

IBM Flex System Fabric CN4093 10Gb Converged Scalable Switch

ISCLI—Industry Standard CLI Command Reference

for IBM Networking OS 7.7

Note: Before using this information and the product it supports, read the general information in the Safety information and Environmental Notices and User Guide documents on the IBM Documentation CD and the Warranty Information document that comes with the product.

First Edition (August 2013)

IBM Flex System Fabric CN4093 10Gb Converged Scalable Switch ISCLI Command Reference US Government Users Restricted Rights – Use, duplication or disclosure restricted by GSA ADP Schedule Contract with IBM Corp.

Contents

Preface
Who Should Use This Book
How This Book Is Organized
Typographic Conventions
Chapter 1. ISCLI Basics
Accessing the ISCLI
ISCLI Command Modes
Global Commands
Command Line Interface Shortcuts
CLI List and Range Inputs
Command Abbreviation
Tab Completion
User Access Levels
Idle Timeout
Chapter 2. Information Commands
System Information.
CLI Display Information
Error Disable and Recovery Information
SNMPv3 System Information
SNMPv3 USM User Table Information
SNMPv3 View Table Information
SNMPv3 Access Table Information
SNMPv3 Group Table Information
SNMPv3 Community Table Information.
SNMPv3 Target Address Table Information
SNMPv3 Target Parameters Table Information
SNMPv3 Notify Table Information
SNMPv3 Dump Information
General System Information.
Show Software Version Brief Information.
Show Specific System Information
Show Recent Syslog Messages
User Status
Layer 2 Information
FDB Information
Show All FDB Information
Show FDB Multicast Address Information
Clearing Entries from the Forwarding Database
Link Aggregation Control Protocol Information.
Link Aggregation Control Protocol
Layer 2 Failover Information Commands
Layer 2 Failover Information
Hot Links Information
Edge Control Protocol Information
LLDP Information
LLDP Remote Device Information
Unidirectional Link Detection Information.
UDLD Port Information
OAM Discovery Information

OAM Port Information	. 40
vLAG Information	. 41
vLAG Trunk Information	. 41
802.1X Information	
Spanning Tree Information	. 44
RSTP/MSTP/PVRST Information	
Common Internal Spanning Tree Information	
Trunk Group Information	
VLAN Information	. 51
Layer 3 Information	
IP Routing Information.	56
Show All IP Route Information	57
Show All ARP Entry Information	
ARP Address List Information	
BGP Information	
BGP Peer information	
BGP Summary Information	
BGP Peer Routes Information	
DGF Feel Roules Information	. 01
Dump BGP Information. .	. 01
	. 62
OSPF General Information	
OSPF Interface Loopback Information	
OSPF Interface Information	
OSPF Database Information.	
OSPF Information Route Codes	
OSPFv3 Information	
OSPFv3 Information Dump	
OSPFv3 Interface Information	
OSPFv3 Database Information	
OSPFv3 Route Codes Information	
Routing Information Protocol	. /1
RIP Routes Information.	
RIP Interface Information	. 71
IPv6 Routing Information.	. 72
IPv6 Routing Table	. 72
IPv6 Neighbor Discovery Cache Information	
5	. 73
IPv6 Neighbor Discovery Prefix Information	. 74
ECMP Static Route Information	. 74
ECMP Hashing Result.	. 75
IGMP Multicast Group Information	. 75
IGMP Querier Information.	. 76
IGMP Group Information	. 77
IGMP Multicast Router Information	. 78
IPMC Group Information	. 78
MLD information	. 79
VRRP Information	. 81
Interface Information	. 81
IPv6 Interface Information	. 82
IPv6 Path MTU Information	. 82
IP Information	. 83
DHCP Snooping Binding Table Information	. 84

IKEv2 Information.	85
IKEv2 Information Dump	86
IPsec Information	
IPsec Manual Policy Information	
PIM Component Information	90
PIM Interface Information	
PIM Neighbor Information	
PIM Neighbor mornation	
PIM Multicast Route Information	
Quality of Service Information	93
802.1p Information	93
WRED and ECN Information	
Access Control List Information Commands	
Access Control List Information	
OpenFlow Information	
OpenFlow Global Configuration Information	98
OpenFlow Flow Allocation Information.	98
OpenFlow Configuration Information	99
OpenFlow Configuration Information	100
RMON Information Commands	102
RMON History Information	
RMON Alarm Information	
RMON Event Information	
Link Status Information.	
Port Information	
Port Transceiver Status	
Virtual Machines Information	
VM Information	
VM Check Information	
VMware Information	
VMware Host Information	112
EVB Information	
vNIC Information.	115
Virtual NIC (vNIC) Information	115
vNIC Group Information.	116
SLP Information	
UFP Information	
	118
	119
	119
	120
	120
	121
	122
	123
	123
	124
	125
	125
	127
DCBX Application Protocol Information	128
	130

PFC Information	 	 			. 131
FCoE Information	 	 			. 132
FIP Snooping Information					
Fibre Channel Information					
Fabric Login Database Information					
Fibre Channel Name Server Database					
Fabric Configuration Status Database					
Fibre Channel Forwarding Information					
NPV Traffic Information					
Zone Status Information					
FC Port Information					
Information Dump					
					-
Chapter 3. Statistics Commands	 	 			. 141
Port Statistics	 	 			. 142
802.1X Authenticator Statistics					
802.1X Authenticator Diagnostics					
Bridging Statistics					
Ethernet Statistics					
Interface Statistics					
Interface Protocol Statistics					
RMON Statistics					
QoS Queue Rate-Based Statistics					
Trunk Group Statistics					
Layer 2 Statistics					
LACP Statistics					
Hotlinks Statistics					
LLDP Port Statistics					
OAM Statistics					
vLAG Statistics					
vLAG Statistics					
Layer 3 Statistics					
IPv4 Statistics					
IPv6 Statistics					
IPv4 Route Statistics		• •	• •		
	• •	• •	• •		. 180
ARP statistics					
DNS Statistics					
ICMP Statistics					
TCP Statistics					
UDP Statistics					
IGMP Statistics					
MLD Statistics					
MLD Global Statistics					
OSPF Statistics					
OSPF Global Statistics					
OSPFv3 Statistics					
OSPFv3 Global Statistics					
VRRP Statistics					
PIM Statistics					
Routing Information Protocol Statistics	 				. 201

OpenFlow Statistics	. 202
Management Processor Statistics	.210
Packet Statistics	.211
MP Packet Statistics.	
Packet Statistics Log	
Packet Log example	
Packet Statistics Last Packet	
Packet Statistics Dump	
Logged Packet Statistics	
Access Control List Statistics	
VMAP Statistics	
Fibre Channel over Ethernet Statistics	
SNMP Statistics	
NTP Statistics	
SLP Statistics	
Statistics Dump	.239
Chapter 4. Configuration Commands	
Viewing and Saving Changes.	.243
System Configuration	.244
System Error Disable and Recovery Configuration	.247
System Host Log Configuration	. 248
SSH Server Configuration	.250
RADIUS Server Configuration	
TACACS+ Server Configuration	
LDAP Server Configuration	
NTP Server Configuration	
System SNMP Configuration	
SNMPv3 Configuration.	
User Security Model Configuration	
SNMPv3 View Configuration	
View-based Access Control Model Configuration	.267
SNMPv3 Group Configuration	
SNMPv3 Community Table Configuration	.200
SNMPv3 Target Address Table Configuration	.270
SNMPv3 Target Parameters Table Configuration	
SNMPv3 Notify Table Configuration	.272
System Access Configuration.	.273
	075
Management Network Configuration	. 275
Management Network Configuration	.276
Management Network Configuration	.276 .277
Management Network Configuration	.276 .277 .278
Management Network Configuration	.276 .277 .278 .279
Management Network Configuration	.276 .277 .278 .279 .280
Management Network Configuration	.276 .277 .278 .279
Management Network Configuration	.276 .277 .278 .279 .280

Port Error Disable and Recovery Configuration	. 285
Port Link Configuration	. 285
Temporarily Disabling a Port	. 286
Unidirectional Link Detection Configuration	. 287
Port OAM Configuration	
Port ACL Configuration	. 288
Port Spanning Tree Configuration	
Port Spanning Tree Guard Configuration	
Port WRED Configuration	200
Port WRED Transmit Queue Configuration	201
Management Port Configuration	
	. 291
Quality of Service Configuration	
802.1p Configuration	. 293
	. 294
Control Plane Protection	
Weighted Random Early Detection Configuration	. 296
WRED Transmit Queue Configuration	. 297
Access Control Configuration	
Access Control List Configuration	
Ethernet Filtering Configuration	. 300
IPv4 Filtering Configuration	. 301
TCP/UDP Filtering Configuration	
Packet Format Filtering Configuration.	
ACL IPv6 Configuration	
IPv6 Filtering Configuration	304
IPv6 TCP/UDP Filtering Configuration	305
IPv6 Re-Mark Configuration	306
	307
ACL Metering Configuration	. 312
Re-Marking In-Profile Configuration	
Re-Marking Out-of-Profile Configuration	. 314
IPv6 Re-Marking Configuration	. 315
IPv6 Re-Marking In-Profile Configuration	
	. 317
Port Mirroring Configuration	
Layer 2 Configuration.	. 318
802.1X Configuration	. 319
802.1X Global Configuration.	. 319
802.1X Guest VLAN Configuration	
802.1X Port Configuration.	
Spanning Tree Configuration	
MSTP/RSTP/PVRST Configuration	
Common Internal Spanning Tree Configuration	
RSTP/PVRST Configuration	
Forwarding Database Configuration	
Static FDB Configuration	
Static Multicast MAC Configuration.	
ECP Configuration	
LLDP Configuration	
LLDP Port Configuration	. 336

Preface

The *IBM Flex System Fabric CN4093 10Gb Converged Scalable Switch ISCLI Command Reference* describes how to configure and use the IBM Networking OS 7.7 software with your IBM Flex System Fabric CN4093 10Gb Converged Scalable Switch. This guide lists each command, together with the complete syntax and a functional description, from the IS Command Line Interface (ISCLI).

For documentation on installing the switches physically, see the *Installation Guide* for your CN4093. For details about the configuration and operation of the CN4093, see the *IBM N/OS 7.7 Application Guide*.

Who Should Use This Book

This book is intended for network installers and system administrators engaged in configuring and maintaining a network. The administrator should be familiar with Ethernet concepts, IP addressing, the IEEE 802.1D Spanning Tree Protocol, and SNMP configuration parameters.

How This Book Is Organized

Chapter 1, "ISCLI Basics," describes how to connect to the switch and access the information and configuration commands. This chapter provides an overview of the command syntax, including command modes, global commands, and shortcuts.

Chapter 2, "Information Commands," shows how to view switch configuration parameters.

Chapter 3, "Statistics Commands," shows how to view switch performance statistics.

Chapter 4, "Configuration Commands," shows how to configure switch system parameters, ports, VLANs, Spanning Tree Protocol, SNMP, Port Mirroring, IP Routing, Port Trunking, and more.

Chapter 5, "Operations Commands," shows how to use commands which affect switch performance immediately, but do not alter permanent switch configurations (such as temporarily disabling ports). The commands describe how to activate or deactivate optional software features.

Chapter 6, **"Boot Options**," describes the use of the primary and alternate switch images, how to load a new software image, and how to reset the software to factory defaults.

Chapter 7, "Maintenance Commands," shows how to generate and access a dump of critical switch state information, how to clear it, and how to clear part or all of the forwarding database.

Appendix A, "IBM Networking OS System Log Messages," lists IBM Networking OS System Log Messages.

Appendix B, "Getting help and technical assistance," contains information on how to get help, service, technical assistance, o more information about IBM products.

"Index" includes pointers to the description of the key words used throughout the book.

Typographic Conventions

The following table describes the typographic styles used in this book.

Table 1. Typographic Conventions

Typeface or Symbol	Meaning
plain fixed-width text	This type is used for names of commands, files, and directories used within the text. For example:
	View the readme.txt file.
	It also depicts on-screen computer output and prompts.
bold fixed-width text	This bold type appears in command examples. It shows text that must be typed in exactly as shown. For example:
	show sys-info
bold body text	This bold type indicates objects such as window names, dialog box names, and icons, as well as user interface objects such as buttons, and tabs.
italicized body text	This italicized type indicates book titles, special terms, or words to be emphasized.
angle brackets < >	Indicate a variable to enter based on the description inside the brackets. Do not type the brackets when entering the command.
	Example: If the command syntax is ping <i><ip address=""></ip></i>
	you enter ping 192.32.10.12
braces { }	Indicate required elements in syntax descriptions where there is more than one option. You must choose only one of the options. Do not type the braces when entering the command.
	Example: If the command syntax is show portchannel {<1-64> hash information}
	you enter: show portchannel <1-64>
	or show portchannel hash
	or show portchannel information

Table 1. Typographic Conventions

Typeface or Symbol	Meaning
brackets []	Indicate optional elements in syntax descriptions. Do not type the brackets when entering the command.
	Example: If the command syntax is show interface ip [<1-128>]
	you enter show interface ip
	or show interface ip <1-128>
vertical line	Separates choices for command keywords and arguments. Enter only one of the choices. Do not type the vertical line when entering the command.
	Example: If the command syntax is show portchannel {<1-64> hash information}
	you must enter: show portchannel <1-64>
	or show portchannel hash
	or show portchannel information

Chapter 1. ISCLI Basics

Your CN4093 10Gb Converged Scalable Switch (CN4093) is ready to perform basic switching functions right out of the box. Some of the more advanced features, however, require some administrative configuration before they can be used effectively.

This guide describes the individual ISCLI commands available for the CN4093.

The ISCLI provides a direct method for collecting switch information and performing switch configuration. Using a basic terminal, the ISCLI allows you to view information and statistics about the switch, and to perform any necessary configuration.

This chapter explains how to access the IS Command Line Interface (ISCLI) for the switch.

Accessing the ISCLI

The first time you start the CN4093, it boots into IBM Networking OS CLI. To access the ISCLI, enter the following command and reset the CN4093:

Main# boot/mode iscli

To access the IBM Networking OS CLI, enter the following command from the ISCLI and reload the CN4093:

Router(config) # boot cli-mode ibmnos-cli

The switch retains your CLI selection, even when you reset the configuration to factory defaults. The CLI boot mode is not part of the configuration settings.

If you downgrade the switch software to an earlier release, it will boot into IBM Networking OS CLI. However, the switch retains the CLI boot mode, and will restore your CLI choice.

ISCLI Command Modes

The ISCLI has three major command modes listed in order of increasing privileges, as follows:

User EXEC mode

This is the initial mode of access. By default, password checking is disabled for this mode, on console.

Privileged EXEC mode

This mode is accessed from User EXEC mode. This mode can be accessed using the following command: enable

Global Configuration mode

This mode allows you to make changes to the running configuration. If you save the configuration, the settings survive a reload of the CN4093. Several sub-modes can be accessed from the Global Configuration mode. For more details, see Table 1.

Each mode provides a specific set of commands. The command set of a higher-privilege mode is a superset of a lower-privilege mode—all lower-privilege mode commands are accessible when using a higher-privilege mode.

Table 1 lists the ISCLI command modes.

Command Mode/Prompt	Command used to enter or exit
User EXEC	Default mode, entered automatically on console
Router>	Exit: exit or logout
Privileged EXEC	Enter Privileged EXEC mode, from User EXEC mode: enable
Router#	Exit to User EXEC mode: disable
	Quit ISCLI: exit or logout
Global Configuration	Enter Global Configuration mode, from Privileged EXEC mode: configure terminal
Router(config)#	Exit to Privileged EXEC: end or exit
Interface IP	Enter Interface IP Configuration mode, from Global Configuration mode: interface ip <interface number=""></interface>
Router(config-ip-if)#	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Interface Loopback	Enter Interface Loopback Configuration mode, from Global Configuration mode: interface ip loopback <1-5>
Router(config-ip-loopback)#	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end

Table 1. ISCLI Command Modes

Table 1. ISCLI Command Modes (continued)

Command Mode/Prompt	Command used to enter or exit
Interface Port	Enter Port Configuration mode, from Global Configuration mode:
Router(config-if)#	<pre>interface port <pre> port number or alias></pre></pre>
	Exit to Privileged EXEC mode: exit
	Exit to Global Configuration mode: end
Interface PortChannel	Enter PortChannel (trunk group) Configuration mode, from Global Configuration mode:
Router(config-PortChannel)#	interface portchannel { <trunk number=""> lacp <key>}</key></trunk>
	Exit to Privileged EXEC mode: exit
	Exit to Global Configuration mode: end
VLAN	Enter VLAN Configuration mode, from Global Configuration mode:
Router(config-vlan)#	vlan <vlan number=""></vlan>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Router OSPF	Enter OSPF Configuration mode, from Global Configuration mode:
Router(config-router-ospf)#	router ospf
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Router BGP	Enter BGP Configuration mode, from Global Configuration mode:
Router(config-router-bgp)#	router bgp
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Router RIP	Enter RIP Configuration mode, from Global Configuration mode:
Router(config-router-rip)#	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Route Map	Enter Route Map Configuration mode, from Global Configuration mode:
Router(config-route-map)#	route-map <1-32>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end

Table 1. ISCLI Command Modes (continued)

Command Mode/Prompt	Command used to enter or exit
Router VRRP	Enter VRRP Configuration mode, from Global Configuration mode:
Router(config-vrrp)#	router vrrp
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
IKEv2 Proposal	Enter IKEv2 Proposal Configuration mode, from Global Configuration mode:
Router(config-ikev2-prop)#	ikev2 proposal
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
MLD Configuration	Enter Multicast Listener Discovery Protocol Configuration mode, from Global Configuration mode:
Router(config-router-mld)#	ipv6 mld
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
OpenFlow Instance	Enter OpenfFlow Instance Configuration mode, from Global Configuration mode:
CN4093(config-openflow-instan ce)#	openflow instance
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
VSI Database	Enter Virtual Station Interface Database Configuration mode, from Global Configuration mode:
CN4093(conf-vsidb)#	virt evb vsidb <vsidb_number></vsidb_number>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
EVB Profile	Enter Edge Virtual Bridging Profile Configuration mode, from Global Configuration mode:
CN4093(conf-evbprof)#	virt evb profile <1-16>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
UFP Virtual Port Configuration	Enter Unified Fabric Port Virtual Port Configuration mode, from
CN4093(config_ufp_vport)#	Global Configuration mode: ufp port <pre>port no.> vport <1-4></pre>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end

Table 1. ISCLI Command Modes (continued)

Command Mode/Prompt	Command used to enter or exit
SPAR Configuration	Enter Switch Partition Configuration mode, from Global Configuration mode:
CN4093(config-spar)#	spar <1-8>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
FC Port Configuration	Enter Fibre Channel Port Configuration mode, from Global Configuration mode:
CN4093(config-fc)#	<pre>interface fc <port alias="" number="" or=""></port></pre>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
FC Zone Configuration	Enter Fibre Channel Zone Configuration mode, from Global Configuration mode:
CN4093(config-zone)#	zone name <1-64 characters>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
FC Zoneset Configuration	Enter Fibre Channel Zoneset Configuration mode, from Global Configuration mode:
CN4093(config-zoneset)#	zoneset name <1-64 characters>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end

Global Commands

Some basic commands are recognized throughout the ISCLI command modes. These commands are useful for obtaining online help, navigating through the interface, and for saving configuration changes.

For help on a specific command, type the command, followed by help.

Table 2. Description of Global Commands

Command	Action
?	Provides more information about a specific command or lists commands available at the current level.
list	Lists the commands available at the current level.
exit	Go up one level in the command mode structure. If already at the top level, exit from the command line interface and log out.
copy running	-config startup-config
	Write configuration changes to non-volatile flash memory.
logout	Exit from the command line interface and log out.
ping	Use this command to verify station-to-station connectivity across the network. The format is as follows:
	<pre>ping <host name=""> <ip address=""> [-n <tries (0-4294967295)>] [-w <msec (0-4294967295)="" delay="">] [-1 <length (0="" 2080)="" 32-65500="">] [-s <ip source="">] [-v <tos (0-255)>] [-f] [-t]</tos </ip></length></msec></tries </ip></host></pre>
	Where:
	 -n: Sets the number of attempts (optional). -w: Sets the number of milliseconds between attempts (optional).
	 -1: Sets the ping request payload size (optional). -s: Sets the IP source address for the IP packet (optional).
	 -v: Sets the Type Of Service bits in the IP header. -f: Sets the <i>don't fragment</i> bit in the IP header (only for IPv4 addresses).
	 -t: Pings continuously (same as -n 0).
	Where the <i>IP address</i> or <i>hostname</i> specify the target device. Use of a hostname requires DNS parameters to be configured on the switch.
	<i>Tries</i> (optional) is the number of attempts (1-32), and <i>msec delay</i> (optional) is the number of milliseconds between attempts.

Command	Action
traceroute	Use this command to identify the route used for station-to-station connectivity across the network. The format is as follows:
	<pre>traceroute {<hostname> <ip address="">} [<max-hops (1-32)=""></max-hops></ip></hostname></pre>
	<pre>traceroute <hostname> <ip address=""> [<max-hops (1-32)=""> [<msec-delay (1-4294967295)="">]]</msec-delay></max-hops></ip></hostname></pre>
	Where <i>hostname/IP address</i> is the hostname or IP address of the target station, <i>max-hops</i> (optional) is the maximum distance to trace (1-32 devices), and <i>msec-delay</i> (optional) is the number of milliseconds to wait for the response.
	As with ping, the DNS parameters must be configured if specifying hostnames.
telnet	This command is used to form a Telnet session between the switch and another network device. The format is as follows:
	<pre>telnet {<hostname> <ip address="">} [<port>]</port></ip></hostname></pre>
	Where <i>IP address</i> or <i>hostname</i> specifies the target station. Use of a hostname requires DNS parameters to be configured on the switch.
	Port is the logical Telnet port or service number.
show history	This command displays the last ten issued commands.
show who	Displays a list of users who are currently logged in.
show line	Displays a list of users who are currently logged in, in table format.

Table 2. Description of Global Commands (continued)

Command Line Interface Shortcuts

The following shortcuts allow you to enter commands quickly and easily.

CLI List and Range Inputs

For VLAN and port commands that allow an individual item to be selected from within a numeric range, lists and ranges of items can now be specified. For example, the vlan command permits the following options:

# vlan 1,3,4095	(access VLANs 1, 3, and 4095)
# vlan 1-20	(access VLANs 1 through 20)
# vlan 1-5,90-99,4090-4095	(access multiple ranges)
# vlan 1-5,19,20,4090-4095	(access a mix of lists and ranges)

The numbers in a range must be separated by a dash: *<start of range>-<end of range>*

Multiple ranges or list items are permitted using a comma: <*range or item 1*>, <*range or item 2*>

Do not use spaces within list and range specifications.

Ranges can also be used to apply the same command option to multiple items. For example, to access multiple ports with one command:

<pre># interface port 1-4</pre>	(Access ports 1 though 4)	
---------------------------------	---------------------------	--

Command Abbreviation

Most commands can be abbreviated by entering the first characters which distinguish the command from the others in the same mode. For example, consider the following full command and a valid abbreviation:

```
Router(config)# spanning-tree stp 2 bridge hello 2
Of
Router(config)# sp stp 2 br h 2
```

Tab Completion

By entering the first letter of a command at any prompt and pressing <Tab>, the ISCLI displays all available commands or options that begin with that letter. Entering additional letters further refines the list of commands or options displayed. If only one command fits the input text when <Tab> is pressed, that command is supplied on the command line, waiting to be entered.

User Access Levels

To enable better switch management and user accountability, three levels or *classes* of user access have been implemented on the CN4093. Levels of access to CLI, Web management functions, and screens increase as needed to perform various switch management tasks. Conceptually, access classes are defined as follows:

user

Interaction with the switch is completely passive—nothing can be changed on the CN4093. Users may display information that has no security or privacy implications, such as switch statistics and current operational state information.

• oper

Operators can make temporary changes on the CN4093. These changes are lost when the switch is rebooted/reset. Operators have access to the switch management features used for daily switch operations. Because any changes an operator makes are undone by a reset of the switch, operators cannot severely impact switch operation.

admin

Administrators are the only ones that may make permanent changes to the switch configuration—changes that are persistent across a reboot or reset of the switch. Administrators can access switch functions to configure and troubleshoot problems on the CN4093. Because administrators can also make temporary (operator-level) changes as well, they must be aware of the interactions between temporary and permanent changes.

Access to switch functions is controlled through the use of unique surnames and passwords. Once you are connected to the switch via local Telnet, remote Telnet, or SSH, you are prompted to enter a password. The default user names/password for each access level are listed in the following table.

Note: It is recommended that you change default switch passwords after initial configuration and as regularly as required under your network security policies.

User Account	Description and Tasks Performed	Password
User	The User has no direct responsibility for switch management. He or she can view all switch status information and statistics, but cannot make any configuration changes to the switch.	user
Operator	The Operator can make temporary changes that are lost when the switch is rebooted/reset. Operators have access to the switch management features used for daily switch operations.	
Administrator	The superuser Administrator has complete access to all command modes, information, and configuration commands on the CN4093 10Gb Converged Scalable Switch, including the ability to change both the user and administrator passwords.	admin

Table 3. User Access Levels

Note: With the exception of the "admin" user, access to each user level can be disabled by setting the password to an empty value.

Idle Timeout

By default, the switch will disconnect your Telnet session after ten minutes of inactivity. This function is controlled by the following command, which can be set from 1 to 60 minutes, or disabled when set to 0:

system idle <0-60>

Command mode: Global Configuration

Chapter 2. Information Commands

You can view configuration information for the switch in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch information.

Table 4. Information Commands

show	interface status <port alias="" number="" or=""></port>
	isplays configuration information about the selected port(s), including:
	Port alias and number
_	Port speed
_	Duplex mode (half, full, or auto)
	Flow control for transmit and receive (no, yes, or both)
_	Link status (up, down, or disabled)
F	or details, see page 106.
	ommand mode: All
show	interface trunk <port alias="" number="" or=""></port>
	isplays port status information, including:
	Port alias and number
	Whether the port uses VLAN Tagging or not
	Port VLAN ID (PVID)
	Port name
_	VLAN membership
	FDB Learning status
_	Flooding status
F	or details, see page 108.
	ommand mode: All
show	interface transceiver
D	isplays the status of the port transceiver module on each external port. For
	etails, see page 110.
С	ommand mode: All
show	software-key
D	isplays the enabled software features.
С	ommand mode: All
show	information-dump
	umps all switch information available (10K or more, depending on your onfiguration).
	you want to capture dump data to a file, set your communication software on our workstation to capture session data prior to issuing the dump commands

System Information

The information provided by each command option is briefly described in Table 5 on page 14, with pointers to where detailed information can be found.

Table 5. System Information Commands

show	sys-info
D	isplays system information, including:
_	System date and time
_	Switch model name and number
_	Switch name and location
_	Time of last boot
_	MAC address of the switch management processor
_	IP address of management interface
_	Hardware version and part number
_	Software image file and version number
_	Configuration name
_	Log-in banner, if one is configured
_	Internal temperatures
F	or details, see page 25.
С	ommand mode: All
show	logging [severity <0-7>] [reverse]
S	isplays the current syslog configuration, followed by the most recent 2000 yslog messages, as displayed by the show logging messages command. or details, see page 27.
С	ommand mode: All
show	access user
D	isplays configured user names and their status.
С	ommand mode: Privileged EXEC

CLI Display Information

These commands allow you to display information about the number of lines per screen displayed in the CLI.

Table 6. CLI Display Information Options

Command Syntax and Usage
show terminal-length
Displays the number of lines per screen displayed in the CLI for the current session. A value of 0 means paging is disabled.
Command mode: All
show line console length
Displays the current line console length setting. For details, see page 244.
Command mode: All
show line vty length
Displays the current line vty length setting. For details, see page 244.
Command mode: All

Error Disable and Recovery Information

These commands allow you to display information about the Error Disable and Recovery feature for interface ports.

Table 7. Error Disable Information Commands

Command Syntax and Usage	
show errdisable recovery	
Displays a list ports with their Error Recovery status.	
Command mode: All	
show errdisable timers	
Displays a list of active recovery timers, if applicable.	
Command mode: All	
show errdisable information	
Displays all Error Disable and Recovery information.	
Command mode: All	

SNMPv3 System Information

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 framework by supporting the following:

- a new SNMP message format
- security for messages
- access control
- remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC2271 to RFC2276.

Table 8. SNMPv3 Commands

Command Syntax and Usage
show snmp-server v3 user
Displays User Security Model (USM) table information. To view the table, see page 18.
Command mode: All
show snmp-server v3 view
Displays information about view, subtrees, mask and type of view. To view a sample, see page 19.
Command mode: All
show snmp-server v3 access
Displays View-based Access Control information. To view a sample, see page 20.
Command mode: All
show snmp-server v3 group
Displays information about the group, including the security model, user name, and group name. To view a sample, see page 20.
Command mode: All
show snmp-server v3 community
Displays information about the community table information. To view a sample, see page 21.
Command mode: All
show snmp-server v3 target-address
Displays the Target Address table information. To view a sample, see page 21.
Command mode: All
show snmp-server v3 target-parameters
Displays the Target parameters table information. To view a sample, see page 23.
Command mode: All

Table 8. SNMPv3 Commands (continued)

Command Syntax and Usage

```
show snmp-server v3 notify
```

Displays the Notify table information. To view a sample, see page 23.

Command mode: All

show snmp-server v3

Displays all the SNMPv3 information. To view a sample, see page 24.

Command mode: All

SNMPv3 USM User Table Information

The User-based Security Model (USM) in SNMPv3 provides security services such as authentication and privacy of messages. This security model makes use of a defined set of user identities displayed in the USM user table. The following command displays SNMPv3 user information:

show snmp-server v3 user

Command mode: All

The USM user table contains the following information:

- the user name
- a security name in the form of a string whose format is independent of the Security Model
- an authentication protocol, which is an indication that the messages sent on behalf of the user can be authenticated
- the privacy protocol

usmUser Table: User Name	Protocol
adminmd5	HMAC_MD5, DES PRIVACY
adminsha	HMAC_SHA, DES PRIVACY
v1v2only	NO AUTH, NO PRIVACY

Table 9. USM User Table Information Parameters

Field	Description
User Name	This is a string that represents the name of the user that you can use to access the switch.
Protocol	This indicates whether messages sent on behalf of this user are protected from disclosure using a privacy protocol. IBM Networking OS supports DES algorithm for privacy. The software also supports two authentication algorithms: MD5 and HMAC-SHA.

SNMPv3 View Table Information

The user can control and restrict the access allowed to a group to only a subset of the management information in the management domain that the group can access within each context by specifying the group's rights in terms of a particular MIB view for security reasons.

The following command displays the SNMPv3 View Table:

show snmp-server v3 view

Command mode: All

View Name	Subtree	Mask	Туре
iso	1		included
v1v2only	1		included
v1v2only	1.3.6.1.6.3.15		excluded
v1v2only	1.3.6.1.6.3.16		excluded
v1v2only	1.3.6.1.6.3.18		excluded

Table 10. SNMPv3 View Table Information Parameters

Field	Description
View Name	Displays the name of the view.
Subtree	Displays the MIB subtree as an OID string. A view subtree is the set of all MIB object instances which have a common Object Identifier prefix to their names.
Mask	Displays the bit mask.
Туре	Displays whether a family of view subtrees is included or excluded from the MIB view.

SNMPv3 Access Table Information

The access control subsystem provides authorization services.

The vacmAccessTable maps a group name, security information, a context, and a message type, which could be the read or write type of operation or notification into a MIB view.

The View-based Access Control Model defines a set of services that an application can use for checking access rights of a group. This group's access rights are determined by a read-view, a write-view and a notify-view. The read-view represents the set of object instances authorized for the group while reading the objects. The write-view represents the set of object instances authorized for the group when writing objects. The notify-view represents the set of object instances authorized for the group when writing objects. The notify-view represents the set of object instances authorized for the group when writing objects.

The following command displays SNMPv3 access information:

show snmp-server v3 access

Command mode: All

Group Name 1	Model	Level	ReadV	WriteV	NotifyV
vlv2grp s admingrp i	-	noAuthNoPriv authPriv		iso iso	vlv2only iso

Table 11. SNMPv3 Access Table Information

Field	Description
Group Name	Displays the name of group.
Model	Displays the security model used, for example, SNMPv1, or SNMPv2 or USM.
Level	Displays the minimum level of security required to gain rights of access. For example, noAuthNoPriv, authNoPriv, Or authPriv.
ReadV	Displays the MIB view to which this entry authorizes the read access.
WriteV	Displays the MIB view to which this entry authorizes the write access.
NotifyV	Displays the Notify view to which this entry authorizes the notify access.

SNMPv3 Group Table Information

A group is a combination of security model and security name that defines the access rights assigned to all the security names belonging to that group. The group is identified by a group name.

The following command displays SNMPv3 group information:

show snmp-server v3 group

Command mode: All

User Name	Group Name
v1v2only	v1v2grp
adminmd5	admingrp
adminsha	admingrp
	v1v2only adminmd5

Table 12. SNMPv3 Group Table Information Parameters

Field	Description
Sec Model	Displays the security model used, which is any one of: USM, SNMPv1, SNMPv2, and SNMPv3.
User Name	Displays the name for the group.
Group Name	Displays the access name of the group.

SNMPv3 Community Table Information

This command displays the community table information stored in the SNMP engine. The following command displays SNMPv3 community information:

show snmp-server v3 community

Command mode: All

Field	Description
Index	Displays the unique index value of a row in this table
Name	Displays the community string, which represents the configuration.
User Name	Displays the User Security Model (USM) user name.
Тад	Displays the community tag. This tag specifies a set of transport endpoints from which a command responder application accepts management requests and to which a command responder application sends an SNMP trap.

SNMPv3 Target Address Table Information

The following command displays SNMPv3 target address information:

show snmp-server v3 target-address

Command mode: All

This command displays the SNMPv3 target address table information, which is stored in the SNMP engine.

Table 14. SNMPv3 Target Address Table Information Parameters

Field	Description
Name	Displays the locally arbitrary, but unique identifier associated with this snmpTargetAddrEntry.
Transport Addr	Displays the transport addresses.
Port	Displays the SNMP UDP port number.
Taglist	This column contains a list of tag values which are used to select target addresses for a particular SNMP message.
Params	The value of this object identifies an entry in the snmpTargetParamsTable. The identified entry contains SNMP parameters to be used when generating messages to be sent to this transport address.

SNMPv3 Target Parameters Table Information

The following command displays SNMPv3 target parameters information:

show snmp-server v3 target-parameters

Command mode: All

ſ	Name	MP Model	User Name	Sec Model	Sec Level
	v1v2param	snmpv2c	v1v2only	snmpv1	noAuthNoPriv

Table 15. SNMPv3 Target Parameters Table Information

Field	Description
Name	Displays the locally arbitrary, but unique identifier associated with this snmpTargeParamsEntry.
MP Model	Displays the Message Processing Model used when generating SNMP messages using this entry.
User Name	Displays the securityName, which identifies the entry on whose behalf SNMP messages will be generated using this entry.
Sec Model	Displays the security model used when generating SNMP messages using this entry. The system may choose to return an inconsistentValue error if an attempt is made to set this variable to a value for a security model which the system does not support.
Sec Level	Displays the level of security used when generating SNMP messages using this entry.

SNMPv3 Notify Table Information

The following command displays the SNMPv3 Notify table:

show snmp-server v3 notify

Command mode: All

Name	Тад
v1v2trap	v1v2trap

Table 16. SNMPv3 Notify Table Information

Field	Description
Name	The locally arbitrary, but unique identifier associated with this snmpNotifyEntry.
Тад	This represents a single tag value which is used to select entries in the snmpTargetAddrTable. Any entry in the snmpTargetAddrTable that contains a tag value equal to the value of this entry, is selected. If this entry contains a value of zero length, no entries are selected.

SNMPv3 Dump Information

The following command displays SNMPv3 information:

show snmp-server v3

Command mode: All

User Name			Proto				
adminmd5 adminsha v1v2only			HMAC_I HMAC_S	MD5, DE SHA, DE	S PRIVAC S PRIVAC PRIVACY	CY CY

General System Information

The following command displays system information:

show sys-info

Command mode: All

```
System Information at 16:50:45 Wed Nov 16, 2011
Time zone: America/US/Pacific
Daylight Savings Time Status: Disabled
IBM Flex System Fabric CN4093 10Gb Converged Scalable Switch for IBM BladeCenter
IBM Flex System Fabric CN4093 10Gb Converged Scalable Switch (BW build)
Switch has been up 5 days, 2 hours, 16 minutes and 42 seconds.
Last boot: 0:00:47 Wed Jan 3, 2010 (reset from console)
MAC address: 00:00:00:00:00:00
                                IP (If 1) address: 0.0.0.0
Internal Management Port MAC Address: 00:00:00:00:00:ef
Internal Management Port IP Address (if 128): 9.43.95.121
External Management Port MAC Address: 00:00:00:00:00:fe
External Management Port IP Address (if 127):
Software Version 7.7.1 (FLASH image2), active configuration.
PCBA Part Number: BAC-00042-00
Hardware Part Number: 46C7193
FAB Number: BN-RZZ000
Serial Number: PROTO2C04
                     PROTO2C04E
Manufacturing Date: 43/08
Hardware Revision:
                      0
                     1
Board Revision:
PLD Firmware Version: 4.0
Temperature Sensor 1 (Warning): 42.0 C (Warn at 88.0 C/Recover at 78.0 C)
Temperature Sensor 2 (Shutdown): 42.5 C (Shutdown at 98.0 C/Recover at 88.0 C)
Temperature Sensor 3 (Exhaust): 37.5 C
Temperature Sensor 4 (Inlet): 32.5 C
```

Note: The display of temperature will come up only if the temperature of any of the sensors exceeds the temperature threshold. There will be a warning from the software if any of the sensors exceeds this temperature threshold. The switch will shut down if the power supply overheats.

System information includes:

- System date and time
- Switch model
- Switch name and location
- Time of last boot
- MAC address of the switch management processor
- Software image file and version number, and configuration name.
- IP address of the management interface
- Hardware version and part number
- Log-in banner, if one is configured
- Internal temperatures

Show Software Version Brief Information

The following command displays brief software version information:

show version brief

Command mode: All

Software Version 7.7.1.0 (FLASH image2), active configuration.

Displays the software version number, image file, and configuration name.

Show Specific System Information

 Table 17 lists commands used for displaying specific entries from the general system information screen

Table 17. Specific System Information Options

Show Recent Syslog Messages

The following command displays system log messages:

show logging messages [severity <0-7>] [reverse]

Command mode: All

Date		Time	Criticality	level	Message		
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT1
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT8
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT7
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT2
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT1
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT4
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT3
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT6
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT5
Jul	8	17:25:41	NOTICE	system:	link up on	port	EXT4
Jul	8	17:25:41	NOTICE	system:	link up on	port	EXT1
Jul	8	17:25:41	NOTICE	system:	link up on	port	EXT3
Jul	8	17:25:41	NOTICE	system:	link up on	port	EXT2
Jul	8	17:25:41	NOTICE	system:	link up on	port	INT3
Jul	8	17:25:42	NOTICE	system:	link up on	port	INT2
Jul	8	17:25:42	NOTICE	system:	link up on	port	INT4
Jul	8	17:25:42	NOTICE	system:	link up on	port	INT3
Jul	8	17:25:42	NOTICE	system:	link up on	port	INT6

Each syslog message has a severity level associated with it, included in text form as a prefix to the log message. One of eight different prefixes is used, depending on the condition for which the administrator is being notified.

- EMERG Indicates the system is unusable
- ALERT Indicates action should be taken immediately
- CRIT Indicates critical conditions
- ERR Indicates error conditions or errored operations
- WARNING Indicates warning conditions
- NOTICE Indicates a normal but significant condition
- INFO Indicates an information message
- DEBUG Indicates a debug-level message

The severity option filters only syslog messages with a specific severity level between 0 and 7, from EMERG to DEBUG correspondingly.

The reverse option displays the output in reverse order, from the newest entry to the oldest.

User Status

The following command displays user status information:

show access user

Command mode: All except User EXEC

```
Usernames:

user - enabled - offline

oper - disabled - offline

admin - Always Enabled - online 1 session

Current User ID table:

1: name paul , dis, cos user , password valid, offline

Current strong password settings:

strong password status: disabled
```

This command displays the status of the configured usernames.

Layer 2 Information

The following commands display Layer 2 information.

Table 18. Layer 2 Information Commands

Com	mand Syntax and Usage
show	v dot1x information
[Displays 802.1X Information.
(Command mode: All
F	For details, see page 42.
shov	v spanning-tree
	Displays Spanning Tree information, including the status (on or off), Spanning Free mode (RSTP, PVRST, or MSTP), and VLAN membership.
	n addition to seeing if spanning tree groups (STGs) are enabled or disabled, you can view the following STG bridge information:
-	- Priority
-	- Hello interval
-	- Maximum age value
-	- Forwarding delay
-	- Aging time
Ň	You can also see the following port-specific STG information:
-	- Port alias and priority
-	- Cost
_	- State
(Command mode: All
show	v spanning-tree stp <1-128> information
[Displays information about a specific Spanning Tree Group.
(Command mode: All
F	For details, see page 44.

Table 18. Layer 2 Information Commands (continued)

	and Syntax and Usage
show	spanning-tree mstp cist information
	splays Common Internal Spanning Tree (CIST) information, including the STP digest and VLAN membership.
CI	ST bridge information includes:
_	Priority
_	Hello interval
_	Maximum age value
-	Forwarding delay
-	Root bridge information (priority, MAC address, path cost, root port)
CI	ST port information includes:
_	Port number and priority
_	Cost
_	State
Fo	r details, see page 48.
Co	mmand mode: All

Table 18. Layer 2 Information Commands (continued)

Command Syntax and Usage show hotlinks information Displays Hot Links information. For details, see page 36. Command mode: All show layer2 information Dumps all Layer 2 switch information available (10K or more, depending on your configuration). If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Command mode: All

FDB Information

The forwarding database (FDB) contains information that maps the media access control (MAC) address of each known device to the switch port where the device address was learned. The FDB also shows which other ports have seen frames destined for a particular MAC address.

Note: The master forwarding database supports up to K MAC address entries on the MP per switch.

Table 19. FDB Information Commands

Command Syntax and Usage
show mac-address-table address < <i>MAC address</i> >
Displays a single database entry by its MAC address. You are prompted to enter the MAC address of the device. Enter the MAC address using the format, xx:xx:xx:xx:xx:xx. For example, 08:00:20:12:34:56
You can also enter the MAC address using the format, xxxxxxxxxxxx. For example, 080020123456
Command mode: All
show mac-address-table interface port <port alias="" number="" or=""></port>
Displays all FDB entries for a particular port.
Command mode: All
show mac-address-table vlan < <i>VLAN number></i>
Displays all FDB entries on a single VLAN.
Command mode: All
show mac-address-table state {unknown forward trunk}
Displays all FDB entries for a particular state.
Command mode: All
show mac-address-table multicast
Displays all Multicast MAC entries in the FDB.
Command mode: All

Table 19. FDB Information Commands (continued)

show	mac-address-table static
Di	splays all static MAC entries in the FDB.
C	ommand mode: All
show	mac-address-table configured static
Di	splays all configured static MAC entries in the FDB.
C	ommand mode: All
show	mac-address-table
Di	splays all entries in the Forwarding Database.
C	ommand mode: All
Fo	or more information, see page 32.
show	mac-address-table all
	splays both unicast (static and dynamix) and multicast (static) entries in the prwarding Database.
C	ommand mode: All

Show All FDB Information

The following command displays Forwarding Database information:

show mac-address-table

Command mode: All

MAC address	VLAN	Port	Trnk	State	Permanent
00:04:38:90:54:18	1	EXT4		FWD	
00:09:6b:9b:01:5f	1	INT13		FWD	
00:09:6b:ca:26:ef	4095	MGT1		FWD	
00:0f:06:ec:3b:00	4095	MGT1		FWD	
00:11:43:c4:79:83	1	EXT4		FWD	P

An address that is in the forwarding (FWD) state, means that it has been learned by the switch. When in the trunking (TRK) state, the port field represents the trunk group number. If the state for the port is listed as unknown (UNK), the MAC address has not yet been learned by the switch, but has only been seen as a destination address.

When an address is in the unknown state, no outbound port is indicated, although ports that reference the address as a destination will be listed under "Reference ports.

Show FDB Multicast Address Information

The following commands display Multicast Forwarding Database information:.

Table 20. Multicast FDB Information Commands

Command Syntax and Usage
show mac-address-table multicast address < <i>MAC address</i> >
Displays a single FDB multicast entry by its MAC address. You are prompted to enter the MAC address of the device. Enter the MAC address using the format, $xx:xx:xx:xx:xx$. For example, $03:00:20:12:34:56$
You can also enter the MAC address using the format, xxxxxxxxxxx. For example, 030020123456
Command mode: All
show mac-address-table multicast interface port <pre>port alias or number></pre>
Displays all FDB multicast entries for a particular port.
Command mode: All
show mac-address-table vlan < <i>VLAN number></i>
Displays all FDB multicast entries on a single VLAN.
Command mode: All
show mac-address-table multicast
Displays all Multicast MAC entries in the FDB.
Command mode: All

Clearing Entries from the Forwarding Database

To clear the entire FDB, refer to "Forwarding Database Maintenance" on page 527.

Link Aggregation Control Protocol Information

Use these commands to display LACP status information about each port on the CN4093.

Table 21. LACP Information Commands

Command Syntax and Usage
show lacp aggregator < <i>aggregator ID</i> >
Displays detailed information about the LACP aggregator.
Command mode: All
show interface port <pre>port alias or number> lacp information</pre>
Displays LACP information about the selected port.
Command mode: All
show lacp information
Displays a summary of LACP information.
Command mode: All
For details, see page 34.

Link Aggregation Control Protocol

The following command displays LACP information:

show lacp information

Command mode: All

port	mode	adminkey	operkey	selected	prio	aggr	trunk	status	minlinks
1	off	1	1	no	32768				1
2	off	2	2	no	32768				1
3	off	3	3	no	32768				1
•••									

LACP dump includes the following information for each external port in the CN4093:

- mode Displays the port's LACP mode (active, passive, or off).
- adminkey Displays the value of the port's adminkey.
- operkey Shows the value of the port's operational key.
- selected Indicates whether the port has been selected to be part of a Link Aggregation Group.
- prio Shows the value of the port priority.
- aggr Displays the aggregator associated with each port.
- trunk This value represents the LACP trunk group number.
- status Displays the status of LACP on the port (up, down or standby).
- minlinks Displays the minimum number of active links in the LACP trunk.

Layer 2 Failover Information Commands

Table 22. Layer 2 Failover Information Commands

Command Syntax and Usage
show failover trigger <i><trigger number=""></trigger></i> Displays detailed information about the selected Layer 2 Failover trigger. Command mode: All
show failover trigger Displays a summary of Layer 2 Failover information. For details, see page 35. Command mode: All

Layer 2 Failover Information

The following command displays Layer 2 Failover information:

```
show failover trigger
```

Command mode: All

Trigger 1 Auto Monitor: Enabled				
Trigger 1 l	Trigger 1 limit: 0			
Monitor Sta	ite: Up			
Member	Status			
trunk 1

Member	Status			
INT1	Operational			
INT2	Operational			
INT3	Operational			
INT4	Operational			

A monitor port's Failover status is <code>Operational</code> only if all the following conditions hold true:

- Port link is up.
- If Spanning-Tree is enabled, the port is in the Forwarding state.
- If the port is a member of an LACP trunk group, the port is aggregated.

If any of these conditions are not true, the monitor port is considered to be failed.

A control port is considered to be operational if the monitor trigger state is Up. Even if a port's link status is Down, Spanning-Tree status is Blocking, and the LACP status is Not Aggregated, from a teaming perspective the port status is Operational, since the trigger is Up.

A control port's status is displayed as Failed only if the monitor trigger state is Down.

Hot Links Information

The following command displays Hot Links information:

```
show hotlinks information
```

Command mode: All

Hot Links information includes the following:

- Hot Links status (on or off)
- Status of BPDU flood option
- Status of FDB send option
- · Status and configuration of each Hot Links trigger

Edge Control Protocol Information

Table 23. ECP Information Options

Command Syntax and Usage	
show ecp channels	
Displays all Edge Control Protocol (ECP) channels.	
Command mode: All	
show ecp upper-layer-protocols	
Displays all registered Upper-Level Protocols (ULPs).	
Command mode: All	

LLDP Information

The following commands display LLDP information.

```
Table 24. LLDP Information Commands
```

Command Syntax and Usage	
show lldp port Displays Link Layer Discovery Protocol (LLDP) port information. Command mode: All	
show lldp receive Displays information about the LLDP receive state machine. Command mode: All	
show lldp transmit Displays information about the LLDP transmit state machine. Command mode: All	
<pre>show lldp remote-device [<1-256> detail] Displays information received from LLDP-capable devices. To view a sa display, see page 38.</pre>	mple
show lldp port <1-16> tlv evb Displays Edge Virtual Bridge (EVB) type-length-value (TLV) information. Command mode: All	
show lldp information Displays all LLDP information. Command mode: All	

LLDP Remote Device Information

The following command displays LLDP remote device information:

show lldp remote-device [<1-256> | detail]

Command mode: All

LLDP Remote Devices	Information
LocalPort Index	Remote Chassis ID RemotePort Remote System Name
	00 16 ca ff 7e 00 15 BNT Gb Ethernet Switch 00 16 60 f9 3b 00 20 BNT Gb Ethernet Switch

LLDP remote device information provides a summary of information about remote devices connected to the switch. To view detailed information about a device, as shown below, follow the command with the index number of the remote device. To view detailed information about all devices, use the detail option.

```
Local Port Alias: EXT1
       Remote Device Index : 15
       Remote Device TTL : 99
       Remote Device RxChanges : false
       Chassis Type : Mac Address
       Chassis Id
                           : 00-18-b1-33-1d-00
       Port Type
                            : Locally Assigned
       Port Id
                            : 23
       Port Description
                            : EXT1

              Object Identifier :
```

Unidirectional Link Detection Information

The following commands show unidirectional link detection information.

```
Table 25. UDLD Information Commands
```

Command Syntax and Usage	
show interface port <pre>port alias or number> udld</pre>	
Displays UDLD information about the selected port.	
Command mode: All	
show udld	

Displays all UDLD information.

Command mode: All

UDLD Port Information

The following command displays UDLD information for the selected port:

```
show interface port port alias or number> udld
```

Command mode: All

```
UDLD information on port EXT1

Port enable administrative configuration setting: Enabled

Port administrative mode: normal

Port enable operational state: link up

Port operational state: advertisement

Port bidirectional status: bidirectional

Message interval: 15

Time out interval: 5

Neighbor cache: 1 neighbor detected

Entry #1

Expiration time: 31 seconds

Device Name:

Device ID: 00:da:c0:00:04:00

Port ID: EXT1
```

UDLD information includes the following:

- Status (enabled or disabled)
- Mode (normal or aggressive)
- Port state (link up or link down)
- Bi-directional status (unknown, unidirectional, bidirectional, TX-RX loop, neighbor mismatch)

OAM Discovery Information

Table 26. OAM Discovery Information Commands

Command Syntax and Usage

show interface port port alias or number> oam

Displays OAM information about the selected port.

Command mode: All

show oam

Displays all OAM information.

Command mode: All

OAM Port Information

The following command displays OAM information for the selected port:

show interface port port alias or number> oam

Command mode: All

```
OAM information on port EXT1
State enabled
Mode active
Link up
Satisfied Yes
Evaluating No
Remote port information:
Mode active
MAC address 00:da:c0:00:04:00
Stable Yes
State valid Yes
Evaluating No
```

OAM port display shows information about the selected port and the peer to which the link is connected.

vLAG Information

The following table lists the information commands for Virtual Link Aggregation Group (vLAG) protocol.

Table 27. vLAG Information Options

Command Syntax and Usage	
show vlag adminkey <1-65535>	
Displays vLAG LACP information.	
Command mode: All	
show vlag portchannel <trunk group="" number=""></trunk>	
Displays vLAG static trunk group information.	
Command mode: All	
show vlag isl	
Displays vLAG Inter-Switch Link (ISL) information.	
Command mode: All	
show vlag information	
Displays all vLAG information.	
Command mode: All	

vLAG Trunk Information

The following command displays vLAG information for the trunk group:

show vlag portchannel <trunk group number>

Command mode: All

vLAG is enabled on trunk 3
Protocol - Static
Current settings: enabled
ports: 60
Current L2 trunk hash settings:
smac
Current L3 trunk hash settings:
sip dip
Current ingress port hash: disabled
Current L4 port hash: disabled

802.1X Information

The following command displays 802.1X information:

show dot1x information

Command mode: All

-		Authenticator			
System	status :	disabled			
Protoco	ol version :	1			
Guest '	VLAN status :	disabled

*EXT3	force-auth	unauthorized	initialize	initialize	none
*EXT4	force-auth	unauthorized	initialize	initialize	none
*EXT11	force-auth	unauthorized	initialize	initialize	none

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of BladeCenter unit that you are using and the firmware versions and options that are installed.

The following table describes the IEEE 802.1X parameters.

Table 28.	802.1X Para	ameter Descriptions
-----------	-------------	---------------------

Parameter	Description	
Port	Displays each port's alias.	
Auth Mode	Displays the Access Control authorization mode for the port. The Autho- rization mode can be one of the following: - force-unauth - auto - force-auth	
Auth Status	Displays the current authorization status of the port, either authorized or unauthorized.	

Parameter	Description
Authenticator PAE State	Displays the Authenticator Port Access Entity State. The PAE state can be one of the following:
	– initialize
	 disconnected
	 connecting
	 authenticating
	 authenticated
	– aborting
	– held
	– forceAuth
Backend Auth State	Displays the Backend Authorization State. The Backend Authorization state can be one of the following:
	– initialize
	– request
	– response
	- success
	– fail
	– timeout
	– idle

 Table 28.
 802.1X Parameter Descriptions (continued)

Spanning Tree Information

The following command displays Spanning Tree information:

show spanning-tree stp <1-128> information

Command mode: All

```
      Spanning Tree Group 1: On (PVRST)

      VLANs: 1

      Current Root:

      <
```

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of BladeCenter unit that you are using and the firmware versions and options that are installed.

The switch software uses the Per VLAN Rapid Spanning Tree Protocol (PVRST) spanning tree mode, with IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) or IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), as alternatives. For details see "RSTP/MSTP/PVRST Information" on page 46.

When STP is used, in addition to seeing if STG is enabled or disabled, you can view the following STG bridge information:

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STG root bridge.
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.

Table 29. PVRST/RSTP/MSTP Bridge Parameter Descriptions

Parameter	Description
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STG network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from DISC state to LRN state and from LRN state to FWD state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.
Topology Change Count	The Topology Change Count shows the number of Topology Changes detected since the last initialization of the Spanning Tree Group (either by reboot or by Spanning Tree mode change).

Table 29. PVRST/RSTP/MSTP Bridge Parameter Descriptions (continued)

The following port-specific information is also displayed:

Parameter	Description
Priority (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The Port Path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The State field can be one of the following: Discarding (DISC), Learning (LRN), or Forwarding (FWD).
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The Designated Port field shows the port on the Designated Bridge to which this port is connected.

Table 30. PVRST/RSTP/MSTP Port Parameter Descriptions

RSTP/MSTP/PVRST Information

 * = STP turned off for this port.
```

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of BladeCenter unit that you are using and the firmware versions and options that are installed.

You can configure the switch software to use the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP), the IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), or Per VLAN Rapid Spanning Tree Protocol (PVRST).

If RSTP/MSTP/PVRST is turned on, you can view the following bridge information for the Spanning Tree Group:.

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STP root bridge.
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the STP network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from listening to learning and from learning state to forwarding state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.

Table 31. RSTP/MSTP/PVRST Bridge Parameter Descriptions

The following port-specific information is also displayed:

Table 32. R	STP/MSTP/PVRST Port Parameter Descriptions
-------------	--

Parameter	Description
Prio (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port Path Cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The State field in RSTP or MSTP mode can be one of the following: Discarding (DISC), Learning (LRN), Forwarding (FWD), or Disabled (DSB).

Parameter	Description
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The port ID of the port on the Designated Bridge to which this port is connected.
Туре	Type of link connected to the port, and whether the port is an edge port. Link type values are AUTO, P2P, or SHARED.

Table 32. RSTP/MSTP/PVRST Port Parameter Descriptions (continued)

Common Internal Spanning Tree Information

The following command displays Common Internal Spanning Tree (CIST) information:

show spanning-tree mstp cist information

Command mode: All

```
Mstp Digest: 0xac36177f50283cd4b83821d8ab26de62
Common Internal Spanning Tree:

# = PVST Protection enabled for this port.
```

In addition to seeing if Common Internal Spanning Tree (CIST) is enabled or disabled, you can view the following CIST bridge information:

Table 33. CIST Parameter Descriptions

Parameter	Description
CIST Root	The CIST Root shows information about the root bridge for the Common Internal Spanning Tree (CIST). Values on this row of information refer to the CIST root.
CIST Regional Root	The CIST Regional Root shows information about the root bridge for this MSTP region. Values on this row of information refer to the regional root.
Priority (bridge)	The bridge priority parameter controls which bridge on the network will become the STP root bridge.
Hello	The hello time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The maximum age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STP network.
FwdDel	The forward delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from learning state to forwarding state.
Hops	The maximum number of bridge hops a packet can traverse before it is dropped. The default value is 20.

The following port-specific CIST information is also displayed:

Table 34. CIST Parameter Descriptions

Parameter	Description
Prio (port)	The port priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The state field shows the current state of the port. The state field can be either Discarding (DISC), Learning (LRN), or Forwarding (FWD).

Table 34.	CIST Parameter	Descriptions	(continued)
-----------	----------------	--------------	-------------

Parameter	Description
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST), or Unknown (UNK).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The port ID of the port on the Designated Bridge to which this port is connected.
Туре	Type of link connected to the port, and whether the port is an edge port. Link type values are AUTO, P2P, or SHARED.

Trunk Group Information

The following command displays Trunk Group information:

```
show portchannel information
```

Command mode: All

```
Trunk group 1: Enabled
Protocol - Static
Port state:
EXT1: STG 1 forwarding
EXT2: STG 1 forwarding
```

When trunk groups are configured, you can view the state of each port in the various trunk groups.

Note: If Spanning Tree Protocol on any port in the trunk group is set to forwarding, the remaining ports in the trunk group will also be set to forwarding.

VLAN Information

Table 35. VLAN Information Comma	nds
----------------------------------	-----

show vlan <vlan number=""></vlan>					
5110					
U	splays general VLAN information.				
show	protocol-vlan <protocol number=""></protocol>				
D	splays protocol VLAN information.				
С	ommand mode: All				
show	private-vlan				
D	splays private VLAN information.				
С	ommand mode: All				
show	vlan information				
D	splays information about all VLANs, including:				
_	VLAN number and name				
_	Port membership				
_	VLAN status (enabled or disabled)				
_	Protocol VLAN status				
_	Private VLAN status				
_	Spanning Tree membership				

The following command displays VLAN information:

show vlan <VLAN number>

Command mode: All

VLAN	Name	Status	MGT	Ports
1	Default VLAN	ena	dis	INT1A-INT14B EXT1-EXT10
4095	Mgmt VLAN	ena	ena	EXT15-EXT22 MGT1 EXTM

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of BladeCenter unit that you are using and the firmware versions and options that are installed.

This information display includes all configured VLANs and all member ports that have an active link state. Port membership is represented in slot/port format.

VLAN information includes:

- VLAN Number
- VLAN Type

- Status
- Management status of the VLAN
- Port membership of the VLAN
- Protocol-based VLAN information
- Private VLAN configuration

Layer 3 Information

Table 36. Layer 3 Information Commands

Command Syntax and Usage	
show ip route Displays all routes configured on the switch. For details, see page 57. Command mode: All	
show arp Displays Address Resolution Protocol (ARP) information. For details, see page 58. Command mode: All	
show ip bgp information [IPv4 address] [IPv4 mask] Displays Border Gateway Protocol (BGP) information. For details, see page 61. Command mode: All	
show ip ospf information Displays OSPF information. For more OSPF information options, see page Command mode : All	e 62.
show ipv6 ospf information Displays OSPFv3 information. For more OSPFv3 information options, see page 67. Command mode: All	9
show ip rip interface Displays RIP user's configuration. For details, see page 71. Command mode: All	
show ipv6 route Displays IPv6 routing information. For more information options, see page Command mode: All	e 72.
show ipv6 neighbors Displays IPv6 Neighbor Discovery cache information. For more informatio options, see page 73. Command mode: All	'n
show ipv6 prefix Displays IPv6 Neighbor Discovery prefix information. For details, see page Command mode : All	e 74.
show ip ecmp Displays ECMP static route information. For details, see page 74. Command mode: All	

Table 36. Layer 3 Information Commands (continued)

Command Syntax and Usage
show ip igmp groups Displays IGMP Information. For more IGMP information options, see page 75. Command mode: All
show ipv6 mld groups Displays Multicast Listener Discovery (MLD) information. For more MLD information options, see page 79. Command mode : All
show ip vrrp information Displays VRRP information. For details, see page 81. Command mode: All
show interface ip Displays IPv4 interface information. For details, see page 81. Command mode: All
show ipv6 interface <i><interface number=""></interface></i> Displays IPv6 interface information. For details, see page 82. Command mode: All
show ipv6 pmtu [< <i>destination IPv6 address</i> >] Displays IPv6 Path MTU information. For details, see page 82. Command mode: All
 show ip interface brief Displays IP 'Information. For details, see page 83. IP information, includes: IP interface information: Interface number, IP address, subnet mask, VLAN number, and operational status. Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status IP forwarding settings, network filter settings, route map settings Command mode: All
show ikev2 Displays IKEv2 information. For more information options, see page 85. Command mode: All
show ipsec manual-policy Displays information about manual key management policy for IP security. For more information options, see page 87. Command mode: All

Table 36. Layer 3 Information Commands (continued)

Command Syntax and Usage

show ip pim component [<1-2>]

Displays Protocol Independent Multicast (PIM) component information. For more PIM information options, see page 88.

Command mode: All

show layer3

Dumps all Layer 3 switch information available (10K or more, depending on your configuration).

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands. **Command mode:** All

© Copyright IBM Corp. 2013

IP Routing Information

Using the commands listed below, you can display all or a portion of the IP routes currently held in the switch.

Table 37. Route Information Commands

shov	/ ip route address < <i>IP address</i> >
C	Displays a single route by destination IP address.
C	Command mode: All
shov	n ip route gateway < <i>IP address</i> >
0	Displays routes to a single gateway.
C	Command mode: All
	<pre>v ip route type {indirect direct local broadcast martian multicast}</pre>
	Displays routes of a single type. For a description of IP routing types, see Table 38 on page 57.
C	Command mode: All
	<pre>v ip route tag {fixed static addr rip ospf bgp broadcast martian multicast}</pre>
	Displays routes of a single tag. For a description of IP routing tags, see Table 39 on page 57.
C	Command mode: All
shov	/ ip route interface <interface number=""></interface>
D	Displays routes on a single interface.
C	Command mode: All
shov	/ ip route ecmphash
0	Displays the current ECMP hashing mechanism.
C	Command mode: All
shov	/ ip route static
E	Displays static routes configured on the switch.
C	Command mode: All
shov	/ ip route
0	Displays all routes configured in the switch.
C	Command mode: All
	or more information, see page 57.

Show All IP Route Information

The following command displays IP route information:

show ip route

Command mode: All

S	tatus code: * - ł	pest				
	Destination	Mask	Gateway	Туре	Tag	Metr If
*	12.0.0.0	255.0.0.0	11.0.0.1	direct	fixed	128
*	12.0.0.1	255.255.255.255	11.0.0.1	local	addr	128
*	12.255.255.255	255.255.255.255	11.255.255.255	broadcast	broadcast	128
*	12.0.0.0	255.0.0.0	12.0.0.1	direct	fixed	12
*	12.0.0.1	255.255.255.255	12.0.0.1	local	addr	12
*	255.255.255.255	255.255.255.255	12.255.255.255	broadcast	broadcast	2
*	224.0.0.0	224.0.0.0	0.0.0.0	martian	martian	
*	224.0.0.5	255.255.255.255	0.0.0.0	multicast	addr	

The following table describes the Type parameters.

Table 38. IP Routing Type Parameters

Parameter	Description The next hop to the host or subnet destination will be forwarded through a router at the Gateway address.				
indirect					
direct	Packets will be delivered to a destination host or subnet attached to the switch.				
local	Indicates a route to one of the switch's IP interfaces.				
broadcast	Indicates a broadcast route.				
martian	The destination belongs to a host or subnet which is filtered out. Packets to this destination are discarded.				
multicast	Indicates a multicast route.				

The following table describes the Tag parameters.

Table 39. IP Routing Tag Parameters

Parameter	Description
fixed	The address belongs to a host or subnet attached to the switch.
static	The address is a static route which has been configured on the CN4093 10Gb Converged Scalable Switch.
addr	The address belongs to one of the switch's IP interfaces.
rip	The address was learned by the Routing Information Protocol (RIP).
ospf	The address was learned by Open Shortest Path First (OSPF).
bgp	The address was learned via Border Gateway Protocol (BGP)

Table 39. IP Routing Tag Parameters (continued)

Parameter	Description
broadcast	Indicates a broadcast address.
martian	The address belongs to a filtered group.
multicast	Indicates a multicast address.

ARP Information

The ARP information includes IP address and MAC address of each entry, address status flags (see Table 41 on page 59), VLAN and port for the address, and port referencing information.

Table 40. ARP Information Commands

show arp	find <ip address=""></ip>
Display	s a single ARP entry by IP address.
Comm	and mode: All
show arp	interface port <pre>port alias or number></pre>
Display	s the ARP entries on a single port.
Comm	and mode: All
show arp	vlan <vlan number=""></vlan>
Display	s the ARP entries on a single VLAN.
Comm	and mode: All
show arp	
Display	s all ARP entries. including:
– IP ad	dress and MAC address of each entry
– Addr	ess status flag (see below)
– The	VLAN and port to which the address belongs
	ports which have referenced the address (empty if no port has routed c to the IP address shown)
For mo	re information, see page 59.
Comm	and mode: All
show arp	reply
Display flags.	s the ARP address list: IP address, IP mask, MAC address, and VLAN
Comm	and mode: All

Show All ARP Entry Information

The following command displays ARP information:

show arp

Command mode: All

IP address	Flags	MAC address	VLAN	Age	Port
12.20.1.1	C	0:15:40:07:20:42	4095	0	INT8
12.20.20.16	C	0:30:13:e3:44:14	4095	2	INT8
12.20.20.18	C	0:30:13:e3:44:14	4095	2	INT6
12.20.23.111	C	0:1f:29:95:f7:e5	4095	6	INT6

The Port field shows the target port of the ARP entry.

The Flags field is interpreted as follows:

Table 41. ARP Dump Flag Parameters

Flag	Description
Р	Permanent entry created for switch IP interface.
R	Indirect route entry.
U	Unresolved ARP entry. The MAC address has not been learned.

ARP Address List Information

The following command displays owned ARP address list information:

show arp reply

205.178.18.66 255.255.255.255 00:70:cf:03:20:04 P 205.178.50.1 255.255.255 00:70:cf:03:20:06 1 205.178.18.64 255.255.255 00:70:cf:03:20:05 1	IP address	IP mask	MAC address	VLAN Pass-Up

	205.178.18.66	255.255.255.255	00:70:cf:03:20:04	l P
205.178.18.64 255.255.255.255 00:70:cf:03:20:05 1	205.178.50.1	255.255.255.255	00:70:cf:03:20:00	5 1
	205.178.18.64	255.255.255.255	00:70:cf:03:20:05	5 1

BGP Information

Table 42. BGP Peer Information Commands

Command Syntax and Usage
show ip bgp neighbor information
Displays BGP peer information.
Command mode: All
See page 61 for a sample output.
show ip bgp neighbor summary
Displays peer summary information such as AS, message received, message sent, up/down, state.
Command mode: All
See page 61 for a sample output.
show ip bgp aggregate-address
Displays BGP peer routes.
Command mode: All
See page 61 for a sample output.
show ip bgp information
Displays the BGP routing table.
Command mode: All
See page 61 for a sample output.

BGP Peer information

Following is an example of the information provided by the following command:

show ip bgp neighbor information

Command mode: All

```
BGP Peer Information:
                    , version 4, TTL 225
 3: 2.1.1.1
   Remote AS: 100, Local AS: 100, Link type: IBGP
   Remote router ID: 3.3.3.3, Local router ID: 1.1.201.5
   BGP status: idle, Old status: idle
   Total received packets: 0, Total sent packets: 0
   Received updates: 0, Sent updates: 0
   Keepalive: 60, Holdtime: 180, MinAdvTime: 60
   LastErrorCode: unknown(0), LastErrorSubcode: unspecified(0)
   Established state transitions: 1
                    , version 4, TTL 225
 4: 2.1.1.4
   Remote AS: 100, Local AS: 100, Link type: IBGP
   Remote router ID: 4.4.4.4, Local router ID: 1.1.201.5
   BGP status: idle, Old status: idle
   Total received packets: 0, Total sent packets: 0
   Received updates: 0, Sent updates: 0
   Keepalive: 60, Holdtime: 180, MinAdvTime: 60
   LastErrorCode: unknown(0), LastErrorSubcode: unspecified(0)
   Established state transitions: 1
```

BGP Summary Information

Following is an example of the information provided by the following command:

show ip bgp neighbor summary

Command mode: All

```
      BGP Peer Summary Information:

      Peer
      V
      AS
      MsgRcvd
      MsgSent
      Up/Down
      State

      1:
      205.178.23.142
      4
      142
      113
      121
      00:00:28
      established

      2:
      205.178.15.148
      0
      148
      0
      0
      never
      connect
```

BGP Peer Routes Information

Following is an example of the information provided by the following command:

show ip bgp aggregate-address

Command mode: All

```
Current BGP aggregation settings:
1: addr 4.2.0.0, mask 255.0.0.0, enabled
2: addr 5.5.0.0, mask 255.255.0.0, enabled
```

Dump BGP Information

Following is an example of the information provided by the following command:

show ip bgp information [<IPv4 network> <IPv4 mask>]

Command mode: All

```
      Status codes: * valid, > best, i - internal

      Origin codes: i - IGP, e - EGP, ? - incomplete

      Network
      Mask

      Next Hop
      Metr LcPrf Wght

      *> 1.1.1.0
      255.255.255.0
      0.0.0.0

      *> 10.100.100.0
      255.255.255.0
      0.0.0.0
      0

      *> 10.100.120.0
      255.255.255.0
      0.0.0.0
      0

      The 13.0.0.0 is filtered out by rrmap; or, a loop detected.
      Image: Complete complet
```

The IPv4 network and mask options restrict the output to a specific network in the BGP routing table.

OSPF Information

Command Syntax and Usage
show ip ospf general-information
Displays general OSPF information.
Command mode: All
See page 64 for a sample output.
show ip ospf area information
Displays area information for all areas.
Command mode: All
show ip ospf area <0-2>
Displays area information for a particular area index.
Command mode: All
show ip ospf interface loopback <1-5>
Displays loopback information for a particular interface. If no parameter is supplied, it displays loopback information for all the interfaces.
Command mode: All
See page 64 for a sample output.
<pre>show interface ip {<interface number="">} ospf</interface></pre>
Displays interface information for a particular interface. If no parameter is supplied, it displays information for all the interfaces.
Command mode: All
See page 64 for a sample output.
show ip ospf area-virtual-link information
Displays information about all the configured virtual links.
Command mode: All

Table 43. OSPF Information Commands

Table 43. OSPF Information Commands (continued)

Com	imand Syntax and Usage
sho	w ip ospf neighbor
	Displays the status of all the current neighbors.
	Command mode: All
sho	w ip ospf summary-range <0-2>
	Displays the list of summary ranges belonging to non-NSSA areas.
	Command mode: All
sho	w ip ospf summary-range-nssa <0-2>
	Displays the list of summary ranges belonging to NSSA areas.
(Command mode: All
sho	w ip ospf routes
	Displays OSPF routing table.
	Command mode: All
:	See page 66 for a sample output.
sho	w ip ospf information
	Displays OSPF information.
	Command mode: All

OSPF General Information

The following command displays general OSPF information:

show ip ospf general-information

Command mode: All

```
OSPF Version 2
Router ID: 10.10.10.1
Started at 1663 and the process uptime is 4626
Area Border Router: yes, AS Boundary Router: no
LS types supported are 6
External LSA count 0
External LSA checksum sum 0x0
Number of interfaces in this router is 2
Number of virtual links in this router is 1
16 new lsa received and 34 lsa originated from this router
Total number of entries in the LSDB 10
Database checksum sum 0x0
Total neighbors are 1, of which
                                  2 are >=INIT state,
                                  2 are >=EXCH state,
                                  2 are =FULL state
Number of areas is 2, of which 3-transit 0-nssa
       Area Id : 0.0.0.0
       Authentication : none
       Import ASExtern : yes
       Number of times SPF ran : 8
       Area Border Router count : 2
       AS Boundary Router count : 0
        LSA count : 5
       LSA Checksum sum : 0x2237B
        Summary : noSummary
```

OSPF Interface Loopback Information

The following command displays OSPF interface loopback information:

show ip ospf interface loopback <interface number>

Command mode: All

```
Ip Address 5.5.5.5, Area 0.0.0.1, Passive interface, Admin Status UP
Router ID 1.1.1.2, State Loopback, Priority 1
Designated Router (ID) 0.0.0.0, Ip Address 0.0.0.0
Backup Designated Router (ID) 0.0.0.0, Ip Address 0.0.0.0
Timer intervals, Hello 10, Dead 40, Wait 40, Retransmit 5, Transit delay
1
Neighbor count is 0 If Events 1, Authentication type none
```

OSPF Interface Information

The following command displays OSPF interface information:

show ip ospf interface <interface number>

```
Ip Address 10.10.12.1, Area 0.0.0.1, Admin Status UP
Router ID 10.10.10.1, State DR, Priority 1
Designated Router (ID) 10.10.10.1, Ip Address 10.10.12.1
Backup Designated Router (ID) 10.10.14.1, Ip Address 10.10.12.2
Timer intervals, Hello 10, Dead 40, Wait 1663, Retransmit 5,
Neighbor count is 1 If Events 4, Authentication type none
```

OSPF Database Information

Table 44. OSPF Database Information Commands

Command Syntax and Usage	
show ip ospf database advertising-router < <i>router ID</i> >	
Takes advertising router as a parameter. Displays all the Link State Advertisements (LSAs) in the LS database that have the advertising router w the specified router ID, for example: 20.1.1.1.	/ith
Command mode: All	
show ip ospf database asbr-summary [advertising-router < <i>router ID</i> > link-state-id < <i>A.B.C.D</i> > self]	
Displays ASBR summary LSAs. The use of this command is as follows:	
a. asbr-summary advertising-router 20.1.1.1 displays ASBR summar LSAs having the advertising router 20.1.1.1.	у
b. asbr-summary link-state-id 10.1.1.1 displays ASBR summary LSA having the link state ID 10.1.1.1.	S
c. asbr-summary self displays the self advertised ASBR summary LSAs.	
d. asbr-summary with no parameters displays all the ASBR summary LSAs	
Command mode: All	
show ip ospf database database-summary	
Displays the following information about the LS database in a table format:	
a. Number of LSAs of each type in each area.	
b. Total number of LSAs for each area.	
c. Total number of LSAs for each LSA type for all areas combined.	
d. Total number of LSAs for all LSA types for all areas combined.	
No parameters are required.	
Command mode: All	
<pre>show ip ospf database external [advertising-router <router id=""></router></pre>	
Displays the AS-external (type 5) LSAs with detailed information of each fie of the LSAs.	ld
Command mode: All	
<pre>show ip ospf database network [advertising-router <router id=""> link-state-id <a.b.c.d> self]</a.b.c.d></router></pre>	_
Displays the network (type 2) LSAs with detailed information of each field of LSA.network LS database.	he
Command mode: All	

Table 44. OSPF Database Information Commands (continued)

ommand Syntax and Usage
how ip ospf database nssa
Displays the NSSA (type 7) LSAs with detailed information of each field of the LSAs.
Command mode: All
how ip ospf database router [advertising-router < <i>router ID</i> > link-state-id < <i>A.B.C.D</i> > self]
Displays the router (type 1) LSAs with detailed information of each field of the LSAs.
Command mode: All
how ip ospf database self
Displays all the self-advertised LSAs. No parameters are required.
Command mode: All
how ip ospf database summary [advertising-router < <i>router ID</i> > link-state-id < <i>A.B.C.D</i> > self]
Displays the network summary (type 3) LSAs with detailed information of each field of the LSAs.
Command mode: All
how ip ospf database
Displays all the LSAs.
Command mode: All

OSPF Information Route Codes

The following command displays OSPF route information:

show ip ospf routes

```
Codes: IA - OSPF inter area,
     N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
      E1 - OSPF external type 1, E2 - OSPF external type 2
IA 10.10.0.0/16 via 200.1.1.2
IA 40.1.1.0/28 via 20.1.1.2
IA 80.1.1.0/24 via 200.1.1.2
IA 100.1.1.0/24 via 20.1.1.2
IA 140.1.1.0/27 via 20.1.1.2
IA 150.1.1.0/28 via 200.1.1.2
E2 172.18.1.1/32 via 30.1.1.2
E2 172.18.1.2/32 via 30.1.1.2
E2 172.18.1.3/32 via 30.1.1.2
E2 172.18.1.4/32 via 30.1.1.2
E2 172.18.1.5/32 via 30.1.1.2
E2 172.18.1.6/32 via 30.1.1.2
E2 172.18.1.7/32 via 30.1.1.2
E2 172.18.1.8/32 via 30.1.1.2
```

OSPFv3 Information

Table 45.	OSPFv3	Information	Options
-----------	--------	-------------	---------

show ipv6 ospf area <area (0-2)="" index=""/>	
Displays the area information.	
Command mode: All	
show ipv6 ospf areas	
Displays the OSPFv3 Area Table.	
Command mode: All	
show ipv6 ospf interface < <i>interface number</i> >	
Displays interface information for a particular interface. If no parameter is supplied, it displays information for all the interfaces. To view a sample displ see page 69.	ay,
Command mode: All	
show ipv6 ospf area-virtual-link	
Displays information about all the configured virtual links.	
Command mode: All	
show ipv6 ospf neighbor <nbr (a.b.c.d)="" router-id=""></nbr>	
Displays the status of a neighbor with a particular router ID. If no router ID i supplied, it displays the information about all the current neighbors.	S
Command mode: All	
show ipv6 ospf host	
Displays OSPFv3 host configuration information.	
Command mode: All	
show ipv6 ospf request-list <nbr (a.b.c.d)="" router-id=""></nbr>	
Displays the OSPFv3 request list. If no router ID is supplied, it displays the information about all the current neighbors.	
Command mode: All	
show ipv6 ospf retrans-list <i><nbr (a.b.c.d)="" router-id=""></nbr></i>	
show ipv6 ospf retrans-list <i><nbr (a.b.c.d)="" router-id=""></nbr></i> Displays the OSPFv3 retransmission list. If no router ID is supplied, it displays the OSPFv3 retransmission list.	ays
<pre>show ipv6 ospf retrans-list <nbr (a.b.c.d)="" router-id=""> Displays the OSPFv3 retransmission list. If no router ID is supplied, it display the information about all the current neighbors.</nbr></pre>	ays
show ipv6 ospf retrans-list <i><nbr (a.b.c.d)="" router-id=""></nbr></i> Displays the OSPFv3 retransmission list. If no router ID is supplied, it displays the OSPFv3 retransmission list.	ays
<pre>show ipv6 ospf retrans-list <nbr (a.b.c.d)="" router-id=""> Displays the OSPFv3 retransmission list. If no router ID is supplied, it display the information about all the current neighbors.</nbr></pre>	ays

Table 45. OSPFv3 Information Options

show ipv6	ospf redist-config
	s OSPFv3 redistribution information to be applied to routes learned a route table.
Comma	ind mode: All
show ipv6	ospf area-range information
Displays	s OSPFv3 summary ranges.
Comma	ind mode: All
show ipv6	ospf routes
Displays	SOSPFv3 routing table. To view a sample display, see page 70.
Comma	nd mode: All
show ipv6	ospf border-routers
Displays	SOSPFv3 routes to an ABR or ASBR.
Comma	nd mode: All
show ipv6	ospf information
Displays	all OSPFv3 information. To view a sample display, see page 68.
	ind mode: All

show ipv6 ospf database inter-prefix [detail hex] Displays Inter-Area Prefix LSAs database information. If no parameter is supplied, it displays condensed information. Command mode: All
show ipv6 ospf database inter-router [detail hex] Displays Inter-Area router LSAs database information. If no parameter is supplied, it displays condensed information. Command mode: All
<pre>show ipv6 ospf database intra-prefix [detail hex] Displays Intra-Area Prefix LSAs database information. If no parameter is supplied, it displays condensed information. Command mode: All</pre>

Table 46. OSPFv3 Database Information Options

Command Syntax and Usage
show ipv6 ospf database link [detail hex]
Displays Link LSAs database information. If no parameter is supplied, it displays condensed information.
Command mode: All
show ipv6 ospf database network [detail hex]
Displays Network LSAs database information. If no parameter is supplied, it displays condensed information.
Command mode: All
show ipv6 ospf database router [detail hex]
Displays the Router LSAs with detailed information of each field of the LSAs. If no parameter is supplied, it displays condensed information.
Command mode: All
show ipv6 ospf database nssa [detail hex]
Displays Type-7 (NSSA) LSA database information. If no parameter is supplied, it displays condensed information.
Command mode: All
show ipv6 ospf database [detail hex]
Displays all the LSAs.
Command mode: All

OSPFv3 Route Codes Information

The following command displays OSPFv3 route information:

show ipv6 ospf routes

Dest/ Prefix-Length	NextHp/ IfIndex	Cost	Rt. Type	Area
5	fe80::290:69ff fe90:b4bf /vlan		interArea	0.0.0.0
3ffe::20:0:0:0 /80	fe80::290:69ff fe90:b4bf /vlan		interArea	0.0.0.0
3ffe::30:0:0:0 /80	:: /vlan	2 10	intraArea	0.0.0
3ffe::60:0:0:6 /128	fe80::211:22ff fe33:4426 /vlan		interArea	0.0.0.0

Routing Information Protocol

Table 47. Routing Information Protocol Commands

Command Syntax and Usage	
show ip rip routes	
Displays RIP routes.	
Command mode: All	
For more information, see page 71.	
show interface ip <i><interface number=""></interface></i> rip	
Displays RIP user's configuration.	
Command mode: All	
For more information, see page 71.	

RIP Routes Information

The following command displays RIP route information:

```
show ip rip routes
```

Command mode: All

```
>> IP Routing#
30.1.1.0/24 directly connected
3.0.0.0/8 via 30.1.1.11 metric 4
4.0.0.0/16 via 30.1.1.11 metric 16
10.0.0.0/8 via 30.1.1.2 metric 3
20.0.0.0/8 via 30.1.1.2 metric 2
```

This table contains all dynamic routes learned through RIP, including the routes that are undergoing garbage collection with metric = 16. This table does not contain locally configured static routes.

RIP Interface Information

The following command displays RIP user information:

show ip rip interface <interface number>

```
RIP USER CONFIGURATION :

RIP: ON, update 30

RIP on Interface 49 : 101.1.1.10, enabled

version 2, listen enabled, supply enabled, default none

poison disabled, split horizon enabled, trigg enabled, mcast enabled, metric 1

auth none,key none
```

IPv6 Routing Information

Table 48 describes the IPv6 Routing information options.

