Preface

This *Menu-Based CLI Command Reference* describes how to configure and use the IBM Networking OS 7.2 software with your EN2092 1Gb Ethernet Scalable Switch (EN2092) for the IBM Flex System.

For documentation on installing the switches physically, see the *Installation Guide* for your EN2092. For details about configuration and operation of your EN2092, see the *IBM Networking OS 7.2 Application Guide*.

Who Should Use This Book

This book is intended for network installers and system administrators engaged in configuring and maintaining a network. The administrator should be familiar with Ethernet concepts, IP addressing, the IEEE 802.1D Spanning Tree Protocol, and SNMP configuration parameters.

How This Book Is Organized

Chapter 1, “The Command Line Interface,” describes how to connect to the switch and access the information and configuration menus.

Chapter 2, “First-Time Configuration,” describes how to use the Setup utility for initial switch configuration and how to change the system passwords.

Chapter 2, “Menu Basics,” provides an overview of the menu system, including a menu map, global commands, and menu shortcuts.

Chapter 3, “The Information Menu,” shows how to view switch configuration parameters.

Chapter 4, “The Statistics Menu,” shows how to view switch performance statistics.

Chapter 5, “The Configuration Menu,” shows how to configure switch system parameters, ports, VLANs, Spanning Tree Protocol, SNMP, Port Mirroring, IP Routing, Port Trunking, and more.

Chapter 6, “The Operations Menu,” shows how to use commands which affect switch performance immediately, but do not alter permanent switch configurations (such as temporarily disabling ports). The menu describes how to activate or deactivate optional software features.

Chapter 7, “The Boot Options Menu,” describes the use of the primary and alternate switch images, how to load a new software image, and how to reset the software to factory defaults.

Chapter 8, “The Maintenance Menu,” shows how to generate and access a dump of critical switch state information, how to clear it, and how to clear part or all of the forwarding database.

Appendix A, “IBM Networking OS System Log Messages,” shows a listing of syslog messages.

Appendix B, “IBM Networking OS SNMP Agent,” lists the Management Interface Bases (MIBs) supported in the switch software.

“Index” includes pointers to the description of the key words used throughout the book.

Typographic Conventions

The following table describes the typographic styles used in this book.

Table 1. *Typographic Conventions*

Typeface or Symbol	Meaning
plain fixed-width text	This type is used for names of commands, files, and directories used within the text. For example: View the <code>readme.txt</code> file. It also depicts on-screen computer output and prompts.
bold fixed-width text	This bold type appears in command examples. It shows text that must be typed in exactly as shown. For example: <code>/info/sys/gen</code>
bold body text	This bold type indicates objects such as window names, dialog box names, and icons, as well as user interface objects such as buttons, and tabs.
<i>italicized body text</i>	This italicized type indicates book titles, special terms, or words to be emphasized.
block body text	Indicates objects such as window names, dialog box names, and icons, as well as user interface objects such as buttons and tabs.
angle brackets < >	Indicate a variable to enter based on the description inside the brackets. Do not type the brackets when entering the command. Example: If the command syntax is <code>ping <IP address></code> you enter <code>ping 192.32.10.12</code>
braces { }	Indicate required elements in syntax descriptions where there is more than one option. You must choose only one of the options. Do not type the braces when entering the command. Example: If the command syntax is <code>/cfg/12/vlan/vmap {add rem} <1-127></code> you enter: <code>/cfg/12/vlan/vmap add 1</code> or <code>/cfg/12/vlan/vmap rem 1</code>

Table 1. Typographic Conventions

Typeface or Symbol	Meaning
brackets []	<p>Indicate optional elements in syntax descriptions. Do not type the brackets when entering the command.</p> <p>Example: If the command syntax is <code>/cfg/sys/dhcp [mgta mgtb] enable</code></p> <p>you enter <code>/cfg/sys/dhcp mgta enable</code></p> <p>or <code>/cfg/sys/dhcp mgtb enable</code></p>
vertical line	<p>Separates choices for command keywords and arguments. Enter only one of the choices. Do not type the vertical line when entering the command.</p> <p>Example: If the command syntax is <code>/cfg/13/route/ecmphaash [sip dip]</code></p> <p>you enter: <code>/cfg/13/route/ecmphaash sip</code></p> <p>or <code>/cfg/13/route/ecmphaash dip</code></p> <p>or <code>/cfg/13/route/ecmphaash sip dip</code></p>

How To Get Help

If you need help, service, or technical assistance, visit our website at the following address:

You also can visit our web site at the following address:

<http://www.ibm.com/support>

Click the **Support** tab.

The warranty card received with your product provides details for contacting a customer support representative. If you are unable to locate this information, please contact your reseller. Before you call, prepare the following information:

- Serial number of the switch unit
- Software release version number
- Brief description of the problem and the steps you have already taken
- Technical support dump information (# `show tech-support`)

Chapter 1. The Command Line Interface

Your EN2092 1Gb Ethernet Scalable Switch (EN2092) is ready to perform basic switching functions right out of the box. Some of the more advanced features, however, require some administrative configuration before they can be used effectively.

The extensive IBM Networking OS switching software included in your switch provides a variety of options for accessing and configuring the switch:

- A built-in, text-based command line interface and menu system for access via a Telnet session or serial-port connection
- SNMP support for access through network management software such as IBM Director or HP OpenView
- IBM Networking OS Browser-Based Interface (BBI)

The command line interface is the most direct method for collecting switch information and performing switch configuration. Using a basic terminal, you are presented with a hierarchy of menus that enable you to view information and statistics about the switch, and to perform any necessary configuration.

This chapter explains how to access the Command Line Interface (CLI) for the switch.

Connecting to the Switch

You can access the command line interface in any one of the following ways:

- Using a Telnet connection via the chassis management module
- Using a Telnet connection over the network
- Using a SSH connection via the management module
- Using a serial connection via the serial port on the EN2092

Accessing the Switch

To enable better switch management and user accountability, three levels or *classes* of user access have been implemented on the EN2092. Levels of access to CLI, Web management functions, and screens increase as needed to perform various switch management tasks. Conceptually, access classes are defined as follows:

- User interaction with the switch is completely passive—nothing can be changed on the EN2092. Users may display information that has no security or privacy implications, such as switch statistics and current operational state information.
- Operators can only effect temporary changes on the EN2092. These changes will be lost when the switch is rebooted/reset. Operators have access to the switch management features used for daily switch operations. Because any changes an operator makes are undone by a reset of the switch, operators cannot severely impact switch operation.
- Administrators are the only ones that may make permanent changes to the switch configuration—changes that are persistent across a reboot/reset of the switch. Administrators can access switch functions to configure and troubleshoot problems on the EN2092. Because administrators can also make temporary (operator-level) changes as well, they must be aware of the interactions between temporary and permanent changes.

Access to switch functions is controlled through the use of unique surnames and passwords. Once you are connected to the switch via local Telnet, remote Telnet, or SSH, you are prompted to enter a password. The default user names/password for each access level are listed in the following table.

Note: It is recommended that you change default switch passwords after initial configuration and as regularly as required under your network security policies. For more information, see [“Setting Passwords” on page 11](#).

Table 2. User Access Levels

User Account	Description and Tasks Performed	Password
User	The User has no direct responsibility for switch management. He or she can view all switch status information and statistics, but cannot make any configuration changes to the switch.	user
Operator	The Operator manages all functions of the switch. The Operator can reset ports, except the management ports.	oper
Administrator	The superuser Administrator has complete access to all menus, information, and configuration commands on the EN2092, including the ability to change both the user and administrator passwords.	admin

Note: With the exception of the “admin” user, access to each user level can be disabled by setting the password to an empty value.

Setup vs. CLI

Once the administrator password is verified, you are given complete access to the switch. If the switch is still set to its factory default configuration, the system will ask whether you wish to run Setup, a utility designed to help you through the first-time configuration process. If the switch has already been configured, the Main Menu of the CLI is displayed instead.

The following table shows the Main Menu with administrator privileges.

[Main Menu]	
info	- Information Menu
stats	- Statistics Menu
cfg	- Configuration Menu
oper	- Operations Command Menu
boot	- Boot Options Menu
maint	- Maintenance Menu
diff	- Show pending config changes [global command]
apply	- Apply pending config changes [global command]
save	- Save updated config to FLASH [global command]
revert	- Revert pending or applied changes [global command]
exit	- Exit [global command, always available]

Note: If you are accessing a user account, some menu options are not available.

Command Line History and Editing

For a description of global commands, shortcuts, and command line editing functions, see [“Menu Basics” on page 9.](#)

Idle Timeout

By default, the switch will disconnect your Telnet session after 10 minutes of inactivity. This function is controlled by the idle timeout parameter, which can be set from 1 to 60 minutes. For information on changing this parameter, see [“System Configuration Menu” on page 176.](#)

Chapter 2. Menu Basics

The IBM Networking OS Command Line Interface (CLI) is used for viewing switch information and statistics. In addition, the administrator can use the CLI for performing all levels of switch configuration.

To make the CLI easy to use, the various commands have been logically grouped into a series of menus and sub-menus. Each menu displays a list of commands and/or sub-menus that are available, along with a summary of what each command will do. Below each menu is a prompt where you can enter any command appropriate to the current menu.

This chapter describes the Main Menu commands, and provides a list of commands and shortcuts that are commonly available from all the menus within the CLI.

The Main Menu

The Main Menu appears after a successful connection and login. The following table shows the Main Menu for the administrator login. Some features are not available under the user login.

```
[Main Menu]
  info   - Information Menu
  stats  - Statistics Menu
  cfg    - Configuration Menu
  oper   - Operations Command Menu
  boot   - Boot Options Menu
  maint  - Maintenance Menu
  diff   - Show pending config changes [global command]
  apply  - Apply pending config changes [global command]
  save   - Save updated config to FLASH [global command]
  revert - Revert pending or applied changes [global command]
  exit   - Exit [global command, always available]
```

Menu Summary

The following menus are available from the Main Menu:

- **Information Menu**
Provides sub-menus for displaying information about the current status of the switch: from basic system settings to VLANs, and more.
- **Statistics Menu**
Provides sub-menus for displaying switch performance statistics. Included are port, IF, IP, ICMP, TCP, UDP, SNMP, routing, ARP, DNS, and VRRP statistics.
- **Configuration Menu**
This menu is available only from an administrator login. It includes sub-menus for configuring every aspect of the switch. Changes to configuration are not active until explicitly applied. Changes can be saved to non-volatile memory.

- **Operations Menu**
Operations-level commands are used for making immediate and temporary changes to switch configuration. This menu is used for bringing ports temporarily in and out of service, enabling or disabling FDB learning on a port, or sending NTP requests. It is also used for activating or deactivating optional software packages.
- **Boot Options Menu**
This menu is used for upgrading switch software, selecting configuration blocks, and for resetting the switch when necessary.
- **Maintenance Menu**
This menu is used for debugging purposes, enabling you to generate a dump of the critical state information in the switch, and to clear entries in the forwarding database and the ARP and routing tables.

Global Commands

Some basic commands are recognized throughout the menu hierarchy. These commands are useful for obtaining online help, navigating through menus, and for applying and saving configuration changes.

For help on a specific command, type `help`. You will see the following screen:

```
Global Commands: [can be issued from any menu]
help          list          up          print
pwd           lines         verbose    exit
quit         config        diff       apply
save         revert        ping       traceroute
telnet       history       pushd      popd
who          chpass_p     chpass_s   clock
mv           dir
```

The following are used to navigate the menu structure:

```
. Print current menu
.. Move up one menu level
/ Top menu if first, or command separator
! Execute command from history
```

Table 3. Description of Global Commands

Command	Action
? <i>command</i> or help	Provides more information about a specific command on the current menu. When used without the <i>command</i> parameter, a summary of the global commands is displayed.
. or print	Display the current menu.
list	Lists the commands available at the current level. You may follow the list command with a text string, and list all of the available commands that match the string.
.. or up	Go up one level in the menu structure.
/	If placed at the beginning of a command, go to the Main Menu. Otherwise, this is used to separate multiple commands placed on the same line.

Table 3. Description of Global Commands (continued)

Command	Action
lines [<i>n</i>]	Set the number of lines (<i>n</i>) that display on the screen at one time. The default is 24 lines. When used without a value, the current setting is displayed. Set lines to a value of 0 (zero) to disable pagination.
diff	Show any pending configuration changes.
apply	Apply pending configuration changes.
save	Write configuration changes to non-volatile flash memory.
revert	Remove pending configuration changes between “apply” commands. Use this command to remove any configuration changes made since last <code>apply</code> .
revert apply	Remove pending or applied configuration changes between “save” commands. Use this command to remove any configuration changes made since last <code>save</code> .
exit or quit	Exit from the command line interface and log out.
config	Displays the switch configuration dump.
ping	<p>Use this command to verify station-to-station connectivity across the network. The format is as follows:</p> <pre>ping <host name> <IP address> [-n <tries (0-4294967295)>] [-w <msec delay (0-4294967295)>] [-l <length (0/32-65500/2080)>] [-s <IP source>] [-v <tos (0-255)>] [-f] [-t]</pre> <p>Where:</p> <ul style="list-style-type: none"> – -n: Sets the number of attempts (optional). – -w: Sets the number of milliseconds between attempts (optional). – -l: Sets the ping request payload size (optional). – -s: Sets the IP source address for the IP packet (optional). – -v: Sets the Type Of Service bits in the IP header. – -f: Sets the <i>don't fragment</i> bit in the IP header (only for IPv4 addresses). – -t: Pings continuously (same as -n 0). <p>The DNS parameters must be configured if specifying hostnames (see “Domain Name System Configuration Menu” on page 342).</p>

Table 3. Description of Global Commands (continued)

Command	Action
traceroute	<p>Use this command to identify the route used for station-to-station connectivity across the network. The format is as follows:</p> <pre>traceroute <hostname> <IP address> [<max-hops (1-32)> [<msec-delay (1-4294967295)>]]</pre> <p>Where <i>hostname/IP address</i> is the hostname or IP address of the target station, <i>max-hops</i> (optional) is the maximum distance to trace (1-32 devices), and <i>msec-delay</i> (optional) is the number of milliseconds to wait for the response.</p> <p>As with <code>ping</code>, the DNS parameters must be configured if specifying hostnames.</p>
pwd	Display the command path used to reach the current menu.
verbose <i>n</i>	<p>Sets the level of information displayed on the screen:</p> <p>0 = Quiet: Nothing appears except errors—not even prompts.</p> <p>1 = Normal: Prompts and requested output are shown, but no menus.</p> <p>2 = Verbose: Everything is shown.</p> <p>When used without a value, the current setting is displayed.</p>
telnet	<p>This command is used to telnet out of the switch. The format is as follows:</p> <pre>telnet <hostname> <IP address> [<port>]</pre> <p>Where <i>IP address</i> is the hostname or IP address of the device.</p>
history	This command displays the most recent commands.
pushd	Save the current menu path, so you can jump back to it using <code>popd</code> .
popd	Go to the menu path and position previously saved by using <code>pushd</code> .
who	Displays a list of users that are logged on to the switch.
chpass_p	Configures the password for the primary TACACS+ server.
chpass_s	Configures the password for the secondary TACACS+ server.
clock	Displays the configured date and time for the switch.
mv <i>file1 file2</i>	Move (rename) a file
dir	<p>Lists image and configuration files. The format is as follows:</p> <pre>dir [images configs]</pre>

Command Line History and Editing

Using the command line interface, you can retrieve and modify previously entered commands with just a few keystrokes. The following options are available globally at the command line:

Table 4. Command Line History and Editing Options

Option	Description
history	Display a numbered list of the last 64 previously entered commands.
!!	Repeat the last entered command.
! <i>n</i>	Repeat the <i>n</i> th command shown on the history list.
<Ctrl-p>	(Also the up arrow key.) Recall the <i>previous</i> command from the history list. This can be used multiple times to work backward through the last 64 commands. The recalled command can be entered as is, or edited using the options below.
<Ctrl-n>	(Also the down arrow key.) Recall the <i>next</i> command from the history list. This can be used multiple times to work forward through the last 64 commands. The recalled command can be entered as is, or edited using the options below.
<Ctrl-a>	Move the cursor to the beginning of command line.
<Ctrl-e>	Move cursor to the <i>end</i> of the command line.
<Ctrl-b>	(Also the left arrow key.) Move the cursor <i>back</i> one position to the left.
<Ctrl-f>	(Also the right arrow key.) Move the cursor <i>forward</i> one position to the right.
<Backspace>	(Also the Delete key.) Erase one character to the left of the cursor position.
<Ctrl-d>	<i>Delete</i> one character at the cursor position.
<Ctrl-k>	<i>Kill</i> (erase) all characters from the cursor position to the end of the command line.
<Ctrl-l>	Redraw the screen.
<Ctrl-u>	Clear the entire line.
Other keys	Insert new characters at the cursor position.

Command Line Interface Shortcuts

The following shortcuts allow you to enter commands quickly and easily.

CLI List and Range Inputs

For CLI commands that allow an individual item to be selected from within a numeric range, lists and ranges of items can now be specified. For example, the `/info/vlan` command permits the following options:

<code># /info/12/vlan</code>	<i>(show all VLANs)</i>
<code># /info/12/vlan 1</code>	<i>(show only VLAN 1)</i>
<code># /info/12/vlan 1,3,4095</code>	<i>(show listed VLANs)</i>
<code># /info/12/vlan 1-20</code>	<i>(show range 1 through 20)</i>
<code># /info/12/vlan 1-5,90-99,4090-4095</code>	<i>(show multiple ranges)</i>
<code># /info/12/vlan 1-5,19,20,4090-4095</code>	<i>(show a mix of lists and ranges)</i>

The numbers in a range must be separated by a dash:

`<start of range>-<end of range>`

Multiple ranges or list items are permitted using a comma:

`<range or item 1>, <range or item 2>`

Do not use spaces within list and range specifications.

Ranges can also be used to apply the same command option to multiple items. For example, to enable multiple ports with one command:

<code># /cfg/port 1-4/ena</code>	<i>(Enable ports 1 through 4)</i>
----------------------------------	-----------------------------------

Note: Port ranges accept only port numbers, not aliases such as INT1 or EXT1.

Command Stacking

As a shortcut, you can type multiple commands on a single line, separated by forward slashes (/). You can connect as many commands as required to access the menu option that you want. For example, the keyboard shortcut to access the Spanning Tree Port Configuration Menu from the `Main#` prompt is as follows:

<code>Main# cfg/12/stg 1/port</code>

Command Abbreviation

Most commands can be abbreviated by entering the first characters which distinguish the command from the others in the same menu or sub-menu. For example, the command shown above could also be entered as follows:

<code>Main# c/12/stg 1/po</code>

Tab Completion

By entering the first letter of a command at any menu prompt and hitting <Tab>, the CLI will display all commands or options in that menu that begin with that letter. Entering additional letters will further refine the list of commands or options displayed. If only one command fits the input text when <Tab> is pressed, that command will be supplied on the command line, waiting to be entered. If the <Tab> key is pressed without any input on the command line, the currently active menu will be displayed.

Chapter 3. The Information Menu

You can view configuration information for the switch in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch information.

`/info` Information Menu

```
[Information Menu]
  sys      - System Information Menu
  12       - Layer 2 Information Menu
  13       - Layer 3 Information Menu
  qos      - QoS Menu
  acl      - Show ACL information
  rmon     - Show RMON information
  link     - Show link status
  port     - Show port information
  transcvr - Show Port Transceiver status
  virt     - Show Virtualization information
  swkey    - Show enabled software features
  dump     - Dump all information
```

The information provided by each menu option is briefly described in [Table 5](#), with pointers to detailed information.

Table 5. Information Menu Options (/info)

Command Syntax and Usage	
sys	Displays the System Information Menu. For details, see page 19 .
12	Displays the Layer 2 Information Menu. For details, see page 31 .
13	Displays the Layer 3 Information Menu. For details, see page 52 .
qos	Displays the Quality of Service (QoS) Information Menu. For details, see page 86 .
acl	Displays the current configuration profile for each Access Control List (ACL) and ACL Group. For details, see page 88 .
rmon	Displays the Remote Monitoring (RMON) Information Menu. For details, see page 89 .

Table 5. Information Menu Options (/info)

Command Syntax and Usage
<p><code>link</code></p> <p>Displays configuration information about each port, including:</p> <ul style="list-style-type: none">– Port alias and number– Port speed– Duplex mode (half, full, or auto)– Flow control for transmit and receive (no, yes, or both)– Link status (up, down, or disabled) <p>For details, see page 92.</p>
<p><code>port</code></p> <p>Displays port status information, including:</p> <ul style="list-style-type: none">– Port alias and number– Whether the port uses VLAN Tagging or not– Port VLAN ID (PVID)– Port name– VLAN membership– Fast Forwarding status– FDB Learning status– Flooding status <p>For details, see page 93.</p>
<p><code>transcvr</code></p> <p>Displays the status of the port transceiver module on each external port.</p> <p>For details, see page 94.</p>
<p><code>virt</code></p> <p>Displays the Virtualization information menu. For details, see page 95.</p>
<p><code>swkey</code></p> <p>Displays the enabled software features.</p>
<p><code>dump</code></p> <p>Dumps all switch information available from the Information Menu (10K or more, depending on your configuration).</p> <p>If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.</p>

/info/sys

System Information Menu

[System Menu]	
errdis	- Errdisable Menu
snmpv3	- SNMPv3 Information Menu
chassis	- Show BladeCenter Chassis related information
general	- Show general system information
log	- Show last 100 syslog messages
user	- Show current user status
dump	- Dump all system information

The information provided by each menu option is briefly described in [Table 6](#), with pointers to where detailed information can be found.

Table 6. System Menu Options (/info/sys)

Command Syntax and Usage	
errdis	Displays Error Disable and Recovery Information menu. To view the menu options, see page 20 .
snmpv3	Displays SNMPv3 Information Menu. To view the menu options, see page 20 .
chassis	Displays information about the Flex System chassis. For details, see page 28 .
general	Displays system information, including: <ul style="list-style-type: none">- System date and time- Switch model name and number- Switch name and location- Time of last boot- MAC address of the switch management processor- IP address of management interface- Hardware version and part number- Software image file and version number- Configuration name- Log-in banner, if one is configured For details, see page 29 .
log	Displays most recent syslog messages. For details, see page 30 .
user	Displays configured user names and their status. For details, see page 30 .
dump	Dumps all switch information available from the Information Menu (10K or more, depending on your configuration).

/info/sys/errdis

Error Disable and Recovery Information

```
[ErrDisable Information Menu]
  recovery - Show ErrDisable recovery information
  timers   - Show ErrDisable timer information
  dump     - Show all of the above
```

This menu allows you to display information about the Error Disable and Recovery feature for interface ports.

Table 7. Error Disable Information Options

Command Syntax and Usage	
recovery	Displays a list ports with their Error Recovery status.
timers	Displays a list of active recovery timers, if applicable.
dump	Displays all Error Disable and Recovery information.

/info/sys/snmpv3

SNMPv3 System Information Menu

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 Framework by supporting the following:

- a new SNMP message format
- security for messages
- access control
- remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC2271 to RFC2276.

```
[SNMPv3 Information Menu]
  usm      - Show usmUser table information
  view     - Show vacmViewTreeFamily table information
  access   - Show vacmAccess table information
  group    - Show vacmSecurityToGroup table information
  comm     - Show community table information
  taddr    - Show targetAddr table information
  tparam   - Show targetParams table information
  notify   - Show notify table information
  dump     - Show all SNMPv3 information
```

Table 8. SNMPv3 information Menu Options (/info/sys/snmpv3)

Command Syntax and Usage	
usm	Displays User Security Model (USM) table information. To view the table, see page 22 .
view	Displays information about view, sub-trees, mask and type of view. To view a sample, see page 22 .
access	Displays View-based Access Control information. To view a sample, see page 23 .
group	Displays information about the group that includes, the security model, user name, and group name. To view a sample, see page 24 .
comm	Displays information about the community table information. To view a sample, see page 24 .
taddr	Displays the Target Address table information. To view a sample, see page 25 .
tparam	Displays the Target parameters table information. To view a sample, see page 25 .
notify	Displays the Notify table information. To view a sample, see page 26 .
dump	Displays all the SNMPv3 information. To view a sample, see page 27 .

/info/sys/snmpv3/usm **SNMPv3 USM User Table Information**

The User-based Security Model (USM) in SNMPv3 provides security services such as authentication and privacy of messages. This security model makes use of a defined set of user identities displayed in the USM user table. The USM user table contains the following information:

- the user name
- a security name in the form of a string whose format is independent of the Security Model
- an authentication protocol, which is an indication that the messages sent on behalf of the user can be authenticated
- the privacy protocol

usmUser Table:	
User Name	Protocol

adminmd5	HMAC_MD5, DES PRIVACY
adminsha	HMAC_SHA, DES PRIVACY
v1v2only	NO AUTH, NO PRIVACY

Table 9. USM User Table Information Parameters (/info/sys/usm)

Field	Description
User Name	This is a string that represents the name of the user that you can use to access the switch.
Protocol	This indicates whether messages sent on behalf of this user are protected from disclosure using a privacy protocol. IBM Networking OS supports DES algorithm for privacy. The software also supports two authentication algorithms: MD5 and HMAC-SHA.

/info/sys/snmpv3/view **SNMPv3 View Table Information**

The user can control and restrict the access allowed to a group to only a subset of the management information in the management domain that the group can access within each context by specifying the group's rights in terms of a particular MIB view for security reasons.

View Name	Subtree	Mask	Type

iso	1.3		included
v1v2only	1.3		included
v1v2only	1.3.6.1.6.3.15		excluded
v1v2only	1.3.6.1.6.3.16		excluded
v1v2only	1.3.6.1.6.3.18		excluded

Table 10. SNMPv3 View Table Information Parameters (/info/sys/snmpv3/view)

Field	Description
View Name	Displays the name of the view.
Subtree	Displays the MIB subtree as an OID string. A view subtree is the set of all MIB object instances which have a common Object Identifier prefix to their names.
Mask	Displays the bit mask.
Type	Displays whether a family of <code>view subtrees</code> is included or excluded from the MIB view.

/info/sys/snmpv3/access **SNMPv3 Access Table Information**

The access control sub system provides authorization services.

The `vacmAccessTable` maps a group name, security information, a context, and a message type, which could be the read or write type of operation or notification into a MIB view.

The View-based Access Control Model defines a set of services that an application can use for checking access rights of a group. This group's access rights are determined by a read-view, a write-view and a notify-view. The read-view represents the set of object instances authorized for the group while reading the objects. The write-view represents the set of object instances authorized for the group when writing objects. The notify-view represents the set of object instances authorized for the group when sending a notification.

Table 11. SNMPv3 Access Table Information (/info/sys/snmpv3/access)

Field	Description
Group Name	Displays the name of group.
Model	Displays the security model used, for example, SNMPv1, or SNMPv2 or USM.
Level	Displays the minimum level of security required to gain rights of access. For example, <code>noAuthNoPriv</code> , <code>authNoPriv</code> , or <code>authPriv</code> .
ReadV	Displays the MIB view to which this entry authorizes the read access.
WriteV	Displays the MIB view to which this entry authorizes the write access.
NotifyV	Displays the Notify view to which this entry authorizes the notify access.

/info/sys/snmpv3/group **SNMPv3 Group Table Information**

A group is a combination of security model and security name that defines the access rights assigned to all the security names belonging to that group. The group is identified by a group name.

Sec Model	User Name	Group Name
snmpv1	v1v2only	v1v2grp
usm	adminmd5	admingrp
usm	adminsha	admingrp

Table 12. SNMPv3 Group Table Information Parameters (/info/sys/snmpv3/group)

Field	Description
Sec Model	Displays the security model used, which is any one of: USM, SNMPv1, SNMPv2, and SNMPv3.
User Name	Displays the name for the group.
Group Name	Displays the access name of the group.

/info/sys/snmpv3/comm **SNMPv3 Community Table Information**

This command displays the community table information stored in the SNMP engine.

Index	Name	User Name	Tag
trap1	public	v1v2only	v1v2trap

Table 13. SNMPv3 Community Table Parameters (/info/sys/snmpv3/comm)

Field	Description
Index	Displays the unique index value of a row in this table
Name	Displays the community string, which represents the configuration.
User Name	Displays the User Security Model (USM) user name.
Tag	Displays the community tag. This tag specifies a set of transport endpoints from which a command responder application accepts management requests and to which a command responder application sends an SNMP trap.

`/info/sys/snmpv3/taddr` SNMPv3 Target Address Table Information

This command displays the SNMPv3 target address table information, which is stored in the SNMP engine.

Name	Transport Addr	Port	Taglist	Params
trap1	47.81.25.66	162	v1v2trap	v1v2param

Table 14. SNMPv3 Target Address Table Information Parameters (`/info/sys/snmpv3/taddr`)

Field	Description
Name	Displays the locally arbitrary, but unique identifier associated with this <code>snmpTargetAddrEntry</code> .
Transport Addr	Displays the transport addresses.
Port	Displays the SNMP UDP port number.
Taglist	This column contains a list of tag values which are used to select target addresses for a particular SNMP message.
Params	The value of this object identifies an entry in the <code>snmpTargetParamsTable</code> . The identified entry contains SNMP parameters to be used when generating messages to be sent to this transport address.

`/info/sys/snmpv3/tparam` SNMPv3 Target Parameters Table Information

Name	MP Model	User Name	Sec Model	Sec Level
v1v2param	snmpv2c	v1v2only	snmpv1	noAuthNoPriv

This command displays the SNMPv3 target parameters table information.

Table 15. SNMPv3 Target Parameters Table Information (`/info/sys/snmpv3/tparam`)

Field	Description
Name	Displays the locally arbitrary, but unique identifier associated with this <code>snmpTargetParamsEntry</code> .
MP Model	Displays the Message Processing Model used when generating SNMP messages using this entry.
User Name	Displays the <code>securityName</code> , which identifies the entry on whose behalf SNMP messages will be generated using this entry.

Table 15. SNMPv3 Target Parameters Table Information (/info/sys/snmpv3/tparam)

Field	Description
Sec Model	Displays the security model used when generating SNMP messages using this entry. The system may choose to return an <code>inconsistentValue</code> error if an attempt is made to set this variable to a value for a security model which the system does not support.
Sec Level	Displays the level of security used when generating SNMP messages using this entry.

/info/sys/snmpv3/notify **SNMPv3 Notify Table Information**

Name	Tag
-----	-----
v1v2trap	v1v2trap

This command displays the SNMPv3 notify table information.

Table 16. SNMPv3 Notify Table Information (/info/sys/snmpv3/notify)

Field	Description
Name	The locally arbitrary, but unique identifier associated with this <code>snmpNotifyEntry</code> .
Tag	This represents a single tag value that is used to select entries in the <code>snmpTargetAddrTable</code> . Any entry in the <code>snmpTargetAddrTable</code> that contains a tag value equal to the value of this entry, is selected. If this entry contains a value of zero length, no entries are selected.

Each syslog message has a criticality level associated with it, included in text form as a prefix to the log message. One of eight different prefixes is used, depending on the condition that the administrator is being notified of, as shown below.

- **EMERG:** indicates the system is unusable
- **ALERT:** Indicates action should be taken immediately
- **CRIT:** Indicates critical conditions
- **ERR:** indicates error conditions or errored operations
- **WARNING:** indicates warning conditions
- **NOTICE:** indicates a normal but significant condition
- **INFO:** indicates an information message
- **DEBUG:** indicates a debug-level message

/info/sys/user

User Status Information

Usernames:	
user	- enabled - offline
oper	- disabled - offline
admin	- Always Enabled - online 1 session

1:	name paul , dis, cos user , password valid, offline
Current strong password settings:	
strong password status:	disabled

This command displays the status of the configured usernames.

/info/12

Layer 2 Information Menu

[Layer 2 Menu]	
fdb	- Forwarding Database Information Menu
lACP	- Link Aggregation Control Protocol Menu
failover	- Show Failover information
hotlink	- Show Hot Links information
lldp	- LLDP Information Menu
udld	- UDLD Information Menu
oam	- OAM Information Menu
8021x	- Show 802.1X information
stg	- Show STP information
cist	- Show CIST information
trunk	- Show Trunk Group information
vlan	- Show VLAN information
pvlan	- Show protocol VLAN information
prvlan	- Show private-vlan information
dump	- Dump all layer 2 information

The information provided by each menu option is briefly described in [Table 17](#), with pointers to where detailed information can be found.

Table 17. Layer 2 Information Menu Options (/info/12)

Command Syntax and Usage	
fdb	Displays the Forwarding Database Information Menu. For details, see page 33 .
lACP	Displays the Link Aggregation Control Protocol Menu. For details, see page 35 .
failover	Displays the Layer 2 Failover Information menu. For details, see page 36 .
hotlink	Displays the Hot Links Information menu. For details, see page 37 .
lldp	Displays the LLDP Information menu. For details, see page 38 .
udld	Displays the Unidirectional Link Detection (UDLD) Information menu. For details, see page 40 .
oam	Displays the Operation, Administration, and Maintenance (OAM) Information menu. For details, see page 41 .
8021x	Displays the 802.1X Information Menu. For details, see page 42 .

Table 17. Layer 2 Information Menu Options (/info/l2)

Command Syntax and Usage
<p><code>stg</code></p> <p>Displays Spanning Tree information, including the status (on or off), Spanning Tree mode (PVRST, RSTP, or MSTP), and VLAN membership.</p> <p>In addition to seeing if STG is enabled or disabled, you can view the following STG bridge information:</p> <ul style="list-style-type: none">– Priority– Hello interval– Maximum age value– Forwarding delay– Aging time <p>You can also see the following port-specific STG information:</p> <ul style="list-style-type: none">– Port alias and priority– Cost– State <p>For details, see page 44.</p>
<p><code>cist</code></p> <p>Displays Common Internal Spanning Tree (CIST) information, including the MSTP digest and VLAN membership.</p> <p>CIST bridge information includes:</p> <ul style="list-style-type: none">– Priority– Hello interval– Maximum age value– Forwarding delay– Root bridge information (priority, MAC address, path cost, root port) <p>CIST port information includes:</p> <ul style="list-style-type: none">– Port number and priority– Cost– State <p>For details, see page 49.</p>
<p><code>trunk</code></p> <p>When trunk groups are configured, you can view the state of each port in the various trunk groups. For details, see page 51.</p>
<p><code>vlan</code></p> <p>Displays VLAN configuration information, including:</p> <ul style="list-style-type: none">– VLAN Number– VLAN Name– Status– Port membership of the VLAN <p>For details, see page 51.</p>

Table 17. Layer 2 Information Menu Options (/info/l2)

Command Syntax and Usage	
pvlan	Displays Protocol VLAN information.
prvlan	Displays Private VLAN information.
dump	Dumps all switch information available from the Layer 2 menu (10K or more, depending on your configuration). If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

/info/l2/fdb

FDB Information Menu

[Forwarding Database Menu]	
find	- Show a single FDB entry by MAC address
port	- Show FDB entries on a single port
trunk	- Show FDB entries on a single trunk
vlan	- Show FDB entries on a single VLAN
state	- Show FDB entries by state
mcdump	- Show FDB multicast entries
static	- Show FDB static entries
dump	- Show all FDB entries

The forwarding database (FDB) contains information that maps the media access control (MAC) address of each known device to the switch port where the device address was learned. The FDB also shows which other ports have seen frames destined for a particular MAC address.

Note: The master forwarding database supports up to K MAC address entries on the MP per switch.

Table 18. FDB Information Menu Options (/info/l2/fdb)

Command Syntax and Usage	
find <MAC address> [<VLAN>]	Displays a single database entry by its MAC address. You are prompted to enter the MAC address of the device. Enter the MAC address using the format, xx:xx:xx:xx:xx:xx. For example, 08:00:20:12:34:56 You can also enter the MAC address using the format, xxxxxxxxxxxx. For example, 080020123456
port <port number or alias>	Displays all FDB entries for a particular port.
trunk <trunk number>	Displays all FDB entries for a particular trunk.

Table 18. FDB Information Menu Options (/info/12/fdb)

Command Syntax and Usage	
vlan <VLAN number>	Displays all FDB entries on a single VLAN.
state unknown forward trunk	Displays all FDB entries of a particular state.
mcdump	Displays all Multicast MAC entries in the FDB.
static	Displays all static MAC entries in the FDB.
dump	Displays all entries in the Forwarding Database. For more information, see page 34 .

/info/12/fdb/dump

Show All FDB Information

MAC address	VLAN	Port	Trnk	State	Permanent
00:04:38:90:54:18	1	EXT4		FWD	
00:09:6b:9b:01:5f	1	INTA13		FWD	
00:09:6b:ca:26:ef	4095	MGT1		FWD	
00:0f:06:ec:3b:00	4095	MGT1		FWD	
00:11:43:c4:79:83	1	EXT4		FWD	P

An address that is in the forwarding (FWD) state, means that it has been learned by the switch. When in the trunking (TRK) state, the port field represents the trunk group number. If the state for the port is listed as unknown (UNK), the MAC address has not yet been learned by the switch, but has only been seen as a destination address.

When an address is in the unknown state, no outbound port is indicated, although ports which reference the address as a destination will be listed under “Reference ports.”

Clearing Entries from the Forwarding Database

To clear the entire FDB, refer to [“Forwarding Database Maintenance Menu” on page 420](#).

/info/12/lacp

Link Aggregation Control Protocol Information Menu

```
[LACP Menu]
  aggr      - Show LACP aggregator information
  port      - Show LACP port information
  dump      - Show all LACP ports information
```

Use these commands to display Link Aggregation Protocol (LACP) status information about each port on the switch.

Table 19. LACP Information Options (/info/12/lacp)

Command Syntax and Usage	
aggr <aggregator ID>	Displays detailed information about the LACP aggregator.
port	Displays LACP information about the selected port.
dump	Displays a summary of LACP information. For details, see page 35 .

/info/12/lacp/dump

Show All LACP Information

port	mode	adminkey	operkey	selected	prio	aggr	trunk	status
INTA1	active	30	30	yes	32768	17	19	up
INTA2	active	30	30	yes	32768	17	19	up
INTA3	off	3	3	no	32768	--	--	--
INTA4	off	4	4	no	32768	--	--	--
...								

LACP dump includes the following information for each external port in the EN2092:

- **mode** Displays the port's LACP mode (active, passive, or off).
- **adminkey** Displays the value of the port's *adminkey*.
- **operkey** Shows the value of the port's operational key.
- **selected** Indicates whether the port has been selected to be part of a Link Aggregation Group.
- **prio** Shows the value of the port priority.
- **aggr** Displays the aggregator associated with each port.
- **trunk** This value represents the LACP trunk group number.
- **status** Displays the status of LACP on the port (up or down).

/info/l2/failovr

Layer 2 Failover Information Menu

```
[Failover Info Menu]
trigger - Show Trigger information
```

Table 20 describes the Layer 2 Failover information options.

Table 20. Failover Information Options (/info/l2/failovr)

Command Syntax and Usage

```
trigger <trigger number>
    Displays detailed information about the selected Layer 2 Failover trigger.
```

/info/l2/failovr/trigger <trigger number> Show Layer 2 Failover Information

```
Trigger 1 Auto Monitor: Enabled
Trigger 1 limit: 0
Monitor State: Up
Member      Status
-----
trunk 1
  EXT2      Operational
  EXT3      Operational

Control State: Auto Disabled
Member      Status
-----
  INTA1     Operational
  INTA2     Operational
  INTA3     Operational
  INTA4     Operational
  ...
```

A monitor port's Failover status is `Operational` only if all the following conditions hold true:

- Port link is up.
- If Spanning-Tree is enabled, the port is in the `Forwarding` state.
- If the port is a member of an LACP trunk group, the port is aggregated.

If any of the above conditions are not true, the monitor port is considered to be failed.

A control port is considered to be operational if the monitor trigger state is `Up`. Even if a port's link status is `Down`, Spanning-Tree status is `Blocking`, and the LACP status is `Not Aggregated`, from a teaming perspective the port status is `Operational`, since the trigger is `Up`.

A control port's status is displayed as `Failed` only if the monitor trigger state is `Down`.

/info/12/hotlink Hot Links Information Menu

```
[Hot Links Info Menu]
trigger - Show Trigger information
```

Table 21. Hot Links Information Options (/info/12/hotlink)

Command Syntax and Usage
<pre>trigger</pre> <p>Displays status and configuration information for each Hot Links trigger. To view a sample display, see page 37.</p>

/info/12/hotlink/trigger Hotlinks Trigger Information

```
Hot Links Info: Trigger

Current global Hot Links setting: ON
bpdu disabled
sndfdb disabled

Current Trigger 1 setting: enabled
name "Trigger 1", preempt enabled, fdelay 1 sec

Active state: None

Master settings:
port EXT1
Backup settings:
port EXT2
```

Hot Links trigger information includes the following:

- Hot Links status (on or off)
- Status of BPDU flood option
- Status of FDB send option
- Status and configuration of each Hot Links trigger

/info/12/11dp

LLDP Information Menu

[LLDP Information Menu]	
port	- Show LLDP port information
rx	- Show LLDP receive state machine information
tx	- Show LLDP transmit state machine information
remodev	- Show LLDP remote devices information
dump	- Show all LLDP information

Table 22. LLDP Information Menu Options (/info/12/11dp)

Command Syntax and Usage	
port <port alias or number>	Displays Link Layer Discovery Protocol (LLDP) port information.
rx	Displays information about the LLDP receive state machine.
tx	Displays information about the LLDP transmit state machine.
remodev	Displays information received from LLDP -capable devices. To view a sample display, see page 39 .
dump	Displays all LLDP information.

`/info/12/1ldp/remodev` LLDP Remote Device Information

LLDP Remote Devices Information				
LocalPort	Index	Remote Chassis ID	RemotePort	Remote System Name
MGT1	210	00 16 ca ff 7e 00	15	BNT Gb Ethernet Switch...
EXT4	12	00 16 60 f9 3b 00	20	BNT Gb Ethernet Switch...

LLDP remote device information provides a summary of information about remote devices connected to the switch. To view detailed information about a device, as shown below, follow the `remodev` command with the index number of the remote device.

Local Port Alias: EXT1	
Remote Device Index	: 15
Remote Device TTL	: 99
Remote Device RxChanges	: false
Chassis Type	: Mac Address
Chassis Id	: 00-18-b1-33-1d-00

Object Identifier	:

/info/12/udld

Unidirectional Link Detection Information Menu

```
[UDLD Information Menu]
port      - Show UDLD port information
dump     - Show all UDLD information
```

Table 23. UDLD Information Menu Options (/info/12/udld)

Command Syntax and Usage
<pre>port <port alias or number></pre> <p>Displays UDLD information about the selected port. To view a sample display, see page 40.</p>
<pre>dump</pre> <p>Displays all UDLD information.</p>

/info/12/udld/port <port alias or number> UDLD Port Information

```
UDLD information on port EXT1
Port enable administrative configuration setting: Enabled
Port administrative mode: normal
Port enable operational state: link up
Port operational state: advertisement
Port bidirectional status: bidirectional
Message interval: 15
Time out interval: 5
Neighbor cache: 1 neighbor detected

Entry #1
Expiration time: 31 seconds
Device Name:
Device ID: 00:da:c0:00:04:00
Port ID: EXT1
```

UDLD information includes the following:

- Status (enabled or disabled)
- Mode (normal or aggressive)
- Port state (link up or link down)
- Bi-directional status (unknown, unidirectional, bidirectional, TX-RX loop, neighbor mismatch)

`/info/12/oam`

OAM Discovery Information Menu

```
[OAM Information Menu]
port      - Show OAM port information
dump     - Show all OAM information
```

Table 24. OAM Discovery Information Menu Options (`/info/12/oam`)

Command Syntax and Usage	
<code>port <port alias or number></code>	Displays OAM information about the selected port. To view a sample display, see page 41 .
<code>dump</code>	Displays all OAM information.

`/info/12/oam/port <port alias or number>`

OAM Port Information

```
OAM information on port EXT1
State enabled
Mode active
Link up
Satisfied Yes
Evaluating No

Remote port information:
Mode active
MAC address 00:da:c0:00:04:00
Stable Yes
State valid Yes
Evaluating No
```

OAM port display shows information about the selected port and the peer to which the link is connected.

/info/12/8021x

-----
```

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex system chassis that you are using and the firmware versions and options that are installed.

The switch software uses the Per VLAN Rapid Spanning Tree Protocol (PVRST) Spanning Tree mode, with IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) or IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), as alternatives. For details see [“RSTP/MSTP/PVRST Information” on page 46](#).

When STP is enabled, in addition to seeing if STG is enabled or disabled, you can view the following STG bridge information:

Table 26. Spanning Tree Bridge Parameter Descriptions

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STG root bridge.
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STG network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from listening to learning and from learning state to forwarding state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.

The following port-specific information is also displayed:

Table 27. Spanning Tree Port Parameter Descriptions

Parameter	Description
Priority (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The Port Path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The state field can be FWD (Forwarding), DISC (Discarding) or LRN (Learning).

Table 27. Spanning Tree Port Parameter Descriptions (continued)

Parameter	Description
Role	The role field shows the current role of the port : DESG (Designated), ROOT (Root Port), ALTN (Alternate) or BKUP (Backup).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The Designated Port field shows the port on the Designated Bridge to which this port is connected.

```

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

The switch software can be set to use the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) or the IEEE 802.1s Multiple Spanning Tree Protocol (MSTP). If RSTP/MSTP is turned on (see [page 253](#)), you can view RSTP/MSTP bridge information for the Spanning Tree Group and port-specific RSTP information.

If RSTP/MSTP/PVRST is turned on, you can view the following bridge information for the Spanning Tree Group:.

Table 28. RSTP/MSTP/PVRST Bridge Parameter Descriptions

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STP root bridge.
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the STP network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from listening to learning and from learning state to forwarding state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.

The following port-specific information is also displayed:

Table 29. RSTP/MSTP/PVRST Port Parameter Descriptions

Parameter	Description
Prio (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port Path Cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The State field in RSTP or MSTP mode can be one of the following: Discarding (DISC), Learning (LRN), Forwarding (FWD), or Disabled (DSB).

Table 29. RSTP/MSTP/PVRST Port Parameter Descriptions (continued)

Parameter	Description
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The port ID of the port on the Designated Bridge to which this port is connected.
Type	Type of link connected to the port, and whether the port is an edge port. Link type values are AUTO, P2P, or SHARED.

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

In addition to seeing if Common Internal Spanning Tree (CIST) is enabled or disabled, you can view CIST bridge and port-specific information. The following table describes the CIST parameters.

Table 30. CIST Parameter Descriptions

Parameter	Description
CIST Root	The CIST Root shows information about the root bridge for the Common Internal Spanning Tree (CIST). Values on this row of information refer to the CIST root.
CIST Regional Root	The CIST Regional Root shows information about the root bridge for this MSTP region. Values on this row of information refer to the regional root.

Table 30. CIST Parameter Descriptions

Parameter	Description
Priority (bridge)	The bridge priority parameter controls which bridge on the network will become the STP root bridge.
Hello	The hello time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The maximum age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STP network.
FwdDel	The forward delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from learning state to forwarding state.
Hops	The maximum number of bridge hops a packet can traverse before it is dropped. The default value is 20.
Priority (port)	The port priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The state field shows the current state of the port. The state field can be either Discarding (DISC), Learning (LRN), or Forwarding (FWD).
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST), or Unknown (UNK).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The port ID of the port on the Designated Bridge to which this port is connected.
Type	Type of link connected to the port, and whether the port is an edge port. Link type values are AUTO, P2P, or SHARED.

/info/12/trunk

Trunk Group Information

```
Trunk group 1: Enabled
Protocol - Static
Port state:
  EXT1: STG 1 forwarding
  EXT2: STG 1 forwarding
```

When trunk groups are configured, you can view the state of each port in the various trunk groups.

Note: If Spanning Tree Protocol on any port in the trunk group is set to forwarding, the remaining ports in the trunk group will also be set to forwarding.

/info/12/vlan

VLAN Information

VLAN	Name	Status	MGT	Ports
1	Default VLAN	ena	dis	INTA1-INTB14 EXT1-EXT24
4095	Mgmt VLAN	ena	ena	MGT1

Private-VLAN	Type	Mapped-To	Status	Ports
1000	primary	1001-1014	ena	EXT1 EXT2
1001	isolated	1000	ena	INTA1
1002	community	1000	ena	INTA2
1003	community	1000	ena	INTA3

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

This information display includes all configured VLANs and all member ports that have an active link state. Port membership is represented in slot/port format.

VLAN information includes:

- VLAN Number
- VLAN Name
- Status
- Port membership of the VLAN
- Protocol-based VLAN information, if applicable
- Private VLAN configuration, if applicable

dump	- Dump all layer 3 information

The information provided by each menu option is briefly described in [Table 31](#), with pointers to detailed information.

Table 31. Layer 3 Information Options (/info/13)

Command Syntax and Usage	
route	<p>Displays the IP Routing Menu. Using the options of this menu, the system displays the following for each configured or learned route:</p> <ul style="list-style-type: none">– Route destination IP address, subnet mask, and gateway address– Type of route– Tag indicating origin of route– Metric for RIP tagged routes, specifying the number of hops to the destination (1-15 hops, or 16 for infinite hops)– The IP interface that the route uses <p>For details, see page 54.</p>
arp	<p>Displays the Address Resolution Protocol (ARP) Information Menu. For details, see page 56.</p>
bgp	<p>Displays BGP Information Menu. To view menu options, see page 58.</p>
ospf	<p>Displays OSPF routing Information Menu. For details, see page 61.</p>
ospf3	<p>Displays OSPFv3 routing Information Menu. For details, see page 66.</p>
rip	<p>Displays Routing Information Protocol Menu. For details, see page 71.</p>

Table 31. Layer 3 Information Options (/info/l3)

Command Syntax and Usage	
hash	<p><i><Source IP address> <destination IP address> <number of ECMP paths></i></p> <p>Displays information about ECMP hashing results. For details, see page 74.</p>
ip	<p>Displays IP Information. For details, see page 82.</p> <p>IP information, includes:</p> <ul style="list-style-type: none"> – IP interface information: Interface number, IP address, subnet mask, VLAN number, and operational status. – Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status – IP forwarding settings, network filter settings, route map settings
igmp	<p>Displays IGMP Information Menu. For details, see page 75.</p>
mlld	<p>Displays MLD Information Menu. For details, see page 78.</p>
vrrp	<p>Displays VRRP Information. For details, see page 80.</p>
ip	<p>Displays IP Information. For details, see page 82.</p> <p>IP information, includes:</p> <ul style="list-style-type: none"> – IP interface information: Interface number, IP address, subnet mask, VLAN number, and operational status. – Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status – IP forwarding settings, network filter settings, route map settings
ikev2	<p>Displays IKEv2 Information menu. For details, see page 83.</p>
ipsec	<p>Displays IPsec Information menu. For details, see page 84.</p>
dump	<p>Dumps all switch information available from the Layer 3 menu (10K or more, depending on your configuration).</p> <p>If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.</p>

/info/13/route

IP Routing Information Menu

[IP Routing Menu]	
find	- Show a single route by destination IP address
gw	- Show routes to a single gateway
type	- Show routes of a single type
tag	- Show routes of a single tag
if	- Show routes on a single interface
dump	- Show all routes

Using the commands listed in the following table, you can display all or a portion of the IP routes currently held in the switch.

Table 32. Route Information Menu Options (/info/13/route)

Command Syntax and Usage	
<code>find <IP address (such as 192.4.17.101)></code>	Displays a single route by destination IP address.
<code>gw <default gateway address (such as 192.4.17.44)></code>	Displays routes to a single gateway.
<code>type indirect direct local broadcast martian multicast</code>	Displays routes of a single type. For a description of IP routing types, see Table 33 on page 55 .
<code>tag fixed static addr rip ospf bgp broadcast martian multicast</code>	Displays routes of a single tag. For a description of IP routing types, see Table 34 on page 56 .
<code>if <interface number></code>	Displays routes on a single interface.
<code>dump</code>	Displays all routes configured in the switch. For more information, see page 55 .

/info/13/route/dump
Show All IP Route Information

Status code: * - best						
Destination	Mask	Gateway	Type	Tag	Metr	If
* 12.0.0.0	255.0.0.0	11.0.0.1	direct	fixed		128
* 12.0.0.1	255.255.255.255	11.0.0.1	local	addr		128
* 12.255.255.255	255.255.255.255	11.255.255.255	broadcast	broadcast		128
* 12.0.0.0	255.0.0.0	12.0.0.1	direct	fixed		12
* 12.0.0.1	255.255.255.255	12.0.0.1	local	addr		12
* 255.255.255.255	255.255.255.255	12.255.255.255	broadcast	broadcast		2
* 224.0.0.0	224.0.0.0	0.0.0.0	martian	martian		
* 224.0.0.5	255.255.255.255	0.0.0.0	multicast	addr		

The following table describes the `Type` parameters.

Table 33. IP Routing Type Parameters

Parameter	Description
indirect	The next hop to the host or subnet destination will be forwarded through a router at the <code>Gateway</code> address.
direct	Packets will be delivered to a destination host or subnet attached to the switch.
local	Indicates a route to one of the switch's IP interfaces.
broadcast	Indicates a broadcast route.
martian	The destination belongs to a host or subnet which is filtered out. Packets to this destination are discarded.
multicast	Indicates a multicast route.

The following table describes the `Tag` parameters.

Table 34. IP Routing Tag Parameters

Parameter	Description
fixed	The address belongs to a host or subnet attached to the switch.
static	The address is a static route which has been configured on the EN2092.
addr	The address belongs to one of the switch's IP interfaces.
rip	The address was learned by the Routing Information Protocol (RIP).
ospf	The address was learned by Open Shortest Path First (OSPF).
bgp	The address was learned via Border Gateway Protocol (BGP)
broadcast	Indicates a broadcast address.
martian	The address belongs to a filtered group.
multicast	Indicates a multicast address.

/info/13/arp

ARP Information Menu

[Address Resolution Protocol Menu]	
find	- Show a single ARP entry by IP address
port	- Show ARP entries on a single port
vlan	- Show ARP entries on a single VLAN
addr	- Show ARP address list
dump	- Show all ARP entries

The ARP information includes IP address and MAC address of each entry, address status flags (see [Table 35](#)), VLAN and port for the address, and port referencing information.

Table 35. ARP Information Menu Options (/info/13/arp)

Command Syntax and Usage	
find <IP address (such as, 192.4.17.101)>	Displays a single ARP entry by IP address.
port <port alias or number>	Displays the ARP entries on a single port.
vlan <VLAN number>	Displays the ARP entries on a single VLAN.

Table 35. ARP Information Menu Options (/info/13/arp)

Command Syntax and Usage	
addr	Displays the ARP address list: IP address, IP mask, MAC address, and VLAN flags.
dump	<p>Displays all ARP entries. including:</p> <ul style="list-style-type: none"> – IP address and MAC address of each entry – Address status flag (see below) – The VLAN and port to which the address belongs – The ports which have referenced the address (empty if no port has routed traffic to the IP address shown) <p>For more information, see page 57.</p>

/info/13/arp/dump
Show All ARP Entry Information

IP address	Flags	MAC address	VLAN	Age	Port
12.20.1.1		00:15:40:07:20:42	4095	0	INT8
12.20.20.16		00:30:13:e3:44:14	4095	2	INT8
12.20.20.18		00:30:13:e3:44:14	4095	2	INT6
12.20.23.111		00:1f:29:95:f7:e5	4095	6	INT6

The **Port** field shows the target port of the ARP entry.

The **Flag** field is interpreted as follows:

Table 36. ARP Dump Flag Parameters

Flag	Description
P	Permanent entry created for switch IP interface.
R	Indirect route entry.
U	Unresolved ARP entry. The MAC address has not been learned.

/info/13/arp/addr ARP Address List Information

IP address	IP mask	MAC address	VLAN Pass-Up

Table 39. OSPF Database Information Menu Options (/info/13/ospf/dbase)

Command Syntax and Usage	
advrtr <router-id (A.B.C.D)>	Takes advertising router as a parameter. Displays all the Link State Advertisements (LSAs) in the LS database that have the advertising router with the specified router ID, for example: 20.1.1.1.
asbrsum <adv-rtr (A.B.C.D)> <link_state_id (A.B.C.D)> <self>	Displays ASBR summary LSAs. The usage of this command is as follows: <ul style="list-style-type: none"> - asbrsum adv-rtr 20.1.1.1 Displays ASBR summary LSAs having the advertising router 20.1.1.1. - asbrsum link-state-id 10.1.1.1 Displays ASBR summary LSAs having the link state ID 10.1.1.1. - asbrsum self Displays the self advertised ASBR summary LSAs. - asbrsum with no parameters displays all the ASBR summary LSAs.
dbsumm	Displays the following information about the LS database in a table format: <ul style="list-style-type: none"> - Number of LSAs of each type in each area. - Total number of LSAs for each area. - Total number of LSAs for each LSA type for all areas combined. - Total number of LSAs for all LSA types for all areas combined. No parameters are required.
ext <adv-rtr (A.B.C.D)> <link_state_id (A.B.C.D)> <self>	Displays the AS-external (type 5) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.
nw <adv-rtr (A.B.C.D)> <link_state_id (A.B.C.D)> <self>	Displays the network (type 2) LSAs with detailed information of each field of the LSA.network LS database. The usage of this command is the same as the usage of the command asbrsum.

Table 39. OSPF Database Information Menu Options (/info/13/ospf/dbase)

Command Syntax and Usage	
nssa <adv-rtr (A.B.C.D)> <link_state_id (A.B.C.D)> <self>	Displays the NSSA (type 7) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.
rtr <adv-rtr (A.B.C.D)> <link_state_id (A.B.C.D)> <self>	Displays the router (type 1) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.
self	Displays all the self-advertised LSAs. No parameters are required.
summ <adv-rtr (A.B.C.D)> <link_state_id (A.B.C.D)> <self>	Displays the network summary (type 3) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.
all	Displays all the LSAs.

/info/13/ospf/routes

OSPF Route Codes Information

```
Codes: IA - OSPF inter area,
       N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
       E1 - OSPF external type 1, E2 - OSPF external type 2
IA 10.10.0.0/16 via 200.1.1.2
IA 40.1.1.0/28 via 20.1.1.2
IA 80.1.1.0/24 via 200.1.1.2
IA 100.1.1.0/24 via 20.1.1.2
IA 140.1.1.0/27 via 20.1.1.2
IA 150.1.1.0/28 via 200.1.1.2
E2 172.18.1.1/32 via 30.1.1.2
E2 172.18.1.2/32 via 30.1.1.2
E2 172.18.1.3/32 via 30.1.1.2
E2 172.18.1.4/32 via 30.1.1.2
E2 172.18.1.5/32 via 30.1.1.2
E2 172.18.1.6/32 via 30.1.1.2
E2 172.18.1.7/32 via 30.1.1.2
E2 172.18.1.8/32 via 30.1.1.2
```

OSPFv3 Information Menu

```
[OSPFv3 Information Menu]
aindex - Show area database information Menu
dbase - Database Menu
areas - Show areas information
if - Show interface(s) information
virtual - Show details of virtual links
nbr - Show neighbor(s) information
host - Show host information
reqlist - Show request list
retlist - Show retransmission list
sumaddr - Show summary address information
redist - Show config applied to routes learnt from RTM
ranges - Show OSPFv3 summary ranges
routes - Show OSPFv3 routes
borderrt - Show OSPFv3 routes to an abr/asbr
dump - Show OSPFv3 information
```

Table 40. OSPFv3 Information Menu Options (/info/13/ospf3)

Command Syntax and Usage	
<code>a index <area index (0-2)></code>	Displays the area information menu for a particular area index. To view menu options, see page 68 .
<code>dbase</code>	Displays the OSPFv3 database menu. To view menu options, see page 69 .
<code>areas</code>	Displays the OSPFv3 Area Table.

Table 40. OSPFv3 Information Menu Options (/info/l3/ospf3)

Command Syntax and Usage	
<code>if <interface number></code>	Displays interface information for a particular interface. If no parameter is supplied, it displays information for all the interfaces. To view a sample display, see page 69 .
<code>virtual</code>	Displays information about all the configured virtual links.
<code>nbr <nbr router-id (A.B.C.D)></code>	Displays the status of a neighbor with a particular router ID. If no router ID is supplied, it displays the information about all the current neighbors.
<code>host</code>	Displays OSPFv3 host configuration information.
<code>reqlist <nbr router-id (A.B.C.D)></code>	Displays the OSPFv3 request list. If no router ID is supplied, it displays the information about all the current neighbors.
<code>retlist <nbr router-id (A.B.C.D)></code>	Displays the OSPFv3 retransmission list. If no router ID is supplied, it displays the information about all the current neighbors.
<code>sumaddr</code>	Displays the OSPFv3 external summary-address configuration information.
<code>redist</code>	Displays OSPFv3 redistribution information to be applied to routes learned from the route table.
<code>ranges</code>	Displays the OSPFv3 list of all area address ranges information.
<code>routes</code>	Displays OSPFv3 routing table. To view a sample display, see page 71 .
<code>borderrt</code>	Displays OSPFv3 routes to an ABR or ASBR.
<code>dump</code>	Displays all OSPFv3 information. To view a sample display, see page 69 .

/info/13/ospf3/aindex <0-2> OSPFv3 Area Index Information Menu

[Area Info Menu]	
asext	- External LS Database info

IPv6 Routing Information Menu

```
[IP6 Routing Menu]
find - Show a single route by destination IP address
gw   - Show routes to a single next hop
type - Show routes of a single type
if   - Show routes on a single interface
summ - Show routes summary
dump - Show all routes
```

[Table 44](#) describes the IPv6 Routing information options.

Table 44. IPv6 Routing Information Menu Options (/info/13/route6)

Command Syntax and Usage	
<code>find <IP address (such as 3001:0:0:0:0:abcd:12)></code>	Displays a single route by destination IP address.
<code>gw <default gateway address (such as 3001:0:0:0:0:abcd:14)></code>	Displays routes to a single gateway.
<code>type connected static ospf</code>	Displays routes of a single type. For a description of IP routing types, see Table 33 on page 55 .
<code>if <interface number></code>	Displays routes on a single interface.
<code>summ</code>	Displays a summary of IPv6 routing information, including inactive routes.
<code>dump</code>	Displays all IPv6 routing information. For more information, see page 73 .

/info/13/route6/dump
IPv6 Routing Table Information

```
IPv6 Routing Table - 3 entries
Codes : C - Connected, S - Static
        0 - OSPF

S   ::/0 [1/20]
    via 2001:2:3:4::1, Interface 2
C   2001:2:3:4::/64 [1/1]
    via ::, Interface 2
C   fe80::20f:6aff:feec:f701/128 [1/1]
    via ::, Interface 2
```

Note that the first number inside the brackets represents the metric and the second number represents the preference for the route.

/info/13/nbrcache
IPv6 Neighbor Discovery Cache Information Menu

```
[IPv6 Neighbor Discovery Protocol Menu]
find   - Show a single NBR Cache entry by IP address
port   - Show NBR Cache entries on a single port
vlan   - Show NBR Cache entries on a single VLAN
dump   - Show all NBR Cache entries
```

Table 45 describes IPv6 Neighbor Discovery cache information menu options.

Table 45. IPv6 Neighbor Discovery Cache Information Options (/info/13/nbrcache)

Command Syntax and Usage	
find <IPv6 address>	Shows a single Neighbor Discovery cache entry by IP address.
port <port alias or number>	Shows the Neighbor Discovery cache entries on a single port.
vlan <VLAN number>	Shows the Neighbor Discovery cache entries on a single VLAN.
dump	Shows all Neighbor Discovery cache entries. For more information, see page 74 .

/info/13/nbrcache/dump

IPv6 Neighbor Discovery Cache Information

IPv6 Address	Age	Link-layer Addr	State	IF	VLAN	Port
2001:2:3:4::1	10	00:50:bf:b7:76:b0	Reachable	2	1	EXT1
fe80::250:bfff:feb7:76b0	0	00:50:bf:b7:76:b0	Stale	2	1	EXT2

/info/13/ndprefix

IPv6 Neighbor Discovery Prefix Information

```
Codes: A - Address , P - Prefix-Advertisement
       D - Default , N - Not Advertised
       [L] - On-link Flag is set
       [A] - Autonomous Flag is set

AD 10:: 64 [LA] Valid lifetime 2592000 , Preferred lifetime 604800
P 20:: 64 [LA] Valid lifetime 200 , Preferred lifetime 100
```

Neighbor Discovery prefix information includes information about all configured prefixes.

/info/13/ecmp

ECMP Static Routes Information

```
Current ecmp static routes:
Destination      Mask           Gateway        If    GW Status
-----
10.10.1.1        255.255.255.255 10.100.1.1    1    up
                  10.200.2.2      1    down
10.20.2.2        255.255.255.255 10.233.3.3    1    up
10.20.2.2        255.255.255.255 10.234.4.4    1    up
10.20.2.2        255.255.255.255 10.235.5.5    1    up

ECMP health-check ping interval: 1
ECMP health-check retries number: 3
```

ECMP route information shows the status of each ECMP route configured on the switch.

/info/13/hash

ECMP Hashing Result

```
Enter SIP address: 10.0.0.1
Enter DIP address (0 for SIP only): 10.0.0.2
Enter number of ECMP paths: 3
Source 10.0.0.1 will go through route number 3
```

ECMP hashing information shows the status of ECMP hashing.

IGMP Multicast Group Information Menu

[IGMP Multicast Menu]	
querier	- Show IGMP Querier information
mrouter	- Show IGMP Snooping Multicast Router Port information
find	- Show a single group by IP group address
vlan	- Show groups on a single vlan
port	- Show groups on a single port
trunk	- Show groups on a single trunk
detail	- Show detail of a single group by IP group address
dump	- Show all groups
ipmcgrp	- Show all ipmc groups

[Table 46](#) describes the commands used to display information about IGMP groups learned by the switch.

Table 46. IGMP Multicast Group Information Menu Options (/info/13/igmp)

Command Syntax and Usage	
querier	Displays IGMP Querier information. For details, see page 76 .
mrouter	Displays IGMP Multicast Router menu. To view menu options, see page 76 .
find <IP address>	Displays a single IGMP multicast group by its IP address.
vlan <VLAN number>	Displays all IGMP multicast groups on a single VLAN.
port <port number or alias>	Displays all IGMP multicast groups on a single port.
trunk <trunk number>	Displays all IGMP multicast groups on a single trunk group.
detail <IP address>	Displays details about IGMP multicast groups, including source and timer information.
dump	Displays information for all multicast groups. For details, see page 77
ipmcgrp <VLAN number>	Displays all IP multicast groups on a single VLAN.

/info/13/igmp/querier <VLAN number>

IGMP Querier Information

```
Current IGMP Querier information:
IGMP Querier information for vlan 1:
Other IGMP querier - none
Switch-querier enabled, current state: Querier
Switch-querier type: Ipv4, address 0.0.0.0,
Switch-querier general query interval: 125 secs.
Switch-querier max-response interval: 100 'tenths of secs',
Switch-querier startup interval: 31 secs, count: 2
Switch-querier robustness: 2
IGMP configured version is v3
IGMP Operating version is v3
```

IGMP Querier information includes:

- VLAN number
- Querier status
 - Other IGMP querier—none
 - IGMP querier present, address: (IP or MAC address)
Other IGMP querier present, interval (minutes:seconds)
- Querier election type (IPv4 or MAC) and address
- Query interval
- Querier startup interval
- Maximum query response interval
- Querier robustness value
- IGMP version number

/info/13/igmp/mrouter

IGMP Multicast Router Port Information Menu

```
[IGMP Multicast Router Menu]
vlan      - Show all multicast router ports on a single vlan
dump      - Show all learned multicast router ports
```

[Table 47](#) describes the commands used to display information about multicast routers (Mrouters) learned through IGMP Snooping.