```
Table 48. IPv6 Routing Information Commands
```

Comm	and Syntax and Usage
show	ipv6 route address < <i>IPv6 address</i> >
Di	splays a single route by destination IP address.
Co	ommand mode: All
show	ipv6 route gateway <default address="" gateway=""></default>
Di	splays routes to a single gateway.
Co	ommand mode: All
show	<pre>ipv6 route type {connected static ospf}</pre>
	splays routes of a single type. For a description of IP routing types, see ble 38 on page 57.
Co	ommand mode: All
show	<pre>ipv6 route interface <interface number=""></interface></pre>
Di	splays routes on a single interface.
Co	ommand mode: All
show	ipv6 route summary
Di	splays a summary of IPv6 routing information, including inactive routes.
Co	ommand mode: All
show	ipv6 route
Di	splays all IPv6 routing information. For more information, see page 72.
Co	ommand mode: All

IPv6 Routing Table

The following command displays IPv6 routing information:

show ipv6 route

Note: The first number inside the brackets represents the metric and the second number represents the preference for the route.

IPv6 Neighbor Discovery Cache Information

Table 49. IPv6 Neighbor Discovery Cache Information Commands

show ipv6	neighbors find < <i>IPv6 address</i> >
Shows a	single IPv6 Neighbor Discovery cache entry by IP address.
Comman	d mode: All
show ipv6	neighbors interface port <port alias="" number="" or=""></port>
Shows IP	v6 Neighbor Discovery cache entries on a single port.
Comman	d mode: All
show ipv6	neighbors vlan <i><vlan number=""></vlan></i>
Shows IP	v6 Neighbor Discovery cache entries on a single VLAN.
Comman	d mode: All
show ipv6	neighbors static
Displays	static IPv6 Neighbor Discovery cache entries.
Comman	d mode: All
show ipv6	neighbors
Shows all page 73.	IPv6 Neighbor Discovery cache entries. For more information, see
Comman	d mode: All

IPv6 Neighbor Discovery Cache Information

The following command displays a summary of IPv6 Neighbor Discovery cache information:

show ipv6 neighbors

IPv6 Address	Age	Link-layer Addr	State	IF	VLAN	Port
2001:2:3:4::1	 10	00:50:bf:b7:76:b0	Reachable	2	 1	EXT1
fe80::250:bfff:feb7:76b0	0	00:50:bf:b7:76:b0	Stale	2	1	EXT2

IPv6 Neighbor Discovery Prefix Information

The following command displays a summary of IPv6 Neighbor Discovery prefix information:

show ipv6 prefix

Command mode: All

```
Codes: A - Address , P - Prefix-Advertisement
D - Default , N - Not Advertised
[L] - On-link Flag is set
[A] - Autonomous Flag is set
AD 10:: 64 [LA] Valid lifetime 2592000 , Preferred lifetime 604800
P 20:: 64 [LA] Valid lifetime 200 , Preferred lifetime 100
```

Neighbor Discovery prefix information includes information about all configured prefixes.

The following command displays IPv6 Neighbor Discovery prefix information for an interface:

show ipv6 prefix interface <interface number>

Command mode: All

ECMP Static Route Information

The following command displays Equal Cost Multi-Path (ECMP) route information:

show ip ecmp

Command mode: All

```
      Current ecmp static routes:

      Destination
      Mask
      Gateway
      If
      GW Status

      10.10.1.1
      255.255.255.255
      100.10.1.1
      1
      up

      10.20.2.2
      255.255.255.255
      10.233.3.3
      1
      up

      10.20.2.2
      255.255.255.255
      10.234.4.4
      1
      up

      10.20.2.2
      255.255.255.255
      10.235.5.5
      1
      up
```

ECMP route information shows the status of each ECMP route configured on the switch.

ECMP Hashing Result

The following command displays the status of ECMP hashing on each switch:

show ip route ecmphash

Command mode: All

ECMP Hash Mechanism: dipsip

IGMP Multicast Group Information

Table 50.	IGMP Multicast Group Information Commands
-----------	---

show ip igmp querier vlan < <i>VLAN number></i> Displays IGMP Querier information. For details, see page 76. Command mode: All show ip igmp snoop Displays IGMP Snooping information. Command mode: All show ip igmp relay Displays IGMP Relay information. Command mode: All show ip igmp mrouter information Displays IGMP Multicast Router information. For details, see page 78 Command mode: All show ip igmp mrouter vlan < <i>VLAN number></i> Displays IGMP Multicast Router information for the specified VLAN. Command mode: All show ip igmp filtering Displays current IGMP Filtering parameters. Command mode: All show ip igmp profile < <i>1-16></i> Displays information about the current IGMP filter. Command mode: All show ip igmp profile < <i>1-16></i> Displays information about the current IGMP filter.	ommand Syntax and Usage	
Command mode: All show ip igmp snoop Displays IGMP Snooping information. Command mode: All show ip igmp relay Displays IGMP Relay information. Command mode: All show ip igmp mrouter information Displays IGMP Multicast Router information. For details, see page 78 Command mode: All show ip igmp mrouter vlan <i>VLAN number></i> Displays IGMP Multicast Router information for the specified VLAN. Command mode: All show ip igmp filtering Displays current IGMP Filtering parameters. Command mode: All show ip igmp profile <i>I-16></i> Displays information about the current IGMP filter. Command mode: All show ip igmp groups address <i>IP address></i>	how ip igmp querier vlan < <i>VLAN number</i> >	
show ip igmp snoop Displays IGMP Snooping information. Command mode: All show ip igmp relay Displays IGMP Relay information. Command mode: All show ip igmp mrouter information Displays IGMP Multicast Router information. For details, see page 78 Command mode: All show ip igmp mrouter vlan <i><vlan number=""></vlan></i> Displays IGMP Multicast Router information for the specified VLAN. Command mode: All show ip igmp filtering Displays current IGMP Filtering parameters. Command mode: All show ip igmp profile <i><1-16></i> Displays information about the current IGMP filter. Command mode: All show ip igmp groups address <i><ip address=""></ip></i>	Displays IGMP Querier information. For details, see page 76.	
Displays IGMP Snooping information. Command mode: All show ip igmp relay Displays IGMP Relay information. Command mode: All show ip igmp mrouter information Displays IGMP Multicast Router information. For details, see page 78 Command mode: All show ip igmp mrouter vlan <vlan number=""> Displays IGMP Multicast Router information for the specified VLAN. Command mode: All show ip igmp filtering Displays current IGMP Filtering parameters. Command mode: All show ip igmp profile <1-16> Displays information about the current IGMP filter. Command mode: All show ip igmp groups address <1P address></vlan>	Command mode: All	
Command mode: All show ip igmp relay Displays IGMP Relay information. Command mode: All show ip igmp mrouter information Displays IGMP Multicast Router information. For details, see page 78 Command mode: All show ip igmp mrouter vlan <vlan number=""> Displays IGMP Multicast Router information for the specified VLAN. Command mode: All show ip igmp filtering Displays current IGMP Filtering parameters. Command mode: All show ip igmp profile <1-16> Displays information about the current IGMP filter. Displays current IGMP Filtering parameters. Command mode: All show ip igmp profile <1-16> Displays information about the current IGMP filter. Command mode: All show ip igmp groups address <1P address>	Command mode: All	
Command mode: All show ip igmp profile <1-16> Displays information about the current IGMP filter. Command mode: All show ip igmp groups address <1P address>	how ip igmp filtering	
<pre>show ip igmp profile <1-16> Displays information about the current IGMP filter. Command mode: All show ip igmp groups address <1P address></pre>	Displays current IGMP Filtering parameters.	
Displays information about the current IGMP filter. Command mode: All show ip igmp groups address < <i>IP address</i> >	Command mode: All	
Command mode: All show ip igmp groups address < <i>IP address</i> >	how ip igmp profile <1-16>	
show ip igmp groups address < <i>IP address</i> >	Displays information about the current IGMP filter.	
	Command mode: All	
	how ip igmp groups address < <i>IP address</i> >	

Comm	and Syntax and Usage
show	ip igmp groups vlan <i><vlan number=""></vlan></i>
Dis	splays all IGMP multicast groups on a single VLAN.
Co	mmand mode: All
show	ip igmp groups interface port <pre>port alias or number></pre>
Di	splays all IGMP multicast groups on a single port.
Co	mmand mode: All
show	ip igmp groups portchannel <i><trunk number=""></trunk></i>
Di	splays all IGMP multicast groups on a single trunk group.
Co	mmand mode: All
show	ip igmp groups detail <i><ip address=""></ip></i>
	splays details about an IGMP multicast group, including source and timer
	ormation.
Co	mmand mode: All
show	ip igmp groups
Dis	splays information for all multicast groups. For details, see page 77.
Co	mmand mode: All
show	ip igmp ipmcgrp
Dis	splays information for all IPMC groups. For details, see page 78.
Co	mmand mode: All
show	ip igmp counters
Dis	splays IGMP counters for all VLANs.
Co	mmand mode: All
show	ip igmp vlan <i><vlan number=""></vlan></i> counter
Dis	splays IGMP counters for a specific VLAN.

Table 50. IGMP Multicast Group Information Commands (continued)

IGMP Querier Information

The following command displays IGMP Querier information:

```
show ip igmp querier vlan <VLAN number>
```

Command mode: All

```
Current IGMP Querier information:
IGMP Querier information for vlan 1:
Other IGMP querier - none
Switch-querier enabled, current state: Querier
Switch-querier type: Ipv4, address 0.0.0.0,
Switch-querier general query interval: 125 secs,
Switch-querier max-response interval: 100 'tenths of secs',
Switch-querier startup interval: 31 secs, count: 2
Switch-querier robustness: 2
IGMP configured version is v3
IGMP Operating version is v3
```

IGMP Querier information includes:

- VLAN number
- Querier status
 - Other IGMP querier-none
 - IGMP querier present, address: (IP or MAC address)
 Other IGMP querier present, interval (minutes:seconds)
- Querier election type (IPv4 or MAC) and address
- Query interval
- Querier startup interval
- Maximum query response interval
- Querier robustness value
- Other IGMP querier present, interval (minutes:seconds)
- IGMP Querier current state: Querier/Non-Querier
- IGMP version number

IGMP Group Information

The following command displays IGMP Group information:

show ip igmp groups

Command mode: All

Source Group VLAN Port Version Mode Expires Fwd 10.1.1.1 232.1.1.1 2 EXT4 V3 INC 4:16 Yes 10.1.1.5 232.1.1.1 2 EXT4 V3 INC 4:16 Yes * 232.1.1.1 2 EXT4 V3 INC 4:16 Yes * 232.1.1.1 2 EXT4 V3 INC - No 10.10.10.43 235.0.0.1 9 EXT1 V3 INC 2:26 Yes * 236.0.0.1 9 EXT1 V3 EXC - Yes	Note: Local g	roups (224.0.0.x)	are not	snooped	/relayed	and wil	l not app	ear.
10.1.1.5 232.1.1.1 2 EXT4 V3 INC 4:16 Yes * 232.1.1.1 2 EXT4 V3 INC - No 10.10.10.43 235.0.0.1 9 EXT1 V3 INC 2:26 Yes	Source	Group	VLAN	Port	Version	Mode	Expires	Fwd
10.1.1.5 232.1.1.1 2 EXT4 V3 INC 4:16 Yes * 232.1.1.1 2 EXT4 V3 INC - No 10.10.10.43 235.0.0.1 9 EXT1 V3 INC 2:26 Yes								
* 232.1.1.1 2 EXT4 V3 INC - No 10.10.10.43 235.0.0.1 9 EXT1 V3 INC 2:26 Yes	10.1.1.1	232.1.1.1	2	EXT4	V3	INC	4:16	Yes
10.10.10.43 235.0.0.1 9 EXT1 V3 INC 2:26 Yes	10.1.1.5	232.1.1.1	2	EXT4	V3	INC	4:16	Yes
	*	232.1.1.1	2	EXT4	V3	INC	-	No
* 236.0.0.1 9 EXT1 V3 EXC - Yes	10.10.10.43	235.0.0.1	9	EXT1	V3	INC	2:26	Yes
	*	236.0.0.1	9	EXT1	V3	EXC	-	Yes

IGMP Group information includes:

- IGMP source address
- IGMP Group address
- VLAN and port
- IGMP version
- IGMPv3 filter mode

- Expiration timer value
- IGMP multicast forwarding state

IGMP Multicast Router Information

The following command displays Mrouter information:

show ip igmp mrouter information

Command mode: All

SrcIP	VLAN	Port	Version	Expires	MRT	QRV	QQIC	
10.1.1.1	2	EXT4	V3	4:09	128	2	125	
10.1.1.5	2	EXT6	V2	4:09	125	-	-	
10.10.10.43	9	EXT7	V2	static	unknown	-	-	

IGMP Mrouter information includes:

- Source IP address
- · VLAN and port where the Mrouter is connected
- IGMP version
- Mrouter expiration
- · Maximum query response time
- Querier's Robustness Variable (QRV)
- Querier's Query Interval Code (QQIC)

IPMC Group Information

The following command displays IGMP IPMC group information:

show ip igmp ipmcgrp

Command mode: All

Total number of di	splayed ipmo	groups:	4			
Legend(possible va	lues in Type	e column)	:			
SH - static host	DR - dyr	namic reg	istered			
SP - static primar	y DU - dyr	namic unr	egistere	d		
SB - static backup	M - mro	outer				
0 - other						
Source	Group	Vlan	Port	Туре С	[imeleft]	
				===		
* 23	2.0.0.1	1	-	DU	6 sec	
* 23	2.0.0.2	1	-	DU	6 sec	
* 23	2.0.0.3	1	-	DU	6 sec	
* 23	2.0.0.4	1	-	DU	6 sec	

IGMP IPMC Group information includes:

- IGMP source address
- IGMP group address
- · VLAN and port
- Type of IPMC group

Expiration timer value

MLD information

Table 51 describes the commands used to view Multicast Listener Discovery (MLD) information.

Table 51. MLD Information Commands

show i	pv6 mld groups
Disp	plays MLD multicast group information.
Cor	nmand mode: All
show i	pv6 mld groups address < <i>IPv6 address</i> >
Disp	plays group information for the specified IPv6 address.
Cor	nmand mode: All
show i	pv6 mld groups interface port <pre>port alias or number></pre>
Disp	plays MLD groups on a single interface port.
Cor	nmand mode: All
show i	pv6 mld groups portchannel <trunk group="" number=""></trunk>
Disp	plays groups on a single port channel.
Cor	nmand mode: All
show i	pv6 mld groups vlan <vlan number=""></vlan>
Disp	plays groups on a single VLAN.
Cor	nmand mode: All
show i	pv6 mld mrouter
Dist	plays all MLD Mrouter ports. See page 80 for sample output.

MLD Mrouter Information

The following command displays MLD Mrouter information:

show ipv6 mld mrouter

Command mode: All

```
Source: fe80:0:0:0200:14ff:fea8:40c9
Port/Vlan: 26/4
Interface: 3
QRV: 2 QQIC:125
Maximum Response Delay: 1000
Version: MLDv2 Expires:1:02
```

The following table describes the MLD Mrouter information displayed in the output.

Statistic	Description
Source	Displays the link-local address of the reporter.
Port/Vlan	Displays the port/vlan on which the general query is received.
Interface	Displays the interface number on which the general query is received.
QRV	Displays the Querier's robustness variable value.
QQIC	Displays the Querier's query interval code.
Maximum Response Delay	Displays the configured maximum query response time.
Version	Displays the MLD version configured on the interface.
Expires	Displays the amount of time that must pass before the multicast router decides that there are no more listeners for a multicast address or a particular source on a link.

VRRP Information

Virtual Router Redundancy Protocol (VRRP) support on CN4093 10Gb Converged Scalable Switch provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

The following command displays VRRP information:

show ip vrrp information

Command mode: All

```
VRRP information:
    1: vrid 2, 205.178.18.210, if 1, renter, prio 100, master
    2: vrid 1, 205.178.18.202, if 1, renter, prio 100, backup
    3: vrid 3, 205.178.18.204, if 1, renter, prio 100, master
```

When virtual routers are configured, you can view the status of each virtual router using this command. VRRP information includes:

- Virtual router number
- Virtual router ID and IP address
- Interface number
- Ownership status
 - owner identifies the preferred master virtual router. A virtual router is the owner when the IP address of the virtual router and its IP interface are the same.
 - renter identifies virtual routers which are not owned by this device.
- Priority value. During the election process, the virtual router with the highest priority becomes master.
- Activity status
 - master identifies the elected master virtual router.
 - backup identifies that the virtual router is in backup mode.
 - init identifies that the virtual router is waiting for a startup event.
 For example, once it receives a startup event, it transitions to master if its priority is 255, (the IP address owner), or transitions to backup if it is not the IP address owner.

Interface Information

The following command displays interface information:

show interface ip

```
Interface information:

1: IP4 172.31.35.5 255.255.0.0 172.31.255.255, vlan 1, up

128: IP4 10.90.90.97 255.255.0 10.90.90.255, vlan 4095, up
```

For each interface, the following information is displayed:

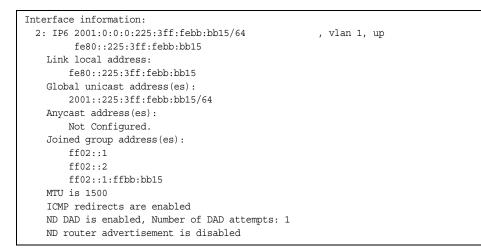

- IPv4 interface address and subnet mask
- IPv6 address and prefix
- VLAN assignment
- Status (up, down, disabled)

IPv6 Interface Information

The following command displays IPv6 interface information:

show ipv6 interface <interface number>

Command mode: All

For each interface, the following information is displayed:

- IPv6 interface address and prefix
- VLAN assignment
- Status (up, down, disabled)
- Path MTU size
- Status of ICMP redirects
- Status of Neighbor Discovery (ND) Duplicate Address Detection (DAD)
- Status of Neighbor Discovery router advertisements

IPv6 Path MTU Information

The following command displays IPv6 Path MTU information:

show ipv6 pmtu [<destination IPv6 address>]

Path MTU Discovery info:					
Max Cache Entry Number : 10					
Current Cache Entry Number: 2					
Cache Timeout Interval : 10 minutes					
Destination Address	Since	PMTU			
5000:1::3	00:02:26	1400			
FE80::203:A0FF:FED6:141D	00:06:55	1280			

Path MTU Discovery information provides information about entries in the Path MTU cache. The PMTU field indicates the maximum packet size in octets that can successfully traverse the path from the switch to the destination node. It is equal to the minimum link MTU of all the links in the path to the destination node.

IP Information

The following command displays Layer 3 information:

show ip interface brief

	IP information:
	AS number 0
	Interface information:
	126: IP6 0:0:0:0:0:0:0/0 , vlan 4095, up
	fe80::200:ff:fe00:ef
	128: IP4 9.43.95.121 255.255.255.0 9.43.95.255, vlan 4095, up
	Loopback interface information:
	Default gateway information: metric strict
	4: 9.43.95.254, FAILED
	Default IP6 gateway information:
	Current BOOTP relay settings: OFF
	Global servers:
	Server 1 address 0.0.0.0
	Server 2 address 0.0.0.0
	Server 3 address 0.0.0.0
	Server 4 address 0.0.0.0
	Server 5 address 0.0.0.0
	Current IP forwarding settings: ON, dirbr disabled, icmprd disabled
	current if forwarding sectings. ON, diffi disabled, fompid disabled
	Current network filter settings:
	none
	Current route map settings:
	RIP is disabled.
	OSPF is disabled.
ļ	
ļ	OSPFv3 is disabled.
	BGP is disabled.

IP information includes:

- IP interface information: Interface number, IP address, subnet mask, broadcast address, VLAN number, and operational status.
- Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status
- BootP relay settings
- IP forwarding settings, including the forwarding status of directed broadcasts, and the status of ICMP re-directs
- Network filter settings, if applicable
- Route map settings, if applicable

DHCP Snooping Binding Table Information

The following command displays the DHCP binding table:

show ip dhcp snooping binding

Command mode: All

Mac Address	IP Address	Lease(seconds)	Туре	VLAN	Interface		
00:00:01:00:02:01	10.0.0.1	1600	dynamic	100	port 1		
02:1c:5f:d1:18:9c	210.38.197.63	86337	Static	127	1		
06:51:4d:e6:16:2d	194.116.155.190	86337	Static	105	1		
08:69:0f:1d:ba:3d	40.90.17.26	86337	Static	150	1		
08:a2:6d:00:36:56	40.194.18.213	86337	Static	108	1		
0e:a7:f8:a2:74:2c	130.254.47.129	86337	Static	171	1		
0e:b7:64:02:97:7c	35.92.27.110	86337	Static	249	1		
0e:f7:5b:6a:74:d8	75.179.93.39	86337	Static	232	1		
Total number of bindings: 8							

The DHCP Snooping binding table displays information for each entry in the table. Each entry has a MAC address, an IP address, the lease time, the interface to which the entry applies, and the VLAN to which the interface belongs.

IKEv2 Information

The following table lists commands that display information about IKEv2.

```
Table 53. IKEv2 Information Commands
```

how ikev2	
Displays all IKEv2 information. See page 86 for sample output.	
Command mode: All	
how ikev2 ca-cert	
Displays the CA certificate.	
Command mode: All	
how ikev2 host-cert	
Displays the host certificate.	
Command mode: All	
how ikev2 identity	
Displays IKEv2 identity information.	
Command mode: All	
how ikev2 preshare-key	
Displays the IKEv2 preshare key.	
Command mode: All	
how ikev2 proposal	
Displays the IKEv2 proposal.	
Command mode: All	
how ikev2 retransmit-interval	
Displays the IKEv2 retransmit interval.	
Command mode: All	
how ikev2 sa	
Displays the IKEv2 SA.	
Command mode: All	

IKEv2 Information Dump

The following command displays IKEv2 information:

show ikev2

Command mode: All

IKEv2 retransmit time:	20
IKEv2 cookie notification:	disable
IKEv2 authentication method:	Pre-shared key
IKEv2 proposal:	
Cipher:	3des
Authentication:	shal
DH Group:	dh-2
Local preshare key:	ibm123
IKEv2 choose IPv6 address as No SAD entries.	ID type

IKEv2 information includes:

- IKEv2 retransmit time, in seconds.
- Whether IKEv2 cookie notification is enabled.
- The IKEv2 proposal in force. This includes the encryption algorithm (cipher), the authentication algorithm type, and the Diffie-Hellman (DH) group, which determines the strength of the key used in the key exchange process. Higher DH group numbers are more secure but require additional time to compute the key.
- The local preshare key.
- Whether IKEv2 is using IPv4 or IPv6 addresses as the ID type.
- Security Association Database (SAD) entries, if applicable.

IPsec Information

The following table describes the commands used to display information about IPsec.

Table 54. IPsec Information Commands

Command Syntax and Usage	
show ipsec sa Displays all security association information Command mode: All	n.
show ipsec spd Displays all security policy information. Command mode: All	
show ipsec dynamic-policy < <i>I-10</i> > Displays dynamic policy information. Command mode: All	
show ipsec manual-policy <1-10> Displays manual policy information. See p Command mode: All	age 88 for sample output.
show ipsec transform-set <1-10> Displays IPsec transform set information. Command mode: All	
show ipsec traffic-selector <1-10> Displays IPsec traffic selector information Command mode: All	

IPsec Manual Policy Information

The following command displays IPsec manual key management policy information:

show ipsec manual-policy

Command mode: All

```
IPsec manual policy 1IP Address:2002:0:0:0:0:0:151Associated transform ID:1Associated traffic selector ID:1IN-ESP SPI:9900IN-ESP encryption KEY:3456789abcdef012IN-ESP authentication KEY:23456789abcdef0123456789abcdef0123456789OUT-ESP encryption KEY:6789abcdef012345OUT-ESP authentication KEY:56789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456789abcdef0123456
```

IPsec manual policy information includes:

- The IP address of the remote peer
- · The transform set ID associated with this policy
- · Traffic selector ID associated with this policy
- ESP inbound SPI
- ESP inbound encryption key
- ESP inbound authentication key
- ESP outbound SPI
- ESP outbound encryption key
- ESP outbound authentication key
- · The interface to which this manual policy has been applied

PIM Information

Table 55. PIM Information Options

Command Syntax and Usage			
show ip pim bsr [<component id="">]</component>			
Displays information about the PIM bootstrap router (BSR).			
Command mode: All			
show ip pim component [<component (1-2)="" id="">]</component>			
Displays PIM component information. For details, see page 90.			
Command mode: All			
<pre>show ip pim interface [<interface number=""> detail port <port number="">]</port></interface></pre>			
Displays PIM interface information. To view sample output, see page 90.			
Command mode: All			

Table 55. PIM Information Options (continued)

Command Syntax and Usage
show ip pim neighbor [<interface number=""> port <port number="">]</port></interface>
Displays PIM neighbor information. To view sample output, see page 91.
Command mode: All
show ip pim neighbor-filters
Displays information about PIM neighbor filters.
Command mode: All
show ip pim mroute [<componentid> count flags </componentid>
group <multicast address="" group=""></multicast>
<pre>inteface {<interface number=""> port <port number="">} source <multicast address="" source="">]</multicast></port></interface></pre>
Displays information about PIM multicast routes. For more information about
displaying PIM multicast route information, see page 91.
Command mode: All
show ip pim rp-candidate [< <i>component ID</i> >]
Displays a list of the candidate Rendezvous Points configured.
Command mode: All
show ip pim rp-set [<rp address="" ip="">]</rp>
Displays a list of the Rendezvous Points learned.
Command mode: All
show ip pim rp-static [< <i>component ID</i> >]
Displays a list of the static Rendezvous Points configured.
Command mode: All
show ip pim elected-rp [group <multicast address="" group="">]</multicast>
Displays a list of the elected Rendezvous Points.
Command mode: All

PIM Component Information

The following command displays Protocol Independent Multicast (PIM) component information:

show ip pim component [<component ID>]

Command mode: All

```
PIM Component Information
Component-Id: 1
PIM Mode: sparse, PIM Version: 2
Elected BSR: 0.0.0.0
Candidate RP Holdtime: 0
```

PIM component information includes the following:

- Component ID
- Mode (sparse, dense)
- PIM Version
- Elected Bootstrap Router (BSR) address
- · Candidate Rendezvous Point (RP) hold time, in seconds

PIM Interface Information

The following command displays information about PIM interfaces:

show ip pim interface

Command mode: All

Address	IfName/IfId	Ver/Mode		Qry Interval	DR-Address	DR-Prio
40.0.0.3	net4/4	2/Sparse	1	30	40.0.0.3	1
50.0.0.3	net5/5	2/Sparse	0	30	50.0.0.3	1

PIM interface information includes the following for each PIM interface:

- IP address
- Name and ID
- Version and mode
- Neighbor count
- Query interval
- Designated Router address
- Designated Router priority value

PIM Neighbor Information

The following command displays PIM neighbor information:

show ip pim neighbor

Command mode: All

Neighbour Address	IfName/Idx	Uptime/Expiry	Ver	DRPri/Mode	CompId	Override Interval	Lan Delay
40.0.0.2	net4/4	00:00:37/79	v2	1/S	1	0	0
40.0.0.4	net1/160	00:03:41/92	v2	32/S	20	0	0

PIM neighbor information includes the following:

- Neighbor IP address, interface name, and interface ID
- Name and ID of interface used to reach the PIM neighbor
- Up time (the time since this neighbor became the neighbor of the local router)
- Expiry Time (the minimum time remaining before this PIM neighbor expires)
- Version number
- Designated Router priority and mode
- Component ID
- Override interval
- LAN delay interval

PIM Multicast Route Information Commands

Table 56. PIM Multicast Route Information Options

Command Syntax and Usage
show ip pim mroute [< <i>component ID</i> >] Displays PIM multicast routes for the selected component. Command mode: All
 show ip pim mroute flags [s] [r] [w] Displays PIM multicast routes based on the selected entry flags. Enter flags in any combination: – S: Shortest Path Tree (SPT) bit – R: Rendezvous Point Tree (RPT) bit – W: Wildcard bit Command mode: All
show ip pim mroute group < <i>multicast group IP address</i> > Displays PIM multicast routes for the selected multicast group. Command mode: All
show ip pim mroute interface <i><interface number=""></interface></i> Displays PIM multicast routes for the selected incoming IP interface. Command mode: All

Table 56. PIM Multicast Route Information Options (continued)

show ip	pim mroute source <multicast address="" ip="" source=""></multicast>	
Displa	ys PIM multicast routes for the selected source IP address.	
Comm	and mode: All	
show ip	pim mroute count	
Displa	ys a count of PIM multicast routes of each type.	
Comm	and mode: All	
show ip	pim mroute	
Displa	ys information about all PIM multicast routes.	
Comm	and mode: All	

PIM Multicast Route Information

The following command displays PIM multicast route information:

```
show ip pim mroute
```

Quality of Service Information

Table 57. QoS Information Options

show qos tr	ansmit-queue
Displays m queue wei	apping of 802.1p value to Class of Service queue number, and COS ght value.
Command	I mode: All
show qos tr	ansmit-queue information
Displays a	I 802.1p information.
Command	I mode: All
For details	, see page 93.
show qos ra	ndom-detect
Displays V	/RED ECN information.
Command	I mode: All

802.1p Information

The following command displays 802.1p information:

show qos transmit-queue information

Curren	t priority	to CO	S queue	information:
Priori	ty COSq	Weight		
0	0	1		
1	1	2		
2	2	3		
3	3	4		
4	4	5		
5	5	7		
6	6	15		
7	7	0		
Curren	t port pri	lority :	informat	ion:
Port	Priority	COSq	Weight	
INT1	0	0	1	
INT2	0	0	1	
MGT1	0	0	1	
MGT2	0	0	1	
EXT1	0	0	1	
EXT2	0	0	1	
EXT3	0	0	1	
EXT4	0	0	1	

The following table describes the IEEE 802.1p priority-to-COS queue information.

Table 58. 802.1p Priority-to-COS Queue Parameter Descriptions

Parameter	Description
Priority	Displays the 802.1p Priority level.
COSq	Displays the Class of Service queue.
Weight	Displays the scheduling weight of the COS queue.

The following table describes the IEEE 802.1p port priority information.

Table 59. 802.1p Port Priority Parameter Descriptions

Parameter	Description
Port	Displays the port alias.
Priority	Displays the 802.1p Priority level.
COSq	Displays the Class of Service queue.
Weight	Displays the scheduling weight.

WRED and ECN Information

The following command displays WRED and ECN information:

show qos random-detect

Global	ECN:	and ecn Disable Disable	configurati	ion:				
WRED	-		-	-	-	-	nrNonTcpDrate	
0	TQ0:	Dis	0	0	0	0	0	
	TQ1:	Dis	0	0	0	0	0	
0	TQ2:	Dis	0	0	0	0	0	
0	TQ3:	Dis	0	0	0	0	0	
0	TQ4:	Dis	0	0	0	0	0	
0	TQ5:	Dis	0	0	0	0	0	
0	TQ6:	Dis	0	0	0	0	0	
0	TQ7:	Dis	0	0	0	0	0	
0								

Access Control List Information Commands

Table 60. ACL Information Options

Command Syntax and Usage	
show access-control list <acl number=""></acl>	
Displays ACL list information. For details, see page 96.	
Command mode: All	
show access-control list6 <acl number=""></acl>	
Displays IPv6 ACL list information.	
Command mode: All	
show access-control group <acl group="" number=""></acl>	
Displays ACL group information.	
Command mode: All	
show access-control vmap < <i>VMAP number</i> >	
Displays VMAP information.	
Command mode: All	

Access Control List Information

The following command displays Access Control List (ACL) information:

show access-control list <ACL number>

Command mode: All

Current ACL info	ormation:
Eilter 2 profi	
Filter 2 profi Ethernet	lie:
- VID	: 2/0xfff
Actions	: Permit
Statistics	: enabled

Access Control List (ACL) information includes configuration settings for each ACL and ACL Group.

Table 61. ACL Parameter Descriptions

Parameter	Description
Filter x profile	Indicates the ACL number.
Actions	Displays the configured action for the ACL.
Statistics	Displays the status of ACL statistics configuration (enabled or disabled).

OpenFlow Information

The following commands display OpenFlow information.

Table 62. OpenFlow Information Options

 show openflow [flow-allocation information statistics table] Displays the current OpenFlow configuration. For more information, see page 98. flow-allocation displays the configured, current and maximum number of flows for each OpenFlow instance. For more information, see page 98. information displays the configuration for each OpenFlow instance. For more information, see page 99. statistics displays traffic statistics for each OpenFlow instance. For
 page 98. flow-allocation displays the configured, current and maximum number of flows for each OpenFlow instance. For more information, see page 98. information displays the configuration for each OpenFlow instance. For more information, see page 99.
 number of flows for each OpenFlow instance. For more information, see page 98. information displays the configuration for each OpenFlow instance. For more information, see page 99.
more information, see page 99.
- statistics displays traffic statistics for each OpenFlow instance. For
more information see page 202.
 table displays the basic and emergency flow tables for each OpenFlow instance. For more information, see page 100
Command mode: All
<pre>show openflow instance <1-2> [information statistics table] Displays OpenFlow information for the specified instance ID:</pre>
Command mode: All

OpenFlow Global Configuration Information

The following command displays the global OpenFlow configuration parameters for all instances:

show openflow

Command mode: All

```
Protocol Version: 1
Openflow State: Enabled
FDB Table Priority: 1000
Openflow Instance ID: 1
   state: enabled , buffering: disabled
   retry 4, emergency time-out 30
   echo req interval 30, echo reply time-out 15
   min-flow-timeout : 0, use controller provided values.
   max flows acl
                         : Maximum Available
   max flows unicast fdb : Maximum Available
   max flows multicast fdb : Maximum Available
   emergency feature: enabled
   Controller Id: 1
       Not Active Controller
       IP Address: 10.10.10.10, port: 6633, Mgt-Port
Openflow instance 2 is currently disabled
Openflow Edge ports : None
Openflow Management ports : None
```

OpenFlow Flow Allocation Information

The following command displays the OpenFlow flow allocation for all instances:

show openflow flow-allocation

Flow Allocation Information	
Instance 1	
Maximum ACL Count Configured :	Maximum Available
Maximum Unicast FDB Count Configured :

RMON History Information

The following command displays RMON History information:

show rmon history

Command mode: All

RMON H	History group configuration:			
Index	IFOID	Interval	Rbnum	Gbnum
1	1.3.6.1.2.1.2.2.1.1.24	30	5	5
2	1.3.6.1.2.1.2.2.1.1.22	30	5	5
3	1.3.6.1.2.1.2.2.1.1.20	30	5	5
4	1.3.6.1.2.1.2.2.1.1.19	30	5	5
5	1.3.6.1.2.1.2.2.1.1.24	1800	5	5
Index	Owner			
				-
1	dan			

The following table describes the RMON History Information parameters.

Parameter	Description
Table 64. RMON H	istory Parameter Descriptions

Parameter	Description
Index	Displays the index number that identifies each history instance.
IFOID	Displays the MIB Object Identifier.
Interval	Displays the time interval for each sampling bucket.
Rbnum	Displays the number of requested buckets, which is the number of data slots into which data is to be saved.
Gbnum	Displays the number of granted buckets that may hold sampled data.
Owner	Displays the owner of the history instance.

RMON Alarm Information

The following command displays RMON Alarm information:

show rmon alarm

Command mode: All

RMON A	larm grou	p configu	ration:						
Index	Interval	Sample	Туре	rLimit		fLimit		last	value
1	1800	abs	either		0		0		7822
Index	rEvtIdx	fEvtIdx			OID				
1	0	0	1.3.6.1.2	2.1.2.2.1.1	L0.1				
Index			Owner						
1	dan								

The following table describes the RMON Alarm Information parameters.

Parameter	Description
Index	Displays the index number that identifies each alarm instance.
Interval	Displays the time interval over which data is sampled and compared with the rising and falling thresholds.
Sample	 Displays the method of sampling the selected variable and calculating the value to be compared against the thresholds, as follows: abs-absolute value, the value of the selected variable is compared directly with the thresholds at the end of the sampling interval.
	 delta-delta value, the value of the selected variable at the last sample is subtracted from the current value, and the difference compared with the thresholds.
Туре	 Displays the type of alarm, as follows: falling-alarm is triggered when a falling threshold is crossed. rising-alarm is triggered when a rising threshold is crossed. either-alarm is triggered when either a rising or falling
rLimit	threshold is crossed.
	Displays the rising threshold for the sampled statistic.
fLimit	Displays the falling threshold for the sampled statistic.
Last value	Displays the last sampled value.

Table 65. RMON Alarm Parameter Descriptions

Parameter	Description
rEvtldx	Displays the rising alarm event index that is triggered when a rising threshold is crossed.
fEvtIdx	Displays the falling alarm event index that is triggered when a falling threshold is crossed.
OID	Displays the MIB Object Identifier for each alarm index.
Owner	Displays the owner of the alarm instance.

Table 65. RMON Alarm Parameter Descriptions (continued)

RMON Event Information

The following command displays RMON Alarm information:

show rmon event

Command mode: All

RMON I	Event	group	con	figu	rat	ion:
Index	Туре	Las	st S	ent		Description
1	both	0D:	OH:	1M:	20S	Event_1
2	none	0D:	0H:	0M:	0S	Event_2
3	log	0D:	0H:	0M:	0S	Event_3
4	trap	0D:	0H:	0M:	0S	Event_4
5	both	0D:	0H:	0M:	0S	Log and trap event for Link Down
10	both	0D:	0H:	0M:	0S	Log and trap event for Link Up
11	both	0D:	0H:	0M:	0S	Send log and trap for icmpInMsg
15	both	0D:	0H:	0M:	0S	Send log and trap for icmpInEchos
Index						Owner
1	dan					

The following table describes the RMON Event Information parameters.

Table 66. RMON Event Parameter Descriptions

Parameter	Description
Index	Displays the index number that identifies each event instance.
Туре	Displays the type of notification provided for this event, as follows: none, log, trap, both.
Last sent	Displays the time that passed since the last switch reboot, when the most recent event was triggered. This value is cleared when the switch reboots.
Description	Displays a text description of the event.
Owner	Displays the owner of the alarm instance.

Link Status Information

The following command displays link information:

show interface status [<port alias or number>]

Command mode: All

		-	-			Link	Name

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of BladeCenter unit that you are using and the firmware versions and options that are installed.

Use this command to display link status information about each port on the CN4093, including:

- Port alias and port number
- Port speed and Duplex mode (half, full, any)
- Flow control for transmit and receive (no, yes, or both)
- Link status (up, down, or disabled)

The following display shows link status when Bridge Module connections are enabled:

Alias	Port	Speed	Duplex	Flow	Ctrl	Link		
			<u>.</u> 		RX			
INT1	1	10000	full	ves	yes	down		
INT2	2	10000	full	yes	yes	down

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of BladeCenter unit that you are using and the firmware versions and options that are installed.

Port information includes:

- Port alias and number
- Whether the port uses VLAN tagging or not (y or n)
- Whether the port is internal, external or used for management
- Whether the port has Remote Monitoring (RMON) enabled
- Whether the port has FDB Learning enabled (Lrn)
- Whether the port has Port Flooding enabled (Fld)
- Port VLAN ID (PVID)

- Port description
- VLAN membership

Port Transceiver Status

The following command displays the status of the transceiver module on each external port:

show interface transceiver

Command mode: All

This command displays information about the transceiver module on each port, as follows:

- Port number and media type
- TX: Transmission status
- RXlos: Receive Loss of Signal indicator
- TXflt: Transmission fault indicator
- Volts: Power usage, in volts
- DegsC: Temperature, in degrees centigrade
- TXuW: Transmit power, in micro-watts
- · RXuW: Receive power, in micro-watts
- Media type (LX, LR, SX, SR)
- Laser wavelength, in nano-meters
- Approval status

The optical power levels shown for transmit and receive functions for the transceiver should fall within the expected range defined in the IEEE 802-3-2008 specification for each transceiver type. For convenience, the expected range values are summarized in the following table.

Table 67.	Expected	Transceiver	Optica	l Power Levels	

Transceiver Type	Tx Minimum	Tx Maximum	Rx Minimum	Rx Maximum
SFP SX	112µW	1000μW	20µW	1000μW
SFP LX	70.8μW	501µW	12.6μW	501µW
SFP+ SR	186µW	794µW	102µW	794µW
SFP+ LR	151µW	891µW	27.5μW	891µW

Note: Power level values in the IEEE specification are shown in dBm, but have been converted to mW in this table to match the unit of measure shown in the display output.

Virtual Machines Information

The following command display information about Virtual Machines (VMs).

Table 68. Virtual Machines Information Options

Command Syntax and Usage	
show virt port <port alias="" number="" or=""></port>	
Displays Virtual Machine information for the selected port.	
Command mode: All	
show virt vm [-v -r]	
Displays all Virtual Machine information.	
 – v displays verbose information 	
 -r rescans the data center 	
Command mode: All	

VM Information

The following command displays VM information:

```
show virt vm
```

Command mode: All

IP Address	VMAC Address	Index	Port	VM Group (Profile)
*127.31.46.50	00:50:56:4e:62:f5	4	INT3	
*127.31.46.10	00:50:56:4f:f2:85	2	INT4	
+127.31.46.51	00:50:56:72:ec:86	1	INT3	
+127.31.46.11	00:50:56:7c:1c:ca	3	INT4	
127.31.46.25	00:50:56:9c:00:c8	5	INT4	
127.31.46.15	00:50:56:9c:21:2f	0	INT4	
127.31.46.35	00:50:56:9c:29:29	6	INT3	
Number of entrie	es: 8			
* indicates VMwa	are ESX Service Consc	ole Int	erface	
+ indicates VMwa	are ESX/ESXi VMKernel	. or Ma	nagement	Interface

VM information includes the following for each Virtual Machine (VM):

- IP address
- MAC address
- Index number assigned to the VM
- Internal port on which the VM was detected
- VM group that contains the VM, if applicable

VM Check Information

The following command displays VM Check information:

show virt vmcheck

Command mode: All

```
Action to take for spoofed VMs:
Basic: Oper disable the link
Advanced: Install ACL to drop traffic
Maximum number of acls that can be used for mac spoofing: 50
Trusted ports by configuration: empty
```

VMware Information

Use these commands to display information about Virtual Machines (VMs) and VMware hosts in the data center. These commands require the presence of a configured Virtual Center.

Table 69. VMware Information Options

Command Syntax and Usage
show virt vmware hosts
Displays a list of VMware hosts.
Command mode: All
show virt vmware hello
Displays VMware hello settings.
Command mode: All
show virt vmware showhost <host uuid=""> <host address="" ip=""> <host name=""></host></host></host>
Displays detailed information about a specific VMware host.
Command mode: All
show virt vmware showvm
Displays detailed information about a specific Virtual Machine (VM).
Command mode: All
show virt vmware vms
Displays a list of VMs.
Command mode: All

VMware Host Information

The following command displays VM host information:

show virt vmware hosts

Command mode: All

UUID	Name(s), IP Address
80a42681-d0e5-5910-a0bf-bd23bd3f7803	
3c2e063c-153c-dd11-8b32-a78dd1909a69	
64f1fe30-143c-dd11-84f2-a8ba2cd7ae40 c818938e-143c-dd11-9f7a-d8defa4b83bf	
	127.12.46.30
009a581a-143c-dd11-be4c-c9fb65ff04ec	127.12.46.40

VM host information includes the following:

- UUID associated with the VMware host.
- Name or IP address of the VMware host.

EVB Information

The following commands display Edge Virtual Bridge (EVB) Virtual Station Interface (VDP) discovery and configuration information.

Table 70. EVB Information Options

5011	mand Syntax and Usage
show	v virt evb vdp vm
0	Displays all active Virtual Machines (VMs).
(Command mode: All
show	w virt evb profile [<1-16>]
[Displays the current EVB profile parameters.
C	Command mode: All
show	w virt evb vdp tlv
	Displays all active Virtual Station Interface (VSI) Discovery and Configuration Protocol (VDP) type-length-values (TLVs).
(Command mode: All
show	<pre>w virt evb vsidb <vsi_database_number></vsi_database_number></pre>
[Displays Virtual Station Interface database information.
C	Command mode: All
	w virt evb vsitypes [mgrid <0-255> typeid <1-16777215> version <0-255>]
[Displays the current Virtual Station Interface Type database parameters.
(Command mode: All

vNIC Information

The following commands display information about Virtual NICs (vNICs).

Table 71. vNIC Information Options

show	vnic vnic
Di	splays information about each vNIC.
Co	ommand mode: All
show	vnic vnicgroup
Di	splays information about each vNIC Group, including:
_	Status (enabled or disabled)
_	VLAN assigned to the vNIC Group
_	Uplink Failover status (enabled or disabled)
_	Link status for each vNIC (up, down, or disabled)
	Port link status for each port associated with the vNIC Group (up, down, or disabled)
Co	ommand mode: All
show	vnic information-dump
Di	splays all vNIC information.
Co	ommand mode: All

Virtual NIC (vNIC) Information

The following command displays Virtual NIC (vNIC) information:

show vnic vnic

VNIC	vNICGroup	Vlan	MaxBandwidth	Туре	MACAddress	Link
INT1.1	1	100	25	Default	00:00:c9:c6:d0:2a	up
INT1.2	#	*	0	FCoE	00:00:c9:c6:d0:2b	up
INT1.3	3	300	25	Default	00:00:c9:c6:d0:2c	up
INT1.4	4	400	25	Default	00:00:c9:c6:d0:2d	up
INT2.1	1	100	25	Default	00:00:c9:c6:cf:72	up
INT2.2	#	*	0	FCoE	00:00:c9:c6:cf:73	up
INT2.3	3	300	25	Default	00:00:c9:c6:cf:74	up
INT2.4	4	400	25	Default	00:00:c9:c6:cf:75	up
INT3.1	1	100	25	Default	00:00:c9:e3:09:5c	up
INT3.3	3	300	25	Default	00:00:c9:e3:09:5e	up
INT3.4	4	400	25	Default	00:00:c9:e3:09:5f	up
INT4.2	#	*	0	FCoE	00:00:c9:b2:55:6f	up
INT9.2	#	*	0	FCoE	00:00:c9:c6:cf:33	up
# = Not	added to any	v vNIC g	roup			
* = Not	added to any	v vNIC g	roup or no vlan	set for	its vNIC group	

vNIC information includes the following for each vNIC:

- vNIC ID
- vNIC Group that contains the vNIC
- VLAN assigned to the vNIC Group
- Maximum bandwidth allocated to the vNIC
- MAC address of the vNIC, if applicable
- Link status (up, down, or disabled)

vNIC Group Information

The following command displays vNIC Group information:

show vnic vnicgroup

Command mode: All

```
vNIC Group 1: enabled
------
              VLAN : 100
Failover : disabled
vNIC Link
-----
INT1.1 up
INT2.1 up
INT3.1 up
Port
     Link
-----
UplinkPort Link
-----
EXT6
      up
```

vNIC Group information includes the following for each vNIC Group:

- Status (enabled or disabled)
- VLAN assigned to the vNIC Group
- Uplink Failover status (enabled or disabled)
- Link status for each vNIC (up, down, or disabled)
- Port link status for each port associated with the vNIC Group (up, down, or disabled)

SLP Information

The following commands display information about Service Location Protocol settings:

Table 72. SLP Information Options

Command Syntax and Usage
show ip slp information
Displays the SLP version, whether SLP is enabled or disabled and whether DA auto-discovery is enabled or disabled
Command mode: All
show ip slp directory-agents
Lists all detected DAs
Command mode: All
show ip slp user-agents
Lists all detected UAs
Command mode: All

UFP Information

The following commands display information about Unified Fabric Port (UFP) settings.

Table 73. UFP Information Options

Command Syntax and Usage						
show ufp [port <port_no.>] [vport <1-4>] [network qos]</port_no.>						
Displays the UFP network and QoS settings applied on all ports or on specified physical and virtual ports.						
 network filters only UFP network settings 						
 qos filters only QoS network settings 						
Command mode: All						
show ufp information port [<pre>port_no.>]</pre>						
Displays UFP status for all physical ports or only for a specified physical port. Information includes wether the UFP is enabled on the physical port, how many virtual ports are enabled and the link stats for each virtual port. For details, see page 118.						
Command mode: All						

Table 73. UFP Information Options

Command Syntax and Usage
show ufp information {cdcp qos tlvstat} [port <port_no.>]</port_no.>
Displays global or port-specific UFP information on:
 cdcp displays S-Channel Discovery and Configuration Protocol (CDCP)
information. CDCP allows hypervisor hosts to create on-demand
S-channels with the switch. For details, see page 119.
 qos displays bandwidth allocation between virtual ports. For details, see page 119.
 tlvstat displays status for Type-Length-Values transmitted on
UFP-enabled physical ports. For details, see page 120.
Command mode: All
show ufp information qos [port <pre>port_no.>] [vport <1-4>]</pre>
Displays bandwidth allocation between virtual ports for all physical ports or specified physical and virtual ports.
Command mode: All
show ufp information vport [port <pre>port_no.>] [vport <1-4>]</pre>
Displays state, operating mode and VLAN related information for all virtual ports, for virtual ports belonging to a specified physical port or for a single virtual port. For details, see page 121.
Command mode: All
show ufp information getvlan <2-4094>
Displays state, operating mode and VLAN related information for physical and virtual ports associated to a specified VLAN ID.
Command mode: All
show ufp information vlan [<1-4094>]
Displays ports associated to all configured VLANs or to a specified VLAN ID. For details, see page 121.
Command mode: All
show ufp {receive transmit} {cap cdcp} port <pre>cort_no.></pre>
Displays received/transmitted Type-Length-Values for the specified ports.
 – cap displays the UFP Capability Discovery TLV
 – cdcp displays the UFP Channel Discovery and Configuration Protocol TLV
For details, see page 122.
Command mode: All

Port Information

The following command displays UFP port information:

show ufp information port

Command mode: All

ſ								
	Alias	Port	state	vPorts	chan 1	chan 2	chan 3	chan 4
	INTA1	1	ena	1	disabled	disabled	disabled	down
	INTA2	2	ena	0	disabled	disabled	disabled	disabled
	INTA3	3	dis	0	disabled	disabled	disabled	disabled
	INTA4	4	dis	0	disabled	disabled	disabled	disabled
	INTA5	5	dis	0	disabled	disabled	disabled	disabled
	INTA6	6	dis	0	disabled	disabled	disabled	disabled
	INTA7	7	dis	0	disabled	disabled	disabled	disabled
	INTA8	8	dis	0	disabled	disabled	disabled	disabled
	INTA9	9	dis	0	disabled	disabled	disabled	disabled
	INTA10	10	dis	0	disabled	disabled	disabled	disabled
	INTA11	11	dis	0	disabled	disabled	disabled	disabled
	INTA12	12	dis	0	disabled	disabled	disabled	disabled
	INTA13	13	dis	0	disabled	disabled	disabled	disabled
	INTA14	14	dis	0	disabled	disabled	disabled	disabled

Port information includes the following for each physical port:

- Port alias
- Port number
- UFP state
- Number of virtual ports enabled
- Link status on each channel (up, down or disabled)

CDCP Information

The following command displays S-Channel Discovery and Configuration Protocol information:

show ufp information cdcp

Command mode: All

ſ	INTA1	:	Channel	Request
	INTA2	:	Channel	Request
	INTA3	:		TxSVIDs
	INTA4	:		TxSVIDs
	INTA5	:		Disable
	INTA6	:		Disable
	INTA7	:		Disable
	INTA8	:		Disable
	INTA9	:		Disable
	INTA10	:		Disable
	INTA11	:		Disable
	INTA12	:		Disable
	INTA13	:		Disable
	INTA14	:		Disable

CDCP information includes the following for each physical port:

- Whether there is a channel set up
- CDCP communication status for active channels

QoS Information

The following command displays Quality of Service information:

show ufp information qos

Command mode: All

Global	UFP QOS	mode: (JFP QOS BW		
Port	Vport	Minbw%	Maxbw%		
1	1	15	100		
i	2	25	50		
Í	3	25	100		
	4	25	100		
2	1	25	100		
	2	25	100		
	3	25	100		
	4	25	100		
3	1	25	100		
	2	25	100		
	3	25	100		
	4	25	100		

QoS information includes the following:

- Physical port number
- Virtual port number
- Minimum guaranteed bandwidth allocated
- Maximum bandwidth achievable

TLV Status Information

The following command displays Type-Length-Values information:

show ufp information tlvstat

Command mode: All

INTA1	:	Success
INTA2	:	Success
INTA3	:	Disabled
INTA4	:	Disabled
INTA5	:	Disabled
INTA6	:	Disabled
INTA7	:	Disabled
INTA8	:	Disabled
INTA9	:	Disabled
INTA10	:	Disabled
INTA11	:	Disabled
INTA12	:	Disabled
INTA13	:	Disabled
INTA14	:	Disabled

TLV status information includes the following:

- Physical port alias
- Type-Length-Values status

Virtual Port Information

The following command displays virtual port information:

show ufp information vport

Command mode: All

vPort	state	evbprof	mode	svid	defvlan	deftag	VLANs
1.1	dis	dis	tunnel	0	0	dis	
1.2	dis	dis	tunnel	0	0	dis	
1.3	dis	dis	tunnel	0	0	dis	
1.4	down	dis	trunk	4005	22	ena	22
2.1	dis	dis	tunnel	0	0	dis	
2.2	dis	dis	tunnel	0	0	dis	
2.3	dis	dis	tunnel	0	0	dis	
2.4	dis	dis	tunnel	0	0	dis	
3.1	dis	dis	tunnel	0	0	dis	
3.2	dis	dis	tunnel	0	0	dis	
3.3	dis	dis	tunnel	0	0	dis	

Virtual port information includes the following for each virtual port:

- Virtual port number
- Channel status
- Operating mode (trunk, access, tunnel or FCoE)
- S-channel VLAN ID
- Default VLAN ID
- Default VLAN ID tagging enforcement
- · VLANs the virtual port is associated with

VLAN Information

The following command displays VLAN information:

show ufp information vlan

Command mode: All

 VLAN 22			
vPort list: INTA1.4			
EXT Port list:			
INT Port list:			
UFP Port list: INTA1			

VLAN information includes the following for each VLAN:

- VLAN ID
- Associated virtual ports
- Associated external ports
- Associated internal ports
- Associated UFP ports

TLV Information

The following commands display TLV information:

show ufp receive cap port port_no.>

Command mode: All

```
UFP Capability Discovery TLV Received on port INTA2:
tlv : Type 127 Length 7 OUI 00-18-b1 Subtype 1
version : Max 1 Oper 1
cna : Req 1 Oper 1 Res 0x00
switch : Cap 1 Oper 1 Res 0x00
```

UFP Capability Discovery TLV information includes the following:

- TLV type and length
- · IBM Organizationally Unique Identifier
- TLV Subtype
- Max Version and Operation Version
- UFP CNA Status which include UFP Request and UFP Operation
- UFP Switch Status which includes UFP Capable and UFP Operation

show ufp transmit cdcp port port_no.>

Command mode: All

```
CDCP TLV Transmitted on port INTA2:

tlv : Type 127 Length 23 OUI 00-80-c2 Subtype 14

local : Role 0 SComp 1 Channel Cap 5

SCID 1 : SVID 1

SCID 2 : SVID 4002

SCID 3 : SVID 4003

SCID 4 : SVID 0

SCID 5 : SVID 0
```

UFP Channel Discovery and Configuration Protocol TLV includes the following:

- TLV type and length
- IBM Organizationally Unique Identifier
- TLV Subtype
- Role bit
- S-Component bit
- Channel Cap
- Corresponding index/SVID pairs

Converged Enhanced Ethernet Information

Table 74 describes the Converged Enhanced Ethernet (CEE) information options.

Table 74. CEE Information Options

Command Syntax and Usage

show cee information

Displays all CEE information

Command mode: All

DCBX Information

Table 75 describes the Data Center Bridging Capability Exchange (DCBX) protocol information options.

Table 75. DCBX Information Options

show	v cee information dcbx port <port alias="" number="" or=""> control</port>
	Displays information about the DCBX Control state machine for the selected port. For details, see page 124.
(Command mode: All
show	v cee information dcbx port <pre>port alias or number> feature</pre>
	Displays information about the DCBX Feature state machine for the selected port. For details, see page 125.
(Command mode: All
show	v cee information dcbx port <pre>port alias or number> ets</pre>
	Displays information about the DCBX ETS state machine. For details, see page 125.
(Command mode: All
show	v cee information dcbx port <pre>port alias or number> pfc</pre>
	Displays information about the DCBX PFC state machine. For details, see page 127.
(Command mode: All
show	v cee information dcbx port <pre>port alias or number> app_proto</pre>
	Displays information about the DCBX Application Protocol state machine on he selected port. For details, see page 128.
(Command mode: All
show	v cee information dcbx port <pre>port alias or number></pre>
[Displays all DCBX information.
	Command mode: All

DCBX Control Information

The following command displays DCBX control information:

show cee information dcbx port port alias or number> control

Command mode: All

DCBX Port Control State-machine Info						
======						
Alias	Port	OperStatus	OperVer	MaxVer	SeqNo	AckNo
INTA1	1	enabled	0	0	0	0
INTA2	2	enabled	0	0	4	2
INTA3	3	enabled	0	0	0	0
INTA4	4	enabled	0	0	1	1

DCBX control information includes the following:

- Port alias and number
- DCBX status (enabled or disabled)
- Operating version negotiated with the peer device
- Maximum operating version supported by the system
- Sequence number that changes each time a DCBX parameter in one or more DCB feature TLVs changes
- Sequence number of the most recent DCB feature TLV that has been acknowledged

DCBX Feature Information

The following command displays DCBX feature information:

show cee information dcbx port port alias or number> feature

Command mode: All

DCBX Po	DCBX Port Feature State-machine Info											
	=====:			=====								
Alias	Port	Туре	AdmState	Will	Advrt	OpVer	MxVer	PrWill	SeqNo	Err	OperMode	Syncd
INTA2	2	ETS	enabled	No	Yes	0	0	Yes	1	No	enabled	Yes
INTA2	2	PFC	enabled	No	Yes	0	0	Yes	1	No	enabled	Yes
INTA2	2	${\tt AppProt}$	disabled	No	Yes	0	0	Yes	1	No	disabled	Yes

The following table describes the DCBX feature information.

Table 76. DCBX Feature Information Fields

Parameter	Description
Alias	Displays each port's alias.
Port	Displays each port's number.
Туре	Feature type
AdmState	Feature status (Enabled or Disabled)
Will	Willing flag status (Yes/True or No/Untrue)
Advrt	Advertisement flag status (Yes/True or No/Untrue)
OpVer	Operating version negotiated with the peer device
MxVer	Maximum operating version supported by the system
PrWill	Peer's Willing flag status (Yes/True or No/Untrue)
SeqNo	Sequence number that changes each time a DCBX parameter in one or more DCB feature TLVs changes
Err	Error condition flag (Yes or No). Yes indicates that an error occurred during the exchange od configuration data with the peer.
OperMode	Operating status negotiated with the peer device (enabled or disabled)
Syncd	Synchronization status between this port and the peer (Yes or No)

DCBX ETS Information

The following command displays DCBX ETS information:

show cee information dcbx port port alias or number> ets

Command mode: All

DCBX Port Priority Group - Priority Allocation Table								
Alias	Port	Priority	PqIdDes	PqIdOper	PqIdPeer			
INTA2	2	0	PGID0	PGID0	PGID0			
INTA2	2	1	PGID0	PGID0	PGID0			
INTA2	2	2	PGID0	PGID0	PGID0			
INTA2	2	3	PGID1	PGID1	PGID1			
INTA2	2	4	PGID2	PGID2	PGID0			
INTA2	2	5	PGID2	PGID2	PGID0			
INTA2	2	6	PGID2	PGID2	PGID0			
INTA2	2	7	PGID2	PGID2	PGID0			
====== Alias	DCBX Port Priority Group - Bandwidth Allocation Table Alias Port PrioGrp BwDes BwOper BwPeer							
INTA2	2	0	10 10	50				
		1		50				
INTA2			40 40	0				

The following table describes the DCBX ETS information.

Table 77.	DCBX Feature	Information	Fields

Parameter	Description				
DCBX Port Priority Group - Priority Allocation Table					
Alias	Displays each port's alias				
Port	Displays each port's number				
PgldDes	Priority Group ID configured on this switch				
PgldOper	Priority Group negotiated with the peer (operating Priority Group).				
PgldPeer	Priority Group ID configured on the peer				
DCBX Port Priority Group - Bandwidth Allocation Table					
BwDes	Bandwidth allocation configured on this switch				
BwOper	Bandwidth allocation negotiated with the peer (operating bandwidth)				
BwPeer	Bandwidth allocation configured on the peer				

DCBX PFC Information

The following command displays DCBX Priority Flow Control (PFC) information:

show cee information dcbx port port alias or number> pfc

Command mode: All

DCBX P	ort P	riority F	low Control	Table	
======	=====				
Alias	Port	Priority	EnableDesr	EnableOper	EnablePeer
INTA2	2	0	disabled	disabled	disabled
INTA2	2	1	disabled	disabled	disabled
INTA2	2	2	disabled	disabled	disabled
INTA2	2	3	enabled	enabled	enabled
INTA2	2	4	disabled	disabled	disabled
INTA2	2	5	disabled	disabled	disabled
INTA2	2	6	disabled	disabled	disabled
INTA2	2	7	disabled	disabled	disabled

DCBX PFC information includes the following:

- Port alias and number
- 802.1p value
- EnableDesr: Status configured on this switch
- EnableOper: Status negotiated with the peer (operating status)
- EnablePeer: Status configured on the peer

DCBX Application Protocol Information

The following command displays DCBX Application Protocol information:

show cee information dcbx port port alias or number> app-proto

Command mode: All

			tocol Table

The following table describes the DCBX Application Protocol information.

Table 78. DCBX Application Protocol Information Fields

Parameter	Description
Protocol ID	Identifies the supported Application Protocol.
Selector Field	Specifies the Application Protocol type, as follows: – 0 = Ethernet Type – 1 = TCP socket ID
Organizationally Unique ID	DCBX TLV identifier

Parameter	Description
Alias	Port alias
Port	Port number
Priority	802.1p value
EnableDesr	Status configured on this switch
EnableOper	Status negotiated with the peer (operating status)
EnablePeer	Status configured on the peer

Table 78. DCBX Application Protocol Information Fields (continued)

ETS Information

Table 79 describes the Enhanced Transmission Selection (ETS) information options

```
Table 79. ETS Information Options
```

Command Syntax and Usage	
show cee global ets information	
Displays global ETS information.	
Command mode: All	

The following command displays ETS information:

show cee global ets information

Command mode: All

Global ETS information:
Number of COSq: 8
Mapping of 802.1p Priority to Priority Groups:
Priority PGID COSq
0 0 0
1 0 0
2 0 0
3 1 1
4 2 2
5 2 2
6 2 2
7 2 2
Bandwidth Allocation to Priority Groups:
PGID PG% Description
0 10
1 50
2 40

Enhanced Transmission Selection (ETS) information includes the following:

- Number of Class of Service queues (COSq) configured
- 802.1p mapping to Priority Groups and Class of Service queues
- Bandwidth allocated to each Priority Group

PFC Information

Table 80 describes the Priority Flow Control (PFC) information options.