Table 47. IGMP Mrouter Information Menu Options (/info/igmp/mrouter)

Command Syntax and Usage	
vlan <VLAN number>	Displays the multicast router ports configured or learned on the selected VLAN.
dump	Displays information for all multicast groups learned by the switch.

/info/13/igmp/mrouter/dump

IGMP Multicast Router Dump Information

SrcIP	VLAN	Port	Version	Expires	MRT	QRV	QQIC
10.1.1.1	2	21	V3	4:09	128	2	125
10.1.1.5	2	23	V2	4:09	125	-	-
10.10.10.43	9	24	V2	-	-	-	-

IGMP Mrouter information includes:

- Source IP address
- VLAN and port where the Mrouter is connected
- IGMP version
- Mrouter expiration
- Maximum query response time
- Querier's Robustness Variable (QRV)
- Querier's Query Interval Code (QQIC)

IGMP IPMC Group information includes:

- IGMP source address
- IGMP Group address
- VLAN and port
- Type of IPMC group
- Expiration timer value

/info/13/mld MLD Information Menu

```
[MLD info Menu]
mrouter - Show MLD Multicast Router Port information
groups - Show all groups
find - Show a single group by IP group address
vlan - Show groups on a single vlan
port - Show groups on a single port
trunk - Show groups on a single trunk
if - Show interface(s) mld information
dump - Show mld information
```

[Table 48](#) describes the MLD information menu options.

Table 48. MLD Information Menu Options (/info/13/mld)

Command Syntax and Usage	
mrouter	Displays MLD Mrouter information menu. To view menu options, see page 79 .
groups	Displays all MLD groups.
find <IP6 address>	Displays a single MLD group by its IP address.
vlan <VLAN number>	Displays all MLD groups on a single VLAN.

Table 48. MLD Information Menu Options (/info/13/mld)

Command Syntax and Usage	
port <port number>	Displays all MLD groups on a single port.
trunk <trunk group number>	Displays all MLD groups on a single trunk group.
if <interface number or a range of interface numbers>	Displays all MLD groups on the interface(s).
dump	Displays information for all MLD groups.

/info/13/mld/mrouter

MLD Mrouter Information Menu

```
[MLD Multicast Router Menu]
dump - Show all MLD multicast router ports
```

Table 49 describes the commands used to display information about MLD Mrouter ports.

Table 49. MLD Mrouter Information Menu Options (/info/13/mld/mrouter)

Command Syntax and Usage	
dump	Displays information for MLD Mrouter ports. See page 79 for sample output.

/info/13/mld/mrouter/dump

MLD Mrouter Dump Information

```
Source: fe80:0:0:0:200:bff:fe88:2748
Port/Vlan: XGE2/4
Interface: 3
QRV: 2 QQIC:125
Maximum Response Delay: 1000
Version: MLDv2 Expires:1:03
```

Table 50 describes the MLD Mrouter dump information displayed in the output.

Table 50. MLD Mrouter Dump Information (/info/13/mld/mrouter/dump)

Statistic	Description
Source	Displays the link-local address of the reporter.
Port/Vlan	Displays the port/vlan on which the general query is received.
Interface	Displays the interface number on which the general query is received.

Table 50. MLD Mrouter Dump Information (/info/13/mld/mrouter/dump)

Statistic	Description
QRV	Displays the Querier's robustness variable value.
QQIC	Displays the Querier's query interval code.
Maximum Response Delay	Displays the configured maximum query response time.
Version	Displays the MLD version configured on the interface.
Expires	Displays the interval after which the multicast router decides that there are no more listeners for a multicast address or a particular source on a link.

/info/13/vrrp

VRRP Information

Virtual Router Redundancy Protocol (VRRP) support on the EN2092 provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

```
VRRP information:
 1: vrid 2, 205.178.18.210, if 1, renter, prio 100, master
 2: vrid 1, 205.178.18.202, if 1, renter, prio 100, backup
 3: vrid 3, 205.178.18.204, if 1, renter, prio 100, master
```

When virtual routers are configured, you can view the status of each virtual router using this command. VRRP information includes:

- Virtual router number
- Virtual router ID and IP address
- Interface number
- Ownership status
 - `owner` identifies the preferred master virtual router. A virtual router is the owner when the IP address of the virtual router and its IP interface are the same.
 - `renter` identifies virtual routers which are not owned by this device.
- Priority value. During the election process, the virtual router with the highest priority becomes master.

- **Activity status**
 - `master` identifies the elected master virtual router.
 - `backup` identifies that the virtual router is in backup mode.
 - `init` identifies that the virtual router is waiting for a startup event.
For example, once it receives a startup event, it transitions to master if its priority is 255, (the IP address owner), or transitions to backup if it is not the IP address owner.

`/info/13/if`

Interface Information

```
Interface information:
127: IP6 0:0:0:0:0:0:0/0          , vlan 4095, up
      fe80::a17:f4ff:fe31:b1ef
128: IP4 10.43.95.122    255.255.255.0   9.43.95.255,   vlan 4095, up
```

For each interface, the following information is displayed:

- IPv4 interface address and subnet mask
- IPv6 address and prefix
- VLAN assignment
- Status (up, DOWN, disabled)

`/info/13/ip6pmtu [<destination IPv6 address>]`

IPv6 Path MTU Information

```
Path MTU Discovery info:

Max Cache Entry Number : 10
Current Cache Entry Number: 2
Cache Timeout Interval : 10 minutes

Destination Address          Since      PMTU
5000:1::3                    00:02:26  1400
FE80::203:A0FF:FED6:141D    00:06:55  1280
```

Path MTU Discovery information provides information about entries in the Path MTU cache. The PMTU field indicates the maximum packet size in octets that can successfully traverse the path from the switch to the destination node. It is equal to the minimum link MTU of all the links in the path to the destination node.

/info/l3/ip IP Information

```
IP information:
  AS number 0

Interface information:
126: IP6 0:0:0:0:0:0:0/0          , vlan 4095, up
      fe80::200:ff:fe00:ef
128: IP4 9.43.95.121    255.255.255.0  9.43.95.255,   vlan 4095, up

Loopback interface information:

Default gateway information: metric strict
  4: 9.43.95.254,   FAILED

Default IP6 gateway information:

Current BOOTP relay settings: OFF
Global servers:
-----
Server 1 address 0.0.0.0
Server 2 address 0.0.0.0
Server 3 address 0.0.0.0
Server 4 address 0.0.0.0
Server 5 address 0.0.0.0

Current IP forwarding settings: ON, dirbr disabled, icmprd disabled

Current network filter settings:
  none

Current route map settings:
RIP is disabled.

OSPF is disabled.

OSPFv3 is disabled.

BGP is disabled.
```

IP information includes:

- IP interface information: Interface number, IP address, subnet mask, broadcast address, VLAN number, and operational status.
- Loopback interface information, if applicable
- Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status
- BootP relay settings
- IP forwarding settings, including the forwarding status of directed broadcasts, and the status of ICMP re-directs
- Network filter settings, if applicable
- Route map settings, if applicable

/info/13/ikev2 IKEv2 Information

```
[IKEv2 Information Menu]
info      - Show IKEv2 information
cacert    - Show CA certificate information
hcert     - Show host certificate information
```

Table 51 describes the commands used to display information about IKEv2.

Table 51. IKEv2 Information Menu Options (/info/13/ikev2)

Command Syntax and Usage	
info	Displays all IKEv2 information. See page 83 for sample output.
cacert	Displays CA certificate information.
hcert	Displays host certificate information.

/info/13/ikev2/info IKEv2 Information Dump

```
IKEv2 retransmit time:      20
IKEv2 cookie notification:  disable
IKEv2 authentication method: Pre-shared key

IKEv2 proposal:
Cipher:                      3des
Authentication:              sha1
DH Group:                     dh-2

Local preshare key:         ibm123

IKEv2 choose IPv6 address as ID type
No SAD entries.
```

IKEv2 information includes:

- IKEv2 retransmit time, in seconds.
- Whether IKEv2 cookie notification is enabled.
- The IKEv2 proposal in force. This includes the encryption algorithm (cipher), the authentication algorithm type, and the Diffie-Hellman (DH) group, which determines the strength of the key used in the key exchange process. Higher DH group numbers are more secure but require additional time to compute the key.
- The local preshare key.
- Whether IKEv2 is using IPv4 or IPv6 addresses as the ID type.
- Security Association Database (SAD) entries, if applicable.

[Table 52](#) describes the commands used to display information about IPsec.

Table 52. IPsec Information Menu Options (/info/13/ipsec)

Command Syntax and Usage	
sa	Displays all security association information.
spd	Displays all security policy information.
dpolicy <1-10>	Displays dynamic policy information.
mpolicy <1-10>	Displays manual policy information. See page 85 for sample output.
txform <1-10>	Displays IPsec transform information.
selector <1-10>	Displays IPsec traffic selector information.

/info/13/ipsec/mpolicy

IPsec Manual Policy Information

```
IPsec manual policy 1 -----  
IP Address:                2002:0:0:0:0:0:151  
Associated transform ID:    1  
Associated traffic selector ID: 1  
IN-ESP SPI:                9900  
IN-ESP encryption KEY:     3456789abcdef012  
IN-ESP authentication KEY: 23456789abcdef0123456789abcdef0123456789  
OUT-ESP SPI:               7700  
OUT-ESP encryption KEY:    6789abcdef012345  
OUT-ESP authentication KEY: 56789abcdef0123456789abcdef0123456789abc  
Applied on interface:  
interface 1
```

IPsec manual policy information includes:

- The IP address of the remote peer
- The transform set ID associated with this policy
- Traffic selector ID associated with this policy
- ESP inbound SPI
- ESP inbound encryption key
- ESP inbound authentication key
- ESP outbound SPI
- ESP outbound encryption key
- ESP outbound authentication key
- The interface to which this manual policy has been applied

-----
   1  dan
    
```

The following table describes the RMON Alarm Information parameters.

Table 60. RMON Alarm Parameter Descriptions

Parameter	Description
Index	Displays the index number that identifies each alarm instance.
Interval	Displays the time interval over which data is sampled and compared with the rising and falling thresholds.
Sample	Displays the method of sampling the selected variable and calculating the value to be compared against the thresholds, as follows: <ul style="list-style-type: none"> <code>abs</code>—absolute value, the value of the selected variable is compared directly with the thresholds at the end of the sampling interval. <code>delta</code>—delta value, the value of the selected variable at the last sample is subtracted from the current value, and the difference compared with the thresholds.

Table 60. RMON Alarm Parameter Descriptions (continued)

Parameter	Description
Type	Displays the type of alarm, as follows: <ul style="list-style-type: none"> • falling-alarm is triggered when a falling threshold is crossed. • rising-alarm is triggered when a rising threshold is crossed. • either-alarm is triggered when either a rising or falling threshold is crossed.
rLimit	Displays the rising threshold for the sampled statistic.
fLimit	Displays the falling threshold for the sampled statistic.
Last value	Displays the last sampled value.
rEvtIdx	Displays the rising alarm event index that is triggered when a rising threshold is crossed.
fEvtIdx	Displays the falling alarm event index that is triggered when a falling threshold is crossed.
OID	Displays the MIB Object Identifier for each alarm index.
Owner	Displays the owner of the alarm instance.

/info/rmon/event
RMON Event Information

```

RMON Event group configuration:
Index Type      Last Sent      Description
-----
 1 both   OD: 0H: 1M:20S  Event_1
 2 none   OD: 0H: 0M: 0S  Event_2

= PVID is tagged.

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

Port information includes:

- Port alias and number
- Whether the port uses VLAN tagging or not (y or n)
- Type of port (Internal, External, or Management)
- Whether the port has Remote Monitoring (RMON) enabled
- Whether the port has FDB learning enabled (Lrn)
- Whether the port has Port Flooding enabled (Fld)
- Port VLAN ID (PVID)
- Port name
- VLAN membership

/info/transcvr

Port Transceiver Status

Name	TX	RXLos	TXFlt	Volts	DegsC	TXuW	RXuW	Media	Laser	Approval
50 Extn49 SFP+ 1										
51 Extn50 SFP+ 2	Ena	LINK	no	3.29	29.5	556.9	580.5	SR SFP+ 850nm		Approved
	Blade Network									
52 Extn51 SFP+ 3										
53 Extn52 SFP+ 4	N/A	LINK	-N/A-	-.-	-.-	-.-	-.-	CU SFP	-N/A-	Approved
	Blade Network									

This command displays information about the transceiver module on each port, as follows:

- Port number and media type
- TX: Transmission status
- RXlos: Receive Loss of Signal indicator
- TXflt: Transmission fault indicator
- Volts: Power usage, in volts
- DegsC: Temperature, in degrees centigrade
- TXuW: Transmit power, in micro-watts
- RXuW: Receive power, in micro-watts
- Media type (LX, LR, SX, SR)
- Laser wavelength, in nano-meters
- Approval status

The optical power levels shown for transmit and receive functions for the transceiver should fall within the expected range defined in the IEEE 802-3-2008 specification for each transceiver type. For convenience, the expected range values are summarized in the following table.

Table 62. Expected Transceiver Optical Power Levels

Transceiver Type	Tx Minimum	Tx Maximum	Rx Minimum	Rx Maximum
SFP SX	112 μ W	1000 μ W	20 μ W	1000 μ W
SFP LX	70.8 μ W	501 μ W	12.6 μ W	501 μ W
SFP+ SR	186 μ W	794 μ W	102 μ W	794 μ W
SFP+ LR	151 μ W	891 μ W	27.5 μ W	891 μ W

Note: Power level values in the IEEE specification are shown in dBm, but have been converted to mW in this table to match the unit of measure shown in the display output.

009a581a-143c-dd11-be4c-c9fb65ff04ec	127.12.46.40

VM host information includes the following:

- UUID associated with the VMware host.
- Name or IP address of the VMware host.

`/info/dump` Information Dump

Use the dump command to dump all switch information available from the Information Menu (10K or more, depending on your configuration). This data is useful for tuning and debugging switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Chapter 4. The Statistics Menu

You can view switch performance statistics in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch statistics.

/stats **Statistics Menu**

```
[Statistics Menu]
port      - Port Stats Menu
trunk     - Trunk Group Stats Menu
12        - Layer 2 Stats Menu
13        - Layer 3 Stats Menu
mp        - MP-specific Stats Menu
acl       - ACL Stats Menu
snmp      - Show SNMP stats
ntp       - Show NTP stats
clrmp     - Clear all MP related stats
clrports  - Clear stats for all ports
dump      - Dump all stats
```

The information provided by each menu option is briefly described in [Table 66](#), with pointers to detailed information.

Table 66. Statistics Menu Options (/stats)

Command Syntax and Usage	
<code>port <port alias or number></code>	Displays the Port Statistics Menu for the specified port. Use this command to display traffic statistics on a port-by-port basis. Traffic statistics are included in SNMP Management Information Base (MIB) objects. To view menu options, see page 100 .
<code>trunk <trunk group number></code>	Displays the Trunk Statistics Menu for the specified port. To view menu options, see page 114 .
<code>12</code>	Displays the Layer 2 Statistics Menu. To view menu options, see page 115 .
<code>13</code>	Displays the Layer 3 Stats Menu. To view menu options, see page 120 .
<code>mp</code>	Displays the Management Processor Statistics Menu. Use this command to view information on how switch management processes and resources are currently being allocated. To view menu options, see page 152 .
<code>acl</code>	Displays ACL Statistics menu. To view menu options, see page 166 .

Table 66. Statistics Menu Options (/stats)

Command Syntax and Usage	
snmp	Displays SNMP statistics. See page 168 for sample output.
ntp [clear]	Displays Network Time Protocol (NTP) Statistics. See page 171 for a sample output and a description of NTP Statistics. You can use the <code>clear</code> option to delete all NTP statistics.
clrmp	Clears all management processor statistics.
clrports	Clears statistics counters for all ports.
dump	Dumps all switch statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command. For details, see page 172 .

/stats/port *<port alias or number>*

Port Statistics Menu

This menu displays traffic statistics on a port-by-port basis. Traffic statistics include SNMP Management Information Base (MIB) objects.

[Port Statistics Menu]	
8021x	- Show 802.1x stats
bootp	- Show BOOTP relay stats
brate	- Show interface bitrate[Kbps] usage (continuous)
brg	- Show bridging ("dot1") stats
brg-rate	- Show bridging ("dot1") stats/second
ether	- Show Ethernet ("dot3") stats
eth-rate	- Show Ethernet ("dot3") stats/second
if	- Show interface ("if") stats
if-rate	- Show interface ("if") stats/second
ip	- Show Internet Protocol ("IP") stats
ip-rate	- Show Internet Protocol ("IP") stats/second
link	- Show link stats
maint	- Show port maintenance stats
rmon	- Show RMON stats
dump	- Show all port stats
clear	- Clear all port stats

Table 67. Port Statistics Menu Options (/stats/port)

Command Syntax and Usage	
8021x	Displays IEEE 802.1x statistics for the port. See page 103 for sample output.
bootp	Displays BOOTP Relay statistics for the port. See page 105 for sample output.
brate	Displays continuous interface bitrate usage in Kb per second.
brg	Displays bridging (“dot1”) statistics for the port. See page 105 for sample output.
brg-rate	Displays bridging (“dot1”) statistics per second for the port.
ether	Displays Ethernet (“dot3”) statistics for the port. See page 106 for sample output.
ether-rate	Displays Ethernet (“dot3”) statistics per second for the port.
if	Displays interface statistics for the port. See page 109 for sample output.
if-rate	Displays interface statistics per second for the port.
ip	Displays IP statistics for the port. See page 111 for sample output.
ip-rate	Displays IP statistics per second for the port.
link	Displays link statistics for the port. See page 112 for sample output.
maint	Displays detailed maintenance statistics for the port.
rmon	Displays Remote Monitoring (RMON) statistics for the port. See page 112 for sample output.
dump	This command dumps all statistics for the selected port.
clear	This command clears all the statistics on the selected port.

/stats/port <port alias or number>/8021x
802.1x Authenticator Statistics

This menu option enables you to display the 802.1x authenticator statistics of the selected port.

```
Authenticator Statistics:
  eapolFramesRx      = 925
  eapolFramesTx      = 3201
  eapolStartFramesRx = 2
  eapolLogoffFramesRx = 0
  eapolRespIdFramesRx = 463
  eapolRespFramesRx  = 460
  eapolReqIdFramesTx = 1820
  eapolReqFramesTx   = 1381
  invalidEapolFramesRx = 0
  eapLengthErrorFramesRx = 0
  lastEapolFrameVersion = 1
  lastEapolFrameSource  = 00:01:02:45:ac:51
```

Table 68. 802.1x Authenticator Statistics of a Port (/stats/port/8021x)

Statistics	Description
eapolFramesRx	Total number of EAPOL frames received
eapolFramesTx	Total number of EAPOL frames transmitted
eapolStartFramesRx	Total number of EAPOL Start frames received
eapolLogoffFramesRx	Total number of EAPOL Logoff frames received
eapolRespIdFramesRx	Total number of EAPOL Response Identity frames received
eapolRespFramesRx	Total number of Response frames received
eapolReqIdFramesTx	Total number of Request Identity frames transmitted
eapolReqFramesTx	Total number of Request frames transmitted
invalidEapolFramesRx	Total number of invalid EAPOL frames received
eapLengthErrorFramesRx	Total number of EAP length error frames received
lastEapolFrameVersion	The protocol version number carried in the most recently received EAPOL frame.
lastEapolFrameSource	The source MAC address carried in the most recently received EAPOL frame.

/stats/port <port alias or number>/8021x
802.1x Authenticator Diagnostics

This menu option enables you to display the 802.1x authenticator diagnostics of the selected port.

Authenticator Diagnostics:	
authEntersConnecting	= 1820
authEapLogoffsWhileConnecting	= 0
authEntersAuthenticating	= 463
authSuccessesWhileAuthenticating	= 5
authTimeoutsWhileAuthenticating	= 0
authFailWhileAuthenticating	= 458
authReauthsWhileAuthenticating	= 0
authEapStartsWhileAuthenticating	= 0
authEapLogoffWhileAuthenticating	= 0
authReauthsWhileAuthenticated	= 3
authEapStartsWhileAuthenticated	= 0
authEapLogoffWhileAuthenticated	= 0
backendResponses	= 923
backendAccessChallenges	= 460
backendOtherRequestsToSupplicant	= 460
backendNonNakResponsesFromSupplicant	= 460
backendAuthSuccesses	= 5
backendAuthFails	= 458

Table 69. 802.1x Authenticator Diagnostics of a Port (/stats/port/8021x)

Statistics	Description
authEntersConnecting	Total number of times that the state machine transitions to the CONNECTING state from any other state.
authEapLogoffsWhileConnecting	Total number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
authEntersAuthenticating	Total number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.
authSuccessesWhileAuthenticating	Total number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant.
authTimeoutsWhileAuthenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout.
authFailWhileAuthenticating	Total number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure.

Table 69. 802.1x Authenticator Diagnostics of a Port (/stats/port/8021x)

Statistics	Description
authReauthsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a re-authentication request
authEapStartsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.
authEapLogoffWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
authReauthsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a re-authentication request.
authEapStartsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
authEapLogoffWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
backendResponses	Total number of times that the state machine sends an initial Access-Request packet to the Authentication server. Indicates that the Authenticator attempted communication with the Authentication Server.
backendAccess Challenges	Total number of times that the state machine receives an initial Access-Challenge packet from the Authentication server. Indicates that the Authentication Server has communication with the Authenticator.
backendOtherRequests ToSupplicant	Total number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure, or Success message) to the Supplicant. Indicates that the Authenticator chose an EAP-method.
backendNonNak ResponsesFrom Supplicant	Total number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK. Indicates that the Supplicant can respond to the Authenticator's chosen EAP-method.

Table 69. 802.1x Authenticator Diagnostics of a Port (/stats/port/8021x)

Statistics	Description
backendAuthSuccesses	Total number of times that the state machine receives an Accept message from the Authentication Server. Indicates that the Supplicant has successfully authenticated to the Authentication Server.
backendAuthFails	Total number of times that the state machine receives a Reject message from the Authentication Server. Indicates that the Supplicant has not authenticated to the Authentication Server.

/stats/port <port alias or number> /bootp BOOTP Relay Statistics

This menu option enables you to display the BOOTP Relay statistics of the selected port.

```

BOOTP Relay statistics for port EXT1:

Requests received from client:      0
Requests relayed to server:        0
Requests relayed with option 82:   0
Requests dropped due to ...
- relay not allowed:                0
- no server or unreachable server: 0
- packet or processing errors:      0
Replies received from server:      0
Replies relayed to client:         0
Replies dropped due to ...
- packet or processing errors:      0
    
```

/stats/port <port alias or number> /brg Bridging Statistics

This menu option enables you to display the bridging statistics of the selected port.

```

Bridging statistics for port INTA1:
dot1PortInFrames:                  63242584
dot1PortOutFrames:                 63277826
dot1PortInDiscards:                0
dot1TpLearnedEntryDiscards:        0
dot1StpPortForwardTransitions:     0
    
```

Table 70. Bridging Statistics of a Port (/stats/port/brg)

Statistics	Description
dot1PortInFrames	The number of frames that have been received by this port from its segment. A frame received on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.
dot1PortOutFrames	The number of frames that have been transmitted by this port to its segment. Note that a frame transmitted on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.
dot1PortInDiscards	Count of valid frames received which were discarded (that is, filtered) by the Forwarding Process.
dot1TpLearnedEntry Discards	The total number of Forwarding Database entries, which have been or would have been learnt, but have been discarded due to a lack of space to store them in the Forwarding Database. If this counter is increasing, it indicates that the Forwarding Database is regularly becoming full (a condition which has unpleasant performance effects on the subnetwork). If this counter has a significant value but is not presently increasing, it indicates that the problem has been occurring but is not persistent.
dot1StpPortForward Transitions	The number of times this port has transitioned from the Learning state to the Forwarding state.

/stats/port <port alias or number>/ether Ethernet Statistics

This menu option enables you to display the bridging statistics of the selected port.

```

Ethernet statistics for port INTA1:
dot3StatsAlignmentErrors:           NA
dot3StatsFCSErrors:                 0
dot3StatsSingleCollisionFrames:     0
dot3StatsMultipleCollisionFrames:   0
dot3StatsLateCollisions:            0
dot3StatsExcessiveCollisions:      0
dot3StatsInternalMacTransmitErrors: 0
dot3StatsFrameTooLongs:             0
dot3StatsInternalMacReceiveErrors:  0
    
```

Table 71. Ethernet Statistics of a Port

Statistics	Description
dot3StatsAlignmentErrors	<p>A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the Frame Check Sequence (FCS) check.</p> <p>The count represented by an instance of this object is incremented when the <code>alignmentError</code> status is returned by the MAC service to the Logical Link Control (LLC) (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.</p>
dot3StatsFCSErrors	<p>A count of frames received on a particular interface that are an integral number of octets in length but do not pass the Frame Check Sequence (FCS) check.</p> <p>The count represented by an instance of this object is incremented when the <code>frameCheckError</code> status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.</p>
dot3StatsSingleCollision Frames	<p>A count of successfully transmitted frames on a particular interface for which transmission is inhibited by exactly one collision.</p> <p>A frame that is counted by an instance of this object is also counted by the corresponding instance of either the <code>ifOutUcastPkts</code>, <code>ifOutMulticastPkts</code>, or <code>ifOutBroadcastPkts</code>, and is not counted by the corresponding instance of the <code>dot3StatsMultipleCollisionFrame</code> object.</p>
dot3StatsMultipleCollision Frames	<p>A count of successfully transmitted frames on a particular interface for which transmission is inhibited by more than one collision.</p> <p>A frame that is counted by an instance of this object is also counted by the corresponding instance of either the <code>ifOutUcastPkts</code>, <code>ifOutMulticastPkts</code>, or <code>ifOutBroadcastPkts</code>, and is not counted by the corresponding instance of the <code>dot3StatsSingleCollisionFrames</code> object.</p>

Table 71. Ethernet Statistics of a Port (continued)

Statistics	Description
dot3StatsLateCollisions	<p>The number of times that a collision is detected on a particular interface later than 512 bit-times into the transmission of a packet.</p> <p>Five hundred and twelve bit-times corresponds to 51.2 microseconds on a 10 Mbit/s system. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics.</p>
dot3StatsExcessive Collisions	<p>A count of frames for which transmission on a particular interface fails due to excessive collisions.</p>
dot3StatsInternalMac TransmitErrors	<p>A count of frames for which transmission on a particular interface fails due to an internal MAC sub layer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the <code>dot3StatsLateCollisions</code> object, the <code>dot3StatsExcessiveCollisions</code> object, or the <code>dot3StatsCarrierSenseErrors</code> object.</p> <p>The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted.</p>
dot3StatsFrameToo Longs	<p>A count of frames received on a particular interface that exceed the maximum permitted frame size.</p> <p>The count represented by an instance of this object is incremented when the <code>frameTooLong</code> status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.</p>
dot3StatsInternalMac ReceiveErrors	<p>A count of frames for which reception on a particular interface fails due to an internal MAC sub layer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the <code>dot3StatsFrameTooLongs</code> object, the <code>dot3StatsAlignmentErrors</code> object, or the <code>dot3StatsFCSErrors</code> object.</p> <p>The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of received errors on a particular interface that are not otherwise counted.</p>

/stats/port <port alias or number>/if **Interface Statistics**

This menu option enables you to display the interface statistics of the selected port.

Interface statistics for port EXT1:			
	ifHCIn Counters		ifHCOut Counters
Octets:	51697080313		51721056808
UcastPkts:	65356399		65385714
BroadcastPkts:	0		6516
MulticastPkts:	0		0
FlowCtrlPkts:	0		0
Discards:	0		0
Errors:	0		21187
Ingress Discard reasons:		Egress Discard reasons:	
VLAN Discards:	0	HOL-blocking Discards:	0
Filter Discards:	0	MMU Discards:	0
Policy Discards:	0	Cell Error Discards:	0
Non-Forwarding State:	0	MMU Aging Discards:	0
IBP/CBP Discards:	0	Other Discards:	0

Table 72. Interface Statistics of a Port (/stats/port/if)

Statistics	Description
ifInOctets	The total number of octets received on the interface, including framing characters.
ifInUcastPkts	The number of packets, delivered by this sub-layer to a higher sub-layer, which were not addressed to a multicast or broadcast address at this sub-layer.
ifInBroadcastPkts	The number of packets, delivered by this sub-layer to a higher sub-layer, which were addressed to a broadcast address at this sub-layer.
ifInMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.
ifInFlowControlPkts	The total number of flow control <i>pause</i> packets received on the interface.
ifInDiscards	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being delivered to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space.

Table 72. Interface Statistics of a Port (/stats/port/if)

Statistics	Description
ifInErrors	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
ifOutUcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent.
ifOutBroadcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of <code>ifOutBroadcastPkts</code> .
ifOutMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of <code>ifOutMulticastPkts</code> .
ifOutFlowControlPkts	The total number of flow control <code>pause</code> packets transmitted out of the interface.
ifOutDiscards	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space.
ifOutErrors	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors.
VLAN Discards	Discarded because the packet was tagged with a VLAN to which this port is not a member.
Filter Discards	Dropped by the Content Aware Engine (user-configured filter).
Policy Discards	Dropped due to policy setting. For example, due to a user-configured static entry.

Table 72. Interface Statistics of a Port (/stats/port/if)

Statistics	Description
Non-Forwarding State	Discarded because the ingress port is not in the forwarding state.
IBP/CBP Discards	Discarded because of Ingress Back Pressure (flow control), or because the Common Buffer Pool is full (for example, insufficient packet buffering).
HOL-blocking Discards	HOL-blocking Discards = Discarded because of Head Of Line (HOL) blocking mechanism. Low priority packets are placed in a separate queue and can be discarded as applications or the TCP protocol keep track of whether a retransmission is necessary or not. HOL blocking is necessary to wait until an overloaded egress port buffer can receive data again.
MMU Discards	Discarded because of Memory Management Unit.
Other Discards	Discarded packets not included in any category.

/stats/port <port alias or number>/ip Interface Protocol Statistics

This menu option enables you to display the interface statistics of the selected port.

GEA IP statistics for port INTA1:	
ipInReceives	: 0
ipInHeaderError	: 0
ipInDiscards	: 0

Table 73. Interface Protocol Statistics of a Port (/stats/port/ip)

Statistics	Description
ipInReceives	The total number of input datagrams received from interfaces, including those received in error.
ipInHeaderErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch).
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.

/stats/port <port alias or number> **/link** **Link Statistics**

This menu enables you to display the link statistics of the selected port.

```
Link statistics for port INTA1:
linkStateChange:          1
```

Table 74. Link Statistics of a Port (/stats/port/link)

Statistics	Description
linkStateChange	The total number of link state changes.

/stats/port <port alias or number> **/rmon** **RMON Statistics**

This menu enables you to display the Remote Monitoring (RMON) statistics of the selected port.

```
RMON statistics for port EXT2:

etherStatsDropEvents:          NA
etherStatsOctets:              0
etherStatsPkts:                0
etherStatsBroadcastPkts:      0
etherStatsMulticastPkts:      0
etherStatsCRCAlignErrors:     0
etherStatsUndersizePkts:      0
etherStatsOversizePkts:       0
etherStatsFragments:          NA
etherStatsJabbers:             0
etherStatsCollisions:         0
etherStatsPkts64Octets:       0
etherStatsPkts65to127Octets:  0
etherStatsPkts128to255Octets:  0
etherStatsPkts256to511Octets:  0
etherStatsPkts512to1023Octets: 0
etherStatsPkts1024to1518Octets: 0
```

Table 75. RMON Statistics of a Port (/stats/port/rmon)

Statistics	Description
etherStatsDropEvents	The total number of packets received that were dropped because of system resource constraints.
etherStatsOctets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).
etherStatsPkts	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 75. RMON Statistics of a Port (/stats/port/rmon)

Statistics	Description
etherStatsBroadcastPkts	The total number of good packets received that were directed to the broadcast address.
etherStatsMulticastPkts	The total number of good packets received that were directed to a multicast address.
etherStatsCRCAlignErrors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
etherStatsUndersizePkts	The total number of packets received that were less than 64 octets long (excluding framing bits but including FCS octets) and were otherwise well formed.
etherStatsOversizePkts	The total number of packets received that were longer than 1518 octets (excluding framing bits but including FCS octets) and were otherwise well formed.
etherStatsFragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
etherStatsJabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Jabber is defined as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
etherStatsCollisions	The best estimate of the total number of collisions on this Ethernet segment.
etherStatsPkts64Octets	The total number of packets (including bad packets) received that were less than or equal to 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts65to127 Octets	The total number of packets (including bad packets) received that were greater than 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts128to255 Octets	The total number of packets (including bad packets) received that were greater than 127 octets in length (excluding framing bits but including FCS octets).

Table 75. RMON Statistics of a Port (/stats/port/rmon)

Statistics	Description
etherStatsPkts256to511 Octets	The total number of packets (including bad packets) received that were greater than 255 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts512to1023 Octets	The total number of packets (including bad packets) received that were greater than 511 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts1024to1518 Octets	The total number of packets (including bad packets) received that were greater than 1023 octets in length (excluding framing bits but including FCS octets).

/stats/trunk <trunk group number> **Trunk Statistics Menu**

This menu allows you to display traffic statistics for the selected trunk group.

[Trunk Group Statistics Menu] if - Show interface ("if") stats clear - Clear all trunk group stats
--

Table 76. Trunk Statistics Menu Options (/stats/trunk)

Command Syntax and Usage
if Displays interface statistics for the trunk group.
clear This command clears all the statistics on the selected trunk group.

/stats/12

Layer 2 Statistics Menu

```
[Layer 2 Statistics Menu]
fdb      - Show FDB stats
lACP     - Show LACP stats
hotlink  - Show Hot Links stats
lldp     - Show LLDP port stats
oam      - Show OAM stats
```

The Layer 2 statistics provided by each menu option are briefly described in [Table 77](#), with pointers to detailed information.