```
Table 80. PFC Information Options
```

Command Syntax a	ind Usage	
show cee port <	<pre><port alias="" number="" or=""> pfc information</port></pre>	
Displays PFC in	nformation.	

The following command displays PFC information for a port:

show cee port port alias or number> pfc information

Global PF	C Informa	ation:
PFC - ON		
Priority	State	Description
0	Dis	
1	Dis	
2	Dis	
3	Ena	
4	Dis	
5	Dis	
6	Dis	
7	Dis	
State - in	ndicates	whether PFC is Enabled/Disabled on a particular priority

FCoE Information

Table 81 describes the Fibre Channel over Ethernet (FCoE) information options.

Table 81. FCoE Information Options

Command Syntax and Usage	
show fcoe information	
Displays all current FCoE information.	
Command mode: All	

FIP Snooping Information

Table 82 describes the Fibre Channel Initialization Protocol (FIP) Snooping information options

Table 82. FIP Snooping Information Options

Command Syntax and Usage
show fcoe fips port <pre>port alias or number> information</pre>
Displays FIP Snooping (FIPS) information for the selected port, including a list of current FIPS ACLs.
Command mode: All
show fcoe fips fcf
Displays FCF information for all FCFs learned.
Command mode: All
show fcoe fips fcoe
Displays FCoE connections established on the switch.
Command mode: All
show fcoe fips information
Displays FIP Snooping information for all ports.
Command mode: All

The following command displays FIP Snooping information for the selected port:

show fcoe fips port port alias or number> information

Command mode: All

```
FIP Snooping on port INT2:
This port has been configured to automatically detect FCF.
It has currently detected to have 0 FCF connecting to it.
FIPS ACLs configured on this port:
SMAC 00:c0:dd:13:9b:6f, action deny.
SMAC 00:c0:dd:13:9b:70, action deny.
SMAC 00:c0:dd:13:9b:6d, action deny.
SMAC 00:c0:dd:13:9b:6e, action deny.
DMAC 00:c0:dd:13:9b:6f, ethertype 0x8914, action permit.
DMAC 00:c0:dd:13:9b:70, ethertype 0x8914, action permit.
DMAC 00:c0:dd:13:9b:6d, ethertype 0x8914, action permit.
DMAC 00:c0:dd:13:9b:6e, ethertype 0x8914, action permit.
SMAC 0e:fc:00:01:0a:00, DMAC 00:c0:dd:13:9b:6d, ethertype 0x8906, vlan 1002, action
permit.
DMAC 01:10:18:01:00:01, Ethertype 0x8914, action permit.
DMAC 01:10:18:01:00:02, Ethertype 0x8914, action permit.
Ethertype 0x8914, action deny.
Ethertype 0x8906, action deny.
SMAC 0e:fc:00:00:00; SMAC mask ff:ff:ff:00:00:00, action deny.
```

FIP Snooping port information includes the following:

- Fibre Channel Forwarding (FCF) mode
- Number of FCF links connected to the port
- List of FIP Snooping ACLs assigned to the port

Fibre Channel Information

These commands allow you to display Fibre Channel information.

Table 83. Fibre Channel Information Commands

Comm	nand Syntax and Usage
Di	fdmi database isplays fibre channel management interface database information. ommand mode: All
Di pa	fcs database isplays fabric configuration status database information. For details, see age 136. ommand mode: All
Di	fcoe database isplays Fibre Channel over Ethernet database information. ommand mode: All
	fcf isplays Fibre Channel forwarding information. For details, see page 136. ommand mode: All
Di	npv status isplays N_Port Virtualization information. ommand mode: All
Di	npv flogi-table isplays the contents of the NPV fabric login table. ommand mode: All
Di	npv traffic-map isplays NPV source-destination traffic mapping. For details, see page 137. ommand mode: All
Li Co show Di	zone sts all FC zones. ommand mode: All zone status isplays FC zone status information. For details, see page 137. ommand mode: All
Di	zone name <i><zone name=""></zone></i> isplays information for the specified FC zone. ommand mode: All
Li	zoneset sts all FC zonesets. ommand mode: All

Table 83. Fibre Channel Information Commands

 Table 83. Fibre Channel Information Commands

 Command Syntax and Usage

 show zoneset name <zoneset name>

 Displays information for the specified FC zoneset.

 Command mode: All

 show zoneset active

 Displays the currently active FC zoneset.

 Command mode: All

 show interface fc information

 Displays FC port information. For details, see page 138.

 Command mode: All

 show interface fc port <port no.>

 Displays FC information for the specified ports.

 Command mode: All

Fabric Login Database Information

The following command displays a list of the storage devices present in the FC fabric login database:

show flogi database

Command mode: All

Fibre Channel Name Server Database Information

The following command displays information about the FC name server database:

show fcns database

Command mode: All

FCID	TYPE	PWWN
010100	N	20:02:00:11:0d:8a:10:00

Fibre Channel Forwarding Information

The following command displays information about Fibre Channel forwarding:

show fcf

Command mode: All

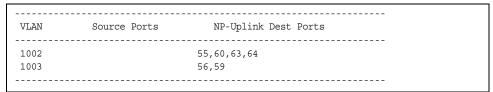

```
------
FCF:1 in VLAN: 1002 NPV-Gw
FC-MAP : 0x0efc00
Priority : 128
FKA-Adv : 8
FC Port : 55 60 63 64
_____
FCF:2 in VLAN: 1003 NPV-Gw
FC-MAP : 0x0efc01
Priority : 128
FKA-Adv : 8
FKA-Adv
        : 8
FC Port : 56 59
-----
FCF:3 in VLAN: 1004 Fabric
FC-MAP : 0x0efc02
Priority : 128
FKA-Adv : 8
FC Port : 53 54 57 58 61 62
```

NPV Traffic Information

The following command displays information about NPV source-destination traffic mapping:

show npv traffic-mapping

Command mode: All

Zone Status Information

The following command displays status information about FC zones:

show zone status

Defa	ult-Zone	: 1	Permit
FC Z	oning Limits :		
MAX	ZONES per ZONESET		: 64
MAX I	MEMBERS per ZONE		: 20
MAX	ZONESETS		: 4
MAX	ZONES		: 200
MAX 2	ALIASES		: 200
MAX I	MEMBERS		: 1000

FC Port Information

The following command displays information about FC ports:

show interface fc information

Command mode: All

Alias	Port	Admin	Oper	Login	Config	Running	Link	Link
		State	State	Status	Туре	Туре	Status	Speed
EXT11	53	Online	Online	LoggedIn	F	F	Active	4Gb/s
EXT12	54	Online	Offline	NotLoggedIn	F	F	Active	4Gb/s
EXT13	55	Online	Offline	NotLoggedIn	F	Unknown	Inactive	Unknown

EXT21	63	Down	Downed	NotLoggedIn	Eth	Eth	Inactive	Unknown
EXT22	64	Online	Downed	NotLoggedIn	Eth	Eth	Inactive	Unknown

Fibre Channel port information includes the following:

Parameter	Description	
Alias	Port alias	
Port	Port number	
Admin State	Configured state of the port (online, offline, or down)	
Oper State	Current operational state of the port (online, offline, or downed)	
Login Status	Login status of the port on the FC fabric (LoggedIn or NotLoggedIn)	
Config Type	Configured FC port type, as follows: – E (Expansion port) **not supported – F (Fabric port) – Eth (Ethernet port)	
Running Type	Current operational FC port type, as follows: – E (Expansion port) **not supported – F (Fabric port) – Eth (Ethernet port) – Unknown	
Link Status	Current status of the port link (Active or Inactive)	
Link Speed	Current operational link speed.	

The following command displays information specific FC ports:

show interface fc port port no.>

Port Number: EXT11	
AdminState	Online
ConfigType	F
EPortIsolationReason	NotApplicable
LinkSpeed	Auto
LinkState	Inactive
LoginStatus	NotLoggedIn
OperationalState	Offline
RunningType	Unkn
Port Number: EXT12	
AdminState	Online
ConfigType	F
EPortIsolationReason	NotApplicable
LinkSpeed	Auto
LinkState	Inactive
LoginStatus	NotLoggedIn
OperationalState	Offline
RunningType	Unkn
Port Number: EXT13	
AdminState	Online
ConfigType	Eth
EPortIsolationReason	NotApplicable
LinkSpeed	10000
LinkState	Inactive
LoginStatus	NotLoggedIn
OperationalState	Offline
RunningType	Eth

Information Dump

The following command dumps switch information:

show information-dump

Command mode: All

Use the dump command to dump all switch information available (10K or more, depending on your configuration). This data is useful for tuning and debugging switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Chapter 3. Statistics Commands

You can use the Statistics Commands to view switch performance statistics in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch statistics.

Table 85. Statistics Commands

sho	ow layer3 counters
	Command mode: All
	Displays Layer 3 statistics.
sho	ow snmp-server counters
	Command mode: All
	Displays SNMP statistics. See page 232 for sample output.
sho	ow ntp counters
	Displays Network Time Protocol (NTP) Statistics.
	Command mode: All
	See page 236 for a sample output and a description of NTP Statistics.
sho	ow ip slp counter
	Displays Service Location Protocol packet counters. See page 237 for a sample output.
	Command mode: All
sho	ow counters
	Dumps all switch statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, so your communication software on your workstation to capture session data pri
	to issuing the dump command.
	to issuing the dump command. Command mode: All

Port Statistics

These commands display traffic statistics on a port-by-port basis. Traffic statistics include SNMP Management Information Base (MIB) objects.

Table 86. Port Statistics Commands

Command Syntax and Usage					
show interface port <pre>port alias or number> dot1x counters</pre>					
Displays IEEE 802.1X statistics for the port. See page 144 for sample output.					
Command mode: All					
show interface port <pre>port alias or number> bridging-counters</pre>					
Displays bridging ("dot1") statistics for the port. See page 148 for sample output.					
Command mode: All					
show interface port <pre>port alias or number> ethernet-counters</pre>					
Displays Ethernet ("dot3") statistics for the port. See page 149 for sample output.					
Command mode: All					
show interface port <pre>port alias or number> interface-counters</pre>					
Displays interface statistics for the port. See page 152 for sample output.					
Command mode: All					
show interface port <pre>port alias or number> ip-counters</pre>					
Displays IP statistics for the port. See page 155 for sample output.					
Command mode: All					
show interface port <pre>port alias or number> link-counters</pre>					
Displays link statistics for the port. See page 155 for sample output.					
Command mode: All					
show interface port <pre>port alias or number> rmon-counters</pre>					
Displays Remote Monitoring (RMON) statistics for the port. See page 156 for sample output.					
Command mode: All					
show interface port <pre>port alias or number> oam counters</pre>					
Displays Operation, Administrative, and Maintenance (OAM) protocol statistics for the port.					
Command mode: All					

Table 86. Port Statistics Commands

Command Syntax and Usage

clear interface port cport alias or number> counters

Clears all statistics for the port.

Command mode: All except User EXEC

clear counters

Clears statistics for all ports.

Command mode: All except User EXEC

802.1X Authenticator Statistics

Use the following command to display the 802.1X authenticator statistics of the selected port:

show interface port port alias or number> dot1x counters

Command mode: All

Authenticator Statistics:				
eapolFramesRx	= 925			
eapolFramesTx	= 3201			
eapolStartFramesRx	= 2			
eapolLogoffFramesRx	= 0			
eapolRespIdFramesRx	= 463			
eapolRespFramesRx	= 460			
eapolReqIdFramesTx	= 1820			
eapolReqFramesTx	= 1381			
invalidEapolFramesRx	= 0			
eapLengthErrorFramesRx	= 0			
lastEapolFrameVersion	= 1			
lastEapolFrameSource	= 00:01:02:45:ac:51			

Table 87. 802.1X Authenticator Statistics of a Port

Statistics	Description		
eapolFramesRx	Total number of EAPOL frames received		
eapolFramesTx	Total number of EAPOL frames transmitted		
eapolStartFramesRx	Total number of EAPOL Start frames received		
eapolLogoffFramesRx	Total number of EAPOL Logoff frames received		
eapolRespIdFramesRx	Total number of EAPOL Response Identity frames received		
eapolRespFramesRx	Total number of Response frames received		
eapolReqIdFramesTx	Total number of Request Identity frames transmitted		
eapolReqFramesTx	Total number of Request frames transmitted		
invalidEapolFramesRx	Total number of invalid EAPOL frames received		
eapLengthErrorFramesRx	Total number of EAP length error frames received		
lastEapolFrameVersion	The protocol version number carried in the most recently received EAPOL frame.		
lastEapolFrameSource	The source MAC address carried in the most recently received EAPOL frame.		

802.1X Authenticator Diagnostics

Use the following command to display the 802.1X authenticator diagnostics of the selected port:

show interface port port alias or number> dot1x counters

Statistics	Description
authEntersConnecting	Total number of times that the state machine transitions to the CONNECTING state from any other state.
authEapLogoffsWhile Connecting	Total number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
authEntersAuthenticating	Total number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.
authSuccessesWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant.
authTimeoutsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout.

Statistics	Description	
authFailWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure.	
authReauthsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a re-authentication request	
authEapStartsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.	
authEapLogoffWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.	
authReauthsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a re-authentication request.	
authEapStartsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.	
authEapLogoffWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.	
backendResponses	Total number of times that the state machine sends an initial Access-Request packet to the Authentication server. Indicates that the Authenticator attempted communication with the Authentication Server.	
backendAccessChallenges	Total number of times that the state machine receives an initial Access-Challenge packet from the Authentication server. Indicates that the Authentication Server has communication with the Authenticator.	
backendOtherRequests ToSupplicant	Total number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure, or Success message) to the Supplicant. Indicates that the Authenticator chose an EAP-method.	

Table 88. 802.1X Authenticator Diagnostics of a Port (continued)

Statistics	Description
backendNonNak ResponsesFromSupplicant	Total number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK. Indicates that the Supplicant can respond to the Authenticator.s chosen EAP-method.
backendAuthSuccesses	Total number of times that the state machine receives an Accept message from the Authentication Server. Indicates that the Supplicant has successfully authenticated to the Authentication Server.
backendAuthFails	Total number of times that the state machine receives a Reject message from the Authentication Server. Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 88. 802.1X Authenticator Diagnostics of a Port (continued)

Bridging Statistics

Use the following command to display the bridging statistics of the selected port:

show interface port port alias or number> bridging-counters

Bridging statistics for port INT1	:
dot1PortInFrames:	63242584
dot1PortOutFrames:	63277826
dot1PortInDiscards:	0
dot1TpLearnedEntryDiscards:	0
dot1StpPortForwardTransitions:	0

Table 89. Bridging Statistics of a Port

Statistics	Description
dot1PortInFrames	The number of frames that have been received by this port from its segment. A frame received on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.
dot1PortOutFrames	The number of frames that have been transmitted by this port to its segment. Note that a frame transmitted on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.
dot1PortInDiscards	Count of valid frames received which were discarded (that is, filtered) by the Forwarding Process.
dot1TpLearnedEntry Discards	The total number of Forwarding Database entries, which have been or would have been learnt, but have been discarded due to a lack of space to store them in the Forwarding Database. If this counter is increasing, it indicates that the Forwarding Database is regularly becoming full (a condition which has unpleasant performance effects on the subnetwork). If this counter has a significant value but is not presently increasing, it indicates that the problem has been occurring but is not persistent.
dot1StpPortForward Transitions	The number of times this port has transitioned from the Learning state to the Forwarding state.

Ethernet Statistics

Use the following command to display the ethernet statistics of the selected port:

show interface port cport alias or number> ethernet-counters

Ethernet statistics for port INT1:	
dot3StatsAlignmentErrors:	0
dot3StatsFCSErrors:	0
dot3StatsSingleCollisionFrames:	0
dot3StatsMultipleCollisionFrames:	0
dot3StatsLateCollisions:	0
dot3StatsExcessiveCollisions:	0
dot3StatsInternalMacTransmitErrors:	NA
dot3StatsFrameTooLongs:	0
dot3StatsInternalMacReceiveErrors:	0

Table 90. Ethernet Statistics for Port

Statistics	Description
dot3StatsAlignment Errors	A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the Frame Check Sequence (FCS) check.
	The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the Logical Link Control (LLC) (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsFCSErrors	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the Frame Check Sequence (FCS) check.
	The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.

Statistics	Description
dot3StatsSingleCollision Frames	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by exactly one collision.
	A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, Or ifOutBroadcastPkts, and is not counted by the
	corresponding instance of the dot3StatsMultipleCollisionFrame object.
dot3StatsMultipleCollisionF rames	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by more than one collision.
	A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, Or
	ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object.
dot3StatsLateCollisions	The number of times that a collision is detected on a particular interface later than 512 bit-times into the transmission of a packet.
	Five hundred and twelve bit-times corresponds to 51.2 microseconds on a 10 Mbit/s system. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics.
dot3StatsExcessive Collisions	A count of frames for which transmission on a particular interface fails due to excessive collisions.
dot3StatsInternalMac TransmitErrors	A count of frames for which transmission on a particular interface fails due to an internal MAC sub layer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object.
	The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted.

Table 90. Ethernet Statistics for Port (continued)

Statistics	Description
dot3StatsFrameTooLongs	A count of frames received on a particular interface that exceed the maximum permitted frame size. The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsInternalMac ReceiveErrors	A count of frames for which reception on a particular interface fails due to an internal MAC sub layer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object. The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of received errors on a particular interface that are not otherwise counted.

Table 90. Ethernet Statistics for Port (continued)

Interface Statistics

Use the following command to display the interface statistics of the selected port:

show interface port port alias or number> interface-counters

Command mode: All

Interface statistics f	for port EXT1:		
i	fHCIn Counters	ifHCOut Counters	
Octets:	0	648329	
UcastPkts:	0	0	
BroadcastPkts:	0	271	
MulticastPkts:	0	7654	
FlowCtrlPkts:	0	0	
PriFlowCtrlPkts:	0	0	
Discards:	0	11	
Errors:	0	0	
Ingress Discard reasor	ns:	Egress Discard reasons:	
VLAN Discards:	0	HOL-blocking Discards:	0
Filter Discards:	0	MMU Discards:	0
Policy Discards:	0	Cell Error Discards:	0
Non-Forwarding State:	0	MMU Aging Discards:	0
IBP/CBP Discards:	0	Other Discards:	11

Table 91. Interface Statistics for Port

Statistics	Description
ifInOctets	The total number of octets received on the interface, including framing characters.
ifInUcastPkts	The number of packets, delivered by this sub-layer to a higher sub- layer, which were not addressed to a multicast or broadcast address at this sub-layer.
ifInBroadcastPkts	The number of packets, delivered by this sub-layer to a higher sub- layer, which were addressed to a broadcast address at this sub-layer.
ifInMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.
ifInFlowControlPkts	The total number of flow control pause packets received on the interface.
ifInDiscards	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being delivered to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space.

Table 91.	Interface	Statistics	for Port	(continued)
-----------	-----------	------------	----------	-------------

Statistics	Description
ifInErrors	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
ifOutUcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent.
ifOutBroadcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts.
ifOutMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts.
ifOutFlowControlPkts	The total number of flow control pause packets transmitted out of the interface.
ifOutDiscards	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space.
ifOutErrors	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors.
VLAN Discards	Discarded because the packet was tagged with a VLAN to which this port is not a member.
Filter Discards	Dropped by the Content Aware Engine (user-configured filter).
Policy Discards	Dropped due to policy setting. For example, due to a user-configured static entry.

Statistics	Description		
Non-Forwarding State	Discarded because the ingress port is not in the forwarding state.		
IBP/CBP Discards	Discarded because of Ingress Back Pressure (flow control), or because the Common Buffer Pool is full (for example, insufficient packet buffering).		
HOL-blocking Discards	Discarded because of the Head Of Line (HOL) blocking mechanism. Low-priority packets are placed in a separate queue and can be discarded while applications or the TCP protocol determine whether a retransmission is necessary. HOL block- ing forces transmission to stop until the overloaded egress port buffer can receive data again.		
MMU Discards	Discarded because of the Memory Management Unit.		
Cell Error Discards			
MMU Aging Discards			
Other Discards	Discarded packets not included in any category.		
Empty Egress Portmap	Dropped due to an egress port bitmap of zero condition (no ports in the egress mask). This counter increments whenever the switching decision found that there was no port to send out.		

Table 91. Interface Statistics for Port (continued)

Interface Protocol Statistics

Use the following command to display the interface protocol statistics of the selected port:

show interface port port alias or number> ip-counters

Command mode: All

GEA IP statistic	cs for	port INT1:
ipInReceives	:	0
ipInHeaderError	:	0
ipInDiscards	:	0

Table 92. Interface Protocol Statistics

Statistics	Description
ipInReceives	The total number of input datagrams received from interfaces, including those received in error.
ipInHeaderErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch).
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.

Link Statistics

Use the following command to display the link statistics of the selected port:

show interface port port alias or number> link-counters

Command mode: All

	Link statistics	stics for port INT	1:
linkStateChange: 1	linkStateChange:	hange:	1

Table 93. Link Statistics

Statistics	Description
linkStateChange	The total number of link state changes.

RMON Statistics

Use the following command to display the Remote Monitoring (RMON) statistics of the selected port:

show interface port port alias or number> rmon-counters

therStatsDropEvents:	NA	
etherStatsOctets:	0	
etherStatsPkts:	0	
etherStatsBroadcastPkts:	0	
etherStatsMulticastPkts:	0	
etherStatsCRCAlignErrors:	0	
etherStatsUndersizePkts:	0	
etherStatsOversizePkts:	0	
etherStatsFragments:	NA	
etherStatsJabbers:	0	
etherStatsCollisions:	0	
etherStatsPkts64Octets:	0	
etherStatsPkts65to1270ctets:	0	
etherStatsPkts128to255Octets:	0	
etherStatsPkts256to5110ctets:	0	
etherStatsPkts512to1023Octets:	0	
etherStatsPkts1024to1518Octets:	0	

Statistics	Description		
etherStatsDropEvents	The total number of packets received that were dropped because of system resource constraints.		
etherStatsOctets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).		
etherStatsPkts	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.		
etherStatsBroadcastPkts	The total number of good packets received that were directed to the broadcast address.		
etherStatsMulticastPkts	The total number of good packets received that were directed to a multicast address.		
etherStatsCRCAlignErrors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).		

Statistics	Description			
etherStatsUndersizePkts	The total number of packets received that were less than 64 octets long (excluding framing bits but including FCS octets) and were otherwise well formed.			
etherStatsOversizePkts	The total number of packets received that were longer than 1518 octets (excluding framing bits but including FCS octets) and were otherwise well formed.			
etherStatsFragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).			
etherStatsJabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Jabber is defined as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.			
etherStatsCollisions	The best estimate of the total number of collisions on this Ethernet segment.			
etherStatsPkts64Octets	The total number of packets (including bad packets) received that were less than or equal to 64 octets in length (excluding framing bits but including FCS octets).			
etherStatsPkts65to127 Octets	The total number of packets (including bad packets) received that were greater than 64 octets in length (excluding framing bits but including FCS octets).			
etherStatsPkts128to255 Octets	The total number of packets (including bad packets) received that were greater than 127 octets in length (excluding framing bits but including FCS octets).			
etherStatsPkts256to511 Octets	The total number of packets (including bad packets) received that were greater than 255 octets in length (excluding framing bits but including FCS octets).			
etherStatsPkts512to1023 Octets	The total number of packets (including bad packets) received that were greater than 511 octets in length (excluding framing bits but including FCS octets).			

Table 94.	RMON	Statistics	of a	Port	(continued)
-----------	------	------------	------	------	-------------

Octetsreceived that were greater than 511 octets in length
(excluding framing bits but including FCS octets).etherStatsPkts1024to1518The total number of packets (including bad packets)
received that were greater than 1023 octets in
length (excluding framing bits but including FCS
octets).

QoS Queue Rate-Based Statistics

Use the following command to display the rate-based QoS queue statistics of the selected port:

show interface port port alias or number> egress-queue-rate

Command mode: All.

QoS Rate for port INTA14:		
QoS Queue 0:		
Tx Packets:	5	
Dropped Packets:	0	
Tx Bytes:	363	
-	363 0	
Dropped Bytes:	U

Table 95. QoS Queue Rate-Based Statistics of a Port

Statistics	Description	
Tx Packets	Number of successfully transmitted packets per second for the QoS queue	
	Number of dropped packets per second for the QoS queue	

Statistics	Description
Tx Bytes	Number of successfully transmitted bytes per second for the QoS queue
Dropped Bytes	Number of dropped bytes per second for the QoS queue

Table 95. QoS Queue Rate-Based Statistics of a Port (continued)

Trunk Group Statistics

Table 96. Trunk Group Statistics Commands

Command Syntax and Usage		
<pre>show interface portchannel <trunk group="" number=""> interface counters Displays interface statistics for the trunk group. Command mode: All</trunk></pre>		
clear interface portchannel < <i>trunk group number</i> > counters Clears all the statistics on the specified trunk group. Command mode: All except User EXEC		

Layer 2 Statistics

Table 97. Layer 2 Statistics Commands

Command Syntax and Usage		
show interface port <pre>port alias or number> lacp counters</pre>		
Displays Link Aggregation Control Protocol (LACP) statistics. See page 162 for sample output.		
Command mode: All		
elear interface port <pre>port alias or number> lacp counters</pre>		
Clears Link Aggregation Control Protocol (LACP) statistics.		
Command mode: All except User EXEC		
show hotlinks counters		
Displays Hot Links statistics. See page 163 for sample output.		
Command mode: All except User EXEC		
lear hotlinks		
Clears all Hot Links statistics.		
Command mode: All except User EXEC		
show interface port <pre>port alias or number> lldp counters</pre>		
Displays LLDP statistics. See page 164 for sample output.		
Command mode: All except User EXEC		
show oam counters		
Displays OAM statistics. See page 165 for sample output.		
Command mode: All except User EXEC		

LACP Statistics

Use the following command to display Link Aggregation Control Protocol (LACP) statistics:

show interface port port alias or number> lacp counters

Command mode: All

Port EXT1:	
Valid LACPDUs received:	- 870
Valid Marker PDUs received:	- 0
Valid Marker Rsp PDUs received:	- 0
Unknown version/TLV type:	- 0
Illegal subtype received:	- 0
LACPDUs transmitted:	- 6031
Marker PDUs transmitted:	- 0
Marker Rsp PDUs transmitted:	- 0

Link Aggregation Control Protocol (LACP) statistics are described in the following table:

Statistic	Description
Valid LACPDUs received	Total number of valid LACP data units received.
Valid Marker PDUs received	Total number of valid LACP marker data units received.
Valid Marker Rsp PDUs received	Total number of valid LACP marker response data units received.
Unknown version/TLV type	Total number of LACP data units with an unknown version or type, length, and value (TLV) received.
Illegal subtype received	Total number of LACP data units with an illegal subtype received.
LACPDUs transmitted	Total number of LACP data units transmitted.
Marker PDUs transmitted	Total number of LACP marker data units transmitted.
Marker Rsp PDUs transmitted	Total number of LACP marker response data units transmitted.

Hotlinks Statistics

Use the following command to display Hot Links statistics:

show hotlinks counters

Command mode: All

```
Hot Links Trigger Stats:

Trigger 1 statistics:

Trigger Name: Trigger 1

Master active: 0

Backup active: 0

FDB update: 0 failed: 0
```

The following table describes the Hotlinks statistics:

Table 99. Hotlinks Statistics

Statistic	Description
Master active	Total number of times the Master interface transitioned to the Active state.
Backup active	Total number of times the Backup interface transitioned to the Active state.
FDB update	Total number of FDB update requests sent.
failed	Total number of FDB update requests that failed.

LLDP Port Statistics

Use the following command to display LLDP statistics:

show interface port port alias or number> lldp counters

Command mode: All

LLDP Port INT1 Statistics	
Frames Transmitted	: 0
Frames Received	: 0
Frames Received in Errors	: 0
Frames Discarded	: 0
TLVs Unrecognized	: 0
Neighbors Aged Out	: 0

The following table describes the LLDP port statistics:

Table 100. LLDP Port Statistics

Statistic	Description
Frames Transmitted	Total number of LLDP frames transmitted.
Frames Received	Total number of LLDP frames received.
Frames Received in Errors	Total number of LLDP frames that had errors.
Frames Discarded	Total number of LLDP frames discarded.
TLVs Unrecognized	Total number of unrecognized TLV (Type, Length, and Value) fields received.
Neighbors Aged Out	Total number of neighbor devices that have had their LLDP information aged out.

OAM Statistics

Use the following command to display OAM statistics:

show oam counters

Command mode: All

OAM statistics include the following:

- Total number of OAM Protocol Data Units (OAMPDU) transmitted and received.
- Total number of unsupported OAM Protocol Data Units (OAMPDU) transmitted and received.
- · Local faults detected
- · Remote faults detected

vLAG Statistics

The following table describes the vLAG statistics commands:

Table 101. vLAG Statistics Options

Command Syntax and Usage
show vlag isl-statistics Displays vLAG ISL statistics for the selected port. See page 166 for sample output.
clear vlag statistics Clears all vLAG statistics.
show vlag statistics

Displays all vLAG statistics. See page 166 for sample output.

vLAG ISL Statistics

Use the following command to display vLAG statistics:

```
show vlag isl-statistics
```

Command mode: All

	In Counter	Out Counter	
Octets:	2755820	2288	
Packets:	21044	26	

ISL statistics include the total number of octets received/transmitted, and the total number of packets received/transmitted over the Inter-Switch Link (ISL).

vLAG Statistics

Use the following command to display vLAG statistics:

show vlag statistics

Command mode: All

vLAG PDU sent:			
Role Election:	0	System Info:	0
Peer Instance Enable:	0	Peer Instance Disable:	0
FDB Dynamic Add:	0	FDB Dynamic Del:	0
FDB Inactive Add:	0	FDB Inactive Del:	0
Health Check:	0	ISL Hello:	0
Other:	0	Unknown:	0
vLAG PDU received:			
Role Election:	0	System Info:	0
Peer Instance Enable:	0	Peer Instance Disable:	0
FDB Dynamic Add:	0	FDB Dynamic Del:	0
FDB Inactive Add:	0	FDB Inactive Del:	0
Health Check:	0	ISL Hello:	0
Other:	0	Unknown:	0
vLAG IGMP packets for	warded:		
IGMP Reports:	0		
IGMP Leaves:	0		

The following table describes the vLAG statistics:

Table '	102.	vLAG	Statistics
---------	------	------	------------

Statistic	Description
Role Election	Total number of vLAG PDUs sent for role elections.
System Info	Total number of vLAG PDUs sent for getting system information.
Peer Instance Enable	Total number of vLAG PDUs sent for enabling peer instance.
Peer Instance Disable	Total number of vLAG PDUs sent for disabling peer instance.

Table 102. vLAG Statistics (continued)

Statistic	Description	
FDB Dynamic Add	Total number of vLAG PDUs sent for addition of FDB dynamic entry.	
FDB Dynamic Del	Total number of vLAG PDUs sent for deletion of FDB dynamic entry.	
FDB Inactive Add	Total number of vLAG PDUs sent for addition of FDB inactive entry.	
FDB Inactive Del	Total number of vLAG PDUs sent for deletion of FDB inactive entry.	
Health Check	Total number of vLAG PDUs sent for health checks.	
ISL Hello	Total number of vLAG PDUs sent for ISL hello.	
Other	Total number of vLAG PDUs sent for other reasons.	
Unknown	Total number of vLAG PDUs sent for unknown operations.	
	vLAG IGMP packets forwarded	
IGMP Reports	Total number of IGMP Reports forwarded over vLAG.	
IGMP Leaves	Total number of IGMP Leave messages forwarded over vLAG.	

Layer 3 Statistics

Table 103. Layer 3 Statistics Commands

show ip counte	are
-	atistics. See page 171 for sample output.
Command m	
clear ip count	
statistics.	atistics. Use this command with caution as it deletes all the IPv4
Command m	ode: All except User EXEC
show ip route	counters
Displays route	e statistics. See page 179 for sample output.
Command m	ode: All
show ip arp co	punters
Displays Addr sample output	ess Resolution Protocol (ARP) statistics. See page 180 for t.
Command me	ode: All
show ip dns co	punters
Displays Dom output.	ain Name System (DNS) statistics. See page 181 for sample
Command m	ode: All
show ip icmp o	counters
Displays ICM	P statistics. See page 182 for sample output.
Command m	ode: All
show ip tcp co	bunters
	statistics. See page 184 for sample output.
Command m	ode: All
show ip udp co	Dunters
	statistics. See page 185 for sample output.
Command m	ode: All
show ip ospf o	counters
Displays OSP	F statistics. See page 192 for sample output.
Command me	ode: All
show ipv6 ospf	counters
	Fv3 statistics. See page 196 for sample output.

Table 103. Layer 3 Statistics Commands (continued)

Command Syntax and Usage	
show ip igmp counters Displays IGMP statistics. See page 186 for sample output. Command mode: All	
show ip igmp vlan < <i>vlan number</i> > counter Displays IGMP statistics for a specific VLAN. See page 186 for sample out Command mode: All	tput.
show layer3 igmp-groups Displays the total number of IGMP groups that are registered on the switch Command mode: All	٦.
show layer3 ipmc-groups Displays the total number of current IP multicast groups that are registered the switch. Command mode: All	l on
show ipv6 mld counters Displays Multicast Listener Discovery (MLD) statistics. Command mode: All	
show ip vrrp counters When virtual routers are configured, you can display the protocol statistics VRRP. See page 199 for sample output. Command mode: All	for
<pre>show ip pim counters Displays PIM statistics for all configured PIM interfaces. See page 200 for sample output. Command mode: All</pre>	
show ip pim mroute count Displays statistics of various multicast entry types. Command mode: All	
show ip pim interface <i><interface number=""></interface></i> counters Displays PIM statistics for the selected interface. Command mode: All	
<pre>show ip rip counters Displays Routing Information Protocol (RIP) statistics. See page 201 for sample output. Command mode: All</pre>	
clear ip arp counters Clears Address Resolution Protocol (ARP) statistics. Command mode: All except User EXEC	

Command Syntax and Usage
clear ip dns counters Clears Domain Name System (DNS) statistics. Command mode: All except User EXEC
clear ip icmp counters Clears Internet Control Message Protocol (ICMP) statistics. Command mode: All except User EXEC
clear ip tcp counters Clears Transmission Control Protocol (TCP) statistics. Command mode: All except User EXEC
clear ip udp counters Clears User Datagram Protocol (UDP) statistics. Command mode: All except User EXEC
clear ip igmp [< <i>VLAN number</i> >] counters Clears IGMP statistics for all VLANs or for a specific VLAN. Command mode: All
clear ip vrrp counters Clears VRRP statistics. Command mode: All
clear ip counters Clears IP statistics. Use this command with caution as it will delete all the IP statistics. Command mode: All
clear ip rip counters Clears Routing Information Protocol (RIP) statistics. Command mode: All except User EXEC
clear ip ospf counters Clears Open Shortest Path First (OSPF) statistics. Command mode: All except User EXEC
 show layer3 counters Dumps all Layer 3 statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command. Command mode: All

Table 103. Layer 3 Statistics Commands (continued)

IPv4 Statistics

The following command displays IPv4 statistics:

show ip counters

Command mode: All

Use the following command to clear IPv4 statistics:

clear ip counters

IP statistics:			
ipInReceives:	3115873	ipInHdrErrors:	1
ipInAddrErrors:	35447	ipForwDatagrams:	0
ipInUnknownProtos:	500504	ipInDiscards:	0
ipInDelivers:	2334166	ipOutRequests:	1010542
ipOutDiscards:	4	ipOutNoRoutes:	4
ipReasmReqds:	0	ipReasmOKs:	0
ipReasmFails:	0	ipFragOKs:	0
ipFragFails:	0	ipFragCreates:	0
ipRoutingDiscards:	0	ipDefaultTTL:	255
ipReasmTimeout:	5		

Table 104. IP Statistics

Statistic	Description
ipInReceives	The total number of input datagrams received from interfaces, including those received in error.
ipInHdrErrors	The number of input datagrams discarded due to errors in their IP headers, including bad checksums, version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.
ipInAddrErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses (for example, 0.0.0.0) and addresses of unsupported Classes (for example, Class E). For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.
ipForwDatagrams	The number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source- Route option processing was successful.

Table 104. IP Statistics (continued)

Statistic	Description	
ipInUnknownProtos	The number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.	
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.	
ipInDelivers	The total number of input datagrams successfully delivered to IP user-protocols (including ICMP).	
ipOutRequests	The total number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission. Note that this counter does not include any datagrams counted in ipForwDatagrams.	
ipOutDiscards	The number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space). Note that this counter would include datagrams counted in ipForwDatagrams if any such packets met this (discretionary) discard criterion.	
ipOutNoRoutes	The number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this counter includes any packets counted in ipForwDatagrams, which meet this <i>no-route</i> criterion. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.	
ipReasmReqds	The number of IP fragments received which needed to be reassembled at this entity (the switch).	
ipReasmOKs	The number of IP datagrams successfully re- assembled.	
ipReasmFails	The number of failures detected by the IP re- assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.	
ipFragOKs	The number of IP datagrams that have been successfully fragmented at this entity (the switch).	
ipFragFails	The number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their Don't Fragment flag was set.	

Table 104. IP Statistics (continued)

Statistic	Description	
ipFragCreates	The number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).	
ipRoutingDiscards	The number of routing entries, which were chosen to be discarded even though they are valid. One possible reason for discarding such an entry could be to free-up buffer space for other routing entries.	
ipDefaultTTL	The default value inserted into the Time-To-Live (TTL) field of the IP header of datagrams originated at this entity (the switch), whenever a TTL value is not supplied by the transport layer protocol.	
ipReasmTimeout	The maximum number of seconds, which received fragments are held while they are awaiting reassembly at this entity (the switch).	

IPv6 Statistics

The following command displays IPv6 statistics:

show ipv6 counters

Command mode: All

Use the following command to clear IPv6 statistics:

clear ipv6 counters

Table 105 describes the IPv6 statistics.

Table 105. IPv6 Statistics

Statistic	Description		
Rcvd	Number of datagrams received from interfaces, including those received in error.		
HdrErrors	Number of datagrams discarded due to errors in their IP headers, including bad checksums, version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.		
TooBigErrors	The number of input datagrams that could not be forwarded because their size exceeded the link MTU of outgoing interface.		
AddrErrors	Number of datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses. For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.		
FwdDgrams	Number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source- Route option processing was successful.		
UnknownProtos	Number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.		
Discards	Number of IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.		
Delivers	Number of datagrams successfully delivered to IP user-protocols (including ICMP).		
OutRequests	Number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission.		
OutDiscards	Number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space).		
OutNoRoutes	Number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.		

Table 105. IPv6 Statistics (continued)

Statistic	Description	
ReasmReqds	Number of IP fragments received which needed to be reassembled at this entity (the switch).	
ReasmOKs	Number of IP datagrams successfully re- assembled.	
ReasmFails	Number of failures detected by the IP re- assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.	
FragOKs	Number of IP datagrams that have been successfully fragmented at this entity (the switch).	
FragFails	Number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their Don't Fragment flag was set.	
FragCreates	Number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).	
RcvdMCastPkt	The number of multicast packets received by the interface.	
SentMcastPkts	The number of multicast packets transmitted by the interface.	
TruncatedPkts	The number of input datagrams discarded because datagram frame didn't carry enough data.	
RcvdRedirects	The number of Redirect messages received by the interface.	
SentRedirects	The number of Redirect messages sent.	

The following table describes the IPv6 ICMP statistics.

Table 106. ICMP Statistics

Statistic	Description		
Received			
ICMPPkts	Number of ICMP messages which the entity (the switch) received.		
ICMPErrPkt	Number of ICMP messages which the entity (the switch) received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, and so forth).		
DestUnreach	Number of ICMP Destination Unreachable messages received.		
TimeExcds	Number of ICMP Time Exceeded messages received.		
ParmProbs	Number of ICMP Parameter Problem messages received.		
PktTooBigMsg	The number of ICMP Packet Too Big messages received by the interface.		
ICMPEchoReq	Number of ICMP Echo (request) messages received.		
ICMPEchoReps	Number of ICMP Echo Reply messages received.		
RouterSols	Number of Router Solicitation messages received by the switch.		
RouterAdv	Number of Router Advertisements received by the switch.		
NeighSols	Number of Neighbor Solicitations received by the switch.		
NeighAdv	Number of Neighbor Advertisements received by the switch.		
Redirects	Number of ICMP Redirect messages received.		
AdminProhib	The number of ICMP destination unreachable/communication administratively prohibited messages received by the interface.		
ICMPBadCode	The number of ICMP Parameter Problem messages received by the interface.		
Sent			
ICMPMsgs	Number of ICMP messages which this entity (the switch) attempted to send.		
ICMPErrMsgs	Number of ICMP messages which this entity (the switch) did not send due to problems discovered within ICMP such as a lack of buffer. This value should not include errors discovered outside the ICMP layer such as the inability of IP to route the resultant datagram. In some implementations there may be no types of errors that contribute to this counter's value.		
DstUnReach	Number of ICMP Destination Unreachable messages sent.		
TimeExcds	Number of ICMP Time Exceeded messages sent.		

Table 106. ICMP Statistics (continued)

Statistic	Description
ParmProbs	Number of ICMP Parameter Problem messages sent.
PktTooBigs	The number of ICMP Packet Too Big messages sent by the interface.
EchoReq	Number of ICMP Echo (request) messages sent.
EchoReply	Number of ICMP Echo Reply messages sent.
RouterSols	Number of Router Solicitation messages sent by the switch.
RouterAdv	Number of Router Advertisements sent by the switch.
NeighSols	Number of Neighbor Solicitations sent by the switch.
NeighAdv	Number of Neighbor Advertisements sent by the switch.
RedirectMsgs	Number of ICMP Redirect messages sent. For a host, this object will always be zero, since hosts do not send redirects.
AdminProhibMsgs	Number of ICMP destination unreachable/communication administratively prohibited messages sent.

Table 107 describes the UDP statistics.

Table 107. UDP Statistics

Statistic	Description	
Received		
UDPDgrams	Number of UDP datagrams received by the switch.	
UDPNoPorts	Number of received UDP datagrams for which there was no application at the destination port.	
UDPErrPkts	Number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.	
Sent		
UDPDgrams	Number of UDP datagrams sent from this entity (the switch).	

IPv4 Route Statistics

The following command displays IPv4 route statistics:

show ip route counters

Command mode: All

Route statistics:			
Current total outstanding routes	:	1	
Highest number ever recorded	:	1	
Current static routes	:	0	
Current RIP routes	:	0	
Current OSPF routes	:	0	
Current BGP routes	:	0	
Maximum supported routes	:	2048	
ECMP statistics (active in ASIC):			
Maximum number of ECMP routes	:	2048	
Maximum number of static ECMP routes	:	128	
Number of routes with ECMP paths	:	0	

Table 108. Route Statistics

Statistics	Description
Current total outstanding routes	Total number of outstanding routes in the route table.
Highest number ever recorded	Highest number of routes ever recorded in the route table.
Current static routes	Total number of static routes in the route table.
Current RIP routes	Total number of Routing Information Protocol (RIP) routes in the route table.
Current OSPF routes	Total number of OSPF routes in the route table.
Current BGP routes	Total number of Border Gateway Protocol routes in the route table.
Maximum supported routes	Maximum number of routes that are supported.
Maximum number of ECMP routes	Maximum number of ECMP routes that are supported.
Maximum number of static ECMP routes	Maximum number of static ECMP routes that are supported.
Number of routes with ECMP paths	Current number of routes that contain ECMP paths.

IPv6 Route Statistics

The following command displays IPv6 route statistics:

show ipv6 route counters

Command mode: All

IPV6 Route statistics: ipv6RoutesCur: 4 ipv6RoutesMax: 1156	ipv6RoutesHighWater:	6
ECMP statistics:	CO	
Maximum number of ECMP routes Max ECMP paths allowed for one	: 600 route: 5	

Table 109. IPv6 Route Statistics

Statistics	Description
ipv6RoutesCur	Total number of outstanding routes in the route table.
ipv6RoutesHighWater	Highest number of routes ever recorded in the route table.
ipv6RoutesMax	Maximum number of routes that are supported.
Maximum number of ECMP routes	Maximum number of ECMP routes supported.
Max ECMP paths allowed for one route	Maximum number of ECMP paths supported for each route.

Use the clear option to delete all IPv6 route statistics.

ARP statistics

The following command displays Address Resolution Protocol statistics.

```
show ip arp counters
```

Command mode: All

ARP statistics:				
arpEntriesCur:	3	arpEntriesHighWater:	4	
arpEntriesMax:	4095			

Table 110. ARP Statistics

Statistic	Description
arpEntriesCur	The total number of outstanding ARP entries in the ARP table.
arpEntriesHighWater	The highest number of ARP entries ever recorded in the ARP table.
arpEntriesMax	The maximum number of ARP entries that are supported.

DNS Statistics

The following command displays Domain Name System statistics.

show ip dns counters

Command mode: All

DNS statistics:			
dnsInRequests:	0		
dnsOutRequests:	0		
dnsBadRequests:	0		

Table 111. DNS Statistics

Statistics	Description
dnsInRequests	The total number of DNS response packets that have been received.
dnsOutRequests	The total number of DNS response packets that have been transmitted.
dnsBadRequests	The total number of DNS request packets received that were dropped.

ICMP Statistics

The following command displays ICMP statistics:

show ip icmp counters

Command mode: All

ICMP statistics:				
icmpInMsgs:	245802	icmpInErrors:	1393	
icmpInDestUnreachs:	41	icmpInTimeExcds:	0	
icmpInParmProbs:	0	icmpInSrcQuenchs:	0	
icmpInRedirects:	0	icmpInEchos:	18	
icmpInEchoReps:	244350	icmpInTimestamps:	0	
icmpInTimestampReps:	0	icmpInAddrMasks:	0	
icmpInAddrMaskReps:	0	icmpOutMsgs:	253810	
icmpOutErrors:	0	icmpOutDestUnreachs:	15	
icmpOutTimeExcds:	0	icmpOutParmProbs:	0	
icmpOutSrcQuenchs:	0	icmpOutRedirects:	0	
icmpOutEchos:	253777	icmpOutEchoReps:	18	
icmpOutTimestamps:	0	icmpOutTimestampReps:	0	
icmpOutAddrMasks:	0	icmpOutAddrMaskReps:	0	

Table 112. ICMP Statistics

Statistic	Description
icmpInMsgs	The total number of ICMP messages which the entity (the switch) received. Note that this counter includes all those counted by icmpInErrors.
icmpInErrors	The number of ICMP messages which the entity (the switch) received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, and so forth).
icmpInDestUnreachs	The number of ICMP Destination Unreachable messages received.
icmpInTimeExcds	The number of ICMP Time Exceeded messages received.
icmpInParmProbs	The number of ICMP Parameter Problem messages received.
icmpInSrcQuenchs	The number of ICMP Source Quench (buffer almost full, stop sending data) messages received.
icmpInRedirects	The number of ICMP Redirect messages received.
icmpInEchos	The number of ICMP Echo (request) messages received.
icmpInEchoReps	The number of ICMP Echo Reply messages received.
icmpInTimestamps	The number of ICMP Timestamp (request) messages received.
icmpInTimestampReps	The number of ICMP Timestamp Reply messages received.

Table 112. ICMP Statistics

Statistic	Description
icmpInAddrMasks	The number of ICMP Address Mask Request messages received.
icmpInAddrMaskReps	The number of ICMP Address Mask Reply messages received.
icmpOutMsgs	The total number of ICMP messages which this entity (the switch) attempted to send. Note that this counter includes all those counted by icmpOutErrors.
icmpOutErrors	The number of ICMP messages which this entity (the switch) did not send due to problems discovered within ICMP such as a lack of buffer. This value should not include errors discovered outside the ICMP layer such as the inability of IP to route the resultant datagram. In some implementations there may be no types of errors that contribute to this counter's value.
icmpOutDestUnreachs	The number of ICMP Destination Unreachable messages sent.
icmpOutTimeExcds	The number of ICMP Time Exceeded messages sent.
icmpOutParmProbs	The number of ICMP Parameter Problem messages sent.
icmpOutSrcQuenchs	The number of ICMP Source Quench (buffer almost full, stop sending data) messages sent.
icmpOutRedirects	The number of ICMP Redirect messages sent. For a host, this object will always be zero, since hosts do not send redirects.
icmpOutEchos	The number of ICMP Echo (request) messages sent.
icmpOutEchoReps	The number of ICMP Echo Reply messages sent.
icmpOutTimestamps	The number of ICMP Timestamp (request) messages sent.
icmpOutTimestampReps	The number of ICMP Timestamp Reply messages sent.
icmpOutAddrMasks	The number of ICMP Address Mask Request messages sent.
icmpOutAddrMaskReps	The number of ICMP Address Mask Reply messages sent.

TCP Statistics

The following command displays TCP statistics:

show ip tcp counters

Command mode: All

4	tcpRtoMin:	0		
240000	tcpMaxConn:	2048		
0	tcpPassiveOpens:	16		
0	tcpEstabResets:	0		
2035	tcpOutSegs:	1748		
21	tcpInErrs:	0		
1	tcpCurrConn:	5		
0				
	240000 0 0 2035	240000 tcpMaxConn: 0 tcpPassiveOpens: 0 tcpEstabResets: 2035 tcpOutSegs: 21 tcpInErrs:	240000 tcpMaxConn: 2048 0 tcpPassiveOpens: 16 0 tcpEstabResets: 0 2035 tcpOutSegs: 1748 21 tcpInErrs: 0	240000 tcpMaxConn: 2048 0 tcpPassiveOpens: 16 0 tcpEstabResets: 0 2035 tcpOutSegs: 1748 21 tcpInErrs: 0

Table 113. TCP Statistics

Statistic	Description
tcpRtoAlgorithm	The algorithm used to determine the timeout value used for retransmitting unacknowledged octets.
tcpRtoMin	The minimum value permitted by a TCP implementation for the retransmission timeout, measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission timeout. In particular, when the timeout algorithm is rsre(3), an object of this type has the semantics of the LBOUND quantity described in RFC 793.
tcpRtoMax	The maximum value permitted by a TCP implementation for the retransmission timeout, measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission timeout. In particular, when the timeout algorithm is rsre(3), an object of this type has the semantics of the UBOUND quantity described in RFC 793.
tcpMaxConn	The limit on the total number of TCP connections the entity (the switch) can support. In entities where the maximum number of connections is dynamic, this object should contain the value -1.
tcpActiveOpens	The number of times TCP connections have made a direct transition to the SYN-SENT state from the CLOSED state.
tcpPassiveOpens	The number of times TCP connections have made a direct transition to the SYN-RCVD state from the LISTEN state.
tcpAttemptFails	The number of times TCP connections have made a direct transition to the CLOSED state from either the SYN-SENT state or the SYN-RCVD state, plus the number of times TCP connections have made a direct transition to the LISTEN state from the SYN-RCVD state.

Table 113. TCP Statistics (continued)

Statistic	Description
tcpEstabResets	The number of times TCP connections have made a direct transition to the CLOSED state from either the ESTABLISHED state or the CLOSE-WAIT state.
tcpInSegs	The total number of segments received, including those received in error. This count includes segments received on currently established connections.
tcpOutSegs	The total number of segments sent, including those on current connections but excluding those containing only retransmitted octets.
tcpRetransSegs	The total number of segments retransmitted - that is, the number of TCP segments transmitted containing one or more previously transmitted octets.
tcpInErrs	The total number of segments received in error (for example, bad TCP checksums).
tcpCurEstab	The total number of outstanding TCP sessions in the ESTABLISHED state.
tcpCurConn	The total number of outstanding TCP sessions that are currently opened.
tcpOutRsts	The number of TCP segments sent containing the RST flag.

UDP Statistics

The following command displays UDP statistics:

show ip udp counters

Command mode: All

UDP statistics:			
udpInDatagrams:	54	udpOutDatagrams:	43
udpInErrors:	0	udpNoPorts:	1578077

Table 114. UDP Statistics

Statistic	Description
udpInDatagrams	The total number of UDP datagrams delivered to the switch.
udpOutDatagrams	The total number of UDP datagrams sent from this entity (the switch).
udpInErrors	The number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.
udpNoPorts	The total number of received UDP datagrams for which there was no application at the destination port.

IGMP Statistics

The following command displays statistics about IGMP protocol packets for all VLANs:

show ip igmp counter

Command mode: All

xIgmpValidPkts:	0	rxIgmpInvalidPkts:	0
xIgmpGenQueries:	0	rxIgmpGrpSpecificQueries:	0
xIgmpGroupSrcSpecificQueries:	0	rxIgmpDiscardPkts:	0
xIgmpLeaves:	0	rxIgmpReports:	0
xIgmpReports:	0	txIgmpGrpSpecificQueries:	0
kIgmpLeaves:	0	rxIgmpV3CurrentStateRecords:	0
IgmpV3SourceListChangeRecords	8:0	rxIgmpV3FilterChangeRecords:	0
xIgmpGenQueries:	18	rxPimHellos:	0

The following command displays statistics about IGMP protocol packets for a specific VLAN:

show ip igmp vlan <vlan number> counter

Command mode: All

IGMP vlan 147 statistics:					
rxIqmpValidPkts:		rxIqmpInvalidPkts:	0		
rxIqmpGenQueries:	0	rxIqmpGrpSpecificOueries:	0		
51 -	0	51 11 ~	0		
rxIgmpGroupSrcSpecificQueries:	0	rxIgmpDiscardPkts:	0		
rxIgmpLeaves:	0	rxIgmpReports:	0		
txIgmpReports:	0	txIgmpGrpSpecificQueries:	0		
txIgmpLeaves:	0	rxIgmpV3CurrentStateRecords:	0		
rxIgmpV3SourceListChangeRecords	:0	rxIgmpV3FilterChangeRecords:	0		
txIgmpGenQueries:	11	rxPimHellos:	0		

Table 115. IGMP Statistics

Statistic	Description
rxIgmpValidPkts	Total number of valid IGMP packets received
rxIgmpInvalidPkts	Total number of invalid packets received
rxIgmpGenQueries	Total number of General Membership Query packets received
rxIgmpGrpSpecificQueries	Total number of Membership Query packets received from specific groups
rxIgmpGroupSrcSpecificQueries	Total number of Group Source-Specific Queries (GSSQ) received
rxlgmpDiscardPkts	Total number of IGMP packets discarded
rxlgmpLeaves	Total number of Leave requests received

Table 115. IGMP Statistics

Statistic	Description
rxIgmpReports	Total number of Membership Reports received
txIgmpReports	Total number of Membership reports transmitted
txIgmpGrpSpecificQueries	Total number of Membership Query packets transmitted to specific groups
txIgmpLeaves	Total number of Leave messages transmitted
rxIgmpV3CurrentStateRecords	Total number of Current State records received
rxIgmpV3SourceListChangeRecords	Total number of Source List Change records received.
rxIgmpV3FilterChangeRecords	Total number of Filter Change records received.
txIgmpGenQueries	Total number of General Membership Query packets transmitted
rxPimHellos	Total number of PIM hello packets received

MLD Statistics

Table 116. MLD Statistics Commands

show ipv6 mld		
Displays MLD global	statistics	
Command mode: All	Statistics.	
See page 189 for sam	nole output.	
show ipv6 mld counter Displays MLD area st		
Command mode: All		
show ipv6 mld inter:		
Displays information f		
Command mode: All		
show ipv6 mld inter:	Eace <i><interface number=""></interface></i>	
Displays MLD interfac	e statistics for the specified interface.	
Command mode: All		
show ipv6 mld inter:	Eace [<interface number="">] counters</interface>	
Displays MLD interfac	e statistics.	
Command mode: All	except User EXE	
show ipv6 mld inter:	face counters	
Displays total number		
Command mode: All		
clear ipv6 mld count	Lers	
Clears MLD counters.		
Command mode: Pr	vileged EXEC	
clear ipv6 mld dynam		
Clears all dynamic MI		
Command mode: Pri		
	-	
clear ipv6 mld group		
•	registered group tables.	
Command mode: Pr	vileged EXEC	
clear ipv6 mld mrout	cer	
Clears dynamic MLD	mrouter group tables.	

MLD Global Statistics

The MLD global statistics displays information for all MLD packets received on all interfaces

show ipv6 mld counters

Command mode: All.

MLD global statistic	5:

The following table describes the fields in the MLD global statistics output.

Table 117. MLD Global Statistics

Statistic	Description
Bad Length	Number of messages received with length errors.
Bad Checksum	Number of messages received with an invalid IP checksum.
Bad Receive If	Number of messages received on an interface not enabled for MLD.
Receive non-local	Number of messages received from non-local senders.
Invalid packets	Number of rejected packets.
General Query (v1/v2)	Number of general query packets.
MAS Query(v1/v2)	Number of multicast address specific query packets.
MASSQ Query (v2)	Number of multicast address and source specific query packets.
Listener Report(v1)	Number of packets sent by a multicast listener in response to MLDv1 query.
Listener Done(v1/v2)	Number of packets sent by a host when it wants to stop receiving multicast traffic.
Listener Report(v2)	Number of packets sent by a multicast listener in response to MLDv2 query.
MLDv2 INC mode CSRs	Number of current state records with include filter mode.
MLDv2 EXC mode CSRs	Number of current state records with exclude filter mode.
MLDv2 TO_INC FMCRs	Number of filter mode change records for which the filter mode has changed to include mode.
MLDv2 TO_EXC FMCRs	Number of filter mode change records for which the filter mode has changed to exclude mode.
MLDv2 ALLOW SLCRs	Number of source list change records for which the specified sources from where the data is to be received has changed.
MLDv2 BLOCK SLCRs	Number of source list change records for which the specified sources from where the data is to be received is to be blocked.

OSPF Statistics

Command Syntax and Usage
show ip ospf counters
Displays OSPF statistics.
Command mode: All
See page 192 for sample output.
show ip ospf area counters
Displays OSPF area statistics.
Command mode: All except User EXEC
show ip ospf interface [<interface number="">] counters</interface>
Displays OSPF interface statistics.
Command mode: All except User EXEC

OSPF Global Statistics

The following command displays statistics about OSPF packets received on all OSPF areas and interfaces:

show ip ospf counters

Command mode: All

OSPF stats				
Rx/Tx Stats:	Rx	Tx		
Pkts	0	0

ase export	0			

Statistic	Description	
Rx/Tx Stats:		
Rx Pkts	The sum total of all OSPF packets received on all OSPF areas and interfaces.	
Tx Pkts	The sum total of all OSPF packets transmitted on all OSPF areas and interfaces.	
Rx Hello	The sum total of all Hello packets received on all OSPF areas and interfaces.	
Tx Hello	The sum total of all Hello packets transmitted on all OSPF areas and interfaces.	

Statistic	Description		
Rx Database	The sum total of all Database Description packets received on all OSPF areas and interfaces.		
Tx Database	The sum total of all Database Description packets transmitted on all OSPF areas and interfaces.		
Rx Is Requests	The sum total of all Link State Request packets received on all OSPF areas and interfaces.		
Tx Is Requests	The sum total of all Link State Request packets transmitted on all OSPF areas and interfaces.		
Rx Is Acks	The sum total of all Link State Acknowledgement packets received on all OSPF areas and interfaces.		
Tx Is Acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPF areas and interfaces.		
Rx Is Updates	The sum total of all Link State Update packets received on all OSPF areas and interfaces.		
Tx Is Updates	The sum total of all Link State Update packets transmitted on all OSPF areas and interfaces.		
Nbr Change Sta	ats:		
hello	The sum total of all Hello packets received from neighbors on all OSPF areas and interfaces.		
Start	The sum total number of neighbors in this state (that is, an indication that Hello packets must now be sent to the neighbor at intervals of HelloInterval seconds.) across all OSPF areas and interfaces.		
n2way	The sum total number of bidirectional communication establishment between this router and other neighboring routers.		
adjoint ok	The sum total number of decisions to be made (again) as to whether an adjacency should be established/maintained with the neighbor across all OSPF areas and interfaces.		
negotiation done	The sum total number of neighbors in this state wherein the Master/slave relationship has been negotiated, and sequence numbers have been exchanged, across all OSPF areas and interfaces.		
exchange done	The sum total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets across all OSPF areas and interfaces.		
bad requests	The sum total number of Link State Requests which have been received for a link state advertisement not contained in the database across all interfaces and OSPF areas.		

Table 119. OSPF General Statistics (continued)

Statistic	Description	
bad sequence	The sum total number of Database Description packets which have been received that either:	
	a. Has an unexpected DD sequence number	
	b. Unexpectedly has the init bit set	
	 c. Has an options field differing from the last Options field received in a Database Description packet. 	
	Any of these conditions indicate that some error has occurred during adjacency establishment for all OSPF areas and interfaces.	
loading done	The sum total number of link state updates received for all out-of-date portions of the database across all OSPF areas and interfaces.	
n1way	The sum total number of Hello packets received from neighbors, in which this router is not mentioned across all OSPF interfaces and areas.	
rst_ad	The sum total number of times the Neighbor adjacency has beer reset across all OPSF areas and interfaces.	
down	The total number of Neighboring routers down (that is, in the initial state of a neighbor conversation) across all OSPF areas and interfaces.	
Intf Change St	ats:	
ир	The sum total number of interfaces up in all OSPF areas.	
down	The sum total number of interfaces down in all OSPF areas.	
Іоор	The sum total of interfaces no longer connected to the attached network across all OSPF areas and interfaces.	
unloop	The sum total number of interfaces, connected to the attached network in all OSPF areas.	
wait timer	The sum total number of times the Wait Timer has been fired, indicating the end of the waiting period that is required before electing a (Backup) Designated Router across all OSPF areas and interfaces.	
backup	The sum total number of Backup Designated Routers on the attached network for all OSPF areas and interfaces.	
nbr change	The sum total number of changes in the set of bidirectional neighbors associated with any interface across all OSPF areas.	

Table 119. OSPF General Statistics (continued)

Table 119.	OSPF General Statisti	cs (continued)
------------	-----------------------	----------------

Statistic	Description		
Timers Kickoff	:		
hello	The sum total number of times the Hello timer has been fired (which triggers the send of a Hello packet) across all OPSF areas and interfaces.		
retransmit	The sum total number of times the Retransmit timer has been fired across all OPSF areas and interfaces.		
lsa lock	The sum total number of times the Link State Advertisement (LSA) lock timer has been fired across all OSPF areas and interfaces.		
lsa ack	The sum total number of times the LSA Ack timer has been fired across all OSPF areas and interfaces.		
dbage	The total number of times the data base age (Dbage) has been fired.		
summary	The total number of times the Summary timer has been fired.		
ase export	The total number of times the Autonomous System Export (ASE) timer has been fired.		

OSPFv3 Statistics

Table 120. OSPFv3 Statistics Commands

Command Syntax and Usage	
show ipv6 ospf counters	
Displays OSPFv3 statistics.	
Command mode: All	
See page 192 for sample output.	
show ipv6 ospf area counters	
Displays OSPFv3 area statistics.	
Command mode: All except User EXEC	
show ipv6 ospf interface [< <i>interface number</i> >] counters	
Displays OSPFv3 interface statistics.	
Command mode: All except User EXEC	

OSPFv3 Global Statistics

The following command displays statistics about OSPFv3 packets received on all OSPFv3 areas and interfaces:

show ipv6 ospf counters

Command mode: All

Rx/Tx/Disd Stats:	Rx		Discarded
Pkts	9695	95933	0
hello	9097	8994	0

rcvd newer originatio	ons	355	

The OSPFv3 General Statistics contain the sum total of all OSPF packets received on all OSPFv3 areas and interfaces.

Table 121.	OSPFv3	General	Statistics
	03/1/03	General	Statistics

Statistics	Description	
Rx/Tx Stats:		
Rx Pkts	The sum total of all OSPFv3 packets received on all OSPFv3 interfaces.	
Tx Pkts	The sum total of all OSPFv3 packets transmitted on all OSPFv3 interfaces.	
Discarded Pkts	The sum total of all OSPFv3 packets discarded.	
Rx hello	The sum total of all Hello packets received on all OSPFv3 interfaces.	

Table 121.	OSPFv3 (General	Statistics	(continued)
------------	----------	---------	------------	-------------

tatistics	Description		
Tx hello	The sum total of all Hello packets transmitted on all OSPFv3 interfaces.		
Discarded hello	The sum total of all Hello packets discarded, including packets for which no associated interface has been found.		
Rx database	The sum total of all Database Description packets received on all OSPFv3 interfaces.		
Tx database	The sum total of all Database Description packets transmitted on all OSPFv3 interfaces.		
Discarded database	The sum total of all Database Description packets discarded.		
Rx Is requests	The sum total of all Link State Request packets received on all OSPFv3 interfaces.		
Tx Is requests	The sum total of all Link State Request packets transmitted on all OSPFv3 interfaces.		
Discarded Is requests	The sum total of all Link State Request packets discarded.		
Rx Is acks	The sum total of all Link State Acknowledgement packets received on all OSPFv3 interfaces.		
Tx Is acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPFv3 interfaces.		
Discarded Is acks	The sum total of all Link State Acknowledgement packets discarded.		
Rx Is updates	The sum total of all Link State Update packets received on all OSPFv3 interfaces.		
Tx Is updates	The sum total of all Link State Update packets transmitted on all OSPFv3 interfaces.		
Discarded Is updates	The sum total of all Link State Update packets discarded.		
br Change Stats:	•		
down	The total number of Neighboring routers down (in the initial state of a neighbor conversation) across all OSPFv3 interfaces.		
attempt	The total number of transitions into attempt state of neighboring routers across allOSPFv3 interfaces.		
init	The total number of transitions into init state of neighboring routers across all OSPFv3 interfaces.		
n2way	The total number of bidirectional communication establishment between this router and other neighboring routers.		
exstart	The total number of transitions into exstart state of neighboring routers across all OSPFv3 interfaces		

Statistics	Description
exchange done	The total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets, across all OSPFv3 interfaces.
loading done	The total number of link state updates received for all out-of-date portions of the database across all OSPFv3 interfaces.
full	The total number of transitions into full state of neighboring routers across all OSPFv3 interfaces.
all events	The total number of state transitions of neighboring routers across all OSPFv3 interfaces.
Intf Change Stats:	
down	The total number of transitions into down state of all OSPFv3 interfaces.
loop	The total number of transitions into loopback state of all OSPFv3 interfaces.
waiting	The total number of transitions into waiting state of all OSPFv3 interfaces.
ptop	The total number of transitions into point-to-point state of all OSPFv3 interfaces.
dr	The total number of transitions into Designated Router other state of all OSPFv3 interfaces.
backup	The total number of transitions into backup state of all OSPFv3 interfaces.
all events	The total number of changes associated with any OSPFv3 interface, including changes into internal states.
Timers Kickoff:	
hello	The total number of times the Hello timer has been fired (which triggers the send of a Hello packet) across all OSPFv3 interfaces.
wait	The total number of times the wait timer has been fired (which causes an interface to exit waiting state), across all OPSFv3 interfaces.
poll	The total number of times the timer whose firing causes hellos to be sent to inactive NBMA and Demand Circuit neighbors has been fired, across all OPSFv3 interfaces.
nbr probe	The total number of times the neighbor probe timer has been fired, across all OPSFv3 interfaces.
Number of LSAs:	
originated	The number of LSAs originated by this router.
rcvd newer originations	The number of LSAs received that have been determined to be newer originations.

Table 121. OSPFv3 General Statistics (continued)

VRRP Statistics

Virtual Router Redundancy Protocol (VRRP) support on the CN4093 provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

When virtual routers are configured, you can display the protocol statistics for VRRP. The following command displays VRRP statistics:

show ip vrrp counters

Command mode: All

VRRP statistics:				
vrrpInAdvers:	0	vrrpBadAdvers:	0	
vrrpOutAdvers:	0			
vrrpBadVersion:	0	vrrpBadVrid:	0	
vrrpBadAddress:	0	vrrpBadData:	0	
vrrpBadPassword:	0	vrrpBadInterval:	0	

Table 122. VRRP Statistics

Statistics	Description
vrrpInAdvers	The total number of valid VRRP advertisements that have been received.
vrrpBadAdvers	The total number of VRRP advertisements received that were dropped.
vrrpOutAdvers	The total number of VRRP advertisements that have been sent.
vrrpBadVersion	The total number of VRRP advertisements received that had a bad version number.
vrrpBadVrid	The total number of VRRP advertisements received that had a bad virtual router ID.
vrrpBadAddress	The total number of VRRP advertisements received that had a bad address.
vrrpBadData	The total number of VRRP advertisements received that had bad data.
vrrpBadPassword	The total number of VRRP advertisements received that had a bad password.
vrrpBadInterval	The total number of VRRP advertisements received that had a bad interval.

PIM Statistics

The following command displays Protocol Independent Multicast (PIM) statistics:

show ip pim counters

Join/Prune Tx/Rx : 0/0 Assert Tx/Rx : 0/0 Register Tx/Rx : 0/0 Null-Reg Tx/Rx : 0/0 RegStop Tx/Rx : 0/0 CandRPAdv Tx/Rx : 0/0 BSR Tx/Rx : 0/0 Graft Ack Tx/Rx : 0/0 Mcast data Tx/Rx : 0/0 MDP drop Tx/Rx : 0/0 CTL drop Tx/Rx : 0/0	Hello Tx/Rx	:	2595/2596

	Bad pkts	:	0

Table 123. PIM Statistics

Statistics	Description
Hello Tx/Rx	Number of Hello messages transmitted or received
Join/Prune Tx/Rx	Number of Join/Prune messages transmitted or received
Assert Tx/Rx	Number of Assert messages transmitted or received
Register Tx/Rx	Number of Register messages transmitted or received
Null-Reg Tx/Rx	Number of NULL-register messages received
RegStop Tx/Rx	Number of Register Stop messages transmitted or received
CandRPAdv Tx/Rx	Number of Candidate RP Advertisements transmitted or received
BSR Tx/Rx	Number of Bootstrap Router (BSR) messages transmitted or received
Graft Tx/Rx	Number of Graft messages transmitted or received
Graft Ack Tx/Rx	Number of Graft Acknowledgements transmitted or received
Mcast data Tx/Rx	Number of multicast datagrams transmitted or received
MDP drop Tx/Rx	Number of Multicast data packet Tx/Rx dropped
CTL drop Tx/Rx	Number of PIM control packet Tx/Rx dropped
Bad pkts	Number of bad PIM packets received

Routing Information Protocol Statistics

The following command displays RIP statistics:

show ip rip counters

RIP ALL STATS INFORMATION:	
RIP packets received = 12	
RIP packets sent = 75	
RIP request received = 0	
RIP response recevied = 12	
RIP request sent = 3	
RIP reponse sent = 72	
RIP route timeout = 0	
RIP bad size packet received = 0	
RIP bad version received = 0	
RIP bad zeros received = 0	
RIP bad src port received = 0	
RIP bad src IP received = 0	
RIP packets from self received = 0	

OpenFlow Statistics

Table 124. OpenFlow Statistics Commands

Command Syntax and Usage
show openflow statistics
Displays OpenFlow traffic statistics for each OpenFlow instance.
Command mode: All
show openflow instance <1-2> statistics
Displays OpenFlow traffic statistics for the specified instance ID.
Command mode: All
clear openflow statistics
Clears OpenFlow data for all instances.
Command mode: Privileged EXEC
clear openflow instance <1-2> statistics
Clears OpenFlow data for the specified instance ID.
Command mode: Privileged EXEC

Use the following command to display OpenFlow traffic statistics for each OpenFlow instance:

show openflow statistics

```
Openflow statistics for instance 1
Flow Count
       Basic Flows:
                     0
                                (ACL Based: 0, Unicast FDB Based: 0, Multicast FDB
Based: 0)

Table 125. OpenFlow Table Statistics

Parameter	Description
Flow Count	
Basic Flows	Count of flows stored in the basic flow table, sorted by type: ACL, unicast FDB and multicast FDB.
Emergency Flows	Count of flows stored in the emergency flow table, sorted by type: ACL, unicast FDB and multicast FDB.
Buffering Count	
Openflow Packets Buffered	Count of packets buffered.
Openflow Packets Timed out	Count of buffered packets dropped due to time out.
Openflow Packets Retrieved	Count of packets retrieved.
Openflow Packets Retrieve attempts	Count of attempts made to retrieve the buffer.
Message Count	Count of messages exchanged between Controller and switch.
Hello-Sent	Count of Hello messages sent from the switch to Controller.
Hello-Received	Count of Hello messages received in the Controller from the switch.
Echo-Request- Sent	Count of Echo Request messages sent from switch to Controller.
Echo-Request- Received	Count of Echo Request messages received in switch from Controller.
Echo-Reply-Sent	Count of Echo Reply messages received in switch from Controller.
Echo-Reply- Received	Count of Echo Reply messages received in switch from Controller.
Vendor	Count of Vendor messages received in switch from controller.
Vendor Flow-Mod	
Add	Count of vendor-defined add flow_mod messages received in the switch.
Modify	Count of vendor-defined modify flow_mod messages received in the switch.
Modify-Strict	Count of vendor-defined modify_strict flow_mod messages received in the switch.

Parameter	Description
Delete	Count of vendor-defined delete flow_mod messages received in the switch.
Delete-Strict	Count of vendor-defined delete-strict flow_mod messages received in the switch.
Feature-Request	Count of Feature Request messages received from the Controller to the switch.
Feature-Reply	Count of ${\tt Feature \ Reply}$ messages sent from the switch to the Controller.
Get-Config-Request	Count of Get Config Request messages received from the Controller to the switch.
Get-Config-Reply	Count of Get Config Reply messages sent from the switch to the Controller.
Set-Config	Count of Set Config messages received from the Controller.
Packet-In	
No-Match	Count of Packet-In messages sent to Controller due to no matching flows.
Action	Count of Packet-In messages sent to Controller due to action explicitly asking to forward to Controller.
Flow-Removed	
Idle-Timeout	Count of flow entries removed due to idle-timeout expiration.
Hard-Timeout	Count of flow entries removed due to hard-timeout expiration.
Delete	Count of flow entries removed due to explicit deletion.
Vendor-Flow- Removed	
Idle-Timeout	Count of vendor-defined flow entries removed due to idle-timeout expiration.
Hard-Timeout	Count of vendor-defined flow entries removed due to hard-timeout expiration.
Delete	Count of vendor-defined flow entries removed due to explicit deletion.
Port-Status	
Add	Count of port-status messages sent triggered by adding a port to OpenFlow.
Delete	Count of port-status messages sent triggered by removing a port from OpenFlow.

Parameter	Description
Modify	Count of port-status messages sent triggered by a modification of a port belonging to OpenFlow (for example, up/down status).
Packet-Out	Count of packet-out messages received from the Controller.
Flow-Mod	
Add	Count of add flow_mod messages received in the switch.
Modify	Count of modify flow_mod messages received in the switch.
Modify-Strict	Count of modify_strict flow_mod messages received in the switch.
Delete	Count of delete flow_mod messages received in the switch.
Delete-Strict	Count of delete-strict flow_mod messages received in the switch.
Port-Mod	Count of port_mod messages received in the switch from the Controller.
Statistics-Request	
Desc	Count of Description statistics requests received from the Controller.
Flow	Count of Flow statistics requests received from the Controller.
Aggregate	Count of Aggregate statistics requests received from the Controller.
Table	Count of Table statistics requests received from the Controller.
Port	Count of Port statistics requests received from the Controller.
Vendor	
stats	Count of Vendor statistics requests received from the Controller.
stats-strict	Count of Vendor strict statistics requests received from the Controller.
Statistics-Reply	
Desc	Count of Description statistics requests sent to the Controller.
Flow	Count of Flow statistics requests sent to the Controller.

Parameter	Description
Aggregate	Count of Aggregate statistics requests sent to the Controller.
Table	Count of Table statistics requests sent to the Controller.
Port	Count of Port statistics requests sent to the Controller.
Vendor	
stats	Count of Vendor statistics requests sent to the Controller.
stats-strict	Count of Vendor strict statistics requests sent to the Controller.
Barrier-Request	Count of barrier-request messages received from the Controller.
Barrier-Reply	Count of barrier-reply messages sent to the Controller.
Error Messages	Count of error messages handled - sending/receiving error messages.
Hello Failed Sent	
Incompatible	Count of error messages sent by the switch if the version in the Hello message is incompatible with the version in the Controller.
Hello Failed Recv	
Incompatible	Count of error messages received in the switch if the version in the Hello message is incompatible with the version in the Controller.
Bad Request	
Bad-Version	Count of error messages sent due to bad-version in the request header.
Bad-Type	Count of error messages sent due to bad-type in the request header.
Bad-Stat	Count of error messages sent due to a specific statistics request that is not supported.
Bad-Vendor	Count of error messages sent due to vendor-specific message that is not supported.
Bad-Subtype	Count of error messages sent due to message subtype that is not supported.
Bad-Len	Count of error messages sent due to wrong request length for type of message received in the request header.
Buffer-Empty	Count of error messages sent when the specified buffer in the request does not exist.

Parameter	Description
Buffer-Unknown	Count of error messages sent when the specified buffer in the request does not exist.
Bad Action	
Bad-Type	Count of error messages sent due to due to unknown action type specified in flow_mod message.
Bad-Len	Count of error messages sent due to wrong action length for type of message received in the flow_mod message.
Bad-Out-Port	Count of error message sent due to invalid port in the action field specified flow_mod message.
Bad-Argument	Count of error message sent due to bad action argument in flow_mod message that is not supported.
Too-Many	Count of error message sent due to too many actions received in the flow_mod message that cannot be handled.
Flow-Mod-Failed	
All-Table-Full	Count of error messages due to table full when adding or updating flow_mod message.
Overlap	Count of error messages sent due to an attempt to add overlapping flow_mod messages.
Permission-Error	Count of error messages due to permissions not available to perform action received in the flow_mod message Port_Mod_Failed.
Emergency-Timeout	Count of error messages sent due to invalid emergency-timeout in the flow-mod message.
Bad-Command	Count of error messages sent due to unknown command.
Unsupported	Count of error messages sent due to unsupported action list.
Port-Mod-Failed	
Bad-Port	Count of error messages sent due to invalid port in port_mod message.
Bad-hw-addr	Count of error messages sent due to wrong hardware address specified in port_mod message.

Management Processor Statistics

Command Syntax and Usage
show mp thread
Displays STEM thread statistics. This command is used by Technical Support personnel.
Command mode: All
show mp packet counters
Displays packet statistics, to check for leads and load. To view a sample output and a description of the statistics, see page 211.
Command mode: All
show mp tcp-block
Displays all TCP control blocks that are in use. To view a sample output and a description of the statistics, see page 223.
Command mode: All
show mp udp-block
Displays all UDP control blocks that are in use. To view a sample output, see page 224.
Command mode: All
show processes cpu
Displays CPU utilization for periods of up to 1, 4, and 64 seconds. To view a sample output and a description of the stats, see page 224.
Command mode: All
show processes cpu history
Displays history of CPU utilization. To view a sample output, see page 227.
Command mode: All

Table 128. Packet Statistics

Statistics	Description	
Packet Rate		
1-second	The rate of incoming and outgoing packets over 1 second.	
4-seconds	The rate of incoming and outgoing packets over 4 seconds.	
64-seconds	The rate of incoming and outgoing packets over 64 seconds.	
Packets Counte	rs	
Total packets	Total number of packets received	
Since bootup	Total number of packets received and sent since the last switch reboot.	
BPDUs	Total number of spanning-tree Bridge Protocol Data Units received.	
Cisco packets	Total number of UniDirectional Link Detection (UDLD) packets and Cisco Discovery Protocol (CDP) packets received.	
ARP packets	Total number of Address Resolution Protocol packets received.	
IPv4 packets	Total number of IPv4 packets received and sent. Includes the following packet types: – IGMP – PIM – ICMP requests – ICMP replies	
TCP packets	Total number of TCP packets received and sent. Includes the following packet types: - FTP - HTTP - SSH - TACACS+ - Telnet - Other	
	 DHCP NTP RADIUS SNMP TFTP Other 	
RIP packets	Total number of Routing Information Protocol packets received and sent.	

Table 128. Packet Statistics (continued)

Statistics	Description
OSPF packets	Total number of Open Shortest Path First packets received and sent.
BGP packets	Total number of Border Gateway Protocol packets received and sent.
IPv6 packets	Total number of IPv6 packets received.
LLDP PDUs	Total number of Link Layer Discovery Protocol data units received.
ECP PDUs	Total number of Edge Control Protocol data units received and sent.
MgmtSock Packets	Total number of packets received and transmitted through the management port.
Other	Total number of other packets received.
Packet Buffer St	tatistics
allocs	Total number of packet allocations from the packet buffer pool by the TCP/IP protocol stack.
frees	Total number of times the packet buffers are freed (released) to the packet buffer pool by the TCP/IP protocol stack.
failures	Total number of packet allocation failures from the packet buffer pool by the TCP/IP protocol stack.
dropped	Total number of packets dropped by the packet buffer pool.
small packet bu	ffers
current	Total number of packet allocations with size less than 128 bytes from the packet buffer pool by the TCP/IP protocol stack.
max	Maximum number of small packet allocations supported.
threshold	Threshold value for small packet allocations, beyond which only high-priority small packets are allowed.
hi-watermark	The highest number of packet allocation with size less than 128 bytes from the packet buffer pool by the TCP/IP protocol stack.
hi-water time	Time stamp that indicates when the hi-watermark was reached.

Statistics	Description		
medium packet b	medium packet buffers		
current	Total number of packet allocations with size between 128 to 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
max	Maximum number of medium packet allocations supported.		
threshold	Threshold value for medium packet allocations, beyond which only high-priority medium packets are allowed.		
hi-watermark	The highest number of packet allocation with size between 128 to 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
hi-water time	Time stamp that indicates when the hi-watermark was reached.		
jumbo packet bu	ffers		
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
max	Maximum number of jumbo packet allocations supported.		
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
pkt_hdr statistics	5		
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
max	Maximum number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		

Packet Statistics Log

These commands allow you to display a log of all packets received by CPU. The following table describes the Packet Statistics Log options.