Table 77. Layer 2 Statistics Menu Options (/stats/12)

Command Syntax and Usage	
<code>fdb [clear]</code>	Displays FDB statistics. See page 116 for sample output. Use the <code>clear</code> option to delete all FDB statistics.
<code>lACP [<port alias or number> clear]</code>	Displays Link Aggregation Control Protocol (LACP) statistics for a specified port, or for all ports if no port is specified. See page 116 for sample output. Use the <code>clear</code> option to delete all LACP statistics.
<code>hotlink</code>	Displays Hotlinks statistics. See page 117 for sample output.
<code>lldp [<port alias or number> clear]</code>	Displays LLDP statistics for a specified port, or for all ports if no port is specified. See page 118 for sample output. Use the <code>clear</code> option to delete all LLDP statistics.
<code>oam</code>	Displays the OAM Statistics menu. See page 118 for sample output.

`/stats/12/fdb [clear]` FDB Statistics

```
FDB statistics:
current:      83  hiwat:      855
```

This menu option enables you to display statistics regarding the use of the forwarding database, including the number of new entries, finds, and unsuccessful searches.

FDB statistics are described in the following table:

Table 78. Forwarding Database Statistics (/stats/fdb)

Statistic	Description
current	Current number of entries in the Forwarding Database.
hiwat	Highest number of entries recorded at any given time in the Forwarding Database.

Use the `clear` option to delete all FDB statistics.

`/stats/12/lacp [<port alias or number>|clear]` LACP Statistics

```
Port EXT1:
-----
Valid LACPDUs received:      - 870
Valid Marker PDUs received: - 0
Valid Marker Rsp PDUs received: - 0
Unknown version/TLV type:   - 0
Illegal subtype received:   - 0
LACPDUs transmitted:       - 6031
Marker PDUs transmitted:    - 0
Marker Rsp PDUs transmitted: - 0
```

Link Aggregation Control Protocol (LACP) statistics are described in the following table:

Table 79. LACP Statistics (/stats/12/lacp)

Statistic	Description
Valid LACPDUs received	Total number of valid LACP data units received.
Valid Marker PDUs received	Total number of valid LACP marker data units received.
Valid Marker Rsp PDUs received	Total number of valid LACP marker response data units received.
Unknown version/TLV type	Total number of LACP data units with an unknown version or type, length, and value (TLV) received.

Table 79. LACP Statistics (/stats/l2/lacp)

Statistic	Description
Illegal subtype received	Total number of LACP data units with an illegal subtype received.
LACPDUs transmitted	Total number of LACP data units transmitted.
Marker PDUs transmitted	Total number of LACP marker data units transmitted.
Marker Rsp PDUs transmitted	Total number of LACP marker response data units transmitted.

Use the `clear` option to delete all LACP statistics.

/stats/l2/hotlink Hotlinks Statistics

```

Hot Links Trigger Stats:

Trigger 1 statistics:
  Trigger Name: Trigger 1
  Master active:      0
  Backup active:     0
  FDB update:        0   failed: 0
    
```

The following table describes the Hotlinks statistics:

Table 80. Hotlinks Statistics (/stats/l2/hotlink)

Statistic	Description
Master active	Total number of times the Master interface transitioned to the Active state.
Backup active	Total number of times the Backup interface transitioned to the Active state.
FDB update	Total number of FDB update requests sent.
failed	Total number of FDB update requests that failed.

/stats/12/lldp <port alias or number> | clear
LLDP Port Statistics

```

LLDP Port INTA1 Statistics
-----
Frames Transmitted      : 0
Frames Received         : 0
Frames Received in Errors : 0
Frames Discarded        : 0
TLVs Unrecognized      : 0
Neighbors Aged Out     : 0
...

```

The following table describes the LLDP port statistics:

Table 81. LLDP Port Statistics (/stats/12/lldp)

Statistic	Description
Frames Transmitted	Total number of LLDP frames transmitted.
Frames Received	Total number of LLDP frames received.
Frames Received in Errors	Total number of LLDP frames that had errors.
Frames Discarded	Total number of LLDP frames discarded.
TLVs Unrecognized	Total number of unrecognized TLV (Type, Length, and Value) fields received.
Neighbors Aged Out	Total number of neighbor devices that have had their LLDP information aged out.

/stats/12/oam
OAM Statistics

```

[OAM statistics Menu]
port      - Show OAM port statistics
dump      - Show all OAM statistics

```

The following table describes the OAM statistics commands:

Table 82. OAM Statistics Menu Options (/stats/12/oam)

Command Syntax and Usage
port <port alias or number> Displays OAM statistics for the selected port. See page 119 for sample output.
dump Displays all OAM statistics.

/stats/12/oam/port *<port alias or number>*
OAM Statistics

```
OAM statistics on port INTA1
-----
Information OAMPDU Tx :      0
Information OAMPDU Rx :      0
Unsupported OAMPDU Tx :      0
Unsupported OAMPDU Rx :      0

Local faults
-----
  0 Link fault records
  0 Critical events
  0 Dying gasps

Remote faults
-----
  0 Link fault records
  0 Critical events
  0 Dying gasps
```

OAM statistics include the following:

- Total number of OAM Protocol Data Units (OAMPDU) transmitted and received.
- Total number of unsupported OAM Protocol Data Units (OAMPDU) transmitted and received.
- Local faults detected
- Remote faults detected

/stats/13 Layer 3 Statistics Menu

```

[Layer 3 Statistics Menu]
  geal3  - GEA Layer 3 Stats Menu
  ip     - Show IP stats
  ip6    - Show IP6 stats
  route  - Show route stats
  route6 - Show route6 stats
  pmtu6  - Show ipv6 path mtu stats
  arp    - Show ARP stats
  dns    - Show DNS stats
  icmp   - Show ICMP stats
  tcp    - Show TCP stats
  udp    - Show UDP stats
  igmp   - Show IGMP stats
  mld    - Show MLD stats
  ospf   - OSPF stats
  ospf3  - OSPFv3 stats
  vrrp   - Show VRRP stats
  rip    - Show RIP stats
  igmpgrps - Total number of IGMP groups
  ipmcgrps - Total number of IPMC groups
  clrigmp - Clear IGMP stats
  ipclear - Clear IP stats
  ip6clear - Clear IP6 stats
  clrvrrp - Clear VRRP stats
  ripclear - Clear RIP stats
  ospfclr - Clear all OSPF stats
  ospf3clr - Clear all OSPFv3 stats
  dump   - Dump layer 3 stats
  
```

The Layer 3 statistics provided by each menu option are briefly described in [Table 83](#), with pointers to detailed information.

Table 83. Layer 3 Statistics Menu Options (/stats/13)

Command Syntax and Usage	
geal3	Displays the Gigabit Ethernet Aggregators (GEA) statistics menu. GEA statistics are used by service and support personnel.
ip	Displays IP statistics. See page 123 for sample output.
ip6	Displays IPv6 statistics. See page 125 for sample output.
route [clear]	Displays IPv4 route statistics. See page 129 for sample output. Use the <code>clear</code> option to delete all route statistics.
route6 [clear]	Displays IPv6 route statistics. See page 130 for sample output. Use the <code>clear</code> option to delete all route statistics.

Table 83. Layer 3 Statistics Menu Options (/stats/13)

Command Syntax and Usage	
pmtu6	Displays IPv6 Path MTU statistics. See page 130 for sample output.
arp	Displays Address Resolution Protocol (ARP) statistics. See page 131 for sample output.
dns [clear]	Displays Domain Name System (DNS) statistics. See page 131 for sample output. Use the <code>clear</code> option to delete all DNS statistics.
icmp [clear]	Displays ICMP statistics. See page 132 for sample output. Use the <code>clear</code> option to delete all ICMP statistics.
tcp [clear]	Displays TCP statistics. See page 135 for sample output. Use the <code>clear</code> option to delete all TCP statistics.
udp [clear]	Displays UDP statistics. See page 136 for sample output. Use the <code>clear</code> option to delete all UDP statistics.
igmp	Displays IGMP statistics. See page 137 for sample output.
mld	Displays the MLD statistics menu. See page 138 for menu options.
ospf	Displays OSPF statistics. See page 141 for sample output.
ospf3	Displays OSPFv3 statistics. See page 146 for sample output.
vrrp	When virtual routers are configured, you can display the protocol statistics for VRRP. See page 150 for sample output.
rip	Displays Routing Information Protocol (RIP) statistics. See page 152 for sample output.
igmpgrps	Displays the total number of IGMP groups that are registered on the switch.

Table 83. Layer 3 Statistics Menu Options (/stats/l3)

Command Syntax and Usage	
ipmcgrps	Displays the total number of current IP multicast groups that are registered on the switch.
clrigm	Clears IGMP statistics.
ipclear	Clears IPv4 statistics. Use this command with caution as it will delete all the IPv4 statistics.
ip6clear	Clears IPv6 statistics. Use this command with caution as it will delete all the IPv6 statistics.
clrvrrp	Clears VRRP statistics.
ripclear	Clears Routing Information Protocol (RIP) statistics.
ospfclr	Clears Open Shortest Path First (OSPF) statistics.
ospf3clr	Clears OSPFv3 statistics.
dump	Dumps all Layer 3 statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command.

/stats/l3/ip IPv4 Statistics

IP statistics:			
ipInReceives:	3115873	ipInHdrErrors:	1
ipInAddrErrors:	35447	ipForwDatagrams:	0
ipInUnknownProtos:	500504	ipInDiscards:	0
ipInDelivers:	2334166	ipOutRequests:	1010542
ipOutDiscards:	4	ipOutNoRoutes:	4
ipReasmReqds:	0	ipReasmOKs:	0
ipReasmFails:	0	ipFragOKs:	0
ipFragFails:	0	ipFragCreates:	0
ipRoutingDiscards:	0	ipDefaultTTL:	255
ipReasmTimeout:	5		

Table 84. IPv4 Statistics (stats/l3/ip)

Statistics	Description
ipInReceives	The total number of input datagrams received from interfaces, including those received in error.
ipInHdrErrors	The number of input datagrams discarded due to errors in their IP headers, including bad checksums, version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.
ipInAddrErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses (for example, 0.0.0.0) and addresses of unsupported Classes (for example, Class E). For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.
ipForwDatagrams	The number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source-Route option processing was successful.
ipInUnknownProtos	The number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.
ipInDelivers	The total number of input datagrams successfully delivered to IP user-protocols (including ICMP).

Table 84. IPv4 Statistics (stats/l3/ip)

Statistics	Description
ipOutRequests	The total number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission. Note that this counter does not include any datagrams counted in <code>ipForwDatagrams</code> .
ipOutDiscards	The number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space). Note that this counter would include datagrams counted in <code>ipForwDatagrams</code> if any such packets met this (discretionary) discard criterion.
ipOutNoRoutes	The number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this counter includes any packets counted in <code>ipForwDatagrams</code> , which meet this <i>no-route</i> criterion. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.
ipReasmReqds	The number of IP fragments received which needed to be reassembled at this entity (the switch).
ipReasmOKs	The number of IP datagrams successfully re- assembled.
ipReasmFails	The number of failures detected by the IP re- assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.
ipFragOKs	The number of IP datagrams that have been successfully fragmented at this entity (the switch).
ipFragFails	The number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their <code>Don't Fragment</code> flag was set.
ipFragCreates	The number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).
ipRoutingDiscards	The number of routing entries, which were chosen to be discarded even though they are valid. One possible reason for discarding such an entry could be to free-up buffer space for other routing entries.

Table 84. IPv4 Statistics (stats/l3/ip)

Statistics	Description
ipDefaultTTL	The default value inserted into the <code>Time-To-Live (TTL)</code> field of the IP header of datagrams originated at this entity (the switch), whenever a TTL value is not supplied by the transport layer protocol.
ipReasmTimeout	The maximum number of seconds, which received fragments are held while they are awaiting reassembly at this entity (the switch).

```

The following table describes the IPv6 statistics.

Table 85. IPv6 Statistics (stats/l3/ip6)

Statistics	Description
Rcvd	Number of datagrams received from interfaces, including those received in error.
HdrErrors	Number of datagrams discarded due to errors in their IP headers, including bad <code>checksums</code> , version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.

Table 85. IPv6 Statistics (stats/13/ip6)

Statistics	Description
TooBigErrors	The number of input datagrams that could not be forwarded because their size exceeded the link MTU of outgoing interface.
AddrErrors	Number of datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses. For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.
FwdDgrams	Number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source-Route option processing was successful.
UnknownProtos	Number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.
Discards	Number of IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.
Delivers	Number of datagrams successfully delivered to IP user-protocols (including ICMP).
OutRequests	Number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission.
OutDiscards	Number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space).
OutNoRoutes	Number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.
ReasmReqds	Number of IP fragments received which needed to be reassembled at this entity (the switch).
ReasmOKs	Number of IP datagrams successfully re- assembled.

Table 85. IPv6 Statistics (stats/13/ip6)

Statistics	Description
ReasmFails	Number of failures detected by the IP re-assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.
FragOKs	Number of IP datagrams that have been successfully fragmented at this entity (the switch).
FragFails	Number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their Don't Fragment flag was set.
FragCreates	Number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).
RcvdMcastPkt	The number of multicast packets received by the interface.
SentMcastPkts	The number of multicast packets transmitted by the interface.
TruncatedPkts	The number of input datagrams discarded because datagram frame didn't carry enough data.
RcvdRedirects	The number of Redirect messages received by the interface.
SentRedirects	The number of Redirect messages sent.

The following table describes the IPv6 ICMP statistics.

Table 86. ICMP Statistics (stats/13/ip6)

Statistics	Description
Received	
ICMPPkts	Number of ICMP messages which the entity (the switch) received.
ICMPErrPkt	Number of ICMP messages which the entity (the switch) received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, and so forth).
DestUnreach	Number of ICMP Destination Unreachable messages received.
TimeExcds	Number of ICMP Time Exceeded messages received.
ParmProbs	Number of ICMP Parameter Problem messages received.
PktTooBigMsg	The number of ICMP Packet Too Big messages received by the interface.
ICMPEchoReq	Number of ICMP Echo (request) messages received.

Table 86. ICMP Statistics (stats/13/ip6)

Statistics	Description
ICMPEchoReps	Number of ICMP Echo Reply messages received.
RouterSols	Number of Router Solicitation messages received by the switch.
RouterAdv	Number of Router Advertisements received by the switch.
NeighSols	Number of Neighbor Solicitations received by the switch.
NeighAdv	Number of Neighbor Advertisements received by the switch.
Redirects	Number of ICMP Redirect messages received.
AdminProhib	The number of ICMP destination unreachable/communication administratively prohibited messages received by the interface.
ICMPBadCode	The number of ICMP Parameter Problem messages received by the interface.
Sent	
ICMPMsgs	Number of ICMP messages which this entity (the switch) attempted to send.
ICMPErrMsgs	Number of ICMP messages which this entity (the switch) did not send due to problems discovered within ICMP such as a lack of buffer. This value should not include errors discovered outside the ICMP layer such as the inability of IP to route the resultant datagram. In some implementations there may be no types of errors that contribute to this counter's value.
DstUnReach	Number of ICMP Destination Unreachable messages sent.
TimeExcds	Number of ICMP Time Exceeded messages sent.
ParmProbs	Number of ICMP Parameter Problem messages sent.
PktTooBig	The number of ICMP Packet Too Big messages sent by the interface.
EchoReq	Number of ICMP Echo (request) messages sent.
EchoReply	Number of ICMP Echo Reply messages sent.
RouterSols	Number of Router Solicitation messages sent by the switch.
RouterAdv	Number of Router Advertisements sent by the switch.
NeighSols	Number of Neighbor Solicitations sent by the switch.
NeighAdv	Number of Neighbor Advertisements sent by the switch.
RedirectMsgs	Number of ICMP Redirect messages sent. For a host, this object will always be zero, since hosts do not send redirects.

Table 86. ICMP Statistics (stats/13/ip6)

Statistics	Description
AdminProhibMsgs	Number of ICMP destination unreachable/communication administratively prohibited messages sent.

The following table describes the UDP statistics.

Table 87. UDP Statistics (stats/13/ip6)

Statistics	Description
Received	
UDPdgrams	Number of UDP datagrams received by the switch.
UDPNoPorts	Number of received UDP datagrams for which there was no application at the destination port.
UDPErrPkts	Number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.
Sent	
UDPdgrams	Number of UDP datagrams sent from this entity (the switch).

/stats/13/route [clear] IPv4 Route Statistics

```

Route statistics:
-----
Current total outstanding routes      :          1
Highest number ever recorded         :          1
Current static routes                 :           0
Current RIP routes                   :           0
Current OSPF routes                  :           0
Current BGP routes                   :           0
Maximum supported routes              :         2048

ECMP statistics (active in ASIC):
-----
Maximum number of ECMP routes        :         2048
Maximum number of static ECMP routes :          128
Number of routes with ECMP paths     :           0
    
```

Use the `clear` option to delete all IPv4 route statistics.

**/stats/13/route6 [clear]
IPv6 Route Statistics**

IPv6 Route statistics:			
ipv6RoutesCur:	1	ipv6RoutesHighWater:	1
ipv6RoutesMax:	1880		
ECMP statistics:			

Maximum number of ECMP routes	:	600	
Max ECMP paths allowed for one route	:	5	

Table 88. IPv6 Route Statistics (/stats/13/route)

Statistics	Description
ipv6RoutesCur	Total number of outstanding routes in the route table.
ipv6RoutesHighWater	Highest number of routes ever recorded in the route table.
ipv6RoutesMax	Maximum number of routes that are supported.
Maximum number of ECMP routes	Maximum number of ECMP routes that are supported.
Max ECMP paths allowed for one route	Maximum number of ECMP paths supported for each route.

Use the `clear` option to delete all IPv6 route statistics.

/stats/13/pmtu6 **IPv6 Path MTU Statistics**

```
Max Cache Entry Number : 10
Current Cache Entry Number: 0
```

Table 89. Path MTU Statistics (/stats/13/pmtu6)

Statistics	Description
Max Cache Entry Number	Maximum number of Path MTU entries that are supported.
Current Cache Entry Number	Total number of Path MTU entries in the Path MTU table.

/stats/13/arp **ARP Statistics**

This menu option enables you to display Address Resolution Protocol statistics.

```
ARP statistics:
arpEntriesCur:      3  arpEntriesHighWater:      4
arpEntriesMax:      4095
```

Table 90. ARP Statistics (/stats/13/arp)

Statistics	Description
arpEntriesCur	The total number of outstanding ARP entries in the ARP table.
arpEntriesHighWater	The highest number of ARP entries ever recorded in the ARP table.
arpEntriesMax	The maximum number of ARP entries that are supported.

/stats/13/dns [clear] **DNS Statistics**

This menu option enables you to display Domain Name System statistics.

```
DNS statistics:
dnsInRequests:      0
dnsOutRequests:      0
dnsBadRequests:      0
```

Table 91. DNS Statistics (/stats/dns)

Statistics	Description
dnsInRequests	The total number of DNS response packets that have been received.
dnsOutRequests	The total number of DNS response packets that have been transmitted.
dnsBadRequests	The total number of DNS request packets received that were dropped.

Use the `clear` option to delete all DNS statistics.

/stats/l3/icmp [clear] ICMP Statistics

ICMP statistics:

Table 92. ICMP Statistics (/stats/l3/icmp)

Statistics	Description
icmpInMsgs	The total number of ICMP messages which the entity (the switch) received. Note that this counter includes all those counted by <code>icmpInErrors</code> .
icmpInErrors	The number of ICMP messages which the entity (the switch) received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, and so forth).
icmpInDestUnreachs	The number of ICMP Destination Unreachable messages received.
icmpInTimeExcds	The number of ICMP Time Exceeded messages received.
icmpInParmProbs	The number of ICMP Parameter Problem messages received.
icmpInSrcQuenchs	The number of ICMP Source Quench (buffer almost full, stop sending data) messages received.
icmpInRedirects	The number of ICMP Redirect messages received.

Table 92. ICMP Statistics (/stats/13/icmp)

Statistics	Description
icmplnEchos	The number of ICMP Echo (request) messages received.
icmplnEchoReps	The number of ICMP Echo Reply messages received.
icmplnTimestamps	The number of ICMP Timestamp (request) messages received.
icmplnTimestampReps	The number of ICMP Timestamp Reply messages received.
icmplnAddrMasks	The number of ICMP Address Mask Request messages received.
icmplnAddrMaskReps	The number of ICMP Address Mask Reply messages received.
icmpOutMsgs	The total number of ICMP messages which this entity (the switch) attempted to send. Note that this counter includes all those counted by <code>icmpOutErrors</code> .
icmpOutErrors	The number of ICMP messages which this entity (the switch) did not send due to problems discovered within ICMP such as a lack of buffer. This value should not include errors discovered outside the ICMP layer such as the inability of IP to route the resultant datagram. In some implementations there may be no types of errors that contribute to this counter's value.
icmpOutDestUnreachs	The number of ICMP Destination Unreachable messages sent.
icmpOutTimeExcds	The number of ICMP Time Exceeded messages sent.
icmpOutParmProbs	The number of ICMP Parameter Problem messages sent.
icmpOutSrcQuenchs	The number of ICMP Source Quench (buffer almost full, stop sending data) messages sent.
icmpOutRedirects	The number of ICMP Redirect messages sent. For a host, this object will always be zero, since hosts do not send redirects.
icmpOutEchos	The number of ICMP Echo (request) messages sent.
icmpOutEchoReps	The number of ICMP Echo Reply messages sent.
icmpOutTimestamps	The number of ICMP Timestamp (request) messages sent.
icmpOutTimestampReps	The number of ICMP Timestamp Reply messages sent.

Table 92. ICMP Statistics (/stats/l3/icmp)

Statistics	Description
icmpOutAddrMasks	The number of ICMP Address Mask Request messages sent.
icmpOutAddrMaskReps	The number of ICMP Address Mask Reply messages sent.

Use the `clear` option to delete all ICMP statistics.

**/stats/l3/tcp [clear]
TCP Statistics**

TCP statistics:			
tcpRtoAlgorithm:	4	tcpRtoMin:	0
tcpRtoMax:	240000	tcpMaxConn:	512
tcpActiveOpens:	252214	tcpPassiveOpens:	7
tcpAttemptFails:	528	tcpEstabResets:	4
tcpInSegs:	756401	tcpOutSegs:	756655
tcpRetransSegs:	0	tcpInErrs:	0
tcpCurBuff:	0	tcpCurConn:	3
tcpOutRsts:	417		

Table 93. TCP Statistics (/stats/l3/tcp)

Statistics	Description
tcpRtoAlgorithm	The algorithm used to determine the <code>timeout</code> value used for retransmitting unacknowledged octets.
tcpRtoMin	The minimum value permitted by a TCP implementation for the retransmission <code>timeout</code> , measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission <code>timeout</code> . In particular, when the <code>timeout</code> algorithm is <code>rsre(3)</code> , an object of this type has the semantics of the <code>LBOUND</code> quantity described in RFC 793.
tcpRtoMax	The maximum value permitted by a TCP implementation for the retransmission <code>timeout</code> , measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission <code>timeout</code> . In particular, when the <code>timeout</code> algorithm is <code>rsre(3)</code> , an object of this type has the semantics of the <code>UBOUND</code> quantity described in RFC 793.
tcpMaxConn	The limit on the total number of TCP connections the entity (the switch) can support. In entities where the maximum number of connections is dynamic, this object should contain the value -1.
tcpActiveOpens	The number of times TCP connections have made a direct transition to the SYN-SENT state from the CLOSED state.
tcpPassiveOpens	The number of times TCP connections have made a direct transition to the SYN-RCVD state from the LISTEN state.
tcpAttemptFails	The number of times TCP connections have made a direct transition to the CLOSED state from either the SYN-SENT state or the SYN-RCVD state, plus the number of times TCP connections have made a direct transition to the LISTEN state from the SYN-RCVD state.
tcpEstabResets	The number of times TCP connections have made a direct transition to the CLOSED state from either the ESTABLISHED state or the CLOSE-WAIT state.

Table 93. TCP Statistics (/stats/13/tcp)

Statistics	Description
tcpInSegs	The total number of segments received, including those received in error. This count includes segments received on currently established connections.
tcpOutSegs	The total number of segments sent, including those on current connections but excluding those containing only retransmitted octets.
tcpRetransSegs	The total number of segments retransmitted - that is, the number of TCP segments transmitted containing one or more previously transmitted octets.
tcpInErrs	The total number of segments received in error (for example, bad TCP <code>checksums</code>).
tcpCurBuff	The total number of outstanding memory allocations from heap by TCP protocol stack.
tcpCurConn	The total number of outstanding TCP sessions that are currently opened.
tcpOutRsts	The number of TCP segments sent containing the RST flag.

Use the `clear` option to delete all TCP statistics.

/stats/13/udp [clear] UDP Statistics

UDP statistics:			
udpInDatagrams:	54	udpOutDatagrams:	43
udpInErrors:	0	udpNoPorts:	1578077

Table 94. UDP Statistics (/stats/13/udp)

Statistics	Description
udpInDatagrams	The total number of UDP datagrams delivered to the switch.
udpOutDatagrams	The total number of UDP datagrams sent from this entity (the switch).
udpInErrors	The number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.
udpNoPorts	The total number of received UDP datagrams for which there was no application at the destination port.

Use the `clear` option to delete all UDP statistics.

/stats/l3/igmp <VLAN number>
IGMP Statistics

```

IGMP vlan 2 statistics:
-----
rxIgmValidPkts:          0   rxIgmInvalidPkts:          0
rxIgmGenQueries:         0   rxIgmGrpSpecificQueries:   0

txIgmGenQueries:         0
  
```

This menu option displays statistics about the use of the IGMP Multicast Groups. IGMP statistics are described in the following table:

Table 95. IGMP Statistics (/stats/l3/igmp)

Statistic	Description
rxIgmValidPkts	Total number of valid IGMP packets received
rxIgmInvalidPkts	Total number of invalid packets received
rxIgmGenQueries	Total number of General Membership Query packets received
rxIgmGrpSpecific Queries	Total number of Membership Query packets received from specific groups
rxIgmGroupSrcSpecific Queries	Total number of Group Source-Specific Queries (GSSQ) received
rxIgmDiscardPkts	Total number of IGMP packets discarded
rxIgmLeaves	Total number of Leave requests received
rxIgmReports	Total number of Membership Reports received
txIgmReports	Total number of Membership reports transmitted
txIgmGrpSpecific Queries	Total number of Membership Query packets transmitted to specific groups
txIgmLeaves	Total number of Leave messages transmitted
rxIgmV3CurrentState Records	Total number of Current State records received
rxIgmV3SourceList ChangeRecords	Total number of Source List Change records received.
rxIgmV3FilterChange Records	Total number of Filter Change records received.
txIgmGenQueries	Total number of General Membership Query packets transmitted.

`/stats/13/mld` MLD Statistics Menu

TO_INC FMCRs(v2)      0           0           0
TO_EXC FMCRs(v2)      0           8           0
ALLOW SLCRs(v2)       0           0           0
BLOCK SLCRs(v2)       1           0           0

```

The following table describes the fields in the MLD global statistics output.

Table 97. MLD Global Statistics (/stats/13/mld/global)

Statistic	Description
Bad Length	Number of messages received with length errors.
Bad Checksum	Number of messages received with an invalid IP checksum.
Bad Receive If	Number of messages received on an interface not enabled for MLD.
Receive non-local	Number of messages received from non-local senders.
Invalid packets	Number of rejected packets.
General Query (v1/v2)	Number of general query packets.
MAS Query(v1/v2)	Number of multicast address specific query packets.
MASSQ Query (v2)	Number of multicast address and source specific query packets.
Listener Report(v1)	Number of packets sent by a multicast listener in response to MLDv1 query.
Listener Done(v1/v2)	Number of packets sent by a host when it wants to stop receiving multicast traffic.
Listener Report(v2)	Number of packets sent by a multicast listener in response to MLDv2 query.
MLDv2 INC mode CSRs	Number of current state records with include filter mode.
MLDv2 EXC mode CSRs	Number of current state records with exclude filter mode.
MLDv2 TO_INC FMCRs	Number of filter mode change records for which the filter mode has changed to include mode.
MLDv2 TO_EXC FMCRs	Number of filter mode change records for which the filter mode has changed to exclude mode.
MLDv2 ALLOW SLCRs	Number of source list change records for which the specified sources from where the data is to be received has changed.
MLDv2 BLOCK SLCRs	Number of source list change records for which the specified sources from where the data is to be received is to be blocked.

Table 99. OSPF General Statistics (stats/13/ospf/general)

Statistics	Description
Rx/Tx Stats:	
Rx Pkts	The sum total of all OSPF packets received on all OSPF areas and interfaces.
Tx Pkts	The sum total of all OSPF packets transmitted on all OSPF areas and interfaces.
Rx Hello	The sum total of all Hello packets received on all OSPF areas and interfaces.
Tx Hello	The sum total of all Hello packets transmitted on all OSPF areas and interfaces.
Rx Database	The sum total of all Database Description packets received on all OSPF areas and interfaces.

Table 99. OSPF General Statistics (stats/l3/ospf/general) (continued)

Statistics		Description
	Tx Database	The sum total of all Database Description packets transmitted on all OSPF areas and interfaces.
	Rx Is Requests	The sum total of all Link State Request packets received on all OSPF areas and interfaces.
	Tx Is Requests	The sum total of all Link State Request packets transmitted on all OSPF areas and interfaces.
	Rx Is Acks	The sum total of all Link State Acknowledgement packets received on all OSPF areas and interfaces.
	Tx Is Acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPF areas and interfaces.
	Rx Is Updates	The sum total of all Link State Update packets received on all OSPF areas and interfaces.
	Tx Is Updates	The sum total of all Link State Update packets transmitted on all OSPF areas and interfaces.
Nbr Change Stats:		
	hello	The sum total of all Hello packets received from neighbors on all OSPF areas and interfaces.
	Start	The sum total number of neighbors in this state (that is, an indication that Hello packets should now be sent to the neighbor at intervals of <code>HelloInterval</code> seconds.) across all OSPF areas and interfaces.
	n2way	The sum total number of bidirectional communication establishment between this router and other neighboring routers.
	adjoint ok	The sum total number of decisions to be made (again) as to whether an adjacency should be established/maintained with the neighbor across all OSPF areas and interfaces.
	negotiation done	The sum total number of neighbors in this state wherein the Master/slave relationship has been negotiated, and sequence numbers have been exchanged, across all OSPF areas and interfaces.
	exchange done	The sum total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets, across all OSPF areas and interfaces.
	bad requests	The sum total number of Link State Requests which have been received for a link state advertisement not contained in the database across all interfaces and OSPF areas.

Table 99. OSPF General Statistics (stats/l3/ospf/general) (continued)

Statistics	Description
bad sequence	<p>The sum total number of Database Description packets which have been received that either:</p> <ul style="list-style-type: none"> a. Has an unexpected DD sequence number b. Unexpectedly has the init bit set c. Has an options field differing from the last Options field received in a Database Description packet. <p>Any of these conditions indicate that some error has occurred during adjacency establishment for all OSPF areas and interfaces.</p>
loading done	<p>The sum total number of link state updates received for all out-of-date portions of the database across all OSPF areas and interfaces.</p>
n1way	<p>The sum total number of Hello packets received from neighbors, in which this router is not mentioned across all OSPF interfaces and areas.</p>
rst_ad	<p>The sum total number of times the Neighbor adjacency has been reset across all OPSF areas and interfaces.</p>
down	<p>The total number of Neighboring routers down (that is, in the initial state of a neighbor conversation.) across all OSPF areas and interfaces.</p>

Table 99. OSPF General Statistics (stats/l3/ospf/general) (continued)

Statistics		Description
Intf Change Stats:		
	up	The sum total number of interfaces up in all OSPF areas.
	down	The sum total number of interfaces down in all OSPF areas.
	loop	The sum total of interfaces no longer connected to the attached network across all OSPF areas and interfaces.
	unloop	The sum total number of interfaces, connected to the attached network in all OSPF areas.
	wait timer	The sum total number of times the Wait Timer has been fired, indicating the end of the waiting period that is required before electing a (Backup) Designated Router across all OSPF areas and interfaces.
	backup	The sum total number of Backup Designated Routers on the attached network for all OSPF areas and interfaces.
	nbr change	The sum total number of changes in the set of bidirectional neighbors associated with any interface across all OSPF areas.
Timers Kickoff:		
	hello	The sum total number of times the Hello timer has been fired (which triggers the <code>send</code> of a Hello packet) across all OPSF areas and interfaces.
	retransmit	The sum total number of times the Retransmit timer has been fired across all OPSF areas and interfaces.
	lsa lock	The sum total number of times the Link State Advertisement (LSA) lock timer has been fired across all OSPF areas and interfaces.
	lsa ack	The sum total number of times the LSA <code>ack</code> timer has been fired across all OSPF areas and interfaces.
	dbage	The total number of times the data base age (<code>Dbage</code>) has been fired.
	summary	The total number of times the Summary timer has been fired.
	ase export	The total number of times the Autonomous System Export (ASE) timer has been fired.

The OSPFv3 General Statistics contain the sum total of all OSPF packets received on all OSPFv3 areas and interfaces.

Table 101. OSPFv3 General Statistics (stats/13/ospf3/general)

Statistics	Description
Rx/Tx Stats:	
Rx Pkts	The sum total of all OSPFv3 packets received on all OSPFv3 interfaces.
Tx Pkts	The sum total of all OSPFv3 packets transmitted on all OSPFv3 interfaces.
Discarded Pkts	The sum total of all OSPFv3 packets discarded.
Rx hello	The sum total of all Hello packets received on all OSPFv3 interfaces.
Tx hello	The sum total of all Hello packets transmitted on all OSPFv3 interfaces.
Discarded hello	The sum total of all Hello packets discarded, including packets for which no associated interface has been found.