Table 129. Packet Statistics Log Options

Command Syntax and Usage
show mp packet log all
Displays all packet logs received by and sent from the CPU. To view a sample output and a description of the log entries, see "Packet Log example" on page 217.
show mp packet log rx
Displays all peckets less rescived by the CDU

Displays all packets logs received by the CPU.

```
show mp packet log tx
```

Displays all packet logs sent from the CPU.

Packet Log example

```
358. Type: BPDU, sent 1:01:11 Tue Mar 20, 2012
Port EXT2, VLAN 201, Length 57, Reason 0x0, Flags 0x0
Dst MAC: 01:80:c2:00:00:00, Src MAC: 08:17:f4:a7:57:2c
357. Type: ICMP ECHO Req,sent 1:01:09 Tue Mar 20, 2012
Port MGT1, VLAN 4095, Length 16, Reason 0x0, Flags 0x0 FromMgmtSock
Src IP: 9.43.98.125, Dst IP: 9.43.98.254
```

Each packet log entry includes the following information:

- Entry ID
- Packet type
- Date and time
- Port number
- VLAN number
- Packet length
- Reason code
- Flags
- Source and destination address

Packet Statistics Last Packet

These commands allow you to display a specified number (N) of the most recent packet logs received by or sent from the CPU. The following table describes the Packet Statistics Last Packet options.

Table 130. Last Packet Options

Command Syntax and Usage
show mp packet last both <1-1000>
Displays a specified number of recent packet logs received by and sent from the CPU. To view a sample output and a description, see "Packet Log example" on page 217.
show mp packet last rx <1-1000> Displays a specified number of recent packet logs received by the CPU.
show mp packet last tx <1-1000> Displays a specified number of recent packet logs sent from the CPU.

Packet Statistics Dump

The following table describes the Packet Statistics Dump options.

```
Table 131. Packet Statistics Dump Options
```

```
Command Syntax and Usage

show mp packet dump all

Displays all packet statistics and logs received by and sent from the CPU.

show mp packet dump rx

Displays all packet statistics and logs received by the CPU.

show mp packet dump tx

Displays all packet statistics and logs sent from the CPU.
```

Logged Packet Statistics

The following command displays logged packets that have been received or sent, based on the specified filter:

show mp packet parse rx | tx parsing_option>

The filter options are described in Table 132.

Table 132. Packet Log Parsing Options

Command Syntax and Usage	
show mp packet parse rx tx arp	
Displays only ARP packets logged.	
Command mode: All	
show mp packet parse rx tx rarp	
Displays only Reverse-ARP packets.	
Command mode: All	
show mp packet parse rx tx bpdu	
Displays only BPDUs logged	
Command mode: All	
show mp packet parse rx tx cisco	
Displays only Cisco packets (BPDU/CDP/UDLD) logged.	
Command mode: All	
show mp packet parse rx tx lacp	
Displays only LACP PDUs logged.	
Command mode: All	
show mp packet parse rx tx fcoe	
Displays only FCoE FIP PDUs logged.	
Command mode: All	
show mp packet parse rx tx ipv4	
Displays only IPv4 packets logged.	
Command mode: All	
show mp packet parse rx tx igmp	
Displays only IGMP packets logged.	
Command mode: All	
show mp packet parse rx tx pim	
Displays only PIM packets logged.	
Command mode: All	
show mp packet parse rx tx icmp	
Displays only ICMP packets logged.	
Command mode: All	

Command Syntax and Usage	
show mp packet parse rx tx tcp	
Displays only TCP packets logged.	
Command mode: All	
show mp packet parse rx tx ftp	
Displays only FTP packets logged.	
Command mode: All	
show mp packet parse rx tx http	
Displays only HTTP packets logged.	
Command mode: All	
show mp packet parse rx tx ssh	
Displays only SSH packets logged.	
Command mode: All	
show mp packet parse rx tx tacacs	
Displays only TACACS packets logged.	
Command mode: All	
show mp packet parse rx tx telnet	
Displays only TELNET packets logged.	
Command mode: All	
show mp packet parse rx tx tcpother	
Displays only TCP other-port packets logged.	
Command mode: All	
show mp packet parse rx tx udp	
Displays only UDP packets logged.	
Command mode: All	
show mp packet parse rx tx dhcp	
Displays only DHCP packets logged.	
Command mode: All	
show mp packet parse rx tx ntp	
Displays only NTP packets logged.	
Command mode: All	
show mp packet parse rx tx radius	
Displays only RADIUS packets logged.	
Command mode: All	
show mp packet parse rx tx snmp	
Displays only SNMP packets logged.	
Command mode: All	

Table 132. Packet Log Parsing Options (continued)

Table 132. Packet Log Parsing Options (continued)

Command Syntax and Usage
show mp packet parse rx tx tftp Displays only TFTP packets logged. Command mode: All
show mp packet parse rx tx udpother Displays only UDP other-port packets logged. Command mode: All
show mp packet parse rx tx ipv6 Displays only IPv6 packets logged. Command mode: All
show mp packet parse rx tx rip Displays only RIP packets logged. Command mode: All
show mp packet parse rx tx ospf Displays only OSPF packets logged. Command mode: All
show mp packet parse rx tx bgp Displays only BGP packets logged. Command mode: All
show mp packet parse rx tx lldp Displays only LLDP PDUs logged. Command mode: All
show mp packet parse rx tx vlan < <i>VLAN_number></i> Displays only logged packets with the specified VLAN. Command mode: All
show mp packet parse rx tx port < <i>port_number</i> > Displays only logged packets with the specified port. Command mode: All
show mp packet parse rx tx mac < <i>MAC_address</i> > Displays only logged packets with the specified MAC address. Command mode: All
show mp packet parse rx tx ip-addr < <i>IPv4_address</i> > Displays only logged packets with the specified IPv4 address. Command mode: All

Table 132. Packet Log Parsing Options (continued)

Command Syntax and Usage
show mp packet parse rx tx other Displays logs of all packets not explicitly selectable. Command mode: All
show mp packet parse rx tx raw Displays raw packet buffer in addition to headers. Command mode: All

TCP Statistics

The following command displays TCP statistics:

show mp tcp-block

Command mode: All

Table 134. CPU Statistics

Statistics	Description
cpuUtil1Second	The use of MP CPU over 1 second. It shows the percentage, highest rate, thread, and time the highest utilization occurred.
cpuUtil4Seconds	The use of MP CPU over 4 seconds. It shows the percentage.
cpuUtil64Seconds	The use of MP CPU over 64 seconds. It shows the percentage.
Highest	The highest percent of CPU use.

Table 134. CPU Statistics

Statistics	Description
Thread	The thread ID and name of the thread that caused the highest CPU use.
Time	The time when the highest CPU use was reached.

show processes cpu

Command mode: All

CPU Utilization at 8:25:55 Tue Jan 8, 2013
Total CPU Utilization: For 1 second: 2.92%
For 5 second: 3.38%
For 1 minute: 7.88%
For 5 minute: 8.93%

Highest CPU Utilization: thread 2 (STP) at 6:44:56 Tue Jan 8, 2013

Access Control List Statistics

The following commands display and change ACL statistics.

Table 136. ACL Statistics Commands

Command Syntax and Usage
show access-control list < <i>ACL number</i> > counters Displays the Access Control List Statistics for a specific ACL. Command mode: All
show access-control list6 < <i>ACL number</i> > counters Displays the IPv6 ACL statistics for a specific ACL. Command mode: All
show access-control macl <i><macl number=""></macl></i> counters Displays the ACL statistics for a specific management ACL (MACL). Command mode: All
show access-control counters Displays all ACL statistics. Command mode: All
clear access-control list {< <i>ACL number</i> > all} counters Clears ACL statistics. Command mode: Privileged EXEC
clear access-control list6 {< <i>ACL number</i> > all} Clears IPv6 ACL statistics. Command mode: Privileged EXEC
show access-control meter <i><meter number=""></meter></i> counters Displays ACL meter statistics. Command mode: All
clear access-control meter <i><meter number=""></meter></i> counters Clears ACL meter statistics. Command mode: Privileged EXEC

ACL Statistics

The following command displays ACL statistics.

show access-control counters

Command mode: All

Hits for ACL 1:	26057515	
Hits for ACL 2:	26057497	

VMAP Statistics

The following command displays VLAN Map statistics.

show access-control vmap {<vmap number>} counters

Command mode: All

Hits for VMAP 1: 57515

Fibre Channel over Ethernet Statistics

The following command displays Fibre Channel over Ethernet (FCoE) statistics:

show fcoe counters

Command mode: All

FCOE statistics:			
FCFAdded:	5	FCFRemoved:	1
FCOEAdded:	81	FCOERemoved:	24

Fibre Channel over Ethernet (FCoE) statistics are described in the following table:

 Table 137.
 FCoE Statistics (/stats/fcoe)

Statistic	Description
FCFAdded	Total number of FCoE Forwarders (FCF) added.
FCFRemoved	Total number of FCoE Forwarders (FCF) removed.
FCOEAdded	Total number of FCoE connections added.
FCOERemoved	Total number of FCoE connections removed.

The total can accumulate over several FCoE sessions, until the statistics are cleared.

The following command clears Fibre Channel over Ethernet (FCoE) statistics:

clear fcoe counters

ACL Meter Statistics

This option displays ACL meter statistics.

show access-control meter <meter number> counters

Command mode: All

Out of profile hits for Meter 1, Port EXT1: 0 Out of profile hits for Meter 2, Port EXT1: 0

SNMP Statistics

The following command displays SNMP statistics:

show snmp-server counters

Command mode: All except User EXEC

SNMP statistics:				
snmpInPkts:	150097	<pre>snmpInBadVersions:</pre>	0	
<pre>snmpInBadC'tyNames:</pre>	0	<pre>snmpInBadC'tyUses:</pre>	0	
<pre>snmpInASNParseErrs:</pre>	0	<pre>snmpEnableAuthTraps:</pre>	0	
snmpOutPkts:	150097	<pre>snmpInBadTypes:</pre>	0	
snmpInTooBigs:	0	<pre>snmpInNoSuchNames:</pre>	0	
<pre>snmpInBadValues:</pre>	0	<pre>snmpInReadOnlys:</pre>	0	
snmpInGenErrs:	0	<pre>snmpInTotalReqVars:</pre>	798464	
<pre>snmpInTotalSetVars:</pre>	2731	snmpInGetRequests:	17593	
snmpInGetNexts:	131389	snmpInSetRequests:	615	
<pre>snmpInGetResponses:</pre>	0	snmpInTraps:	0	
snmpOutTooBigs:	0	<pre>snmpOutNoSuchNames:</pre>	1	
<pre>snmpOutBadValues:</pre>	0	<pre>snmpOutReadOnlys:</pre>	0	
snmpOutGenErrs:	1	<pre>snmpOutGetRequests:</pre>	0	
snmpOutGetNexts:	0	<pre>snmpOutSetRequests:</pre>	0	
<pre>snmpOutGetResponses:</pre>	150093	<pre>snmpOutTraps:</pre>	4	
<pre>snmpSilentDrops:</pre>	0	<pre>snmpProxyDrops:</pre>	0	

Table 138. SNMP Statistics

Statistic	Description
snmpInPkts	The total number of Messages delivered to the SNMP entity from the transport service.
snmpInBadVersions	The total number of SNMP Messages, which were delivered to the SNMP protocol entity and were for an unsupported SNMP version.
snmpInBadC'tyNames	The total number of SNMP Messages delivered to the SNMP entity which used an SNMP community name not known to the said entity (the switch).
snmpInBadC'tyUses	The total number of SNMP Messages delivered to the SNMP protocol entity which represented an SNMP operation which was not allowed by the SNMP community named in the Message.

Table 138. SNMP Statistics (continued)

Statistic	Description
snmpInASNParseErrs	The total number of ASN.1 or BER errors encountered by the SNMP protocol entity when decoding SNMP Messages received.
	Note: OSI's method of specifying abstract objects is called ASN.1 (Abstract Syntax Notation One, defined in X.208), and one set of rules for representing such objects as strings of ones and zeros is called the BER (Basic Encoding Rules, defined in X.209). ASN.1 is a flexible notation that allows one to define a variety of data types, from simple types such as integers and bit strings to structured types such as sets and sequences. BER describes how to represent or encode values of each ASN.1 type as a string of eight-bit octets.
snmpEnableAuthTraps	An object to enable or disable the authentication traps generated by this entity (the switch).
snmpOutPkts	The total number of SNMP Messages which were passed from the SNMP protocol entity to the transport service.
snmpInBadTypes	The total number of SNMP Messages which failed ASN parsing.
snmpInTooBigs	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>too big</i> .
snmpInNoSuchNames	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is noSuchName.
snmpInBadValues	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is badValue.
snmpInReadOnlys	The total number of valid SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is `read-Only'. It should be noted that it is a protocol error to generate an SNMP PDU, which contains the value `read-Only' in the error-status field. As such, this object is provided as a means of detecting incorrect implementations of the SNMP.
snmpInGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is genErr.

Table 138. SNMP Statistics (continued)

Statistic	Description
snmpInTotalReqVars	The total number of MIB objects which have been retrieved successfully by the SNMP protocol entity as a result of receiving valid SNMP Get-Request and Get-Next Protocol Data Units (PDUs).
snmpInTotalSetVars	The total number of MIB objects, which have been altered successfully by the SNMP protocol entity as a result of receiving valid SNMP Set-Request Protocol Data Units (PDUs).
snmpInGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInGetResponses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpOutTooBigs	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is <i>too big</i> .
snmpOutNoSuchNames	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status is noSuchName.
snmpOutBadValues	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is badValue.
snmpOutReadOnlys	Not in use.
snmpOutGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is genErr.
snmpOutGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.

Table 138.	SNMP	Statistics	(continued)
------------	------	------------	-------------

Statistic	Description
snmpOutGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutGetResponses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpSilentDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMPv2 entity which were silently dropped because the size of a reply containing an alternate Response-PDU with an empty variable bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.
snmpProxyDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMP entity which were silently dropped because the transmission of the message to a proxy target failed in a manner such that no Response-PDU could be returned.

NTP Statistics

IBM Networking OS uses NTP (Network Timing Protocol) version 3 to synchronize the switch's internal clock with an atomic time calibrated NTP server. With NTP enabled, the switch can accurately update its internal clock to be consistent with other devices on the network and generates accurate syslogs.

The following command displays NTP statistics:

show ntp counters

Command mode: All

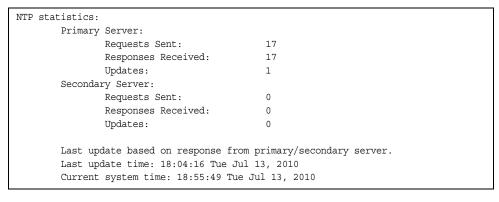

Table 139. NTP Statistics

Field	Description		
Primary Server	• Requests Sent: The total number of NTP requests the switch sent to the primary NTP server to synchronize time.		
	• Responses Received: The total number of NTP responses received from the primary NTP server.		
	• Updates: The total number of times the switch updated its time based on the NTP responses received from the primary NTP server.		
Secondary Server	• Requests Sent: The total number of NTP requests the switch sent to the secondary NTP server to synchronize time.		
	• Responses Received: The total number of NTP responses received from the secondary NTP server.		
	 Updates: The total number of times the switch updated its time based on the NTP responses received from the secondary NTP server. 		
Last update based on response from primary server	Last update of time on the switch based on either primary or secondary NTP response received.		

Table 139. NTP Statistics (continued)

Field	Description
Last update time	The time stamp showing the time when the switch was last updated.
Current system time	The switch system time when the following command was issued: show ntp counters

The following command displays information about NTP associated peers:

show ntp associations

Command mode: All

address	ref clock	st	when(s)	offset(s)
*12.200.151.18	198.72.72.10	3	35316	-2
*synced, #unsync	ced			

Table 140. NTP Associations

Field	Description
address	Peer address
ref clock	Peer reference clock address
st	Peer stratum
when(s)	Time in seconds since the latest NTP packet was received from the peer
offset(s)	Offset in seconds between the peer clock and local clock

SLP Statistics

Table 141. SLP Statistics Commands

Command Syntax and Usage	
show ip slp counter	
Displays SLP packet counters.	
Command mode: All	
clear ip slp counter	
Clears SLP packet counters.	
Command mode: Privileged EXEC	

Use the following command to display SLP packet counters:

show ip slp counter

Command mode: All

SLP Se	nd Counters:		
SL	P DAAdvert	:	0
SL	? SrvRqst	:	0
SL	? SrvRply	:	0

Statistics Dump

The following command dumps switch statistics:

show counters

Use the dump command to dump all switch statistics (40K or more, depending on your configuration). This data can be used to tune or debug switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command.

Chapter 4. Configuration Commands

This chapter discusses how to use the Command Line Interface (CLI) for making, viewing, and saving switch configuration changes. Many of the commands, although not new, display more or different information than in the previous version. Important differences are called out in the text.

Table 142. General Configuration Commands

Command Syntax and Usage
show running-config
Dumps current configuration to a script file.
Command mode: Privileged EXEC
For details, see page 494.
show running-config diff
Displays running configuration changes that have been applied but not saved to flash memory.
Command mode: Privileged EXEC
copy running-config backup-config
Copy the current (running) configuration from switch memory to the <pre>backup-config partition.</pre>
Command mode: Privileged EXEC
For details, see page 495.
copy running-config startup-config
Copy the current (running) configuration from switch memory to the <pre>startup-config partition.</pre>
Command mode: Privileged EXEC
copy running-config {ftp tftp sftp} [data-port extm-port mgt-port]
Backs up current configuration to a file on the selected FTP/TFTP/SFTP server. Select a management port, or press Enter to use the default (management) port.
Command mode: Privileged EXEC

Table 142. General Configuration Commands

Command Syntax and Usage

```
copy {ftp|tftp|sftp} running-config
```

[data-port|extm-port|mgt-port]

Restores current configuration from a FTP/TFTP/SFTP server. Select a management port, or press **Enter** to use the default (management) port.

Command mode: Privileged EXEC

For details, see page 496.

copy {tftp|sftp} {ca-cert|host-key|host-cert}

Import interface used by NIST certified test laboratories for USGv6 (NIST SP 500-267) certification purposes. Required for RSA digital signature authentication verification during IKEv2 interoperability testing. Uses TFTP or SFTP to import:

- ca-cert: Certificate Authority root certificate
- host-key: host private key
- host-cert: host public key

Command mode: Privileged EXEC

Viewing and Saving Changes

As you use the configuration commands to set switch parameters, the changes you make take effect immediately. You do not need to apply them. Configuration changes are lost the next time the switch boots, unless you save the changes.

You can view all running configuration changes that have been applied but not saved to flash memory using the show running-config diff command in Privileged EXEC mode.

Note: Some operations can override the settings of the Configuration commands. Therefore, settings you view using the Configuration commands (for example, port status) might differ from run-time information that you view using the Information commands. The Information commands display current run-time information of switch parameters.

Saving the Configuration

You must save configuration settings to flash memory, so the CN4093 reloads the settings after a reset.

Note: If you do not save the changes, they will be lost the next time the system is rebooted.

To save the new configuration, enter the following command:

Router# copy running-config startup-config

When you save configuration changes, the changes are saved to the *active* configuration block. For instructions on selecting the configuration to run at the next system reset, see "Selecting a Configuration Block" on page 517.

System Configuration

These commands provide configuration of switch management parameters such as user and administrator privilege mode passwords, Web-based management settings, and management access lists.

 Table 143.
 System Configuration Commands

sys	stem date < <i>yyyy> <mm> <dd></dd></mm></i>
-	Prompts the user for the system date. The date retains its value when the switch is reset.
	Command mode: Global configuration
sys	stem time <hh>:<mm>:<ss></ss></mm></hh>
	Configures the system time using a 24-hour clock format. The time retains its value when the switch is reset.
	Command mode: Global configuration
sys	stem timezone
	Configures the time zone where the switch resides. You are prompted to select your location (continent, country, region) by the timezone wizard. Once a region is selected, the switch updates the time to reflect local changes to Daylight Saving Time, etc.
	Command mode: Global configuration
[no] system daylight
	Disables or enables daylight saving time in the system clock. When enabled, the switch will add an extra hour to the system clock so that it is consistent with the local clock. By default, this option is disabled.
	Command mode: Global configuration
ter	minal-length <0-300>
	Configures the number of lines per screen displayed in the CLI for the curren session. A value of 0 disables paging. By default, it is set to the corresponding line vty length or line console length value in effect at login.
	Command mode: All
lir	e console length <0-300>
	Configures the number of lines per screen displayed in the CLI by default for console sessions. Setting it to 0 disables paging. The default value is 28.
	Command mode: Global configuration
no	line console
	Sets line console length to the default value of 28.
	Command mode: Global configuration
lir	e vty length <0-300>
	Sets the default number of lines per screen displayed for Telnet and SSH sessions. A value of 0 disables paging. The default value is 28.

Table 143. System Configuration Commands (continued)

Command Syntax and Usage
no line vty
Sets line vty length to the default value of 28.
Command mode: Global configuration
system idle <0-60>
Sets the idle timeout for CLI sessions in minutes. The default value is 10 minutes. A value of 0 disables system idle.
Command mode: Global configuration
system linkscan {fast normal slow}
Configures the link scan interval used to poll the status of ports.
Command mode: Global configuration
system notice <maximum 1024="" character="" login="" multi-line="" notice=""> <'.' to end></maximum>
Displays a login notice immediately before the "Enter password:" prompt. This notice can contain up to 1024 characters and new lines.
Command mode: Global configuration
[no] banner <1-80 characters>
Configures a login banner of up to 80 characters. When a user or administrator logs into the switch, the login banner is displayed. It is also displayed as part of the output from the show sys-info command.
Command mode: Global configuration
[no] hostname <character string=""></character>
Enables or disables displaying of the host name (system administrator's name) in the Command Line Interface (CLI).
Command mode: Global configuration
[no] system dhcp [extm mgt]
Enables or disables Dynamic Host Control Protocol for setting the IP address on the selected interface. When enabled, the IP address obtained from the DHCP server overrides the static IP address. The default setting is enabled.
Command mode: Global configuration
[no] system reset-control
Enables or disables the reset control flag. When enabled, the switch continues to function after a crash of the main processor, using the last known Layer 2/3 information.
Command mode: Global configuration

Table 143. System Configuration Commands (continued)

Command Syntax and Usage

[no] system packet-logging

Enables or disables logging of packets that come to the CPU. The default setting is enabled.

Command mode: Global configuration

show system

Displays the current system parameters.

Command mode: All

System Error Disable and Recovery Configuration

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 144. Error Disable Configuration Commands

erı	rdisable timeout <30-86400>
	Configures the error-recovery timeout, in seconds. After the timer expires, the switch attempts to re-enable the port. The default value is 300.
	Note: When you change the timeout value, all current error-recovery timers are reset.
	Command mode: Global configuration
eri	rdisable recovery
	Globally enables automatic error-recovery for error-disabled ports. The default setting is disabled.
	Note : Each port must have error-recovery enabled to participate in automatic error recovery.
	Command mode: Global configuration
no	errdisable recovery
	Globally disables error-recovery for error-disabled ports; errdisable recovery is disabled globally by default.
	Command mode: All
sho	ow errdisable
	Displays the current system Error Disable configuration.
	Command mode: All

System Host Log Configuration

Table 145. I	Host Log	Configuration	Commands
--------------	----------	---------------	----------

[data-port extm-port mgt-port] Sets the IPv4 address of the first or second syslog host. Command mode: Global configuration [no] logging host <1-2> address6 <ip address=""> [data-port extm-port mgt-port] Sets the IPv6 address of the first or second syslog host. Command mode: Global configuration logging host <1-2> severity <0-7> This option sets the severity level of the first or second syslog host displayed. The default is 7, which means log all severity levels. 	Command mode: Global configuration

Table 145. Host Log Configuration Commands

Com	mand Syntax and Usage
[no]	logging synchronous [level <0-7> all]
e p fi n	nables or disables synchronous logging for unsolicited messages. When nabled, if unsolicited messages occur while solicited output display is in rogress, the unsolicited messages are buffered and then output separately rom the solicited messages. The buffer can store up to 20 unsolicited messages, after which unsolicited messages are discarded. When disabled, unsolicited and solicited messages are logged together.
v d	The level parameter sets a minimum severity level (lower or equal numeric alues) for unsolicited messages to be displayed asynchronously; all isplays all unsolicited messages asynchronously, regardless of severity evel. The default setting is 2.
C	command mode: Global configuration
logg	ing console severity $<0-7>$
T s n	Sets the severity level of system log messages to display via the console, Telnet, and SSH. The system displays only messages with the selected everity level and above. For example, if you set the console severity to 2, only messages with severity level of 1 and 2 are displayed. The default is 7, which means log all severity levels.
C	command mode: Global configuration
no l	ogging console severity
Ľ	Disables delivering syslog messages to the console based on severity.
C	command mode: Global configuration
[no]	logging buffer severity <0-7>
T F	Sets the severity level of system log messages that are written to flash buffer. The system saves only messages with the selected severity level and above. For example, if you set the buffer severity to 2, only messages with severity evel of 1 and 2 are saved.
C	command mode: Global configuration
[no]	logging log [<feature>]</feature>
С	Displays a list of features for which syslog messages can be generated. You an choose to enable/disable specific features (such as vlans, stg, or ssh), r enable/disable syslog on all available features.
C	command mode: Global configuration
show	<pre>logging [severity <severity level="">] [reverse]</severity></pre>
n	Displays the current syslog settings, followed by the most recent 2000 syslog nessages, as displayed by the show logging messages command. For letails, see page 27.
	he reverse option displays the output in reverse order, from the newest entry o the oldest.
-	

SSH Server Configuration

For the CN4093 10Gb Converged Scalable Switch, these commands enable Secure Shell access from any SSH client.

ssł	n scp-password
	Set the administration password for SCP access.
	Command mode: Global configuration
ssł	n generate-host-key
	Generate the RSA host key.
	Command mode: Global configuration
ssł	n port <tcp number="" port=""></tcp>
	Sets the SSH server port number.
	Command mode: Global configuration
ssł	1 scp-enable
	Enables the SCP apply and save.
	Command mode: Global configuration
no	ssh scp-enable
	Disables the SCP apply and save.
	Command mode: Global configuration
ssł	1 enable
	Enables the SSH server.
	Command mode: Global configuration
no	ssh enable
	Disables the SSH server.
	Command mode: Global configuration
sho	ow ssh
	Displays the current SSH server configuration.
	Command mode: All

RADIUS Server Configuration

Table 147. RADIUS Server Configuration Commands

Command Syntax and Usage [no] radius-server primary-host <ip address=""> Sets the primary RADIUS server address. Command mode: Global configuration</ip>
Sets the primary RADIUS server address.
Command mode: Global configuration
[no] radius-server secondary-host < <i>IP address</i> >
Sets the secondary RADIUS server address.
Command mode: Global configuration
radius-server primary-host < <i>IP address</i> > key < <i>1-32 characters</i> >
This is the primary shared secret between the switch and the RADIUS server(s).
Command mode: Global configuration
radius-server secondary-host < <i>IP address</i> > key < <i>1-32 characters</i> >
This is the secondary shared secret between the switch and the RADIUS server(s).
Command mode: Global configuration
[default] radius-server port < UDP port number>
Enter the number of the UDP port to be configured, between 1500 - 3000. The default is 1645.
Command mode: Global configuration
radius-server retransmit <i><1-3></i>
Sets the number of failed authentication requests before switching to a different RADIUS server. The default is 3 requests.
Command mode: Global configuration
radius-server timeout <1-10>
Sets the amount of time, in seconds, before a RADIUS server authentication attempt is considered to have failed. The default is 3 seconds.
Command mode: Global configuration
ip radius source-interface loopback <1-5>
Sets the RADIUS source loopback interface.
Command mode: Global configuration
[no] radius-server backdoor
Enables or disables the RADIUS backdoor for Telnet/SSH/HTTP/HTTPS. The default value is disabled.
To obtain the RADIUS backdoor password for your switch, contact your Service and Support line.
Command mode: Global configuration

Command Syntax and Usage	
radius-server enable	
Enables the RADIUS server.	
Command mode: Global configuration	
no radius-server enable	
Disables the RADIUS server.	
Command mode: Global configuration	
show radius-server	
Displays the current RADIUS server parameters.	
Command mode: All	

TACACS+ Server Configuration

TACACS (Terminal Access Controller Access Control system) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system. TACACS is not an encryption protocol, and therefore less secure than TACACS+ and Remote Authentication Dial-In User Service (RADIUS) protocols. Both TACACS and TACACS+ are described in RFC 1492.

TACACS+ protocol is more reliable than RADIUS, as TACACS+ uses the Transmission Control Protocol (TCP) whereas RADIUS uses the User Datagram Protocol (UDP). Also, RADIUS combines authentication and authorization in a user profile, whereas TACACS+ separates the two operations.

TACACS+ offers the following advantages over RADIUS as the authentication device:

- TACACS+ is TCP-based, so it facilitates connection-oriented traffic.
- It supports full-packet encryption, as opposed to password-only in authentication requests.
- It supports de-coupled authentication, authorization, and accounting.

Table 148. TACACS+ Server Configuration Commands

	mand Syntax and Usage
[no]	tacacs primary-host < <i>IP address</i> >
D	Defines the primary TACACS+ server address.
C	Command mode: Global configuration
[no]	tacacs secondary-host < <i>IP address</i> >
0	Defines the secondary TACACS+ server address.
C	Command mode: Global configuration
[no]	tacacs primary-host < <i>IP address</i> > key < <i>1-32 characters</i> >
	This is the primary shared secret between the switch and the TACACS+ server(s).
C	Command mode: Global configuration
[no]	tacacs secondary-host <ip address=""> key <1-32 characters></ip>
	This is the secondary shared secret between the switch and the TACACS+ server(s).
C	Command mode: Global configuration
[def	ault] tacacs port <tcp number="" port=""></tcp>
	Enter the number of the TCP port to be configured, between 1 and 65000. The default is 49.
C	Command mode: Global configuration
taca	acs retransmit <1-3>
	Sets the number of failed authentication requests before switching to a lifferent TACACS+ server. The default is 3 requests.
	Command mode: Global configuration

Table 148.	. TACACS+ Server Configuration Commands	(continued)
------------	---	-------------

Command Syntax and Usage tacacs attempts <1-10>
tacacs attempts $<1-10>$
Sets the number of failed login attempts before disconnecting the user. The default is 2 attempts.
Command mode: Global configuration
tacacs timeout <4-15>
Sets the amount of time, in seconds, before a TACACS+ server authentication attempt is considered to have failed. The default is 5 seconds.
Command mode: Global configuration
ip tacacs source-interface loopback <1-5>
Sets the TACACS+ source loopback interface.
Command mode: Global configuration
[no] tacacs user-mapping {<0-15>user oper admin}
Maps a TACACS+ authorization level to a switch user level. Enter a TACACS+ authorization level (0-15), followed by the corresponding switch user level.
Command mode: Global configuration
[no] tacacs backdoor
Enables or disables the TACACS+ back door for Telnet, SSH/SCP, or HTTP/HTTPS.
Enabling this feature allows you to bypass the TACACS+ servers. It is recommended that you use Secure Backdoor to ensure the switch is secured, because Secure Backdoor disallows access through the back door when the TACACS+ servers are responding.
The default setting is disabled.
To obtain the TACACS+ backdoor password for your CN4093, contact your Service and Support line.
Command mode: Global configuration
[no] tacacs secure-backdoor
Enables or disables TACACS+ secure back door access through Telnet, SSH/SCP, or HTTP/HTTPS only when the TACACS+ servers are not responding.
This feature is recommended to permit access to the switch when the TACACS+ servers become unresponsive. If no back door is enabled, the only way to gain access when TACACS+ servers are unresponsive is to use the back door via the console port.
The default is disabled.
Command mode: Global configuration
[no] tacacs privilege-mapping
Enables or disables TACACS+ privilege-level mapping.
The default value is disabled.
Command mode: Global configuration

Com	mand Syntax and Usage
[no]	tacacs-server password-change
E	Enables or disables TACACS+ password change.
٦	Fhe default value is disabled.
(Command mode: Global configuration
prir	nary-password
	Configures the password for the primary TACACS+ server. The CLI will promp /ou for input.
(Command mode: Global configuration
seco	ondary-password
	Configures the password for the secondary TACACS+ server. The CLI will prompt you for input.
(Command mode: Global configuration
[no]	tacacs-server command-authorization
E	Enables or disables TACACS+ command authorization.
C	Command mode: Global configuration
[no]	tacacs-server command-logging
E	Enables or disables TACACS+ command logging.
C	Command mode: Global configuration
[no]	tacacs-server directed-request [restricted no-truncate]
۲ ۱ s	Enables or disables TACACS+ directed request, which uses a specified IACACS+ server for authentication, authorization, accounting. When enabled When directed-request is enabled, each user must add a configured TACACS- server hostname to the username (for example, username@hostname) during login.
٦	This command allows the following options:
_	- Restricted: Only the username is sent to the specified TACACS+ server.
_	- No-truncate : The entire login string is sent to the TACACS+ server.
C	Command mode: Global configuration
[no]	tacacs-server enable
E	Enables or disables the TACACS+ server. By default, the server is disabled.
(Command mode: Global configuration
[no]	tacacs-server accounting-enable
E	Enables or disables TACACS+ accounting.
C	Command mode: Global configuration
shov	v tacacs-server

LDAP Server Configuration

LDAP (Lightweight Directory Access Protocol) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system.

Table 149. LDAP Server Configuration Commands

Command Syntax and Usage		
[no] ldap-server primary-host <i><ip address=""></ip></i>		
Sets the primary LDAP server address.		
Command mode: Global configuration		
[no] ldap-server secondary-host < <i>IP address</i> >		
Sets the secondary LDAP server address.		
Command mode: Global configuration		
[default] ldap-server port UDP port number>		
Enter the number of the UDP port to be configured, between 1 - 65000. The default is 389.		
Command mode: Global configuration		
ldap-server retransmit <1-3>		
Sets the number of failed authentication requests before switching to a different LDAP server. The default is 3 requests.		
Command mode: Global configuration		
ldap-server timeout <4-15>		
Sets the amount of time, in seconds, before a LDAP server authentication attempt is considered to have failed. The default is 5 seconds.		
Command mode: Global configuration		
ldap-server domain [<1-128 characters> none]		
Sets the domain name for the LDAP server. Enter the full path for your organization. For example:		
ou=people,dc=mydomain,dc=com		
Command mode: Global configuration		
[no] ldap-server backdoor		
Enables or disables the LDAP back door for Telnet, SSH/SCP, or HTTP/HTTPS. The default setting is <code>disabled</code> .		
To obtain the LDAP back door password for your CN4093, contact your Service and Support line.		
Command mode: Global configuration		

Table 149.	LDAP Server Configuration Co	ommands (continued)
------------	------------------------------	---------------------

Command Syntax and Usage

ldap-server enable

Enables the LDAP server.

Command mode: Global configuration

no ldap-server enable

Disables the LDAP server.

Command mode: Global configuration

show ldap-server

Displays the current LDAP server parameters.

Command mode: All

NTP Server Configuration

These commands allow you to synchronize the switch clock to a Network Time Protocol (NTP) server. By default, this option is disabled.

Table 150. NTP Server Configuration Commands

Command Syntax and Usage	
 [no] ntp primary-server <<i>IP address</i>>[data-port extm-port mgt-po Prompts for the IP addresses of the primary NTP server to which you want synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt) data port (data) external management port (extm) 	-
Command mode: Global configuration	
<pre>[no] ntp secondary-server <ip address>[data-port extm-port mgt-port] Prompts for the IP addresses of the secondary NTP server to which you we to synchronize the switch clock. Select the port to use for data transfer: - internal management port (mgt) - data port (data) - external management port (extm) Command mode: Global configuration [no] ntp ipv6 primary-server <ipv6 address>[data-port extm-port mgt-port] Prompts for the IPv6 addresses of the primary NTP server to which you wan synchronize the switch clock. Select the port to use for data transfer: - internal management port (mgt) - data port (data)</ipv6 </ip </pre>	
 – external management port (extm) 	
Note: To delete the IPv6 primary server, use the following command: no ntp primary-server <ip address=""> Command mode: Global configuration</ip>	
 [no] ntp ipv6 secondary-server <ipv6 address>[data-port extm-port mgt-port]</ipv6 Prompts for the IPv6 addresses of the secondary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfe – internal management port (mgt) data port (data) external management port (extm) Note: To delete the IPv6 secondary server, use the following command: no ntp secondary-server <ip address=""></ip> Command mode: Global configuration 	

Table 150. NTP Server Configuration Commands

[no] ntp sync-logs

Enables or disables informational logs for NTP synchronization failures. Default setting is enabled.

Command mode: Global configuration

ntp offset <0-86400>

Configures the minimum offset in seconds between the switch clock and the NTP server that triggers a system log message.

The default value is 300.

Command mode: Global configuration

no ntp offset

Resets the NTP offset to the default 300 seconds value.

Command mode: Global configuration

ntp interval <5-44640>

Specifies the interval, that is, how often, in minutes, to re-synchronize the switch clock with the NTP server.

The default value is 1440.

Command mode: Global configuration

ntp source loopback <1-5>

Sets the NTP source loopback interface.

Command mode: Global configuration

[no] ntp authenticate

Enables or disables NTP authentication. The default setting is disabled. When authentication is enabled, the switch transmits NTP packets with the MAC address appended.

Command mode: Global configuration

ntp primary-key <1-65534>

Adds the NTP primary server key, which specifies which MD5 key is used by the primary server.

Command mode: Global configuration

ntp secondary-key <1-65534>

Adds the NTP secondary server key, which specifies which MD5 key is used by the secondary server.

Command mode: Global configuration

ntp trusted-key < l-65534 > 0

Adds an MD5 key code to the list of trusted keys. Enter 0 (zero) to remove the selected key code.

Command mode: Global configuration

Table 150. NTP Server Configuration Commands

ntr	p enable
	Enables the NTP synchronization service.
	Command mode: Global configuration
no	ntp enable
	Disables the NTP synchronization service.
	Command mode: Global configuration
show ntp	
	Displays the current NTP service settings.
	Command mode: All

NTP MD5 Key Commands

Table 151. NTP MD5 KEy Configuration Options

Command Syntax and Usage	
ntp message-digest-key <1-65534> md5-key <1-16 characters> Configures the selected MD5 key code. Command mode: Global configuration	
no ntp message-digest-key <1-65534> Deletes the selected MD5 key code. Command mode: Global configuration	

System SNMP Configuration

IBM Networking OS supports SNMP-based network management. In SNMP model of network management, a management station (client/manager) accesses a set of variables known as MIBs (Management Information Base) provided by the managed device (agent). If you are running an SNMP network management station on your network, you can manage the switch using the following standard SNMP MIBs:

- MIB II (RFC 1213)
- Ethernet MIB (RFC 1643)
- Bridge MIB (RFC 1493)

An SNMP agent is a software process on the managed device that listens on UDP port 161 for SNMP messages. Each SNMP message sent to the agent contains a list of management objects to retrieve or to modify.

SNMP parameters that can be modified include:

- System name
- System location
- System contact
- Use of the SNMP system authentication trap function
- Read community string
- Write community string
- Trap community strings

Table 152. System SNMP Commands

Command Syntax and Usage

snmp-server name <1-64 characters>

Configures the name for the system. The name can have a maximum of 64 characters.

Command mode: Global configuration

snmp-server location <1-64 characters>

Configures the name of the system location. The location can have a maximum of 64 characters.

Command mode: Global configuration

snmp-server contact <1-64 characters>

Configures the name of the system contact. The contact can have a maximum of 64 characters.

Command mode: Global configuration

snmp-server read-community <1-32 characters>

Configures the SNMP read community string. The read community string controls SNMP "get" access to the switch. It can have a maximum of 32 characters. The default read community string is *public*.

Command mode: Global configuration

Table 152. System SNMP Commands

Cor	nmand Syntax and Usage
snr	np-server write-community <1-32 characters>
	Configures the SNMP write community string. The write community string controls SNMP "set" and "get" access to the switch. It can have a maximum of 32 characters. The default write community string is <i>private</i> .
	Command mode: Global configuration
[nc	Adds or removes an additional SNMP read community string. Up to 7 additional read community strings are supported.
	Command mode: Global configuration
[nc	Adds or removes an additional SNMP write community string. Up to 7 additional write community strings are supported. Command mode: Global configuration
snr	<pre>mp-server trap-source {<interface number=""> loopback <1-5>} Configures the source interface for SNMP traps. To send traps through the management ports, specify interface 128. Command mode: Global configuration</interface></pre>
snr	np-server host <trap address="" host="" ip=""> <trap community="" host="" string=""> Adds a trap host server. Command mode: Global configuration</trap></trap>
no	snmp-server host <trap address="" host="" ip=""> Removes the trap host server. Command mode: Global configuration</trap>
snr	mp-server timeout <1-30> Sets the timeout value for the SNMP state machine, in minutes. Command mode: Global configuration
[no] snmp-server authentication-trap Enables or disables the use of the system authentication trap facility. The default setting is disabled. Command mode: Global configuration
[no] snmp-server link-trap Enables or disables the sending of SNMP link up and link down traps. The default setting is enabled. Command mode: Global configuration
sho	ow snmp-server Displays the current SNMP configuration. Command mode: All

SNMPv3 Configuration

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 Framework by supporting the following:

- a new SNMP message format
- security for messages
- access control
- remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC3411 to RFC3418.

Command Syntax and Usage		
snmp-server user <1-16>		
This command allows you to create a user security model (USM) entry for an authorized user. You can also configure this entry through SNMP.		
Command mode: Global configuration		
To view command options, see page 265.		
snmp-server view <1-128>		
This command allows you to create different MIB views.		
Command mode: Global configuration		
To view command options, see page 266.		
snmp-server access <1-32>		
This command allows you to specify access rights. The View-based Access Control Model defines a set of services that an application can use for checking access rights of the user. You need access control when you have to process retrieval or modification request from an SNMP entity.		
Command mode: Global configuration		
To view command options, see page 267.		
snmp-server group <1-16>		
A group maps the user name to the access group names and their access rights needed to access SNMP management objects. A group defines the access rights assigned to all names that belong to a particular group.		
Command mode: Global configuration		
To view command options, see page 268.		
snmp-server community <1-16>		
The community table contains objects for mapping community strings and version-independent SNMP message parameters.		
Command mode: Global configuration		
To view command options, see page 260		

To view command options, see page 269.

Table 153. SNMPv3 Configuration Commands (continued)

Table 153. SNMPv3 Configuration Commands (continued)
 snmp-server target-address <1-16> This command allows you to configure destination information, consisting of a transport domain and a transport address. This is also termed as transport endpoint. The SNMP MIB provides a mechanism for performing source address validation on incoming requests, and for selecting community strings based on target addresses for outgoing notifications. Command mode: Global configuration To view command options, see page 270.
snmp-server target-parameters <1-16> This command allows you to configure SNMP parameters, consisting of message processing model, security model, security level, and security name information. There may be multiple transport endpoints associated with a particular set of SNMP parameters, or a particular transport endpoint may be associated with several sets of SNMP parameters.
Command mode: Global configuration
To view command options, see page 271.
snmp-server notify <1-16>
A notification application typically monitors a system for particular events or conditions, and generates Notification-Class messages based on these events or conditions.
Command mode: Global configuration
To view command options, see page 272.
<pre>snmp-server version {v1v2v3 v3on1y} This command allows you to enable or disable the access to SNMP versions 1, 2 or 3. The default value is v1v2v3.</pre>
Command mode: Global configuration
show snmp-server v3
Displays the current SNMPv3 configuration.
Command mode: All

264 IBM Flex System Fabric CN4093 10Gb Converged Scalable Switch: Command Reference

User Security Model Configuration

You can make use of a defined set of user identities using this Security Model. An SNMP engine must have the knowledge of applicable attributes of a user.

These commands help you create a user security model entry for an authorized user. You need to provide a security name to create the USM entry.

Table 154. User Security Model Configuration Commands

Command Syntax and Usage		
snmp-server user <1-16> name <1-32 characters>		
This command allows you to configure a string that represents the name of the user. This is the login name that you need in order to access the switch.		
Command mode: Global configuration		
<pre>snmp-server user <1-16> authentication-protocol {md5 sha none} authentication-password <pre>password value></pre></pre>		
This command allows you to configure the authentication protocol and password.		
The authentication protocol can be HMAC-MD5-96 or HMAC-SHA-96, or none. The default algorithm is none.		
When you configure an authentication algorithm, you must provide a password, otherwise you will get an error message during validation. This command allows you to create or change your password for authentication.		
Command mode: Global configuration		
<pre>snmp-server user <1-16> privacy-protocol {des none} privacy-password <password value=""></password></pre>		
This command allows you to configure the type of privacy protocol and the privacy password.		
The privacy protocol protects messages from disclosure. The options are des (CBC-DES Symmetric Encryption Protocol) or none. If you specify des as the privacy protocol, then make sure that you have selected one of the authentication protocols (MD5 or HMAC-SHA-96). If you select none as the authentication protocol, you will get an error message.		
You can create or change the privacy password.		
Command mode: Global configuration		
no snmp-server user <1-16>		
Deletes the USM user entries.		
Command mode: Global configuration		
show snmp-server v3 user <1-16>		
Displays the USM user entries.		
Command mode: All		

SNMPv3 View Configuration

Note that the first five default vacmViewTreeFamily entries cannot be removed, and their names cannot be changed.

Table 155. SNMPv3 View Configuration Commands

Command Syntax and Usage			
snmp-server view <1-128> name <1-32 characters>			
This command defines the name for a family of view subtrees.			
Command mode: Global configuration			
snmp-server view <1-128> tree <1-64 characters>			
This command defines MIB tree, which when combined with the corresponding mask defines a family of view subtrees.			
Command mode: Global configuration			
[no] snmp-server view <1-128> mask <1-32 characters>			
This command defines the bit mask, which in combination with the corresponding tree defines a family of view subtrees.			
Command mode: Global configuration			
snmp-server view <1-128> type {included excluded}			
This command indicates whether the corresponding instances of vacmViewTreeFamilySubtree and vacmViewTreeFamilyMask define a family of view subtrees, which is included in or excluded from the MIB view.			
Command mode: Global configuration			
no snmp-server view <1-128>			
Deletes the vacmViewTreeFamily group entry.			
Command mode: Global configuration			
show snmp-server v3 view <1-128>			
Displays the current vacmViewTreeFamily configuration.			
Command mode: All			

View-based Access Control Model Configuration

The view-based Access Control Model defines a set of services that an application can use for checking access rights of the user. Access control is needed when the user has to process SNMP retrieval or modification request from an SNMP entity.

Table 156. View-based Access Control Model Commands

Con	nmand Syntax and Usage
snm	p-server access <1-32> name <1-32 characters>
	Defines the name of the group.
	Command mode: Global configuration
snm	p-server access <1-32> prefix <1-32 characters>
	Defines the name of the context. An SNMP context is a collection of management information that an SNMP entity can access. An SNMP entity has access to many contexts. For more information on naming the management information, see RFC2571, the SNMP Architecture document. The view-based Access Control Model defines a table that lists the locally available contexts by contextName.
	Command mode: Global configuration
snm	p-server access <1-32> security {usm snmpv1 snmpv2}
	Allows you to select the security model to be used.
	Command mode: Global configuration
	p-server access <1-32> level {noAuthNoPriv authNoPriv authPriv}
	Defines the minimum level of security required to gain access rights. The level noAuthNoPriv means that the SNMP message will be sent without authentication and without using a privacy protocol. The level authNoPriv means that the SNMP message will be sent with authentication but without using a privacy protocol. The authPriv means that the SNMP message will be sent both with authentication and using a privacy protocol.
	Command mode: Global configuration
snm	p-server access <1-32> match {exact prefix}
	If the value is set to $exact$, then all the rows whose contextName exactly matches the prefix are selected. If the value is set to $prefix$ then the all the rows where the starting octets of the contextName exactly match the prefix are selected.
	Command mode: Global configuration
snm	p-server access <1-32> read-view <1-32 characters>
	Defines a read view name that allows you read access to a particular MIB view. If the value is empty or if there is no active MIB view having this value then no
	access is granted.

Table 156. View-based Access Control Model Commands (continued)

Cor	Command Syntax and Usage		
snn	mp-server access <1-32> write-view <1-32 characters>		
	Defines a write view name that allows you write access to the MIB view. If the value is empty or if there is no active MIB view having this value then no access is granted.		
	Command mode: Global configuration		
snn	mp-server access <1-32> notify-view <1-32 characters>		
	Defines a notify view name that allows you notify access to the MIB view.		
	Command mode: Global configuration		
no	<pre>snmp-server access <1-32></pre>		
	Deletes the View-based Access Control entry.		
	Command mode: Global configuration		
sho	show snmp-server v3 access <1-32>		
	Displays the View-based Access Control configuration.		
	Command mode: All		

SNMPv3 Group Configuration

Table 157. SNMPv3 Group Configuration Commands

Command Syntax and Usage		
<pre>snmp-server group <1-16> security {usm snmpv1 snmpv2} Defines the security model. Command mode: Global configuration</pre>		
<pre>snmp-server group <1-16> user-name <1-32 characters> Sets the user name as defined in the following command on page 265: snmp-server user <1-16> name <1-32 characters> Command mode: Global configuration</pre>		
<pre>snmp-server group <1-16> group-name <1-32 characters> The name for the access group as defined in the following command: snmp-server access <1-32> name <1-32 characters> on page 265. Command mode: Global configuration</pre>		
no snmp-server group <1-16> Deletes the vacmSecurityToGroup entry. Command mode: Global configuration		
<pre>show snmp-server v3 group <1-16> Displays the current vacmSecurityToGroup configuration. Command mode: All</pre>		

SNMPv3 Community Table Configuration

These commands are used for configuring the community table entry. The configured entry is stored in the community table list in the SNMP engine. This table is used to configure community strings in the Local Configuration Datastore (LCD) of SNMP engine.

Table 158. SNMPv3 Community Table Configuration Commands

Command Syntax and Usage		
<pre>snmp-server community <1-16> index <1-32 characters> Allows you to configure the unique index value of a row in this table. Command string: Global configuration</pre>		
<pre>snmp-server community <1-16> name <1-32 characters> Defines the user name as defined in the following command on page 265: snmp-server user <1-16> name <1-32 characters> Command string: Global configuration</pre>		
<pre>snmp-server community <1-16> user-name <1-32 characters> Defines a readable string that represents the corresponding value of an SNMP community name in a security model. Command mode: Global configuration</pre>		
<pre>snmp-server community <1-16> tag <1-255 characters> Allows you to configure a tag. This tag specifies a set of transport endpoints to which a command responder application sends an SNMP trap. Command mode: Global configuration</pre>		
no snmp-server community <1-16> Deletes the community table entry. Command mode: Global configuration		
show snmp-server v3 community <1-16> Displays the community table configuration. Command mode: All		

SNMPv3 Target Address Table Configuration

These commands are used to configure the target transport entry. The configured entry is stored in the target address table list in the SNMP engine. This table of transport addresses is used in the generation of SNMP messages.

Table 159. Target Address Table Configuration Commands

Command Syntax and Usage		
<pre>snmp-server target-address <1-16> address <ip address=""> name <1-32 characters></ip></pre>		
Allows you to configure the locally arbitrary, but unique identifier, target address name associated with this entry.		
Command mode: Global configuration		
<pre>snmp-server target-address <1-16> name <1-32 characters> address <transport address="" ip=""></transport></pre>		
Configures a transport IPv4 address that can be used in the generation of SNMP traps.		
Command mode: Global configuration		
<pre>snmp-server target-address <1-16> port <port number=""></port></pre>		
Allows you to configure a transport address port that can be used in the generation of SNMP traps.		
Command mode: Global configuration		
<pre>snmp-server target-address <1-16> taglist <1-255 characters></pre>		
Allows you to configure a list of tags that are used to select target addresses for a particular operation.		
Command mode: Global configuration		
<pre>snmp-server target-address <1-16> parameters-name <1-32 characters> Defines the name as defined in the following command on page 271: snmp-server target-parameters <1-16> name <1-32 characters></pre>		
Command mode: Global configuration		
no snmp-server target-address <1-16>		
Deletes the Target Address Table entry.		
Command mode: Global configuration		
show snmp-server v3 target-address <1-16>		
Displays the current Target Address Table configuration.		
Command mode: All		

SNMPv3 Target Parameters Table Configuration

You can configure the target parameters entry and store it in the target parameters table in the SNMP engine. This table contains parameters that are used to generate a message. The parameters include the message processing model (for example: SNMPv3, SNMPv2c, SNMPv1), the security model (for example: USM), the security name, and the security level (noAuthnoPriv, authNoPriv, or authPriv).

Table 160. Target Parameters Table Configuration Commands

Command Syntax and Usage			
snmp-server target-parameters <1-16> name <1-32 characters>			
Allows you to configure the locally arbitrary, but unique, identifier that is associated with this entry.			
Command mode: Global configuration			
<pre>snmp-server target-parameters <1-16> message {snmpv1 snmpv2c snmpv3}</pre>			
Allows you to configure the message processing model that is used to generate SNMP messages.			
Command mode: Global configuration			
<pre>snmp-server target-parameters <1-16> security {usm snmpv1 snmpv2}</pre>			
Allows you to select the security model to be used when generating the SNMP messages.			
Command mode: Global configuration			
snmp-server target-parameters <1-16> user-name <1-32 characters>			
Defines the name that identifies the user in the USM table (page 265) on whose behalf the SNMP messages are generated using this entry.			
Command mode: Global configuration			
snmp-server target-parameters < <i>l-16</i> > level {noAuthNoPriv authNoPriv authPriv}			
Allows you to select the level of security to be used when generating the SNMP messages using this entry. The level noAuthNoPriv means that the SNMP message will be sent without authentication and without using a privacy protocol. The level authNoPriv means that the SNMP message will be sent with authentication but without using a privacy protocol. The authPriv means that the SNMP message will be sent both with authentication and using a privacy protocol.			
Command mode: Global configuration			
no snmp-server target-parameters <1-16>			
Deletes the targetParamsTable entry.			
Command mode: Global configuration			
show snmp-server v3 target-parameters <1-16>			
Displays the current targetParamsTable configuration.			
Command mode: All			

SNMPv3 Notify Table Configuration

SNMPv3 uses Notification Originator to send out traps. A notification typically monitors a system for particular events or conditions, and generates Notification-Class messages based on these events or conditions.

Table 161. Notify Table Commands

Command Syntax and Usage				
snmp-server notify <1-16> name <1-32 characters>				
Defines a locally arbitrary, but unique, identifier associated with this SNMP notify entry.				
Command mode: Global configuration				
snmp-server notify <1-16> tag <1-255 characters>				
Allows you to configure a tag that contains a tag value which is used to select entries in the Target Address Table. Any entry in the snmpTargetAddrTable, that matches the value of this tag, is selected. Command mode: Global configuration				
no snmp-server notify <1-16>				
Deletes the notify table entry.				
Command mode: Global configuration				
show snmp-server v3 notify <1-16>				
Displays the current notify table configuration.				
Command mode: All				

System Access Configuration

The following table describes system access configuration commands.

Table 162. System Access Configuration Commands

Command Syntax and Usage

access user user-password

Sets the user (user) password. The user has no direct responsibility for switch management. The user view switch status information and statistics, but cannot make any configuration changes.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Note: To disable the user account, set the password to null (no password).

Command Mode: Global configuration

access user operator-password

Sets the operator (oper) password. The operator manages all functions of the switch. The operator can view all switch information and statistics and can reset ports.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Note: To disable the operator account, set the password to null (no password). The default setting is disabled (no password).

Command Mode: Global configuration

access user administrator-password

Sets the administrator (admin) password. The administrator has complete access to all menus, information, and configuration commands on the CN4093, including the ability to change both the user and administrator passwords.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Access includes "oper" functions.

Note: You cannot disable the administrator password.

Command Mode: Global configuration

[no] access http enable

Enables or disables HTTP (Web) access to the Browser-Based Interface. It is enabled by default.

Command mode: Global configuration

[default] access http port [<port number>]

Sets the switch port used for serving switch Web content. The default is HTTP port 80.

Command mode: Global configuration

Com	mand Syntax and Usage
[no]	access snmp {read-only read-write}
Ľ	Disables or provides read-only/write-read SNMP access.
C	Command mode: Global configuration
[no]	access telnet enable
E	nables or disables Telnet access. This command is enabled by default.
C	Command mode: Global configuration
[def	ault] access telnet port [<1-65535>]
	Sets an optional Telnet server port number for cases where the server listens
	or Telnet sessions on a non-standard port.
C	Command mode: Global configuration
[def	ault] access tftp-port [<1-65535>]
S	Sets the TFTP port for the switch. The default is port 69.
C	Command mode: Global configuration
[no]	access tsbbi enable
	Enables or disables Telnet/SSH configuration through the Browser-Based nterface (BBI).
C	Command mode: Global configuration
[no]	access userbbi enable
	Enables or disables user configuration access through the Browser-Based nterface (BBI).
C	Command mode: Global configuration
shov	/ access
D	Displays the current system access parameters.
	Command mode: All

Table 162. System Access Configuration Commands (continued)

Management Network Configuration

These commands are used to define IP address ranges which are allowed to access the switch for management purposes.

Table 163. Management Network Configuration Commands

Command	Syntax and	Usage
Commanu	Syntax and	Usaye

001	ninana oynax ana osage
aco	cess management-network <mgmt address="" ipv4="" ipv6="" network="" or=""> <mgmt length="" mask="" network="" or="" prefix=""></mgmt></mgmt>
	Adds a defined network through which switch access is allowed through Telnet, SNMP, RIP, or the IBM Networking OS browser-based interface. A range of IP addresses is produced when used with a network mask address. Specify an IP address and mask address in dotted-decimal notation.
	Note : If you configure the management network without including the switch interfaces, the configuration causes the Firewall Load Balancing health checks to fail and creates a "Network Down" state on the network.
	Command mode: Global configuration
no	access management-network <mgmt address="" ipv4="" ipv6="" network="" or=""> <mgmt length="" mask="" network="" or="" prefix=""></mgmt></mgmt>
	Removes a defined network, which consists of a management network address and a management network mask address.
	Command mode: Global configuration
aco	cess management-network < <i>mgmt network IPv4 or IPv6 address</i> > < <i>mgmt network mask or prefix length</i> > {snmp-ro snmp-rw}
	Adds a defined network through which SNMP read-only or SNMP read/write switch access is allowed. Specify an IP address and mask address in dotted-decimal notation.
	Command mode: Global configuration
no	access management-network {snmp-ro snmp-rw}
	Clears the SNMP read-only or SNMP read/write access control list for management purposes.
	Command mode: Global configuration
sho	ow access management-network
	Displays the current management network configuration and SNMP access management IP list.
	Command mode: All
cle	ear access management-network
	Removes all defined management networks.
	Command mode: All except User EXEC

User Access Control Configuration

The following table describes user-access control commands.

Passwords can be a maximum of 128 characters.

```
Table 164. User Access Control Configuration Commands
```

Command Syntax and Usage			
access user <1-10>			
Configures the User ID.			
Command mode: Global configuration			
access user eject { <user name=""> <session id="">}</session></user>			
Ejects the specified user from the CN4093.			
Command mode: Global configuration			
clear line <1-12>			
Ejects the user with the corresponding session ID from the CN4093.			
Command mode: Privileged EXEC			
[no] access user administrator-enable			
Enables or disables the default administrator account.			
Command mode: Global configuration			
access user user-password <1-128 characters>			
Sets the user (user) password. The user has no direct responsibility for switch management. He or she can view switch status information and statistics, but cannot make any configuration changes.			
Command mode: Global configuration			
access user operator-password <1-128 characters>			
Sets the operator (oper) password. The operator manages all functions of the switch. He or she can view all switch information and statistics and can reset ports.			
Command mode: Global configuration			
access user administrator-password <1-128 characters>			
Sets the administrator (admin) password. The super user administrator has complete access to all information and configuration commands on the CN4093, including the ability to change both the user and administrator passwords.			
Access includes "oper" functions.			
Command mode: Global configuration			
show access user			
Displays the current user status.			
Command mode: All			

System User ID Configuration

.

The following table describes user ID configuration commands.

Table 165.	User ID	Configuration	Commands
------------	---------	---------------	----------

Cor	nmand Syntax and Usage
aco	cess user <1-10> level {user operator administrator}
	Sets the Class-of-Service to define the user's authority level. IBM Networking OS defines these levels as: User, Operator, and Administrator, with User being the most restricted level.
	Command mode: Global configuration
aco	cess user <1-10> name <1-8 characters>
	Defines the user name of maximum eight characters.
	Command mode: Global configuration
aco	cess user <1-10> password
	Sets the user (user) password. This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.
	Command mode: Global configuration
aco	cess user <1-10> enable
	Enables the user ID.
	Command mode: Global configuration
no	access user <1-10> enable
	Disables the user ID.
	Command mode: Global configuration
no	access user <1-10>
	Deletes the user ID.
	Command mode: Global configuration
sho	ow access user
	Displays the current user ID configuration.

Strong Password Configuration

The following table describes strong password configuration commands.

Table 166. Strong Password Configuration Commands

Cor	nmand Syntax and Usage
acc	cess user strong-password enable
	Enables Strong Password requirement.
	Command mode: Global configuration
no	access user strong-password enable
	Disables Strong Password requirement.
	Command mode: Global configuration
acc	cess user strong-password expiry <1-365>
	Configures the number of days allowed before the password must be changed. The default value is 60 days.
	Command mode: Global configuration
acc	cess user strong-password warning <1-365>
	Configures the number of days before password expiration, that a warning is issued to users. The default value is 15 days.
	Command mode: Global configuration
acc	cess user strong-password faillog <1-255>
	Configures the number of failed login attempts allowed before a security notification is logged. The default value is 3 login attempts.
	Command mode: Global configuration
[nc) access user strong-password lockout
	Enables or disables account lockout after a specified number of failed login attempts. Default setting is disabled.
	Command mode: Global configuration
acc	cess user strong-password faillock <1-10>
	Configures the number of failed login attempts that trigger the account lockout. Default value is 6.
	Command mode: Global configuration
acc	ess user strong-password clear local user
	{lockout fail-attempts} { <username> all}</username>
	Enables locked out accounts or resets failed login counters for all users or for a specific user.
	Command mode: Global configuration
sho	ow access user strong-password
	Displays the current Strong Password configuration.
	Command mode: All

HTTPS Access Configuration

The following table describes HTTPS access configuration commands.

[no] access https enable
Enables or disables BBI access (Web access) using HTTPS.
Command mode: Global configuration
[default] access https port [<tcp number="" port="">]</tcp>
Defines the HTTPS Web server port number. The default port is 443.
Command mode: Global configuration
access https generate-certificate
Allows you to generate a certificate to connect to the SSL to be used during the key exchange. A default certificate is created when HTTPS is enabled for the first time. The user can create a new certificate defining the information that they want to be used in the various fields. For example:
 Country Name (2 letter code): CA
 State or Province Name (full name): Ontario
 Locality Name (for example, city): Ottawa
 Organization Name (for example, company): IBM
 Organizational Unit Name (for example, section): Operations
 Common Name (for example, user's name): Mr Smith
 Email (for example, email address): info@ibm.com
You will be asked to confirm if you want to generate the certificate. It will take approximately 30 seconds to generate the certificate. Then the switch will restart SSL agent.
Command mode: Global configuration
access https save-certificate
Allows the client, or the Web browser, to accept the certificate and save the certificate to Flash to be used when the switch is rebooted.
Command mode: Global configuration
show access
Displays the current SSL Web Access configuration.
Command mode: All

Custom Daylight Saving Time Configuration

Use these commands to configure custom Daylight Saving Time. The DST is defined by two rules, the start rule and end rule. The rules specify the dates when the DST starts and finishes. These dates are represented as specific calendar dates or as relative offsets in a month (for example, 'the second Sunday of September').

Relative offset example: 2070901 = Second Sunday of September, at 1:00 a.m.

Calendar date example: 0070901 = September 7, at 1:00 a.m.

Table 168.	Custom DST	Configuration	Commands
------------	------------	---------------	----------

Con	nmand Syntax and Usage
sys	stem custom-dst start-rule <wddmmhh></wddmmhh>
	Configures the start date for custom DST, as follows:
	WDMMhh
	W = week (0-5, where 0 means use the calender date) D = day of the week (01-07, where 01 is Monday) MM = month (1-12) hh = hour (0-23)
	Note: Week 5 is always considered to be the last week of the month.
	Command mode: Global configuration
sys	stem custom-dst end-rule WDDMMhh>
	Configures the end date for custom DST, as follows:
	WDMMhh
	W = week (0-5, where 0 means use the calender date) D = day of the week (01-07, where 01 is Monday) MM = month (1-12) hh = hour (0-23)
	Note: Week 5 is always considered to be the last week of the month.
	Command mode: Global configuration
sys	tem custom-dst enable
	Enables the Custom Daylight Saving Time settings.
	Command mode: Global configuration
no	system custom-dst enable
	Disables the Custom Daylight Savings Time settings.
	Command mode: Global configuration
shc	w custom-dst
	Displays the current Custom DST configuration.
	Command mode: All

sFlow Configuration

IBM Networking OS supports sFlow version 5. sFlow is a sampling method used for monitoring high speed switched networks. Use these commands to configure the sFlow agent on the switch.

Table 169. sFlow Configuration Commands

Cor	mmand Syntax and Usage	
sf]	sflow enable	
	Enables the sFlow agent.	
	Command mode: Global configuration	
no	sflow enable	
	Disables the sFlow agent.	
	Command mode: Global configuration	
sflow server <ip address=""></ip>		
	Defines the sFlow server address.	
	Command mode: Global configuration	
sfl	low port <1-65535>	
	Configures the UDP port for the sFlow server. The default value is 6343.	
	Command mode: Global configuration	
sho	ow sflow	
	Displays sFlow configuration parameters.	
	Command mode: All	

sFlow Port Configuration

Use the following commands to configure the sFlow port on the switch.

```
Table 170. sFlow Port Configuration Commands
```

Command Syntax and Usage
[no] sflow polling <5-60>
Configures the sFlow polling interval, in seconds. The default setting is disabled.
Command mode: Interface port
[no] sflow sampling <256-65536>
Configures the sFlow sampling rate, in packets per sample. The default setting is disabled.
Command mode: Interface port

Port Configuration

Use the Port Configuration commands to configure settings for switch ports (INTx) and (EXTx). If you are configuring management ports (MGT1), see "Management Port Configuration" on page 291.

 Table 171. Port Configuration Commands

Command Syntax and Usage
interface port <port alias="" number="" or=""></port>
Enter Interface port mode.
Command mode: Global configuration
dot1p <0-7>
Configures the port's 802.1p priority level.
Command mode: Interface port
pvid <vlan number=""></vlan>
Sets the default VLAN number which will be used to forward frames which are not VLAN tagged. The default number is 1 for non-management ports.
Command mode: Interface port
name <1-64 characters>
Sets a name for the port. The assigned port name appears next to the port number on some information and statistics screens. The default is set to None.
Command mode: Interface port
unicast-bandwidth <10-100>
Configures the allocated bandwidth percentage for unicast traffic on the port. The remaining bandwidth is automatically allocated to multicast traffic. The default value is 50.
Command mode: Interface port
unicast-bandwidth global <10-100>
Configures the allocated bandwidth percentage for unicast traffic on the egress ports. The remaining bandwidth is automatically allocated to multicast traffic. The default value is 50. This applies to all ports.
Command mode: Interface port
[no] bpdu-guard
Enables or disables BPDU guard, to avoid spanning-tree loops on ports with Port Fast Forwarding enabled.
Command mode: Interface port
[no] dscp-marking
Enables or disables DSCP re-marking on a port.
Command mode: Interface port

Table 171. Port Configuration Commands (continued)

[no] re	flective-relay force
Ena	bles or disables constraint to always keep reflective relay active. Defaulting is disabled.
	nmand mode: Interface port
[no] r	mon
	bles or disables Remote Monitoring for the port. RMON must be enabled any RMON configurations to function.
Cor	nmand mode: Interface port
[no] ta	gging
	ables or enables VLAN tagging for this port. The default setting is $abled$ for external ports (EXTx) and enabled for internal server ports \overline{x}).
Cor	nmand mode: Interface port
[no] ta	g-pvid
rem setti	ables or enables VLAN tag persistence. When disabled, the VLAN tag is oved from packets whose VLAN tag matches the port PVID. The default ing is disabled for internal server ports (INT x) and external ports (EXT x) enabled for management (MGT x) ports.
Cor	nmand mode: Interface port
[no] tag	gpvid-ingress
ena	bles or disables tagging the ingress frames with the port's VLAN ID. Wher bled, the PVID tag is inserted into untagged and 802.1Q single-tagged ess frames as outer VLAN ID. The default setting is <code>disabled</code> .
Cor	nmand mode: Interface port/Interface portchannel
[no] fl	ood-blocking
pac	bles or disables port Flood Blocking. When enabled, unicast and multicas kets with unknown destination MAC addresses are blocked from the port. nmand mode: Interface port
[no] mad	c-address-table mac-notification
ena	bles or disables MAC Address Notification. With MAC Address Notificatior bled, the switch generates a syslog message when a MAC address is ed or removed from the MAC address table.
Cor	nmand mode: Interface port/Interface portchannel
[no] le	arning
Ena	bles or disables FDB learning on the port.
Cor	nmand mode: Interface port
port-c	hannel min-links <1-32>
	the minimum number of links for this port. If the specified minimum numbe orts are not available, the trunk is placed in the down state.
	nmand mode: Interface port

Command mode: Interface port

Table 171. Port Configuration Commands (continued)

Cor	nmand Syntax and Usage
[nc	o] broadcast-threshold <0-262143>
	Limits the number of broadcast packets per second to the specified value. If disabled, the port forwards all broadcast packets.
	Command mode: Interface port
[nc] multicast-threshold <0-262143>
	Limits the number of multicast packets per second to the specified value. If disabled, the port forwards all multicast packets.
	Command mode: Interface port
[nc] dest-lookup-threshold <0-262143>
	Limits the number of unknown unicast packets per second to the specified value. If disabled, the port forwards all unknown unicast packets.
	Command mode: Interface port
no	shutdown
	Enables the port.
	Command mode: Interface port
shu	utdown
	Disables the port. (To temporarily disable a port without changing its configuration attributes, refer to "Temporarily Disabling a Port" on page 286.)
	Command mode: Interface port
shc	ow interface port <pre>port alias or number></pre>
	Displays current port parameters.
	Command mode: All

Port Error Disable and Recovery Configuration

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 172. Port Error Disable Commands

err	rdisable recovery
	Enables automatic error-recovery for the port. The default setting is enabled.
	Note : Error-recovery must be enabled globally before port-level commands become active.
	Command mode: Interface port
no	errdisable recovery
	Enables automatic error-recovery for the port.
	Command mode: Interface port
sho	ow interface port <port alias="" number="" or=""> errdisable</port>
	Displays current port Error Disable parameters.

Port Link Configuration

Use these commands to set flow control for the port link.

Table 173. Port Link Configuration Commands

Command Syntax and Usage	
speed {10 100 10000 auto}	
Sets the link speed. Some options are not valid on all ports. The choices include:	
– 1000 Mbps	
– 10000 Mps	
 any (auto negotiate port speed) 	
Command mode: Interface port	
duplex {full half any}	
Sets the operating mode. The choices include:	
 Any negotiation (default) 	
– Half-duplex	
– Full-duplex	
Command mode: Interface port	

Table 173. Port Link Configuration Commands

Command Syntax and Usage	
flowcontrol {receive send} [on off]	
Sets the flow control. The choices include:	
 Receive flow control 	
 Transmit flow control 	
 No flow control 	
Note : For external ports (EXT <i>x</i>) the default setting is no flow control, and for internal ports (INT <i>x</i>) the default setting is both receive and transmit.	
Command mode: Interface port	
[no] auto	
Turns auto-negotiation on or off.	
Command mode: Interface port	
show interface port <pre>port alias or number></pre>	
Displays current port parameters.	
Command mode: All	

Temporarily Disabling a Port

To temporarily disable a port without changing its stored configuration attributes, enter the following command at any prompt:

Router# interface port port alias or number> shutdown

Because this configuration sets a temporary state for the port, you do not need to use a save operation. The port state will revert to its original configuration when the CN4093 10Gb Converged Scalable Switch is reset. See the "Operations Commands" on page 497 for other operations-level commands.

Unidirectional Link Detection Configuration

UDLD commands are described in the following table.

Command Syntax and Usage
[no] udld
Enables or disables UDLD on the port.
Command mode: Interface port
[no] udld aggressive
Configures the UDLD mode for the selected port, as follows:
 Normal: Detect unidirectional links that have mis-connected interfaces. The port is disabled if UDLD determines that the port is mis-connected. Use the "no" form to select normal operation.
 Aggressive: In addition to the normal mode, the aggressive mode disables the port if the neighbor stops sending UDLD probes for 7 seconds.
Command mode: Interface port
show interface port <pre>port number> udld</pre>
Displays current port UDLD parameters.
Command mode: All

Port OAM Configuration

Operation, Administration, and Maintenance (OAM) protocol allows the switch to detect faults on the physical port links. OAM is described in the IEEE 802.3ah standard. OAM Discovery commands are described in the following table.

Table 175. Port OAM Configuration Commands

Command Syntax and Usage	
oam {active passive}	
Configures the OAM discovery mode, as follows:	
 Active: This port link initiates OAM discovery. 	
 Passive: This port allows its peer link to initiate OAM discovery. 	
If OAM determines that the port is in an anomalous condition, the port is disabled.	
Command mode: Interface port	
no oam {active passive}	
Disables OAM discovery on the port.	
Command mode: Interface port	
show interface port <pre>port number> oam</pre>	
Displays current port OAM parameters.	
Command mode: All	

Port ACL Configuration

The following table describes port ACL configuration commands

Table 176. Port ACL/QoS Configuration Commands

Command Syntax and Usage			
[no] access-control list <acl number=""></acl>			
Adds or removes the specified ACL. You can add multiple ACLs to a port.			
Command mode: Interface port			
[no] access-control list6 <acl number=""></acl>			
Adds or removes the specified IPv6 ACL. You can add multiple ACLs to a port.			
Command mode: Interface port			
[no] access-control group <acl group="" number=""></acl>			
Adds or removes the specified ACL group. You can add multiple ACL groups to a port.			
Command mode: Interface port			
show interface port <pre>port alias or number> access-control</pre>			
Displays current ACL QoS parameters.			
Command mode: All			

Port Spanning Tree Configuration

Table 177. Port STP Commands

Comm	and Syntax and Usage
[no]	spanning-tree portfast
ab	ables or disables this port as an edge port. An edge port is not connected to pridge, and can begin forwarding traffic as soon as the link is up. Configure rver ports as edge ports (enabled).
	ote : After you configure the port as an edge port, you must disable the port d then re-enable the port for the change to take effect.
Co	ommand mode: Interface port
[no]	spanning-tree link-type p2p shared
De	fines the type of link connected to the port, as follows:
	no: Configures the port to detect the link type, and automatically match its settings.

- p2p: Configures the port for Point-To-Point protocol.
- shared: Configures the port to connect to a shared medium (usually a hub).

The default link type is auto.

Command mode: Interface port

```
show interface port {<port alias or number>}
```

Displays current port configuration parameters.

Command mode: All

Port Spanning Tree Guard Configuration

Table 178. Port STP Guard Options

Command Syntax and Usage

spanning-tree guard loop

Enables STP loop guard. STP loop guard prevents the port from forwarding traffic if no BPDUs are received. The port is placed into a loop-inconsistent blocking state until a BPDU is received.

Command mode: Interface port/Interface portchannel

spanning-tree guard root

Enables STP root guard. STP root guard enforces the position of the root bridge. If the bridge receives a superior BPDU, the port is placed into a root-inconsistent state (listening).

Command mode: Interface port/Interface portchannel

Table 178. Port STP Guard Options

Command Syntax and Usage

spanning-tree guard none

Disables STP loop guard and root guard.

Command mode: Interface port/Interface portchannel

no spanning-tree guard

Sets the Spanning Tree guard parameters to their default values.

Command mode: Interface port/Interface portchannel

Port WRED Configuration

These commands allow you to configure Weighted Random Early Detection (WRED) parameters for a selected port. For global WRED configuration, see "Weighted Random Early Detection Configuration" on page 296.

Table 179. Port WRED Options

Command Syntax and Usage		
[no] random-detect ecn enable		
Enables or disables Explicit Congestion Notification (ECN). When ECN is on, the switch marks the ECN bit of the packet (if applicable) instead of dropping the packet. ECN-aware devices are notified of the congestion and those devices can take corrective actions.		
Note: ECN functions only on TCP traffic.		
Command mode: Interface port		
random-detect enable		
Turns on Random Detection and avoidance.		
Command mode: Interface port		
no random-detect enable		
Turns off Random Detection and avoidance.		
Command mode: Interface port		
show interface port <pre>port alias or number> random-detect</pre>		
Displays current Random Detection and avoidance parameters.		
Command mode: All		

Port WRED Transmit Queue Configuration

Use this menu to define WRED thresholds for the port's transmit queues. Set each threshold between 1% and 100%. When the average queue size grows beyond the minimum threshold, packets begin to be dropped. When the average queue size reaches the maximum threshold, all packets are dropped. The probability of packet-drop between the thresholds is defined by the drop rate.

Table 180. Port WRED Transmit Queue Options

Command Syntax and Usage			
<pre>[no] random-detect transmit-queue <0-7> tcp <min. (1-100)="" threshold=""> <max. (1-100)="" threshold=""> <drop (1-100)="" rate=""></drop></max.></min.></pre>			
Configures the WRED thresholds for TCP traffic. Use the ${\tt no}$ form to clear the WRED threshold value.			
Command mode: Interface port			
<pre>[no] random-detect transmit-queue <0-7> non-tcp <min. (1-100)="" threshold=""> <max. (1-100)="" threshold=""> <drop (1-100)="" rate=""> Configures the WRED thresholds for non-TCP traffic. Use the no form to clear the WRED threshold value. Command mode: Interface port</drop></max.></min.></pre>			
random-detect transmit-queue $<\!0-7\!>$ enable			
Sets the WRED transmit queue configuration to on.			
Command mode: Interface port			
no random-detect transmit-queue $<0-7>$ enable			
Sets the WRED transmit queue configuration to off.			
Command mode: Interface port			

Management Port Configuration

You can use these commands to set port parameters for management ports (MGT1 and EXTM). Use these commands to set port parameters for the port link. For MGT1, the values for speed, duplex, and flow control are fixed, and cannot be configured.

 Table 181. Management Port Configuration Commands

Command Syntax and Usage	
speed {10 100 1000 auto}	
Sets the link speed. The choices include:	
- 10 Mbps	
– 100 Mbps	
– 1000 Mbps	
 Auto — for auto negotiation 	
Command mode: Interface port	

Cor	nmand Syntax and Usage
dup	<pre>blex {full half any}</pre>
	Sets the operating mode. The choices include:
	– Full-duplex
	- Half-duplex
	 Any — for auto negotiation (default)
	Command mode: Interface port
[no] flowcontrol {receive send both}
	Sets the flow control. The choices include:
	 Receive flow control
	 Transmit flow control
	 Both receive and transmit flow control (default)
	 No flow control
	Command mode: Interface port
no	shutdown
	Enables the port.
	Command mode: Interface port
shu	ltdown
	Disables the port.
	Command mode: Interface port
shc	<pre>w interface port <pre> port alias or number></pre></pre>
	Displays current port parameters.
	Command mode: All

Table 181. Management Port Configuration Commands (continued)

Quality of Service Configuration

Quality of Service (QoS) commands configure the 802.1p priority value and DiffServ Code Point value of incoming packets. This allows you to differentiate between various types of traffic, and provide different priority levels.

802.1p Configuration

This feature provides the CN4093 the capability to filter IP packets based on the 802.1p bits in the packet's VLAN header. The 802.1p bits specify the priority that you should give to the packets while forwarding them. The packets with a higher (non-zero) priority bits are given forwarding preference over packets with numerically lower priority bits value.

Table 182.	802.1p	Configuration	Commands
------------	--------	---------------	----------

Com	imand Syntax and Usage
qos	transmit-queue mapping <priority (0-7)=""> <cosq number=""></cosq></priority>
1	Maps the 802.1p priority of to the Class of Service queue (COSq) priority. Enter the 802.1p priority value (0-7), followed by the Class of Service queue that handles the matching traffic.
(Command mode: Global configuration
qos	transmit-queue weight-cos <cosq number=""> <weight (0-15)=""></weight></cosq>
	Configures the weight of the selected Class of Service queue (COSq). Enter the queue number (0-1), followed by the scheduling weight (0-15).
(Command mode: Global configuration
sho	w qos transmit-queue
	Displays the current 802.1p parameters.
(Command mode: All
qos	unicast-bandwith <10-100>
	Configures the allocated bandwidth percentage for unicast traffic on the egress ports. The remaining bandwidth is automatically allocated to multicast traffic. The default value is 50. This applies to all ports.
(Command mode: All

DSCP Configuration

These commands map the DiffServ Code Point (DSCP) value of incoming packets to a new value or to an 802.1p priority value.

Table 183. DSCP Configuration Commands

Command Syntax and Usage
<pre>qos dscp dscp-mapping <dscp(0-63)> <new dscp(0-63)=""></new></dscp(0-63)></pre>
Maps the initial DiffServ Code Point (DSCP) value to a new value. Enter the DSCP value (0-63) of incoming packets, followed by the new value.
Command mode: Global configuration
<pre>qos dscp dot1p-mapping <dscp(0-63)> <priority(0-7)></priority(0-7)></dscp(0-63)></pre>
Maps the DiffServ Code point value to an 802.1p priority value. Enter the DSCP value, followed by the corresponding 802.1p value.
Command mode: Global configuration
qos dscp re-marking
Turns on DSCP re-marking globally.
Command mode: Global configuration
no qos dscp re-marking
Turns off DSCP re-marking globally.
Command mode: Global configuration
show qos dscp
Displays the current DSCP parameters.
Command mode: All

Control Plane Protection

To prevent switch instability if the switch is unable to process a high rate of control-plane traffic, the switch now supports CoPP. CoPP, allows you to assign control-plane traffic protocols to one of 48 queues, and can set bandwidth limits for each queue.

Table 184. CoPP Commands

Command Syntax and Usage

qos protocol-packet-control packet-queue-map <packet queue number (0-47)>
 cpacket type>

Configures a packet type to associate with each packet queue number. Enter a queue number, followed by the packet type. You may map multiple packet types to a single queue. The following packet types are allowed:

- 802.1x (IEEE 802.1x packets)
- application-cri-packets (critical packets of various applications, such as Telnet, SSH)
- arp-bcast (ARP broadcast packets)
- arp-ucast (ARP unicast reply packets)
- bgp (BGP packets)
- **bpdu** (Spanning Tree Protocol packets)
- cisco-bpdu (Cisco STP packets)
- dest-unknown (packets with destination not yet learned)
- dhcp (DHCP packets)
- icmp (ICMP packets)
- **igmp** (IGMP packets)
- ipv4-miscellaneous (IPv4 packets with IP options and TTL exception)
- ipv6-nd (IPv6 Neighbor Discovery packets)
- lacp (LACP/Link Aggregation protocol packets)
- IIdp (LLDP packets)
- ospf (OSPF packets)
- ospf3 (OSPF3 Packets)
- pim (PIM packets)
- rip (RIP packets)
- system (system protocols, such as tftp, ftp, telnet, ssh)
- udld (UDLD packets)
- vlag (vLAG packets)
- vrrp (VRRP packets)

Command mode: Global configuration

qos protocol-packet-control rate-limit-packetqueue packet queue number (0-47)> <1-10000>

Configures the number of packets per second allowed for each packet queue.

Command mode: Global configuration

Table 184. CoPP Commands

Co	mmand Syntax and Usage
no	<pre>qos protocol-packet-control packet-queue-map <packet type=""> Clears the selected packet type from its associated packet queue. Command mode: Global configuration</packet></pre>
no	<pre>qos protocol-packet-control rate-limit-packet- queue <packet (0-47)="" number="" queue=""> Clears the packet rate configured for the selected packet queue. Command mode: Global configuration</packet></pre>
sho	bw qos protocol-packet-control information protocol Displays of mapping of protocol packet types to each packet queue number. The status indicates whether the protocol is running or not running. Command mode: All
sho	ow qos protocol-packet-control information queue Displays the packet rate configured for each packet queue. Command mode: All

Weighted Random Early Detection Configuration

Weighted Random Early Detection (WRED) provides congestion avoidance by pre-emptively dropping packets before a queue becomes full. CN4093 implementation of WRED defines TCP and non-TCP traffic profiles on a per-port, per COS queue basis. For each port, you can define a transmit-queue profile with thresholds that define packet-drop probability.

These commands allow you to configure global WRED parameters. For port WRED commands, see "Port WRED Configuration" on page 290.

Table 185. WRED Configuration Options

Command Syntax and Usage

qos random-detect ecn

Enables or disables Explicit Congestion Notification (ECN). When ECN is on, the switch marks the ECN bit of the packet (if applicable) instead of dropping the packet. ECN-aware devices are notified of the congestion and those devices can take corrective actions.

Note: ECN functions only on TCP traffic.

Command mode: Global configuration

qos random-detect enable

Turns on Random Detection and avoidance.

Command mode: Global configuration

Table 185. WRED Configuration Options

Command Syntax and Usage

no qos random-detect enable

Turns off Random Detection and avoidance.

Command mode: Global configuration

show qos random-detect

Displays current Random Detection and avoidance parameters.

Command mode: All

WRED Transmit Queue Configuration

Table 186. WRED Transmit Queue Options

Command Syntax and Usage [no] gos random-detect transmit-queue <0-7> tcp <min. threshold (1-100)> <max. threshold (1-100)> <drop rate (1-100)> Configures the WRED thresholds for TCP traffic. Use the no form to clear the WRED threshold value. Command mode: Global configuration [no] gos random-detect transmit-queue <0-7> non-tcp <min. threshold (1-100)> <max. threshold (1-100)> <drop rate (1-100)> Configures the WRED thresholds for non-TCP traffic. Use the no form to clear the WRED threshold value. Command mode: Global configuration qos random-detect transmit-queue <0-7> enable Sets the WRED transmit queue configuration to on. Command mode: Global configuration no qos random-detect transmit-queue <0-7> enable Sets the WRED transmit queue configuration to off. Command mode: Global configuration

Access Control Configuration

Use these commands to create Access Control Lists and ACL Groups. ACLs define matching criteria used for IP filtering and Quality of Service functions.

For information about assigning ACLs to ports, see "Port ACL Configuration" on page 288.

Table 187. General ACL Configuration Commands

Command Syntax and Usage
[no] access-control list <1-256>
Configures an Access Control List.
Command mode: Global configuration
To view command options, see page 299.
[no] access-control group <1-256>
Configures an ACL Group.
Command mode: Global configuration
To view command options, see page 311.
show access-control
Displays the current ACL parameters.
Command mode: All

Access Control List Configuration

These commands allow you to define filtering criteria for each Access Control List (ACL).

Table 188. ACL Configuration Commands

Command Syntax and Usage
<pre>[no] access-control list <1-256> egress-port port <pre> port alias or number></pre></pre>
Configures the ACL to function on egress packets.
Command mode: Global configuration
access-control list <1-256> action {permit deny set-priority <0-7>}
Configures a filter action for packets that match the ACL definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).
Command mode: Global configuration
[no] access-control list <1-256> statistics
Enables or disables the statistics collection for the Access Control List.
Command mode: Global configuration
default access-control list <1-256>
Resets the ACL parameters to their default values.
Command mode: Global configuration
show access-control list <1-256>
Displays the current ACL parameters.
Command mode: All
[no] access-control list6 <1-128>
Configures an IPv6 Access Control List. To view command options, see page 303.
Command mode: Global configuration

Ethernet Filtering Configuration

These commands allow you to define Ethernet matching criteria for an ACL.

Table 189. Ethernet Filtering Configuration Commands

Command Syntax and Usage
[no] access-control list <1-256> ethernet
source-mac-address /
Defines the source MAC address for this ACL.
Command mode: Global configuration
<pre>[no] access-control list <1-256> ethernet destination-mac-address <mac address=""> <mac mask=""></mac></mac></pre>
Defines the destination MAC address for this ACL.
Command mode: Global configuration
•
<pre>[no] access-control list <1-256> ethernet vlan <vlan id=""> <vlan mask=""></vlan></vlan></pre>
Defines a VLAN number and mask for this ACL.
Command mode: Global configuration
<pre>[no] access-control list <1-256> ethernet ethernet-type {arp ip ipv6 mpls rarp any <other(0x600-0xffff)>}</other(0x600-0xffff)></pre>
Defines the Ethernet type for this ACL.
Command mode: Global configuration
[no] access-control list $<1-256>$ ethernet priority $<0-7>$
Defines the Ethernet priority value for the ACL.
Command mode: Global configuration
default access-control list <1-256> ethernet
Resets Ethernet parameters for the ACL to their default values.
Command mode: Global configuration
no access-control list <1-256> ethernet
Removes Ethernet parameters for the ACL.
Command mode: Global configuration
•
show access-control list $<1-256>$ ethernet
Displays the current Ethernet parameters for the ACL.
Command mode: All

IPv4 Filtering Configuration

These commands allow you to define IPv4 matching criteria for an ACL.

Table 190. IP version 4 Filtering Configuration Commands

Command S	yntax and Usage
	s-control list <1-256> ipv4 source-ip-address ress> <ip mask=""></ip>
	a source IP address for the ACL. If defined, traffic with this source IP will match this ACL. Specify an IP address in dotted decimal notation.
Comma	and mode: Global configuration
	s-control list <1-256> ipv4 destination-ip-address dress> <ip mask=""></ip>
	a destination IP address for the ACL. If defined, traffic with this ion IP address will match this ACL.
Comma	ind mode: Global configuration
[no] acces	s-control list <1-256> ipv4 protocol <0-255>
matches	an IP protocol for the ACL. If defined, traffic from the specified protocol s this filter. Specify the protocol number. Listed below are some of the own protocols.
Numbe	r Name
1	icmp
2 6	igmp
0 17	tcp udp
89	ospf
112	vrrp
Comma	and mode: Global configuration
[no] acces	s-control list <1-256> ipv4 type-of-service <0-255>
	a Type of Service (ToS) value for the ACL. For more information on er to RFC 1340 and 1349.
Comma	and mode: Global configuration
default a	ccess-control list <1-256> ipv4
Resets t	the IPv4 parameters for the ACL to their default values.
Comma	and mode: Global configuration
show acce	ss-control list <1-256> ipv4
Displays	s the current IPv4 parameters.
Comma	Ind mode: All

TCP/UDP Filtering Configuration

These commands allow you to define TCP/UDP matching criteria for an ACL.

Table 191. TCP/UDP Filtering Configuration Commands

Command Sy	ntax and Usage
no] access mask (0)	-control list <1-256> tcp-udp source-port <1-65535> <pre>KFFFF)></pre>
UDP sour	source port for the ACL. If defined, traffic with the specified TCP or ce port will match this ACL. Specify the port number. Listed below are ne well-known ports:
Number	Name
20	ftp-data
21	ftp
22	ssh
23	telnet
25	smtp
37	time
42	name
43	whois
53	domain
69	tftp
70	gopher
79	finger
80	http
Comman	d mode: Global configuration
	-control list <1-256> tcp-udp destination-port > <mask (0xffff)=""></mask>
	destination port for the ACL. If defined, traffic with the specified TCP estination port will match this ACL. Specify the port number, just as to above.
_	d mode: Global configuration
	-control list <1-256> tcp-udp flags <value(0x0-0x3f)> x0-0x3f)></value(0x0-0x3f)>
Defines a	TCP/UDP flag for the ACL.
Commer	d made. Clabel configuration
Comman	d mode: Global configuration
	cess-control list <1-256> tcp-udp
default ac	cess-control list <1-256> tcp-udp
default acc Resets the	-
default acc Resets the Comman	cess-control list <1-256> tcp-udp e TCP/UDP parameters for the ACL to their default values. d mode: Global configuration
default acc Resets the Comman show access	cess-control list <1-256> tcp-udp e TCP/UDP parameters for the ACL to their default values. d mode: Global configuration s-control list <1-256> tcp-udp
default acc Resets the Comman show access Displays t	cess-control list <1-256> tcp-udp e TCP/UDP parameters for the ACL to their default values. d mode: Global configuration

Packet Format Filtering Configuration

These commands allow you to define Packet Format matching criteria for an ACL.

Table 192. Packet Format Filtering Configuration Commands

Command Syntax and Usage
<pre>[no] access-control list <1-256> packet-format ethernet {ethertype2 snap llc} Defines the Ethernet format for the ACL. Command mode: Global configuration</pre>
<pre>[no] access-control list <1-256> packet-format tagging {any none tagged} Defines the tagging format for the ACL. Command mode: Global configuration</pre>
<pre>[no] access-control list <1-256> packet-format ip {ipv4 ipv6} Defines the IP format for the ACL. Command mode: Global configuration</pre>
default access-control list <1-256> packet-format Resets Packet Format parameters for the ACL to their default values. Command mode: Global configuration
show access-control list <1-256> packet-format Displays the current Packet Format parameters for the ACL. Command mode: All

ACL IPv6 Configuration

These commands allow you to define filtering criteria for each IPv6 Access Control List (ACL).

Table 193. IPv6 ACL Options

Command Syntax and Usage
[no] access-control list6 <1-128> egress-port port <pre>port alias or number></pre>
Configures the ACL to function on egress packets.
Command mode: Global configuration
access-control list6 <1-128> action {permit deny set-priority <0-7>}
Configures a filter action for packets that match the ACL definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).
Command mode: Global configuration
[no] access-control list6 <1-128> statistics
Enables or disables the statistics collection for the Access Control List.
Command mode: Global configuration

Table 193. IPv6 ACL Options

Command Syntax and Usage

default access-control list6 <1-128>

Resets the ACL parameters to their default values.

Command mode: Global configuration

show access-control list <1-128>

Displays the current ACL parameters.

Command mode: All

IPv6 Filtering Configuration

These commands allow you to define IPv6 matching criteria for an ACL.

Table 194. IP version 6 Filtering Options

Command Syntax and Usage
<pre>[no] access-control list6 <1-128> ipv6 source-address <ipv6 address=""></ipv6></pre>
Defines a source IPv6 address for the ACL. If defined, traffic with this source address will match this ACL.
Command mode: Global configuration
<pre>[no] access-control list6 <1-128> ipv6 destination-address <ipv6 address=""> <prefix (1-128)="" length=""></prefix></ipv6></pre>
Defines a destination IPv6 address for the ACL. If defined, traffic with this destination address will match this ACL.
Command mode: Global configuration
[no] access-control list6 <1-128> ipv6 next-header <0-255>
Defines the next header value for the ACL. If defined, traffic with this next header value will match this ACL.
Command mode: Global configuration
[no] access-control list6 <1-128> ipv6 flow-label <0-1048575>
Defines the flow label for the ACL. If defined, traffic with this flow label will match this ACL.
Command mode: Global configuration
[no] access-control list6 <1-128> ipv6 traffic-class <0-255>
Defines the traffic class for the ACL. If defined, traffic with this traffic class will match this ACL.
Command mode: Global configuration

Table 194. IP version 6 Filtering Options

Command Syntax and Usage

```
default access-control list6 <1-128> ipv6
```

Resets the IPv6 parameters for the ACL to their default values.

Command mode: Global configuration

show access-control list6 <1-128> ipv6

Displays the current IPv6 parameters.

Command mode: All

IPv6 TCP/UDP Filtering Configuration

These commands allows you to define TCP/UDP matching criteria for an ACL.

Table 195. IPv6 ACL TCP/UDP Filtering Options

```
Command Syntax and Usage
[no] access-control list6 <1-128> tcp-udp source-port <1-65535>
   <mask (0xFFFF)>
   Defines a source port for the ACL. If defined, traffic with the specified TCP or
   UDP source port will match this ACL. Specify the port number. Listed here are
   some of the well-known ports:
   Number
               Name
               ftp-data
   20
   21
               ftp
   22
               ssh
   23
               telnet
   25
               smtp
   37
               time
   42
               name
   43
               whois
   53
               domain
   69
               tftp
   70
               qopher
   79
               finger
   80
               http
   Command mode: Global configuration
[no] access-control list6 <1-128> tcp-udp destination-port
   <1-65535> <mask (0xFFFF)>
   Defines a destination port for the ACL. If defined, traffic with the specified TCP
   or UDP destination port will match this ACL. Specify the port number, just as
   with sport above.
   Command mode: Global configuration
[no] access-control list6 <1-128> tcp-udp
   flags \langle value(0x0-0x3f) \rangle \langle mask(0x0-0x3f) \rangle
   Defines a TCP/UDP flag for the ACL.
   Command mode: Global configuration
```

Table 195. IPv6 ACL TCP/UDP Filtering Options

Command Syntax and Usage

default access-control list6 <1-128> tcp-udp

Resets the TCP/UDP parameters for the ACL to their default values.

Command mode: Global configuration

show access-control list6 <1-128> tcp-udp

Displays the current TCP/UDP Filtering parameters.

Command mode: All

IPv6 Re-Mark Configuration

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

IPv6 Re-Marking In-Profile Configuration

Table 196. IPv6 Re-Marking In-Profile Options

Command Syntax and Usage
<pre>[no] access-control list6 <1-128> re-mark dot1p <0-7> Re-marks the 802.1p value. The value is the priority bits information in the packet structure.</pre>
Command mode: Global configuration
<pre>[no] access-control list6 <1-128> re-mark in-profile dscp <0-63> Re-marks the DSCP value for in-profile traffic. Command mode: Global configuration</pre>
<pre>[no] access-control list6 <1-128> re-mark use-tos-precedence Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value. Command mode: Global configuration</pre>
default access-control list6 <1-128> re-mark Sets the ACL re-mark parameters to their default values. Command mode: Global configuration
show access-control list6 <1-128> re-mark Displays current re-mark parameters. Command mode: All

VMAP Configuration

A VLAN Map is an Access Control List (ACL) that can be assigned to a VLAN or a VM group instead of a port. In a virtualized environment where Virtual Machines move between physical servers, VLAN Maps allow you to create traffic filtering and metering policies associated with a VM's VLAN.

For more information about VLAN Map configuration commands, see "Access Control List Configuration" on page 299.

For more information about assigning VLAN Maps to a VLAN, see "VLAN Configuration" on page 355.

For more information about assigning VLAN Maps to a VM group, see "VM Group Configuration" on page 474.

Table 197 lists the general VMAP configuration commands.

Table 197. VMAP Configuration Commands

Command Syntax and Usage

[no] access-control vmap <1-128> egress-port port alias or number>
Configures the VMAP to function on egress packets.

Command mode: Global configuration

access-control vmap <1-128> action {permit|deny|
 set-priority <0-7>}

Configures a filter action for packets that match the VMAP definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).

Command mode: Global configuration

[no] access-control vmap <1-256> ethernet source-mac-address <MAC address> <MAC mask>

Enables or disables filtering of VMAP statistics collection based on source MAC.

Command mode: Global configuration

[no] access-control vmap <1-256> ethernet destination-mac-address <MAC address> <MAC mask>

Enables or disables filtering of VMAP statistics collection based on destination MAC.

Command mode: Global configuration

Command Syntax and Usage
<pre>[no] access-control vmap <1-256> ethernet ether-type {<0x600-0xFFF> arp rarp ip ipv6 mpls any}</pre>
Enables or disables filtering of VMAP statistics collection based on the encapsulated protocol:
– <0x600-0xFFF> filters Ethernet frames with the specified EtherType
 arp filters Address Resolution Protocol frames
 rarp filters Reverse Address Resolution Protocol frames
 ip filters Internet Protocol version 4 frames
 ipv6 filters Internet Protocol version 6 frames
 mpls filters Multiprotocol Label Switching frames
 all filters all frames
Command mode: Global configuration
[no] access-control vmap $<\!l-256\!>$ ethernet priority $<\!l-256\!>$
Enables or disables filtering of VMAP statistics collection based on the IEEE 802.1Q priority code point value.
Command mode: Global configuration
[no] access-control vmap <1-256> ethernet vlan <1-4094>
Enables or disables filtering of VMAP statistics collection based on VLAN ID.
Command mode: Global configuration
<pre>[no] access-control vmap <1-256> ipv4 source-ip-address <ipv4 address=""> <ipv4 mask=""></ipv4></ipv4></pre>
Enables or disables filtering of VMAP statistics collection based on source IP address.
Command mode: Global configuration
<pre>[no] access-control vmap <1-256> ipv4 destination-ip-address <ipv4 address=""> <ipv4 mask=""></ipv4></ipv4></pre>
Enables or disables filtering of VMAP statistics collection based on destination IP address.
Command mode: Global configuration
[no] access-control vmap <1-256> ipv4 protocol <0-255>
Enables or disables filtering of VMAP statistics collection based on protocol.
Command mode: Global configuration
[no] access-control vmap $<\!l-256\!>$ ipv4 type-of-service $<\!l-255\!>$
Enables or disables filtering of VMAP statistics collection based on type of service.
Command mode: Global configuration
access-control vmap <1-256> meter enable
Enables ACL port metering.
Command mode: All except User EXEC

Table 197.	VMAP Configuration	n Commands (continued)
------------	--------------------	------------------------

Cor	nmand Syntax and Usage
acc	ess-control vmap <1-256> meter action drop pass Sets ACL port metering to drop or pass out-of-profile traffic. Command mode: Global configuration
acc	ess-control vmap <1-256> meter committed-rate <64-10000000> Sets the ACL port metering control rate in kilobits per second. Command mode: Global configuration
acc	ess-control vmap <1-256> meter maximum-burst-size <32-4096> Sets the ACL port metering maximum burst size in kilobytes. The following eight values are allowed: - 32 - 64 - 128 - 256 - 512 - 1024 - 2048 - 4096 Command mode: Global configuration
no	access-control vmap <1-256> meter enable Disables ACL port metering. Command mode: Global configuration
acc	ess-control vmap <1-256> mirror port <port> Sets the specified port as the mirror target. Command mode: Global configuration</port>
no	access-control vmap <1-256> mirror Turns off ACL mirroring. Command mode: Global configuration
	ess-control vmap <1-256> packet-format ethernet ethernet-type2 llc snap Sets to filter the specified ethernet packet format type. Command mode: Global configuration
acc	ess-control vmap <1-256> packet-format ip ipv4 ipv6 Sets to filter the specified IP packet format type. Command mode: Global configuration

Table 197.	VMAP Configuration Commands	(continued)
------------	-----------------------------	-------------

Command Syntax and Usage
 access-control vmap <1-256> packet-format tagging any none tagged Sets filtering based on packet tagging. The options are: any: Filter tagged & untagged packets none: Filter only untagged packets tagged: Filter only tagged packets Command mode: Global configuration
no access-control vmap <1-256> packet-format ethernet ip tagging Disables filtering based on the specified packet format. Command mode: Global configuration
access-control vmap <1-256> re-mark dot1p <0-7> Sets the ACL re-mark configuration user update priority. Command mode: Global configuration
no access-control vmap <1-256> re-mark dot1p Disables the use of dot1p for in-profile traffic ACL re-mark configuration. Command mode: Global configuration
access-control vmap <1-256> re-mark in-profile out-profile dscp <0-63> Sets the ACL re-mark configuration user update priority. Command mode: Global configuration
no access-control vmap <1-256> re-mark in-profile out-profile Removes all re-mark in-profile or out-profile settings. Command mode: Global configuration
<pre>[no] access-control vmap <1-256> re-mark use-tos-precedence Enables or disables the use of the TOS precedence for in-profile traffic. Command mode: Global configuration</pre>
<pre>[no] access-control vmap <1-128> statistics Enables or disables the statistics collection for the VMAP. Command mode: Global configuration</pre>
<pre>access-control vmap <1-256> tcp-udp source-port destination-port <1-65535> <port (0x0001="" -="" 0xffff)="" mask=""> Sets the TCP/UDP filtering source port or destination port and port mask for this ACL. Command mode: Global configuration</port></pre>
access-control vmap <1-256> tcp-udp flags [<flags (0x0-0x3f)="" mask="">] Sets the TCP flags for this ACL. Command mode: Global configuration</flags>

Table 197. VMAP Configuration Commands (continued)

 Command Syntax and Usage

 no access-control vmap <1-256> tcp-udp

 Removes TCP/UDP filtering for this ACL.

 Command mode: Global configuration

 default access-control vmap <1-128>

 Resets the VMAP parameters to their default values.

 Command mode: Global configuration

 show access-control vmap <1-128>

 Displays the current VMAP parameters.

 Command mode: All

ACL Group Configuration

These commands allow you to compile one or more ACLs into an ACL group. Once you create an ACL group, you can assign the ACL group to one or more ports.

Table 198. ACL Group Configuration Commands

Command Syntax and Usage	
access-control group <1-256> list <1-256>	
Adds the selected ACL to the ACL group.	
Command mode: Global configuration	
no access-control group <1-256> list <1-256>	
Removes the selected ACL from the ACL group.	
Command mode: Global configuration	
show access-control group <1-256>	
Displays the current ACL group parameters.	
Command mode: All	

ACL Metering Configuration

These commands define the Access Control profile for the selected ACL or ACL Group.

Table 199. ACL Metering Configuration Commands

Com	nand Syntax and Usage
acce	ss-control list <1-256> meter committed-rate <64-10000000>
	Configures the committed rate, in Kilobits per second. The committed rate nust be a multiple of 64.
C	command mode: Global configuration
acce	ss-control list <1-256> meter maximum-burst-size <32-4096>
	Configures the maximum burst size, in Kilobits. Enter one of the following alues for mbsize: 32, 64, 128, 256, 512, 1024, 2048, 4096
C	command mode: Global configuration
	access-control list <1-256> meter enable inables or disables ACL Metering.
C	command mode: Global configuration
	ss-control list <1-256> meter action {drop pass}
	command mode: Global configuration
defa	ult access-control list <1-256> meter
S	ets the ACL meter configuration to its default values.
C	command mode: Global configuration
[no]	access-control list <1-256> meter log
C	Configures the ACL meter to log out-of-profile notifications.
C	command mode: Global configuration
no a	ccess-control list <1-256> meter
D	Peletes the selected ACL meter.
C	command mode: Global configuration
show	access-control list <1-256> meter
C	Displays current ACL Metering parameters.
_	command mode: All

ACL Re-Mark Configuration

You can choose to re-mark IP header data for the selected ACL or ACL group. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

Table 200. ACL Re-Marking Configuration Commands

aco	cess-control list $<1-256>$ re-mark dot1p $<0-7>$	
	Defines 802.1p value. The value is the priority bits information in the packet structure.	
	Command mode: Global configuration	
no	access-control list <1-256> re-mark dot1p	
	Disables use of 802.1p value for re-marked packets.	
	Command mode: Global configuration	
[no	D] access-control list <1-256> re-mark use-tos-precedence Enable or disable mapping of TOS (Type of Service) priority to 802.1p priority for In-Profile packets. When enabled, the TOS value is used to set the 802.1p value.	
	Command mode: Global configuration	
det	default access-control list <1-256> re-mark Sets the ACL Re-mark configuration to its default values. Command mode: Global configuration	
sho	ow access-control list <1-256> re-mark	
	Displays current Re-mark parameters.	
	Command mode: All	

Re-Marking In-Profile Configuration

Table 201. ACL Re-Mark In-Profile Commands

Command Syntax and Usage	
access-control list <1-256> re-mark in-profile dscp <0-63> Sets the DiffServ Code Point (DSCP) of in-profile packets to the selected value. Command mode: Global configuration	
no access-control list <1-256> re-mark in-profile dscp Disables use of DSCP value for in-profile traffic. Command mode: Global configuration	
show access-control list <1-256> re-mark Displays current re-mark parameters. Command mode: All	

Re-Marking Out-of-Profile Configuration

Table 202. ACL Re-Mark Out-of-Profile Commands

Command Syntax and Usage		
access-control list <1-256> re-mark out-profile dscp <0-63> Sets the DiffServ Code Point (DSCP) of out-of-profile packets to the selected value. The switch sets the DSCP value on Out-of-Profile packets. Command mode: Global configuration		
no access-control list <1-256> re-mark out-profile dscp Disables use of DSCP value for out-of-profile traffic. Command mode: Global configuration		
show access-control list <1-256> re-mark Displays current re-mark parameters. Command mode: All		

IPv6 Re-Marking Configuration

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within or outside the ACL metering profile.

Table 203. IPv6 General Re-Mark Options

Command Syntax and Usage
<pre>[no] access-control list6 <1-128> re-mark dot1p <0-7> Re-marks the 802.1p value. The value is the priority bits information in the packet structure. Command mode: Global configuration</pre>
[no] no access-control list6 <1-128> re-mark use-tos-precedence
Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.
Command mode: Global configuration
default access-control list6 <1-128> re-mark
Sets the ACL re-mark parameters to their default values.
Command mode: Global configuration
show access-control list6 <1-128> re-mark
Displays current re-mark parameters.
Command mode: All

IPv6 Re-Marking In-Profile Configuration

Table 204. IPv6 Re-Mark In-Profile Options

Command Syntax and Usage
[no] access-control list6 <1-128> re-mark in-profile dscp <0-63> Re-marks the DSCP value for in-profile traffic.
Command mode: Global configuration
default access-control list6 <1-128> re-mark Sets the ACL re-mark parameters to their default values. Command mode: Global configuration
show access-control list6 <1-128> re-mark Displays current re-mark parameters. Command mode: All

Port Mirroring

Port mirroring is disabled by default. For more information about port mirroring on the CN4093, see "Appendix A: Troubleshooting" in the *IBM Networking OS 7.7 Application Guide*.

Note: Traffic on VLAN 4095 is not mirrored to the external ports.

Port Mirroring commands are used to configure, enable, and disable the monitor port. When enabled, network packets being sent and/or received on a target port are duplicated and sent to a monitor port. By attaching a network analyzer to the monitor port, you can collect detailed information about your network performance and usage.

Table 205. Port Mirroring Configuration Commands

Command Syntax and Usage	
[no] port-mirroring enable	
Enables or disables port mirroring.	
Command mode: Global configuration	
show port-mirroring	
Displays current settings of the mirrored and monitoring ports.	
Command mode: All	

Port Mirroring Configuration

Table 206.	Port-Based Port Mirroring Configuration Commands	
------------	--	--

Command Syntax and Usage		
<pre>port-mirroring monitor-port <pre>port alias or number> mirroring-port <pre>port alias or number> {in out both}</pre></pre></pre>		
Adds the port to be mirrored. This command also allows you to enter the direction of the traffic. It is necessary to specify the direction because:		
If the source port of the frame matches the mirrored port and the mirrored direction is ingress or both (ingress and egress), the frame is sent to the monitoring port.		
If the destination port of the frame matches the mirrored port and the mirrored direction is egress or both, the frame is sent to the monitoring port.		
Command mode: Global configuration		
<pre>no port-mirroring monitor-port <pre>port alias or number> mirroring-port <pre>port alias or number></pre></pre></pre>		
Removes the mirrored port.		
Command mode: Global configuration		
show port-mirroring		
Displays the current settings of the monitoring port.		
Command mode: All		

Layer 2 Configuration

The following table describes basic Layer 2 Configuration commands. The following sections provide more detailed information and commands.

Table 207. Layer 2 Configuration Commands

Command Syntax and Usage		
vlan < <i>VLAN number</i> >		
Enter VLAN configuration mode. To view command options, see page 355.		
Command mode: Global configuration		
spanning-tree mode disable		
When enabled, globally turns Spanning Tree off (selects Spanning-Tree mode "disable"). All ports are placed into forwarding state. Any BPDU's received are flooded. BPDU Guard is not affected by this command.		
To enable Spanning-Tree, select another Spanning-Tree mode.		
Command mode: Global configuration		
[no] spanning-tree stg-auto		
Enables or disables VLAN Automatic STG Assignment (VASA). When enabled, each time a new VLAN is configured, the switch will automatically assign the new VLAN its own STG. Conversely, when a VLAN is deleted, if its STG is not associated with any other VLAN, the STG is returned to the available pool.		
Note: VASA applies only to PVRST mode.		
Command mode: Global configuration		
[no] spanning-tree pvst-compatibility		
Enables or disables VLAN tagging of Spanning Tree BPDUs. The default setting is enabled.		
Command mode: Global configuration		
[no] spanning-tree loopguard		
Enables or disables Spanning Tree Loop Guard.		
Command mode: Global configuration		
show layer2		
Displays current Layer 2 parameters.		
Command mode: All		

802.1X Configuration

These commands allow you to configure the CN4093 as an IEEE 802.1X Authenticator, to provide port-based network access control.

Table 208. 802.1X Configuration Commands

Command Syntax and Usage	
dot1x enable	
Globally enables 802.1X.	
Command mode: Global configuration	
no dot1x enable	
Globally disables 802.1X.	
Command mode: Global configuration	
show dot1x	
Displays current 802.1X parameters.	
Command mode: All	

802.1X Global Configuration

The global 802.1X commands allow you to configure parameters that affect all ports in the CN4093.

Table 209.	802.1X Global	Configuration	Commands
------------	---------------	---------------	----------

Command Syntax and Usage			
dot1x mode [force-unauthorized auto force-authorized]			
Sets the type of access control for all ports:			
 force-unauthorized - the port is unauthorized unconditionally. 			
 auto - the port is unauthorized until it is successfully authorized by the RADIUS server. 			
 force-authorized - the port is authorized unconditionally, allowing all traffic. 			
The default value is force-authorized.			
Command mode: Global configuration			
dotlx quiet-time <0-65535>			
Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/ Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.			
Command mode: Global configuration			
dot1x transmit-interval <1-65535>			
Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds.			
Command mode: Global configuration			

Table 209. 802.1X Global Configuration Commands (continued)

Command Syntax and Usage		
dot1x supplicant-timeout <1-65535>		
Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet from the authentication server. The default value is 30 seconds.		
Command mode: Global configuration		
dot1x server-timeout <1-65535>		
Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value is 30 seconds.		
The time interval between transmissions of the RADIUS Access-Request packet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of radius-server timeout < <i>timeout-value</i> > (default is 3 seconds).		
Command mode: Global configuration		
dot1x max-request <1-10>		
Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.		
Command mode: Global configuration		
dot1x re-authentication-interval <1-604800>		
Sets the time, in seconds, the authenticator waits before re-authenticating a supplicant (client) when periodic re-authentication is enabled. The default value is 3600 seconds.		
Command mode: Global configuration		
dot1x re-authenticate		
Sets the re-authentication status to on. The default value is off.		
Command mode: Global configuration		
[no] dot1x re-authenticate		
Sets the re-authentication status to off. The default value is off.		
Command mode: Global configuration		
[no] dot1x vlan-assign Sets the dynamic VLAN assignment status to on or off. The default value is off.		
Command mode: Global configuration		
default dot1x		
Resets the global 802.1X parameters to their default values.		
Command mode: Global configuration		
show dot1x		
Displays current global 802.1X parameters.		
Command mode: All		

802.1X Guest VLAN Configuration

The 802.1X Guest VLAN commands allow you to configure a Guest VLAN for unauthenticated ports. The Guest VLAN provides limited access to switch functions.

Table 210. 802.1X Guest VLAN Configuration Commands

ommand Syntax and Usage	
no] dot1x guest-vlan vlan < <i>VLAN number></i> Configures the Guest VLAN number.	
Command mode: Global configuration	
ot1x guest-vlan enable	
Enables the 802.1X Guest VLAN.	
Command mode: Global configuration	
o dot1x guest-vlan enable	
Disables the 802.1X Guest VLAN.	
Command mode: Global configuration	
how dotlx	
Displays current 802.1X parameters.	
Command mode: All	

802.1X Port Configuration

The 802.1X port commands allows you to configure parameters that affect the selected port in the CN4093. These settings override the global 802.1X parameters.

Table 211. 802.1X Port Commands

Con	nmand Syntax and Usage
dot	1x mode force-unauthorized auto force-authorized
	Sets the type of access control for the port:
	 force-unauthorized - the port is unauthorized unconditionally.
	 auto - the port is unauthorized until it is successfully authorized by the RADIUS server.
	 force-authorized - the port is authorized unconditionally, allowing all traffic.
	The default value is force-authorized.
	Command mode: Interface port
dot	1x quiet-time <0-65535>
	Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/ Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.
	Command mode: Interface port
dot	1x transmit-interval <1-65535>
	Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds.
	Command mode: Interface port
dot	1x supplicant-timeout <1-65535>
	Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet from the authentication server. The default value is 30 seconds.
	Command mode: Interface port
dot	1x server-timeout <1-65535>
	Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value is 30 seconds.
	The time interval between transmissions of the RADIUS Access-Request packet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of the radius-server timeout command.
	Command mode: Interface port
dot	1x max-request <1-10>
	Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.
	Command mode: Interface port

Spanning Tree Configuration

IBM Networking OS supports the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP), the IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), and Per VLAN Rapid Spanning Tree Protocol (PVRST+). STP is used to prevent loops in the network topology. Up to 128 Spanning Tree Groups can be configured on the switch (STG 128 is reserved for management).

Note: When VRRP is used for active/active redundancy, STG must be enabled.

Table 212. Spanning Tree Configuration Options

Table 212. Spanning thee Configuration Options
Command Syntax and Usage
spanning-tree mode [disable mst pvrst rstp]
Selects and enables Multiple Spanning Tree mode (mst), Per VLAN Rapid Spanning Tree mode (pvrst), or Rapid Spanning Tree mode (rstp).
The default mode is PVRST+.
When you select spanning-tree mode disable, the switch globally turns Spanning Tree off. All ports are placed into forwarding state. Any BPDU's received are flooded. BPDU Guard is not affected by this command.
Command mode: Global configuration
[no] spanning-tree stg-auto
Enables or disables VLAN Automatic STG Assignment (VASA). When enabled, each time a new VLAN is configured, the switch will automatically assign the new VLAN its own STG. Conversely, when a VLAN is deleted, if its STG is not associated with any other VLAN, the STG is returned to the available pool.
Note: When using VASA, a maximum number of automatically assigned STGs is supported.
Note: VASA applies only to PVRST mode.
Command mode: Global configuration
[no] spanning-tree pvst-compatibility
Enables or disables VLAN tagging of Spanning Tree BPDUs. The default setting is enabled.
Command mode: Global configuration
[no] spanning-tree edge
Enables or disables this port as portfast or edge port. An edge port is not connected to a bridge, and can begin forwarding traffic as soon as the link is up. Configure server ports as edge ports (enabled).
Note : After you configure the port as an edge port, you must disable the port and then re-enable the port for the change to take effect.
Command mode: Interface port/Interface portchannel

Table 212. Spanning Tree Configuration Options (continued)

traffic if no BPDUs are received. The port is placed into a loop-inconsistent blocking state until a BPDU is received. Command mode: Interface port/Interface portchannel spanning-tree guard root Enables STP root guard. STP root guard enforces the position of the root bridge. If the bridge receives a superior BPDU, the port is placed into a root-inconsistent state (listening). Command mode: Interface port/Interface portchannel spanning-tree guard none Disables STP loop guard and root guard. Command mode: Interface port/Interface portchannel no spanning-tree guard Sets the Spanning Tree guard parameters to their default values. MSTP/RSTP/PVRST Configuration

IBM N/OS supports STP/PVST+, the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP), IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), and Per VLAN Rapid Spanning Tree Protocol (PVRST+). MSTP allows you to map many VLANs to a small number of Spanning Tree Groups, each with its own topology.

Up to 32 Spanning Tree Groups can be configured in MSTP mode. MSTP is turned off by default and the default STP mode is PVRST+.

Note: When Multiple Spanning Tree is turned on, VLAN 4095 is moved from Spanning Tree Group 128 to the Common Internal Spanning Tree (CIST). When Multiple Spanning Tree is turned off, VLAN 4095 is moved back to Spanning Tree Group 128.

Table 213. Multiple Spanning Tree Configuration Option
--

Command Syntax and Usage
default spanning-tree mstp cist
Resets all CIST parameters to their default values.
Command mode: Global configuration
spanning-tree mstp name <1-32 characters>
Configures a name for the MSTP region. All devices within an MSTP region must have the same region name.
Command mode: Global configuration
spanning-tree mstp version <0-65535>
Configures a version number for the MSTP region. The version is used as a numerical identifier for the region. All devices within an MSTP region must have the same version number.
Command mode: Global configuration
spanning-tree mstp maximum-hop <4-60>
Configures the maximum number of bridge hops a packet may traverse before it is dropped. The default value is 20.
Command mode: Global configuration
spanning-tree mode [disable mst pvrst rstp]
Selects and enables Multiple Spanning Tree mode (mst), Per VLAN Rapid Spanning Tree mode ($pvrst$), or Rapid Spanning Tree mode ($rstp$).
The default mode is STP/PVRST+.
When you select spanning-tree disable, the switch globally turns Spanning Tree off. All ports are placed into forwarding state. Any BPDU's received are flooded. BPDU Guard is not affected by this command.
Command mode: Global configuration
show spanning-tree mstp mrst
Displays the current RSTP/MSTP/PVRST+ configuration.
Command mode: All

Common Internal Spanning Tree Configuration

Table 214 describes the commands used to configure Common Internal Spanning Tree (CIST) parameters. The CIST provides compatibility with different MSTP regions and with devices running different Spanning Tree instances. It is equivalent to Spanning Tree Group 0.

Table 214. CIST Configuration Commands

Command Syntax and Usage

default spanning-tree mstp cist

Resets all CIST parameters to their default values.

Command mode: Global configuration

show spanning-tree mstp cist

Displays the current CIST configuration.

Command mode: All

CIST Bridge Configuration

CIST bridge parameters are used only when the switch is in MSTP mode. CIST parameters do not affect operation of STP/PVST+, RSTP, or PVRST+.

Table 215.	CIST Bridge	Configuration	Commands
------------	-------------	---------------	----------

Command Syntax and Usage
spanning-tree mstp cist-add-vlan <vlan no.=""></vlan>
Add the specified VLANs to CIST.
Command mode: Global configuration
spanning-tree mstp cist-bridge priority <0-65535>
Configures the CIST bridge priority. The bridge priority parameter controls which bridge on the network is the MSTP root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority.
The range is 0 to 65535, in steps of 4096 (0, 4096, 8192), and the default value is 61440.
Command mode: Global configuration
spanning-tree mstp cist-bridge maximum-age <6-40>
Configures the CIST bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the MSTP network. The range is 6 to 40 seconds, and the default is 20 seconds. Command mode: Global configuration
-

Table 215. CIST Bridge Configuration Commands

Command Syntax and Usage

spanning-tree mstp cist-bridge forward-delay <4-30>

Configures the CIST bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.

Command mode: Global configuration

show spanning-tree mstp cist

Displays the current CIST bridge configuration.

Command mode: All

CIST Port Configuration

CIST port parameters are used to modify CIST operation on an individual port basis. CIST parameters do not affect operation of STP/PVST+. For each port, RSTP/MSTP is turned on by default.

Table 216. CIST Port Configuration Options

Command Syntax and Usage
spanning-tree mstp cist interface-priority <0-240>
Configures the CIST port priority. The port priority helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
The range is 0 to 240, in steps of 16 (0, 16, 32), and the default is 128.
Command mode: Interface port
spanning-tree mstp cist path-cost <0-20000000>
Configures the CIST port path cost. The port path cost is used to help determine the designated port for a segment. Port path cost is based on the port speed, and is calculated as follows:
– 1Gbps = 20000
– 10Gbps = 2000
The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.
Command mode: Interface port
spanning-tree mstp cist hello <1-10>
Configures the CIST port Hello time. The Hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge Hello value. The range is 1 to 10 seconds, and the default is 2 seconds.
Command mode: Interface port

Table 216. CIST Port Configuration Options (continued)

Command Syntax and Usage

[no] spanning-tree pvst-protection

Configures PVST Protection on the selected port. If the port receives any PVST+/PVRST+ BPDUs, it error disabled. PVST Protection works only in MSTP mode. The default setting is disabled.

Note: Not available in stacking.

Command mode: Interface port

no spanning-tree mstp cist enable

Disables MRST on the port.

Command mode: Interface port

show interface port port alias or number> spanning-tree mstp cist

Displays the current CIST port configuration.

Command mode: All

RSTP/PVRST Configuration

 Table 217 describes the commands used to configure the Rapid Spanning Tree

 (RSTP) and Per VLAN Rapid Spanning Tree Protocol (PVRST+) protocols.

Table 217. RSTP/PVRST Configuration Options

Command Syntax and Usage	
<pre>spanning-tree stp <stg number=""> vlan <vlan number=""></vlan></stg></pre>	
Associates a VLAN with a Spanning Tree Group and requires a VLAN ID as parameter. If the VLAN does not exist, it will be created automatically, but it win not be enabled by default.	
Command mode: Global configuration	
no spanning-tree stp <i><stg number=""></stg></i> vlan <i><vlan number=""></vlan></i>	
Breaks the association between a VLAN and a Spanning Tree Group and requires a VLAN ID as a parameter.	
Command mode: Global configuration	
no spanning-tree stp <i><stg number=""></stg></i> vlan all	
Removes all VLANs from a Spanning Tree Group.	
Command mode: Global configuration	
spanning-tree stp <i><stg number=""></stg></i> enable	
Globally enables Spanning Tree Protocol. STG is turned on by default.	
Command mode: Global configuration	
no spanning-tree stp <i><stg number=""></stg></i> enable	
Globally disables Spanning Tree Protocol.	
Command mode: Global configuration	

Table 217. RSTP/PVRST Configuration Options (continued)

Command Syntax and Usage

default spanning-tree <STG number>

Restores a Spanning Tree instance to its default configuration.

Command mode: Global configuration

show spanning-tree stp <STG number> [information]

Displays current Spanning Tree Protocol parameters for the specified Spanning Tree Group. See page 44 for details about the information parameter.

Command mode: All

Bridge RSTP/PVRST Configuration

Spanning Tree bridge parameters affect the global STG operation of the switch. STG bridge parameters include:

- Bridge priority
- Bridge hello time
- Bridge maximum age
- Forwarding delay

```
Table 218. Bridge Spanning Tree Configuration Options
```

Command Syntax and Usage
<pre>spanning-tree stp <stg number=""> bridge priority <0-65535></stg></pre>
Configures the bridge priority. The bridge priority parameter controls which bridge on the network is the STG root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority. The range is 0 to 65535, in steps of 4096 (0, 4096, 8192); the default value is 61440.
Command mode: Global configuration
spanning-tree stp <i><stg number=""></stg></i> bridge hello-time <i><1-10></i>
Configures the bridge Hello time. The Hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge Hello value. The range is 1 to 10 seconds, and the default is 2 seconds.
This command does not apply to MSTP.
Command mode: Global configuration
spanning-tree stp <i><stg number=""></stg></i> bridge maximum-age <i><6-40></i>
Configures the bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it re configures the STG network. The range is 6 to 40 seconds, and the default is 20 seconds.
This command does not apply to MSTP.
Command mode: Global configuration

Table 218. Bridge Spanning Tree Configuration Options

Command Syntax and Usage

spanning-tree stp *<STG number>* bridge forward-delay *<4-30>*

Configures the bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.

This command does not apply to MSTP

Command mode: Global configuration

show spanning-tree [stp <STG no.>] bridge

Displays the current bridge STG parameters.

Command mode: All

When configuring STG bridge parameters, the following formulas must be used:

- 2*(*fwd*-1) <u>></u> *mxage*
- 2*(hello+1) <u><</u> mxage

Spanning TreeRSTP/PVRST Port Configuration

By default, Spanning Tree is turned off for management ports, and turned on for data ports. STG port parameters include:

- Port priority
- Port path cost

Table 219. Spanning Tree Port Options

Command Syntax and Usage	
spanning-tree stp <i><stg number=""></stg></i> priority <i><0-240></i>	
Configures the port priority. The port priority helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment. The default value is 128.	
RSTP/MSTP : The range is 0 to 240, in steps of 16 (0, 16, 32) and the default is 128.	
Command mode: Interface port	
<pre>spanning-tree stp <stg number=""> path-cost <1-200000000, 0 for default)></stg></pre>	
Configures the port path cost. The port path cost is used to help determine the designated port for a segment. Port path cost is based on the port speed, and is calculated as follows:	
– 1Gbps = 20000	
– 10Gbps = 2000	
The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.	

Command mode: Interface port

Table 219. Spanning Tree Port Options (continued)

Command Syntax and Usage		
 spanning-tree stp link-type {auto p2p shared} Defines the type of link connected to the port, as follows: auto: Configures the port to detect the link type, and automatically match its settings. p2p: Configures the port for Point-To-Point protocol. shared: Configures the port to connect to a shared medium (usually a hub). 		
Command mode: Interface port		
spanning-tree stp <i><stg number=""></stg></i> enable Enables STG on the port. Command mode: Interface port		
no spanning-tree stp <i>STG number></i> enable Disables STG on the port. Command mode: Interface port		
show interface port <i><port alias="" number="" or=""></port></i> spanning-tree stp <i><stg number=""></stg></i> Displays the current STG port parameters. Command mode: All		

Forwarding Database Configuration

Use the following commands to configure the Forwarding Database (FDB).

Table 220. FDB Configuration Commands

Command Syntax and Usage
mac-address-table aging $<\!0.65535\!>$
Configures the aging value for FDB entries, in seconds. The default value is 300.
Command mode: Global configuration
[no] mac-address-table mac-notification
Enables or disables MAC address notification.
Command mode: Global configuration
show mac-address-table
Display current FDB configuration.
Command mode: All

Static FDB Configuration

Use the following commands to configure static entries in the Forwarding Database (FDB).

Table 221. FDB Configuration Commands

Со	Command Syntax and Usage	
mao	<pre>c-address-table static <mac address=""> vlan <vlan number=""> {port <pre>port alias or number> portchannel <trunk number=""> adminkey <1-65535>}</trunk></pre></vlan></mac></pre>	
	Adds a permanent FDB entry. Enter the MAC address using the following format, xx:xx:xx:xx:xx:xx	
	For example, 08:00:20:12:34:56	
	You can also enter the MAC address as follows:	
	For example, 080020123456	
	Command mode: Global configuration	
no	<pre>mac-address-table static <mac address=""> <vlan number=""></vlan></mac></pre>	
	Deletes a permanent FDB entry.	
	Command mode: Global configuration	
sho	ow mac-address-table	
	Display current FDB configuration.	
	Command mode: All	

Static Multicast MAC Configuration

The following options are available to control the forwarding of known and unknown multicast packets:

- All multicast packets are flooded to the entire VLAN. This is the default switch behavior.
- Known multicast packets are forwarded only to those ports specified. Unknown
 multicast packets are flooded to the entire VLAN. To configure this option, define
 the Multicast MAC address for the VLAN and specify ports that are to receive
 multicast packets (mac-address-table multicast).
- Known multicast packets are forwarded only to those ports specified. Unknown
 multicast packets are dropped. To configure this option:
 - Define the Multicast MAC address for the VLAN and specify ports that are to receive multicast packets (mac-address-table multicast).
 - Enable Flood Blocking on ports that are not to receive multicast packets (interface port x) (flood-blocking).

Use the following commands to configure static Multicast MAC entries in the Forwarding Database (FDB).

Table 222. Static Multicast MAC Configuration Commands

Command Syntax and Usage	
<pre>mac-address-table multicast <mac address=""> <vlan number=""></vlan></mac></pre>	
Adds a static multicast entry. You can list ports separated by a space, or enter a range of ports separated by a hyphen (-). For example:	
<pre>mac-address-table multicast 01:00:00:23:3f:01 200 int1-int4</pre>	
Command mode: Global configuration	
<pre>no mac-address-table multicast <mac address=""> <vlan number=""></vlan></mac></pre>	
Deletes a static multicast entry.	
Command mode: Global configuration	
show mac-address-table multicast	
Display the current static multicast entries.	
Command mode: All	

ECP Configuration

Use the following commands to configure Edge Control Protocol (ECP).

```
Table 223. ECP Configuration Options
```

ecn retrans	mit-interval <100-9000>
-	es ECP retransmit interval in milliseconds. Default value is 1000.
Comma	nd mode: Global configuration
default ecr	retransmit-interval
Resets the	e ECP retransmit interval to the default 1000 milliseconds.
Comma	nd mode: Global configuration
show ecp [c	hannels upper-layer-protocols]
Displays	settings for all ECP channels or registered ULPs.
Comma	nd mode: All

LLDP Configuration

Use the following commands to configure Link Layer Detection Protocol (LLDP).

Table 224. LLDP Configuration Commands

Command Syntax and Usage
lldp refresh-interval <5-32768>
Configures the message transmission interval, in seconds. The default value is 30.
Command mode: Global configuration
lldp holdtime-multiplier <2-10>
Configures the message hold time multiplier. The hold time is configured as a multiple of the message transmission interval.
The default value is 4.
Command mode: Global configuration
lldp trap-notification-interval <1-3600>
Configures the trap notification interval, in seconds. The default value is 5.
Command mode: Global configuration
lldp transmission-delay <1-8192>
Configures the transmission delay interval. The transmit delay timer represents the minimum time permitted between successive LLDP transmissions on a port.
The default value is 2.
Command mode: Global configuration

Table 224. LLDP Configuration Commands

Cor	nmand Syntax and Usage	
110	lldp reinit-delay <i><1-10></i>	
	Configures the re-initialization delay interval, in seconds. The re-initialization delay allows the port LLDP information to stabilize before transmitting LLDP messages.	
	The default value is 2.	
	Command mode: Global configuration	
110	lp enable	
	Globally turns LLDP on. The default setting is on.	
	Command mode: Global configuration	
no	lldp enable	
	Globally turns LLDP off.	
	Command mode: Global configuration	
sho	ow lldp	
	Display current LLDP configuration.	
	Command mode: All	

LLDP Port Configuration

Use the following commands to configure LLDP port options.

Table 225. LLDP Port Commands

Command Syntax and Usage
<pre>lldp admin-status {disabled tx_only rx_only tx_rx}</pre>
Configures the LLDP transmission type for the port, as follows:
 Transmit only
 Receive only
 Transmit and receive
- Disabled
The default setting is tx_rx.
Command mode: Interface port
[no] lldp trap-notification
Enables or disables SNMP trap notification for LLDP messages.
Command mode: Interface port
show interface port <pre>port alias or number> lldp</pre>
Display current LLDP port configuration.
Command mode: All

LLDP Optional TLV configuration

Use the following commands to configure LLDP port TLV (Type, Length, Value) options for the selected port.

Table 226. Optional TLV Commands

Command Syntax and Usage
[no] lldp tlv portdesc Enables or disables the Port Description information type. Command mode : Interface port
[no] lldp tlv sysname Enables or disables the System Name information type. Command mode : Interface port
<pre>[no] lldp tlv sysdescr Enables or disables the System Description information type. Command mode: Interface port</pre>
<pre>[no] lldp tlv syscap Enables or disables the System Capabilities information type. Command mode: Interface port</pre>
<pre>[no] lldp tlv mgmtaddr Enables or disables the Management Address information type. Command mode: Interface port</pre>
[no] lldp tlv portvid Enables or disables the Port VLAN ID information type. Command mode: Interface port
[no] lldp tlv portprot Enables or disables the Port and VLAN Protocol ID information type. Command mode: Interface port
[no] lldp tlv vlanname Enables or disables the VLAN Name information type. Command mode: Interface port
<pre>[no] lldp tlv protid Enables or disables the Protocol ID information type. Command mode: Interface port</pre>
[no] lldp tlv macphy Enables or disables the MAC/Phy Configuration information type. Command mode : Interface port

Table 226.	Optional TLV Commands	(continued)
------------	-----------------------	-------------

Command Syntax and Usage
[no] lldp tlv powermdi
Enables or disables the Power via MDI information type.
Command mode: Interface port
[no] lldp tlv linkaggr
Enables or disables the Link Aggregation information type.
Command mode: Interface port
[no] lldp tlv framesz
Enables or disables the Maximum Frame Size information type.
Command mode: Interface port
[no] lldp tlv dcbx
Enables or disables the Data Center Bridging Capability Exchange (DCBX) information type.
Command mode: Interface port
[no] lldp tlv all
Enables or disables all optional TLV information types.
Command mode: Interface port
show interface port <pre>port alias or number> lldp</pre>
Display current LLDP port configuration.
Command mode: All

Trunk Configuration

Trunk groups can provide super-bandwidth connections between CN4093 or other trunk capable devices. A *trunk* is a group of ports that act together, combining their bandwidth to create a single, larger port. Up to 64 trunk groups can be configured on the CN4093, with the following restrictions:

- Any physical switch port can belong to no more than one trunk group.
- Up to 16 ports can belong to the same trunk group.
- Configure all ports in a trunk group with the same properties (speed, duplex, flow control, STG, VLAN, and so on).
- Trunking from non-IBM devices must comply with Cisco[®] EtherChannel[®] technology and exclude the PAgP networking protocol.

By default, each trunk group is empty and disabled.

Table 227. Trunk Configuration Commands

Con	Command Syntax and Usage	
por	portchannel <1-64> port <pre>port alias or number></pre>	
	Adds a physical port or ports to the current trunk group. You can add several ports, with each port separated by a comma (,) or a range of ports, separated by a dash (-).	
	Command mode: Global configuration	
no	portchannel <1-64> port <pre>port alias or number></pre>	
	Removes a physical port or ports from the current trunk group.	
	Command mode: Global configuration	
[no]	portchannel <1-64> enable	
	Enables or Disables the current trunk group.	
	Command mode: Global configuration	
no	portchannel <1-64>	
	Removes the current trunk group configuration.	
	Command mode: Global configuration	
sho	w portchannel <1-64>	
	Displays current trunk group parameters.	
	Command mode: All	

IP Trunk Hash Configuration

Use the following commands to configure IP trunk hash settings for the CN4093. Trunk hash parameters are set globally for the CN4093. The trunk hash settings affect both static trunks and LACP trunks.

To achieve the most even traffic distribution, select options that exhibit a wide range of values for your particular network. You may use the configuration settings listed in Table 228 combined with the hash parameters listed in Table 229.

Table 228. Trunk Hash Settings

Command Syntax and Usage
[no] portchannel hash ingress
Enables or disables use of the ingress port to compute the trunk hash value. The default setting is <code>disabled</code> .
Command mode: Global configuration
[no] portchannel hash L4port
Enables or disables use of Layer 4 service ports (TCP, UDP, etc.) to compute the hash value. The default setting is disabled.
Command mode: Global configuration
show portchannel hash
Display current trunk hash configuration.
Command mode: All

Layer 2 Trunk Hash

Layer 2 trunk hash parameters are set globally. You can enable one or both parameters, to configure any of the following valid combinations:

- SMAC (source MAC only)
- DMAC (destination MAC only)
- SMAC and DMAC

Use the following commands to configure Layer 2 trunk hash parameters for the switch.

Table 229. Layer 2 Trunk Hash Options

Command Syntax and Usage
[no] portchannel thash 12hash 12-source-mac-address
Enables or disables Layer 2 trunk hashing on the source MAC. Command mode: Global configuration
[no] portchannel thash l2hash l2-destination-mac-address
Enables or disables Layer 2 trunk hashing on the destination MAC.
Command mode: Global configuration

Table 229. Layer 2 Trunk Hash Options (continued)

Command Syntax and Usage [no] portchannel thash 12hash 12-source-destination-mac Enables or disables Layer 2 trunk hashing on both the source and destination MAC.

Command mode: Global configuration

show portchannel hash

Displays the current trunk hash settings.

Command mode: All

Layer 3 Trunk Hash

Layer 3 trunk hash parameters are set globally. You can enable one or both parameters, to configure any of the following valid combinations:

- SIP (source IP only)
- DIP (destination IP only)
- SIP and DIP

Use the following commands to configure Layer 3 trunk hash parameters for the switch.

Table 230. Layer 3 Trunk Hash Options

Command Syntax and Usage
[no] portchannel thash 13thash 13-use-12-hash Enables or disables use of Layer 2 hash parameters only. When enabled,
Layer 3 hashing parameters are cleared. Command mode: Global configuration
[no] portchannel thash 13thash 13-source-ip-address
Enables or disables Layer 3 trunk hashing on the source IP address.
Command mode: Global configuration
[no] portchannel thash 13thash 13-destination-ip-address
Enables or disables Layer 3 trunk hashing on the destination IP address.
Command mode: Global configuration
[no] portchannel thash 13thash 13-source-destination-ip
Enables or disables Layer 3 trunk hashing on both the source and the destination IP address.
Command mode: Global configuration
show portchannel hash
Displays the current trunk hash settings.
Command mode: All

Virtual Link Aggregation Control Protocol Configuration

Use the following commands to configure Virtual Link Aggregation Control Protocol (vLAG) for the CN4093.

Table 231. Virtual Link Aggregation Control Protocol Commands

Command Syntax and Usage
[no] vlag portchannel <1-64>
Enables or disables the vLAG underlying trunk.
Command mode: Global configuration
[no] vlag adminkey <1-65535> enable
Enables or disables vLAG on the selected LACP admin key. LACP trunks formed with this admin key will be included in the vLAG configuration.
Command mode: Global configuration
[no] vlag enable
Enables or disables vLAG globally.
Command mode: Global configuration
[no] vlag tier-id <1-512>
Sets the vLAG peer ID.
Command mode: Global configuration
vlag priority <0-65535>
Configures the vLAG priority for the switch, used for election of Primary and Secondary vLAG switches. The switch with lower priority is elected to the role of Primary vLAG switch.
Command mode: Global configuration
vlag auto-recovery <240-3600>
Sets the duration in seconds of the auto-recovery timer. This timer configures how log after boot-up configuration load, the switch can assume the Primary role from an unresponsive ISL peer and bring up the vLAG ports.
The default value is 300.
Command mode: Global configuration
no vlag auto-recovery
Sets the auto-recovery timer to the default 300 seconds duration.
Command mode: Global configuration

Table 231. Virtual Link Aggregation Control Protocol Commands (continued)

Command Syntax and Usage

vlag startup-delay <1-3600>

Sets the vLAG startup-delay value in seconds to the specified value.

Note: Startup delay gives vLAG the ability to prevent traffic loss after a reboot. When a vLAG switch reboots, the vLAG ports are in an errdisabled state. After ISL is up, the vLAG ports are started one by one after the specified startup delay time. This specified time allows the switch to get BGP/OSFP ready through the uplinks so when the vLAG port starts up, all the traffic through those links flows smoothly. Admin status of the ports is honored by the vlag startup delay. For example, if the admin status of the vLAG port is down, those ports will be kept down even after the vLAG start-up delay.

Command mode: Global configuration

show vlag

Display current vLAG configuration.

Command mode: All

vLAG Health Check Configuration

These commands allow you to configure a health check of synchronization between vLAG peers.

Table 232.	vLAG Health	Check	Configuration	Options
------------	-------------	-------	---------------	---------

Command Syntax and Usage
<pre>vlag hlthchk peer-ip {<ip address=""> <ipv6 address="">}</ipv6></ip></pre>
Configures the IP address of the vLAG peer.
Command mode: Global configuration
[no] vlag hlthchk connect-retry-interval <1-300>
Sets in seconds the vLAG health check connect retry interval, in seconds. The default value is 30.
Command mode: Global configuration
[no] vlag hlthchk keepalive-attempts <1-24>
Sets the number of vLAG keep alive attempts. The default value is 3.
Command mode: Global configuration
[no] vlag hlthchk keepalive-interval <2-300>
Sets the time between vLAG keep alive attempts, in seconds. The default value is 5.
Command mode: Global configuration

vLAG ISL Configuration

These commands allow you to configure a dedicated inter-switch link (ISL) for synchronization between vLAG peers.

Table 233. vLAG ISL Configuration Options

Command Syntax and Usage
[no] vlag isl portchannel <1-64> enable
Enables or disables vLAG Inter-Switch Link (ISL) on the selected trunk group.
Command mode: Global configuration
[no] vlag isl adminkey <1-65535>
Enables or disables vLAG Inter-Switch Link (ISL) on the selected LACP admin key. LACP trunks formed with this admin key will be included in the ISL.
Command mode: Global configuration
show vlag information
Displays current vLAG parameters.
Command mode: All

Link Aggregation Control Protocol Configuration

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the CN4093.

Table 234. Link Aggregation Control Protocol Commands

Command Syntax and Usage	
<pre>lacp system-priority <1-65535> Defines the priority value for the CN4093. Lower numbers provide higher priority. The default value is 32768. Command mode: Global configuration</pre>	
<pre>lacp timeout {short long} Defines the timeout period before invalidating LACP data from a remote partner. Choose short (3 seconds) or long (90 seconds). The default va is long. Note: It is recommended that you use a timeout value of long, to reduce LACPDU processing. If your CN4093's CPU utilization rate remains at 100</pre>	
for periods of 90 seconds or more, consider using static trunks instead of LACP. Command mode: Global configuration	
<pre>default lacp [system-priority timeout] Restores either the VFSM priority value, timeout period or both to their def values.</pre>	ault
Command mode: Global configuration	
no lacp <1-65535> Deletes a selected LACP trunk, based on its admin key. This command is equivalent to disabling LACP on each of the ports configured with the sam admin key.	
Command mode: Global configuration	
portchannel <trunk id=""> lacp key <1-65535> suspend-individual Enables a static LACP trunk. In this mode, ports sharing the same LACP ad key can form a single trunk, with the specified trunk ID. The active trun picked based on the ports which occupy first the trunk ID. Member ports th cannot join this trunk are prohibited from forming secondary LACP groups Instead, they are set in a suspend state where they discard all non-LACP traffic.</trunk>	k is nat
Command mode: Global configuration	
no portchannel <i><trunk id=""></trunk></i>	
Disables a static LACP trunk.	
Command mode: Global configuration	
show lacp Display current LACP configuration. Command mode: All	

LACP Port Configuration

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the selected port.

Table 235. Link Aggregation Control Protocol Commands

Command Syntax and Usage	
lacp mode {off active passive}	_
Set the LACP mode for this port, as follows:	
– off	
Turn LACP off for this port. You can use this port to manually configure a static trunk. The default value is off.	
- active	
Turn LACP on and set this port to active. Active ports initiate LACPDUs.	
 passive Turn LACP on and set this port to passive. Passive ports do not initiate LACPDUs, but respond to LACPDUs from active ports. 	
Command mode: Interface port	
lacp priority <1-65535>	
Sets the priority value for the selected port. Lower numbers provide higher priority. The default value is 32768.	
Command mode: Interface port	ļ
lacp key <1-65535>	
Set the admin key for this port. Only ports with the same <i>admin key</i> and <i>oper key</i> (operational state generated internally) can form a LACP trunk group.	
Command mode: Interface port	ļ
port-channel min-links <1-32>	
Set the minimum number of links for this port. If the specified minimum number of ports are not available, the trunk is placed in the $down$ state.	r
Command mode: Interface port	
default lacp [key mode priority]	
Restores the selected parameters to their default values.	
Command mode: Interface port	
show interface port <pre>port alias or number> lacp</pre>	
Displays the current LACP configuration for this port.	
Command mode: All	

Layer 2 Failover Configuration

Use these commands to configure Layer 2 Failover. For more information about Layer 2 Failover, see "High Availability" in the *IBM Networking OS Application Guide*.

Table 236. I	Layer 2 Failover	Configuration	Commands
--------------	------------------	---------------	----------

Cor	nmand Syntax and Usage
fai	lover vlan
	Globally turns VLAN monitor on. When the VLAN Monitor is on, the switch automatically disables only internal ports that belong to the same VLAN as ports in the failover trigger. The default value is off.
	Command mode: Global configuration
no	failover vlan
	Globally turns VLAN monitor off . When the VLAN Monitor is on, the switch automatically disables only internal ports that belong to the same VLAN as ports in the failover trigger. The default value is off.
	Command mode: Global configuration
fai	lover enable
	Globally turns Layer 2 Failover on.
	Command mode: Global configuration
no	failover enable
	Globally turns Layer 2 Failover off.
	Command mode: Global configuration
sho	w failover trigger
	Displays current Layer 2 Failover parameters.
	Command mode: All

Failover Trigger Configuration

Table 237. Failover Trigger Configuration Commands

Command Syntax and Usage		
no] failover trigger < <i>l-8</i> > enable		
Enables or disables the Failover trigger.		
Command mode: Global configuration		
no failover trigger < <i>l-8</i> >		
Deletes the Failover trigger.		
Command mode: Global configuration		
failover trigger <1-8> limit <0-1024>		
Configures the minimum number of operational links allowed within each trigger before the trigger initiates a failover event. If you enter a value of zero (0), the switch triggers a failover event only when no links in the trigger are operational.		
Command mode: Global configuration		
show failover trigger <1-8>		
Displays the current failover trigger settings.		
Command mode: All		

Auto Monitor Configuration

Table 238. Auto Monitor Configuration Commands

Со	nmand Syntax and Usage	
fa:	<pre>failover trigger <1-8> amon portchannel <trunk group="" number=""> Adds a trunk group to the Auto Monitor. Command mode: Global configuration</trunk></pre>	
no	<pre>failover trigger <1-8> amon portchannel <trunk group="" number=""> Removes a trunk group from the Auto Monitor. Command mode: Global configuration</trunk></pre>	
fa	<pre>failover trigger <1-8> amon adminkey <1-65535> Adds an LACP admin key to the Auto Monitor. LACP trunks formed with this admin key will be included in the Auto Monitor. Command mode: Global configuration</pre>	
no	failover trigger <1-8> amon adminkey <1-65535> Removes an LACP <i>admin key</i> from the Auto Monitor. Command mode: Global configuration	

Failover Manual Monitor Port Configuration

Use these commands to define the port link(s) to monitor. The Manual Monitor Port configuration accepts only external uplink ports.

Note: AMON and MMON configurations are mutually exclusive.

Table 239. Failover Manual Monitor Port Commands

Со	nmand Syntax and Usage
fa	Adds the selected port to the Manual Monitor Port configuration. Command mode: Global configuration
no	failover trigger < <i>l</i> -8> mmon monitor member < <i>port alias or number</i> > Removes the selected port from the Manual Monitor Port configuration. Command mode: Global configuration
fa	Ilover trigger <1-8> mmon monitor portchannel <trunk number=""> Adds the selected trunk group to the Manual Monitor Port configuration. Command mode: Global configuration</trunk>
no	failover trigger < <i>l</i> -8> mmon monitor portchannel < <i>trunk number</i> > Removes the selected trunk group to the Manual Monitor Port configuration. Command mode: Global configuration
fai	Adds an LACP <i>admin key</i> to the Manual Monitor Port configuration. LACP trunks formed with this <i>admin key</i> will be included in the Manual Monitor Port configuration. Command mode: Global configuration
no	failover trigger <1-8> mmon monitor adminkey <1-65535> Removes an LACP admin key from the Manual Monitor Port configuration. Command mode: Global configuration
sho	ow failover trigger <i><1-8></i> Displays the current Failover settings. Command mode: All

Failover Manual Monitor Control Configuration

Use these commands to define the port link(s) to control. The Manual Monitor Control configuration accepts internal and external ports, but not management ports.

Table 240. Failover Manual Monitor Control Commands

Со	mmand Syntax and Usage
fa	ilover trigger < <i>l-8</i> > mmon control member < <i>port alias or number</i> > Adds the selected port to the Manual Monitor Control configuration. Command mode: Global configuration
no	failover trigger <1-8> mmon control member <port alias="" number="" or=""> Removes the selected port from the Manual Monitor Control configuration. Command mode: Global configuration</port>
fa	ilover trigger <1-8> mmon control portchannel <trunk number=""> Adds the selected trunk group to the Manual Monitor Control configuration. Command mode: Global configuration</trunk>
no	<pre>failover trigger <1-8> mmon control portchannel <trunk number=""> Removes the selected trunk group to the Manual Monitor Control configuration. Command mode: Global configuration</trunk></pre>
fa	<pre>ilover trigger <1-8> mmon control adminkey <1-65535> Adds an LACP admin key to the Manual Monitor Control configuration. LACP trunks formed with this admin key will be included in the Manual Monitor Control configuration. Command mode: Global configuration</pre>
no	failover trigger < <i>l-8</i> > mmon control adminkey < <i>l-65535</i> > Removes an LACP admin key from the Manual Monitor Control configuration. Command mode: Global configuration
sh	ow failover trigger <i><1-8></i> Displays the current Failover settings. Command mode: All

Hot Links Configuration

Use these commands to configure Hot Links. For more information about Hot Links, see "Hot Links" in the *IBM Networking OS 7.7 Application Guide*.