Table 101. OSPFv3 General Statistics (stats/l3/ospf3/general) (continued)

Statistics		Description
	Rx database	The sum total of all Database Description packets received on all OSPFv3 interfaces.
	Tx database	The sum total of all Database Description packets transmitted on all OSPFv3 interfaces.
	Discarded database	The sum total of all Database Description packets discarded.
	Rx ls requests	The sum total of all Link State Request packets received on all OSPFv3 interfaces.
	Tx ls requests	The sum total of all Link State Request packets transmitted on all OSPFv3 interfaces.
	Discarded ls requests	The sum total of all Link State Request packets discarded.
	Rx ls acks	The sum total of all Link State Acknowledgement packets received on all OSPFv3 interfaces.
	Tx ls acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPFv3 interfaces.
	Discarded ls acks	The sum total of all Link State Acknowledgement packets discarded.
	Rx ls updates	The sum total of all Link State Update packets received on all OSPFv3 interfaces.
	Tx ls updates	The sum total of all Link State Update packets transmitted on all OSPFv3 interfaces.
	Discarded ls updates	The sum total of all Link State Update packets discarded.
Nbr Change Stats:		
	down	The total number of Neighboring routers down (that is, in the initial state of a neighbor conversation.) across all OSPFv3 interfaces.
	attempt	The total number of transitions into attempt state of neighboring routers across all OSPFv3 interfaces.
	init	The total number of transitions into init state of neighboring routers across all OSPFv3 interfaces.
	n2way	The total number of bidirectional communication establishment between this router and other neighboring routers.
	exstart	The total number of transitions into exstart state of neighboring routers across all OSPFv3 interfaces

Table 101. OSPFv3 General Statistics (stats/13/ospf3/general) (continued)

Statistics		Description
	exchange done	The total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets, across all OSPFv3 interfaces.
	loading done	The total number of link state updates received for all out-of-date portions of the database across all OSPFv3 interfaces.
	full	The total number of transitions into full state of neighboring routers across all OSPFv3 interfaces.
	all events	The total number of state transitions of neighboring routers across all OSPFv3 interfaces.

Table 101. OSPFv3 General Statistics (stats/13/ospf3/general) (continued)

Statistics	Description
Intf Change Stats:	
down	The total number of transitions into down state of all OSPFv3 interfaces.
loop	The total number of transitions into loopback state of all OSPFv3 interfaces.
waiting	The total number of transitions into waiting state of all OSPFv3 interfaces.
ptop	The total number of transitions into point-to-point state of all OSPFv3 interfaces.
dr	The total number of transitions into Designated Router other state of all OSPFv3 interfaces.
backup	The total number of transitions into backup state of all OSPFv3 interfaces.
all events	The total number of changes associated with any OSPFv3 interface, including changes into internal states.
Timers Kickoff:	
hello	The total number of times the Hello timer has been fired (which triggers the <code>send</code> of a Hello packet) across all OSPFv3 interfaces.
wait	The total number of times the wait timer has been fired (which causes an interface to exit waiting state), across all OPSFv3 interfaces.
poll	The total number of times the timer whose firing causes hellos to be sent to inactive NBMA and Demand Circuit neighbors has been fired, across all OPSFv3 interfaces.
nbr probe	The total number of times the neighbor probe timer has been fired, across all OPSFv3 interfaces.
Number of LSAs:	
originated	The number of LSAs originated by this router.
rcvd newer originations	The number of LSAs received that have been determined to be newer originations.

`/stats/13/vrrp` VRRP Statistics

Virtual Router Redundancy Protocol (VRRP) support on the EN2092 1Gb Ethernet Scalable Switch (EN2092) provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of

the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

When virtual routers are configured, you can display the protocol statistics for VRRP:

VRRP statistics:			
vrrpInAdvers:	0	vrrpBadAdvers:	0
vrrpOutAdvers:	0	vrrpOutGratuitousARPs:	0
vrrpBadVersion:	0	vrrpBadVrid:	0
vrrpBadAddress:	0	vrrpBadData:	0
vrrpBadPassword:	0	vrrpBadInterval:	0

Table 102. VRRP Statistics (/stats/l3/vrrp)

Statistics	Description
vrrpInAdvers	The total number of valid VRRP advertisements that have been received.
vrrpBadAdvers	The total number of VRRP advertisements received that were dropped.
vrrpOutAdvers	The total number of VRRP advertisements that have been sent.
vrrpOut GratuitousARPs	The total number of VRRP gratuitous ARPs that have been sent.
vrrpBadVersion	The total number of VRRP advertisements received that had a bad version number.
vrrpBadVrid	The total number of VRRP advertisements received that had a bad virtual router ID.
vrrpBadAddress	The total number of VRRP advertisements received that had a bad address.
vrrpBadData	The total number of VRRP advertisements received that had bad data.
vrrpBadPassword	The total number of VRRP advertisements received that had a bad password.
vrrpBadInterval	The total number of VRRP advertisements received that had a bad interval.

Statistics	Description
Packet rate	
1-second	The rate of incoming and outgoing packets over 1 second.
4-seconds	The rate of incoming and outgoing packets over 4 seconds.
64-seconds	The rate of incoming and outgoing packets over 64 seconds.
Packets counters	
Total packets	Total number of packets received and sent.
Since bootup	Total number of packets received and sent since the last switch reboot.

Statistics	Description
BPDUs	Total number of spanning-tree Bridge Protocol Data Units received and sent.
Cisco packets	Total number of UniDirectional Link Detection (UDLD) packets and Cisco Discovery Protocol (CDP) packets received and sent.
ARP packets	Total number of Address Resolution Protocol packets received and sent.
IPv4 packets	Total number of IPv4 packets received and sent. Includes the following packet types: <ul style="list-style-type: none"> – IGMP – PIM – ICMP requests – ICMP replies
TCP packets	Total number of TCP packets received and sent. Includes the following packet types: <ul style="list-style-type: none"> – FTP – HTTP – SSH – TACACS+ – Telnet – Other
UDP packets	Total number of UDP packets received and sent. Includes the following packet types: <ul style="list-style-type: none"> – DHCP – NTP – RADIUS – SNMP – TFTP – Other
RIP packets	Total number of Routing Information Protocol packets received and sent.
OSPF packets	Total number of Open Shortest Path First packets received and sent.
BGP packets	Total number of Border Gateway Protocol packets received and sent.
IPv6 packets	Total number of IPv6 packets received and sent.
LLDP PDUs	Total number of Link Layer Discovery Protocol data units received and sent.
ECP PDUs	Total number of Edge Control Protocol data units received and sent.

Statistics	Description
MgmtSock Packets	Total number of packets received and transmitted through the management port.
Other	Total number of other packets received and transmitted.
Packet Buffer Statistics	
allocs	Total number of packet allocations from the packet buffer pool by the TCP/IP protocol stack.
frees	Total number of times the packet buffers are freed (released) to the packet buffer pool by the TCP/IP protocol stack.
failures	Total number of packet allocation failures from the packet buffer pool by the TCP/IP protocol stack.
dropped	Total number of packets dropped by the packet buffer pool.
small packet buffers	
current	Total number of packet allocations with size less than 128 bytes from the packet buffer pool by the TCP/IP protocol stack.
max	Maximum number of small packet allocations supported
threshold	Threshold value for small packet allocations, beyond which only high-priority small packets are allowed.
hi-watermark	The highest number of packet allocation with size less than 128 bytes from the packet buffer pool by the TCP/IP protocol stack.
hi-water time	Time stamp that indicates when the hi-watermark was reached.
medium packet buffers	
current	Total number of packet allocations with size between 128 to 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
max	Maximum number of medium packet allocations supported.
threshold	Threshold value for medium packet allocations, beyond which only high-priority medium packets are allowed.
hi-watermark	The highest number of packet allocation with size between 128 to 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
hi-water time	Time stamp that indicates when the hi-watermark was reached.

Statistics	Description
jumbo packet buffers	
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
max	Maximum number of jumbo packet allocations supported.
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
pkt_hdr statistics	
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
max	Maximum number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack that are supported.
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.

/stats/mp/pkt/logs **Packet Statistics Log Menu**

[MP Packet Logs Menu]	
all	- Display logs of all packets received/sent by CPU
rx	- Display logs of packets received by CPU
tx	- Display logs of packets sent by CPU

This menu allows you to display a log of all packets received by CPU. The following table describes the Packet Statistics Log menu options.

Table 105. Packet Statistics Log Menu Options (/stats/mp/pkt/log)

Command Syntax and Usage	
all	Displays all packet logs received by and sent from the CPU. To view a sample output and a description of the log entries, see page 160 .
rx	Displays all packets logs received by the CPU.
tx	Displays all packet logs sent from the CPU.

`/stats/mp/pkt/logs/all` Packet Log example

```
358. Type: BPDU, sent 1:01:11 Tue Mar 20, 2012
     Port EXT2, VLAN 201, Length 57, Reason 0x0, Flags 0x0
     Dst MAC: 01:80:c2:00:00:00, Src MAC: 08:17:f4:a7:57:2c

357. Type: ICMP ECHO Req, sent 1:01:09 Tue Mar 20, 2012
     Port MGT1, VLAN 4095, Length 16, Reason 0x0, Flags 0x0 FromMgmtSock
     Src IP: 9.43.98.125, Dst IP: 9.43.98.254
```

Each packet log entry includes the following information:

- Entry ID
- Packet type
- Date and time
- Port number
- VLAN number
- Packet length
- Reason code
- Flags
- Source and destination address

`/stats/mp/pkt/last` Packet Statistics Last Packet Menu

```
[MP Packet Last Packet Menu]
both - Display logs of the last N packets received/sent by CPU
rx   - Display logs of the last N packets received by CPU
tx   - Display logs of the last N packets sent by CPU
```

This menu allows you to display a specified number (N) of the most recent packet logs received by or sent from the CPU. The following table describes the Packet Statistics Last Packet menu options.

Table 106. Last Packet Menu Options (/stats/mp/pkt/last)

Command Syntax and Usage	
<code>both <1-1000></code>	Displays a specified number of recent packet logs received by and sent from the CPU. To view a sample output and a description, see page 160 .
<code>rx <1-1000></code>	Displays a specified number of recent packet logs received by the CPU.
<code>tx <1-1000></code>	Displays a specified number of recent packet logs sent from the CPU.

`/stats/mp/pkt/dump` Packet Statistics Dump Menu

[MP Packet Dump Menu]	
all	- Display packet statistics and all logs
rx	- Display packet statistics and received logs
tx	- Display packet statistics and sent logs

The following table describes the Packet Statistics Dump menu options.

Table 107. Packet Dump Menu Options (`/stats/mp/pkt/dump`)

Command Syntax and Usage	
all	Displays all packet statistics and logs received by and sent from the CPU.
rx	Displays all packet statistics and logs received by the CPU.
tx	Displays all packet statistics and logs sent from the CPU.

`/stats/mp/pkt/parse` Packet Statistics Parse Menu

[MP Packet Parse Menu]	
rx	- Display Receive packets parsed
tx	- Display Sent packets parsed

The following table describes the Packet Statistics Parse menu options.

Table 108. Packet Parse Menu Options (`/stats/mp/pkt/parse`)

Command Syntax and Usage	
rx <i><packet type></i>	Displays specified packet types received by the CPU. Table 109 lists the packet types accepted by this command.
tx <i><packet type></i>	Displays specified packet types sent from the CPU. Table 109 lists the packet types accepted by this command.

Table 109. Packet types accepted by the packet parse command

Packet Type	Description
arp	Display only ARP packets logged.
bgp	Display only BGP packets logged.
bpdu	Display only BPDUs logged.
cisco	Display only Cisco packets (BPDU/CDP/UDLD) logged.

Packet Type	Description
dhcp	Display only DHCP packets logged.
ecp	Display only ECP packets logged.
fcoe	Display only FCoE FIP PDUs logged.
ftp	Display only FTP packet logged.
http	Display only HTTP packets logged.
icmp	Display only ICMP packets logged.
igmp	Display only IGMP packet logged.
ip-addr	Display only logged packets with specified IP address.
ipv4	Display only IPv4 packets logged.
ipv6	Display only IPv6 packets logged.
lacp	Display only LACP packets logged.
lldp	Display only LLDP PDUs logged.
mac	Display only logged packets with specified MAC address.
mgmtsock	Display only packets logged from management ports.
ntp	Display only NTP packets logged.
ospf	Display only OSPF packet logged.
other	Display logs of all packets not explicitly selectable.
pim	Display only PIM packet logged.
port	Display only logged packets with specified port.
radius	Display only RADIUS packets logged.
rarp	Display only Reverse-ARP packets logged.
raw	Display raw packet buffer in addition to headers.
rip	Display only RIP packet logged.
snmp	Display only SNMP packets logged.
ssh	Display only SSH packets logged.
tacacs	Display only TACACS packets logged.
tcp	Display only TCP packets logged.
tcpother	Display only TCP other-port packets logged.
telnet	Display only TELNET packets logged.
tftp	Display only TFTP packets logged.
udp	Display only UDP packets logged.
udpother	Display only UDP other-port packets logged.
vlan	Display only logged packets with specified VLAN.

/stats/mp/cpu **CPU Statistics**

This menu option enables you to display the CPU utilization statistics.

CPU utilization	Highest	Thread	Time
-----	-----	-----	-----
cpuUtil1Second: 13%	93%	110 (FTMR)	11:36:19 Mon Jan 10, 2012
cpuUtil4Seconds: 7%			
cpuUtil64Seconds: 13%			

Table 112. CPU Statistics (stats/mp/cpu)

Statistics	Description
cpuUtil1Second	The utilization of MP CPU over 1 second. It shows the percentage, highest rate, thread, and time the highest utilization occurred.
cpuUtil4Seconds	The utilization of MP CPU over 4 seconds. It shows the percentage.
cpuUtil64Seconds	The utilization of MP CPU over 64 seconds. It shows the percentage.
Highest	The highest percent ever recorded of CPU utilization.
Thread	Thread ID and name of the thread which caused highest CPU utilization.
Time	Time stamp that indicates when the hi-water mark was reached.

`/stats/mp/ncpu` New CPU Statistics

```
Total CPU Utilization: For 1 second: 0.55%
                        For 5 second: 0.37%
                        For 1 minute: 0.40%
                        For 5 minute: 0.76%
Highest thread util   : 84% by 94 (PROX) at 2:46:57 Wed Mar 7, 2012
-----
```

Thread ID	Thread Name	Utilization				Status
		1sec	5sec	1Min	5Min	
1	STEM	0.00%	0.00%	0.00%	0.00%	idle
2	STP	0.07%	0.04%	0.04%	0.04%	idle
3	MFDB	0.00%	0.00%	0.00%	0.00%	idle
4	TND	0.00%	0.00%	0.00%	0.00%	idle
5	CONS	0.00%	0.01%	0.00%	0.35%	running

/stats/acl ACL Statistics Menu

[ACL Menu]	
acl	- Display ACL stats
acl6	- Display IPv6 ACL stats
dump	- Display all available ACL stats
mac1	- Display MACL stats
vmap	- Display VMAP stats
clrac1	- Clear ACL stats
clrac16	- Clear IPv6 ACL stats
clrmacl	- Clear MACL stats
clrvmap	- Clear VMAP stats

ACL statistics are described in the following table.

Table 113. ACL Statistics Menu Options (/stats/acl)

Command Syntax and Usage	
acl <ACL number>	Displays the Access Control List Statistics for a specific ACL. For details, see page 167 .
acl6 <ACL number>	Displays the IPv6 Access Control List Statistics for a specific ACL.
mac1 <ACL number>	Displays the Management Access Control List (MACL) Statistics for a specific ACL.
dump	Displays all ACL statistics.
vmap <VMAP number>	Displays the VLAN Map statistics for a specific VMAP. For details, see page 167 .
clrac1	Clears all ACL statistics.

Table 113. ACL Statistics Menu Options (/stats/acl)

Command Syntax and Usage	
clrac16	Clears all IPv6 ACL statistics.
clrmac1	Clears all Management ACL (MACL) statistics.
clrvmap	Clears all VMAP statistics.

/stats/acl/acl [*<ACL number>*]
ACL Statistics List

This option displays statistics for the selected ACL if an ACL number is specified, or for all ACLs if the option is omitted.

Hits for ACL 1:	26057515
Hits for ACL 2:	26057497

/stats/acl/vmap [*<VMAP number>* | **all]**
VLAN Map Statistics

This option displays statistics for the selected VLAN Map, or for all VMAPs.

Hits for VMAP 1:	57515
Hits for VMAP 2:	74970

`/stats/snmp [clear]` SNMP Statistics

Note: You can reset the SNMP counter to zero by using `clear` command, as follows:

```
>> Statistics# snmp clear
```

SNMP statistics:			
snmpInPkts:	150097	snmpInBadVersions:	0
snmpInBadC'tyNames:	0	snmpInBadC'tyUses:	0

Table 114. SNMP Statistics (`/stats/snmp`)

Statistics	Description
snmpInPkts	The total number of Messages delivered to the SNMP entity from the transport service.
snmpInBadVersions	The total number of SNMP Messages, which were delivered to the SNMP protocol entity and were for an unsupported SNMP version.
snmpInBadC'tyNames	The total number of SNMP Messages delivered to the SNMP entity which used an SNMP community name not known to the said entity (the switch).
snmpInBadC'tyUses	The total number of SNMP Messages delivered to the SNMP protocol entity which represented an SNMP operation which was not allowed by the SNMP community named in the Message.
snmpInASNParseErrs	<p>The total number of ASN.1 or BER errors encountered by the SNMP protocol entity when decoding SNMP Messages received.</p> <p>Note: OSI's method of specifying abstract objects is called ASN.1 (Abstract Syntax Notation One, defined in X.208), and one set of rules for representing such objects as strings of ones and zeros is called the BER (Basic Encoding Rules, defined in X.209). ASN.1 is a flexible notation that allows one to define a variety of data types, from simple types such as integers and bit strings to structured types such as sets and sequences. BER describes how to represent or encode values of each ASN.1 type as a string of eight-bit octets.</p>

Table 114. SNMP Statistics (/stats/snmp) (continued)

Statistics	Description
snmpEnableAuthTraps	An object to enable or disable the authentication traps generated by this entity (the switch).
snmpOutPkts	The total number of SNMP Messages which were passed from the SNMP protocol entity to the transport service.
snmpInBadTypes	The total number of SNMP Messages which failed ASN parsing.
snmpInTooBig	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>too big</i> .
snmpInNoSuchNames	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>noSuchName</i> .
snmpInBadValues	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>badValue</i> .
snmpInReadOnly	The total number of valid SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>'read-Only'</i> . It should be noted that it is a protocol error to generate an SNMP PDU, which contains the value <i>'read-Only'</i> in the error-status field. As such, this object is provided as a means of detecting incorrect implementations of the SNMP.
snmpInGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>genErr</i> .
snmpInTotalReqVars	The total number of MIB objects which have been retrieved successfully by the SNMP protocol entity as a result of receiving valid SNMP Get-Request and Get-Next Protocol Data Units (PDUs).
snmpInTotalSetVars	The total number of MIB objects, which have been altered successfully by the SNMP protocol entity as a result of receiving valid SNMP Set-Request Protocol Data Units (PDUs).
snmpInGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.

Table 114. SNMP Statistics (/stats/snmp) (continued)

Statistics	Description
snmpInSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInGetResponses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpOutTooBig	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is <i>too big</i> .
snmpOutNoSuchNames	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status is <i>noSuchName</i> .
snmpOutBadValues	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is <i>badValue</i> .
snmpOutReadOnly	Not in use.
snmpOutGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is <i>genErr</i> .
snmpOutGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutGetResponses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.

Table 114. SNMP Statistics (/stats/snmp) (continued)

Statistics	Description
snmpSilentDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMPv2 entity which were silently dropped because the size of a reply containing an alternate Response-PDU with an empty variable bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.
snmpProxyDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMP entity which were silently dropped because the transmission of the message to a proxy target failed in a manner such that no Response-PDU could be returned.

/stats/ntp NTP Statistics

IBM Networking OS uses NTP (Network Timing Protocol) version 3 to synchronize the switch's internal clock with an atomic time calibrated NTP server. With NTP enabled, the switch can accurately update its internal clock to be consistent with other devices on the network and generates accurate syslogs.

```

NTP statistics:
  Primary Server via MGT port:
    Requests Sent:          17
    Responses Received:    17
    Updates:                1
  Secondary Server via MGT port:
    Requests Sent:          0
    Responses Received:    0
    Updates:                0

Last update based on response from primary/secondary server.
Last update time: 18:04:16 Tue Jan 13, 2012
Current system time: 18:55:49 Tue Jan 13, 2012
    
```

Table 115. NTP Statistics Parameters (/stats/ntp)

Field	Description
Primary Server	<ul style="list-style-type: none"> • Requests Sent: The total number of NTP requests the switch sent to the primary NTP server to synchronize time. • Responses Received: The total number of NTP responses received from the primary NTP server. • Updates: The total number of times the switch updated its time based on the NTP responses received from the primary NTP server.
Secondary Server	<ul style="list-style-type: none"> • Requests Sent: The total number of NTP requests the switch sent to the secondary NTP server to synchronize time. • Responses Received: The total number of NTP responses received from the secondary NTP server. • Updates: The total number of times the switch updated its time based on the NTP responses received from the secondary NTP server.
Last update based on response from primary server	Last update of time on the switch based on either primary or secondary NTP response received.
Last update time	The time stamp showing the time when the switch was last updated.
Current system time	The switch system time when the following command was issued: /stats/ntp

Note: Use the following command to delete all NTP statistics: /stats/ntp clear

/stats/dump **Statistics Dump**

Use the dump command to dump all switch statistics available from the Statistics Menu (40K or more, depending on your configuration). This data can be used to tune or debug switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Chapter 5. The Configuration Menu

This chapter discusses how to use the Command Line Interface (CLI) for making, viewing, and saving switch configuration changes. Many of the commands, although not new, display more or different information than in the previous version. Important differences are called out in the text.

/cfg

Configuration Menu

[Configuration Menu]	
sys	- System-wide Parameter Menu
port	- Port Menu qos - QOS Menu
acl	- Access Control List Menu
pmirr	- Port Mirroring Menu
l2	- Layer 2 Menu
l3	- Layer 3 Menu
rmon	- RMON Menu
virt	- Virtualization Menu
setup	- Step by step configuration set up
dump	- Dump current configuration to script file
ptcfg	- Backup current configuration to FTP/TFTP server
gtcfg	- Restore current configuration from FTP/TFTP server
cur	- Display current configuration

Each configuration option is briefly described in [Table 116](#), with pointers to detailed menu commands.

Table 116. Configuration Menu Options (/cfg)

Command Syntax and Usage	
sys	Displays the System Configuration Menu. To view menu options, see page 176 .
port <port alias or number>	Displays the Port Configuration Menu. To view menu options, see page 212 .
qos	Displays the Quality of Service Configuration Menu. To view menu options, see page 221 .
acl	Displays the ACL Configuration Menu. To view menu options, see page 224 .
pmirr	Displays the Mirroring Configuration Menu. To view menu options, see page 244 .
l2	Displays the Layer 2 Configuration Menu. To view menu options, see page 246 .

Table 116. Configuration Menu Options (/cfg) (continued)

Command Syntax and Usage	
l3	Displays the Layer 3 Configuration Menu. To view menu options, see page 284 .
rmon	Displays the Remote Monitoring (RMON) Configuration Menu. To view menu options, see page 377 .
virt	Displays the Virtualization Configuration Menu. To view menu options, see page 381 .
dump	Dumps current configuration to a script file. For details, see page 388 .
ptcfg <FTP/TFTP server host name or IP address> <filename on host>	Backs up current configuration to FTP/TFTP server. For details, see page 389 .
gtcfg <host name or IP address of FTP/TFTP server> <filename on host>	Restores current configuration from FTP/TFTP server. For details, see page 389 .
cur	Displays current configuration parameters.

Viewing, Applying, and Saving Changes

As you use the configuration menus to set switch parameters, the changes you make do not take effect immediately. All changes are considered “pending” until you explicitly apply them. Also, any changes are lost the next time the switch boots unless the changes are explicitly saved.

Note: Some operations can override the settings in the Configuration menu. Therefore, settings you view in the Configuration menu (for example, port status) might differ from run-time information that you view in the Information menu or on the management module. The Information menu displays current run-time information of switch parameters.

While configuration changes are in the pending state, you can do the following:

- View the pending changes
- Apply the pending changes
- Save the changes to flash memory

Viewing Pending Changes

You can view all pending configuration changes by entering `diff` at the menu prompt.

Note: The `diff` command is a global command. Therefore, you can enter `diff` at any prompt in the CLI.

Applying Pending Changes

To make your configuration changes active, you must apply them. To apply configuration changes, enter `apply` at any prompt in the CLI.

```
# apply
```

Note: The `apply` command is a global command. Therefore, you can enter `apply` at any prompt in the administrative interface.

Saving the Configuration

In addition to applying the configuration changes, you can save them to flash memory on the EN2092 1Gb Ethernet Scalable Switch (EN2092).

Note: If you do not save the changes, they will be lost the next time the system is rebooted.

To save the new configuration, enter the following command at any CLI prompt:

```
# save
```

When you save configuration changes, the changes are saved to the *active* configuration block. The configuration being replaced by the save is first copied to the *backup* configuration block. If you do not want the previous configuration block copied to the backup configuration block, enter the following instead:

```
# save n
```

You can decide which configuration you want to run the next time you reset the switch. Your options include:

- The active configuration block
- The backup configuration block
- Factory default configuration

You can view all pending configuration changes that have been applied but not saved to flash memory using the `diff flash` command. It is a global command that can be executed from any menu.

For instructions on selecting the configuration to run at the next system reset, see [“Selecting a Configuration Block” on page 410](#).

/cfg/sys

System Configuration Menu

[System Menu]	
errdis	- ErrDisable Menu
syslog	- Syslog Menu
sshd	- SSH Server Menu
radius	- RADIUS Authentication Menu
tacacs+	- TACACS+ Authentication Menu
ldap	- LDAP Authentication Menu
ntp	- NTP Server Menu
ssnmp	- System SNMP Menu
access	- System Access Menu
dst	- Custom DST Menu
sflow	- sFlow Menu
date	- Set system date
time	- Set system time
timezone	- Set system timezone (daylight savings)
dlight	- Set system daylight savings
idle	- Set timeout for idle CLI sessions
notice	- Set login notice
bannr	- Set login banner
hprompt	- Enable/disable display hostname (sysName) in CLI prompt
reminder	- Enable/disable Reminders
rstctrl	- Enable/disable System reset on panic
cur	- Display current system-wide parameters

This menu provides configuration of switch management parameters such as user and administrator privilege mode passwords, Web-based management settings, and management access lists.

Table 117. System Configuration Menu Options (/cfg/sys)

Command Syntax and Usage	
errdis	Displays the Error Disable Recovery menu. To view menu options, see page 178 .
syslog	Displays the Syslog Menu. To view menu options, see page 180 .
sshd	Displays the SSH Server Menu. To view menu options, see page 182 .
radius	Displays the RADIUS Authentication Menu. To view menu options, see page 183 .
tacacs+	Displays the TACACS+ Authentication Menu. To view menu options, see page 185 .
ldap	Displays the LDAP Authentication Menu. To view menu options, see page 188 .

Table 117. System Configuration Menu Options (/cfg/sys) (continued)

Command Syntax and Usage	
ntp	Displays the NTP Server menu, which allows you to synchronize the switch clock with a Network Time Protocol server. To view menu options, see page 189 .
ssnmp	Displays the System SNMP Menu. To view menu options, see page 191 .
access	Displays the System Access Menu. To view menu options, see page 203 .
dst	Displays the Custom Daylight Savings Time menu. To view menu options, see page 209 .
sflow	Displays the sFlow menu. To view menu options, see page 210 .
date	Prompts the user for the system date. The date retains its value when the switch is reset.
time	Configures the system time using a 24-hour clock format. The time retains its value when the switch is reset.
timezone	Configures the time zone where the switch resides. You are prompted to select your location (continent, country, region) by the timezone wizard. Once a region is selected, the switch updates the time to reflect local changes to Daylight Savings Time, etc.
dlight enable disable	Disables or enables daylight savings time in the system clock. When enabled, the switch will add an extra hour to the system clock so that it is consistent with the local clock. The default value is disabled.
idle <idle timeout in minutes>	Sets the idle timeout for CLI sessions, from 1 to 60 minutes. The default is 10 minutes.
notice <maximum 1024 character multi-line login notice> <'.' to end>	Displays login notice immediately before the "Enter password:" prompt. This notice can contain up to 1024 characters and new lines.
bannr <string, maximum 80 characters>	Configures a login banner of up to 80 characters. When a user or administrator logs into the switch, the login banner is displayed. It is also displayed as part of the output from the /info/sys command.

Table 117. System Configuration Menu Options (/cfg/sys) (continued)

Command Syntax and Usage	
hprompt disable enable	Enables or disables displaying of the host name (system administrator's name) in the Command Line Interface (CLI).
reminder disable enable	Enables or disables reminder messages in the CLI. The default value is enabled.
rstctrl disable enable	Enables or disables the reset control flag. When enabled, the switch continues to function after a crash of the main processor, using the last known Layer 2/3 information. The default value is enabled.
cur	Displays the current system parameters.

/cfg/sys/errdis

Error Disable Configuration

[System ErrDisable Menu]	
lfd	- Link Flap Dampening Menu
timeout	- Set ErrDisable timeout (sec)
ena	- Enable ErrDisable recovery
dis	- Disable ErrDisable recovery
cur	- Display current ErrDisable configuration

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 118. Error Disable Configuration Options

Command Syntax and Usage	
lfd	Displays the Link Flap Dampening menu. To view menu options, see page 178 .
timeout <30 - 86400>	Configures the error-recovery timeout, in seconds. After the timer expires, the switch attempts to re-enable the port. The default value is 300. Note: When you change the timeout value, all current error-recovery timers are reset.

Table 118. Error Disable Configuration Options

Command Syntax and Usage	
ena	Globally enables automatic error-recovery for error-disabled ports. The default setting is disabled. Note: Each port must have error-recovery enabled to participate in automatic error recovery (/cfg/port x/errdis/ena).
dis	Globally disables error-recovery for error-disabled ports.
cur	Displays the current system Error Disable and Recovery configuration.

/cfg/sys/errdis/lfd Link Flap Dampening Menu

[Link Flap Dampening Menu]	
flaps	- Set maximum number of flaps allowed in time period
time	- Set time period to count flaps (sec)
ena	- Enable Link Flap Dampening
dis	- Disable Link Flap Dampening
cur	- Display current Link Flap Dampening configuration

Table 119. Link Flap Dampening Configuration Options

Command Syntax and Usage	
flaps <1 - 100>	Sets the maximum number of flaps allowed in a time period.
time <5 - 500>	Sets the time period, in seconds, to count flaps.
ena	Enables Link Flap Dampening.
dis	Disables Link Flap Dampening.
cur	Displays the current Link Flap Dampening configuration.

/cfg/sys/syslog System Host Log Configuration Menu

[Syslog Menu]	
host	- Set IP address of first syslog host
host2	- Set IP address of second syslog host
sever	- Set the severity of first syslog host
sever2	- Set the severity of second syslog host
facil	- Set facility of first syslog host
facil2	- Set facility of second syslog host
sloopif	- Set source loopback interface index
console	- Enable/disable console output of syslog messages
consev	- Severity Level of console output of syslog messages
log	- Enable/disable syslogging of features
buffer	- Buffer Menu
cur	- Display current syslog settings

Table 120. Host Log Menu Options (/cfg/sys/syslog)

Command Syntax and Usage	
host <new syslog host IP address>	Sets the IP address of the first syslog host.
host2 <new syslog host IP address>	Sets the IP address of the second syslog host.
sever <syslog host local severity (0-7)>	This option sets the severity level of the first syslog host displayed. The default is 7, which means log all severity levels.
sever2 <syslog host local severity (0-7)>	This option sets the severity level of the second syslog host displayed. The default is 7, which means, log all severity levels.
facil <syslog host local facility (0-7)>	This option sets the facility level of the first syslog host displayed. The default is 0.
facil2 <syslog host local facility (0-7)>	This option sets the facility level of the second syslog host displayed. The default is 0.
sloopif <1-5>	Sets the loopback interface number for syslogs.
console disable enable	Enables or disables delivering syslog messages to the console. When necessary, disabling console ensures the switch is not affected by syslog messages. It is enabled by default.
consev <0-7>	Sets the severity level of system log messages to display via the console, Telnet, and SSH. The system displays only messages with the selected severity level and above. For example, if you set the console severity to 2, only messages with severity level of 1 and 2 are displayed.

Table 120. Host Log Menu Options (/cfg/sys/syslog) (continued)

Command Syntax and Usage	
log <feature all> <enable disable>	Displays a list of features for which syslog messages can be generated. You can choose to enable or disable specific features (such as vlans, stg, or ssh), or to enable or disable syslog on all available features.
buffer	Displays the system log Buffer menu. To view menu options, see page 181 .
cur	Displays the current syslog settings.

/cfg/sys/syslog/buffer Syslog Log Buffer Configuration

```
[Buffer Menu]
severity - Severity level of syslog messages write to flash
```

The System Log Buffer menu commands allow you to configure which severity levels to write to flash memory for later retrieval.

Table 121. Syslog Log Buffer Options (/cfg/sys/syslog/buffer)

Command Syntax and Usage	
severity <0-7>	Sets the severity level of system log messages that are written to flash buffer. The system saves only messages with the selected severity level and above. For example, if you set the buffer severity to 2, only messages with severity level of 1 and 2 are saved.

/cfg/sys/sshd

SSH Server Configuration Menu

[SSHD Menu]	
scpadm	- Set SCP-only admin password
hkeygen	- Generate the RSA host key
sshport	- Set SSH server port number
ena	- Enable the SCP apply and save
dis	- Disable the SCP apply and save
on	- Turn SSH server ON
off	- Turn SSH server OFF
cur	- Display current SSH server configuration

For the EN2092, this menu enables Secure Shell access from any SSH client. SSH scripts can be viewed by using the /cfg/dump command (see [page 388](#)).