Table 241. Hot Links Configuration Commands

Cor	nmand Syntax and Usage
[no] hotlinks bpdu
	Enables or disables flooding of Spanning-Tree BPDUs on the active Hot Links interface when the interface belongs to a Spanning Tree group that is globally turned off . This feature can prevent unintentional loop scenarios (for example, if two uplinks come up at the same time).
	The default setting is disabled.
	Command mode: Global configuration
[no	hotlinks fdb-update
	Enables or disables FDB Update, which allows the switch to send FDB and MAC update packets over the active interface.
	The default value is disabled.
	Command mode: Global configuration
hot	llinks fdb-update-rate <10-200>
	Configures the FDB Update rate, in packets per second.
	Command mode: Global configuration
hot	links enable
	Globally enables Hot Links.
	Command mode: Global configuration
no	hotlinks enable
	Globally disables Hot Links.
	Command mode: Global configuration
sho	ow hotlinks
	Displays current Hot Links parameters.
	Command mode: All

Hot Links Trigger Configuration

Table 242. Hot Links Trigger Configuration Commands

Command Syntax and Usage
hotlinks trigger <1-200> forward-delay <0-3600>
Configures the Forward Delay interval, in seconds. The default value is 1.
Command mode: Global configuration
[no] hotlinks trigger <1-200> name <1-32 characters>
Defines a name for the Hot Links trigger.
Command mode: Global configuration
[no] hotlinks trigger <1-200> preemption
Enables or disables pre-emption, which allows the Master interface to transition to the Active state whenever it becomes available.
The default setting is enabled.
Command mode: Global configuration
[no] hotlinks trigger <1-200> enable
Enables or disables the Hot Links trigger.
Command mode: Global configuration
no hotlinks trigger <1-200>
Deletes the Hot Links trigger.
Command mode: Global configuration
show hotlinks trigger <1-200>
Displays the current Hot Links trigger settings.
Command mode: All

Hot Links Master Configuration

Use the following commands to configure the Hot Links Master interface.

```
Table 243. Hot Links Master Configuration Commands
```

Command Syntax and Usage		
[no] hotlinks trigger <1-200> master port <port alias="" number="" or=""></port>		
Adds or removes the selected port to the Hot Links Master interface.		
Command mode: Global configuration		
<pre>[no] hotlinks trigger <1-200> master portchannel</pre>		
Adds or removes the selected trunk group to the Master interface.		
Command mode: Global configuration		
[no] hotlinks trigger <1-200> master adminkey <0-65535>		
Adds or removes an LACP admin key to the Master interface. LACP trunks formed with this admin key will be included in the Master interface.		
Command mode: Global configuration		
show hotlinks trigger <1-200>		
Displays the current Hot Links trigger settings.		
Command mode: All		

Hot Links Backup Configuration

Use the following commands to configure the Hot Links Backup interface.

```
Table 244. Hot Links Backup Configuration Commands
```

Command Syntax and Usage
[no] hotlinks trigger <1-200> backup port <port alias="" number="" or=""></port>
Adds or removes the selected port to the Hot Links Backup interface.
Command mode: Global configuration
<pre>[no] hotlinks trigger <1-200> backup portchannel</pre>
Adds or removes the selected trunk group to the Backup interface.
Command mode: Global configuration
[no] hotlinks trigger <1-200> backup adminkey <0-65535>
Adds or removes an LACP <i>admin key</i> to the Backup interface. LACP trunks formed with this <i>admin key</i> will be included in the Backup interface.
Command mode: Global configuration
show hotlinks trigger <1-200>
Displays the current Hot Links trigger settings.
Command mode: All

VLAN Configuration

These commands configure VLAN attributes, change the status of each VLAN, change the port membership of each VLAN, and delete VLANs.

By default, VLAN 1 is the only VLAN configured on the switch. Internal server ports and external uplink ports are members of VLAN 1 by default. Up to 4096 VLANs can be configured on the CN4093.

VLANs can be assigned any number between 1 and 4094. VLAN 4095 is reserved for switch management.

Table 245. VLAN Configuration Commands			
Command Syntax and Usage			
vlan <i><vlan number=""></vlan></i> Enter VLAN configuration mode. Command mode: Global configuration			
protocol-vlan <1-8> Configures the Protocol-based VLAN (PVLAN). Command mode: VLAN			
name <1-32 characters> Assigns a name to the VLAN or changes the existing name. The default VLAN name is the first one. Command mode: VLAN			
stg <i><stg number=""></stg></i> Assigns a VLAN to a Spanning Tree Group. Command mode: VLAN			
[no] vmap <1-128> [extports intports] Adds or removes a VLAN Map to the VLAN membership. You can choose to limit operation of the VLAN Map to internal ports only or external ports only. If you do not select a port type, the VMAP is applied to the entire VLAN. Command mode: VLAN			
member <i><port alias="" number="" or=""></port></i> Adds port(s) to the VLAN membership. Command mode: VLAN			
no member <i><port alias="" number="" or=""></port></i> Removes port(s) from this VLAN. Command mode: VLAN			
[no] management Configures this VLAN as a management VLAN. You must add the management ports (MGT1 and MGT2) to each new management VLAN. External ports cannot be added to management VLANs. Command mode: VLAN			

Table 245. VLAN Configuration Commands (continued)

Command S	Syntax and	Usage
-----------	------------	-------

[no] flood

Configures the switch to flood unregistered IP multicast traffic to all ports. The default setting is enabled.

Note: If none of the IGMP hosts reside on the VLAN of the streaming server for a IPMC group, you must disable IGMP flooding to ensure that multicast data is forwarded across the VLANs for that IPMC group.

Command mode: VLAN

[no] cpu

Configures the switch to forward unregistered IP multicast traffic to the MP, which adds an entry in the IPMC table, as follows:

- If no Mrouter is present, drop subsequent packets with same IPMC.
- If an Mrouter is present, forward subsequent packets to the Mrouter(s) on the ingress VLAN.

The default setting is enabled.

Note: If both flood and cpu are disabled, then the switch drops all unregistered IPMC traffic.

Command mode: VLAN

[no] optflood

Enables or disables optimized flooding. When enabled, optimized flooding avoids packet loss during the learning period. The default setting is disabled.

Command mode: VLAN

enable

Enables this VLAN.

Command mode: VLAN

no enable

Disables this VLAN without removing it from the configuration.

Command mode: VLAN

no vlan <*VLAN number*>

Deletes this VLAN.

Command mode: VLAN

show vlan information

Displays the current VLAN configuration.

Command mode: All

Note: All ports must belong to at least one VLAN. Any port which is removed from a VLAN and which is not a member of any other VLAN is automatically added to default VLAN 1. You cannot remove a port from VLAN 1 if the port has no membership in any other VLAN. Also, you cannot add a port to more than one VLAN unless the port has VLAN tagging turned on.

Protocol-Based VLAN Configuration

Use the following commands to configure Protocol-based VLAN for the selected VLAN.

Table 246. Protocol VLAN Configuration Commands

pro	<pre>ptocol-vlan <1-8> frame-type {ether2 llc snap} <ethernet type=""></ethernet></pre>
Prv	Configures the frame type and the Ethernet type for the selected protocol.
	Ethernet type consists of a 4-digit (16 bit) hex code, such as 0080 (IPv4).
	Command mode: VLAN
pro	otocol-vlan <1-8> protocol <protocol type=""></protocol>
	Selects a pre-defined protocol, as follows:
	- decEther2:DEC Local Area Transport
	- ipv4Ether2:Internet IP (IPv4)
	- ipv6Ether2:IPv6
	- ipx802.2:Novell IPX 802.2
	- ipx802.3:Novell IPX 802.3
	- ipxEther2:Novell IPX
	- ipxSnap:Novell IPX SNAP
	- netbios:NetBIOS 802.2
	- rarpEther2:Reverse ARP
	 sna802.2:SNA 802.2 snaEther2:IBM SNA Service on Ethernet
	- vinesEther2:Banyan VINES
	- xnsEther2:XNS Compatibility
	Command mode: VLAN
pro	otocol-vlan <1-8> priority <0-7>
	Configures the priority value for this PVLAN.
	Command mode: VLAN
pro	ptocol-vlan <1-8> member <port alias="" number="" or=""></port>
	Adds a port to the selected PVLAN.
	Command mode: VLAN
no	protocol-vlan <1-8> member <port alias="" number="" or=""></port>
	Removes a port from the selected PVLAN.
	Command mode: VLAN
] protocol-vlan <1-8> tag-pvlan <port alias="" number="" or=""></port>
Inc	
[nc	Defines a port that will be tagged by the selected protocol on this VLAN.

Co	Command Syntax and Usage			
pro	protocol-vlan <1-8> enable			
	Enables the selected protocol on the VLAN.			
	Command mode: VLAN			
no	protocol-vlan <1-8> enable			
	Disables the selected protocol on the VLAN.			
	Command mode: VLAN			
no	protocol-vlan <1-8>			
	Deletes the selected protocol configuration from the VLAN.			
	Command mode: VLAN			
sh	ow protocol-vlan <1-8>			
	Displays current parameters for the selected PVLAN.			
	Command mode: All			

Private VLAN Configuration

Use the following commands to configure Private VLAN.

```
Table 247. Private VLAN Configuration Commands
```

Cor	nmand Syntax and Usage
[no	 private-vlan type primary Enables or disables the VLAN type as a Primary VLAN. A Private VLAN must have only one primary VLAN. The primary VLAN carries unidirectional traffic to ports on the isolated VLAN or to community VLAN.
	Command mode: VLAN
[no	 private-vlan type community Enables or disables the VLAN type as a community VLAN. Community VLANs carry upstream traffic from host ports. A Private VLAN may have multiple community VLANs. Command mode: VLAN
[no	b) private-vlan type isolated Enables or disables the VLAN type as an isolated VLAN. The isolated VLAN carries unidirectional traffic from host ports. A Private VLAN may have only one isolated VLAN.
	Command mode: VLAN
no	private-vlan type Clears the private-VLAN type. Command mode: VLAN
[nc	 private-vlan map [add remove] <secondary list="" vlan=""></secondary> Configures Private VLAN mapping between a primary VLAN and secondary VLANs. Enter the primary VLAN ID. Secondary VLANs have the type defined as isolated or community. Use the no form to remove the mapping between the secondary VLAN and the primary VLAN Command mode: VLAN
pri	ivate-vlan enable Enables the private VLAN. Command mode: VLAN
no	private-vlan enable Disables the Private VLAN. Command mode: VLAN
sho	ow private-vlan [<2-4094>] Displays current parameters for the selected Private VLAN(s). Command mode: VLAN

Layer 3 Configuration

The following table describes basic Layer 3 Configuration commands. The following sections provide more detailed information and commands.

Table 248. Layer 3 Configuration Commands

Command Syntax and Usage	
nterface ip < <i>interface number</i> > Configures the IP Interface. The CN4093 supports up to 128 IP interfaces. view command options, see page 362. Command mode: Global configuration	ō
<pre>route-map {<1-32>} Enter IP Route Map mode. To view command options, see page 371. Command mode: Global configuration</pre>	
 Outer rip Configures the Routing Interface Protocol. To view command options, see page 375. Command mode: Global configuration 	
Couter ospf Configures OSPF. To view command options, see page 379. Command mode: Global configuration	
pv6 router ospf Enters OSPFv3 configuration mode. To view command options, see page 43 Command mode: Global configuration	38.
outer bgp Configures Border Gateway Protocol. To view command options, see page 389. Command mode: Global configuration	
Couter vrrp Configures Virtual Router Redundancy. To view command options, see page 421. Command mode: Global configuration	
p pim component <1-2> Enters Protocol Independent Multicast (PIM) component configuration mod To view command options, see page 434. Command mode: Global configuration	e.

Table 248. Layer 3 Configuration Commands

Command Syntax and Usage	
ip router-id	
Sets the router ID.	
Command mode: Global configuration	
show layer3	
Displays the current IP configuration.	
Command mode: All	

IP Interface Configuration

The CN4093 supports up to 128 IP interfaces. Each IP interface represents the CN4093 on an IP subnet on your network. The Interface option is disabled by default.

IP Interface 127 and 128 are reserved for switch management. If the IPv6 feature is enabled on the switch, IP Interface 125 and 126 are also reserved.

Note: To maintain connectivity between the management module and the CN4093, use the management module interface to change the IP address of the switch.

Table 249.	IP Interface	Configuration Commands
------------	--------------	------------------------

Command Syntax and Llagga		
Command Syntax and Usage		
<pre>interface ip <interface number=""></interface></pre>		
Enter IP interface mode.		
Command mode: Global configuration		
ip address <ip address=""> [<ip netmask="">]</ip></ip>		
Configures the IP address of the switch interface, using dotted decimal notation.		
Command mode: Interface IP		
ip netmask < <i>IP netmask</i> >		
Configures the IP subnet address mask for the interface, using dotted decimal notation.		
Command mode: Interface IP		
<pre>ipv6 address <ip (such="" 3001:0:0:0:0:0:abcd:12)="" address="" as=""> [<ip6 (1-128)="" length="" prefix="">] [enable anycast]</ip6></ip></pre>		
Configures the IPv6 address of the switch interface, using hexadecimal format with colons.		
Command mode: Interface IP		
<pre>ipv6 secaddr6 address <ip (such="" 3001:0:0:0:0:0:0:abcd:12)="" address="" as=""> <pre></pre></ip></pre>		
Configures the secondary IPv6 address of the switch interface, using hexadecimal format with colons.		
Command mode: Interface IP		
ipv6 prefixlen <ipv6 (1-128)="" length="" prefix=""></ipv6>		
Configures the subnet IPv6 prefix length. The default value is 0 (zero).		
Command mode: Interface IP		
vlan <vlan number=""></vlan>		
Configures the VLAN number for this interface. Each interface can belong to one VLAN.		
Command mode: Interface IP		

Table 249. IP Interface Configuration Commands (continued)

Cor	nmand Syntax and Usage	
	· ·	
[no] relay Enables or disables the BOOTP relay on this interface. The default setting is enabled. Command mode: Interface IP	
[nc	D] ip6host Enables or disables the IPv6 Host Mode on this interface. The default setting is disabled for data interfaces, and enabled for the management interface. Command mode: Interface IP	
[nc	D] ipv6 unreachables Enables or disables sending of ICMP Unreachable messages. The default setting is enabled. Command mode: Interface IP	
enable		
	Enables this IP interface.	
Command mode: Interface IP		
no	enable Disables this IP interface. Command mode: Interface IP	
no	<pre>interface ip <interface number=""></interface></pre>	
	Removes this IP interface.	
	Command mode: Interface IP	
shc	ow interface ip <i><interface number=""></interface></i>	
	Displays the current interface settings.	
	Command mode: All	

Default Gateway Configuration

The switch can be configured with up to 4 IPv4 gateways. Gateways 1–4 are reserved for default gateways. Gateway 4 is reserved for switch management. Default gateway indices are:

- 1-2: Data gateways
- 3: External management gateway
- 4: Internal management gateway

This option is disabled by default.

Table 250. Default Gateway Configuration Commands

Со	nmand Syntax and Usage
ip	gateway <1-4> address <ip address=""> Configures the IP address of the default IP gateway using dotted decimal notation. Default gateway indices are: Command mode: Global configuration</ip>
ip	gateway <1-4> interval <0-60> The switch pings the default gateway to verify that it's up. This command sets the time between health checks. The range is from 0 to 60 seconds. The default is 2 seconds. Command mode: Global configuration
ip	gateway <1-4> retry <1-120> Sets the number of failed health check attempts required before declaring this default gateway inoperative. The range is from 1 to 120 attempts. The default is 8 attempts. Command mode: Global configuration
[no] ip gateway <1-4> arp-health-check Enables or disables Address Resolution Protocol (ARP) health checks. The default setting is disabled. The arp option does not apply to management gateways. Command mode: Global configuration
ip	gateway <1-4> enable Enables the gateway for use. Command mode: Global configuration
no	ip gateway <1-4> enable Disables the gateway. Command mode: Global configuration

Table 250. Default Gateway Configuration Commands (continued)

Command Syntax and Usage

no ip gateway <1-4>

Deletes the gateway from the configuration.

Command mode: Global configuration

```
show ip gateway <1-4>
```

Displays the current gateway settings.

Command mode: All

IPv4 Static Route Configuration

Up to 128 IPv4 static routes can be configured.

Table 251. IPv4 Static Route Configuration Commands

-			
Co	mmand Syntax and Usage		
ip	route <i><ip subnet=""> <ip netmask=""> <ip nexthop=""></ip></ip></ip></i> [<i><interface number=""></interface></i>] Adds a static route. You will be prompted to enter a destination IP address, destination subnet mask, and gateway address. Enter all addresses using dotted decimal notation.		
	Command mode: Global configuration		
no	<pre>ip route <ip subnet=""> <ip netmask=""> [<interface number="">] Removes a static route. The destination address of the route to remove must be specified using dotted decimal notation. Command mode: Global configuration</interface></ip></ip></pre>		
no	<pre>ip route destination-address <ip address=""> Clears all IP static routes with this destination. Command mode: Global configuration</ip></pre>		
no	<pre>ip route gateway <ip address=""> Clears all IP static routes that use this gateway. Command mode: Global configuration</ip></pre>		
ip	route interval <1-60> Configures the ping interval for ECMP health checks, in seconds. The default value is one second. Command mode: Global configuration		
ip	route retries <1-60> Configures the number of health check retries allowed before the switch declares that the gateway is down. The default value is 3. Command mode: Global configuration		
sh	ow ip route static Displays the current IP static routes. Command mode: All		

IP Multicast Route Configuration

The following table describes the IP Multicast (IPMC) route commands.

Note: Before you can add an IPMC route, IGMP must be turned on and IGMP Relay/Snooping must be enabled.

Table 252. IP Multicast Route Configuration Commands

Command Syntax and Usage ip mroute <ipmc destination=""> <vlan number=""> <port alias="" number="" or=""> {primary backup host} Adds a static multicast route. The destination address, VLAN, and member port of the route must be specified. Indicate whether the route is used for a primary, backup, or host multicast router. Command mode: Global configuration no ip mroute <ipmc destination=""> <vlan number=""> <port alias="" number="" or=""> {primary backup host} [<virtual id="" router=""> none] Removes a static multicast route. The destination address, VLAN, and member port of the route to remove must be specified. Command mode: Global configuration ip mroute <ip address=""> <vlan number=""> portchannel <trunk group="" number=""> {primary backup host} [<virtual id="" router=""> none] Adds a static multicast route. The destination address, VLAN, and member funk group of the route must be specified. Command mode: Global configuration ip mroute <ip address=""> <vlan number=""> portchannel <trunk group="" number=""> {primary backup host} [<virtual id="" router=""> none] Adds a static multicast route. The destination address, VLAN, and member trunk group number> {primary backup host} [<virtual id="" router=""> none] Removes a static multicast route. The destination address, VLAN, and member trunk group number> {primary backup host} [<virtual id="" router=""> none] Removes a static multicast route. The destination address, VLAN, and member trunk group of the route to remove must be specified. Command mode:</virtual></virtual></virtual></trunk></vlan></ip></virtual></trunk></vlan></ip></virtual></port></vlan></ipmc></port></vlan></ipmc>		
<pre>{primary backup host} [<virtual id="" router=""> none] Adds a static multicast route. The destination address, VLAN, and member port of the route must be specified. Indicate whether the route is used for a primary, backup, or host multicast router. Command mode: Global configuration no ip mroute <ipmc destination=""> <vlan number=""> <port alias="" number="" or=""> {primary backup host} [<virtual id="" router=""> none] Removes a static multicast route. The destination address, VLAN, and member port of the route to remove must be specified. Command mode: Global configuration ip mroute <ip address=""> <vlan number=""> portchannel <trunk group="" number=""> {primary backup host} [<virtual id="" router=""> none] Adds a static multicast route. The destination address, VLAN, and member port of the route to remove must be specified. Command mode: Global configuration ip mroute <ip address=""> <vlan number=""> portchannel <trunk group="" number=""> {primary backup host} [<virtual id="" router=""> none] Adds a static multicast route. The destination address, VLAN, and member trunk group of the route must be specified. Indicate whether the route is used for a primary, backup, or host multicast router. Command mode: Global configuration no ip mroute <ip address=""> <vlan number=""> portchannel <trutk group="" number=""> {primary backup host} [<virtual id="" router=""> none] Removes a static multicast route. The destination address, VLAN, and member trunk group of the route to remove must be specified. Command mode: Global configuration ip mroute <ip address=""> <vlan number=""> adminkey <1-65535> {primary backup host} [<virtual id="" router=""> none] Adds a static multicast route. The destination address, VLAN, and LACP admin key of the route must be specified. Indicate whether the route is used for a primary backup, host be specified. Indicate whether the route is used for a primary backup, host be specified. Indicate whether the route is used for a primary backup, host be specified. Table 252. IP Multicast Route Configuration Commands (continued)

Command Syntax and Usage

no ip mroute all

Removes all the static multicast routes configured.

Command mode: Global configuration

show ip mroute

Displays the current IP multicast routes.

Command mode: All

ARP Configuration

Address Resolution Protocol (ARP) is the TCP/IP protocol that resides within the Internet layer. ARP resolves a physical address from an IP address. ARP queries machines on the local network for their physical addresses. ARP also maintains IP to physical address pairs in its cache memory. In any IP communication, the ARP cache is consulted to see if the IP address of the computer or the router is present in the ARP cache. Then the corresponding physical address is used to send a packet.

Table 253. ARP Configuration Commands

Command	Syntax	and Usage
---------	--------	-----------

ip arp rearp <2-120>

Defines re-ARP period, in minutes, for entries in the switch arp table. When ARP entries reach this value the switch will re-ARP for the address to attempt to refresh the ARP cache. The default value is 5 minutes.

Command mode: Global configuration

show ip arp

Displays the current ARP configurations.

Command mode: All

ARP Static Configuration

Static ARP entries are permanent in the ARP cache and do not age out like the ARP entries that are learned dynamically. Static ARP entries enable the switch to reach the hosts without sending an ARP broadcast request to the network. Static ARPs are also useful to communicate with devices that do not respond to ARP requests. Static ARPs can also be configured on some gateways as a protection against malicious ARP Cache corruption and possible DOS attacks.

Table 254. ARP Static Configuration Commands

Command Syntax and Usage	
<pre>ip arp <ip address=""> <mac address=""> vlan <vlan number=""> port <port alias="" number="" or=""></port></vlan></mac></ip></pre>	
Adds a permanent ARP entry.	
Command mode: Global configuration	
<pre>ip arp <destination address="" ip="" unicast=""> <destination <cluster="" a="" mac="" multicast="" number="" vlan=""></destination></destination></pre>	ddress>
Adds a static multicast ARP entry for Network Load Balancing (N	NLB).
Command mode: Global configuration	
no ip arp <i><ip address=""></ip></i>	
Deletes a permanent ARP entry.	
Command mode: Global configuration	
no ip arp all	
Deletes all static ARP entries.	
Command mode: Global configuration	
show ip arp static	
Displays current static ARP configuration.	
Command mode: All	

IP Forwarding Configuration

Table 255. IP Forwarding Configuration Commands

Cor	nmand Syntax and Usage
[no] ip routing directed-broadcasts Enables or disables forwarding directed broadcasts. The default setting is disabled.
	Command mode: Global configuration
[no] ip routing no-icmp-redirect Enables or disables ICMP re-directs. The default setting is disabled. Command mode: Global configuration
[no] ip routing icmp6-redirect Enables or disables IPv6 ICMP re-directs. The default setting is disabled. Command mode: Global configuration
ip	routing Enables IP forwarding (routing) on the CN4093. Forwarding is turned on by default. Command mode: Global configuration
no	ip routing Disables IP forwarding (routing) on the CN4093. Command mode: Global configuration
sho	ow ip routing
	Displays the current IP forwarding settings. Command mode: All

Network Filter Configuration

Table 256. IP Network Filter Configuration Commands

Cor	nmand Syntax and Usage
ip	<pre>match-address <1-256> <ip address=""> <ip netmask=""></ip></ip></pre>
	Sets the starting IP address and IP Netmask for this filter to define the range of IP addresses that will be accepted by the peer when the filter is enabled. The default address is $0.0.0.0.0.0.0.0.0$
	For Border Gateway Protocol (BGP), assign the network filter to an access-list in a route map, then assign the route map to the peer.
	Command mode: Global configuration.
ip	match-address <1-256> enable
	Enables the Network Filter configuration.
	Command mode: Global configuration
no	ip match-address <1-256> enable
	Disables the Network Filter configuration.
	Command mode: Global configuration
no	ip match-address <1-256>
	Deletes the Network Filter configuration.
Command mode: Global configuration	
sho	ow ip match-address [<1-256>]
	Displays the current the Network Filter configuration.
	Command mode: All

Routing Map Configuration

Note: The *map number* (1-32) represents the routing map you wish to configure.

Routing maps control and modify routing information.

Table 257. Routing Map Configuration Commands

Command Syntax and Usage
· · ·
route-map <1-32>
Enter route map configuration mode.
Command mode: Route map
[no] access-list <1-8>
Configures the Access List. For more information, see page 373.
Command mode: Route map
[no] as-path-list <1-8>
Configures the Autonomous System (AS) Filter. For more information, see page 374.
Command mode: Route map
[no] as-path-preference <1-65535>
Sets the AS path preference of the matched route. You can configure up to three path preferences.
Command mode: Route map
[no] local-preference <0-4294967294>
Sets the local preference of the matched route, which affects both inbound and outbound directions. The path with the higher preference is preferred.
Command mode: Route map
[no] metric <1-4294967294>
Sets the metric of the matched route.
Command mode: Route map
[no] metric-type {1 2}
Assigns the type of OSPF metric. The default is type 1.
 Type 1—External routes are calculated using both internal and external metrics.
 Type 2—External routes are calculated using only the external metrics. Type 1 routes have more cost than Type 2.
 none—Removes the OSPF metric.
Command mode: Route map
precedence <1-255>
Sets the precedence of the route map. The smaller the value, the higher the precedence. Default value is 10. Command mode: Route map

Cor	nmand Syntax and Usage
[no] weight <0-65534>
	Sets the weight of the route map.
	Command mode: Route map
ena	able
	Enables the route map.
	Command mode: Route map
no	enable
	Disables the route map.
	Command mode: Route map
no	route-map <1-32>
	Deletes the route map.
	Command mode: Route map
sho	ow route-map [<1-32>]
	Displays the current route configuration.
	Command mode: All

Table 257. Routing Map Configuration Commands (continued)

IP Access List Configuration

Note: The *route map number* (1-32) and the *access list number* (1-8) represent the IP access list you wish to configure.

Table 258. IP Access List Configuration Commands

ino] access-list <1-8> match-address <1-256>
[0	Sets the network filter number. See "Network Filter Configuration" on page 370 for details.
	Command mode: Route map
[no] access-list <1-8> metric <1-4294967294>
	Sets the metric value in the AS-External (ASE) LSA.
	Command mode: Route map
aco	cess-list <1-8> action {permit deny}
	Permits or denies action for the access list.
	Command mode: Route map
aco	cess-list <1-8> enable
	Enables the access list.
	Command mode: Route map
no	access-list <1-8> enable
no	
no	access-list <1-8> enable
	access-list <1-8> enable Disables the access list.
	access-list <1-8> enable Disables the access list. Command mode: Route map
	access-list <1-8> enable Disables the access list. Command mode: Route map access-list <1-8>
no	access-list <1-8> enable Disables the access list. Command mode: Route map access-list <1-8> Deletes the access list.
no	access-list <1-8> enable Disables the access list. Command mode: Route map access-list <1-8> Deletes the access list. Command mode: Route map

Autonomous System Filter Path Configuration

Note: The *rmap number* and the *path number* represent the AS path you wish to configure.

Table 259. AS Filter Configuration Commands

Cor	nmand Syntax and Usage
as-	-path-list <1-8> as-path <1-65535>
	Sets the Autonomous System filter's path number.
	Command mode: Route map
as-	path-list <1-8> action {permit deny}
	Permits or denies Autonomous System filter action.
	Command mode: Route map
as-	path-list <1-8> enable
	Enables the Autonomous System filter.
	Command mode: Route map
no	as-path-list <1-8> enable
	Disables the Autonomous System filter.
	Command mode: Route map
no	as-path-list <1-8>
	Deletes the Autonomous System filter.
	Command mode: Route map
sho	ow route-map <1-32> as-path-list <1-8>
	Displays the current Autonomous System filter configuration.
	Command mode: All

Routing Information Protocol Configuration

RIP commands are used for configuring Routing Information Protocol parameters. This option is turned off by default.

Table 260. Routing Information Protocol Commands

ro	uter rip
	Enter Router RIP configuration mode.
	Command mode: Global Configuration
ti	mers update <1-120>
	Configures the time interval for sending for RIP table updates, in seconds. The default value is 30 seconds.
	Command mode: Router RIP
ena	able
	Globally turns RIP on.
	Command mode: Router RIP
no	enable
	Globally turns RIP off.
	Command mode: Router RIP
sh	ow ip rip
	Displays the current RIP configuration.
	Command mode: All

Routing Information Protocol Interface Configuration

The RIP Interface commands are used for configuring Routing Information Protocol parameters for the selected interface.

Note: Do not configure RIP version 1 parameters if your routing equipment uses RIP version 2.

Table 261. RIP Interface Commands

Command Syntax and Usage			
<pre>ip rip version {1 2 both} Configures the RIP version used by this interface. The default value is versior 2. Command mode: Interface IP</pre>	۱		
[no] ip rip supplyWhen enabled, the switch supplies routes to other routers. The default value is enabled.	\$		
Command mode: Interface IP			
<pre>[no] ip rip listen When enabled, the switch learns routes from other routers. The default value is enabled. Command mode: Interface IP</pre>	~		
[no] ip rip poison			
When enabled, the switch uses split horizon with poisoned reverse. When disabled, the switch uses only split horizon. The default value is disabled. Command mode: Interface IP			
[no] ip rip split-horizon			
Enables or disables split horizon. The default value is enabled.			
Command mode: Interface IP			
[no] ip rip triggered Enables or disables Triggered Updates. Triggered Updates are used to speed convergence. When enabled, Triggered Updates force a router to send update messages immediately, even if it is not yet time for the update message. The default value is enabled. Command mode: Interface IP	÷		
[no] ip rip multicast-updates			
Enables or disables multicast updates of the routing table (using address 224.0.0.9). The default value is enabled.			
Command mode: Interface IP			
[no] ip rip default-action {listen supply both} When enabled, the switch accepts RIP default routes from other routers, but gives them lower priority than configured default gateways. When disabled, the switch rejects RIP default routes. The default value is none. Command mode: Interface IP	÷		

Table 261. RIP Interface Commands (continued)

Coi	nmand Syntax and Usage
[no] ip rip metric [<1-15>]
	Configures the route metric, which indicates the relative distance to the destination. The default value is 1.
	Command mode: Interface IP
[no] ip rip authentication type [<pre>password>]</pre>
	Configures the authentication type. The default is none.
	Command mode: Interface IP
[nd	o] ip rip authentication key < <i>password</i> >
	Configures the authentication key password.
	Command mode: Interface IP
ip	rip enable
	Enables this RIP interface.
	Command mode: Interface IP
no	ip rip enable
	Disables this RIP interface.
	Command mode: Interface IP
sho	<pre>ow interface ip <interface number=""> rip</interface></pre>
	Displays the current RIP configuration.
	Command mode: All

RIP Route Redistribution Configuration

The following table describes the RIP Route Redistribution commands.

```
Table 262. RIP Redistribution Commands
```

Command Syntax and Usage			
redistribute {fixed static ospf eospf ebgp ibgp} <1-32>			
Adds selected routing maps to the RIP route redistribution list. To add specific route maps, enter routing map numbers, separated by a comma (,). To add all 32 route maps, type all.			
The routes of the redistribution protocol matched by the route maps in the route redistribution list will be redistributed.			
Command mode: Router RIP			
no redistribute {fixed static ospf eospf ebgp ibgp} <1-32>			
Removes the route map from the RIP route redistribution list.			
To remove specific route maps, enter routing map numbers, separated by a comma (,). To remove all 32 route maps, type all.			
Command mode: Router RIP			
redistribute {fixed static ospf eospf ebgp ibgp} export <1-15>			
Exports the routes of this protocol in which the metric and metric type are specified. To remove a previous configuration and stop exporting the routes of the protocol, enter none.			
Command mode: Router RIP			
show ip rip redistribute			
Displays the current RIP route redistribute configuration.			
Command mode: All			

Open Shortest Path First Configuration

Table 263.	OSPF Configuration	Commands
------------	---------------------------	----------

roı	iter ospf
	Enter Router OSPF configuration mode.
	Command mode: Global configuration
are	ea-range <1-16>
	Configures summary routes for up to 16 IP addresses. See page 383 to view command options.
	Command mode: Router OSPF
ip	ospf <interface number=""></interface>
	Configures the OSPF interface. See page 384 to view command options.
	Command mode: Interface IP
are	ea-virtual-link <1-3>
	Configures the Virtual Links used to configure OSPF for a Virtual Link. See page 386 to view command options.
	Command mode: Router OSPF
mes	ssage-digest-key <1-255> md5-key <text string=""></text>
	Assigns a string to MD5 authentication key.
	Command mode: Router OSPF
hos	st <1-128>
	Configures OSPF for the host routes. Up to 128 host routes can be configured. Host routes are used for advertising network device IP addresses to external networks to perform server load balancing within OSPF. It also makes Area Border Route (ABR) load sharing and ABR failover possible.
	See page 387 to view command options.
	Command mode: Router OSPF
lsc	Ab-limit <lsdb (0-2048,="" 0="" for="" limit="" limit)="" no=""></lsdb>
	Sets the link state database limit.
	Command mode: Router OSPF
[nc	<pre>o] default-information <1-16777214> {<as (1-2)="" external="" metric="" type="">}</as></pre>
	Sets one default route among multiple choices in an area. Use none for no default.
	Command mode: Router OSPF
ena	able
	Enables OSPF on the CN4093.

Table 263. OSPF Configuration Commands (continued)

Command Syntax and Usage

no enable

Disables OSPF on the CN4093.

Command mode: Router OSPF

show ip ospf

Displays the current OSPF configuration settings.

Command mode: All

Area Index Configuration

Table 264. Area Index Configuration Commands

Command Syntax and Usage		
area <0-2> area-id <ip address=""></ip>		
Defines the IP address of the OSPF area number.		
Command mode: Router OSPF		
area <0-2> type {transit stub nssa}		
Defines the type of area. For example, when a virtual link has to be establishe with the backbone, the area type must be defined as transit.	d	
Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.	Э	
Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.		
NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas.		
Command mode: Router OSPF		
area <0-2> stub-metric <1-65535>		
Configures a stub area to send a numeric metric value. All routes received vi that stub area carry the configured metric to potentially influencing routing decisions.	а	
Metric value assigns the priority for choosing the switch for default route. Metr type determines the method for influencing routing decisions for external routes.	ic	
Command mode: Router OSPF		
[no] area <0-2> authentication-type {password md5}		
None: No authentication required.		
Password: Authenticates simple passwords so that only trusted routing devices can participate.		
MD5: This parameter is used when MD5 cryptographic authentication is required.		
Command mode: Router OSPF		
area <0-2> spf-interval <1-255>		
Configures the minimum time interval, in seconds, between two successive SPF (shortest path first) calculations of the shortest path tree using the Dijkstra's algorithm. The default value is 10 seconds.		
Command mode: Router OSPF		
area <0-2> enable		
Enables the OSPF area.		
Command mode: Router OSPF		

Table 264. Area Index Configuration Commands (continued)

Cor	Command Syntax and Usage	
no	area <0-2> enable	
	Disables the OSPF area.	
	Command mode: Router OSPF	
no	area <0-2>	
	Deletes the OSPF area.	
	Command mode: Router OSPF	
sho	ow ip ospf area <0-2>	
	Displays the current OSPF configuration.	
	Command mode: All	

OSPF Summary Range Configuration

Table 265. OSPF Summary Range Configuration Commands

Со	nmand Syntax and Usage
are	ea-range <1-16> address <1P address> <1P netmask> Displays the base IP address or the IP address mask for the range. Command mode: Router OSPF
are	ea-range <i><1-16></i> area <i><0-2></i> Displays the area index used by the CN4093. Command mode: Router OSPF
[no] area-range <1-16> hide Hides the OSPF summary range. Command mode: Router OSPF
are	ea-range <i><1-16></i> enable Enables the OSPF summary range. Command mode: Router OSPF
no	area-range <1-16> enable Disables the OSPF summary range. Command mode: Router OSPF
no	area-range <1-16> Deletes the OSPF summary range. Command mode: Router OSPF
sho	ow ip ospf area-range <1-16> Displays the current OSPF summary range. Command mode: Router OSPF

OSPF Interface Configuration

Table 266. OSPF Interface Configuration Commands

Cor	nmand Syntax and Usage
ip	ospf area <0-2>
	Configures the OSPF area index.
	Command mode: Interface IP
ip	ospf priority <0-255>
	Configures the priority value for the CN4093's OSPF interfaces.
	A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the interface cannot be used as Designated Router (DR) or Backup Designated Router (BDR).
	Command mode: Interface IP
ip	ospf cost <1-65535>
	Configures cost set for the selected path—preferred or backup. Usually the cost is inversely proportional to the bandwidth of the interface. Low cost indicates high bandwidth.
	Command mode: Interface IP
	ospf hello-interval <1-65535> ospf hello-interval <50-65535ms>
	Configures the interval, in seconds or milliseconds, between the hello packets for the interfaces.
	Command mode: Interface IP
	ospf dead-interval <1-65535> ospf dead-interval <1000-65535ms>
	Configures the health parameters of a hello packet, in seconds or milliseconds, before declaring a silent router to be down.
	Command mode: Interface IP
ip	ospf transit-delay <1-3600>
	Configures the transit delay in seconds.
	Command mode: Interface IP
ip	ospf retransmit-interval <1-3600>
	Configures the retransmit interval in seconds.
	Command mode: Interface IP
[no	ip ospf key <key string=""></key>
	Sets the authentication key to clear the password.
	Command mode: Interface IP
[no	ip ospf message-digest-key <1-255>
	Assigns an MD5 key to the interface.

Table 266.	OSPF Interface	Configuration Commands	(continued)
------------	----------------	------------------------	-------------

Co	mmand Syntax and Usage			
[no	[no] ip ospf passive-interface			
	Sets the interface as passive. On a passive interface, you can disable OSPF protocol exchanges, but the router advertises the interface in its LSAs so that IP connectivity to the attached network segment will be established.			
	Command mode: Interface IP			
[no	o] ip ospf point-to-point Sets the interface as point-to-point. Command mode: Interface IP			
ip	ospf enable Enables OSPF interface. Command mode: Interface IP			
no	ip ospf enable Disables OSPF interface. Command mode: Interface IP			
no	ip ospf Deletes the OSPF interface. Command mode: Interface IP			
Sho	ow interface ip <i><interface number=""></interface></i> ospf Displays the current settings for OSPF interface. Command mode: All			

OSPF Virtual Link Configuration

Table 267. OSPF Virtual Link Configuration Commands

Command Syntax and Usage
area-virtual-link <1-3> area <0-2> Configures the OSPF area index for the virtual link. Command mode: Router OSPF
<pre>area-virtual-link <1-3> hello-interval <1-65535> area-virtual-link <1-3> hello-interval <50-65535ms> Configures the authentication parameters of a hello packet, in seconds or milliseconds. The default value is 10 seconds. Command mode: Router OSPF</pre>
area-virtual-link <1-3> dead-interval <1-65535> area-virtual-link <1-3> dead-interval <1000-65535ms> Configures the health parameters of a hello packet, in seconds or milliseconds. The default value is 40 seconds. Command mode: Router OSPF
area-virtual-link <1-3> transit-delay <1-3600> Configures the delay in transit, in seconds. The default value is one second. Command mode: Router OSPF
<pre>area-virtual-link <1-3> retransmit-interval <1-3600> Configures the retransmit interval, in seconds. The default value is five seconds. Command mode: Router OSPF</pre>
area-virtual-link <1-3> neighbor-router <ip address=""> Configures the router ID of the virtual neighbor. The default value is 0.0.0.0. Command mode: Router OSPF</ip>
<pre>[no] area-virtual-link <1-3> key <password> Configures the password (up to eight characters) for each virtual link. The default setting is none. Command mode: Router OSPF</password></pre>
area-virtual-link <1-3> message-digest-key <1-255> Sets MD5 key ID for each virtual link. The default setting is none. Command mode: Router OSPF
area-virtual-link <1-3> enable Enables OSPF virtual link. Command mode: Router OSPF

Table 267. OSPF Virtual Link Configuration Commands (continued)

no	area-virtual-link <1-3> enable
	Disables OSPF virtual link.
	Command mode: Router OSPF
no	area-virtual-link <1-3>
	Deletes OSPF virtual link.
	Command mode: Router OSPF
sho	ow ip ospf area-virtual-link <1-3>
	Displays the current OSPF virtual link settings.
	Command mode: All

OSPF Host Entry Configuration

Table 268. OSPF Host Entry Configuration Commands

Command Syntax and Usage
host <1-128> address <ip address=""></ip>
Configures the base IP address for the host entry.
-
Command mode: Router OSPF
host <1-128> area <0-2>
Configures the area index of the host.
Command mode: Router OSPF
host <1-128> cost <1-65535>
Configures the cost value of the host.
Command mode: Router OSPF
host <1-128> enable
Enables OSPF host entry.
Command mode: Router OSPF
no host <1-128> enable
Disables OSPF host entry.
Command mode: Router OSPF
no host <1-128>
Deletes OSPF host entry.
Command mode: Router OSPF
show ip ospf host <1-128>
Displays the current OSPF host entries.
Command mode: All

OSPF Route Redistribution Configuration.

Table 269. OSPF Route Redistribution Configuration Commands

Co	nmand Syntax and Usage	
redistribute {fixed static rip ebgp ibgp} <rmap (1-32)="" id=""></rmap>		
	Adds selected routing map to the rmap list.	
	This option adds a route map to the route redistribution list. The routes of the redistribution protocol matched by the route maps in the route redistribution list will be redistributed.	
	Command mode: Router OSPF	
no	<pre>redistribute {fixed static rip ebgp ibgp} <rmap (1-32)="" id=""></rmap></pre>	
	Removes the route map from the route redistribution list.	
	Removes routing maps from the rmap list.	
	Command mode: Router OSPF	
[nc] redistribute {fixed static rip ebgp ibgp} export metric	
	Exports the routes of this protocol as external OSPF AS-external LSAs in which the metric and metric type are specified. To remove a previous configuration and stop exporting the routes of the protocol, enter none.	
	Command mode: Router OSPF	
sh	ow ip ospf redistribute	
	Displays the current route map settings.	
	Command mode: All	

OSPF MD5 Key Configuration

Table 270. OSPF MD5 Key Commands

Command Syntax and Usage		
message-digest-key <1-255> md5-key <1-16 characters> Sets the authentication key for this OSPF packet. Command mode: Router OSPF		
no message-digest-key <1-255> Deletes the authentication key for this OSPF packet. Command mode: Router OSPF		
show ip ospf message-digest-key <1-255> Displays the current MD5 key configuration. Command mode: All		

Border Gateway Protocol Configuration

Border Gateway Protocol (BGP) is an Internet protocol that enables routers on a network to share routing information with each other and advertise information about the segments of the IP address space they can access within their network with routers on external networks. BGP allows you to decide what is the "best" route for a packet to take from your network to a destination on another network, rather than simply setting a default route from your border router(s) to your upstream provider(s). You can configure BGP either within an autonomous system or between different autonomous systems. When run within an autonomous systems, it's called internal BGP (iBGP). When run between different autonomous systems, it's called external BGP (eBGP). BGP is defined in RFC 1771.

BGP commands enable you to configure the switch to receive routes and to advertise static routes, fixed routes and virtual server IP addresses with other internal and external routers. In the current IBM Networking OS implementation, the CN4093 10Gb Converged Scalable Switch does not advertise BGP routes that are learned from one iBGP *speaker* to another iBGP *speaker*.

BGP is turned off by default.

Note: Fixed routes are subnet routes. There is one fixed route per IP interface.

Table 271. Border Gateway Protocol Commands

Command Syntax and Usage			
router bgp			
Enter Router BGP configuration mode.			
Command mode: Global configuration			
neighbor <1-12>			
Configures each BGP <i>peer</i> . Each border router, within an autonomous system, exchanges routing information with routers on other external networks.			
To view command options, see page 391.			
Command mode: Router BGP			
as <0-65535>			
Set Autonomous System number.			
Command mode: Router BGP			
[no] asn4comp			
Enables or disables ASN4 to ASN2 compatibility.			
Command mode: Router BGP			
cluster-id <ip address=""></ip>			
Specifies the router's Cluster ID used when operating as a route reflector. Route reflectors that are part of the same cluster (assigned to the same group of clients) must use identical Cluster IDs.			
Command mode: Router BGP			
no cluster-id			
Removes the router's Cluster ID.			
Command mode: Router BGP			

Table 271. Border Gateway Protocol Commands (continued)

route reflector. The default state is enabled. Command mode: Router BGP local-preference <0-4294967294> Sets the local preference. The path with the higher value is preferred. When multiple peers advertise the same route, use the route with the shorter AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP. Command mode: Router BGP enable Globally turns BGP on. Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp	[no] client-to-client reflection
<pre>local-preference <0-4294967294> Sets the local preference. The path with the higher value is preferred. When multiple peers advertise the same route, use the route with the shorter AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP. Command mode: Router BGP enable Globally turns BGP on. Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp</pre>		Enables or disables client-to-client IBGP route reflection when operating as a route reflector. The default state is enabled.
Sets the local preference. The path with the higher value is preferred. When multiple peers advertise the same route, use the route with the shorter AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP. Command mode: Router BGP enable Globally turns BGP on. Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp		Command mode: Router BGP
When multiple peers advertise the same route, use the route with the shorter AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP. Command mode: Router BGP enable Globally turns BGP on. Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp	loc	al-preference <0-4294967294>
AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP. Command mode: Router BGP enable Globally turns BGP on. Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp		Sets the local preference. The path with the higher value is preferred.
enable Globally turns BGP on. Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp		
Globally turns BGP on. Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp		Command mode: Router BGP
Command mode: Router BGP no enable Globally turns BGP off. Command mode: Router BGP show ip bgp	ena	ble
no enable Globally turns BGP off. Command mode: Router BGP show ip bgp		Globally turns BGP on.
Globally turns BGP off. Command mode: Router BGP show ip bgp		Command mode: Router BGP
Command mode: Router BGP	no	enable
show ip bgp		Globally turns BGP off.
		Command mode: Router BGP
Displays the current BGP configuration.	shc	w ip bgp
		Displays the current BGP configuration.

BGP Peer Configuration

These commands are used to configure BGP peers, which are border routers that exchange routing information with routers on internal and external networks. The peer option is disabled by default.

Table 272. BGP Peer Configuration Commands

Command Syntax and Usage	
neighbor <1-12> remote-address <1P address>	
Defines the IP address for the specified peer (border router), using dotted decimal notation. The default address is 0.0.0.0.	
Command mode: Router BGP	
neighbor <1-12> remote-as <1-65535>	
Sets the remote autonomous system number for the specified peer.	
Command mode: Router BGP	
[no] neighbor <1-12> route-reflector-client	
Enables or disables the peer as a route reflector client. Configuring route reflector clients, implicitly sets up the local router as a route reflector.	
Command mode: Router BGP	
neighbor <1-12> update-source { <interface number=""> loopback <1-5>}</interface>	
Sets the source interface number for this peer.	
Command mode: Router BGP	
neighbor <1-12> timers hold-time <0,3-65535>	
Sets the period of time, in seconds, that will elapse before the peer session is torn down because the switch hasn't received a "keep alive" message from the peer. The default value is 180 seconds.	
Command mode: Router BGP	
neighbor <1-12> timers keep-alive <0,1-21845>	
Sets the keep-alive time for the specified peer, in seconds. The default value is 60 seconds.	6
Command mode: Router BGP	
neighbor <1-12> advertisement-interval <1-65535>	
Sets time, in seconds, between advertisements. The default value is 60 seconds.	
Command mode: Router BGP	
neighbor <1-12> retry-interval <1-65535>	
Sets connection retry interval, in seconds. The default value is 120 seconds.	
Command mode: Router BGP	
neighbor <1-12> route-origination-interval <1-65535>	
Sets the minimum time between route originations, in seconds. The default value is 15 seconds.	
Command mode: Router BGP	

Table 272. BGP Peer Configuration Commands (continued)

Tabl	e 272. BGF Feel Configuration Confinantis (continueu)
Cor	nmand Syntax and Usage
	Initial Syntax and UsageIghbor <1-12> time-to-live <1-255>Time-to-live (TTL) is a value in an IP packet that tells a network router whether or not the packet has been in the network too long and should be discarded.TTL specifies a certain time span in seconds that, when exhausted, would cause the packet to be discarded. The TTL is determined by the number of router hops the packet is allowed before it must be discarded.This command specifies the number of router hops that the IP packet can make. This value is used to restrict the number of "hops" the advertisement makes. It is also used to support multi-hops, which allow BGP peers to talk across a routed network. The default number is set at 1.Note: The TTL value is significant only to eBGP peers, for iBGP peers the TTL
	value in the IP packets is always 255 (regardless of the configured value). Command mode: Router BGP
nei	Ighbor <1-12> route-map in <1-32> Adds route map into in-route map list. Command mode: Router BGP
nei	Ighbor <1-12> route-map out <1-32> Adds route map into out-route map list. Command mode: Router BGP
no	neighbor <1-12> route-map in <1-32> Removes route map from in-route map list. Command mode: Router BGP
no	neighbor <1-12> route-map out <1-32> Removes route map from out-route map list. Command mode: Router BGP
no	neighbor <1-12> shutdown Enables this peer configuration. Command mode: Router BGP
nei	Ighbor <i><1-12></i> shutdown Disables this peer configuration. Command mode: Router BGP
no	neighbor <1-12> Deletes this peer configuration. Command mode: Router BGP

Table 272. BGP Peer Configuration Commands (continued)

Command Syntax and Usage [no] neighbor <1-12> password <1-16 characters> Configures the BGP peer password. Command mode: Router BGP show ip bgp neighbor [<1-12>] Displays the current BGP peer configuration. Command mode: All

BGP Redistribution Configuration

Table 273. BGP Redistribution Configuration Commands

Command	Syntax and Usage
Sets d	hbor <1-12> redistribute default-metric <1-4294967294> efault metric of advertised routes.
Comm	and mode: Router BGP
{impor	hbor <1-12> redistribute default-action rt originate redistribute}
	efault route action.
	ts routes can be configured as import, originate, redistribute, or none.
None:	No routes are configured
-	t: Import these routes.
	ate: The switch sends a default route to peers if it does not have any troutes in its routing table.
learne learne since t	tribute: Default routes are either configured through default gateway o d through other protocols and redistributed to peer. If the routes are d from default gateway configuration, you have to enable static routes he routes from default gateway are static routes. Similarly, if the routes irrned from a certain routing protocol, you have to enable that protocol.
Comm	and mode: Router BGP
[no] neig	hbor <1-12> redistribute rip
Enable	es or disables advertising RIP routes.
Comm	and mode: Router BGP
[no] neig	hbor <1-12> redistribute ospf
Enable	es or disables advertising OSPF routes.
Comm	and mode: Router BGP
[no] neig	hbor <1-12> redistribute fixed
Enable	es or disables advertising fixed routes.
Comm	and mode: Router BGP
[no] neig	hbor <1-12> redistribute static
Enable	es or disables advertising static routes.
Comm	and mode: Router BGP
show ip	bgp neighbor <1-12> redistribute
Displa	ys current redistribution configuration.
Comm	nand mode: All

BGP Aggregation Configuration

These commands enable you to configure BGP aggregation to specify the routes/range of IP destinations a peer router accepts from other peers. All matched routes are aggregated to one route, to reduce the size of the routing table. By default, the first aggregation number is enabled and the rest are disabled.

Table 274. BGP Aggregation Configuration Commands

	nmand Syntax and Usage
ago	gregate-address <1-16> <ip address=""> <ip netmask=""></ip></ip>
	Defines the starting subnet IP address for this aggregation, using dotted decimal notation. The default address is 0.0.0.0.
	Command mode: Router BGP
ago	gregate-address <1-16> enable
	Enables this BGP aggregation.
	Command mode: Router BGP
no	aggregate-address <1-16> enable
	Disables this BGP aggregation.
	Command mode: Router BGP
no	aggregate-address <1-16>
	Deletes this BGP aggregation.
	Command mode: Router BGP
sho	ow ip bgp aggregate-address [<1-16>]
	Displays the current BGP aggregation configuration.
	Command mode: All

Multicast Listener Discovery Protocol Configuration

Table 275 describes the commands used to configure MLD parameters..

Table 275.	MLD Protocol	Configuration Commands	s
------------	--------------	------------------------	---

Command Syntax and Usage		
ipv6 mld		
Enter MLD global configuration mode.		
Command mode: Global configuration		
default		
Resets MLD parameters to their default values.		
Command mode: MLD Configuration		
enable		
Globally turns MLD on.		
Command mode: MLD Configuration		
no enable		
Globally turns MLD off.		
Command mode: MLD Configuration		
exit		
Exit from MLD configuration mode.		
Command mode: MLD Configuration		
show ipv6 mld		
Displays the current MLD configuration parameters.		
Command mode: All		

MLD Interface Configuration

Table 276 describes the commands used to configure MLD parameters for an interface.

Table 276. MLD Interface Configuration Commands

Command Syntax and Usage
ipv6 mld default Resets MLD parameters for the selected interface to their default values. Command mode: Interface IP
ipv6 mld dmrtr enable disable Enables or disables dynamic Mrouter learning on the interface. The default setting is disabled. Command mode: Interface IP

Table 276.	MLD Interface	Configuration	Commands	(continued)
------------	---------------	---------------	----------	-------------

Со	mmand Syntax and Usage
ipv	⁷⁶ mld enable Enables this MLD interface. Command mode: Interface IP
no	ipv6 mld enable Disables this MLD interface. Command mode: Interface IP
ipv	<pre>r6 mld llistnr <1-32> Configures the Last Listener query interval. The default value is 1 second. Command mode: Interface IP</pre>
ipv	⁷⁶ mld qintrval <2-65535> Configures the interval for MLD Query Reports. The default value is 125 seconds. Command mode: Interface IP
ipv	⁷⁶ mld qri <1000-65535> Configures the interval for MLD Query Response Reports. The default value is 10,000 milliseconds. Command mode: Interface IP
ipv	⁷⁶ mld robust <2-10> Configures the MLD Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If the subnet is expected to be lossy (high rate of packet loss), increase the value. The default value is 2. Command mode: Interface IP
ipv	T6 mld version <1-2> Defines the MLD protocol version number. Command mode: Interface IP
sho	w ipv6 mld interface <i><interface number=""></interface></i> Displays the current MLD interface configuration. Command mode: All

IGMP Configuration

Table 277 describes the commands used to configure basic IGMP parameters.

```
Table 277. IGMP Configuration Commands
```

Coi	nmand Syntax and Usage
[no] ip igmp aggregate Enables or disables IGMP Membership Report aggregation.	
	Command mode: Global configuration
ip	igmp enable
	Globally turns IGMP on.
	Command mode: Global configuration
no	ip igmp enable
	Globally turns IGMP off.
	Command mode: Global configuration
sho	ow ip igmp
	Displays the current IGMP configuration parameters.
	Command mode: All

The following sections describe the IGMP configuration options.

- "IGMP Snooping Configuration" on page 399
- "IGMPv3 Configuration" on page 400
- "IGMP Relay Configuration" on page 401
- "IGMP Relay Multicast Router Configuration" on page 402
- "IGMP Static Multicast Router Configuration" on page 403
- "IGMP Filtering Configuration" on page 404
- "IGMP Advanced Configuration" on page 407
- "IGMP Querier Configuration" on page 407

IGMP Snooping Configuration

IGMP Snooping allows the switch to forward multicast traffic only to those ports that request it. IGMP Snooping prevents multicast traffic from being flooded to all ports. The switch learns which server hosts are interested in receiving multicast traffic, and forwards it only to ports connected to those servers.

Table 278 describes the commands used to configure IGMP Snooping.

Table 278. IGMP Snooping Configuration Commands

Cor	nmand Syntax and Usage
ip	igmp snoop mrouter-timeout <1-600> Configures the timeout value for IGMP Membership Queries (mrouter). Once the timeout value is reached, the switch removes the multicast router from its IGMP table, if the proper conditions are met. The range is from 1 to 600 seconds. The default is 255 seconds. Command mode: Global configuration
ip	igmp snoop source-ip < <i>IP address</i> > Configures the source IP address used as a proxy for IGMP Group Specific Queries. Command mode: Global configuration
ip	igmp snoop vlan <i><vlan number=""></vlan></i> Adds the selected VLAN(s) to IGMP Snooping. Command mode: Global configuration
no	ip igmp snoop vlan Removes the selected VLAN(s) from IGMP Snooping. Command mode: Global configuration
no	ip igmp snoop vlan all Removes all VLANs from IGMP Snooping. Command mode: Global configuration
ip	igmp snoop enable Enables IGMP Snooping. Command mode: Global configuration
no	ip igmp snoop enable Disables IGMP Snooping. Command mode: Global configuration
sho	ow ip igmp snoop Displays the current IGMP Snooping parameters. Command mode: All

IGMPv3 Configuration

Table 279 describes the commands used to configure IGMP version 3.

```
Table 279. IGMP version 3 Configuration Commands
```

Co	mmand Syntax and Usage		
ip	igmp snoop igmpv3 sources <1-64> Configures the maximum number of IGMP multicast sources to snoop from within the group record. Use this command to limit the number of IGMP sources to provide more refined control. The default value is 8. Command mode: Global configuration		
[no	 ip igmp snoop igmpv3 v1v2 Enables or disables snooping on IGMP version 1 and version 2 reports. When disabled, the switch drops IGMPv1 and IGMPv2 reports. The default value is enabled. Command mode: Global configuration 		
[no	b] ip igmp snoop igmpv3 exclude Enables or disables snooping on IGMPv3 Exclude Reports. When disabled, the switch ignores Exclude Reports. The default value is enabled. Command mode: Global configuration		
ip	igmp snoop igmpv3 enable Enables IGMP version 3. The default value is disabled. Command mode: Global configuration		
no	ip igmp snoop igmpv3 enable Disables IGMP version 3. Command mode: Global configuration		
sh	ow ip igmp snoop igmpv3 Displays the current IGMP v3 Snooping configuration. Command mode: All		

IGMP Relay Configuration

When you configure IGMP Relay, also configure the IGMP Relay multicast routers.

Table 280 describes the commands used to configure IGMP Relay.

Table 280. IGMP Relay Configuration Commands

Command Syntax and Usage	
ip igmp relay vlan < <i>VLAN number></i> Adds the VLAN to the list of IGMP Relay VLANs. Command mode: Global configuration	
no ip igmp relay vlan < <i>VLAN number</i> > Removes the VLAN from the list of IGMP Relay VLA Command mode: Global configuration	Ns.
<pre>ip igmp relay report <0-150> Configures the interval between unsolicited Join report seconds. The default value is 10. Command mode: Global configuration</pre>	orts sent by the switch, in
ip igmp relay enable Enables IGMP Relay. Command mode: Global configuration	
no ip igmp relay enable Disables IGMP Relay. Command mode: Global configuration	
show ip igmp relay Displays the current IGMP Relay configuration. Command mode: All	

IGMP Relay Multicast Router Configuration

Table 281 describes the commands used to configure multicast routers for IGMP Relay.

Table 281. IGMP Relay Mrouter Configuration Commands

Cor	nmand Syntax and Usage
ip	<pre>igmp relay mrouter <1-2> address <ip address=""> Configures the IP address of the IGMP multicast router used for IGMP Relay. Command mode: Global configuration</ip></pre>
ip	igmp relay mrouter <1-2> interval <1-60> Configures the time interval between ping attempts to the upstream Mrouters, in seconds. The default value is 2.
	Command mode: Global configuration
ip	<pre>igmp relay mrouter <1-2> retry <1-120> Configures the number of failed ping attempts required before the switch declares this Mrouter is down. The default value is 4. Command mode: Global configuration</pre>
ip	igmp relay mrouter < <i>1-2></i> attempt < <i>1-128></i> Configures the number of successful ping attempts required before the switch declares this Mrouter is up. The default value is 5. Command mode: Global configuration
ip	<pre>igmp relay mrouter <1-2> version <1-2> Configures the IGMP version (1 or 2) of the multicast router. Command mode: Global configuration</pre>
ip	igmp relay mrouter <1-2> enable Enables the multicast router. Command mode: Global configuration
no	ip igmp relay mrouter <1-2> enable Disables the multicast router. Command mode: Global configuration
no	<pre>ip igmp relay mrouter <1-2> Deletes the multicast router from IGMP Relay. Command mode: Global configuration</pre>

IGMP Static Multicast Router Configuration

Table 282 describes the commands used to configure a static multicast router.

Note: When static Mrouters are used, the switch continues learning dynamic Mrouters via IGMP snooping. However, dynamic Mrouters may not replace static Mrouters. If a dynamic Mrouter has the same port and VLAN combination as a static Mrouter, the dynamic Mrouter is not learned.

Table 282. IGMP Static Multicast Router Configuration Commands

Co	Command Syntax and Usage	
ip	igmp mrouter <i><port alias="" number="" or=""> <vlan number=""> <version (1-3)=""></version></vlan></port></i> Selects a port/VLAN combination on which the static multicast router is connected, and configures the IGMP version (1, 2 or 3) of the multicast router. Command mode: Global configuration	
no	ip igmp mrouter <i><port alias="" number="" or=""> <vlan number=""> <version (1-3)=""></version></vlan></port></i> Removes a static multicast router from the selected port/VLAN combination. Command mode: Global configuration	
no	ip igmp mrouter all Removes all static multicast routers. Command mode: Global configuration	
cle	ear ip igmp mrouter Clears the multicast router port table. Command mode: Global configuration	
sho	ow ip igmp mrouter Displays the current IGMP Static Multicast Router parameters. Command mode: All	

IGMP Filtering Configuration

Table 283 describes the commands used to configure an IGMP filter.

Table 283. IGMP Filtering Configuration Commands

Cor	Command Syntax and Usage	
ip	<pre>igmp profile <1-16> Configures the IGMP filter. To view command options, see page 405. Command mode: Global configuration</pre>	
ip	igmp filtering Enables IGMP filtering globally. Command mode: Global configuration	
no	ip igmp filtering Disables IGMP filtering globally. Command mode: Global configuration	
sho	ow ip igmp filtering Displays the current IGMP Filtering parameters. Command mode: All	

IGMP Filter Definition

Table 284 describes the commands used to define an IGMP filter.

```
Table 284. IGMP Filter Definition Commands
```

Cor	nmand Syntax and Usage
ip	<pre>igmp profile <1-16> range <ip 1="" address=""> <ip 2="" address=""> Configures the range of IP multicast addresses for this filter. Command mode: Global configuration</ip></ip></pre>
ip	<pre>igmp profile <1-16> action {allow deny} Allows or denies multicast traffic for the IP multicast addresses specified. The default action is deny. Command mode: Global configuration</pre>
ip	igmp profile <1-16> enable Enables this IGMP filter. Command mode: Global configuration
no	ip igmp profile <1-16> enable Disables this IGMP filter. Command mode: Global configuration
no	<pre>ip igmp profile <1-16> Deletes this filter's parameter definitions. Command mode: Global configuration</pre>
sho	ow ip igmp profile <1-16> Displays the current IGMP filter. Command mode: All

IGMP Filtering Port Configuration

Table 285 describes the commands used to configure a port for IGMP filtering.

Table 285. IGMP Filter Port Configuration Commands

Со	nmand Syntax and Usage
[nc] ip igmp filtering Enables or disables IGMP filtering on this port. Command mode: Interface port
ip	igmp profile <1-16> Adds an IGMP filter to this port. Command mode: Interface port
no	ip igmp profile <1-16> Removes an IGMP filter from this port. Command mode: Interface port
sho	ow interface port <i><port alias="" number="" or=""></port></i> igmp-filtering Displays the current IGMP filter parameters for this port. Command mode: All

IGMP Advanced Configuration

Table 286 describes the commands used to configure advanced IGMP parameters.

Table 286. IGMP Advanced Configuration Commands

Со	Command Syntax and Usage	
ip	igmp query-interval <1-600> Sets the IGMP router query interval, in seconds. The default value is 125. Command mode: Global configuration	
ip	igmp robust <2-10> Configures the IGMP Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If you expect the subnet to have a high rate of packet loss, increase the value. The default value is 2. Command mode: Global configuration	
ip	igmp timeout <1-255> Configures the timeout value for IGMP Membership Reports (host). Once the timeout value is reached, the switch removes the host from its IGMP table, if the conditions are met. The range is from 1 to 255 seconds. The default is 10 seconds. Command mode: Global configuration	
[nc] ip igmp fastleave <vlan number=""> Enables or disables Fastleave processing. Fastleave lets the switch immediately remove a port from the IGMP port list if the host sends a Leave message and the proper conditions are met. This command is disabled by default. Command mode: Global configuration</vlan>	
[nc	o] ip igmp rtralert Enables or disables the Router Alert option in IGMP messages. Command mode: Global configuration	

IGMP Querier Configuration

Table 287. describes the commands used to configure IGMP Querier.

Table 287. IGMP Querier Configuration Options

Command Syntax and Usage	
[no] ip igmp querier vlan <i><vlan number=""></vlan></i> enable	
Enables or disables the IGMP Querier globally.	
Command mode: Global configuration	
ip igmp querier vlan <i><vlan number=""></vlan></i> source-ip <i><ip address=""></ip></i>	
Configures the IGMP source IP address for the selected VLAN.	
Command mode: Global configuration	

Table 287. IGMP Querier Configuration Options (continued)

Со	nmand Syntax and Usage
ip	igmp querier vlan <i><vlan number=""></vlan></i> max-response <i><1-256></i>
	Configures the maximum time, in tenths of a second, allowed before responding to a Membership Query message. The default value is 100.
	By varying the Query Response Interval, an administrator may tune the burstiness of IGMP messages on the subnet; larger values make the traffic less bursty, as host responses are spread out over a larger interval.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> query-interval <i><1-608></i>
	Configures the interval between IGMP Query broadcasts. The default value is 125 seconds.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> robustness <i><2-10></i>
	Configures the IGMP Robustness variable, which is the number of times that the switch sends each IGMP message. The default value is 2.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> election-type [ipv4 mac] Sets the IGMP Querier election criteria as IP address or Mac address. The default setting is IPv4.
	Command mode: Global configuration
ip	igmp querier vlan < <i>VLAN number></i> startup-interval < <i>1-608></i>
	Configures the Startup Query Interval, which is the interval between General Queries sent out at startup.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> startup-count <i><1-10></i>
	Configures the Startup Query Count, which is the number of IGMP Queries sent out at startup. Each Query is separated by the Startup Query Interval. The default value is 2.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> version [v1 v2 v3]
	Configures the IGMP version. The default version is $v3$.
	Command mode: Global configuration
ip	igmp querier enable
	Enables IGMP Querier.
	Command mode: Global configuration
no	ip igmp querier enable
	Disables IGMP Querier.
	Command mode: Global configuration

Table 287. IGMP Querier Configuration Options (continued)

Command Syntax and Usage

show ip igmp querier vlan <VLAN number>

Displays IGMP Querier information for the selected VLAN.

Command mode: Global configuration

show ip igmp querier

Displays the current IGMP Querier parameters.

Command mode: All

IKEv2 Configuration

Table 288 describes the commands used to configure IKEv2.

Table 288. IKEv2 Options

Command Syntax and Usage
ikev2 retransmit-interval <1-20>
Sets the interval, in seconds, the timeout value in case a packet is not received by the peer and needs to be retransmitted. The default value is 20 seconds.
Command mode: Global configuration
[no] ikev2 cookie
Enables or disables cookie notification.
Command mode: Global configuration
show ikev2
Displays the current IKEv2 settings.
Command mode: All

IKEv2 Proposal Configuration

Table 289 describes the commands used to configure an IKEv2 proposal.

Table 289. IKEv2 Proposal Options

Command Syntax and Usage
ikev2 proposal
Enter IKEv2 proposal mode.
Command mode: Global configuration
encryption {3des aes-cbc des}
Configures IKEv2 encryption mode. The default value is 3des.
Command mode: IKEv2 proposal
<pre>integrity {md5 sha1}</pre>
Configures the IKEv2 authentication algorithm type. The default value is sha1.
Command mode: IKEv2 proposal
group {1 2 5 14 24}
Configures the the DH group. The default group is 2.
Command mode: IKEv2 proposal

IKEv2 Preshare Key Configuration

Table 290 describes the commands used to configure IKEv2 preshare keys.

```
Table 290. IKEv2 Preshare Key Options
```

Command Syntax and Usage
ikev2 preshare-key local <1-32 characters>
Configures the local preshare key. The default value is <pre>ibm123.</pre>
Command mode: Global configuration
<pre>ikev2 preshare-key remote <1-32 characters> <ipv6 address=""></ipv6></pre>
Configures the remote preshare key for the IPv6 address.
Command mode: Global configuration
show ikev2 preshare-key
Displays the current IKEv2 Preshare key settings.
Command mode: Global configuration

IKEv2 Identification Configuration

E.

Table 291 describes the commands used to configure IKEv2 identification.

Table 291. IKEv2 Identification Options

Command Syntax and Usage
<pre>ikev2 identity local address Configures the switch to use the supplied IPv6 address as identification. Command mode: Global configuration</pre>
<pre>ikev2 identity local fqdn <1-32 characters> Configures the switch to use the fully-qualified domain name (such as "example.com") as identification. Command mode: Global configuration</pre>
<pre>ikev2 identity local email <1-32 characters> Configures the switch to use the supplied email address (such as "xyz@example.com") as identification. Command mode: Global configuration</pre>
show ikev2 identity Displays the current IKEv2 identification settings. Command mode: All

IPsec Configuration

Table 292 describes the commands used to configure IPsec.

Table 292.	IPsec Options		

Command Syntax and Usage		
ipsec enable		
Enables IPsec.		
Command mode: Global configuration		
no ipsec enable		
Disables IPsec.		
Command mode: Global configuration		
show ipsec		
Displays the current IPsec settings.		
Command mode: All		

IPsec Transform Set Configuration

Table 293 describes the commands used to configure IPsec transforms.

```
Table 293. IPsec Transform Set Options
```

Comma	nd Syntax and Usage
{ah-mo	transform-set <1-10> d5 ah-sha1 esp-3des esp-aes-cbc o-des esp-md5 esp-nul1 esp sha1}
	s the AH or ESP authentication, encryption, or integrity algorithm. The ilable algorithms are as follows:
- a	h-md5
- a	h-sha1
- e	sp-3des
- e	sp-aes-cbc
- e	sp-des
- e	sp-md5
- e	sp-null
- e	sp
- 5	hal
Со	mmand mode: Global configuration
esp Set	transform-set <1-10> transport {ah-md5 ah-sha1 esp-3des o-aes-cbc esp-des esp-md5 esp-null esp sha1} s transport mode and the AH or ESP authentication, encryption, or integrity orithm.
Со	mmand mode: Global configuration
	transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des o-aes-cbc esp-des esp-md5 esp-nul1 esp sha1}
	s tunnel mode and the AH or ESP authentication, encryption, or integrity prithm.
Co	mmand mode: Global configuration
no ips	sec transform <1-10>
Del	etes the transform set.
Со	nmand mode: Global configuration
show i	psec transform-set <1-10>
Dis	plays the current IPsec Transform Set settings.
	mmand mode: All

IPsec Traffic Selector Configuration

Table 294 describes the commands used to configure an IPsec traffic selector.

Table 294. IPsec Traffic Selector Options

Command Syntax and Usage
<pre>ipsec traffic-selector <1-10> action {permit deny} {any icmp tcp} {<ipv6 address=""> any}</ipv6></pre>
Sets the traffic-selector to permit or deny the specified type of traffic.
Command mode: Global configuration
src <ipv6 address=""> any</ipv6>
Sets the source IPv6 address.
Command mode: Global configuration
prefix <1-128>
Sets the destination IPv6 prefix length.
Command mode: Global configuration
dst <ipv6 address=""> any</ipv6>
Sets the destination IP address.
Command mode: Global configuration
del
Deletes the traffic selector.
Command mode: Global configuration
cur
Displays the current IPsec Traffic Selector settings.
Command mode: All

IPsec Dynamic Policy Configuration

Table 295 describes the commands used to configure an IPsec dynamic policy.

```
Table 295. IPsec Dynamic Policy Options
```

Command Syntax and Usage
psec dynamic-policy <1-10>
Enter IPsec dynamic policy mode.
Command mode: Global configuration
peer <ipv6 address=""></ipv6>
Sets the remote peer IP address.
Command mode: IPsec dynamic policy
raffic-selector <1-10>
Sets the traffic selector for the IPsec policy.
Command mode: IPsec dynamic policy
cransform-set <1-10>
Sets the transform set for the IPsec policy.
Command mode: IPsec dynamic policy
a-lifetime <120-86400>
Sets the IPsec SA lifetime in seconds. The default value is 86400 seconds.
Command mode: IPsec dynamic policy
ofs enable disable
Enables/disables perfect forward security.
Command mode: IPsec dynamic policy
show ipsec dynamic-policy <1-10>
Displays the current IPsec dynamic policy settings.
Command mode: All

IPsec Manual Policy Configuration

Table 296 describes the commands used to configure an IPsec manual policy.

Table 296. IPsec Manual Policy Options

Command Syntax and Usage
ipsec manual-policy <1-10>
Enter IPsec manual policy mode.
Command mode: Global configuration
in-ah auth-key < <i>key code (hexadecimal)</i> >
Sets inbound Authentication Header (AH) authenticator key.
Note : For manual policies, when peering with a third-party device, key lengths are fixed to 20 characters for SHA1 and 16 characters for MD5 encryption.
Command mode: IPsec manual policy
peer <ipv6 address=""></ipv6>
Sets the remote peer IP address.
Command mode: IPsec manual policy
traffic-selector <1-10>
Sets the traffic selector for the IPsec policy.
Command mode: IPsec manual policy
transform-set <1-10>
Sets the transform set for the IPsec policy.
Command mode: IPsec manual policy
in-ah spi <i><256-4294967295></i>
Sets the inbound Authentication Header (AH) Security Parameter Index (SPI).
Note : For manual policies, when peering with a third-party device, key lengths are fixed to 20 characters for SHA1 and 16 characters for MD5 encryption.
Command mode: IPsec manual policy
<pre>in-esp cipher-key <key (hexadecimal)="" code=""></key></pre>
Sets the inbound Encapsulating Security Payload (ESP) cipher key.
Note : For manual policies, when peering with a third-party device, key lengths are fixed to 8 characters for DES and to 24 characters for 3DES and AES-CBC encryption.
Command mode: IPsec manual policy
in-esp auth-key <key (hexadecimal)="" code=""></key>
Sets the inbound Encapsulating Security Payload (ESP) authenticator key.
Note : For manual policies, when peering with a third-party device, key lengths are fixed to 8 characters for DES and to 24 characters for 3DES and AES-CBC encryption.
Command mode: IPsec manual policy

Table 296. IPsec Manual Policy Options (continued)

Con	nmand Syntax and Usage
in-	esp auth-key spi <256-4294967295>
	Sets the inbound Encapsulating Security Payload (ESP) Security Parameter Index (SPI).
	Note : For manual policies, when peering with a third-party device, key lengths are fixed to 20 characters for SHA1 and 16 characters for MD5 encryption.
	Command mode: IPsec manual policy
out	-ah auth-key <key (hexadecimal)="" code=""></key>
	Sets the outbound Authentication Header (AH) authenticator key.
	Note : For manual policies, when peering with a third-party device, key lengths are fixed to 20 characters for SHA1 and 16 characters for MD5 encryption.
	Command mode: IPsec manual policy
out	-ah spi <256-4294967295>
	Sets the outbound Authentication Header (AH) Security Parameter Index (SPI).
	Note : For manual policies, when peering with a third-party device, key lengths are fixed to 20 characters for SHA1 and 16 characters for MD5 encryption.
	Command mode: IPsec manual policy
out	-esp auth-key <key (hexadecimal)="" code=""></key>
	Sets the outbound Encapsulating Security Payload (ESP) authenticator key.
	Note : For manual policies, when peering with a third-party device, key lengths are fixed to 8 characters for DES and to 24 characters for 3DES and AES-CBC encryption.
	Command mode: IPsec manual policy
out	<pre>-esp cipher-key <key (hexadecimal)="" code=""></key></pre>
	Sets the outbound Encapsulating Security Payload (ESP) cipher key.
	Note : For manual policies, when peering with a third-party device, key lengths are fixed to 8 characters for DES and to 24 characters for 3DES and AES-CBC encryption.
	Command mode: IPsec manual policy
out	-esp auth-key spi <256-4294967295>
	Sets the outbound Encapsulating Security Payload (ESP) Security Parameter Index (SPI).
	Note : For manual policies, when peering with a third-party device, key lengths are fixed to 20 characters for SHA1 and 16 characters for MD5 encryption.
	Command mode: IPsec manual policy
shc	w ipsec manual-policy <1-10>
	Displays the current IPsec manual policy settings.
	Command mode: All

Domain Name System Configuration

The Domain Name System (DNS) commands are used for defining the primary and secondary DNS servers on your local network, and for setting the default domain name served by the switch services. DNS parameters must be configured prior to using hostname parameters with the ping, traceroute, and tftp commands.

Table 297. Domain Name Service Commands

Com	mand Syntax and Usage
 Y	ip dns primary-server <i><ip address=""></ip></i> fou are prompted to set the IPv4 address for your primary DNS server, using lotted decimal notation.
C	Command mode: Global configuration
[no]	ip dns secondary-server < <i>IP address</i> >
U	You are prompted to set the IPv4 address for your secondary DNS server, using dotted decimal notation. If the primary DNS server fails, the configured secondary will be used instead.
C	Command mode: Global configuration
Դ հ	ip dns ipv6 primary-server <i><ip address=""></ip></i> /ou are prompted to set the IPv6 address for your primary DNS server, using nexadecimal format with colons. Command mode: Global configuration
י ע כ	ip dns ipv6 secondary-server <i><ip address=""></ip></i> /ou are prompted to set the IPv6 address for your secondary DNS server, using hexadecimal format with colons. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration
-	Ins ipv6 request-version {ipv4 ipv6} Sets the protocol used for the first request to the DNS server, as follows: - IPv4 - IPv6 Command mode: Global configuration
S F	ip dns domain-name <i><string></string></i> Sets the default domain name used by the switch. For example: mycompany.com Command mode: Global configuration
0	r ip dns Displays the current Domain Name System settings. Command mode: All

Bootstrap Protocol Relay Configuration

The Bootstrap Protocol (BOOTP) Relay commands are used to let hosts get their configurations from a Dynamic Host Configuration Protocol (DHCP) server. The BOOTP configuration enables the switch to forward a client request for an IP address to two DHCP/BOOTP servers with IP addresses that have been configured on the CN4093.

BOOTP relay is turned off by default.

Table 298.	Global BOOTP	Relay	Configuration	Options

Command Syntax and Usage

[no] ip bootp-relay server <1-4> address <IP address>

Sets the IP address of the selected global BOOTP server.

Command mode: Global configuration

ip bootp-relay enable

Globally turns on BOOTP relay.

Command mode: Global configuration

no ip bootp-relay enable

Globally turns off BOOTP relay.

Command mode: Global configuration

BOOTP Relay Broadcast Domain Configuration

These commands allow you to configure a BOOTP server for a specific broadcast domain, based on its associated VLAN.

Table 299. BOOTP Relay Broadcast Domain Configuration Options

Coi	mmand Syntax and Usage
ip	bootp-relay bcast-domain <1-10> vlan <vlan number=""> Configures the VLAN of the broadcast domain. Each broadcast domain must have a unique VLAN. Command mode: Global configuration</vlan>
ip	bootp-relay bcast-domain <1-10> server <1-4> address <ipv4 address=""> Sets the IP address of the BOOTP server. Command mode: Global configuration</ipv4>
ip	bootp-relay bcast-domain <1-10> enable Enables BOOTP Relay for the broadcast domain. Command mode: Global configuration
no	<pre>ip bootp-relay bcast-domain <1-10> enable Disables BOOTP Relay for the broadcast domain. When disabled, BOOTP Relay is performed by one of the global BOOTP servers. Command mode: Global configuration</pre>

Table 299. BOOTP Relay Broadcast Domain Configuration Options

Command Syntax and Usage

no ip bootp-relay bcast-domain <1-10>

Deletes the selected broadcast domain configuration.

Command mode: Global configuration

show ip bootp-relay

Displays the current parameters for the BOOTP Relay broadcast domain.

Command mode: All

VRRP Configuration

Virtual Router Redundancy Protocol (VRRP) support on the CN4093 provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

By default, VRRP is disabled. IBM Networking OS has extended VRRP to include virtual servers as well, allowing for full active/active redundancy between switches. For more information on VRRP, see the "High Availability" chapter in the *IBM Networking OS 7.7 Application Guide.*

roı	iter vrrp
	Enter Router VRRP configuration mode.
	Command mode: Global configuration
[no] hot-standby
	Enables or disables hot standby processing, in which two or more switches provide redundancy for each other. By default, this option is disabled.
	Command mode: Router VRRP
ena	able
	Globally enables VRRP on this switch.
	Command mode: Router VRRP
no	enable
	Globally disables VRRP on this switch.
	Command mode: Router VRRP
sho	ow ip vrrp
	Displays the current VRRP parameters.
	Command mode: All

Virtual Router Configuration

These commands are used for configuring virtual routers for this switch. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Virtual routers are disabled by default.

Command Syntax and Usage

Sommand Syntax and Ssage
virtual-router <1-15> virtual-router-id <1-255>
Defines the virtual router ID (VRID). This is used in conjunction with the [no] virtual-router address command below to define a virtual router on this switch. To create a pool of VRRP-enabled routing devices which can provide redundancy to each other, each participating VRRP device must be configured with the same virtual router.
The VRID for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. The default value is 1.
All VRID values must be unique within the VLAN to which the virtual router's IP interface belongs.
Command mode: Router VRRP
[no] virtual-router <1-15> address <1P address>
Defines the IP address for this virtual router using dotted decimal notation. This is used in conjunction with the VRID (above) to configure the same virtual router on each participating VRRP device. The default address is 0.0.0.0.
Command mode: Router VRRP
virtual-router <1-15> interface <interface number=""></interface>
Selects a switch IP interface. If the IP interface has the same IP address as the addr option above, this switch is considered the "owner" of the defined virtual router. An owner has a special priority of 255 (highest) and will always assume the role of master router, even if it must pre-empt another virtual router which has assumed master routing authority. This pre-emption occurs even if the preem option below is disabled. The default value is 1.
<pre>virtual-router <1-15> priority <1-254> Defines the election priority bias for this virtual server. The priority value can be any integer between 1 and 254. The default value is 100.</pre>
During the master router election process, the routing device with the highest virtual router priority number wins. If there is a tie, the device with the highest IP interface address wins. If this virtual router's IP address is the same as the one used by the IP interface, the priority for this virtual router will automatically be set to 255 (highest).
When priority tracking is used, this base priority value can be modified according to a number of performance and operational criteria.
Command mode: Router VRRP

Table 301.	VRRP \	Virtual Router	Configuration	Commands	(continued)
------------	--------	----------------	---------------	----------	-------------

Cor	nmand Syntax and Usage			
viı	virtual-router <1-15> timers advertise <1-255>			
	Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default value is 1.			
	Command mode: Router VRRP			
[no] virtual-router <1-15> preemption			
	Enables or disables master preemption. When enabled, if this virtual router is in backup mode but has a higher priority than the current master, this virtual router will preempt the lower priority master and assume control. Note that even when preemption is disabled, this virtual router will always pre-empt any other master if this switch is the owner (the IP interface address and virtual router addr are the same). By default, this option is enabled.			
	Command mode: Router VRRP			
vir	rtual-router <1-15> enable			
	Enables this virtual router.			
	Command mode: Router VRRP			
no	virtual-router <1-15> enable			
	Disables this virtual router.			
	Command mode: Router VRRP			
no	virtual-router <1-15> Deletes this virtual router from the switch configuration. Command mode: Router VRRP			
sho	ow ip vrrp virtual-router < <i>l-15></i> Displays the current configuration information for this virtual router. Command mode: All			

Virtual Router Priority Tracking Configuration

These commands are used for modifying the priority system used when electing the master router from a pool of virtual routers. Various tracking criteria can be used to bias the election results. Each time one of the tracking criteria is met, the priority level for the virtual router is increased by an amount defined through the VRRP Tracking commands.

Criteria are tracked dynamically, continuously updating virtual router priority levels when enabled. If the virtual router preemption option is enabled, this virtual router can assume master routing authority when its priority level rises above that of the current master.

Some tracking criteria apply to standard virtual routers, otherwise called "virtual interface routers." A virtual server router is defined as any virtual router whose IP address is the same as any configured virtual server IP address.

Table 302. VRRP Priority Tracking Configuration Commands

Command Syntax and Usage	
[no] virtual-router <1-15> track virtual-routers	
When enabled, the priority for this virtual router will be increased for each virtual router in master mode on this switch. This is useful for making sure that traffic for any particular client/server pairing are handled by the same switch, increasing routing and load balancing efficiency. This command is disabled by default.	
Command mode: Router VRRP	
[no] virtual-router <1-15> track interfaces	
When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.	
Command mode: Router VRRP	
[no] virtual-router <1-15> track ports	
When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered "active" if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.	
Command mode: Router VRRP	
show ip vrrp virtual-router <1-15> track	
Displays the current configuration for priority tracking for this virtual router.	
Command mode: All	

Virtual Router Group Configuration

Virtual Router Group commands are used for associating all virtual routers into a single logical virtual router, which forces all virtual routers on the CN4093 to either be master or backup as a group. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Note: This option is required to be configured only when using at least two CN4093s in a hot-standby failover configuration, where only one switch is active at any time.

Table 303.	VRRP Virtual	Router Group	Configuration	Commands
------------	--------------	--------------	---------------	----------

Command Syntax and Usage

group virtual-router-id <1-255>

Defines the virtual router ID (VRID).

The VRID for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. All VRID values must be unique within the VLAN to which the virtual router's IP interface (see interface below) belongs. The default virtual router ID is 1.

Command mode: Router VRRP

group interface <interface number>

Selects a switch IP interface. The default switch IP interface number is 1.

Command mode: Router VRRP

group priority <1-254>

Defines the election priority bias for this virtual router group. This can be any integer between 1 and 254. The default value is 100.

During the master router election process, the routing device with the highest virtual router priority number wins.

Each virtual router group is treated as one entity regardless of how many virtual routers are in the group. When the switch tracks the virtual router group, it measures the resources contained in the group (such as interfaces, VLAN ports, real servers). The priority is updated as a group. Every virtual router in the group has the same priority.

The *owner* parameter does not apply to the virtual router group. The group itself cannot be an owner and therefore the priority is 1-254.

Command mode: Router VRRP

group advertisement <1-255>

Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default is 1.

Command mode: Router VRRP

Table 303. VRRP Virtual Router Group Configuration Commands (continued)

~	
Con	nmand Syntax and Usage
[no] group preemption
	Enables or disables master pre-emption. When enabled, if the virtual router group is in backup mode but has a higher priority than the current master, this virtual router will pre-empt the lower priority master and assume control. Note that even when preemption is disabled, this virtual router will always pre-empt any other master if this switch is the owner (the IP interface address and virtual router address are the same). By default, this option is enabled. Command mode: Router VRRP
gro	pup enable
	Enables the virtual router group.
	Command mode: Router VRRP
no	group enable
	Disables the virtual router group.
	Command mode: Router VRRP
no	group
	Deletes the virtual router group from the switch configuration.
	Command mode: Router VRRP
shc	w ip vrrp group
	Displays the current configuration information for the virtual router group.
	Command mode: All

Virtual Router Group Priority Tracking Configuration

Note: If *Virtual Router Group Tracking* is enabled, the tracking option will be available only under *group* option. The tracking setting for the other individual virtual routers will be ignored.

```
Table 304. Virtual Router Group Priority Tracking Configuration Commands
```

Command Syntax and Usage

[no] group track interfaces

When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.

Command mode: Router VRRP

[no] group track ports

When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered "active" if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.

Command mode: Router VRRP

show ip vrrp group track

Displays the current configuration for priority tracking for this virtual router.

Command mode: All

VRRP Interface Configuration

Note: The *interface* represents the IP interface on which authentication parameters must be configured.

These commands are used for configuring VRRP authentication parameters for the IP interfaces used with the virtual routers.

Table 305. VRRP Interface Commands

Cor	nmand Syntax and Usage
int	cerface <interface number=""> authentication {password none}</interface>
	Defines the type of authentication that will be used: none (no authentication) or password (password authentication).
	Command mode: Router VRRP
[no] interface <interface number=""> password <password></password></interface>
	Defines a plain text password up to eight characters long. This password will be added to each VRRP packet transmitted by this interface when password authentication is chosen (see interface authentication above).
	Command mode: Router VRRP
no	interface <interface number=""></interface>
	Clears the authentication configuration parameters for this IP interface. The IP interface itself is not deleted.
	Command mode: Router VRRP
sho	ow ip vrrp interface <interface number=""></interface>
	Displays the current configuration for this IP interface's authentication parameters.
	Command mode: All

VRRP Tracking Configuration

These commands are used for setting weights for the various criteria used to modify priority levels during the master router election process. Each time one of the tracking criteria is met (see "VRRP Virtual Router Priority Tracking Commands" on page 424), the priority level for the virtual router is increased by a defined amount.

Table 306. VRRP Tracking Configuration Commands

Command	Syntax and	Usage
---------	------------	-------

tracking-priority-increment virtual-routers <0-254>

Defines the priority increment value (0 through 254) for virtual routers in master mode detected on this switch. The default value is 2.

Command mode: Router VRRP

```
tracking-priority-increment interfaces <0-254>
```

Defines the priority increment value for active IP interfaces detected on this switch. The default value is 2.

Command mode: Router VRRP

tracking-priority-increment ports <0-254>

Defines the priority increment value for active ports on the virtual router's VLAN. The default value is 2.

Command mode: Router VRRP

show ip vrrp tracking-priority-increment

Displays the current configuration of priority tracking increment values.

Command mode: All

Note: These priority tracking options only define increment values. These options do not affect the VRRP master router election process until options under the VRRP Virtual Router Priority Tracking Commands (see page 424) are enabled.

Protocol Independent Multicast Configuration

Table 307. PIM Configuration Options

ip	pim component <1-2>
-	Enter PIM component mode. See page 430 to view options.
	Command mode: Global configuration
ip	pim regstop-ratelimit-period <0-2147483647>
Ľ	Configures the register stop rate limit, in seconds. The default value is 5.
	Command mode: Global configuration
[no	o] ip pim static-rp enable
	Enables or disables static RP configuration. The default setting is disabled
	Command mode: Global configuration
[nd	o] ip pim pmbr enable
	Enables or disables PIM border router. The default setting is disabled.
	Command mode: Global configuration
ip	pim enable
	Globally turns PIM on.
	Command mode: Global configuration
no	ip pim enable
	Globally turns PIM off.
	Command mode: Global configuration
cle	ear ip pim mroute
	Clears PIM multicast router entries.

PIM Component Configuration

Table 308. PIM Component Configuration Options

Command Syntax and Usage		
ip pim component <1-2>		
Enter PIM component mode.		
Command mode: Global configuration		
mode {dense sparse}		
Configures the operational mode of the PIM router (dense or sparse).		
Command mode: PIM Component		
show ip pim component [<1-2>]		
Displays the current PIM component configuration settings.		
Command mode: All		

RP Candidate Configuration

Use these commands to configure a PIM router Rendezvous Point (RP) candidate.

Comi	mand Syntax and Usage
rp-candidate rp-address <group address="" multicast=""> <group mask="" subnet=""> <ip address=""></ip></group></group>	
А	dds an RP candidate.
C	command mode: PIM Component
-	p-candidate rp-address <group address="" multicast=""> <group mask="" subnet=""> <ip address=""></ip></group></group>
F	Removes the specified RP candidate.
C	command mode: PIM Component
rp-c	andidate holdtime <0-255>
C	Configures the hold time of the RP candidate, in seconds.
_	

Command mode: PIM Component

RP Static Configuration

Use these commands to configure a static PIM router Rendezvous Point (RP).

Table 310. RP Static Configuration Options

Command Syntax and Usage		
<pre>rp-static rp-address <group address="" multicast=""> <group mask="" subnet=""></group></group></pre>		
Adds a static RP.		
Command mode: PIM Component		
<pre>no rp-static rp-address <group address="" multicast=""> <group mask="" subnet=""></group></group></pre>		
Removes the specified static RP.		
Command mode: PIM Component		

PIM Interface Configuration

Col	nmand Syntax and Usage
int	erface ip <i><interface number=""></interface></i>
	Enter Interface IP mode.
	Command mode: Global Configuration
ip	pim hello-interval <0-65535>
	Configures the time interval, in seconds, between PIM Hello packets. The default value is 30.
	Command mode: Interface IP
ip	pim join-prune-interval <0-65535>
	Configures the interval between Join Prune messages, in seconds. The default value is 60.
	Command mode: Interface IP
[nc	 ip pim cbsr-preference <0-255> Configures the candidate bootstrap router preference. Command mode: Interface IP
ip	pim component-id <1-2>
	Defines the component ID for the interface.
	Command mode: Interface IP
ip	pim hello-holdtime <1-65535>
	Configures the time period for which a neighbor is to consider this switch to be operative (up). The default value is 105.
	Command mode: Interface IP
ip	pim dr-priority <0-4294967294>
	Configures the designated router priority. The default value is 1.
	Command mode: Interface IP
ip	pim override-interval <0-65535>
	Configures the override interval for the router interface, in seconds.
	Command mode: Interface IP
ip	pim lan-delay <0-32767>
	Configures the LAN delay value for the router interface, in seconds.
	Command mode: Interface IP
[nc	b] ip pim border-bit
	Enables or disables the interface as a border router. The default setting is disabled.
	Command mode: Interface IP

Table 311. PIM Interface Configuration Options (continued)

Cor	Command Syntax and Usage		
[nc] ip pim lan-prune-delay		
	Enables or disables LAN delay advertisements on the interface. The default setting is disabled.		
	Command mode: Interface IP		
ip	pim neighbor-addr <i><ip address=""></ip></i> allow deny		
	Allows or denies PIM access to the specified neighbor. You can configure a list of up to 72 neighbors that bypass the neighbor filter. Once you configure the interface to allow a neighbor, you can configure the interface to deny the neighbor.		
	Command mode: Interface IP		
[nc] ip pim neighbor-filter		
	Enables or disables the PIM neighbor filter on the interface. When enabled, this interface does not accept any PIM neighbors, unless specifically permitted using the following command: ip pim neighbor-addr <i><ip address=""></ip></i> Command mode : Interface IP		
ip	pim enable		
Г	Enables PIM on the interface.		
	Command mode: Interface IP		
no	ip pim enable		
	Disables PIM on the interface.		
	Command mode: Interface IP		
shc	w ip pim neighbor-filters		
	Displays the configured PIM neighbor filters.		
	Command mode: All		
shc	w ip pim interface [< <i>interface number</i> > detail]		
	Displays the current PIM interface parameters.		
	Command mode: All		

IPv6 Default Gateway Configuration

The switch supports IPv6 default gateways.

- Gateway 1 is used for data traffic.
- Gateway 132 is reserved for management.

Table 312 describes the IPv6 Default Gateway Configuration commands.

Command Syntax and Usage		
<pre>ip gateway6 {<gateway number="">} address <ipv6 address=""> Configures the IPv6 address of the default gateway, in hexadecimal format with colons (such as 3001:0:0:0:0:0:abcd:12). Command mode: Global configuration</ipv6></gateway></pre>		
<pre>[no] ip gateway6 {<gateway number="">} enable Enables or disables the default gateway. Command mode: Global configuration</gateway></pre>		
no ip gateway6 { <gateway number="">} Deletes the default gateway. Command mode: Global configuration</gateway>		
show ipv6 gateway6 {< <i>gateway number></i> } Displays the current IPv6 default gateway configuration. Command mode : All		

IPv6 Static Route Configuration

Table 313 describes the IPv6 static route configuration commands.

Table 313. IPv6 Static Route Configuration Commands

Cor	nmand Syntax and Usage		
ip	route6 <ipv6 address=""> <prefix length=""> <ipv6 address="" gateway=""> [<interface number="">]</interface></ipv6></prefix></ipv6>		
	Adds an IPv6 static route.		
	Command mode: Global configuration		
no	<pre>ip route6 <ipv6 address=""> <prefix length=""></prefix></ipv6></pre>		
	Removes the selected route.		
	Command mode: Global configuration		
no	ip route6 [destination-address < <i>IPv6 address</i> > gateway < <i>default gateway address</i> > interface < <i>I-128</i> > all]		
	Clears IPv6 static routes. You are prompted to select the routes to clear, based on the following criteria:		
	 dest: Destination IPv6 address of the route 		
	 gw: Default gateway address used by the route 		
	 if: Interface used by the route 		
	 all: All IPv6 static routes 		
	Command mode: Global configuration		
sho	ow ipv6 route static		
	Displays the current static route configuration.		
	Command mode: All		

IPv6 Neighbor Discovery Cache Configuration

Table 314 describes the IPv6 Neighbor Discovery cache configuration commands.

Table 314.	IPv6 Neighbor Discover	V Cache Configuration	Commands
	II VOINCIGIIDOI DISCOVCI	y outrie ophingulation	Communus

Coi	Command Syntax and Usage		
ip	<pre>neighbors <ipv6 address=""> <mac address=""> vlan <vlan number=""> port <port alias="" number="" or=""></port></vlan></mac></ipv6></pre>		
	Adds a static entry to the Neighbor Discovery cache table.		
	Command mode: Global configuration		
no	<pre>ip neighbors {<ipv6 address=""> all}</ipv6></pre>		
	Deletes the selected entry from the static Neighbor Discovery cache table.		
Command mode: Global configuration			
no	ip neighbors [all if all interface port all vlan <vlan number=""> all]</vlan>		
	Clears the selected static entries in the Neighbor Discovery cache table.		
	Command mode: Global configuration		

IPv6 Path MTU Configuration

The following table describes the configuration options for Path MTU (Maximum Transmission Unit). The Path MTU cache can consume system memory and affect performance. These commands allow you to manage the Path MTU cache.

Table 315. IPv6 Path MTU Commands

Command Syntax and Usage	
ip pmtu6 timeout 0 <10-100>	
Sets the timeout value for Path MTU cache entries, in minutes. Enter 0 (zero) to set the timeout to infinity (no timeout).	
The default value is 10 minutes.	
Command mode: Global configuration	
clear ipv6 pmtu	
Clears all entries in the Path MTU cache.	
Command mode: All Except User EXEC	
show ipv6 pmtu	
Displays the current Path MTU configuration.	
Command mode: All	

IPv6 Neighbor Discovery Prefix Configuration

The following table describes the Neighbor Discovery prefix configuration options. These commands allow you to define a list of prefixes to be placed in Prefix Information options in Router Advertisement messages sent from an interface.

Table 316. IPv6 Neighbor Discovery Prefix Commands

Command Syntax and Usage			
int	interface ip <1-127>		
	Enters Interface IP mode.		
	Command mode: Global configuration		
ipv	76 nd prefix {< <i>IPv6 prefix</i> > < <i>prefix length</i> >} [no-advertise]		
	Adds a Neighbor Discovery prefix to the interface. The default setting is enabled.		
To disable the prefix and not advertise it in the Prefix Information options Router Advertisement messages sent from the interface use the no-advertise option.			
	Additional prefix options are listed in this table.		
	Command mode: Interface IP		
no	<pre>ipv6 nd prefix [<ipv6 prefix=""> <prefix length="">] interface all</prefix></ipv6></pre>		
	Removes the selected Neighbor Discovery prefix(es). If you specify an interface number, all prefixes for the interface are removed.		
	Command mode: Interface IP		

Table 316. IPv6 Neighbor Discovery Prefix Commands (continued)

Table 310. IF vo Neighbol Discovery Frenk Commanus (continued)
Command Syntax and Usage
<pre>ipv6 nd prefix {<ipv6 prefix=""> <prefix length="">} valid-lifetime <0-4294967295> [infinite variable} prefered-lifetime <0-4294967295> [infinite variable}</prefix></ipv6></pre>
Configures the Valid Lifetime and (optionally) the Preferred Lifetime of the prefix, in seconds.
The Valid Lifetime is the length of time (relative to the time the packet is sent) that the prefix is valid for the purpose of on-link determination. The default value is 2592000.
The Preferred Lifetime is the length of time (relative to the time the packet is sent) that addresses generated from the prefix via stateless address autoconfiguration remain preferred. The default value is 604800.
Note: The Preferred Lifetime value must not exceed the Valid Lifetime value.
Command mode: Interface IP
<pre>ipv6 nd prefix {<ipv6 prefix=""> <prefix length="">} off-link [no-autoconfig]</prefix></ipv6></pre>
Disables the on-link flag. When enabled, the on-link flag indicates that this prefix can be used for on-link determination. When disabled, the advertisement makes no statement about on-link or off-link properties of the prefix. The default setting is enabled.
To clear the off-link flag, omit the off-link parameter when you issue this command.
Command mode: Interface IP
<pre>ipv6 nd prefix {<ipv6 prefix=""> <prefix length="">} no-autoconfig</prefix></ipv6></pre>
Disables the autonomous flag. When enabled, the autonomous flag indicates that the prefix can be used for stateless address configuration. The default setting is enabled.
Command mode: Interface IP
<pre>show ipv6 prefix {<interface number="">}</interface></pre>
Displays current Neighbor Discovery prefix parameters.
Command mode: All

IPv6 Prefix Policy Table Configuration

The following table describes the configuration options for the IPv6 Prefix Policy Table. The Prefix Policy Table allows you to override the default address selection criteria.

Table 317. IPv6 Prefix Policy Table Options

Command Syntax and Usage		
<pre>ip prefix-policy <ipv6 prefix=""> <prefix length=""> <precedence (0-100)=""> <label (0-100)=""></label></precedence></prefix></ipv6></pre>		
Adds a Prefix Policy Table entry. Enter the following parameters:		
 IPv6 address prefix 		
 Prefix length 		
 Precedence: The precedence is used to sort destination addresses. Prefixes with a higher precedence are sorted before those with a lower precedence. 		
 Label: The label allows you to select prefixes based on matching labels. Source prefixes are coupled with destination prefixes if their labels match. 		
Command mode: Global configuration		
no ip prefix-policy <ipv6 prefix=""> <prefix length=""> <precedence (0-100)=""> <label (0-100)=""></label></precedence></prefix></ipv6>		
Removes a prefix policy table entry.		
Command mode: Global configuration		
show ip prefix-policy		
Displays the current Prefix Policy Table configuration.		
Command mode: All		

Open Shortest Path First Version 3 Configuration

Table 318. OSPFv3 Configuration Commands

Command Syntax and Usage		
[no] ipv6 router ospf		
Enter OSPFv3 configuration mode. Enables or disables OSPFv3 routing protocol.		
Command mode: Global configuration		
abr-type [standard cisco ibm]		
Configures the Area Border Router (ABR) type, as follows:		
– Standard		
– Cisco		
– IBM		
The default setting is standard.		
Command mode: Router OSPF3		

Table 318. OSPFv3 Configur	ation Commands (continued)
----------------------------	----------------------------

	e sto. Osrrvs connguration commands (continued)
Со	mmand Syntax and Usage
as	-external lsdb-limit <lsdb (0-2147483647,="" -1="" for="" limit="" limit)="" no=""></lsdb>
	Sets the link state database limit.
	Command mode: Router OSPF3
ex:	it-overflow-interval <0-4294967295>
	Configures the number of seconds that a router takes to exit Overflow State. The default value is 0 (zero).
	Command mode: Router OSPF3
nei	.ghbor <1-256> {address <1Pv6 address> enable interface <1-126> priority <0-255>}
	Configures directly reachable routers over non-broadcast networks. This is required for non-broadcast multiple access (NBMA) networks and optional for Point-to-Multipoint networks.
	 address configures the neighbor's IPv6 address
	 enable activates a previously disabled neighbor
	- interface configures the OSPFv3 interface used for the neighbor entry
	 priority configures the priority value used for the neighbor entry. A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the neighbor cannot be used as Designated Router. The default value is 1.
	Command mode: Router OSPF3
no	neighbor <1-256> [enable]
	Deletes the neighbor entry.
	Using the enable option only disables the neighbor, while preserving it's settings.
	Command mode: Router OSPF3
rei	ference-bandwidth <0-4294967295>
	Configures the reference bandwidth, in kilobits per second, used to calculate the default interface metric. The default value is 100,000.
	Command mode: Router OSPF3
tir	ners spf {< <i>SPF delay (0-65535)</i> >} {< <i>SPF hold time (0-65535)</i> >}
	Configures the number of seconds that SPF calculation is delayed after a topology change message is received. The default value is 5.
	Configures the number of seconds between SPF calculations. The default value is 10.
	Command mode: Router OSPF3
	uter-id <ipv4 address=""></ipv4>
roi	
roı	Defines the router ID.

Table 318. OSPFv3 Configuration Commands (continued)

Con	nmand Syntax and Usage
[nc] nssaAsbrDfRtTrans
	Enables or disables setting of the P-bit in the default Type 7 LSA generated by an NSSA internal ASBR. The default setting is <code>disabled</code> .
	Command mode: Router OSPF3
ena	able
	Enables OSPFv3 on the switch.
	Command mode: Router OSPF3
no	enable
	Disables OSPFv3 on the switch.
	Command mode: Router OSPF3
shc	ow ipv6 ospf
	Displays the current OSPF configuration settings.
1	Command mode: All

OSPFv3 Area Index Configuration

Table 319. OSPFv3 Area Index Configuration Options

Command Syntax and Usage
area <area index=""/> area-id <ip address=""></ip>
Defines the IP address of the OSPFv3 area number.
Command mode: Router OSPF3
area <area index=""/> type {transit stub nssa} {no-summary}
Defines the type of area. For example, when a virtual link has to be established with the backbone, the area type must be defined as transit.
Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.
Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.
NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas. External routes from outside the Autonomous System (AS) can be advertised within the NSSA but are not distributed into other areas.
Enables or disables the no-summary option. When enabled, the area-border router neither originates nor propagates Inter-Area-Prefix LSAs into stub/NSSA areas. Instead it generates a default Inter-Area-Prefix LSA.
The default setting is disabled.
Command mode: Router OSPF3

Table 319. OSPFv3 Area Index Configuration Options (continued)

Command Syntax and Usage area <area index=""/> default-metric <metric (1-16777215)="" value=""> Configures the cost for the default summary route in a stub area or NSSA. Command mode: Router OSPF3 area <area index=""/> default-metric type <1-3> Configures the default metric type applied to the route. This command applies only to area type of Stub/NSSA. Command mode: Router OSPF3 area <area index=""/> stability-interval <1-255> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode: Router OSPF3 area <area index=""/> translation-role always candidate</metric>
Configures the cost for the default summary route in a stub area or NSSA. Command mode: Router OSPF3 area <area index=""/> default-metric type <1-3> Configures the default metric type applied to the route. This command applies only to area type of Stub/NSSA. Command mode: Router OSPF3 area <area index=""/> stability-interval <1-255> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode: Router OSPF3
Command mode: Router OSPF3 area <area index=""/> default-metric type <1-3> Configures the default metric type applied to the route. This command applies only to area type of Stub/NSSA. Command mode: Router OSPF3 area <area index=""/> stability-interval <1-255> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode: Router OSPF3
area <i><area index=""/></i> default-metric type <i><1-3></i> Configures the default metric type applied to the route. This command applies only to area type of Stub/NSSA. Command mode : Router OSPF3 area <i><area index=""/></i> stability-interval <i><1-255></i> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode : Router OSPF3
Configures the default metric type applied to the route. This command applies only to area type of Stub/NSSA. Command mode : Router OSPF3 area <area index=""/> stability-interval <1-255> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode : Router OSPF3
This command applies only to area type of Stub/NSSA. Command mode : Router OSPF3 area <area index=""/> stability-interval <1-255> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode : Router OSPF3
Command mode: Router OSPF3 area <area index=""/> stability-interval <1-255> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode: Router OSPF3
area <area index=""/> stability-interval <1-255> Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode : Router OSPF3
Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode : Router OSPF3
expires, an elected translator determines that its services are no longer required. The default value is 40. Command mode : Router OSPF3
area <area index=""/> translation-role always candidate
Configures the translation role for an NSSA area, as follows:
 Always: Type 7 LSAs are always translated into Type 5 LSAs.
 Candidate: An NSSA border router participates in the translator election process.
The default setting is candidate.
Command mode: Router OSPF3
area <area index=""/> enable
Enables the OSPF area.
Command mode: Router OSPF3
area <i><area index=""/></i> no enable
Disables the OSPF area.
Command mode: Router OSPF3
no area <i><area index=""/></i>
Deletes the OSPF area.
Command mode: Router OSPF3
show ipv6 ospf areas
Displays the current OSPFv3 area configuration.
Command mode: All

OSPFv3 Summary Range Configuration

Table 320. OSPFv3 Summary Range Configuration Options

-01	nmand Syntax and Usage
are	ea-range <1-16> address <ipv6 address=""> <prefix (1-128)="" length=""> Configures the base IPv6 address and subnet prefix length for the range Command mode: Router OSPF3</prefix></ipv6>
are	ea-range <1-16> area <area (0-2)="" index=""/> Configures the area index used by the switch. Command mode : Router OSPF3
are	ea-range <1-16> lsa-type summary Type7 Configures the LSA type, as follows: - Summary LSA - Type7 LSA Command mode: Router OSPF3
are	ea-range <i><1-16></i> tag <i><0-4294967295></i> Configures the route tag. Command mode : Router OSPF3
[nc	b] area-range < <i>l-16</i> > hide Hides the OSPFv3 summary range. Command mode : Router OSPF3
are	ea-range <i><1-16></i> enable Enables the OSPFv3 summary range. Command mode : Router OSPF3
are	ea-range <1-16> no enable Disables the OSPFv3 summary range. Command mode : Router OSPF3
no	area-range <1-16> Deletes the OSPFv3 summary range. Command mode : Router OSPF3
sho	ow ipv6 ospf area-range Displays the current OSPFv3 summary range. Command mode : All

OSPFv3 AS-External Range Configuration

Table 321. OSPFv3 AS-External Range Configuration Options

Com	mand Syntax and Usage
(mary-prefix <1-16> address <ipv6 address=""> <ipv6 (1-128)="" length="" prefix=""> Configures the base IPv6 address and the subnet prefix length for the range. Command mode: Router OSPF3</ipv6></ipv6>
sum	mary-prefix <1-16> area <area (0-2)="" index=""/>
	Configures the area index used by the switch.
(Command mode: Router OSPF3
	<pre>mary-prefix <1-16> aggregation-effect {allowAll denyAll advertise not-advertise}</pre>
(Configures the aggregation effect, as follows:
-	 allowAll: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are generated. Aggregated Type-7 LSAs are generated in all the attached NSSAs for the range.
	 denyAll: Type-5 and Type-7 LSAs are not generated.
-	 advertise: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are gener- ated. For other area IDs, aggregated Type-7 LSAs are generated in the NSSA area.
-	 not-advertise: If the area ID is 0.0.0.0, Type-5 LSAs are not generated, while all NSSA LSAs within the range are cleared and aggregated Type-7 LSAs are generated for all NSSAs. For other area IDs, aggregated Type-7 LSAs are not generated in the NSSA area.
(Command mode: Router OSPF3
[no]] summary-prefix <1-16> translation
	When enabled, the P-bit is set in the generated Type-7 LSA. When disabled, the P-bit is cleared. The default setting is disabled.
(Command mode: Router OSPF3
sum	nary-prefix <1-16> enable
E	Enables the OSPFv3 AS-external range.
(Command mode: Router OSPF3
sum	nary-prefix <1-16> no enable
[Disables the OSPFv3 AS-external range.
(Command mode: Router OSPF3
no s	summary-prefix <1-16>
Γ	Deletes the OSPFv3 AS-external range.
(Command mode: Router OSPF3
shor	w ipv6 ospf summary-prefix <1-16>
[Displays the current OSPFv3 AS-external range.
	Command mode: All

OSPFv3 Interface Configuration

Table 322. OSPFv3 Interface Configuration Options

Command Syntax and Usage
<pre>interface ip <interface number=""></interface></pre>
Enter Interface IP mode, from Global Configuration mode.
Command mode: Global configuration
ipv6 ospf area <i><area (0-2)="" index=""/></i>
Configures the OSPFv3 area index.
Command mode: Interface IP
[no] ipsec dynamic-policy <1-10>
Adds an IP security dynamic policy to the OSPFv3 interface.
Command mode: Interface IP
ipsec manual-policy <1-10>
Adds an IP security manual policy to the OSPFv3 interface.
Command mode: Interface IP
ipv6 ospf area <area (0-2)="" index=""/> instance <0-255>
Configures the instance ID for the interface.
Command mode: Interface IP
[no] ipv6 ospf priority <priority (0-255)="" value=""></priority>
Configures the priority value for the switch's OSPFv3 interface.
A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the interface cannot be used as Designated Router (DR).
Command mode: Interface IP
[no] ipv6 ospf cost <1-65535>
Configures the metric value for sending a packet on the interface.
Command mode: Interface IP
[no] ipv6 ospf hello-interval < <i>l-65535</i> >
Configures the indicated interval, in seconds, between the hello packets, that the router sends on the interface.
Command mode: Interface IP
[no] ipv6 ospf linklsasuppress
Enables or disables Link LSA suppression. When suppressed, no Link LSAs are originated. Default setting is disabled.
Command mode: Interface IP

Con	nmand Syntax and Usage
	6 ospf network {broadcast non-broadcast pint-to-multipoint
	point-to-point}
	Configures the network type for the OSPFv3 interface:
	 broadcast: network where all routers use the broadcast capability
	 non-broadcast: non-broadcast multiple access (NBMA) network supporting pseudo-broadcast (multicast and broadcast traffic is configured manually)
	 point-to-multipoint: network where multiple point-to-point links are set up on the same interface
	– point-to-point: network that joins a single pair of routers
	The default value is broadcast.
	Command mode: Interface IP
ipv	6 ospf poll-interval <i><0-4294967295></i>
	Configures the poll interval in seconds for neighbors in NBMA networks. Default value is 120.
	Command mode: Interface IP
no	ipv6 ospf poll-interval
	Configures the poll interval in seconds for neighbors in NBMA and point-to-multipoint networks to its default 120 seconds value.
	Command mode: Interface IP
[no] ipv6 ospf dead-interval <1-65535>
	Configures the health parameters of a hello packet, in seconds, before declaring a silent router to be down.
	Command mode: Interface IP
[no] ipv6 ospf transmit-delay <1-1800>
	Configures the estimated time, in seconds, taken to transmit LS update packe over this interface.
	Command mode: Interface IP
[no] ipv6 ospf retransmit-interval <1-1800>
	Configures the interval in seconds, between LSA retransmissions for adjacencies belonging to interface.
	Command mode: Interface IP
[no] ipv6 ospf passive-interface
	Enables or disables the passive setting on the interface. On a passive interface, OSPFv3 protocol packets are suppressed.
	Command mode: Interface IP
ipv	6 ospf enable
	-
-	Enables OSPFv3 on the interface.

Table 322. OSPFv3 Interface Configuration Options (continued)

Table 322. OSPFv3 Interface Configuration Options (continued)

Command Syntax and Usage	
ipv6 ospf no enable	
Disables OSPFv3 on the interface.	
Command mode: Interface IP	
no ipv6 ospf	
Deletes OSPFv3 from interface.	
Command mode: Interface IP	
show ipv6 ospf interface	
Displays the current settings for OSPFv3 interface.	
Command mode: Interface IP	

OSPFv3 over IPSec Configuration

The following table describes the OSPFv3 over IPsec Configuration commands.

Command Syntax and Usage
<pre>ipv6 ospf authentication ipsec spi <256-4294967295> {md5 sha1} <authentication (hexadecimal)="" key=""></authentication></pre>
Configures the Security Parameters Index (SPI), algorithm, and authentication key for the Authentication Header (AH). The algorithms supported are:
 MD5 (hexadecimal key length is 32)
 SHA1 (hexadecimal key length is 40)
Command mode: Interface IP
[no] ipv6 ospf authentication ipsec enable
Enables or disables IPsec.
Command mode: Interface IP
no ipv6 ospf authentication ipsec spi <256-4294967295>
Disables the specified Authentication Header (AH) SPI.
Command mode: Interface IP
ipv6 ospf authentication ipsec default
Resets the Authentication Header (AH) configuration to default values.
Command mode: Interface IP

Table 323. Layer 3 IPsec Configuration Options (continued)

Cor	nmand Syntax and Usage
	6 ospf encryption ipsec spi <256-4294967295> esp {3des aes-cbc des null} < <i>encryption key (hexadecimal)</i> > null} {md5 sha1 none} < <i>authentication key (hexadecimal)</i> >
	Configures the Security Parameters Index (SPI), encryption algorithm, authentication algorithm, and authentication key for the Encapsulating Security Payload (ESP). The ESP algorithms supported are:
	 3DES (hexadecimal key length is 48)
	 AES-CBC (hexadecimal key length is 32)
	 DES (hexadecimal key length is 16)
	The authentication algorithms supported are:
	 MD5 (hexadecimal key length is 32)
	 SHA1 (hexadecimal key length is 40)
	– none
	Note: If the encryption algorithm is null, the authentication algorithm must be either MD5 or SHA1. (hexadecimal key length is 40). If an encryption algorithm is specified (3DES, AES-CBC, or DES), the authentication algorithm can be none.
	Command mode: Interface IP
ipv	6 ospf encryption ipsec enable
	Enables OSPFv3 encryption for this interface.
	Command mode: Interface IP
no	ipv6 ospf encryption ipsec spi <256-4294967295>
	Disables the specified Encapsulating Security Payload (ESP) SPI.
	Command mode: Interface IP
ipv	6 ospf encryption ipsec default
	Resets the Encapsulating Security Payload (ESP) configuration to default values.
	Command mode: Interface IP

OSPFv3 Virtual Link Configuration

Table 324. OSPFv3 Virtual Link Configuration Options

Command Syntax and Usage	
area-virtual-link <1-3> area <area (0-2)="" index=""/>	
Configures the OSPF area index.	
Command mode: Router OSPF3	
area-virtual-link <1-3> hello-interval <1-65535)>	
Configures the indicated interval, in seconds, between the hello packets, the router sends on the interface.	that
Command mode: Router OSPF3	
area-virtual-link <1-3> dead-interval <1-65535>	
Configures the time period, in seconds, for which the router waits for hello packet from the neighbor before declaring this neighbor down.	D
Command mode: Router OSPF3	
area-virtual-link <1-3> transmit-delay <1-1800>	
Configures the estimated time, in seconds, taken to transmit LS update pa over this interface.	acket
Command mode: Router OSPF3	
area-virtual-link <1-3> retransmit-interval <1-1800>	
Configures the interval, in seconds, between link-state advertisement (LS retransmissions for adjacencies belonging to the OSPFv3 virtual link inter- The default value is five seconds.	
Command mode: Router OSPF3	
area-virtual-link <1-3> neighbor-router <nbr (ip="" addre<="" id="" router="" td=""><td><(22</td></nbr>	<(22
Configures the router ID of the virtual neighbor. The default setting is 0.0.	0.0
Command mode: Router OSPF3	
area-virtual-link <1-3> enable	
Enables OSPF virtual link.	
Command mode: Router OSPF3	
area-virtual-link <1-3> no enable	
Disables OSPF virtual link.	
Command mode: Router OSPF3	
no area-virtual-link < <i>1-3</i> >	
Deletes OSPF virtual link.	
Command mode: Router OSPF3	
show ipv6 ospf area-virtual-link	
Displays the current OSPFv3 virtual link settings.	
Command mode: All	

OSPFv3 Host Entry Configuration

Table 325	OSPEv3 Host Entr	y Configuration Options
10010 020.	001 1 V0 1103t Entr	y configuration options

Command Syntax and Usage	
host <1-128> address <1Pv6 address> <prefix length<="" th=""><th>(1-128)></th></prefix>	(1-128)>
Configures the base IPv6 address and the subnet pre entry.	fix length for the host
Command mode: Router OSPF3	
host <1-128> area < <i>area index (0-2)</i> >	
Configures the area index of the host.	
Command mode: Router OSPF3	
host <1-128> cost <1-65535>	
Configures the cost value of the host.	
Command mode: Router OSPF3	
host <1-128> enable	
Enables the host entry.	
Command mode: Router OSPF3	
no host <1-128> enable	
Disables the host entry.	
Command mode: Router OSPF3	
no host <1-128>	
Deletes the host entry.	
Command mode: Router OSPF3	
show ipv6 ospf host $[]$	
Displays the current OSPFv3 host entries.	
Command mode: All	

OSPFv3 Redist Entry Configuration

Table 326	OSPEv3 Redis	t Entry Configuratio	n Ontions
Table 520.	OSI I VS Neuls	Linuy Conngulatio	n Options

rec	dist-config <1-128> address <ipv6 address=""> <ipv6 (1-128)="" length="" prefix=""></ipv6></ipv6>
	Configures the base IPv6 address and the subnet prefix length for the
	redistribution entry.
	Command mode: Router OSPF3
rec	dist-config <1-128> metric-value <1-16777215>
	Configures the route metric value applied to the route before it is advertised into the OSPFv3 domain.
	Command mode: Router OSPF3
rec	dist-config <1-128> metric-type asExttype1 asExttype2
	Configures the metric type applied to the route before it is advertised into the OSPFv3 domain.
	Command mode: Router OSPF3
[no	o] redist-config <1-128> tag <0-4294967295>
	Configures the route tag.
	Command mode: Router OSPF3
rec	dist-config <1-128> enable
	Enables the OSPFv3 redistribution entry.
	Command mode: Router OSPF3
no	redist-config <1-128> enable
	Disables the OSPFv3 redistribution entry.
	Command mode: Router OSPF3
no	redist-config <1-128>
	Deletes the OSPFv3 redistribution entry.
	Command mode: Router OSPF3
sho	ow ipv6 ospf redist-config
	Displays the current OSPFv3 redistribution configuration entries.
	Command mode: Router OSPF3

OSPFv3 Redistribute Configuration

Table 327. OSPFv3 Redistribute Configuration Options

Command Syntax and Usage
<pre>[no] redistribute {connected static} export <metric (1-16777215)="" value=""> <metric (1-2)="" type=""> <tag (0-4294967295)=""></tag></metric></metric></pre>
Exports the routes of this protocol as external OSPFv3 AS-external LSAs in which the metric, metric type, and route tag are specified. To remove a previous configuration and stop exporting the routes of the protocol, use the no form of the command.
Command mode: Router OSPF3
show ipv6 ospf
Displays the current OSPFv3 route redistribution settings.
Command mode: All

IP Loopback Interface Configuration

An IP loopback interface is not connected to any physical port. A loopback interface is always accessible over the network.

Table 328. IP Loopback Interface Commands

int	cerface loopback <1-5>
	Enter Interface Loopback mode.
	Command mode: Global configuration
no	interface loopback <1-5>
	Deletes the selected loopback interface.
	Command mode: Global configuration
ip	address <ip address=""></ip>
	Defines the loopback interface IP address.
	Command mode: Interface loopback
ip	netmask <subnet mask=""></subnet>
	Defines the loopback interface subnet mask.
	Command mode: Interface loopback
ip	ospf area <area number=""/>
	Configures the OSPF area index used by the loopback interface.
	Command mode: Interface loopback
[no	o] ip ospf enable
	Enables or disables OSPF for the loopback interface.
	Command mode: Interface loopback
ena	able
	Enables the loopback interface.
	Command mode: Interface loopback
no	enable
	Disables the loopback interface.
	Command mode: Interface loopback
sho	ow interface loopback <1-5>
	Displays the current IP loopback interface parameters.
	Command mode: All

Converged Enhanced Ethernet Configuration

 Table 329 describes the Converged Enhanced Ethernet (CEE) configuration commands.

Table 329. CEE Commands

Command Syntax and Usage

cee enable

Globally turns CEE on.

Command mode: Global configuration

no cee enable

Globally turns CEE off.

Command mode: Global configuration

cee iscsi enable

Enables or disables ISCSI TLV advertisements.

Command mode: Global configuration

show cee iscsi

Displays the current ISCSI TLV parameters.

Command mode: All

show cee

Displays the current CEE parameters.

Command mode: All

ETS Global Configuration

Enhanced Transmission Selection (ETS) allows you to allocate bandwidth to different traffic types, based on 802.1p priority.

Note: ETS configuration supersedes the QoS 802.1p menu. When ETS is enabled, you cannot configure the 802.1p menu options.

ETS Global Priority Group Configuration

Table 330 describes the global ETS Priority Group configuration options.

Table 330.	Global ETS Priority Group Commands
------------	------------------------------------

Command Syntax and Usage
cee global ets priority-group pgid <0-7, 15> bandwidth <802.1p priority (0-7)> <bandwidth (0,="" 10-100)="" percentage=""></bandwidth>
Allows you to configure Priority Group parameters. You can enter the link bandwidth percentage allocated to the Priority Group, and also assign one or more 802.1p values to the Priority Group.
Command mode: Global configuration
cee global ets priority-group pgid <0-7,15> description <1-31 characters>
Enter text that describes this Priority Group.
Command mode: Global configuration
no cee global ets priority-group <0-7, $15>$ description
Removes the description for the specified Priority Group.
Command mode: Global configuration
<pre>[no] cee global ets mcast-priority-group mcpgid <0-3> [bandwidth percentage <0,10-100>] [priority <0-7>]</pre>
Configures Multicast Priority Group parameters. You can enter the link bandwidth percentage allocated to the Multicast Priority Group, and assign one or more 802.1p values to the Multicast Priority Group.
Command mode: Global configuration
<pre>cee global ets mcast-priority-group mcpgid <0-3> description <1-31 characters></pre>
Enter text that describes the multicast priority group.
Command mode: Global configuration
no cee global ets mcast-priority-group mcpgid <0-3> description
Removes the description for the specified multicast priority group.
Command mode: Global configuration
cee global ets priority-group pgid <0-7,15> priority <0-7>
Adds one or more 802.1p priority values to the Priority Group. Enter one value per line, null to end.
Command mode: Global configuration

Table 330. Global ETS Priority Group Commands

Command Syntax and Usage	
show cee global ets priority-group <0-7, 15> Displays the current global ETS Priority Group parameters. Command mode : All	
show cee global ets Displays the current global ETS Priority Group parameters. Command mode : All	
show cee global ets mcast-priority-group <0-3> Displays the current global ETS Multicast Priority Group parameters. Command mode: All	

Priority Flow Control Configuration

Priority-based Flow Control (PFC) enhances flow control by allowing the switch to pause traffic based on its 802.1p priority value, while allowing traffic at other priority levels to continue.

Port-level 802.1p PFC Configuration

Table 331 describes the 802.1p Priority Flow Control (PFC) configuration options for the selected port.

Table 331. Port 802.1p PFC Options

Cor	Command Syntax and Usage	
cee	e port <i><port alias="" number="" or=""></port></i> pfc enable Enables Priority Flow Control on the selected port. Command mode : Global configuration	
no	cee port <i><port alias="" number="" or=""></port></i> pfc enable Disables Priority Flow Control on the selected port. Command mode : Global configuration	
cee	e port <i><port alias="" number="" or=""></port></i> pfc priority <i><</i> 0-7> enable Enables Priority Flow Control on the selected 802.1p priority. Note : PFC can be enabled on 802.1p priority 3 and one other priority only. Command mode : Global configuration	
no	cee port <i><port alias="" number="" or=""></port></i> pfc priority <i><0-7></i> enable Disables Priority Flow Control on the selected 802.1p priority. Command mode : Global configuration	
[no	 cee port <port alias="" number="" or=""> pfc priority <0-7> description <1-31 characters></port> Enter text to describe the priority value. Command mode: Global configuration 	

Table 331. Port 802.1p PFC Options (continued)

Command Syntax and Usage show cee port *<port alias or number>* pfc priority *<*0-7> Displays the current 802.1p PFC parameters for the selected port. Command mode: All show cee port *<port alias or number>* pfc Displays the current PFC parameters for the selected port. Command mode: All

DCBX Port Configuration

Table 332 describes the port DCB Capability Exchange Protocol (DCBX) configuration options.

Table 332. Port DCBX Commands

Command Syntax and Usage
<pre>[no] cee port <port alias="" number="" or=""> dcbx app_proto advertise</port></pre>
Enables or disables DCBX Application Protocol advertisements of
configuration data. When enabled, the Advertisement flag is set to 1 (advertise
data to the peer device).
Command mode: Global configuration
<pre>[no] cee port <port alias="" number="" or=""> dcbx app_proto willing</port></pre>
Enables or disables Application Protocol willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).
Command mode: Global configuration
[no] cee port <pre>port alias or number> dcbx ets advertise</pre>
Enables or disables DCBX ETS advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).
Command mode: Global configuration
[no] cee port <pre>port alias or number> dcbx ets willing</pre>
Enables or disables ETS willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).
Command mode: Global configuration
[no] cee port <pre>port alias or number> dcbx pfc advertise</pre>
Enables or disables DCBX PFC advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).
Command mode: Global configuration
[no] cee port <pre>port alias or number> dcbx pfc willing</pre>
Enables or disables PFC willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).
Command mode: Global configuration

Table 332. Port DCBX Commands (continued)

Command Sy	ntax and Usage
no cee poi	t <port alias="" number="" or=""> dcbx enable</port>
Disables	DCBX on the port.
Comma	nd mode: Global configuration
cee port ·	<i>port alias or number></i> dcbx enable
Enables	DCBX on the port.
Comma	nd mode: Global configuration
show cee p	ort <port alias="" number="" or=""> dcbx</port>
Displays	the current port DCBX parameters.
0	nd mode: All

Fibre Channel Configuration

As a converged switch, the CN4093 provides combined support for Ethernet and Fibre Channel (FC) networks. Ports EXT11-EXT16 are hybrid, allowing them to operate in either Ethernet mode (the default), or in Fibre Channel mode for direct connection to Fibre Channel devices.

The CN4093 can be used in the following Fibre Channel applications:

- · As an FCoE gateway for bridging FCoE and Fibre Channel networks
- As a Node Port Virtualized (NPV) Gateway for uplinking multiple Fibre Channel nodes to a full fabric switch
- As a Full-Fabric Switch a central element of a Fibre Channel network

Table 338 describes generic Fibre Channel configuration options.

Table 333. Fibre Channel Configuration Commands

Command Syntax and Usage
[no] system port < low port>- < high port> type fc
Enables or disables Fibre Channel mode on the specified port range. Fibre Channel can be enabled only for port pairs, specifically for: EXT11-EXT12, EXT13-EXT14 and EXT15-EXT16. Default setting is disabled (ports are in Ethernet mode).
Note: VLAN tagging is automatically enabled on any ports placed in Fibre Channel mode.
Command mode: Global configuration
<pre>[no] fcalias <1-64 characters> wwn <port name="" wide="" world=""> Configures or removes an FC alias name for the specified port World Wide Name.</port></pre>

Command mode: Global configuration

Table 333. Fibre Channel Configuration Commands (continued)

Command Syntax and Usage

fcdomain domain <0-239> {preferred|static}

Configures the domain type for the specified FC domain ID:

- <u>preferred</u> allows the domain ID to be re-assigned. If the switch does not get its requested domain ID, it accepts any assigned domain ID.
- static does not allow the domain ID to be re-assigned. If the switch does not get that domain ID, it does not join the fabric.

Default setting is preferred.

Command mode: Global configuration

clear zone database

Erases all FC zones and zonesets.

Command mode: Global configuration

FC Port Configuration

Use the following commands to configure Fibre Channel ports.

```
Command Syntax and Usage

interface fc <FC port alias or number>

Enter Fibre Channel port configuration mode.

Command mode: Global configuration

[no] shutdown

Disables or enables the FC port. Default setting is enabled (no shutdown)

Command mode: FC Port configuration

fc-speed {2|4|8|auto}

Configures the Fibre Channel port speed in Gbps or allows the port to

negotiate its speed automatically. Default setting is auto.

Command mode: FC Port configuration
```

FC VLAN Configuration

Use the following commands to configure the Fibre Channel Forwarding VLAN.

vla	an <i><vlan number=""></vlan></i>
	Enter VLAN configuration mode.
	Command mode: Global configuration
[nc] fcf enable
	Enables or disables the VLAN as Fibre Channel Forwarding VLAN. Default setting is disabled.
	Command mode: VLAN configuration
[nc) npv enable
	Enables or disables NPV gateway functionality for the VLAN. Default setting is disabled.
	Command mode: VLAN configuration
[nc] npv traffic-map external-interface <port no.=""></port>
	Enables or disables the selected ports as NP (external uplink) ports.
	Command mode: VLAN configuration
fcc	be fcmap <fabric id="" map=""></fabric>
	Configures the global FC-map that identifies the FC fabric used by the switch. The switch will discard MAC addresses that are not part of the current fabric, which avoids cross-fabric talk.
	The FC-map is a 24-bit hexadecimal value. The default value is 0x0efc00.
	Command mode: VLAN configuration
no	fcoe fcmap
	Resets the FC-map to the default 0x0efc00 value.
	Command mode: VLAN configuration
fcc	be fcf-priority <0-255>
	Configures the FCF priority. When an FC initiator sends login requests to multiple FCFs, it selects the one with the highest priority value.
	The default value is 128.
	Command mode: VLAN configuration
no	fcoe fcf-priority
	Resets the FCF priority to the default 128 value.
	Command mode: VLAN configuration
fcc	be fka-adv-period <8-90>
	Configures the FIP Keep Alive advertising period, in seconds.
	Command mode: VLAN configuration

FC Zone Configuration

Use the following commands to configure Fibre Channel zones.

Table 336. Fibre Channel Zone Configuration Commands

Command Syntax and Usage
[no] zone name <1-64 characters>
Enter FC Zone configuration mode for the specified zone. If the zone doesn't exist, it is created. The no form of the command erases the zone.
Command mode: Global configuration
zone clone <selected_zone_name> <new_zone_name></new_zone_name></selected_zone_name>
Creates a new zone with the attributes of the selected zone.
Command mode: Global configuration
zone rename < <i>current_name</i> > < <i>new_name</i> >
Renames the FC zone.
Command mode: Global configuration
[no] zone default-zone permit
Permits or denies traffic flow to default zone members.
Command mode: Global configuration
<pre>[no] member {pwwn <pwwn> fcid <id number=""> fcalias <alias id=""> }</alias></id></pwwn></pre>
Adds or removes zone members based on:
– pwwn: Port World Wide Number
 fcid: FC ID of the port, in hex format (for example, 0xce00d1).
 fcalias: Alias name of the FC device.
Command mode: FC Zone configuration

FC Zoneset Configuration

Use the following commands to configure Fibre Channel zonesets.

Table 337. Fibre Channel Zoneset Configuration Commands

Command Syntax and Usage
[no] zoneset name <1-64 characters>
Enter FC Zoneset configuration mode for the specified zone. If the zoneset doesn't exist, it is created. The no form of the command erases the zoneset.
Command mode: Global configuration
[no] zoneset activate name <1-64 characters>
Activates or deactivates the zoneset. Only one zoneset can be active at any point in time. Activating a zoneset automatically deactivates any other zoneset currently active.
Command mode: Global configuration

Table 337. Fibre Channel Zoneset Configuration Commands

Command Syntax and Usage

zoneset clone <selected_zoneset_name> <new_zoneset_name>

Creates a new zoneset with the attributes of the selected zoneset.

Command mode: Global configuration

zone copy active-zoneset running-config

Copies the active zoneset database to the running configuration.

Command mode: Global configuration

zoneset rename <current_name> <new_name>

Renames the FC zoneset.

Command mode: Global configuration

[no] member <1-64 characters>

Adds or removes a zone from the zoneset.

Command mode: FC Zoneset configuration

Fibre Channel over Ethernet Configuration

Fibre Channel over Ethernet (FCoE) transports Fibre Channel frames over an Ethernet fabric. The CEE features and FCoE features allow you to create a lossless Ethernet transport mechanism.

Table 338 describes the FCoE configuration options.

Table 338. FCoE Configuration Commands

Command Syntax and Usage
fcoe fips enable
Globally turns FIP Snooping on.
Command mode: Global configuration
no fcoe fips enable
Globally turns FIP Snooping off.
Command mode: Global configuration
[no] fcoe fips timeout-acl
Enables or disables ACL time-out removal. When enabled, ACLs associated with expired FCFs and FCoE connections are removed from the system.
Command mode: Global configuration
show fcoe information
Displays the current FCoE parameters.
Command mode: All

FIPS Port Configuration

FIP Snooping allows the switch to monitor FCoE Initialization Protocol (FIP) frames to gather discovery, initialization, and maintenance data. This data is used to automatically configure ACLs that provide FCoE connections and data security.

 Table 339 describes the port Fibre Channel over Ethernet Initialization Protocol

 (FIP) Snooping configuration options.

Table 339. Port FIP Snooping Commands

Command Syntax and Usage

fcoe fips port <i><port alias="" number="" or=""></port></i> fcf-mode [auto on off] Configures FCoE Forwarding (FCF) on the port, as follows:	
 on: Configures the port as a Fibre Channel Forwarding (FCF) port. 	-
 off: Configures the port as an FCoE node (ENode). 	
- auto: Automatically detect the configuration of the connected devi	ce, and
configure this port to match.	
Command mode: Global configuration	
fcoe fips port <pre>port alias or number> enable</pre>	
Enables FIP Snooping on the port. The default setting is enabled.	
Note: If IPv6 ACLs are assigned to the port, you cannot enable FCoE	
Command mode: Global configuration	
no fcoe fips port <pre>port alias or number> enable</pre>	
Disables FIP Snooping on the port.	
Command mode: Global configuration	

Remote Monitoring Configuration

Remote Monitoring (RMON) allows you to monitor traffic flowing through the switch. The RMON MIB is described in RFC 1757.

The following sections describe the Remote Monitoring (RMON) configuration options.

- "RMON History Configuration" on page 464
- "RMON Event Configuration" on page 465
- "RMON Alarm Configuration" on page 466

RMON History Configuration

Table 340 describes the RMON History commands.

Table 340. RMON History Commands

Command Syntax and Usage	
rmon history <1-65535> interface-oid <1-127 characters>	
Configures the interface MIB Object Identifier. The IFOID must correspond to the standard interface OID, as follows:)
1.3.6.1.2.1.2.2.1.1.x	
where x is the ifIndex	
Command mode: Global configuration	
rmon history <1-65535> requested-buckets <1-65535>	
Configures the requested number of buckets, which is the number of discrete time intervals over which data is to be saved. The default value is 30.	÷
The maximum number of buckets that can be granted is 50.	
Command mode: Global configuration	
rmon history <1-65535> polling-interval <1-3600>	
Configures the time interval over which the data is sampled for each bucket.	
The default value is 1800.	
Command mode: Global configuration	
rmon history <1-65535> owner <1-127 characters>	
Enter a text string that identifies the person or entity that uses this History index.	
Command mode: Global configuration	
no rmon history <1-65535>	
Deletes the selected History index.	
Command mode: Global configuration	
show rmon history	
Displays the current RMON History parameters.	
Command mode: All	

RMON Event Configuration

Table 341 describes the RMON Event commands.

```
Table 341. RMON Event Commands
```

Command Syntax and Usage	
rmon event <1-65535> description <1-127 characters> Enter a text string to describe the event. Command mode : Global configuration	
[no] rmon event <1-65535> type log trap both Selects the type of notification provided for this event. For log events, an is made in the log table and sent to the configured syslog host. For trap e an SNMP trap is sent to the management station. Command mode: Global configuration	
rmon event <1-65535> owner <1-127 characters> Enter a text string that identifies the person or entity that uses this event Command mode : Global configuration	index.
no rmon event <1-65535> Deletes the selected RMON Event index. Command mode : Global configuration	
show rmon event Displays the current RMON Event parameters. Command mode : All	

RMON Alarm Configuration

The Alarm RMON group can track rising or falling values for a MIB object. The MIB object must be a counter, gauge, integer, or time interval. Each alarm index must correspond to an event index that triggers once the alarm threshold is crossed.

Table 342 describes the RMON Alarm commands.

Table 342. RMON Alarm Commands

Command Syntax and Usage
rmon alarm <1-65535> oid <1-127 characters>
Configures an alarm MIB Object Identifier.
Command mode: Global configuration
rmon alarm <1-65535> interval <1-65535>
Configures the time interval over which data is sampled and compared with the rising and falling thresholds. The default value is 1800.
Command mode: Global configuration
rmon alarm <1-65535> sample abs delta
Configures the method of sampling the selected variable and calculating the value to be compared against the thresholds, as follows:
 abs-absolute value, the value of the selected variable is compared directly with the thresholds at the end of the sampling interval.
 delta-delta value, the value of the selected variable at the last sample is subtracted from the current value, and the difference compared with the thresholds.
Command mode: Global configuration
rmon alarm <1-65535> alarm-type rising falling either
Configures the alarm type as rising, falling, or either (rising or falling).
Command mode: Global configuration
rmon alarm <1-65535> rising-limit <-2147483647-2147483647>
Configures the rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event is generated.
Command mode: Global configuration
rmon alarm <1-65535> falling-limit <-2147483647-214748364)
Configures the falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event is generated.
Command mode: Global configuration
rmon alarm <1-65535> rising-crossing-index <1-65535>
Configures the rising alarm event index that is triggered when a rising threshold is crossed.
Command mode: Global configuration

Table 342. RMON Alarm Commands (continued)

 Command Syntax and Usage

 rmon alarm <1-65535> falling-crossing-index <1-65535>

 Configures the falling alarm event index that is triggered when a falling threshold is crossed.

 Command mode: Global configuration

 rmon alarm <1-65535> owner <1-127 characters>

 Enter a text string that identifies the person or entity that uses this alarm index.

 Command mode: Global configuration

 no rmon alarm <1-65535>

 Deletes the selected RMON Alarm index.

 Command mode: Global configuration

 show rmon alarm

 Displays the current RMON Alarm parameters.

 Command mode: All

Virtualization Configuration

Table 343 describes the virtualization configuration options.

Table 343. Virtualization Configurations Options

ommand Syntax and Usage	
irt enable	
Enables VMready.	
Command mode: Global configuration	
o virt enable	
Disables VMready.	
Note: This command deletes all configured VM groups.	
Command mode: Global configuration	
how virt	
Displays the current virtualization parameters.	
Command mode: All	

VM Policy Bandwidth Management

Table 344 describes the bandwidth management options for the selected VM. Use these commands to limit the bandwidth used by each VM.

Table 344. VM Bandwidth Management Options

Command Syntax and Usage
<pre>virt vmpolicy vmbwidth [<mac address=""> <uuid> <name> <ip address=""> <index number="">] txrate <64-10000000> <max. (32-4096)="" burst=""> <acl number=""></acl></max.></index></ip></name></uuid></mac></pre>
The first value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the VM to the switch, in kilobits per second. Enter the value in multiples of 64.
The second values configures the maximum burst size, in kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.
The third value represents the ACL assigned to the transmission rate. The ACL is automatically, in sequential order, if not specified by the user. If there are no available ACLs, the TXrate cannot be configured. Each TXrate configuration reduces the number of available ACLs by one.
Command mode: Global configuration
<pre>virt vmpolicy vmbwidth [<mac address=""> <uuid> <name> </name></uuid></mac></pre>
The first value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the switch to the VM, in kilobits per second. Enter the value in multiples of 64.
The second values configures the maximum burst size, in kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.
Command mode: Global configuration

Table 344. VM Bandwidth Management Options (continued)

 Command Syntax and Usage

 [no] virt vmpolicy vmbwidth [<MAC address> |<UUID> |<name> |

 <IP address> |<index number>] bwctrl

 Enables or disables bandwidth control on the VM policy.

 Command mode: Global configuration

 [no] virt vmpolicy vmbwidth [<MAC address> |<UUID> |<name> |

 <IP address> |<index number>]

 Deletes the bandwidth management settings from this VM policy.

 Command mode: Global configuration

 show virt vmpolicy vmbandwidth [<MAC address> |<UUID> |<name> |

 <IP address> |<index number>]

 Displays the current VM bandwidth management parameters.

 Command mode: All

Virtual NIC Configuration

Table 345 describes the Virtual NIC (vNIC) configuration options.

```
Table 345. Virtual NIC options
```

Command Syntax and Usage	
vnic enable	
Globally turns vNIC on.	
Command mode: Global configuration	
no vnic enable	
Globally turns vNIC off.	
Command mode: Global configuration	
[no] vnic egress-bw-meter	
Enables or disables vNIC bandwidth metering. When enabled, any bandwidth which is not used by the vNIC to which it is allocated is shared with other vNICs. In all cases, the configured values for minimum bandwidth are honored. Only the excess bandwidth is shared.	
Command mode: Global configuration	
[no] vnic uplink-share	
Enable or disable vNIC shared mode. When enabled, multiple vNIC groups can be assigned to the same uplink port.	
Command mode: Global configuration	
show vnic	
Displays the current vNIC parameters.	
Command mode: All	

vNIC Port Configuration

Table 346 describes the Virtual NIC (vNIC) port configuration options.

```
Table 346. vNIC Port Commands
```

Com	imand Syntax and Usage
vni	c port <port alias="" number="" or=""> index <1-4></port>
I	Enters vNIC Configuration mode.
l	Note: This command is valid for internal server ports only.
(Command mode: Global configuration
ban	dwidth <1-100>
	Configures the maximum bandwidth allocated to this vNIC, in increments of 100 Mbps. For example:
-	– 1 = 100 Mbps
-	– 10 = 1000 Mbps
(Command mode: vNIC configuration
enal	ble
I	Enables the vNIC.
(Command mode: vNIC configuration
no	enable
I	Disables the vNIC.
(Command mode: vNIC configuration

Virtual NIC Group Configuration

Table 347 describes the Virtual NIC (vNIC) Group configuration options.

Table 347. vNIC Group Commands

Command Syntax and Usage
vnic vnicgroup <1-32>
Enters vNIC Group Configuration mode.
Command mode: Global Configuration
vlan <vlan number=""></vlan>
Assigns a VLAN to the vNIC Group.
Command mode: vNIC Group configuration
[no] key <lacp key=""></lacp>
Adds or removes the selected LACP trunk group from the vNIC Group.
Command mode: vNIC Group configuration

Table 347. vNIC Group Commands (continued)

Cor	nmand Syntax and Usage
) failover
[110	Enables or disables uplink failover for the vNIC Group. Uplink Failover for the vNIC Group will disable all vNIC and non-vNIC ports in the group. Other port functions continue to operate normally.
	The default setting is disabled.
	Command mode: vNIC Group configuration
men	uber <vnic number=""></vnic>
	Adds a vNIC to the vNIC Group. The vNIC ID is comprised of the port number and the vNIC number. For example: 1.1
	Command mode: vNIC Group configuration
no	member <vnic number=""></vnic>
	Removes the selected vNIC from the vNIC Group.
	Command mode: vNIC Group configuration
por	rt <port alias="" number="" or=""></port>
	Adds the non-vNIC port or uplink port to the vNIC Group.
	Command mode: vNIC Group configuration
no	port <port alias="" number="" or=""></port>
	Removes the non-vNIC port or uplink port from the vNIC Group.
	Command mode: vNIC Group configuration
tru	ink <trunk number=""></trunk>
	Adds the uplink trunk group to the vNIC Group.
	Command mode: vNIC Group configuration
no	trunk <trunk number=""></trunk>
110	Removes the uplink trunk group from the vNIC Group.
	Command mode: vNIC Group configuration
кеу	<pre>v <trunk number=""> Adda the unlink ACD trunk to the unlink Crown</trunk></pre>
	Adds the uplink LACP trunk to the vNIC Group.
	Command mode: vNIC Group configuration
no	key <trunk number=""></trunk>
	Removes the uplink LACP trunk from the vNIC Group.
	Command mode: vNIC Group configuration
ena	ble
	Enables the vNIC Group.
	Command mode: vNIC Group configuration
no	enable
	Disables the vNIC Group.
	Command mode: vNIC Group configuration

Table 347. vNIC Group Commands (continued)

Command Syntax and Usage no vnic vnicgroup <1-32>

Deletes the selected vNIC Group.

Command mode: Global configuration

show vnicgroup

Displays the current vNIC Group parameters.

Command mode: All

UFP Configuration

Table 348 describes the Unified Fabric Port (UFP) configuration options. UFP allows defining up to 4 virtual ports per physical port. Each virtual port can be set up to operate in a specific mode (access, trunk, tunnel, FCoE) and within predefined bandwidth limits.

Note: vNIC and UFP are mutually exclusive. Only one of them can be globally enabled at any point in time.

Table 348. UFP Commands

Command Syntax and Usage	
[no] ufp enable Globally enables or disables UFP. Command mode: Global configuration	
<pre>[no] ufp port <port_no.> enable Enables or disables UFP on the specified physical ports. Command mode: Global configuration</port_no.></pre>	
ufp port <port_no.> vport <1-4> Enters UFP Virtual Port Configuration mode. Command mode: Global configuration</port_no.>	
no ufp port <port_no.> [vport <1-4>] Disables UFP settings on the specified physical or virtual port. Command mode: Global configuration</port_no.>	
<pre>[no] enable Enables or disables the virtual port. Command mode: UFP Virtual Port Configuration</pre>	

Table 348. UFP Commands (continued)

Command Syntax and Usage
network {mode [access trunk tunnel fcoe auto] default-vlan <2-4094> default-tag}
Configures the virtual port network configuration settings:
 mode configures the virtual port's operating mode:
 access allows the virtual port to associate only with the default customer VLAN, as defined by the default-vlan option.
• trunk allows the virtual port to associate with up to 32 customer VLANs.
• tunnel makes the virtual port VLAN agnostic. This is the default setting.
 fcoe configures the virtual port to carry Fibre Channel over Ethernet traffic when linked to a Fibre Channel virtual Host Bus Adapter. Setting a virtual port in fcoe mode enables Priority Flow Control on the physical port.
 auto chooses the operating mode automatically
 default-vlan configures the default VLAN ID for the virtual port. The default value is automatically assigned (408x, where x is the SPAR ID). This option provides an override if conflicts arise with a customer VLAN ID on the upstream network.
 default-tag enables tagging egress frames with the default VLAN ID when the virtual port is in access or trunk mode and default-vlan is defined. Default setting is disabled.
Note: VLANs 4002-4005 cannot be used as customer VLANs
Note: A customer VLAN cannot be configured on multiple virtual ports of the same physical port.
Command mode: UFP Virtual Port Configuration
no network default-tag
Disables default VLAN ID tagging on the virtual port.
Command mode: UFP Virtual Port Configuration
qos bandwidth {max <10-100> min <10-100>}
Configures bandwidth allocation for the virtual port:
 Configures the minimum bandwidth guaranteed for the virtual port as a percentage of the physical port's bandwidth. The default value is 25. Configures the maximum bandwidth allowed for this virtual port as a
percentage of the physical port's bandwidth. The default value is 100.
Note: The aggregated minimum bandwidth guaranteed for all the virtual ports within a physical port cannot exceed 100.
Command mode: UFP Virtual Port Configuration

VM Group Configuration

Table 349 describes the VM group configuration options. A VM group is a collection of members, such as VMs, ports, or trunk groups. Members of a VM group share certain properties, including VLAN membership, ACLs (VMAP), and VM profiles.