Table 122. SSH Configuration Menu Options (/cfg/sys/sshd)

Command Syntax and Usage	
interval <0 - 24>	Set the interval, in hours, for auto-generation of the RSA server key.
scpadm	Set the administration password for SCP access.
hkeygen	Generate the RSA host key.
skeygen	Generate the RSA server key.
sshport <TCP port number>	Sets the SSH server port number.
ena	Enables the SCP apply and save.
dis	Disables the SCP apply and save.
on	Enables the SSH server.
off	Disables the SSH server.
cur	Displays the current SSH server configuration.

/cfg/sys/radius

RADIUS Server Configuration Menu

[RADIUS Server Menu]	
prisrv	- Set primary RADIUS server address
secsrv	- Set secondary RADIUS server address
secret	- Set RADIUS secret
secret2	- Set secondary RADIUS server secret
port	- Set RADIUS port
retries	- Set RADIUS server retries
timeout	- Set RADIUS server timeout
sloopif	- Set RADIUS source loopback interface
bckdoor	- Enable/disable RADIUS backdoor for telnet/ssh/http/https
secbd	- Enable/disable RADIUS secure backdoor for telnet/ssh/http/https
on	- Turn RADIUS authentication ON
off	- Turn RADIUS authentication OFF
cur	- Display current RADIUS configuration

Table 123. RADIUS Server Configuration Menu Options (/cfg/sys/radius)

Command Syntax and Usage	
prisrv <IP address>	Sets the primary RADIUS server address.
secsrv <IP address>	Sets the secondary RADIUS server address.
secret <1-32 character secret>	This is the shared secret between the switch and the RADIUS server(s).
secret2 <1-32 character secret>	This is the secondary shared secret between the switch and the RADIUS server(s).
port <RADIUS port>	Enter the number of the UDP port to be configured, between 1500 - 3000. The default is 1645.
retries <RADIUS server retries (1-3)>	Sets the number of failed authentication requests before switching to a different RADIUS server. The default is 3 requests.
timeout <RADIUS server timeout seconds (1-10)>	Sets the amount of time, in seconds, before a RADIUS server authentication attempt is considered to have failed. The default is 3 seconds.
sloopif <1-5>	Sets the RADIUS source loopback interface.
bckdoor disable enable	Enables or disables the RADIUS backdoor for Telnet/SSH/HTTP/HTTPS. The default value is disabled. To obtain the RADIUS backdoor password for your switch, contact your Service and Support line.

Table 123. RADIUS Server Configuration Menu Options (/cfg/sys/radius) (continued)

Command Syntax and Usage	
secbd enable disable	Enables or disables the RADIUS back door using secure password for telnet/SSH/HTTP/HTTPS. This command does not apply when backdoor (telnet) is enabled.
on	Enables the RADIUS server.
off	Disables the RADIUS server.
cur	Displays the current RADIUS server parameters.

/cfg/sys/tacacs+ TACACS+ Server Configuration Menu

TACACS (Terminal Access Controller Access Control system) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system. TACACS is not an encryption protocol, and therefore less secure than TACACS+ and Remote Authentication Dial-In User Service (RADIUS) protocols. Both TACACS and TACACS+ are described in RFC 1492.

TACACS+ protocol is more reliable than RADIUS, as TACACS+ uses the Transmission Control Protocol (TCP) whereas RADIUS uses the User Datagram Protocol (UDP). Also, RADIUS combines authentication and authorization in a user profile, whereas TACACS+ separates the two operations.

TACACS+ offers the following advantages over RADIUS as the authentication device:

- TACACS+ is TCP-based, so it facilitates connection-oriented traffic.
- It supports full-packet encryption, as opposed to password-only in authentication requests.
- It supports de-coupled authentication, authorization, and accounting.

```
[TACACS+ Server Menu]
prisrv - Set IP address of primary TACACS+ server
secsrv - Set IP address of secondary TACACS+ server
chpass_p - Set new password for primary server
chpass_s - Set new password for secondary server
secret - Set secret for primary TACACS+ server
secret2 - Set secret for secondary TACACS+ server
port - Set TACACS+ port number
retries - Set number of TACACS+ server retries
attempts - Set number of TACACS+ login attempts
timeout - Set timeout value of TACACS+ server retries
sloopif - Set TACACS+ source loopback interface
usermap - Set user privilege mappings
bckdoor - Enable/disable TACACS+ backdoor for telnet/ssh/http/https
secbd - Enable/disable TACACS+ secure backdoor
cmap - Enable/disable TACACS+ new privilege level mapping
passch - Enable/disable TACACS+ password change
cauth - Enable/disable TACACS+ command authorization
clog - Enable/disable TACACS+ command logging
dreq - Enable/disable TACACS+ directed request
acct - Enable/disable TACACS+ accounting
on - Enable TACACS+ authentication
off - Disable TACACS+ authentication
cur - Display current TACACS+ settings
```

Table 124. TACACS+ Server Menu Options (/cfg/sys/tacacs)

Command Syntax and Usage	
prisrv <IP address>	Defines the primary TACACS+ server address.
secsrv <IP address>	Defines the secondary TACACS+ server address.

Table 124. TACACS+ Server Menu Options (/cfg/sys/tacacs) (continued)

Command Syntax and Usage	
chpass_p	Configures the password for the primary TACACS+ server. The CLI will prompt you for input.
chpass_s	Configures the password for the secondary TACACS+ server. The CLI will prompt you for input.
secret <1-32 character secret>	This is the shared secret between the switch and the TACACS+ server(s).
secret2 <1-32 character secret>	This is the secondary shared secret between the switch and the TACACS+ server(s).
port <TACACS port>	Enter the number of the TCP port to be configured, between 1 - 65000. The default is 49.
retries <TACACS server retries, 1-3>	Sets the number of failed authentication requests before switching to a different TACACS+ server. The default is 3 requests.
attempts <1-10>	Sets the number of failed login attempts before disconnecting the user. The default is 2 attempts.
timeout <TACACS server timeout seconds, 4-15>	Sets the amount of time, in seconds, before a TACACS+ server authentication attempt is considered to have failed. The default is 5 seconds.
sloopif <1-5>	Sets the TACACS+ source loopback interface.
usermap <0-15> user oper admin none	Maps a TACACS+ authorization level to a switch user level. Enter a TACACS+ authorization level (0-15), followed by the corresponding switch user level.
bckdoor disable enable	<p>Enables or disables the TACACS+ back door for Telnet, SSH/SCP, or HTTP/HTTPS.</p> <p>Enabling this feature allows you to bypass the TACACS+ servers. It is recommended that you use Secure Backdoor to ensure the switch is secured, because Secure Backdoor disallows access through the back door when the TACACS+ servers are responding.</p> <p>The default setting is <code>disabled</code>.</p> <p>To obtain the TACACS+ backdoor password for your switch, contact your IBM Service and Support line.</p>

Table 124. TACACS+ Server Menu Options (/cfg/sys/tacacs) (continued)

Command Syntax and Usage	
secbd enable disable	<p>Enables or disables TACACS+ secure back door access through Telnet, SSH/SCP, or HTTP/HTTPS only when the TACACS+ servers are not responding.</p> <p>This feature is recommended to permit access to the switch when the TACACS+ servers become unresponsive. If no back door is enabled, the only way to gain access when TACACS+ servers are unresponsive is to use the back door via the console port.</p> <p>The default setting is disabled.</p>
cmap enable disable	<p>Enables or disables TACACS+ privilege-level mapping.</p> <p>The default value is disabled.</p>
passch enable disable	<p>Enables or disables TACACS+ password change.</p> <p>The default setting is disabled.</p>
cauth disable enable	<p>Enables or disables TACACS+ command authorization.</p>
clog disable enable	<p>Enables or disables TACACS+ command logging.</p>
dreq disable enable	<p>Enables or disables TACACS+ directed request, which uses a specified TACACS+ server for authentication, authorization, accounting. When enabled, When directed-request is enabled, each user must add a configured TACACS+ server hostname to the username (for example, username@hostname) during login.</p> <p>This command allows the following options:</p> <ul style="list-style-type: none"> – Restricted: Only the username is sent to the specified TACACS+ server. – No-truncate: The entire login string is sent to the TACACS+ server.
acct enable disable	<p>Enables or disables TACACS+ accounting.</p>
on	<p>Enables the TACACS+ server. This is the default setting.</p>
off	<p>Disables the TACACS+ server.</p>
cur	<p>Displays current TACACS+ configuration parameters.</p>

/cfg/sys/ldap

LDAP Server Configuration Menu

LDAP (Lightweight Directory Access Protocol) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system.

[LDAP Server Menu]	
prisrv	- Set IP address of primary LDAP server
secsrv	- Set IP address of secondary LDAP server
port	- Set LDAP port number
retries	- Set number of LDAP server retries
timeout	- Set timeout value of LDAP server retries
domain	- Set domain name
bckdoor	- Enable/disable LDAP backdoor for telnet/ssh/http/https
on	- Enable LDAP authentication
off	- Disable LDAP authentication
cur	- Display current LDAP settings

Table 125. LDAP Server Menu Options (/cfg/sys/ldap)

Command Syntax and Usage	
prisrv <IP address>	Defines the primary LDAP server address.
secsrv <IP address>	Defines the secondary LDAP server address.
port <LDAP port>	Enter the number of the TCP port to be configured, between 1 - 65000. The default is 389.
retries <LDAP server retries, 1-3>	Sets the number of failed authentication requests before switching to a different LDAP server. The default is 3 requests.
timeout <LDAP server timeout seconds, 4-15>	Sets the amount of time, in seconds, before a LDAP server authentication attempt is considered to have failed. The default is 5 seconds.
domain <domain name (1-128 characters)> none	Sets the domain name for the LDAP server. Enter the full path for your organization. For example: ou=people,dc=mydomain,dc=com
bckdoor disable enable	Enables or disables the LDAP back door for Telnet, SSH/SCP, or HTTP/HTTPS. The default setting is disabled. To obtain the LDAP back door password for your switch, contact your Service and Support line.
on	Enables the LDAP server.

Table 125. LDAP Server Menu Options (/cfg/sys/ldap) (continued)

Command Syntax and Usage	
off	Disables the LDAP server. This is the default setting.
cur	Displays current LDAP configuration parameters.

/cfg/sys/ntp NTP Client Configuration Menu

[NTP Server Menu]	
prisrv	- Set primary NTP server address
secsrv	- Set secondary NTP server address
intrval	- Set NTP server resync interval
sloopif	- Set NTP source loopback interface
auth	- Enable/Disable NTP authentication
md5key	- NTP MD5 Key Menu
prikey	- Add NTP primary server key
seckey	- Add NTP secondary server key
addkey	- Add NTP trusted key
remkey	- Remove NTP trusted key
on	- Turn NTP service ON
off	- Turn NTP service OFF
cur	- Display current NTP configuration

This menu enables you to synchronize the switch clock to a Network Time Protocol (NTP) server. By default, this option is disabled.

Table 126. NTP Configuration Menu Options (/cfg/sys/ntp)

Command Syntax and Usage	
prisrv <IP address> [-m -mgt -d -data]	Prompts for the IP addresses of the primary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt) or data port (data).
secsrv <IP address> [-m -mgt -d -data]	Prompts for the IP addresses of the secondary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt) or data port (data).
intrval <5-44640>	Specifies the time interval, in minutes, to re-synchronize the switch clock with the NTP server.
auth enable disable	Enables or disables NTP authentication. The default setting is disabled. When authentication is enabled, the switch transmits NTP packets with the MAC address appended.

Table 126. NTP Configuration Menu Options (/cfg/sys/ntp) (continued)

Command Syntax and Usage	
md5key <I-65534>	Displays the MD5 Key configuration menu. To view menu options, see page 191 .
prikey <I-65534>	Adds the NTP primary server key, which specifies which MD5 key is used by the primary server.
seckey <I-65534>	Adds the NTP secondary server key, which specifies which MD5 key is used by the secondary server.
addkey <I-65534>	Adds an MD5 key code to the list of trusted keys.
remkey <I-65534>	Removes the specified key code from the list of trusted keys.
sloopif <I-5>	Sets the NTP source loopback interface.
on	Enables the NTP synchronization service.
off	Disables the NTP synchronization service.
cur	Displays the current NTP service settings.

/cfg/sys/ntp/md5key <1-65534> NTP MD5 Key Menu

```
[NTP MD5 Key 1 Menu]
key      - Set authentication key
delete   - Delete key
cur      - Display current MD5 key configuration
```

Table 127. NTP MD5 KEy Configuration Menu Options (/cfg/sys/ntp/md5key)

Command Syntax and Usage	
key <1-16 characters>	Configures the selected MD5 key code.
delete	Deletes the selected MD5 key code.
cur	Displays the current NTP MD5 key settings.

/cfg/sys/ssnmp System SNMP Configuration Menu

```
[System SNMP Menu]
snmpv3   - SNMPv3 Menu
name     - Set SNMP "sysName"
locn     - Set SNMP "sysLocation"
cont     - Set SNMP "sysContact"
rcomm    - Set SNMP read community string
wcomm    - Set SNMP write community string
trsrc    - Set SNMP trap source interface for SNMPv1
trloopif - Set SNMP trap source loopback interface
thostadd - Add a new trap host
thostrem - Remove an existing trap host
timeout  - Set timeout for the SNMP state machine
auth     - Enable/disable SNMP "sysAuthenTrap"
linkt    - Enable/disable SNMP link up/down trap
cur      - Display current SNMP configuration
```

IBM Networking OS supports SNMP-based network management. In SNMP model of network management, a management station (client/manager) accesses a set of variables known as MIBs (Management Information Base) provided by the managed device (agent). If you are running an SNMP network management station on your network, you can manage the switch using the following standard SNMP MIBs:

- MIB II (RFC 1213)
- Ethernet MIB (RFC 1643)
- Bridge MIB (RFC 1493)

An SNMP agent is a software process on the managed device that listens on UDP port 161 for SNMP messages. Each SNMP message sent to the agent contains a list of management objects to retrieve or to modify.

SNMP parameters that can be modified include:

- System name
- System location
- System contact
- Use of the SNMP system authentication trap function
- Read community string
- Write community string
- Trap community strings

Table 128. System SNMP Menu Options (/cfg/sys/ssnmp)

Command Syntax and Usage	
snmpv3	Displays SNMPv3 menu. To view menu options, see page 193 .
name <1-64 characters>	Configures the name for the system.
locn <1-64 characters>	Configures the name of the system location.
cont <1-64 characters>	Configures the name of the system contact.
rcomm <1-32 characters>	Configures the SNMP read community string. The read community string controls SNMP “get” access to the switch. The default read community string is <i>public</i> .
wcomm <1-32 characters>	Configures the SNMP write community string. The write community string controls SNMP “set” and “get” access to the switch. The default write community string is <i>private</i> .
trsrc <interface number>	Configures the source interface for SNMP traps. The default value is interface 1. To send traps through the management ports, specify interface 128.
trloopif <1-5>	Configures the loopback interface for SNMP traps.
thostadd <trap host IP address> <trap host community string>	Adds a trap host server.
thostrem <trap host IP address>	Removes the trap host server.
timeout <1-30>	Set the timeout value for the SNMP state machine, in minutes.

Table 128. System SNMP Menu Options (/cfg/sys/ssnmp) (continued)

Command Syntax and Usage	
<code>auth</code> <code>disable enable</code>	Enables or disables the use of the system authentication trap facility. The default setting is <code>disabled</code> .
<code>linkt</code> <code><port></code> <code>{disable enable}</code>	Enables or disables the sending of SNMP link up and link down traps. The default setting is <code>enabled</code> .
<code>cur</code>	Displays the current SNMP configuration.

/cfg/sys/ssnmp/snmpv3 SNMPv3 Configuration Menu

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 Framework by supporting the following:

- a new SNMP message format
- security for messages
- access control
- remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC3411 to RFC3418.

[SNMPv3 Menu]	
<code>usm</code>	- <code>usmUser</code> Table menu
<code>view</code>	- <code>vacmViewTreeFamily</code> Table menu
<code>access</code>	- <code>vacmAccess</code> Table menu
<code>group</code>	- <code>vacmSecurityToGroup</code> Table menu
<code>comm</code>	- <code>community</code> Table menu
<code>taddr</code>	- <code>targetAddr</code> Table menu
<code>tparam</code>	- <code>targetParams</code> Table menu
<code>notify</code>	- <code>notify</code> Table menu
<code>v1v2</code>	- Enable/disable V1/V2 access
<code>cur</code>	- Display current SNMPv3 configuration

Table 129. SNMPv3 Configuration Menu Options (/cfg/sys/ssnmp/snmpv3)

Command Syntax and Usage	
<code>usm</code> <code><usmUser number (1-16)></code>	Defines a user security model (USM) entry for an authorized user. You can also configure this entry through SNMP. To view menu options, see page 195 .
<code>view</code> <code><vacmViewTreeFamily number (1-128)></code>	Allows you to create different MIB views. To view menu options, see page 196 .

Table 129. SNMPv3 Configuration Menu Options (/cfg/sys/ssnmp/snmpv3) (continued)

access <vacmAccess number (1-32)>	Configures the access rights. The View-based Access Control Model defines a set of services that an application can use for checking access rights of the user. You need access control when you have to process retrieval or modification request from an SNMP entity. To view menu options, see page 197 .
group <vacmSecurityToGroup number (1-16)>	Maps the user name to the access group names and their access rights needed to access SNMP management objects. A group defines the access rights assigned to all names that belong to a particular group. To view menu options, see page 198 .
comm <snmpCommunity number (1-16)>	The community table contains objects for mapping community strings and version-independent SNMP message parameters. To view menu options, see page 199 .
taddr <snmpTargetAddr number (1-16)>	Allows you to configure destination information, consisting of a transport domain and a transport address. This is also termed as transport endpoint. The SNMP MIB provides a mechanism for performing source address validation on incoming requests, and for selecting community strings based on target addresses for outgoing notifications. To view menu options, see page 200 .
tparam <target params index (1-16)>	Allows you to configure SNMP parameters, consisting of message processing model, security model, security level, and security name information. There may be multiple transport endpoints associated with a particular set of SNMP parameters, or a particular transport endpoint may be associated with several sets of SNMP parameters. To view menu options, see page 201 .
notify <notify index (1-16)>	A notification application typically monitors a system for particular events or conditions, and generates Notification-Class messages based on these events or conditions. To view menu options, see page 202 .
v1v2 disable enable	Allows you to enable or disable the access to SNMP version 1 and version 2. The default setting is disabled.
cur	Displays the current SNMPv3 configuration.

/cfg/sys/ssnmp/snmpv3/usm User Security Model Configuration Menu

You can make use of a defined set of user identities using this Security Model. An SNMP engine must have the knowledge of applicable attributes of a user.

This menu helps you create a user security model entry for an authorized user. You need to provide a security name to create the USM entry.

[SNMPv3 usmUser 1 Menu]	
name	- Set USM user name
auth	- Set authentication protocol
authpw	- Set authentication password
priv	- Set privacy protocol
privpw	- Set privacy password
del	- Delete usmUser entry
cur	- Display current usmUser configuration

Table 130. User Security Model Configuration Menu Options (/cfg/sys/ssnmp/snmpv3/usm)

Command Syntax and Usage	
name <1-32 characters>	Defines a string that represents the name of the user. This is the login name that you need in order to access the switch.
auth {md5 sha none}	Configures the authentication protocol between HMAC-MD5-96 or HMAC-SHA-96. The default algorithm is none.
authpw	Allows you to create or change your password for authentication. If you selected an authentication algorithm using the above command, you need to provide a password, otherwise you will get an error message during validation.
priv des none	Configures the type of privacy protocol on your switch. The privacy protocol protects messages from disclosure. The options are des (CBC-DES Symmetric Encryption Protocol) or none. If you specify des as the privacy protocol, then make sure that you have selected one of the authentication protocols (MD5 or HMAC-SHA-96). If you select none as the authentication protocol, you will get an error message.
privpw	Defines the privacy password.
del	Deletes the selected USM user entries.
cur	Displays the selected USM user entries.

/cfg/sys/ssnmp/snmpv3/view

SNMPv3 View Configuration Menu

```
[SNMPv3 vacmViewTreeFamily 1 Menu]
name      - Set view name
tree      - Set MIB subtree(OID) which defines a family of view subtrees
mask      - Set view mask
type      - Set view type
del       - Delete vacmViewTreeFamily entry
cur       - Display current vacmViewTreeFamily configuration
```

Note that the first five default `vacmViewTreeFamily` entries cannot be removed, and their names cannot be changed.

Table 131. SNMPv3 View Menu Options (/cfg/sys/ssnmp/snmpv3/view)

Command Syntax and Usage	
<code>name <1-32 characters></code>	Defines the name for a family of view subtrees.
<code>tree <object identifier, such as 1.3.6.1.2.1.1.1.0 (1-64 characters)></code>	Defines the MIB tree which, when combined with the corresponding mask, defines a family of view subtrees.
<code>mask <bitmask, 1-32 characters> none</code>	Configures the bit mask, which in combination with the corresponding tree, defines a family of view subtrees.
<code>type included excluded</code>	This command indicates whether the corresponding instances of <code>vacmViewTreeFamilySubtree</code> and <code>vacmViewTreeFamilyMask</code> define a family of view subtrees, which is included in or excluded from the MIB view.
<code>del</code>	Deletes the <code>vacmViewTreeFamily</code> group entry.
<code>cur</code>	Displays the current <code>vacmViewTreeFamily</code> configuration.

/cfg/sys/ssnmp/snmpv3/access

View-Based Access Control Model Configuration Menu

The view-based Access Control Model defines a set of services that an application can use for checking access rights of the user. Access control is needed when the user has to process SNMP retrieval or modification request from an SNMP entity.

```
[SNMPv3 vacmAccess 1 Menu]
name      - Set group name
prefix    - Set content prefix
model     - Set security model
level     - Set minimum level of security
match     - Set prefix only or exact match
rview    - Set read view index
wview    - Set write view index
nview    - Set notify view index
del       - Delete vacmAccess entry
cur       - Display current vacmAccess configuration
```

Table 132. View-based Access Control Model Menu Options
(/cfg/sys/ssnmp/snmpv3/access)

Command Syntax and Usage	
<code>name <1-32 characters></code>	Defines the name of the group.
<code>prefix <1-32 characters></code>	Defines the name of the context. An SNMP context is a collection of management information that an SNMP entity can access. An SNMP entity has access to many contexts. For more information on naming the management information, see RFC2571, the SNMP Architecture document. The view-based Access Control Model defines a table that lists the locally available contexts by contextName.
<code>model usm snmpv1 snmpv2</code>	Allows you to select the security model to be used.
<code>level noAuthNoPriv authNoPriv authPriv</code>	Defines the minimum level of security required to gain access rights. The level <code>noAuthNoPriv</code> means that the SNMP message will be sent without authentication and without using a privacy protocol. The level <code>authNoPriv</code> means that the SNMP message will be sent with authentication but without using a privacy protocol. The <code>authPriv</code> means that the SNMP message will be sent both with authentication and using a privacy protocol.
<code>match exact prefix</code>	If the value is set to <code>exact</code> , then all the rows whose contextName exactly matches the prefix are selected. If the value is set to <code>prefix</code> then the all the rows where the starting octets of the contextName exactly match the prefix are selected.
<code>rview <1-32 characters></code>	Defines a read view name that allows you read access to a particular MIB view. If the value is empty or if there is no active MIB view having this value then no access is granted.

Table 132. View-based Access Control Model Menu Options (/cfg/sys/ssnmp/snmpv3/access) (continued)

Command Syntax and Usage	
wview <1-32 characters>	Defines a write view name that allows you write access to the MIB view. If the value is empty or if there is no active MIB view having this value then no access is granted.
nview <1-32 characters>	Defines a long notify view name that allows you notify access to the MIB view.
del	Deletes the View-based Access Control entry.
cur	Displays the View-based Access Control configuration.

/cfg/sys/ssnmp/snmpv3/group SNMPv3 Group Configuration Menu

[SNMPv3 vacmSecurityToGroup 1 Menu]	
model	- Set security model
uname	- Set USM user name
gname	- Set group gname
del	- Delete vacmSecurityToGroup entry
cur	- Display current vacmSecurityToGroup configuration

Table 133. SNMPv3 Group Menu Options (/cfg/sys/ssnmp/snmpv3/group)

Command Syntax and Usage	
model usm snmpv1 snmpv2	Defines the security model.
uname <1-32 characters>	Sets the user name as defined in /cfg/sys/ssnmp/snmpv3/usm/name on page 195 .
gname <1-32 characters>	The name for the access group as defined in /cfg/sys/ssnmp/snmpv3/access/name on page 197 .
del	Deletes the vacmSecurityToGroup entry.
cur	Displays the current vacmSecurityToGroup configuration.

`/cfg/sys/ssnmp/snmpv3/comm`
SNMPv3 Community Table Configuration Menu

This command is used for configuring the community table entry. The configured entry is stored in the community table list in the SNMP engine. This table is used to configure community strings in the Local Configuration Datastore (LCD) of SNMP engine.

```
[SNMPv3 snmpCommunityTable 1 Menu]
index - Set community index
name - Set community string
uname - Set USM user name
tag - Set community tag
del - Delete communityTable entry
cur - Display current communityTable configuration
```

Table 134. SNMPv3 Community Table Configuration Menu Options
(/cfg/sys/ssnmp/snmpv3/comm)

Command Syntax and Usage	
<code>index <1-32 characters></code>	Configures the unique index value of a row in this table.
<code>name <1-32 characters></code>	Defines the user name as defined in the <code>/cfg/sys/ssnmp/snmpv3/usm/name</code> command.
<code>uname <1-32 characters></code>	Defines a readable text string that represents the corresponding value of an SNMP community name in a security model.
<code>tag <1-255 characters></code>	Configures a tag that specifies a set of transport endpoints to which a command responder application sends an SNMP trap.
<code>del</code>	Deletes the community table entry.
<code>cur</code>	Displays the community table configuration.

/cfg/sys/ssnmp/snmpv3/taddr

SNMPv3 Target Address Table Configuration Menu

This command is used to configure the target transport entry. The configured entry is stored in the target address table list in the SNMP engine. This table of transport addresses is used in the generation of SNMP messages.

[SNMPv3 snmpTargetAddrTable 1 Menu]	
name	- Set target address name
addr	- Set target transport address IP
port	- Set target transport address port
taglist	- Set tag list
pname	- Set targetParams name
del	- Delete targetAddrTable entry
cur	- Display current targetAddrTable configuration

Table 135. Target Address Table Menu Options (/cfg/sys/ssnmp/snmpv3/taddr)

Command Syntax and Usage	
name <1-32 characters>	Defines the locally arbitrary, but unique identifier, target address name associated with this entry.
addr <transport IP address>	Configures a transport IPv4 address that can be used in the generation of SNMP traps.
port <transport address port>	Configures a transport address port that can be used in the generation of SNMP traps.
taglist <1-255 characters>	Allows you to configure a list of tags that are used to select target addresses for a particular operation.
pname <1-32 characters>	Defines the name as defined in the <code>/cfg/sys/ssnmp/snmpv3/tparam/name</code> command on page 201 .
del	Deletes the Target Address Table entry.
cur	Displays the current Target Address Table configuration.

/cfg/sys/ssnmp/snmpv3/tparam

SNMPv3 Target Parameters Table Configuration Menu

You can configure the target parameters entry and store it in the target parameters table in the SNMP engine. This table contains parameters that are used to generate a message. The parameters include the message processing model (for example: SNMPv3, SNMPv2c, SNMPv1), the security model (for example: USM), the security name, and the security level (`noAuthNoPriv`, `authNoPriv`, or `authPriv`).

```
[SNMPv3 snmpTargetParamsTable 1 Menu]
name      - Set target params name
mpmodel   - Set message processing model
model     - Set security model
uname     - Set USM user name
level     - Set minimum level of security
del       - Delete targetParamsTable entry
cur       - Display current targetParamsTable configuration
```

Table 136. Target Parameters Table Configuration Menu Options
(/cfg/sys/ssnmp/snmpv3/tparam)

Command Syntax and Usage	
<code>name <1-32 characters></code>	Defines the locally arbitrary, but unique identifier that is associated with this entry.
<code>mpmodel snmpv1 snmpv2c snmpv3</code>	Configures the message processing model that is used to generate SNMP messages.
<code>model usm snmpv1 snmpv2</code>	Allows you to select the security model to be used when generating the SNMP messages.
<code>uname <1-32 characters></code>	Defines the name that identifies the user in the USM table (page 195) on whose behalf the SNMP messages are generated using this entry.
<code>level noAuthNoPriv authNoPriv authPriv</code>	Allows you to select the level of security to be used when generating the SNMP messages using this entry. The level <code>noAuthNoPriv</code> means that the SNMP message will be sent without authentication and without using a privacy protocol. The level <code>authNoPriv</code> means that the SNMP message will be sent with authentication but without using a privacy protocol. The <code>authPriv</code> means that the SNMP message will be sent both with authentication and using a privacy protocol.
<code>del</code>	Deletes the <code>targetParamsTable</code> entry.
<code>cur</code>	Displays the current <code>targetParamsTable</code> configuration.

/cfg/sys/ssnmp/snmpv3/notify

SNMPv3 Notify Table Configuration Menu

SNMPv3 uses Notification Originator to send out traps. A notification typically monitors a system for particular events or conditions, and generates Notification-Class messages based on these events or conditions.

```
[SNMPv3 snmpNotifyTable 1 Menu]
name      - Set notify name
tag       - Set notify tag
del       - Delete notifyTable entry
cur       - Display current notifyTable configuration
```

Table 137. Notify Table Menu Options (/cfg/sys/ssnmp/snmpv3/notify)

Command Syntax and Usage	
name <1-32 characters>	Defines a locally arbitrary but unique identifier associated with this SNMP notify entry.
tag <1-255 characters>	Allows you to configure a tag that contains a tag value which is used to select entries in the Target Address Table. Any entry in the snmpTargetAddrTable, that matches the value of this tag is selected.
del	Deletes the notify table entry.
cur	Displays the current notify table configuration.

/cfg/sys/access

System Access Configuration Menu

[System Access Menu]	
mgmt	- Management Network Definition Menu
user	- User Access Control Menu (passwords)
https	- HTTPS Web Access Menu
snmp	- Set SNMP access control
tnport	- Set Telnet server port number
tport	- Set the TFTP Port for the system
wport	- Set HTTP (Web) server port number
http	- Enable/disable HTTP (Web) access
tnet	- Enable/disable Telnet access
tsbbi	- Enable/disable Telnet/SSH configuration from BBI
userbbi	- Enable/disable user configuration from BBI
cur	- Display current system access configuration

Table 138. System Access Menu Options (/cfg/sys/access)

Command Syntax and Usage	
mgmt	Displays the Management Configuration Menu. To view menu options, see page 204 .
user	Displays the User Access Control Menu. To view menu options, see page 205 .
https	Displays the HTTPS Menu. To view menu options, see page 208 .
snmp {disable read-only read-write}	Disables or provides read-only/write-read SNMP access.
tnport <TCP port number>	Sets an optional telnet server port number for cases where the server listens for telnet sessions on a non-standard port.
tport <TFTP port number (1-65535)>	Sets the TFTP port for the switch. The default is port 69.
wport <TCP port number (1-65535)>	Sets the switch port used for serving switch Web content. The default is HTTP port 80. If Global Server Load Balancing is to be used, set this to a different port (such as 8080).
http disable enable	Enables or disables HTTP (Web) access to the Browser-Based Interface. The default setting is disabled.
tnet enable disable	Enables or disables Telnet access. The default setting is disabled.
tsbbi enable disable	Enables or disables Telnet/SSH configuration access through the Browser-Based Interface (BBI).

Table 138. System Access Menu Options (/cfg/sys/access) (continued)

Command Syntax and Usage	
userbbi enable disable	Enables or disables user configuration access through the Browser-Based Interface (BBI).
cur	Displays the current system access parameters.

/cfg/sys/access/mgmt

Management Networks Configuration Menu

[Management Networks Menu]	
add	- Add mgmt network definition
rem	- Remove mgmt network definition
cur	- Display current mgmt network definitions
clear	- Clear current mgmt network definitions

This menu is used to define IP address ranges which are allowed to access the switch for management purposes.

Table 139. Management Network Options

Command Syntax and Usage	
add <mgmt network IPv4 or IPv6 address> <mgmt network mask or prefix length>	Adds a defined network through which switch access is allowed through Telnet, SNMP, RIP, or the IBM Networking OS browser-based interface. A range of IP addresses is produced when used with a network mask address. Specify an IP address and mask address in dotted-decimal notation. Note: If you configure the management network without including the switch interfaces, the configuration causes the Firewall Load Balancing health checks to fail and creates a "Network Down" state on the network. You can add up to 10 management networks.
rem <mgmt network IPv4 or IPv6 address> <mgmt network mask or prefix length>	Removes a defined network, which consists of a management network address and a management network mask address.
cur	Displays the current configuration.
clear	Removes all defined management networks.

/cfg/sys/access/user

User Access Control Configuration Menu

[User Access Control Menu]	
uid	- User ID Menu
eject	- Eject user
usrpw	- Set user password (user)
opw	- Set operator password (oper)
admpw	- Set administrator password (admin)
strongpw	- Strong password menu
cur	- Display current user status

Note: Passwords can be a maximum of 128 characters.

Table 140. User Access Control Menu Options (/cfg/sys/access/user)

Command Syntax and Usage	
uid <user ID (1-10)>	Displays the User ID Menu. To view menu options, see page 206 .
eject user oper admin <user name>	Ejects the specified user from the EN2092.
usrpw <1-128 characters>	<p>Sets the user (user) password. The user has no direct responsibility for switch management. The user view switch status information and statistics, but cannot make any configuration changes.</p> <p>This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.</p> <p>Note: To disable the user account, set the password to null (no password).</p>
opw <1-128 characters>	<p>Sets the operator (oper) password. The operator manages all functions of the switch. The operator can view all switch information and statistics and can reset ports.</p> <p>This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.</p> <p>Note: To disable the operator account, set the password to null (no password). The default setting is disabled (no password).</p>
admpw <1-128 characters>	<p>Sets the administrator (admin) password. The administrator has complete access to all menus, information, and configuration commands on the EN2092, including the ability to change both the user and administrator passwords.</p> <p>This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.</p> <p>Access includes “oper” functions.</p> <p>Note: You cannot disable the administrator password.</p>

Table 140. User Access Control Menu Options (/cfg/sys/access/user) (continued)

Command Syntax and Usage	
strongpw	Displays the Strong User Password Menu. To view menu options, see page 207 .
cur	Displays the current user status.

/cfg/sys/access/user/uid <1-10>

System User ID Configuration Menu

[User ID 1 Menu]	
cos	- Set class of service
name	- Set user name
pswd	- Set user password
ena	- Enable user ID
dis	- Disable user ID
del	- Delete user ID
cur	- Display current user configuration

Table 141. User ID Configuration Menu Options (/cfg/sys/access/user/uid)

Command Syntax and Usage	
cos <user oper admin>	Sets the Class-of-Service to define the user's authority level. IBM Networking OS defines these levels as: User, Operator, and Administrator, with User being the most restricted level.
name <1-8 characters>	Sets the user name (maximum of eight characters).
pswd <1-128 characters>	Sets the user password.
ena	Enables the user ID.
dis	Disables the user ID.
del	Deletes the user ID.
cur	Displays the current user ID configuration.

/cfg/sys/access/user/strongpw

Strong Password Configuration Menu

[Strong Pwd Menu]	
ena	- Enable usage of strong passwords
dis	- Disable usage of strong passwords
expiry	- Set password validity
warning	- Set warning days before pswd expiry
faillog	- Set number of failed logins for security notification
cur	- Display current strong password configuration

Table 142. Strong Password Menu Options (/cfg/sys/access/user/strongpw)

Command Syntax and Usage	
ena	Enables Strong Password requirement.
dis	Disables Strong Password requirement.
expiry <1-365>	Configures the number of days allowed before the password must be changed. The default value is 60 days.
warning <1-365>	Configures the number of days before password expiration, that a warning is issued to users. The default value is 15 days.
faillog <1-255>	Configures the number of failed login attempts allowed before a security notification is logged. The default value is 3 login attempts.
cur	Displays the current Strong Password configuration.

/cfg/sys/access/https

HTTPS Access Configuration

[https Menu]	
access	- Enable/Disable HTTPS Web access
port	- HTTPS WebServer port number
generate	- Generate self-signed HTTPS server certificate
certSave	- save HTTPS certificate
gtca	- Import ca root certificate via TFTP
gthkey	- Import host private key via TFTP
gthcert	- Import host certificate via TFTP
cur	- Display current SSL Web Access configuration

Table 143. HTTPS Access Configuration Menu Options (/cfg/sys/access/https)

Command Syntax and Usage	
access ena dis	Enables or disables BBI access (Web access) using HTTPS. The default setting is enabled.
port <TCP port number>	Defines the HTTPS Web server port number. The default port is 443.
generate	<p>Allows you to generate a certificate to connect to the SSL to be used during the key exchange. A default certificate is created when HTTPS is enabled for the first time. The user can create a new certificate defining the information that they want to be used in the various fields. For example:</p> <ul style="list-style-type: none"> - Country Name (2 letter code) []: CA - State or Province Name (full name) []: Ontario - Locality Name (for example, city) []: Ottawa - Organization Name (for example, company) []: IBM - Organizational Unit Name (for example, section) []: Datacenter - Common Name (for example, user's name) []: Mr Smith - Email (for example, email address) []: info@ibm.com <p>You will be asked to confirm if you want to generate the certificate. It will take approximately 30 seconds to generate the certificate. Then the switch will restart SSL agent.</p>
certSave	Allows the client, or the Web browser, to accept the certificate and save the certificate to Flash to be used when the switch is rebooted.
gtca {<hostname > <IP address>} <filename>	Enables you to import a Certificate of Authority root certificate using TFTP.
gthkey {<hostname > <IP address>} <filename>	Enables you to import a host private key using TFTP.

Table 143. HTTPS Access Configuration Menu Options (/cfg/sys/access/https) (continued)

Command Syntax and Usage	
gthcert {<hostname> <IP address>} <filename>	Enables you to import a host certificate using TFTP.
cur	Displays the current SSL Web Access configuration.

/cfg/sys/dst

Custom Daylight Savings Time Configuration Menu

[Custom DST Menu]
dststart - Set the DST start day
dstend - Set the DST stop day
ena - Enable custom DST
dis - Disable custom DST
cur - Display custom DST configuration

Use this menu to configure custom Daylight Savings Time. The DST will be defined by two rules, the start rule and end rule. The rules specify the date and time when the DST starts and finishes. These dates are represented as specific calendar dates or as relative offsets in a month (for example, 'the second Sunday of September').

Relative offset example:

2070901 = Second Sunday of September, at 1:00 a.m.

Calendar date example:

0070901 = September 7, at 1:00 a.m.

Table 144. Custom DST Configuration Menu Options (/cfg/sys/dst)

Command Syntax and Usage	
dststart {<WDDMMhh>}	Configures the start date for custom DST, as follows: WDDMMhh W = week (0-5, where 0 means use the calendar date) D = day of the week (01-07, where 01 is Monday) MM = month (1-12) hh = hour (0-23) Note: Week 5 is always considered to be the last week of the month.
dstend {<WDDMMhh>}	Configures the end date for custom DST, as follows: WDDMMhh W = week (0-5, where 0 means use the calendar date) D = day of the week (01-07, where 01 is Monday) MM = month (1-12) hh = hour (0-23) Note: Week 5 is always considered to be the last week of the month.

Table 144. Custom DST Configuration Menu Options (/cfg/sys/dst) (continued)

Command Syntax and Usage	
ena	Enables the Custom Daylight Savings Time settings.
dis	Disables the Custom Daylight Savings Time settings.
cur	Displays the current Custom DST configuration.

/cfg/sys/sflow sFlow Configuration Menu

[sFlow Menu]	
ena	- Enable sFlow
dis	- Disable sFlow
saddress	- Set the sFlow Analyzer IP address
sport	- Set the sFlow Analyzer port
port	- sFlow port Menu
cur	- Display sFlow configuration

IBM Networking OS supports sFlow version 5. sFlow is a sampling method used for monitoring high speed switched networks. Use this menu to configure the sFlow agent on the switch.

Table 145. sFlow Configuration Menu Options (/cfg/sys/sflow)

Command Syntax and Usage	
ena	Enables the sFlow agent.
dis	Disables the sFlow agent.
saddress <IP address>	Defines the sFlow server address.
sport <1-65535>	Configures the UDP port for the sFlow server. The default value is 6343.
port <port alias or number>	Configures the sFlow interface port.
cur	Displays the current sFlow configuration.

`/cfg/sys/sflow/port <port alias or number>`
sFlow Port Configuration Menu

```
[sFlow Port Menu]
polling - Set the sFlow polling interval
sampling - Set the sFlow sampling rate
cur - Display sFlow port configuration
```

Use this menu to configure the sFlow port on the switch.

Table 146. sFlow Port Configuration Menu Options (/cfg/sys/sflow/port)

Command Syntax and Usage	
<code>polling <5-60> 0</code>	Configures the sFlow polling interval, in seconds. The default value is 0 (disabled).
<code>sampling <256-65536> 0</code>	Configures the sFlow sampling rate, in packets per sample. The default value is 0 (disabled).
<code>cur</code>	Displays the current sFlow port configuration.

`/cfg/port <port alias or number>`
Port Configuration Menu

[Port INTA1 Menu]	
gig	- Gig Phy Menu
udld	- UDLD Menu
oam	- OAM Menu
aclqos	- Acl/Qos Configuration Menu
stp	- STP Menu
8021ppri	- Set default 802.1p priority
pvid	- Set default port VLAN id
name	- Set port name
bpdugrd	- Enable/disable BPDU Guard
dscpmrk	- Enable/disable DSCP remarking for port
rmon	- Enable/disable RMON for port
tag	- Enable/disable VLAN tagging for port
tagpvid	- Enable/disable tagging on pvid
floodblk	- Enable/disable Port flood blocking
brate	- Set BroadCast Threshold
mrate	- Set MultiCast Threshold
drate	- Set Dest. Lookup Fail Threshold
ena	- Enable port
dis	- Disable port
cur	- Display current port configuration

Use the Port Configuration menu to configure settings for internal ports (INTx) and external ports (EXTx).

Table 147. Port Configuration Menu Options (/cfg/port)

Command Syntax and Usage	
errdis	Displays the Error Disable and Recovery menu. To view menu options, see page 214 .
gig	If a port is configured to support Gigabit Ethernet, this option displays the Gigabit Ethernet Physical Link Menu. To view menu options, see page 216 .
udld	Displays the Unidirectional Link Detection (UDLD) Menu. To view menu options, see page 217 .
oam	Displays the OAM Discovery Configuration Menu. To view menu options, see page 218 .
aclqos	Displays the ACL/QoS Configuration Menu. To view menu options, see page 219 .
stp	Displays the Spanning Tree Port menu. To view menu options, see page 219 .
8021ppri <0-7>	Configures the port's 802.1p priority level.

Table 147. Port Configuration Menu Options (/cfg/port) (continued)

Command Syntax and Usage	
pvid <VLAN number>	Sets the default VLAN number which will be used to forward frames which are not VLAN tagged. The default number is 1 for non-management ports.
name <1-64 characters> none	Sets a name for the port. The assigned port name appears next to the port number on some information and statistics screens. The default setting is none.
bpdugrd e d	Enables or disables BPDU guard, to avoid spanning-tree loops on ports with Port Fast Forwarding enabled.
dscpmark	Enables or disables DSCP re-marking on a port.
rmon e d	Enables or disables Remote Monitoring for the port. RMON must be enabled for any RMON configurations to function.
tag disable enable	Disables or enables VLAN tagging for this port. The default setting is disabled for external ports (EXTx) and enabled for internal server ports (INTx).
tagpvid disable enable	Disables or enables VLAN tag persistence. When disabled, the VLAN tag is removed from packets whose VLAN tag matches the port PVID. The default setting is disabled for external (EXTx) ports and internal server ports (INTx), and enabled for MGT ports.
floodblk disable enable	Enables or disables port Flood Blocking. When enabled, unicast and multicast packets with unknown destination MAC addresses are blocked from the port.
brate <0-262143> dis	Limits the number of broadcast packets per second to the specified value. If disabled (dis), the port forwards all broadcast packets.
mrate <0-262143> dis	Limits the number of multicast packets per second to the specified value. If disabled (dis), the port forwards all multicast packets.
drate <0-262143> dis	Limits the number of unknown unicast packets per second to the specified value. If disabled (dis), the port forwards all unknown unicast packets.
ena	Enables the port.

Table 147. Port Configuration Menu Options (/cfg/port) (continued)

Command Syntax and Usage	
dis	Disables the port. (To temporarily disable a port without changing its configuration attributes, refer to “Temporarily Disabling a Port” on page 214.)
cur	Displays current port parameters.

Temporarily Disabling a Port

To temporarily disable a port without changing its stored configuration attributes, enter the following command at any prompt:

```
Main# /oper/port <port alias or number>/dis
```

Because this configuration sets a temporary state for the port, you do not need to use `apply` or `save`. The port state will revert to its original configuration when the EN2092 is reset. See the [“Operations Menu” on page 391](#) for other operations-level commands.

/cfg/port <port alias or number>/errdis Port Error Disable and Recovery Configuration

```
[Port 2 ErrDisable Menu]
lfd      - Link Flap Dampening Menu
ena      - Enable ErrDisable recovery
dis      - Disable ErrDisable recovery
cur      - Display current ErrDisable configuration
```

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 148. Port Error Disable Configuration Options

Command Syntax and Usage	
lfd	Displays the Link Flap Dampening menu. To view menu options, see page 214.
ena	Enables automatic error-recovery for the port. The default setting is <code>enabled</code> . Note: Error-recovery must be enabled globally before port-level commands become active (<code>/cfg/sys/errdis/ena</code>).

Table 148. Port Error Disable Configuration Options

Command Syntax and Usage	
dis	Disables automatic error-recovery for the port.
cur	Displays current port Error Disable parameters.

`/cfg/port <port alias or number>/errdis/lfd`
Link Flap Dampening Menu

[Port INTA1 Link Flap Dampening Menu]	
ena	- Enable Link Flap Dampening
dis	- Disable Link Flap Dampening
cur	- Display current Link Flap Dampening configuration

The following table describes the link flap dampening options.

Table 149. Link Flap Dampening Options

Command Syntax and Usage	
ena	Enables link flap dampening.
dis	Disables link flap dampening.
cur	Displays the current Link Flap Dampening configuration.

/cfg/port <port alias or number>/gig Port Link Configuration Menu

[Gigabit Link Menu]	
speed	- Set link speed
mode	- Set full or half duplex mode
fctl	- Set flow control
auto	- Set autonegotiation
cur	- Display current gig link configuration

Link menu options are described in the following table.

Table 150. Port Link Configuration Menu Options (/cfg/port/gig)

Command Syntax and Usage	
speed 10 100 1000 10000 any	Sets the link speed. Some options are not valid on all ports. The choices include: <ul style="list-style-type: none"> – 10 Mbps – 100 Mbps – 1000 Mbps – any (auto negotiate port speed)
mode full half any	Sets the operating mode. Some options are not valid on all ports. The choices include: <ul style="list-style-type: none"> – Full-duplex – Half-duplex – “Any,” for auto negotiation (default)
fctl rx tx both none	Sets the flow control. The choices include: <ul style="list-style-type: none"> – Receive flow control – Transmit flow control – Both receive and transmit flow control – No flow control <p>Note: For external ports (EXTx) the default setting is no flow control, and for internal ports (INTx) the default setting is both receive and transmit.</p>
auto on off	Turns auto-negotiation on or off.
cur	Displays current port parameters.

`/cfg/port <port alias or number>/udld`
UniDirectional Link Detection Configuration Menu

[UDLD Menu]	
mode	- Set UDLD mode
ena	- Enable UDLD
dis	- Disable UDLD
cur	- Display current port UDLD configuration

UDLD menu options are described in the following table.

Table 151. Port UDLD Configuration Menu Options (/cfg/port/udld)

Command Syntax and Usage	
mode normal aggressive	Configures the UDLD mode for the selected port, as follows: <ul style="list-style-type: none"> – Normal: Detect unidirectional links that have mis-connected interfaces. The port is disabled if UDLD determines that the port is mis-connected. – Aggressive: In addition to the normal mode, the aggressive mode disables the port if the neighbor stops sending UDLD probes for 7 seconds.
ena	Enables UDLD on the port.
dis	Disables UDLD on the port.
cur	Displays current port UDLD parameters.

/cfg/port <port alias or number>/oam Port OAM Configuration Menu

[OAM Menu]	
ena	- Enable OAM Discovery process
dis	- Disable OAM Discovery process
mode	- Set OAM mode
cur	- Display current port OAM configuration

Operation, Administration, and Maintenance (OAM) protocol allows the switch to detect faults on the physical port links. OAM is described in the IEEE 802.3ah standard.

OAM menu options are described in the following table.

Table 152. Port OAM Configuration Menu Options (/cfg/port/oam)

Command Syntax and Usage	
ena	Enables OAM discovery on the port.
dis	Disables OAM discovery on the port.
mode active passive	Configures the OAM discovery mode, as follows: <ul style="list-style-type: none">– Active: This port link initiates OAM discovery.– Passive: This port allows its peer link to initiate OAM discovery. If OAM determines that the port is in an anomalous condition, the port is disabled.
cur	Displays current port OAM parameters.

/cfg/port <port alias or number>/aclqos Port ACL Configuration Menu

[Port INT2 ACL Menu]	
add	- Add ACL or ACL group to this port
rem	- Remove ACL or ACL group from this port
cur	- Display current ACLs for this port

Table 153. Port ACL Menu Options (/cfg/port/aclqos)

Command Syntax and Usage	
add acl acl6 grp <ACL or ACL group number>	Adds the specified ACL or ACL group to the port. You can add multiple ACL groups to a port.
rem acl acl6 grp <ACL or ACL group number>	Removes the specified ACL or ACL group from the port.
cur	Displays current ACL QoS parameters.

/cfg/port <port alias or number>/stp Port Spanning Tree Configuration Menu

[Port INTA1 STP Menu]	
edge	- Enable/disable edge port (for PVRST only)
link	- Set port link type (auto, p2p, or shared; default: auto)
guard	- Set Port Guard Type Menu
cur	- Display current port stp configuration

Table 154. Port STP Menu Options (/cfg/port/stp)

Command Syntax and Usage	
edge e d	Enables or disables this port as an edge port. An edge port is not connected to a bridge, and can begin forwarding traffic as soon as the link is up. Configure server ports as edge ports (enabled). Note: After you configure the port as an edge port, you must disable the port (/oper/port x/dis) and then re-enable the port (/oper/port x/ena) for the change to take effect.
link auto p2p shared	Defines the type of link connected to the port, as follows: <ul style="list-style-type: none"> - auto: Configures the port to detect the link type, and automatically match its settings. - p2p: Configures the port for Point-To-Point protocol. - shared: Configures the port to connect to a shared medium (usually a hub). <p>The default link type is auto.</p>

Table 154. Port STP Menu Options (/cfg/port/stp) (continued)

Command Syntax and Usage	
guard	Displays the Spanning Tree Guard menu for the port. To view menu options, see page 221 .
cur	Displays current STP parameters for the port.

`/cfg/port <port alias or number>/stp/guard`
Port Spanning Tree Guard Configuration

[Guard Menu]	
default	- Set guard type to default
type	- Set guard type
cur	- Display current guard type

Table 155. Port STP Guard Options

Command Syntax and Usage	
default	Sets the Spanning Tree guard parameters to their default values.
type loop root none	Defines the Spanning Tree guard type, as follows: <ul style="list-style-type: none"> - loop: STP loop guard prevents the port from forwarding traffic if no BPDUs are received. The port is placed into a loop-inconsistent blocking state until a BPDU is received. - root: STP root guard enforces the position of the root bridge. If the bridge receives a superior BPDU, the port is placed into a root-inconsistent state (listening). - none: Disables STP loop guard and root guard.
cur	Displays current Spanning Tree guard parameters for the port.

`/cfg/qos`
Quality of Service Configuration Menu

[QoS Menu]	
8021p	- 802.1p Menu
dscp	- Dscp Menu
cur	- Display current QoS configuration

Use the Quality of Service (QoS) menus to configure the 802.1p priority value and DiffServ Code Point (DSCP) value of incoming packets. This allows you to differentiate between various types of traffic, and provide different priority levels.

Table 156. Quality of Service Menu Options (/cfg/qos)

Command Syntax and Usage	
8021p	Displays 802.1p configuration menu. To view menu options, see page 222 .
dscp	Displays DSCP configuration menu. To view menu options, see page 223 .
cur	Displays QoS configuration parameters.

/cfg/qos/8021p

802.1p Configuration Menu

```
[802.1p Menu]
priq      - Set priority to COS queue mapping
qweight   - Set weight to a COS queue
numcos    - Set number of COS queue
cur       - Display current 802.1p configuration
```

This feature provides the capability to filter IP packets based on the 802.1p bits in the packet's VLAN header. The 802.1p bits specify the priority that you should give to the packets while forwarding them. The packets with a higher (non-zero) priority bits are given forwarding preference over packets with numerically lower priority bits value.

Table 157. 802.1p Menu Options (/cfg/qos/8021p)

Command Syntax and Usage	
<p><code>priq <priority (0-7)> <COSq number></code></p> <p>Maps the 802.1p priority to the Class of Service queue (COSq) priority. Enter the 802.1p priority value (0-7), followed by the COSq that handles the matching traffic. The valid range of the COSq number is set using the <code>numcos</code> command.</p>	
<p><code>qweight <COSq number> <weight (0-15)></code></p> <p>Configures the weight of the selected COSq. Enter the COSq number, followed by the scheduling weight (0-15). The valid range of the COSq number is set using the <code>numcos</code> command.</p>	
<p><code>numcos 2 8</code></p> <p>Sets the number of Class of Service queues (COSq) for switch ports. Depending on the <code>numcos</code> setting, the valid COSq range for the <code>priq</code> and <code>qweight</code> commands is as follows:</p> <ul style="list-style-type: none"> - If <code>numcos</code> is 2 (the default), the COSq range is 0-1. - If <code>numcos</code> is 8, the COSq range is 0-7. <p>You must apply, save, and reset the switch to activate the new configuration.</p>	
<p><code>cur</code></p> <p>Displays the current 802.1p parameters.</p>	

/cfg/qos/dscp DSCP Configuration Menu

[dscp Menu]	
dscp	- Remark DSCP value to a new DSCP value
prio	- Remark DSCP value to a 802.1p priority
on	- Globally turn DSCP remarking ON
off	- Globally turn DSCP remarking OFF
cur	- Display current DSCP remarking configuration

Use this menu map the DiffServ Code Point (DSCP) value of incoming packets to a new value, or to an 802.1p priority value.

Table 158. DSCP Menu Options (/cfg/qos/dscp)

Command Syntax and Usage	
dscp <DSCP (0-63)> <new DSCP (0-63)>	Maps the initial DiffServ Code Point (DSCP) value to a new value. Enter the DSCP value (0-63) of incoming packets, followed by the new value.
prio <DSCP (0-63)> <priority (0-7)>	Maps the DiffServ Code point value to an 802.1p priority value. Enter the DSCP value, followed by the corresponding 802.1p value.
on	Turns on DSCP re-marking globally.
off	Turns off DSCP re-marking globally.
cur	Displays the current DSCP parameters.

/cfg/acl

Access Control List Configuration Menu

[ACL Menu]	
acl	- Access Control List Item Config Menu
acl6	- IPv6 Access Control List Item Config Menu
group	- Access Control List Group Config Menu
mac1	- Management ACL Config Menu
vmap	- Vlan Map Config Menu
cur	- Display current ACL configuration

Use this menu to create Access Control Lists (ACLs) and ACL groups. ACLs define matching criteria used for IP filtering and Quality of Service functions.

For information about assigning ACLs to ports, see [“Port ACL Configuration Menu” on page 219](#).

Table 159. ACL Menu Options (/cfg/acl)

Command Syntax and Usage	
acl <1-640>	Displays Access Control List configuration menu. To view menu options, see page 225 .
acl6 <1-128>	Displays Access Control List configuration menu. To view menu options, see page 234 .
group <1-640>	Displays ACL group configuration menu. To view menu options, see page 239 .
mac1 <1-128>	Displays the Management ACL configuration menu. To view menu options, see page 240 .
vmap <1-128>	Displays ACL VLAN Map configuration menu. To view menu options, see page 243 .
cur	Displays the current ACL parameters.

`/cfg/acl/acl <ACL number>`
ACL Configuration Menu

[ACL 1 Menu]	
ethernet	- Ethernet Header Options Menu
ipv4	- IP Header Options Menu
tcpudp	- TCP/UDP Header Options Menu
pktfmt	- Set to filter specific packet format types
egrport	- Set to filter for packets egressing this port
action	- Set filter action
stats	- Enable/disable statistics for this acl
reset	- Reset filtering parameters
cur	- Display current filter configuration

These menus allow you to define filtering criteria for each Access Control List (ACL).

Table 160. ACL Menu Options (`/cfg/acl/acl x`)

Command Syntax and Usage	
ethernet	Displays the ACL Ethernet Header menu. To view menu options, see page 226 .
ipv4	Displays the ACL IP Header menu. To view menu options, see page 227 .
tcpudp	Displays the ACL TCP/UDP Header menu. To view menu options, see page 228 .
pktfmt <packet format>	Displays the ACL Packet Format menu. To view menu options, see page 233 .
egrport <port alias or number>	Configures the ACL to function on egress packets.
action permit deny setprio <0-7>	Configures a filter action for packets that match the ACL definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).
stats e d	Enables or disables the statistics collection for the Access Control List.
reset	Resets the ACL parameters to their default values.
cur	Displays the current ACL parameters.

/cfg/acl/acl <ACL number>/ethernet Ethernet Filtering Configuration Menu

smac	- Set to filter on source MAC
dmac	- Set to filter on destination MAC
vlan	- Set to filter on VLAN ID
etype	- Set to filter on ethernet type
pri	- Set to filter on priority
reset	- Reset all fields
cur	- Display current parameters

This menu allows you to define Ethernet matching criteria for an ACL.

Table 161. Ethernet Filtering Menu Options (/cfg/acl/acl x/ethernet)

Command Syntax and Usage	
smac <MAC address (such as 00:60:cf:40:56:00)> <mask (FF:FF:FF:FF:FF:FF)>	Defines the source MAC address for this ACL.
dmac <MAC address (such as 00:60:cf:40:56:00)> <mask (FF:FF:FF:FF:FF:FF)>	Defines the destination MAC address for this ACL.
vlan <VLAN number> <VLAN mask (0xfff)>	Defines a VLAN number and mask for this ACL.
etype [ARP IP IPv6 MPLS RARP any none <other (0x600-0xFFFF)>]	Defines the Ethernet type for this ACL.
pri <0-7>	Defines the Ethernet priority value for the ACL.
reset	Resets Ethernet parameters for the ACL to their default values.
cur	Displays the current Ethernet parameters for the ACL.

/cfg/acl/acl <ACL number>/ipv4 IPv4 Filtering Configuration Menu

[Filtering IPv4 Menu]	
sip	- Set to filter on source IP address
dip	- Set to filter on destination IP address
proto	- Set to filter on prototype
tos	- Set to filter on TOS
reset	- Reset all fields
cur	- Display current parameters

This menu allows you to define IP version 4 matching criteria for an ACL.

Table 162. IPv4 Filtering Menu Options (/cfg/acl/acl x/ipv4)

Command Syntax and Usage															
<pre>sip <IP address> <mask (such as 255.255.255.0)></pre>	<p>Defines a source IP address for the ACL. If defined, traffic with this source IP address will match this ACL. Specify an IP address in dotted decimal notation.</p>														
<pre>dip <IP address> <mask (such as 255.255.255.0)></pre>	<p>Defines a destination IP address for the ACL. If defined, traffic with this destination IP address will match this ACL.</p>														
<pre>proto <0-255></pre>	<p>Defines an IP protocol for the ACL. If defined, traffic from the specified protocol matches this filter. Specify the protocol number. <code>cur</code>	<p>Displays the current TCP/UDP Filtering parameters.</p>																												

`/cfg/acl/acl <ACL number>/meter`
ACL Metering Configuration Menu

[Metering Menu]	
<code>cir</code>	- Set committed rate in kilobits per second
<code>mbsize</code>	- Set maximum burst size in kilobits
<code>enable</code>	- Enable/disable port metering
<code>dpass</code>	- Set to Drop or Pass out of profile traffic
<code>reset</code>	- Reset meter parameters
<code>cur</code>	- Display current settings

This menu defines the metering profile for the selected ACL.

Table 164. ACL Metering Menu Options (/cfg/acl/acl x/meter)

Command Syntax and Usage	
<code>cir <64-10000000></code>	Configures the committed rate, in Kilobits per second. The committed rate must be a multiple of 64.
<code>mbsize <32-4096></code>	Configures the maximum burst size, in Kilobits. Enter one of the following values for <code>mbsize</code> : 32, 64, 128, 256, 512, 1024, 2048, 4096
<code>enable e d</code>	Enables or disables metering on the ACL.
<code>dpass drop pass</code>	Configures the ACL meter to either drop or pass out-of-profile traffic.
<code>reset</code>	Reset ACL metering parameters to their default values.
<code>cur</code>	Displays current ACL metering parameters.

/cfg/acl/acl <ACL number>/re-mark Re-Mark Configuration Menu

```
[Re-mark Menu]
  inprof - In Profile Menu
  outprof - Out Profile Menu
  up1p - Set Update User Priority Menu
  reset - Reset re-mark settings
  cur - Display current settings
```

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

Table 165. ACL Re-Mark Menu Options (/cfg/acl/acl x/re-mark)

Command Syntax and Usage	
inprof	Displays the Re-Mark In-Profile menu. To view menu options, see page 231 .
outprof	Displays the Re-Mark Out-of-Profile menu. To view menu options, see page 232 .
up1p	Displays the Re-Mark Update User Priority menu. To view menu options, see page 231 .
reset	Reset ACL re-mark parameters to their default values.
cur	Displays current re-mark parameters.

`/cfg/acl/acl <ACL number>/re-mark/inprof`
Re-Marking In-Profile Configuration Menu

[Re-marking - In Profile Menu]	
up1p	- Set Update User Priority Menu
updscp	- Set the update DSCP
reset	- Reset update DSCP settings
cur	- Display current settings

Table 166. ACL Re-Mark In-Profile Menu (`/cfg/acl/acl x/re-mark/inprof`)

Command Syntax and Usage	
up1p	Displays the Re-Mark Update User Priority menu. To view menu options, see page 231 .
updscp <0-63>	Re-marks the DiffServ Code Point (DSCP) of in-profile packets to the selected value.
reset	Resets the re-mark parameters for in-profile packets to their default values.
cur	Displays current re-mark in-profile parameters.

`/cfg/acl/acl <ACL number>/re-mark/up1p`
Update User Priority Configuration

[Update User Priority Menu]	
value	- Set the update user priority
utosp	- Enable/Disable use of TOS precedence
reset	- Reset in profile up1p settings
cur	- Display current settings

Table 167. ACL Re-Mark Update User Priority Options

Command Syntax and Usage	
value <0-7>	Re-marks the 802.1p value. The value is the priority bits information in the packet structure.
utosp enable disable	Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.

Table 167. ACL Re-Mark Update User Priority Options

Command Syntax and Usage	
reset	Resets UP1P settings to their default values.
cur	Displays current re-mark User Priority parameters for in-profile packets.

/cfg/acl/acl <ACL number>/re-mark/outprof
Re-Marking Out-of-Profile Configuration Menu

[Re-marking - Out Of Profile Menu]	
updscp	- Set the update DSCP
reset	- reset update DSCP setting
cur	- Display current settings

Table 168. ACL Re-Mark Out-of-Profile Menu (/cfg/acl/acl x/re-mark/outprof)

Command Syntax and Usage	
updscp <0-63>	Re-marks the DiffServ Code Point (DSCP) for out-of-profile packets to the selected value. The switch sets the DSCP value on out-of-profile packets.
reset	Resets the update DSCP parameters for out-of-profile packets to their default values.
cur	Displays current re-mark parameters for out-of-profile packets.

/cfg/acl/acl <ACL number>/pktfmt Packet Format Filtering Configuration Menu

[Filtering Packet Format Menu]	
ethfmt	- Set to filter on ethernet format
tagfmt	- Set to filter on ethernet tagging format
ipfmt	- Set to filter on IP format
reset	- Reset all fields
cur	- Display current parameters

This menu allows you to define Packet Format matching criteria for an ACL.

Table 169. ACL Packet Format Filtering Menu Options (/cfg/acl/acl x/pktfmt)

Command Syntax and Usage	
ethfmt {none eth2 SNAP LLC}	Defines the Ethernet format for the ACL.
tagfmt {disabled any none tagged}	Defines the tagging format for the ACL.
ipfmt {none v4 v6}	Defines the IP format for the ACL.
reset	Resets Packet Format parameters for the ACL to their default values.
cur	Displays the current Packet Format parameters for the ACL.

`/cfg/acl/acl6 <ACL number>`
ACL IPv6 Configuration

[ACL6 2 Menu]	
ipv6	- IPv6 Header Options Menu
tcpudp	- TCP/UDP Header Options Menu
re-mark	- ACL Re-mark Configuration Menu
egrport	- Set to filter for packets egressing this port
action	- Set filter action
stats	- Enable/disable statistics
reset	- Reset filtering parameters
cur	- Display current filter configuration

These menus allow you to define filtering criteria for each IPv6 Access Control List (ACL).

Table 170. IPv6 ACL Options

Command Syntax and Usage	
ipv6	Displays the ACL IP Header menu. To view menu options, see page 235 .
tcpudp	Displays the ACL TCP/UDP Header menu. To view menu options, see page 236 .
re-mark	Displays the ACL Re-Mark menu. To view menu options, see page 237 .
egrport <port alias or number>	Configures the ACL to function on egress packets.
action permit deny setprio <0-7>	Configures a filter action for packets that match the ACL definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).
stats e d	Enables or disables the statistics collection for the Access Control List.
reset	Resets the ACL parameters to their default values.
cur	Displays the current ACL parameters.

/cfg/acl/acl6 <ACL number>/ipv6 IP version 6 Filtering Configuration

[Filtering IPv6 Menu]	
sip	- Set to filter on source IPv6 address
dip	- Set to filter on destination IPv6 address
nexthd	- Set to filter on IPv6 next header
flabel	- Set to filter on IPv6 flow label
tclass	- Set to filter on IPv6 traffic class
reset	- Reset all fields
cur	- Display current parameters

This menu allows you to define IPv6 matching criteria for an ACL.

Table 171. IP version 6 Filtering Options

Command Syntax and Usage	
<pre>sip <IPv6 address> <prefix length></pre>	<p>Defines a source IPv6 address for the ACL. If defined, traffic with this source IP address will match this ACL.</p>
<pre>dip <IPv6 address> <prefix length></pre>	<p>Defines a destination IPv6 address for the ACL. If defined, traffic with this destination IP address will match this ACL.</p>
<pre>nexthd <0-255></pre>	<p>Defines the next header value for the ACL. If defined, traffic with this next header value will match this ACL.</p>
<pre>flabel <0-1048575></pre>	<p>Defines the flow label for the ACL. If defined, traffic with this flow label will match this ACL.</p>
<pre>tclass <0-255></pre>	<p>Defines the traffic class for the ACL. If defined, traffic with this traffic class will match this ACL.</p>
<pre>reset</pre>	<p>Resets the IPv6 parameters for the ACL to their default values.</p>
<pre>cur</pre>	<p>Displays the current IPv6 parameters.</p>

/cfg/acl/acl6 <ACL number>/tcpudp IPv6 TCP/UDP Filtering Configuration

```
[Filtering TCP/UDP Menu]
sport - Set to filter on TCP/UDP source port
dport - Set to filter on TCP/UDP destination port
flags - Set to filter TCP/UDP flags
reset - Reset all fields
cur - Display current parameters
```

This menu allows you to define TCP/UDP matching criteria for an ACL.