Table 349. VM Group Commands

Command Syntax and Usage	
virt vmgroup <1-4069> cpu	
Enables or disables sending unregistered IPMC to CPU.	
Command mode: Global configuration	
virt vmgroup <1-4069> flood	
Enables or disables flooding unregistered IPMC.	
Command mode: Global configuration	
virt vmgroup <1-4069> optflood	
Enables or disables optimized flooding.	
Command mode: Global configuration	
virt vmgroup <1-4069> vlan <vlan number=""></vlan>	
Assigns a VLAN to this VM group. If you do not assign a VLAN to the VM group, the switch automatically assigns an unused VLAN when adding a port or a VM to the VM Group.	t
Note : If you add a VM profile to this group, the group will use the VLAN assigned to the profile.	
Command mode: Global configuration	
[no] virt vmgroup <1-4069> vmap <vmap number=""> intports extport Assigns the selected VLAN Map to this group. You can choose to limit operation of the VLAN Map to internal ports only or external ports only. If you do not select a port type, the VMAP is applied to the entire VM Group. For more information about configuring VLAN Maps, see "VMAP Configuration" on page 207</vmap>	
Configuration" on page 307. Command mode: Global configuration	
[no] virt vmgroup <1-4069> tag Enables or disables VLAN tagging on ports in this VM group.	
Command mode: Global configuration	
virt vmgroup <1-4069> vm [<mac address=""> <uuid> <name> <ip address=""> <index number="">]</index></ip></name></uuid></mac>	
Adds a VM to the VM group. Enter a unique identifier to select a VM. The UUID and name parameters apply only if Virtual Center information is configured (virt vmware vcspec). The VM index number is found in the VM information dump (show virt vm)).
Note : If the VM is connected to a port that is contained within the VM group, do not add the VM to the VM group.	С
Command mode: Global configuration	

Table 349. VM Group Commands (continued)

Cor	nmand Syntax and Usage
no	virt vmgroup <1-4069> vm [<mac address=""> <uuid> <name> <ip address=""> <index number="">]</index></ip></name></uuid></mac>
	Removes a VM from the VM group. Enter a unique identifier to select a VM. The UUID and name parameters apply only if Virtual Center information is configured (virt vmware vcspec). The VM index number is found in the VM information dump (show virt vm).
	Command mode: Global configuration
vir	ct vmgroup <1-4069> profile <profile (1-39="" characters)="" name=""></profile>
	Adds the selected VM profile to the VM group.
	Command mode: Global configuration
no	virt vmgroup <1-4069> profile
	Removes the VM profile assigned to the VM group.
	Note: This command can only be used if the VM group is empty (only has the profile assigned).
	Command mode: Global configuration
vir	rt vmgroup <1-4069> port <pre>port alias></pre>
	Adds the selected port to the VM group.
	Note : A port can be added to a VM group only if no VMs on that port are members of the VM group.
	Command mode: Global configuration
no	virt vmgroup <1-4069> port <pre>port alias></pre>
	Removes the selected port from the VM group.
	Command mode: Global configuration
vir	t vmgroup <1-4096> vport <port alias="" number="" or=""></port>
	Adds the selected virtual port to the VM group.
	Command mode: Global configuration
no	virt vmgroup <1-4096> vport <port alias="" number="" or=""></port>
	Removes the selected virtual port from the VM group.
	Command mode: Global configuration
vir	rt vmgroup <1-4069> portchannel <trunk number=""></trunk>
	Adds the selected trunk group to the VM group.
	Command mode: Global configuration
no	virt vmgroup <1-4069> portchannel <trunk number=""></trunk>
	Removes the selected trunk group from the VM group.
	Command mode: Global configuration

Table 349. VM Group Commands (continued)

<u> </u>		
Cor	nmand Syntax and Usage	
virt vmgroup <1-4069> key <1-65535>		
	Adds an LACP <i>admin key</i> to the VM group. LACP trunks formed with this <i>admin key</i> will be included in the VM group.	
	Command mode: Global configuration	
no	virt vmgroup <1-4069> key <1-65535>	
	Removes an LACP admin key from the VM group.	
	Command mode: Global configuration	
viı	rt vmgroup <1-4069> stg <stg number=""></stg>	
	Assigns the VM group VLAN to a Spanning Tree Group (STG).	
	Command mode: Global configuration	
vir	t vmgroup <1-4069> validate [basic advanced]	
	Enables MAC address spoof prevention for the specified VM group. Default setting is disabled.	
	 basic validation ensures lightweight port-based protection by cross-checking the VM MAC address, switch port and switch ID between the switch and the hypervisor. Applicable for "trusted" hypervisors, which are not susceptible to duplicating or reusing MAC addresses on virtual machines. 	
	 advanced validation ensures heavyweight VM-based protection by cross-checking the VM MAC address, VM UUID, switch port and switch ID between the switch and the hypervisor. Applicable for "untrusted" hypervisors, which are susceptible to duplicating or reusing MAC addresses on virtual machines. 	
	Command mode: Global configuration	
no	virt vmgroup <1-4069> validate	
	Disables MAC address spoof prevention for the specified VM group.	
	Command mode: Global configuration	
no	virt vmgroup <1-4069>	
	Deletes the VM group.	
	Command mode: Global configuration	
sho	ow virt vmgroup <1-4069>	
	Displays the current VM group parameters.	
	Command mode: All	

VM Check Configuration

Table 350 describes the VM Check validation options used for MAC address spoof prevention.

Table 350. VM Check Configuration Options

Command Syntax and Usage	
virt vmcheck acls max <1-256> Configures the maximum number of ACLs that can be set up for MAC a spoofing prevention in advanced validation mode. Default value is 50. Command mode: Global configuration	address
no virt vmcheck acls Disables ACL-based MAC address spoofing prevention in advanced va mode. Command mode: Global configuration	llidation
 virt vmcheck action basic {link log} Sets up action taken when detecting MAC address spoofing in basic va mode: link registers a syslog entry and disables the corresponding swite log registers a syslog entry Default setting is link. Command mode: Global configuration 	
 virt vmcheck action advanced {acl link log} Sets up action taken when detecting MAC address spoofing in advance validation mode: acl registers a syslog entry and installs an ACL to drop traffic incore the corresponding switch port originating from the spoofed MAC address a syslog entry and disables the corresponding switch port originating from the spoofed MAC address a link registers a syslog entry and disables the corresponding switch port originating from the spoofed MAC address and the corresponding switch port originating from the spoofed MAC address and the corresponding switch port originating from the spoofed MAC address and the corresponding switch port originating from the corresponding switch port and disables the corresponding switch port and the corresponding switch port	ning on ddress
<pre>[no] virt vmcheck trust <ports> Enables or disables trusted ports for VM communication. By default, a are disabled. Command mode: Global configuration</ports></pre>	ll ports
show virt vmcheck Displays the current VM Check settings. See page 112 for sample out Command mode: Global configuration	out.

VM Profile Configuration

Table 351 describes the VM Profiles configuration options.

```
Table 351. VM Profiles Commands
```

	mand Syntax and Usage
	<pre>c vmprofile <profile (1-39="" characters)="" name=""></profile></pre>
	Defines a name for the VM profile.
	Command mode: Global configuration
no v	virt vmprofile <profile (1-39="" characters)="" name=""></profile>
[Deletes the selected VM profile.
(Command mode: Global configuration
vir	<pre>t vmprofile edit <profile (1-39="" characters)="" name=""> vlan <vlan number=""></vlan></profile></pre>
/	Assigns a VLAN to the VM profile.
(Command mode: Global configuration
	virt vmprofile edit <profile (1-39="" characters)="" name=""> shaping [<average (1-1000000000)=""> <burst (1-1000000000)=""> <peak (1-1000000000)="">]</peak></burst></average></profile>
	Configures traffic shaping parameters implemented in the hypervisor, as ollows:
-	 Average traffic, in Kilobits per second
-	- Maximum burst size, in Kilobytes
-	 Peak traffic, in Kilobits per second
-	- Delete traffic shaping parameters.
(Command mode: Global configuration
	<pre>virt vmprofile edit <profile (1-39="" characters)="" name=""> eshaping <average (1-1000000000)=""> <burst (1-1000000000)=""> <pre>cpeak (1-1000000000)>]</pre></burst></average></profile></pre>
	Configures traffic egress shaping parameters implemented in the hypervisor, as follows:
-	 Average traffic, in Kilobits per second
-	 Maximum burst size, in Kilobytes
-	 Peak traffic, in Kilobits per second
-	- Delete traffic shaping parameters.
(Command mode: Global configuration
show	v virt vmprofile [<profile name="">]</profile>
	Displays the current VM Profile parameters.
	Command mode: All

VMWare Configuration

Table 352 describes the VMware configuration options. When the user configures the VMware Virtual Center, the VM Agent module in the switch can perform advanced functionality by communicating with the VMware management console. The Virtual Center provides VM and Host names, IP addresses, Virtual Switch and port group information. The VM Agent on the switch communicates with the Virtual Center to synchronize VM profiles between the switch and the VMware virtual switch.

Table 352. VM Ware Commands

Cc VN	vmware hbport $<1-65535>$
Co	I host to the Virtual Center. The default value is port 902.
	ommand mode: Global configuration
[no]	virt vmware vcspec [< <i>IP address</i> > [< <i>username</i> > noauth]
Vir	efines the Virtual Center credentials on the switch. Once you configure the tual Center, VM Agent functionality is enabled across the system. You are compted for the following information:
_	IP address of the Virtual Center
	User name and password for the Virtual Center
-	Whether to authenticate the SSL security certificate (yes or no)
Co	ommand mode: Global configuration
virt v <1-60>	vmware hello [enable haddr < <i>IP_address</i> > hport < <i>port_no</i> > htimer]
to	onfigures CDP (Cisco Discovery Protocol) advertisements sent periodically VMware ESX hypervisors. Exchanging CDP message with ESX hypervisors cilitates MAC address spoof prevention. Default setting is disabled.
_	enable enables CDP advertisements transmission.
_	haddr advertises a specific IP address instead of the default 0.0.0.0 IP.
_	hport enables ports on which CDP advertisements are sent.
	htimer sets the number of seconds between successive CDP advertisements. Default value is 30.
Co	ommand mode: Global configuration
no vi:	rt vmware hello [enable hport <port_no>]</port_no>
	sables CDP advertisement transmissions completely or only on specific rts.
Co	ommand mode: Global configuration
show	virt vmware
Dig	splays the current VMware parameters.

Miscellaneous VMready Configuration

You can pre-configure MAC addresses as VM Organization Unique Identifiers (OUIs). These configuration commands are only available using the IBM Networking OS CLI and the Miscellaneous VMready Configuration Menu. Table 352 describes the VMready configuration options.

Table 353. VMware Miscellaneous Options

Command Syntax and Usage
<pre>virt vmrmisc oui < 3 byte VM MAC OUI> <vendor name=""> Adds a MAC OUI.</vendor></pre>
no virt vmrmisc oui < 3 byte VM MAC OUI> Removes a MAC OUI.
show virt oui Displays all the configured MAC OUIs.
virt vmrmisc lmac Enables the switch to treat locally administered MAC addresses as VMs.
no virt vmrmisc lmac Disables the switch from treating locally administered MAC addresses as VMs.

Edge Virtual Bridge Configuration

You can configure your switch to use Edge Virtual Bridging (EVB). Table 354 describes the EVB configuration options.

Table 354. Edge Virtual Bridge Configuration Options

virt	evb vsidb <vsidb number=""></vsidb>
	ter Virtual Station Interface Database configuration mode.
	mmand mode: Global configuration
virt	evb update vsidb <vsidb_number></vsidb_number>
Up	date VSI types from the VSI database.
Co	mmand mode: All
clear	<pre>virt evb vsidb <vsidb_number></vsidb_number></pre>
Cle	ears local VSI types cache.
Co	mmand mode: Privileged EXEC
clear	virt evb vsi
Cle	ears VSI database associations.
Co	mmand mode: Privileged EXEC
host	<pre><ip address=""> [mgt-port data-port]</ip></pre>
	ts the Virtual Station Interface Type database manager IPv4/IPv6 address d the port used for the connection. By default, the management port is used.
Co	mmand mode: VSI Database
port	<1-65534>
Se	ts the Virtual Station Interface Type database manager port.
Co	mmand mode: VSI Database
filen	ame <uri path=""></uri>
Se	ts the Virtual Station Interface Type database document name.
Co	mmand mode: VSI Database
filep	ath <uri path=""></uri>
Se	ts the Virtual Station Interface Type database document path.
Co	mmand mode: VSI Database
updat	e-interval <5-300>
	ts the Virtual Station Interface Type database update interval in seconds. A ue of "0" disables periodic updates.
Co	mmand mode: VSI Database
	virt evb vsitypes [mgrid <0-255> typeid <1-16777215> rsion <0-255>
101	

Table 354. Edge Virtual Bridge Configuration Options

 Command Syntax and Usage

 show virt evb vsidb <VSIDB_number>

 Displays the current Virtual Station Interface database information.

 Command mode: All

 no virt evb vsidb <VSIDB_number>

 Resets the Virtual Station Interface Type database information to the default values.

 Command mode: Global configuration

Edge Virtual Bridge Profile Configuration

Table 355 describes the Edge Virtual Bridge profile configuration options.

Table 355. Edge Virtual Bridge VSI Type Profile Configuration Options

Command Syntax and Usage	
virt evb profile <profile_number> Enter Virtual Station Interface type profile configuration mode.</profile_number>	
Command mode: Global configuration	
[no] reflective-relay	
Enables or disables VEPA mode (Reflective Relay capability).	
Command mode: EVB Profile	
[no] vsi-discovery	
Enables or disables VSI Discovery (ECP and VDP).	
Command mode: EVB Profile	
no virt evb profile <profile_number></profile_number>	
Deletes the specified EVB profile.	
Command mode: Global configuration	
show virt evb profile [<1-16>]	
Displays the current EVB profile parameters.	
Command mode: All	
evb profile <1-16>	
Applies the specified EVB profile for the port. Automatically enables LLDP EVB TLV on the corresponding port.	
Command mode: Interface port	
no evb profile	
Resets EVB profile for the port. Automatically disables LLDP, EVB, and TLV on the corresponding port.	
Command mode: Interface port	

OpenFlow Configuration

OpenFlow is an open interface used to control the forwarding plane in compatible switches and routers remotely, from an external controller. The CN4093 10Gb Converged Scalable Switch can function as either a Hybrid or OpenFlow-only switch:

- In Hybrid mode (default), an OpenFlow pipeline can be set up to run in parallel to the normal Ethernet switching pipeline. The two pipelines are completely separate, each with its own dedicated ports and confined packet flows.
- In OpenFlow-only mode, the normal Ethernet switching capabilities are disabled, and the CN4093 10Gb Converged Scalable Switch behaves as a pure OpenFlow switch.

Table 356 describes the OpenFlow configuration options.

Table 356.

Command Syntax and Usage
boot profile openflow Starts the switch in OpenFlow-only mode on reboot. Command mode: Global configuration
boot profile default Starts the switch in Hybrid mode on reboot. This is the default setting. Command mode: Global configuration
 [no] openflow enable Enables or disables OpenFlow. Note: The following features are not supported when OpenFlow is enabled: ACL, VNIC egress, VMready VMAP, FCOE, IPv6, IPMC, ECN, PVID and MACL. Command mode: Global configuration
 [no] openflow edgeport <port_numbers></port_numbers> Enables or disables the selected port as an OpenFlow edge port (outside port). Edge ports are usually connected to servers. The default setting is disabled. Note: Learning is turned on and flood blocking is turned on in OpenFlow edge ports. Command mode: Global configuration
 openflow fdb-priority <1-65535> Configures a priority value to map flows with matching priority to FDB entries, if the flow uses destination MAC address and VLAN as the matching qualifier and single port as the action. The default value is 1000. Note: When you issue this command, all registered flow entries are cleared. Command mode: Global configuration

Table 356.

openflow fdb-priority Resets priority value required for FDB flows to the default value of 1000. Command mode: Global configuration
enflow fdb-timeout <1-300>
Configures a time interval in seconds for periodically clearing dynamically learned FDB entries on edge ports. Default value is disabled.
Command mode: Global configuration
openflow fdb-timeout Disables periodical clearing of dynamically learned FDB entries on edge ports. Command mode : Global configuration
o] openflow fdb-aging
Enables or disables periodical clearing of dynamically learned FDB entries on a specific port. Default value is disabled on OpenFlow edge ports.
Command mode: Interface port
 D) openflow static-station-move Enables or disables forwarding frames that have source MAC addresses conflicting with entries in the static FDB table. This enables equal cost multi-path routing and use cases where IPS and Firewall devices forward packets without changing the source MAC address. Default value is disabled. Command mode: Interface port
enflow instance <1-2> Enters OpenFlow Instance command mode for the specified instance ID. Command mode : Global configuration, OpenFlow Instance
openflow instance <1-2> Deletes the instance and clears flow table and statistics for the specified instance ID.
Command mode: Global configuration, OpenFlow Instance
 D) openflow mgmtport <ports></ports> Enables or disables OpenFlow management for the selected port. Use OpenFlow management ports to communicate with an OpenFlow Controller. In Hybrid mode, controllers can also connect to the switch using legacy ports. The default setting is disabled. Command mode: Global configuration

```
Table 356.
```

Command Syntax and Usage
show openflow [flow-allocation information statistics table]
Displays the current OpenFlow configuration.For more information, see page 98.
 flow-allocation displays the configured, current and maximum number of flows for each OpenFlow instance. For more information, see page 98.
 information displays the configuration for each OpenFlow instance. For more information, see page 98.
 statistics displays traffic statistics for each OpenFlow instance. For more information see page 99.
 table displays the basic and emergency flow tables for each OpenFlow instance. For more information, see page 100
Command mode: All
<pre>show openflow instance <1-2> [information statistics table] Displays OpenFlow information for the specified instance ID:</pre>
clear openflow {statistics table [basic emergency]}
Clears OpenFlow data for all instances:
 The statistics option clears traffic statistics.
 The table option clears all basic and emergency OpenFlow tables.
• The basic option clears only the basic OpenfFlow tables.
• The emergency option clears only the emergency OpenFlow tables.
Command mode: Privileged EXEC
<pre>clear openflow instance <1-2> {statistics table [basic emergency] }</pre>
Clears OpenFlow data for the specified instance ID: - The statistics option clears traffic statistics.
 The statistics option clears all basic and emergency OpenFlow tables.
 The basic option clears only the basic OpenfFlow table.
 The emergency option clears only the emergency OpenFlow table.
Command mode: Privileged EXEC
[no] buffer
Enables or disables buffering support for OpenFlow packets. The default setting is disabled.
Command mode: OpenFlow Instance

Table 356.

acr	most retry <1 %
cor	nect-retry <1-8>
	Configures the maximum number of attempts to establish connection to a controller, before assuming the controller is down. The default value is 4.
	Command mode: OpenFlow Instance
no	connect-retry
	Resets the connect-retry value to 4.
	Command mode: OpenFlow Instance
	ntroller <1-4> address < <i>ip_address</i> > [data-port mgt-port m-port]
	Configures the IP address of the OpenFlow Controller. You may specify the port to use for data transfer: data port (data-port), management port (mgt-port) or external management port (extm-port). By default, the system uses the management port.
	Command mode: OpenFlow Instance
con	troller <1-4> port <tcp (1-65535)="" number="" port=""></tcp>
	Configures the TCP port used for communication with the Controller. The default port is 6633.
	Command mode: OpenFlow Instance
no	controller <1-4>
	Deletes the selected controller from the specified instance ID.
	Command mode: OpenFlow Instance
dpi	.d <hex string=""></hex>
	Applies an 8 byte Datapath ID to the instance, which enables equal cost multi-path routing in an OpenFlow environment. The default value is the instance ID followed by the switch MAC.
	Command mode: OpenFlow Instance
no	dpid
	Resets the instance's Datapath ID to the default value (instance ID followed b the switch MAC).
	Command mode: OpenFlow Instance
ecł	no-reply-timeout <2-65535>
	Configures the duration in seconds the switch will wait to receive an echo repl from the controller, before assuming failure. The default value is 15.
	Note: The echo-reply-timeout value must be lower than the echo-request-interval value.
	Command mode: OpenFlow Instance
no	echo-reply-timeout
	Resets the echo-reply-timeout to the default value of 15.
	Command mode: OpenFlow Instance

Table 356.

-	
ecł	no-request-interval <5-65535>
	Configures the maximum duration in seconds the switch will keep sending echo requests to a non-responsive controller. The default value is 30.
	Note: The echo-request-interval value must be higher than the echo-reply-timeout value.
	Command mode: OpenFlow Instance
no	echo-request-interval
	Resets the echo-request-interval value to the default value of 30.
	Command mode: OpenFlow Instance
eme	ergency [timeout <0-3600>]
	Forces the instance in emergency mode.
	The timeout parameter configures the duration in seconds after which the emergency mode expires. The default value is 30.
	Command mode: OpenFlow Instance
no	emergency [timeout]
	Brings the instance out of emergency mode.
	The timeout parameter resets the emergency mode duration to the default value of 30.
	Command mode: OpenFlow Instance
[nc] enable
	Enables or disables the instance. When disabling an instance, its flow tables and statistics are cleared.
	Command mode: OpenFlow Instance
max	x-flow-acl <0-750/1000>
	Enables or disables the maximum flow ACL option, which ensures a dedicated maximum number of ACL flows are available for the instance. The maximum number of entries is 750 in Hybrid mode and 1000 in OpenFlow Only mode. The total number of 750/1000 entries is shared between instances. By default, $max-flow-acl$ is set to 0, allowing instances to dynamically access the available ACL flow slots until depletion. Setting $max-flow-acl$ manually limits the number of ACL flow slots available for other instances by the corresponding value.
	Command mode: OpenFlow Instance
max	x-flow-mcast-fdb <0-4096>
	Enables or disables the maximum flow multicast FDB option, which ensures a dedicated maximum number of FDB multicast flows are available for the instance. The total number of 4096 entries is shared between instances. By default, $max-flow-mcast-fdb$ is set to 0, allowing instances to dynamically access the available FDB multicast flow slots until depletion. Setting $max-flow-mcast-fdb$ manually limits the number of FDB multicast flow slots available for other instances by the corresponding value.

Table 356.

max	c-flow-ucast-fdb <0-123904>
	Enables or disables the maximum flow unicast FDB option, which ensures a dedicated maximum number of FDB unicast flows available for the instance. The total number of 123904 entries is shared between instances. By default, <code>max-flow-ucast-fdb</code> is set to 0, allowing instances to dynamically access the available FDB unicast flow slots until depletion. Setting <code>max-flow-ucast-fdb</code> manually limits the number of FDB unicast flow slots available for other instances by the corresponding value.
	Command mode: OpenFlow Instance
no	max-flow-acl
	Sets the instance's maximum number of ACL based flows to the default value of 0 (dynamic allocation).
	Command mode: OpenFlow Instance
no	max-flow-mcast-fdb
	Sets the instance's maximum number of FDB based multicast flows to the default value of 0 (dynamic allocation).
	Command mode: OpenFlow Instance
no	max-flow-ucast-fdb
	Sets the instance's maximum number of FDB based unicast flows to the default value of 0 (dynamic allocation).
	Command mode: OpenFlow Instance
[nc] member <ports></ports>
	Enables or disables port usage by the OpenFlow instance for data traffic.
	Command mode: OpenFlow Instance
mir	n-flow-timeout <0-300>
	Sets the minimum number of seconds after which a flow can be cleared from the instance's tables. Default value is 0, meaning controller provided values are used instead.
	Command mode: OpenFlow Instance
no	min-flow-timeout
	Sets the number of seconds after which a flow can be cleared from the instance's tables to the default value of 0 (controller provided values).

Static Flows Configuration

Static flows are ACL OpenFlow entries set up manually from the CLI by the administrator. Static flows cannot be deleted/modified by OpenFlow controllers and will continue to function when the switch goes into emergency mode. Even if they

qualify as FDB entries based on their settings, static flows are always stored as ACL entries. A total of maximum 750 static flows pool is shared between all OpenFlow instances.

Table 357 describes the static flow configuration options.

Table 357. Static Flows

Command Syntax and Usage

static-table add index $<\!\!1\text{-}750\!\!>$ match WORD actions WORD [options WORD] priority $<\!\!0\text{-}65535\!\!>$

Adds a static flow entry to the instance.

Command mode: OpenFlow Instance

static-table modify index $<\!l\text{-}750\!\!>$ match WORD actions WORD [options WORD] priority $<\!l\text{-}65535\!\!>$

Overwrites a static flow entry.

Command mode: OpenFlow Instance

static-table remove index <1-750>

Deletes a static flow entry.

Command mode: OpenFlow Instance

clear openflow table static

Deletes all static flow entries.

Command mode: Global configuration

The following table describes the available matching qualifiers

Table 358. Static Flow Matching Qualifiers

Qualifier	Value
ingress-port	Port of instance
src-mac	Source MAC address
dst-mac	Destination MAC address
vlan-id	VLAN identifier (0-4095 + 65535 (untagged))
vlan-priority	802.1p Priority Code Point (0-7)
src-ip	Source IP address
dst-ip	Destination IP address
src-port	L4 source port (0-65536)
dst-port	L4 destination port (0-65535)
ether-type	"arp"/"0806" or "ip"/"0800" or (hex-value <= 65535)
protocol	"tcp" or "udp" or 0-255
tos	IP Type of Service (0-255)

Table 358. Static Flow Matching Qualifiers

Qualifier	Value
type	"request" or "reply" (can be set only if ether type is ARP)
all	Applicable to all traffic

The following table describes the available actions

Table 359. Static Flow Actions

Action	Value	
out-put	"all","in-port","flood","controller" or a valid port	
set-src-mac	Change source MAC address	
set-dst-mac	Change destination MAC address	
strip-vlan-id	Remove VLAN identifier	
set-vlan-priority	Set 802.1p priority code point value (0-7)	
set-nw-tos	Set IP Type of Service (0-255)	
drop	Drop packet	
max-len	Maximum length to send to controller	

Switch Partition (SPAR) Configuration

Switch partitions (SPARs) divide the data plane inside a physical switch into independent switching domains. Switch partitions do not communicate with each other, forcing hosts on different SPARs to bridge traffic over an upstream link, even if they belong to the same VLAN.

Up to 8 SPARs can be defined on a switch. Each SPAR supports up to 256 local VLANs, for further partitioning flexibility

Table 360. SPAR Configuration Options

Command Syntax and Usage		
spar < <i>1-8</i> >		
Enters SPAR Configuration mode		
Command mode: Global configuration		
no spar <1-8>		
Deletes the specified SPAR.		
Command mode: Global configuration		
[no] enable		
Enables or disables the SPAR.		
Command mode: SPAR Configuration		
name		
Configures the SPAR name.		
Command mode: SPAR Configuration		
[no] uplink {port <pre>port no.> portchannel <1-64> adminkey <1-65535>}</pre>		
Enables or disables uplink connectivity for the SPAR. A single external port, portchannel, or LACP channel can be used for uplink. All uplinks within a SPAR are automatically assigned to the SPAR domain's default VLAN and to any SPAR local VLANs.		
Command mode: SPAR Configuration		
 domain default {vlan <2-4094> member <port no.="">}</port> Configures the SPAR's default domain settings: vlan configures the default SPAR VLAN ID. A unique factory default VLAN ID is assigned to each SPAR as "408x", where x is the SPAR ID <1-8>. This option provides an override if conflicts arise with a customer VLAN ID on the upstream network. member adds server ports to the SPAR. Command mode: SPAR Configuration 		
no domain default member <pre>cport no.></pre>		
Removes server ports from the SPAR.		
Command mode: SPAR Configuration		

Table 360. SPAR Configuration Options (continued)

Command Syntax and Usage		
domain local <1-32> {enable member <port no.=""> name <text> vlan <2-4094>}</text></port>		
Configures the SPAR's local domains:		
 enable enables the SPAR local domains 		
 member adds server ports to the SPAR local domains 		
 name configures the SPAR local domains names 		
- $vlan$ applies a VLAN ID to the SPAR local domains. The default value is 0.		
Command mode: SPAR Configuration		
no domain local <1-32> [enable member <port no.="">]</port>		
Deletes the SPAR local VLAN domains:		
 enable disables the SPAR local domains 		
 member deletes SPAR local domains server ports 		
Command mode: SPAR Configuration		
domain mode {passthrough local}		
Configures the SPAR domain mode:		
 passthrough references member ports only by the SPAR default VLAN. This provides VLAN-unaware uplink connectivity via pass-through tunnel domain switching for SPAR member ports. The default value is passthrough. 		
 local references member ports by both SPAR default VLAN and SPAR local domain VLANs. This provides VLAN-aware uplink connectivity via local domain switching for SPAR member ports 		
Command mode: SPAR Configuration		
<pre>show spar <1-8> [domain [default local <1-32>] uplink] Displays the SPAR settings:</pre>		
Command mode: All		

Service Location Protocol Configuration

Service Location Protocol (SLP) enables networked devices to request/announce services over a local area network without prior configuration. In an SLP environment, devices may have the following roles:

- User Agents (UA) are devices requesting services.
- Service Agents (SA) are devices providing services.
- Directory Agents (DA) are devices caching services provided by SAs. When present in an SLA setup, DAs mediate all communication between UAs and SAs.

When SLP is enabled, the CN4093 10Gb Converged Scalable Switch behaves as a Service Agent providing systems management services.

Table 361. Service Location Protocol

Command Syntax and Usage			
[no]	[no] ip slp enable		
l	Enables or disables SLP. Default value is disabled.		
	Command mode: Global configuration		
[no]] ip slp active-da-discovery enable		
	Enables or disables active directory agent discovery. Default value is disabled.		
(Command mode: Global configuration		
ip s	slp active-da-discovery-start-wait-time <i><1-10></i>		
	Number of seconds to wait after enabling SLP before attempting active DA discovery, if active DA discovery is enabled. Default value is 3.		
	Command mode: Global configuration		
clea	ar ip slp directory-agents		
	Clears directory agents discovered.		
(Command mode: Privileged EXEC		

Configuration Dump

The dump program writes the current switch configuration to the terminal screen. To start the dump program, at the prompt, enter:

Router(config) # show running-config

The configuration is displayed with parameters that have been changed from the default values. The screen display can be captured, edited, and placed in a script file, which can be used to configure other switches through a Telnet connection. When using Telnet to configure a new switch, paste the configuration commands from the script file at the command line prompt of the switch. The active configuration can also be saved or loaded via FTP/TFTP, as described on page 496.

Saving the Active Switch Configuration

When the copy running-config {ftp|tftp|sftp} command is used, the switch's active configuration commands (as displayed using show running-config) will be uploaded to the specified script configuration file on the FTP/TFTP/SFTP server. To start the switch configuration upload, at the prompt, enter:

```
Router(config)# copy running-config ftp [data-port|extm-port|mgt-port]
Or
Router(config)# copy running-config ftp [data-port|extm-port|mgt-port]
Or
Router(config)# copy running-config ftp [data-port|extm-port|mgt-port]
```

Select a port, or press **Enter** to use the default (management port). The switch prompts you for the server address and filename.

Notes:

- The output file is formatted with line-breaks but no carriage returns—the file cannot be viewed with editors that require carriage returns (such as Microsoft Notepad).
- If the FTP/TFTP server is running SunOS or the Solaris operating system, the specified configuration file must exist prior to executing the copy running-config command and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current configuration data.

Restoring the Active Switch Configuration

When the copy {ftp|tftp|sftp} running-config command is used, the active configuration will be replaced with the commands found in the specified configuration file. The file can contain a full switch configuration or a partial switch configuration.

To start the switch configuration download, at the prompt, enter:

```
Router(config)# copy ftp running-config [extm-port|mgt-port|data-port]
Or
Router(config)# copy tftp running-config [extm-port|mgt-port|data-port]
Or
Router(config)# copy sftp running-config [extm-port|mgt-port|data-port]
```

Select a port, or press **Enter** to use the default (management port). The switch prompts you for the server address and filename.

Chapter 5. Operations Commands

Operations commands generally affect switch performance immediately, but do not alter permanent switch configurations. For example, you can use Operations commands to immediately disable a port (without the need to apply or save the change), with the understanding that when the switch is reset, the port returns to its normally configured operation.

These commands enable you to alter switch operational characteristics without affecting switch configuration.

Table 362.	General	Operations	Commands
------------	---------	------------	----------

Command Syntax and Usage

password <1-128 characters>

Allows the user to change the password. You must enter the current password in use for validation. The switch prompts for a new password between 1-128 characters.

Command Mode: Privileged EXEC

clear logging

Clears all Syslog messages.

Command Mode: Privileged EXEC

ntp send

Allows the user to send requests to the NTP server.

Operations-Level Port Commands

Operations-level port options are used for temporarily disabling or enabling a port, and for re-setting the port.

Table 363. Port Operations Commands

Command Syntax and Usage			
no interface port <pre>port number or alias> shutdown</pre>			
Temporarily enables the port. The port will be returned to its configured operation mode when the switch is reset.			
Command Mode: Privileged EXEC			
interface port <pre>port number or alias> shutdown</pre>			
Temporarily disables the port. The port will be returned to its configured operation mode when the switch is reset.			
Command Mode: Privileged EXEC			
show interface port <pre>port number or alias> operation</pre>			
Displays the port interface operational state.			
Command Mode: Privileged EXEC			

Operations-Level Port 802.1X Commands

Operations-level port 802.1X options are used to temporarily set 802.1X parameters for a port.

Table 364. 802.1X Operations Commands

Command Syntax and Usage

interface port port number or alias> dot1x init

Re-initializes the 802.1X access-control parameters for the port. The following actions take place, depending on the 802.1X port configuration:

- force unauth: the port is placed in unauthorized state, and traffic is blocked.
- auto: the port is placed in unauthorized state, then authentication is initiated.
- force auth: the port is placed in authorized state, and authentication is not required.

Command Mode: Privileged EXEC

interface port port number or alias> dot1x re-authenticate

Re-authenticates the supplicant (client) attached to the port. This command only applies if the port's 802.1X mode is configured as auto.

Operations-Level FCoE Commands

Fibre Channel over Ethernet (FCoE) operations commands are listed in the following table.

Table 365. FCoE Operations Commands

Command Syntax and Usage

no fcoe fips fcf <MAC address>

Deletes the selected FCoE Forwarder (FCF), and any associated ACLs.

Operations-Level VRRP Commands

Table 366. Virtual Router Redundancy Operations Commands

Command Syntax and Usage

router vrrp backup <virtual router number (1-255)>

Forces the specified master virtual router on this switch into backup mode. This is generally used for passing master control back to a preferred switch once the preferred switch has been returned to service after a failure. When this command is executed, the current master gives up control and initiates a new election by temporarily advertising its own priority level as 0 (lowest). After the new election, the virtual router forced into backup mode by this command will resume master control in the following cases:

- This switch owns the virtual router (the IP addresses of the virtual router and its IP interface are the same)
- This switch's virtual router has a higher priority and preemption is enabled.
- There are no other virtual routers available to take master control.

Operations-Level BGP Commands

 Table 367. IP BGP Operations Commands

Command Syntax and Usage	
router bgp start <1-12>	
Starts the peer session.	
Command Mode: Privileged EXEC	
router bgp stop <1-12>	
Stops the peer session.	
Command Mode: Privileged EXEC	
show ip bgp state	
Displays the current BGP operational state.	
Command Mode: Privileged EXEC	

Protected Mode Options

Protected Mode is used to secure certain switch management options, so they cannot be changed by the management module.

Table 368. Protected Mode Options

Command Syntax and Usage			
[no] protected-mode external-management			
Enables exclusive local control of switch management. When Protected Mode is set to on, the management module cannot be used to disable external management on the switch. The default value is enabled.			
Note : Due to current management module implementation, this setting cannot be disabled.			
Command Mode: Global Configuration			
[no] protected-mode external-ports			
Enables exclusive local control of external ports. When Protected Mode is set to on, the management module cannot be used to disable external ports on the switch. The default value is enabled.			
Note : Due to current management module implementation, this setting cannot be disabled.			
Command Mode: Global Configuration			
[no] protected-mode factory-default			
Enables exclusive local control of factory default resets. When Protected Mode is set to on, the management module cannot be used to reset the switch software to factory default values. The default value is enabled.			
Note : Due to current management module implementation, this setting cannot be disabled.			
Command Mode: Global Configuration			
[no] protected-mode management-vlan-interface			
Enables exclusive local control of the management interface. When Protected Mode is set to on, the management module cannot be used to configure parameters for the management interface. The default value is enabled.			
Note : Due to current management module implementation, this setting cannot be disabled.			
Command Mode: Global Configuration			
protected-mode enable			
Turns Protected Mode $\circ n$. When Protected Mode is turned on, the switch takes exclusive local control of all enabled options.			
Command Mode: Global Configuration			

Table 368. Protected Mode Options (continued)

Command Syntax and Usage

no protected-mode enable

Turns Protected Mode off. When Protected Mode is turned off, the switch relinquishes exclusive local control of all enabled options.

Command Mode: Global Configuration

show protected-mode

Displays the current Protected Mode configuration.

Command Mode: Global Configuration

VMware Operations

Use these commands to perform minor adjustments to the VMware operation. Use these commands to perform Virtual Switch operations directly from the switch. Note that these commands require the configuration of Virtual Center access information (virt vmware vcspec).

Table 369. VMware Operations Commands

Command Syntax and Usage virt vmware pg [<Port Group name> <host ID> <VSwitch name> <VLAN number> <shaping-enabled> <average-Kbps> <burst-KB> <peak-Kbps>] Adds a Port Group to a VMware host. You are prompted for the following information: Port Group name - VMware host ID (Use host UUID, host IP address, or host name.) - Virtual Switch name - VLAN ID of the Port Group - Whether to enable the traffic-shaping profile (1 or 0). If you choose 1 (yes), you are prompted to enter the traffic shaping parameters. Command Mode: Privileged EXEC virt vmware vsw <host ID> <Virtual Switch name> Adds a Virtual Switch to a VMware host. Use one of the following identifiers to specify the host: - UUID IP address Host name Command Mode: Privileged EXEC no virt vmware pg <Port Group name> <host ID> Removes a Port Group from a VMware host. Use one of the following identifiers to specify the host: - UUID IP address Host name Command Mode: Privileged EXEC no virt vmware vsw <host ID> <Virtual Switch name> Removes a Virtual Switch from a VMware host. Use one of the following identifiers to specify the host: - UUID - IP address - Host name Command Mode: Privileged EXEC

ommand Syntax and Usage
irt vmware export <vm name="" profile=""> <vmware host="" id=""> <virtual name="" switch=""></virtual></vmware></vm>
Exports a VM Profile to a VMware host.
Use one of the following identifiers to specify each host:
– UUID
– IP address
 Host name
You may enter a Virtual Switch name, or enter a new name to create a new Virtual Switch.
Command Mode: Privileged EXEC
irt vmware scan
Performs a scan of the VM Agent, and updates VM information.
Command Mode: Privileged EXEC
irt vmware vmacpg <mac address=""> <port group="" name=""></port></mac>
Changes a VM NIC's configured Port Group.
Command Mode: Privileged EXEC
irt vmware updpg <port group="" name=""> <host id=""> <vlan number=""> [<shaping enabled=""> <average kbps=""> <burst kb=""> <peak kbps="">]</peak></burst></average></shaping></vlan></host></port>
Updates a VMware host's Port Group parameters.
Command Mode: Privileged EXEC

Table 369. VMware Operations Commands (continued)

VMware Distributed Virtual Switch Operations

Use these commands to administer a VMware Distributed Virtual Switch (dvSwitch).

Table 370. VMware dvSwitch Operations (/oper/virt/vmware/dvswitch)

Command Syntax and Usage
virt vmware dvswitch add < <i>datacenter name</i> > < <i>dvSwitch name</i> > < <i>dvSwitch version</i> >
Adds the specified dvSwitch to the specified DataCenter.
Command Mode: Privileged EXEC
virt vmware dvswitch del <datacenter name=""> <dvswitch name=""></dvswitch></datacenter>
Removes the specified dvSwitch from the specified DataCenter.
Command Mode: Privileged EXEC
virt vmware dvswitch addhost < <i>dvSwitch name</i> > < <i>host UUID</i> <i>IP address</i> <i>host name</i> >
Adds the specified host to the specified dvSwitch. Use one of the following identifiers to specify the host:
– IP address
– Host name
Command Mode: Privileged EXEC
<pre>virt vmware dvswitch remhost</pre>
Removes the specified host from the specified dvSwitch. Use one of the following identifiers to specify the host:
– UUID
– IP address
– Host name
Command Mode: Privileged EXEC
virt vmware dvswitch addUplink <dvswitch name=""> <host id=""> <uplink name=""></uplink></host></dvswitch>
Adds the specified physical NIC to the specified dvSwitch uplink ports.
Command Mode: Privileged EXEC
virt vmware dvswitch remUplink <dvswitch name=""> <host id=""> <uplink name=""></uplink></host></dvswitch>
Removes the specified physical NIC from the specified dvSwitch uplink ports.
Command Mode: Privileged EXEC

VMware Distributed Port Group Operations

Use these commands to administer a VMware distributed port group.

Table 371. VMware Distributed Port Group Operations (/oper/virt/vmware/dpg)

Command Syntax and Usage
virt vmware dpg add <port group="" name=""> <dvswitch name=""> <vlan id=""></vlan></dvswitch></port>
[ishaping bandwidth> <burst size=""> <peak bandwidth="">] [eshaping bandwidth> <burst size=""> <peak bandwidth="">]</peak></burst></peak></burst>
Adds the specified port group to the specified dvSwitch. You may enter the following parameters:
 ishaping: Enables ingress shaping. Supply the following information: average bandwidth in KB per second burst size in KB
 purst size in KB peak bandwidth in KB per second
 eshaping: Enables engress shaping. Supply the following information: average bandwidth in KB per second burst size in KB
 peak bandwidth in KB per second
Command Mode: Privileged EXEC
virt vmware dpg vmac < <i>VNIC MAC</i> > < <i>port group name</i> > Adds the specified VM NIC to the specified port group.
Command Mode: Privileged EXEC
<pre>virt vmware dpg update <pre>port group name> <dvswitch name=""> <vlan (1-4094)="" id=""> [ishaping <bandwidth> <burst size=""> <pre>peak bandwidth>] [eshaping <bandwidth> <burst size=""> <pre>size> <pre>speak bandwidth>]</pre></pre></burst></bandwidth></pre></burst></bandwidth></vlan></dvswitch></pre></pre>
Updates the specified port group on the specified dvSwitch. You may enter the following parameters:
 ishaping: Enables ingress shaping. Supply the following information: average bandwidth in KB per second burst size in KB
peak bandwidth in KB per second
 eshaping: Enables engress shaping. Supply the following information: average bandwidth in KB per second
burst size in KB
 peak bandwidth in KB per second
Command Mode: Privileged EXEC
virt vmware dpg del <pre>port group name> <dvswitch name=""></dvswitch></pre>
Removes the specified port group from the specified dvSwitch.
Command Mode: Privileged EXEC

Edge Virtual Bridge Operations

Edge Virtual Bridge operations commands are listed in the following table:

Table 372. Edge Virtual Bridge Operations Commands

Command Syntax and Usage		
virt evb update vsidb < <i>VSIDB_number></i> Update VSI types from the VSI database.		
Command mode: All		
clear virt evb vsidb < <i>VSIDB_number></i>		
Clears local VSI types cache.		
Command mode: Privileged EXEC		
clear virt evb vsi		
Clears VSI database associations.		
Command mode: Privileged EXEC		

Chapter 6. Boot Options

To use the Boot Options commands, you must be logged in to the switch as the administrator. The Boot Options commands provide options for:

- Selecting a switch software image to be used when the switch is next reset
- Selecting a configuration block to be used when the switch is next reset
- Downloading or uploading a new software image to the switch via FTP/TFTP

In addition to the Boot commands, you can use a Web browser or SNMP to work with switch image and configuration files. To use SNMP, refer to "Working with Switch Images and Configuration Files" in the *Command Reference*.

The boot options are discussed in the following sections.

Scheduled Reboot

This feature allows you to schedule a reboot to occur at a particular time in the future. This feature is particularly helpful if the user needs to perform switch upgrades during off-peak hours. You can set the reboot time, cancel a previously scheduled reboot, and check the time of the currently set reboot schedule.

Table 373. Boot Scheduling Options

Cor	Command Syntax and Usage			
boot schedule <day of="" week=""> <time day="" of=""></time></day>				
	Defines the reboot schedule. Enter the day of the week, followed by the time of day (in hh:mm format). For example:			
	boot schedule monday 11:30			
	Command mode: Global configuration			
no	boot schedule			
	Cancels the next pending scheduled reboot.			
	Command mode: Global configuration			
sho	ow boot			
	Displays the current reboot scheduling parameters.			
	Command mode: All			

Netboot Configuration

Netboot allows the switch to automatically download its configuration file over the network during switch reboot, and apply the new configuration. Upon reboot, the switch includes the following options in its DHCP requests:

- Option 66 (TFTP server address)
- Option 67 (file path)

If the DHCP server returns the information, the switch initiates a TFTP file transfer, and loads the configuration file into the active configuration block. As the switch boots up, it applies the new configuration file. Note that the option 66 TFTP server address must be specified in IP-address format (host name is not supported).

If DHCP is not enabled, or the DHCP server does not return the required information, the switch uses the manually-configured TFTP server address and file path.

Table 374. Netboot Options (/boot/netboot)

Command Syntax and Usage		
boot netboot enable		
Enables Netboot. When enabled, the switch boots into factory-default configuration, and attempts to download a new configuration file.		
Command mode: Global configuration		
no boot netboot enable		
Disables Netboot.		
Command mode: Global configuration		
[no] boot netboot tftp < <i>IP address</i> >		
Configures the IP address of the TFTP server used for manual configuration. This server is used if DHCP is not enabled, or if the DHCP server does not return the required information.		
Command mode: Global configuration		
[no] boot netboot cfgfile <1-31 characters>		
Defines the file path for the configuration file on the TFTP server. For example:		
/directory/sub/config.cfg		
Command mode: Global configuration		
show boot		
Displays the current Netboot parameters.		
Command mode: All		

QSFP Port Configuration

Quad Small Form-factor Pluggable Plus (QSFP+) ports are designed to handle high-intensity traffic. Use the following commands to configure QSFP+ ports.

Table 375. Netboot Options (/boot/qsfp-40Gports)

Command Syntax and Usage

[no] boot qsfp-40Gports <ports>

Enables or disables 40GbE mode on the selected QSFP+ ports. When enabled, each QSFP+ port is set as a single 40GbE port. When disabled, each QSFP+ port is configured to breakout into four 10GbE ports.

You must reboot the switch for this change to take effect.

Command mode: Global configuration

show boot qsfp-port-modes

Displays the current QSFP port settings.

Command mode: All

Updating the Switch Software Image

The switch software image is the executable code running on the CN4093 10Gb Converged Scalable Switch. A version of the image ships with the switch, and comes pre-installed on the device. As new versions of the image are released, you can upgrade the software running on your switch. To get the latest version of software available for your CN4093, go to:

http://www-304.ibm.com/jct01004c/systems/support

Click on software updates. Use the following command to determine the current software version: ${\tt show}\ {\tt boot}$

Upgrading the software image on your switch requires the following:

- Loading the new image onto a FTP or TFTP server on your network
- Transferring the new image from the FTP or TFTP server to your switch
- Selecting the new software image to be loaded into switch memory the next time the switch is reset

Loading New Software to Your Switch

The switch can store up to two different software images, called image1 and image2, as well as boot software, called boot. When you load new software, you must specify where it should be placed: either into image1, image2, or boot.

For example, if your active image is currently loaded into image1, you would probably load the new image software into image2. This lets you test the new software and reload the original active image (stored in image1), if needed.

To load a new software image to your switch, you need the following:

- The image or boot software loaded on an FTP/TFTP server on your network
- The hostname or IP address of the FTP/TFTP server
- The name of the new software image or boot file

Note: The DNS parameters must be configured if specifying hostnames.

When the above requirements are met, use the following procedure to download the new software to your switch.

1. In Privileged EXEC mode, enter the following command:

```
Router# copy {ftp|tftp} {image1 | image2 | boot-image[extm-port | mgt-port | data-port]}
```

Select a port, or press <Enter> to use the default (management port).

2. Enter the hostname or IP address of the FTP or TFTP server.

Address or name of remote host:

3. Enter the name of the new software file on the server.

Source file name: <filename>

The exact form of the name will vary by server. However, the file location is normally relative to the FTP or TFTP directory (usually tftpboot).

4. Enter your username and password for the server, if applicable.

User name: {<username> | <Enter>}

5. The system prompts you to confirm your request.

Next. select a software image to run, as described in the following section.

Selecting a Software Image to Run

You can select which software image (image1 or image2) you want to run in switch memory for the next reboot.

1. In Global Configuration mode, enter:

Router(config) # boot image {image1 | image2}

2. Enter the name of the image you want the switch to use upon the next boot. The system informs you of which image set to be loaded at the next reset:

Next boot will use switch software image1 instead of image2.

Uploading a Software Image from Your Switch

You can upload a software image from the switch to a FTP or TFTP server.

1. In Privileged EXEC mode, enter:

```
Router# copy {image1 | image2 | boot-image} {ftp|tftp[extm-port |
mgt-port | data-port]}
```

Select a port, or press <Enter> to use the default (management port).

2. Enter the name or the IP address of the FTP or TFTP server:

Address or name of remote host: <*IP address or hostname*>

3. Enter the name of the file into which the image will be uploaded on the FTP or TFTP server:

Destination file name: <filename>

4. Enter your username and password for the server, if applicable.

User name: {<username> | <Enter>}

5. The system then requests confirmation of what you have entered. To have the file uploaded, enter \underline{Y} .

image2 currently contains Software Version 6.5.0
that was downloaded at 0:23:39 Thu Jan 1, 2010
Upload will transfer image2 (2788535 bytes) to file "image1"
on FTP/TFTP server 1.90.90.95.
Confirm upload operation (y/n) ? y

Selecting a Configuration Block

When you make configuration changes to the CN4093 10Gb Converged Scalable Switch, you must save the changes so that they are retained beyond the next time the switch is reset. When you perform a save operation

(copy running-config startup-config), your new configuration changes are placed in the *active* configuration block. The previous configuration is copied into the *backup* configuration block.

There is also a *factory* configuration block. This holds the default configuration set by the factory when your CN4093 10Gb Converged Scalable Switch was manufactured. Under certain circumstances, it may be desirable to reset the switch configuration to the default. This can be useful when a custom-configured CN4093 10Gb Converged Scalable Switch is moved to a network environment where it will be re-configured for a different purpose.

In Global Configuration mode, use the following command to set which configuration block you want the switch to load the next time it is reset:

Router (config) # boot configuration-block {active | backup | factory}

Resetting the Switch

You can reset the switch to make your software image file and configuration block changes occur.

Note: Resetting the switch causes the Spanning Tree Group to restart. This process can be lengthy, depending on the topology of your network.

Enter the following command to reset (reload) the switch:

>> Router# reload

You are prompted to confirm your request.

```
Reset will use software "image2" and the active config block.

>> Note that this will RESTART the Spanning Tree,

>> which will likely cause an interruption in network service.

Confirm reload (y/n) ?
```

Accessing the IBM Networking OS CLI

To access the IBM Networking OS CLI, enter the following command from the ISCLI:

Router(config) # boot cli-mode ibmnos-cli

The default command-line interface for the CN4093 is the IBM Networking OS CLI. To access the ISCLI, enter the following command and reset the CN4093:

Main# boot/mode iscli

Users can select the CLI mode upon login, if the following ISCLI command is enabled:

Router(config) # boot cli-mode prompt

Only an administrator connected through the CLI can view and enable the prompt command. When prompt is enabled, the first user to log in can select the CLI mode. Subsequent users must use the selected CLI mode, until all users have logged out.

Changing the Switch Profile

The IBM Networking OS software for the CN4093 can be configured to operate in different modes for different deployment scenarios. The deployment profile changes some of the basic switch behavior, shifting switch resources to optimize capacity levels to meet the needs of different types of networks. For more information about deployment profiles, see the IBM Networking OS 7.7 *Application Guide*.

To change the deployment profile, select the new profile and reset the CN4093. Use the following command to select a new profile:

Router(config)# boot profile {default | acl | ipmc-opt | openflow}

Using the Boot Management Menu

The Boot Management menu allows you to switch the software image, reset the switch to factory defaults, or to recover from a failed software download.

You can interrupt the boot process and enter the Boot Management menu from the serial console port. When the system displays Memory Test, press **Shift B>**. The Boot Management menu appears.

```
Resetting the System ...
Memory Test .....
Boot Management Menu
1 - Change booting image
2 - Change configuration block
3 - Xmodem download
4 - Exit
Please choose your menu option: 1
Current boot image is 1. Enter image to boot: 1 or 2: 2
Booting from image 2
```

The Boot Management menu allows you to perform the following actions:

- To change the booting image, press 1 and follow the screen prompts.
- To change the configuration block, press 2, and follow the screen prompts.
- To perform an Xmodem download, press 3 and follow the screen prompts.
- To exit the Boot Management menu, press 4. The booting process continues.

Recovering from a Failed Software Upgrade

Use the following procedure to recover from a failed software upgrade.

- 1. Connect a PC to the serial port of the switch.
- Open a terminal emulator program that supports XModem Download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:
 - Speed: 9600 bps
 - Data Bits: 8
 - Stop Bits: 1
 - Parity: None
 - Flow Control: None
- Boot the switch and access the Boot Management menu by pressing <Shift B> while the Memory Test is in progress and the dots are being displayed.
- 4. Select **3** for **Xmodem download**. When you see the following message, change the Serial Port characteristics to 115200 bps:

Switch baudrate to 115200 bps and press ENTER ...

5. Press <**Enter>** to set the system into download accept mode. When the readiness meter displays (a series of "C" characters), start XModem on your terminal emulator.

 Select the Boot Image to download. The XModem initiates the file transfer. When the download is complete, a message similar to the following is displayed:

yzModem - CRC mode, 62494(SOH)/0(STX)/0(CAN) packets, 6 retries Extracting images ... Do *NOT* power cycle the switch. **** VMLINUX **** Un-Protected 10 sectors Erasing Flash..... done Writing to Flash.....done Protected 10 sectors **** RAMDISK **** Un-Protected 44 sectors Erasing Flash..... done Writing to Flash.....done Protected 44 sectors **** BOOT CODE **** Un-Protected 8 sectors Erasing Flash..... done Writing to Flash.....done Protected 8 sectors

7. When you see the following message, change the Serial Port characteristics to 9600 bps:

Switch baudrate to 9600 bps and press ESC ...

- 8. Press the Escape key (**<Esc>**) to re-display the Boot Management menu.
- 9. Select **3** to start a new **XModem Download**. When you see the following message, change the Serial Port characteristics to 115200 bps:

Switch baudrate to 115200 bps and press ENTER ...

10. Press < Enter> to continue the download.

11. Select the OS Image to download. The XModem initiates the file transfer. When the download is complete, a message similar to the following is displayed:

```
yzModem - CRC mode, 27186(SOH)/0(STX)/0(CAN) packets, 6 retries
Extracting images ... Do *NOT* power cycle the switch.
**** Switch OS ****
Please choose the Switch OS Image to upgrade [1|2|n] :
```

12. Select the image number to load the new image (1 or 2). It is recommended that you select 1. A message similar to the following is displayed:

```
Switch OS Image 1 ...
Un-Protected 27 sectors
Erasing Flash..... done
Writing to Flash.....done
Protected 27 sectors
```

13. When you see the following message, change the Serial Port characteristics to 9600 bps:

Switch baudrate to 9600 bps and press ESC ...

14. Press the Escape key (< Esc>) to re-display the Boot Management menu.

Select 4 to exit and boot the new image.

Recovering a Failed Boot Image

Use the following procedure to recover from a failed boot image upgrade.

- 1. Connect a PC to the serial port of the switch.
- 2. Open a terminal emulator program that supports Xmodem download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:
 - Speed: 9600 bps
 - Data Bits: 8
 - Stop Bits: 1
 - Parity: None
 - Flow Control: None
- 3. Boot the switch and access the Boot Management menu by pressing **<Shift B>** while the Memory Test is in progress and the dots are being displayed.
- 4. Select **4** for **Xmodem download**. You will see the following display:

Perform xmodem download

To download an image use 1K Xmodem at 115200 bps.

5. When you see the following message, change the Serial Port characteristics to 115200 bps:

```
Change the baud rate to 115200 bps and hit the <\!\!\text{ENTER}\!\!> key before initiating the download.
```

a. Press <**Enter**> to set the system into download accept mode. When the readiness meter displays (a series of "C" characters), start Xmodem on your terminal emulator.You will see a display similar to the following:

 When you see the following message, change the Serial Port characteristics to 9600 bps:

Change the baud rate back to 9600 bps, hit the <ESC> key.

Boot image recovery is complete.

Chapter 7. Maintenance Commands

The maintenance commands are used to manage dump information and forward database information. They also include debugging commands to help with troubleshooting.

Dump information contains internal switch state data that is written to flash memory on the CN4093 10Gb Converged Scalable Switch after any one of the following occurs:

- The watchdog timer forces a switch reset. The purpose of the watchdog timer is to reboot the switch if the switch software freezes.
- The switch detects a hardware or software problem that requires a reboot.

To use the maintenance commands, you must be logged in to the switch as the administrator.

Table 376. General Maintenance Commands

Command Syntax and Usage
show flash-dump-uuencode Displays dump information in uuencoded format. For details, see page 540. Command mode: All
copy flash-dump tftp Saves the system dump information via TFTP. For details, see page 541. Command mode: All except User EXEC
copy flash-dump ftp Saves the system dump information via FTP. For details, see page 541. Command mode: All except User EXEC
copy flash-dump sftp Saves the system dump information via SFTP. For details, see page 541. Command mode: All except User EXEC
clear flash-dump Clears dump information from flash memory. Command mode: All except User EXEC
<pre>show tech-support [l2 l3 link port] Dumps all CN4093 information, statistics, and configuration. You can log the output (tsdmp) into a file. To filter the information, use the following options:</pre>

Table 376. General Maintenance Commands

Command Syntax and Usage

copy tech-support tftp

Redirects the technical support dump (tsdmp) to an external TFTP server. **Command mode:** All except User EXEC

copy tech-support ftp

Redirects the technical support dump (tsdmp) to an external FTP server. **Command mode:** All except User EXEC

Forwarding Database Maintenance

The Forwarding Database commands can be used to view information and to delete a MAC address from the forwarding database or to clear the entire forwarding database. This is helpful in identifying problems associated with MAC address learning and packet forwarding decisions.

Table 377. FDB Manipulation Commands

Command Syntax and Usage
<pre>show mac-address-table address <mac address=""> Displays a single database entry by its MAC address. If not specified, you are prompted for the MAC address of the device. Enter the MAC address using one of the following formats:</mac></pre>
 xx:xx:xx:xx:xx (such as 08:00:20:12:34:56) xxxxxxxxxxx (such as 080020123456) Command mode: All except User EXEC
show mac-address-table interface port <pre>port number or alias> Displays all FDB entries for a particular port. Command mode: All except User EXEC</pre>
show mac-address-table portchannel < <i>trunk group number</i> > Displays all FDB entries for a particular trunk group. Command mode: All
show mac-address-table vlan < <i>VLAN number></i> Displays all FDB entries on a single VLAN. Command mode: All except User EXEC
show mac-address-table state {forward trunk unknown} Displays all FDB entries of a particular state. Command mode: All except User EXEC
show mac-address-table static Displays static entries in the FBD. Command mode: All except User EXEC
no mac-address-table static {< <i>MAC address</i> > all} Removes static FDB entries. Command mode: All except User EXEC
no mac-address-table multicast {< <i>MAC address</i> > all} Removes static multicast FDB entries. Command mode: All except User EXEC
clear mac-address-table static Clears all static entries from the Forwarding Database. Command mode: All except User EXEC

Table 377. FDB Manipulation Commands (continued)

Command Syntax and Usage

clear mac-address-table

Clears the entire Forwarding Database from switch memory.

Command mode: All except User EXEC

Debugging Commands

The Miscellaneous Debug Commands display trace buffer information about events that can be helpful in understanding switch operation. You can view the following information using the debug commands:

- Events traced by the Management Processor (MP)
- Events traced to a buffer area when a reset occurs
- **Note:** IBM Networking OS debug commands are intended for advanced users. Use debug commands with caution as they can disrupt the operation of the switch under high load conditions. When debug is running under high load conditions, the CLI prompt may appear unresponsive. Before debugging, check the MP utilization to verify there is sufficient processing capacity available to perform the debug operation.

If the switch resets for any reason, the MP trace buffer is saved into the snap trace buffer area. The output from these commands can be interpreted by Technical Support personnel.

Table 378. Miscellaneous Debug Commands

de	bug debug-flags
	This command sets the flags that are used for debugging purposes.
	Command mode: All except User EXEC
de	bug mp-trace
	Displays the Management Processor trace buffer. Header information similar to the following is shown:
	MP trace buffer at 13:28:15 Fri May 25, 2001; mask: 0x2ffdf748
	The buffer information is displayed after the header.
	Command mode: All except User EXEC
de	bug dumpbt
	Displays the backtrace log.
	Command mode: All except User EXEC
de	bug mp-snap
	Displays the Management Processor snap (or post-mortem) trace buffer. This buffer contains information traced at the time that a reset occurred.
	Command mode: All except User EXEC

Command mode: All except User EXEC

Table 378. Miscellaneous Debug Commands

Com	mand Syntax and Usage
[no]	debug lacp packet [receive transmit both] [port <pre>port numbers>]</pre>
	nables/disables debugging for Link Aggregation Control Protocol (LACP) ackets on all ports running LACP.
Т	he following parameters are available:
_	receive filters only LACP packets received
_	transmit filters only LACP packets sent
_	both filters LACP packets either sent or received
_	 port filters LACP packets sent/received on specific ports
E	By default, LACP debugging is disabled.
C	Command mode: Privileged EXEC
[no]	debug spanning-tree bpdu [receive transmit]
	nables/disables debugging for Spanning Tree Protocol (STP) Bridge Protocol Data Unit (BPDU) frames sent or received.
Т	he following parameters are available:
_	receive filters only BPDU frames received
_	transmit filters only BPDU frames sent
E	By default, STP BPDU debugging is disabled.
C	Command mode: Privileged EXEC

IP Security Debugging

The following table describes the options available.

Table 379. IP Security Debug Options

ommand Syntax and Usage	
o] debug sec all	
Enables or disables all IP security debug messages.	
o] debug sec crypto	
Enables or disables all IP security cryptographic debug mess	ages.
o] debug sec ike	
Enables or disables all IP security IKEv2 debug messages.	
o] debug sec ipsec	
Enables or disables all IPsec debug messages.	
o] debug sec info	
Displays the current security debug settings.	

DCBX Debugging Commands

Table 380. DCBX Maintenance Commands

 Command Syntax and Usage

 show dcbx transmit <port alias or number>

 Displays the Type-Length-Value (TLV) list transmitted in the DCBX TLV.

 Command mode: All except User EXEC

 show dcbx receive <port alias or number>

 Displays the Type-Length-Value (TLV) list received in the DCBX TLV.

 Command mode: All except User EXEC

ARP Cache Maintenance

Table 381. Address Resolution Protocol Maintenance Command
--

Command Syntax and Usage
show ip arp find <i><ip address=""></ip></i>
Shows a single ARP entry by IP address.
Command mode: All except User EXEC
show ip arp interface port <pre>port number or alias></pre>
Shows ARP entries on selected ports.
Command mode: All except User EXEC
show ip arp vlan <i><vlan number=""></vlan></i>
Shows ARP entries on a single VLAN.
Command mode: All except User EXEC
show ip arp reply
Shows the list of IP addresses which the switch will respond to for ARP requests.
Command mode: All except User EXEC
show ip arp
Shows all ARP entries.
Command mode: All except User EXEC
clear arp
Clears the entire ARP list from switch memory.
Command mode: All except User EXEC

Note: To display all or a portion of ARP entries currently held in the switch, you can also refer to "ARP Information" on page 58.

IP Route Manipulation

rable 302. If induce manipulation commands	
Command Syntax and Usage	
show ip route address < <i>IP address</i> >	
Shows a single route by destination IP address.	
Command mode: All except User EXEC	
show ip route gateway < <i>IP address</i> >	
Shows routes to a default gateway.	
Command mode: All except User EXEC	
<pre>show ip route type {indirect direct local broadcast martian multicast}</pre>	
Shows routes of a single type.	
Command mode: All except User EXEC	
For a description of IP routing types, see Table 38 on page 57	
<pre>show ip route tag {fixed static address rip ospf bgp broadcast martian multicast}</pre>	
Shows routes of a single tag.	
Command mode: All except User EXEC	
For a description of IP routing tags, see Table 39 on page 57	
show ip route interface < <i>IP interface</i> >	
Shows routes on a single interface.	
Command mode: All except User EXEC	
show ip route	
Shows all routes.	
Command mode: All except User EXEC	
clear ip route	
Clears the route table from switch memory.	
Command mode: All except User EXEC	

Table 382. IP Route Manipulation Commands

Note: To display all routes, you can also refer to "IP Routing Information" on page 56.

LLDP Cache Manipulation

Table 383 describes the LLDP cache manipulation commands.

Table 383. LLDP Cache Manipulation commands

Command Syntax and Usage
show lldp port <port alias="" number="" or=""></port>
Displays Link Layer Discovery Protocol (LLDP) port information.
Command mode: All
show lldp receive
Displays information about the LLDP receive state machine.
Command mode: All
show lldp transmit
Displays information about the LLDP transmit state machine.
Command mode: All
show lldp remote-device [<1-256> detail]
Displays information received from LLDP -capable devices. For more information, see page 38.
Command mode: All
show lldp
Displays all LLDP information.
Command mode: All
clear lldp
Clears the LLDP cache.
Command mode: All

IGMP Group Maintenance

Table 384 describes the IGMP group maintenance commands.

Table 384. IGMP Multicast Group Maintenance Commands

Command Syntax and Usage
show ip igmp groups address < <i>IP address</i> >
Displays a single IGMP multicast group by its IP address.
Command mode: All
show ip igmp groups vlan <i><vlan number=""></vlan></i>
Displays all IGMP multicast groups on a single VLAN.
Command mode: All
show ip igmp groups interface port <port alias="" number="" or=""></port>
Displays all IGMP multicast groups on selected ports.
Command mode: All
show ip igmp groups portchannel < <i>trunk number</i> >
Displays all IGMP multicast groups on a single trunk group.
Command mode: All
show ip igmp groups detail < <i>IP address</i> >
Displays detailed information about a single IGMP multicast group.
Command mode: All
show ip igmp groups
Displays information for all multicast groups.
Command mode: All
clear ip igmp groups
Clears the IGMP group table.
Command mode: All except User EXEC

IGMP Multicast Routers Maintenance

The following table describes the maintenance commands for IGMP multicast routers (Mrouters).

Table 385. IGMP Multicast Router Maintenance Commands

Comm	and Syntax and Usage
Dis	ip igmp mrouter vlan <i><vlan number=""></vlan></i> splays IGMP Mrouter information for a single VLAN. spmmand mode: All
Dis	ip igmp mrouter splays information for all Mrouters. ommand mode: All
Dis	ip igmp mrouter dynamic splays all dynamic multicast router ports installed. spmmand mode: All
Dis	ip igmp mrouter static splays all static multicast router ports installed. mmand mode: All
Dis	ip igmp mrouter interface port <i><port alias="" number="" or=""></port></i> splays all multicast router ports installed on a specific port. spmmand mode: All
Dis	ip igmp mrouter portchannel <i><trunk number=""></trunk></i> splays all multicast router ports installed on a specific portchannel group.
Dis	ip igmp mrouter information splays IGMP snooping information for all Mrouters. ommand mode: All
Dis	ip igmp snoop igmpv3 splays IGMPv3 snooping information. ommand mode: All
Dis	ip igmp relay splays IGMP relay information. ommand mode: All
Cle	ip igmp mrouter ears the IGMP Mrouter port table. ommand mode: All except User EXEC

MLD Multicast Group Manipulation

Table 386 describes the Multicast Listener Discovery (MLD) manipulation options.

Table 386. MLD Maintenance

Command Syntax and Usage	
show ipv6 mld groups	
Shows all MLD groups.	
Command mode: All	
show ipv6 mld interface < <i>interface number></i>	
Shows MLD groups on the specified interface.	
Command mode: All	
clear ipv6 mld mrouter	
Clears all dynamic MLD multicast router group tables.	
Command mode: All except User EXEC	
clear ipv6 mld groups	
Clears all dynamic MLD registered group tables.	
Command mode: All except User EXEC	
clear ipv6 mld dynamic	
Clears all dynamic MLD group tables.	
Command mode: All except User EXEC	

IPv6 Neighbor Discovery Cache Manipulation

Table 387 describes the IPv6 Neighbor Discovery cache manipulation commands.

Table 387. IPv6 Neighbor Discovery cache manipulation commands

Command Syntax and Usage
show ipv6 neighbors find < <i>IPv6 address</i> >
Shows a single IPv6 Neighbor Discovery cache entry by IP address.
Command mode: All
show ipv6 neighbors interface port <pre>port number or alias></pre>
Shows IPv6 Neighbor Discovery cache entries on a single port.
Command mode: All
show ipv6 neighbors vlan <i><vlan number=""></vlan></i>
Shows IPv6 Neighbor Discovery cache entries on a single VLAN.
Command mode: All
show ipv6 neighbors static
Shows static IPv6 Neighbor Discovery cache entries.
Command mode: All
show ipv6 neighbors
Shows all IPv6 Neighbor Discovery cache entries.
Command mode: All
clear ipv6 neighbors
Clears all IPv6 Neighbor Discovery cache entries from switch memory.
Command mode: All except User EXEC

IPv6 Route Maintenance

Table 388 describes the IPv6 route maintenance commands.

Table 388. IPv6 Route Maintenance Options

-	
Comma	nd Syntax and Usage
show	ipv6 route address <i><ipv6 address=""></ipv6></i>
Sh	ow a single route by destination IP address.
Co	mmand mode: All
show	ipv6 route gateway < <i>IPv6 gateway number</i> >
Sh	ow routes to a single gateway.
Co	mmand mode: All
show	ipv6 route interface < <i>interface number</i> >
Sh	ow routes on a single IP interface.
Co	mmand mode: All
show	ipv6 route type {connected static ospf}
Sh	ow routes of a single type.
Co	mmand mode: All
show	ipv6 route static
Sh	ow static IPv6 routes.
Co	mmand mode: All
show	ipv6 route summary
Sh	ows a summary of IPv6 route information.
Co	mmand mode: All
show	ipv6 route
Sh	ows all IPv6 routes.
Co	mmand mode: All
clear	ipv6 route
Cle	ears all IPv6 routes.
Co	mmand mode: Privileged EXEC

Uuencode Flash Dump

Using this command, dump information is presented in uuencoded format. This format makes it easy to capture the dump information as a file or a string of characters.

If you want to capture dump information to a file, set your communication software on your workstation to capture session data prior to issuing the show flash-dump-uuencode command. This will ensure that you do not lose any information. Once entered, the show flash-dump-uuencode command will cause approximately 23,300 lines of data to be displayed on your screen and copied into the file.

Using the show flash-dump-uuencode command, dump information can be read multiple times. The command does not cause the information to be updated or cleared from flash memory.

Note: Dump information is not cleared automatically. In order for any subsequent dump information to be written to flash memory, you must manually clear the dump region. For more information on clearing the dump region, see page 542.

To access dump information, enter:

Router# show flash-dump-uuencode

The dump information is displayed on your screen and, if you have configured your communication software to do so, captured to a file. If the dump region is empty, the following appears:

No FLASH dump available.

TFTP, SFTP or FTP System Dump Put

Use these commands to put (save) the system dump to a TFTP or FTP server.

Note: If the TFTP/FTP server is running SunOS or the Solaris operating system, the specified copy flash-dump tftp (or ftp) file must exist *prior* to executing the copy flash-dump tftp command (or copy flash-dump tftp), and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current dump data.

To save dump information via TFTP, enter:

Router# copy flash-dump tftp [data-port|extm-port|mgt-port] <server filename>

You are prompted for the TFTP server IP address or hostname, and the *filename* of the target dump file.

To save dump information via SFTP, enter:

Router# copy flash-dump sftp [data-port|extm-port|mgt-port] <server filename>

You are prompted for the SFTP server IP address or hostname, your *username* and *password*, and the *filename* of the target dump file.

To save dump information via FTP, enter:

Router# copy flash-dump ftp [data-port|extm-port|mgt-port] < server filename >

You are prompted for the FTP server IP address or hostname, your *username* and *password*, and the *filename* of the target dump file.

Clearing Dump Information

To clear dump information from flash memory, enter:

Router# clear flash-dump

The switch clears the dump region of flash memory and displays the following message:

FLASH dump region cleared.

If the flash dump region is already clear, the switch displays the following message:

FLASH dump region is already clear.

Unscheduled System Dumps

If there is an unscheduled system dump to flash memory, the following message is displayed when you log on to the switch:

Note: A system dump exists in FLASH. The dump was saved at 13:43:22 Wednesday January 30, 2010. Use show flash-dump uuencode to extract the dump for analysis and clear flash-dump to clear the FLASH region. The region must be cleared before another dump can be saved.

Appendix A. IBM Networking OS System Log Messages

The CN4093 10Gb Converged Scalable Switch (CN4093) uses the following syntax when outputting system log (syslog) messages:

<Time stamp><Log Label>IBMOS<Thread ID>:<Message>

The following parameters are used:

<Timestamp>

The time of the message event is displayed in the following format:

<month (3 characters)> <day> <hour (1-24)>:<minute>:<second>

For example: Aug 19 14:20:30

<Log Label>

The following types of log messages are recorded: LOG_CRIT, LOG_WARNING, LOG_ALERT, LOG_ERR, LOG_NOTICE, and LOG_INFO

• <*Thread ID*>

This is the software thread that reports the log message. For example: stg, ip, console, telnet, vrrp, system, web server, ssh, bgp

<<u>Message</u>>: The log message

Following is a list of potential syslog messages. To keep this list as short as possible, only the *<Thread ID>* and *<Message>* are shown. The messages are sorted by *<Log Label>*.

Where the *<Thread ID>* is listed as mgmt, one of the following may be shown: console, telnet, web server, **or** ssh.

Appendix B. Getting help and technical assistance

If you need help, service, or technical assistance or just want more information about IBM products, you will find a wide variety of sources available from IBM to assist you. This section contains information about where to go for additional information about IBM and IBM products, what to do if you experience a problem with your system, and whom to call for service, if it is necessary.

Before you call

Before you call, make sure that you have taken these steps to try to solve the problem yourself:

- Check all cables to make sure that they are connected.
- Check the power switches to make sure that the system and any optional devices are turned on.
- Use the troubleshooting information in your system documentation, and use the diagnostic tools that come with your system. Information about diagnostic tools is in the *Problem Determination and Service Guide* on the IBM *Documentation* CD that comes with your system.
- Go to the IBM support website at http://www.ibm.com/systems/support/ to check for technical information, hints, tips, and new device drivers or to submit a request for information.

You can solve many problems without outside assistance by following the troubleshooting procedures that IBM provides in the online help or in the documentation that is provided with your IBM product. The documentation that comes with IBM systems also describes the diagnostic tests that you can perform. Most systems, operating systems, and programs come with documentation that contains troubleshooting procedures and explanations of error messages and error codes. If you suspect a software problem, see the documentation for the operating system or program.

Using the documentation

Information about your IBM system and pre-installed software, if any, or optional device is available in the documentation that comes with the product. That documentation can include printed documents, online documents, ReadMe files, and Help files. See the troubleshooting information in your system documentation for instructions for using the diagnostic programs. The troubleshooting information or the diagnostic programs might tell you that you need additional or updated device drivers or other software. IBM maintains pages on the World Wide Web where you can get the latest technical information and download device drivers and updates. To access these pages, go to http://www.ibm.com/systems/support/ and follow the instructions. Also, some documents are available through the IBM Publications Center at http://www.ibm.com/shop/publications/order/.

Getting help and information on the World Wide Web

On the World Wide Web, the IBM website has up-to-date information about IBM systems, optional devices, services, and support. The address for IBM System x[®] and xSeries[®] information is http://www.ibm.com/systems/x/. The address for IBM BladeCenter information is http://www.ibm.com/systems/bladecenter/. The address for IBM IntelliStation[®] information is http://www.ibm.com/intellistation/.

You can find service information for IBM systems and optional devices at http://www.ibm.com/systems/support/.

Software service and support

Through IBM Support Line, you can get telephone assistance, for a fee, with usage, configuration, and software problems with System x and x Series servers, BladeCenter products, IntelliStation workstations, and appliances. For information about which products are supported by Support Line in your country or region, see http://www.ibm.com/services/sl/products/.

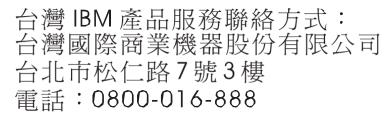

For more information about Support Line and other IBM services, see http://www.ibm.com/services/, or see http://www.ibm.com/planetwide/ for support telephone numbers. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

Hardware service and support

You can receive hardware service through your IBM reseller or IBM Services. To locate a reseller authorized by IBM to provide warranty service, go to http://www.ibm.com/partnerworld/ and click **Find Business Partners** on the right side of the page. For IBM support telephone numbers, see http://www.ibm.com/planetwide/. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

In the U.S. and Canada, hardware service and support is available 24 hours a day, 7 days a week. In the U.K., these services are available Monday through Friday, from 9 a.m. to 6 p.m.