Table 172. IPv6 ACL TCP/UDP Filtering Options

Command Syntax and Usage																													
<code>sport <source port (1-65535)> <mask (0xFFFF)></code>	<p>Defines a source port for the ACL. If defined, traffic with the specified TCP or UDP source port will match this ACL. Specify the port number. Listed here are some of the well-known ports:</p> <table border="1"> <thead> <tr> <th>Number</th> <th>Name</th> </tr> </thead> <tbody> <tr><td>20</td><td>ftp-data</td></tr> <tr><td>21</td><td>ftp</td></tr> <tr><td>22</td><td>ssh</td></tr> <tr><td>23</td><td>telnet</td></tr> <tr><td>25</td><td>smtp</td></tr> <tr><td>37</td><td>time</td></tr> <tr><td>42</td><td>name</td></tr> <tr><td>43</td><td>whois</td></tr> <tr><td>53</td><td>domain</td></tr> <tr><td>69</td><td>ftpp</td></tr> <tr><td>70</td><td>gopher</td></tr> <tr><td>79</td><td>finger</td></tr> <tr><td>80</td><td>http</td></tr> </tbody> </table>	Number	Name	20	ftp-data	21	ftp	22	ssh	23	telnet	25	smtp	37	time	42	name	43	whois	53	domain	69	ftpp	70	gopher	79	finger	80	http

<code>cur</code>	<p>Displays the current TCP/UDP Filtering parameters.</p>																												

`/cfg/acl/acl6 <ACL number>/re-mark`
IPv6 Re-Mark Configuration

[Re-mark Menu]	
inprof	- In Profile Menu
up1p	- Set Update User Priority Menu
reset	- Reset re-mark settings
cur	- Display current settings

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

Table 173. IPv6 ACL Re-Mark Options

Command Syntax and Usage	
inprof	Displays the Re-Mark In-Profile menu. To view menu options, see page 231 .
up1p	Displays the Update User Priority menu. To view menu options, see page 231 .
reset	Reset ACL re-mark parameters to their default values.
cur	Displays current re-mark parameters.

`/cfg/acl/acl6 <ACL number>/re-mark/up1p`
IPv6 Re-Marking User Priority Configuration

[Update User Priority Menu]	
value	- Set the update user priority
utosp	- Enable/Disable use of TOS precedence
reset	- Reset in profile up1p settings
cur	- Display current settings

Table 174. IPv6 ACL Update User Priority Options

Command Syntax and Usage	
value <0-7>	Re-marks the 802.1p value. The value is the priority bits information in the packet structure.
utosp enable disable	Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.

Table 174. IPv6 ACL Update User Priority Options (continued)

Command Syntax and Usage	
reset	Resets UP1P settings to their default values.
cur	Displays current re-mark User Priority parameters for in-profile packets.

`/cfg/acl/acl6 <ACL number>/re-mark/inprof`
IPv6 Re-Marking In-Profile Configuration

[Re-marking - In Profile Menu]	
up1p	- Set Update User Priority Menu
updscp	- Set the update DSCP
reset	- Reset update DSCP settings
cur	- Display current settings

Table 175. IPv6 ACL Re-mark In-Profile Options

Command Syntax and Usage	
up1p	Displays the Re-Mark Update User Priority menu. To view menu options, see page 239 .
updscp <0-63>	Re-marks the DiffServ Code Point (DSCP) of in-profile packets to the selected value.
reset	Resets the update DSCP parameters to their default values.
cur	Displays current re-mark parameters for in-profile packets.

`/cfg/acl/acl6 <ACL number>/re-mark/inprof/up1p`
Update User Priority Configuration

[Update User Priority Menu]	
value	- Set the update user priority
utosp	- Enable/Disable use of TOS precedence
reset	- Reset in profile up1p settings
cur	- Display current settings

Table 176. ACL Re-Mark Update User Priority Options

Command Syntax and Usage	
value <0-7>	Re-marks the 802.1p value. The value is the priority bits information in the packet structure.
utosp enable disable	Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.
reset	Resets UP1P settings to their default values.
cur	Displays current re-mark User Priority parameters for in-profile packets.

`/cfg/acl/group <ACL group number>`
ACL Group Configuration Menu

[ACL Group 1 Menu]	
add	- Add ACL to group
rem	- Remove ACL from group
cur	- Display current ACL items in ACL group

This menu allows you to compile one or more ACLs into an ACL group. Once you create an ACL group, you can assign the ACL group to one or more ports.

Table 177. ACL Group Menu Options (/cfg/acl/group x)

Command Syntax and Usage	
add acl <1-640>	Adds the selected ACL to the ACL group.
rem acl <1-640>	Removes the selected ACL from the ACL group.
cur	Displays the current ACL group parameters.

/cfg/acl/macl <1-128>
MACL Configuration

[MACL 1 Menu]	
ipv4	- IP Header Options Menu
tcpudp	- TCP/UDP Header Options Menu
action	- Set filter action
stats	- Enable/disable statistics
reset	- Reset filtering parameters
ena	- Enable the MACL
dis	- Disable the MACL
cur	- Display current filter configuration

Table 178. Management ACL Configuration Menu Options (/cfg/acl/macl)

Command Syntax and Usage	
ipv4	Displays the IP Header Options menu. To view menu options, see page 241 .
tcpudp	Displays the TCP/UDP Header Options menu. To view menu options, see page 242 .
action	Sets the filter action.
stats enable disable	Enables/Disables statistics.
reset	Resets filtering parameters.
ena	Enables the MACL.
dis	Disables the MACL.
cur	Displays the current filter configuration.

/cfg/acl/macl <1-128>/ipv4 MACL IP Header Configuration

```
[Filtering IPv4 Menu]
sip      - Set to filter on source IP address
dip      - Set to filter on destination IP address
proto    - Set to filter on protocol
reset    - Reset all fields
cur      - Display current parameters
```

The following options are available for configuring MACL IP headers.

Table 179. MACL IP Header Configuration Parameters (/cfg/acl/macl/ipv4)

Command Syntax and Usage															
<pre>sip <source IP address> <address mask> reset</pre>	Sets IPv4 filtering to filter on source IP address.														
<pre>dip <destination IP address> <address mask> reset</pre>	Sets IPv4 filtering to filter on destination IP address.														
<pre>proto <0-255></pre> <p>Defines an IP protocol for the MACL. If defined, traffic from the specified protocol matches this filter. Specify the protocol number. Listed here are some of the well-known protocols.</p> <table border="1"> <thead> <tr> <th>Number</th> <th>Name</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>icmp</td> </tr> <tr> <td>2</td> <td>igmp</td> </tr> <tr> <td>6</td> <td>tcp</td> </tr> <tr> <td>17</td> <td>udp</td> </tr> <tr> <td>89</td> <td>ospf</td> </tr> <tr> <td>112</td> <td>vrrp</td> </tr> </tbody> </table>	Number	Name	1	icmp	2	igmp	6	tcp	17	udp	89	ospf	112	vrrp	
Number	Name														
1	icmp														
2	igmp														
6	tcp														
17	udp														
89	ospf														
112	vrrp														
<pre>reset</pre>	Resets all fields.														
<pre>cur</pre>	Displays the current settings.														

/cfg/acl/mac1 <1-128>/tcpudp TCP/UDP Header Configuration

[Filtering TCP/UDP Menu]	
sport	- Set to filter on TCP/UDP source port
dport	- Set to filter on TCP/UDP destination port
reset	- Reset all fields
cur	- Display current parameters

The following options are available for configuring TCP/UDP headers.

Table 180. TCP/UDP Header Configuration Parameters (/cfg/acl/mac1/tcpudp)

Command Syntax and Usage	
sport <port number> <address mask> reset	Sets IPv4 filtering to filter on TCP/UDP source port.
dport <port number> <address mask> reset	Sets IPv4 filtering to filter on TCP/UDP destination port.
reset	Resets all fields.
cur	Displays the current parameters.

/cfg/acl/vmap <1-128> VMAP Configuration

```
[VMAP 1 Menu]
mirror - Mirror Options Menu
ethernet - Ethernet Header Options Menu
ipv4 - IP Header Options Menu
tcpudp - TCP/UDP Header Options Menu
meter - ACL Metering Configuration Menu
re-mark - ACL Re-mark Configuration Menu
pktfmt - Set to filter specific packet format types
egrport - Set to filter for packets egressing this port
action - Set filter action
stats - Enable/disable statistics
reset - Reset filtering parameters
cur - Display current filter configuration
```

A VLAN Map is an Access Control List (ACL) that can be assigned to a VLAN or a VM group instead of a port. In a virtualized environment where Virtual Machines move between physical servers, VLAN Maps allow you to create traffic filtering and metering policies associated with a VM's VLAN.

For more information about VLAN Map configuration commands, see ["Access Control List Configuration Menu" on page 224](#).

For more information about assigning VLAN Maps to a VLAN, see ["VLAN Configuration Menu" on page 279](#).

For more information about assigning VLAN Maps to a VM group, see ["VM Group Configuration" on page 384](#).

/cfg/pmirr

Port Mirroring Configuration

[Port Mirroring Menu]
monport - Monitoring Port based PM Menu
mirror - Enable/Disable Mirroring
cur - Display All Mirrored and Monitoring Ports

Port mirroring is disabled by default. For more information about port mirroring on the EN2092, see “Appendix A: Troubleshooting” in the *IBM Networking OS Application Guide*.

Note: Traffic on VLAN 4095 is not mirrored to the external ports.

The Port Mirroring Menu is used to configure, enable, and disable the monitor port. When enabled, network packets being sent and/or received on a target port are duplicated and sent to a monitor port. By attaching a network analyzer to the monitor port, you can collect detailed information about your network performance and usage.

Table 181. Port Mirroring Menu Options (/cfg/pmirr)

Command Syntax and Usage
monport <port alias or number> Displays port-mirroring menu. To view menu options, see page 245 .
mirror disable enable Enables or disables port mirroring
cur Displays current settings of the mirrored and monitoring ports.

`/cfg/pmirr/monport <port alias or number>`
Port-Mirroring Configuration Menu

[Port EXT1 Menu]	
add	- Add "Mirrored" port
rem	- Rem "Mirrored" port
delete	- Delete this "Monitor" port
cur	- Display current Port-based Port Mirroring configuration

Table 182. Port Mirroring Monitor Port Menu Options (/cfg/pmirr/monport)

Command Syntax and Usage	
add <mirrored port (port to mirror from)> <direction (in, out, or both)>	<p>Adds the port to be mirrored. This command also allows you to enter the direction of the traffic. It is necessary to specify the direction because:</p> <p>If the source port of the frame matches the mirrored port and the mirrored direction is ingress or both (ingress and egress), the frame is sent to the monitoring port.</p> <p>If the destination port of the frame matches the mirrored port and the mirrored direction is egress or both, the frame is sent to the monitoring port.</p>
rem <mirrored port (port to mirror from)>	Removes the mirrored port.
delete	Deletes this monitor port.
cur	Displays the current settings of the monitoring port.

/cfg/12

Layer 2 Configuration Menu

[Layer 2 Menu]	
8021x	- 802.1x Menu
mrst	- Multiple Spanning Tree/Rapid Spanning Tree Menu
nostp	- Disable Spanning Tree
stg	- Spanning Tree Menu
fdb	- FDB Menu
lldp	- LLDP Menu
trunk	- Trunk Group Menu
thash	- Trunk Hash Menu
lacp	- Link Aggregation Control Protocol Menu
failovr	- Failover Menu
hotlink	- Hot Links Menu
vlan	- VLAN Menu
vlanstg	- Enable/disable VLAN auto assign STG
pvstcomp	- Enable/disable PVST+ compatibility mode
loopgrd	- Enable/disable Spanning Tree Loop Guard
macnotif	- Enable/disable MAC address notification
cur	- Display current layer 2 parameters

Table 183. Layer 2 Configuration Menu (/cfg/12)

Command Syntax and Usage	
8021x	Displays the 802.1X Configuration Menu. To view menu options, see page 248 .
mrst	Displays the Rapid Spanning Tree/Multiple Spanning Tree Protocol Configuration Menu. To view menu options, see page 253 .
nostp enable disable	When enabled, globally turns Spanning Tree <code>off</code> . All ports are placed into forwarding state. Any BPDU's received are flooded. BPDU Guard is not affected by this command.
stg <group number (1-128)>	Displays the Spanning Tree Configuration Menu. To view menu options, see page 257 .
fdb	Displays the Forwarding Database Menu. To view menu options, see page 261 .
lldp	Displays the LLDP Menu. To view menu options, see page 263 .
trunk <trunk number>	Displays the Trunk Group Configuration Menu. To view menu options, see page 266 .
thash	Displays the Trunk Hash Menu. To view menu options, see page 267 .

Table 183. Layer 2 Configuration Menu (/cfg/l2) (continued)

Command Syntax and Usage	
l acp	Displays the Link Aggregation Control Protocol Menu. To view menu options, see page 269 .
fa il ovr	Displays the Failover Configuration Menu. To view menu options, see page 271 .
hot link	Displays the Hot Links Configuration menu. To view menu options, see page 276 .
v lan <VLAN number (1-4095)>	Displays the VLAN Configuration Menu. To view menu options, see page 279 .
v lan stg enable disable	Enables or disables VLAN Automatic STG Assignment (VASA). When enabled, each time a new VLAN is configured, the switch will automatically assign the new VLAN its own STG. Conversely, when a VLAN is deleted, if its STG is not associated with any other VLAN, the STG is returned to the available pool. Note: VASA applies only to PVRST mode.
pv st comp enable disable	Enables or disables VLAN tagging of Spanning Tree BPDUs. The default setting is enabled.
loop grd enable disable	Enables or disables Spanning Tree Loop Guard.
cur	Displays current Layer 2 parameters.

/cfg/12/8021x

802.1X Configuration Menu

[802.1x Configuration Menu]	
global	- Global 802.1x configuration menu
port	- Port 802.1x configuration menu
ena	- Enable 802.1x access control
dis	- Disable 802.1x access control
cur	- Show 802.1x configuration

This feature allows you to configure the EN2092 as an IEEE 802.1X Authenticator, to provide port-based network access control.

Table 184. 802.1X Configuration Menu (/cfg/12/8021x)

Command Syntax and Usage	
global	Displays the global 802.1X Configuration Menu. To view menu options, see page 249 .
port <port alias or number>	Displays the 802.1X Port Menu. To view menu options, see page 251 .
ena	Globally enables 802.1X.
dis	Globally disables 802.1X.
cur	Displays current 802.1X parameters.

/cfg/12/8021x/global 802.1X Global Configuration Menu

```
[802.1X Global Configuration Menu]
gvlan - 802.1X Guest VLAN configuration menu
mode - Set access control mode
qtperiod - Set EAP-Request/Identity quiet time interval
txperiod - Set EAP-Request/Identity retransmission timeout
suptmout - Set EAP-Request retransmission timeout
svrtmout - Set server authentication request timeout
maxreq - Set max number of EAP-Request retransmissions
raperiod - Set reauthentication time interval
reauth - Set reauthentication status to on or off
vassign - Set dynamic VLAN assignment status to on or off
default - Restore default 802.1X configuration
cur - Display current 802.1X configuration
```

The global 802.1X menu allows you to configure parameters that affect all ports in the EN2092.

Table 185. 802.1X Global Configuration Menu Options (/cfg/12/8021x/global)

Command Syntax and Usage
<p>gvlan</p> <p>Displays the 802.1X Guest VLAN Configuration Menu. To view menu options, see page 251.</p>
<p>mode force-unauth auto force-auth</p> <p>Sets the type of access control for all ports:</p> <ul style="list-style-type: none"> – force-unauth: the port is unauthorized unconditionally. – auto: the port is unauthorized until it is successfully authorized by the RADIUS server. – force-auth: the port is authorized unconditionally, allowing all traffic. <p>The default value is force-auth.</p>
<p>qtperiod <0-65535></p> <p>Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/ Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.</p>
<p>txperiod <1-65535></p> <p>Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds.</p>
<p>suptmout <1-65535></p> <p>Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet to the authentication server. The default value is 30 seconds.</p>

Table 185. 802.1X Global Configuration Menu Options (/cfg/12/8021x/global) (continued)

Command Syntax and Usage	
svrtmout <1-65535>	<p>Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value is 30 seconds.</p> <p>The time interval between transmissions of the RADIUS Access-Request packet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of /cfg/sys/radius/timeout (default is 3 seconds).</p>
maxreq <1-10>	<p>Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.</p>
raperiod <1-604800>	<p>Sets the time, in seconds, the authenticator waits before re-authenticating a supplicant (client) when periodic re-authentication is enabled. The default value is 3600 seconds.</p>
reauth on off	<p>Sets the re-authentication status to on or off. The default value is off.</p>
vassign on off	<p>Sets the dynamic VLAN assignment status to on or off. The default value is off.</p>
default	<p>Resets the global 802.1X parameters to their default values.</p>
cur	<p>Displays current global 802.1X parameters.</p>

/cfg/12/8021x/global/gvlan 802.1X Guest VLAN Configuration Menu

```
[802.1X Guest VLAN Configuration Menu]
vlan      - Set 8021.x Guest VLAN number
ena       - Enable 8021.xGuest VLAN
dis       - Disable 8021.x Guest VLAN
cur       - Display current Guest VLAN configuration
```

The 802.1X Guest VLAN menu allows you to configure a Guest VLAN for unauthenticated ports. The Guest VLAN provides limited access to switch functions.

Table 186. 802.1X Guest VLAN Configuration Menu (/cfg/12/8021x/global/gvlan)

Command Syntax and Usage	
vlan <VLAN number>	Configures the Guest VLAN number.
ena	Enables the 802.1X Guest VLAN.
dis	Disables the 802.1X Guest VLAN.
cur	Displays current 802.1X Guest VLAN parameters.

/cfg/12/8021x/port <port alias or number> 802.1X Port Configuration Menu

```
[802.1X Port Configuration Menu]
mode      - Set access control mode
qtperiod  - Set EAP-Request/Identity quiet time interval
txperiod  - Set EAP-Request/Identity retransmission timeout
suptmout  - Set EAP-Request retransmission timeout
svrtmout  - Set server authentication request timeout
maxreq    - Set max number of EAP-Request retransmissions
raperiod  - Set reauthentication time interval
reauth    - Set reauthentication status to on or off
vassign   - Set dynamic VLAN assignment status to on or off
default   - Restore default 802.1X configuration
global    - Apply current global 802.1X configuration to this port
cur       - Display current 802.1X configuration
```

The 802.1X port menu allows you to configure parameters that affect the selected port in the EN2092. These settings override the global 802.1X parameters.

Table 187. 802.1X Port Configuration Menu Options (/cfg/l2/8021x/port)

Command Syntax and Usage	
mode force-unauth auto force-auth	<p>Sets the type of access control for the port:</p> <ul style="list-style-type: none"> – force-unauth - the port is unauthorized unconditionally. – auto - the port is unauthorized until it is successfully authorized by the RADIUS server. – force-auth - the port is authorized unconditionally, allowing all traffic. <p>The default value is <code>force-auth</code>.</p>
qtperiod <0-65535>	<p>Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.</p>
txperiod <1-65535>	<p>Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds.</p>
suptmout <1-65535>	<p>Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet to the authentication server. The default value is 30 seconds.</p>
svrtmout <1-65535>	<p>Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value is 30 seconds.</p> <p>The time interval between transmissions of the RADIUS Access-Request packet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of <code>/cfg/sys/radius/timeout</code> (default is 3 seconds).</p>
maxreq <1-10>	<p>Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.</p>
raperiod <1-604800>	<p>Sets the time, in seconds, the authenticator waits before re-authenticating a supplicant (client) when periodic re-authentication is enabled. The default value is 3600 seconds.</p>
reauth on off	<p>Sets the re-authentication status to <code>on</code> or <code>off</code>. The default value is <code>off</code>.</p>
vassign on off	<p>Sets the dynamic VLAN assignment status to <code>on</code> or <code>off</code>. The default value is <code>off</code>.</p>

Table 187. 802.1X Port Configuration Menu Options (/cfg/l2/8021x/port) (continued)

Command Syntax and Usage	
default	Resets the 802.1X port parameters to their default values.
global	Applies current global 802.1X configuration parameters to the port.
cur	Displays current 802.1X port parameters.

/cfg/l2/mrst

RSTP/MSTP/PVRST Configuration Menu

[Multiple Spanning Tree Menu]	
cist	- Common and Internal Spanning Tree menu
name	- Set MST region name
rev	- Set revision level of this MST region
maxhop	- Set Maximum Hop Count for MST (4 - 60)
mode	- Spanning Tree Mode
cur	- Display current MST parameters

IBM Networking OS supports the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP), IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), and Per VLAN Rapid Spanning Tree Protocol (PVRST). MSTP allows you to map many VLANs to a small number of Spanning Tree Groups (STGs), each with its own topology.

Up to 32 Spanning Tree Groups can be configured in MSTP mode. MRST is turned off by default and the default STP mode is PVRST.

Note: When Multiple Spanning Tree is turned on, VLAN 4095 is moved from Spanning Tree Group 128 to the Common Internal Spanning Tree (CIST). When Multiple Spanning Tree is turned off, VLAN 4095 is moved back to Spanning Tree Group 128.

Table 188. MSTP/RSTP/PVRST Configuration Menu Options (/cfg/l2/mrst)

Command Syntax and Usage	
cist	Displays the Common Internal Spanning Tree (CIST) Menu. To view menu options, see page 254 .
name <1-32 characters>	Configures a name for the MSTP region. All devices within a MSTP region must have the same region name.
rev <0-65535>	Configures a version number for the MSTP region. The version is used as a numerical identifier for the region. All devices within a MSTP region must have the same version number.

Table 188. MSTP/RSTP/PVRST Configuration Menu Options (/cfg/l2/mrst) (continued)

Command Syntax and Usage
<p>maxhop <4-60></p> <p>Configures the maximum number of bridge hops a packet may traverse before it is dropped. The default is 20.</p>
<p>mode rstp mstp pvrst</p> <p>Selects the Spanning Tree mode, as follows: Multiple Spanning Tree (mstp), Rapid Spanning Tree (rstp), Per VLAN Rapid Spanning Tree Plus (pvrst). The default mode is STP/PVRST+.</p>
<p>cur</p> <p>Displays the current RSTP/MSTP/PVRST+ configuration.</p>

/cfg/l2/mrst/cist

Common Internal Spanning Tree Configuration Menu

<p>[Common Internal Spanning Tree Menu]</p> <p>brg - CIST Bridge parameter menu</p> <p>port - CIST Port parameter menu</p> <p>add - Add VLAN(s) to CIST</p> <p>default - Default Common Internal Spanning Tree and Member parameters</p> <p>cur - Display current CIST parameters</p>

Table 189 describes the commands used to configure Common Internal Spanning Tree (CIST) parameters. The CIST provides compatibility with different MSTP regions and with devices running different Spanning Tree instances. It is equivalent to Spanning Tree Group 0.

Table 189. CIST Menu Options (/cfg/l2/mrst/cist)

Command Syntax and Usage
<p>brg</p> <p>Displays the CIST Bridge Menu. To view menu options, see page 255.</p>
<p>port <port alias or number></p> <p>Displays the CIST Port Menu. To view menu options, see page 256.</p>
<p>add <VLAN numbers></p> <p>Adds selected VLANs to the CIST.</p>
<p>default</p> <p>Resets all CIST parameters to their default values.</p>
<p>cur</p> <p>Displays the current CIST configuration.</p>

/cfg/12/mrst/cist/brg CIST Bridge Configuration Menu

```
[CIST Bridge Menu]
prior - Set CIST bridge Priority (0-65535)
mxage - Set CIST bridge Max Age (6-40 secs)
fwd - Set CIST bridge Forward Delay (4-30 secs)
cur - Display current CIST bridge parameters
```

CIST bridge parameters are used only when the switch is in MSTP mode. CIST parameters do not affect operation of STP/PVST+.

Table 190. CIST Bridge Configuration Menu Options (/cfg/12/mrst/cist/brg)

Command Syntax and Usage	
prior <0-65535>	Configures the CIST bridge priority. The bridge priority parameter controls which bridge on the network is the MSTP root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority. The range is 0 to 65535, in steps of 4096 (0, 4096, 8192...). The default value is 61440.
mxage <6-40 seconds>	Configures the CIST bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the MSTP network. The range is 6 to 40 seconds, and the default is 20 seconds.
fwd <4-30 seconds>	Configures the CIST bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.
cur	Displays the current CIST bridge configuration.

`/cfg/12/mrst/cist/port` *<port alias or number>*
CIST Port Configuration Menu

```
[CIST Port 1 Menu]
prior    - Set port Priority (0-240)
cost     - Set port Path Cost (1-200000000, 0 for auto)
hello    - Set CIST port Hello Time (1-10 secs)
pvst-pro - Enable/disable PVST Protection (for MSTP only)
on       - Turn port's Spanning Tree ON
off      - Turn port's Spanning Tree OFF
cur      - Display current port Spanning Tree parameters
```

CIST port parameters are used to modify MRST operation on an individual port basis. CIST parameters do not affect operation of STP/PVST+, RSTP, or PVRST+. For each port, RSTP/MSTP is turned on by default.

Table 191. CIST Port Configuration Menu Options (`/cfg/12/mrst/cist/port`)

Command Syntax and Usage	
<code>prior <0-240></code>	Configures the CIST port priority. The port priority helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment. The range is 0 to 240, in steps of 16 (0, 16, 32...), and the default is 128.
<code>cost <0-200000000></code>	Configures the CIST port path cost. The port path cost is used to help determine the designated port for a segment. Port path cost is based on the port speed, and is calculated as follows: <ul style="list-style-type: none"> – 100Mbps = 200000 – 1Gbps = 20000 – 10Gbps = 2000 The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.
<code>hello <1-10 seconds></code>	Configures the CIST port Hello time. The Hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge Hello value. The range is 1 to 10 seconds, and the default is 2 seconds.
<code>pvst-pro enable disable</code>	Enables or disables PVST Protection on the selected port. If the port receives any PVST+/PVRST+ BPDUs, it error disabled. PVST Protection works only in MSTP mode. The default setting is <code>disabled</code> .
<code>on</code>	Enables MRST on the port.

Table 191. CIST Port Configuration Menu Options (/cfg/l2/mrst/cist/port) (continued)

Command Syntax and Usage	
off	Disables MRST on the port.
cur	Displays the current CIST port configuration.

/cfg/l2/stg <STP group index> Spanning Tree Configuration Menu

[Spanning Tree Group 1 Menu]	
brg	- Bridge parameter menu
port	- Port parameter menu
add	- Add VLAN(s) to Spanning Tree Group
remove	- Remove VLAN(s) from Spanning Tree Group
clear	- Remove all VLANs from Spanning Tree Group
on	- Globally turn Spanning Tree ON
off	- Globally turn Spanning Tree OFF
default	- Default Spanning Tree and Member parameters
cur	- Display current bridge parameters

IBM Networking OS supports the IEEE 802.1D Spanning Tree Protocol (STP). STP is used to prevent loops in the network topology. Up to 128 Spanning Tree Groups can be configured on the switch (STG reserved for management).

Note: When VRRP is used for active/active redundancy, STG must be turned on.

Table 192. Spanning Tree Configuration Menu (/cfg/l2/stg)

Command Syntax and Usage	
brg	Displays the Bridge Spanning Tree Menu. To view menu options, see page 258 .
port <port alias or number>	Displays the Spanning Tree Port Menu. To view menu options, see page 259 .
add <VLAN number>	Associates a VLAN with a Spanning Tree and requires a VLAN ID as a parameter.
remove <VLAN number>	Breaks the association between a VLAN and a Spanning Tree and requires a VLAN ID as a parameter.
clear	Removes all VLANs from a Spanning Tree.
on	Globally enables Spanning Tree Protocol. STG is turned on by default.

Table 192. Spanning Tree Configuration Menu (/cfg/l2/stg) (continued)

Command Syntax and Usage	
off	Globally disables Spanning Tree Protocol.
default	Restores a Spanning Tree instance to its default configuration.
cur	Displays current Spanning Tree Protocol parameters.

/cfg/l2/stg <STP group number> /brg Spanning Tree Bridge Configuration Menu

[Bridge Spanning Tree Menu]	
prior	- Set bridge Priority [0-65535]
hello	- Set bridge Hello Time [1-10 secs]
mxage	- Set bridge Max Age (6-40 secs)
fwd	- Set bridge Forward Delay (4-30 secs)
cur	- Display current bridge parameters

Spanning Tree bridge parameters affect the global STG operation of the switch. STG bridge parameters include:

- Bridge priority
- Bridge hello time
- Bridge maximum age
- Forwarding delay

Table 193. Spanning Tree Bridge Menu Options (/cfg/l2/stg/brg)

Command Syntax and Usage	
prior <new bridge priority (0-65535)>	<p>Configures the bridge priority. The bridge priority parameter controls which bridge on the network is the STG root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority. The default value is 65534.</p> <p>RSTP/MSTP: The range is 0 to 61440, in steps of 4096 (0, 4096, 8192...), and the default is 61440.</p>
hello <new bridge hello time (1-10 secs)>	<p>Configures the bridge hello time. The hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value. The range is 1 to 10 seconds, and the default is 2 seconds.</p> <p>This command does not apply to MSTP (see CIST on page 254).</p>

Table 193. Spanning Tree Bridge Menu Options (/cfg/12/stg/brg) (continued)

Command Syntax and Usage	
<code>mxage</code>	<p><i><new bridge max age (6-40 secs)></i></p> <p>Configures the bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it re configures the STG network. The range is 6 to 40 seconds, and the default is 20 seconds.</p> <p>This command does not apply to MSTP (see CIST on page 254).</p>
<code>fwd</code>	<p><i><new bridge Forward Delay (4-30 secs)></i></p> <p>Configures the bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.</p> <p>This command does not apply to MSTP (see CIST on page 254).</p>
<code>cur</code>	<p>Displays the current bridge STG parameters.</p>

When configuring STG bridge parameters, the following formulas must be used:

- $2*(fwd-1) \geq mxage$
- $2*(hello+1) \leq mxage$

`/cfg/12/stg` *<STP group index>* /port *<port alias or number>*

Spanning Tree Port Configuration Menu

[Spanning Tree Port EXT1 Menu]	
<code>prior</code>	- Set port Priority (0-255)
<code>cost</code>	- Set port Path Cost (1-65535 (802.1D) / 1-200000000 (MSTP/RSTP) /0 for auto)
<code>on</code>	- Turn port's Spanning Tree ON
<code>off</code>	- Turn port's Spanning Tree OFF
<code>cur</code>	- Display current port Spanning Tree parameters

By default for STP/PVST+, Spanning Tree is turned off for internal ports and management ports, and turned on for external ports. By default for RSTP/MSTP, Spanning Tree is turned off for internal ports and management ports, and turned on for external ports, with internal ports configured as edge ports. STG port parameters include:

- Port priority
- Port path cost

For more information about port Spanning Tree commands, see [“Port Spanning Tree Configuration Menu” on page 219](#).

Table 194. Spanning Tree Port Menu Options (/cfg/l2/stg/port)

Command Syntax and Usage	
prior <new port Priority (0-255)>	<p>Configures the port priority. The port priority helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment. The default value is 128.</p> <p>RSTP/MSTP: The range is 0 to 240, in steps of 16 (0, 16, 32...).</p> <p>Note: In Stacking mode, the range is 0-255, in steps of 4 (0, 4, 8, 12...).</p>
cost <1-65535, 0 for default>	<p>Configures the port path cost. The port path cost is used to help determine the designated port for a segment. Port path cost is based on the port speed, and is calculated as follows:</p> <ul style="list-style-type: none"> – 100Mbps = 19 – 1Gbps = 4 – 10Gbps = 2 <p>The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.</p>
on	Enables STG on the port.
off	Disables STG on the port.
cur	Displays the current STG port parameters.

/cfg/12/fdb

Forwarding Database Configuration Menu

```
[FDB Menu]
mcast    - Static Multicast Menu
static   - Static FDB Menu
aging    - Configure FDB aging value
cur      - Display current FDB configuration
```

Use the following commands to configure the Forwarding Database (FDB) for the EN2092.

Table 195. FDB Menu Options (/cfg/12/fdb)

Command Syntax and Usage	
mcast	Displays the static Multicast menu. To view menu options, see page 261 .
static	Displays the static FDB menu. To view menu options, see page 262 .
aging <0-65535>	Configures the aging value for FDB entries, in seconds. The default value is 300.
cur	Displays the current FDB parameters.

/cfg/12/fdb/mcast

Static Multicast MAC Configuration Menu

```
[Static Multicast Menu]
add      - Add a Multicast Address entry
del      - Delete a Multicast Address entry
clear    - Clear all Multicast Address entries
cur      - Display current Multicast Address configuration
```

The following options are available to control the forwarding of known and unknown multicast packets:

- All multicast packets are flooded to the entire VLAN. This is the default switch behavior.
- Known multicast packets are forwarded only to those ports specified. Unknown multicast packets are flooded to the entire VLAN. To configure this option, define the Multicast MAC address for the VLAN and specify ports that are to receive multicast packets (/cfg/12/fdb/mcast/add).
- Known multicast packets are forwarded only to those ports specified. Unknown multicast packets are dropped. To configure this option:
 - Define the Multicast MAC address for the VLAN and specify ports that are to receive multicast packets (/cfg/12/fdb/mcast/add).
 - Enable Flood Blocking on ports that are not to receive multicast packets (/cfg/port x/floodblk ena).

Use the following commands to configure static Multicast MAC entries in the Forwarding Database (FDB).

Table 196. Static Multicast MAC Menu Options (/cfg/12/fdb/mcast)

Command Syntax and Usage
<pre>add <MAC address> <VLAN number> {port <port alias or number> trunk <trunk number> adminkey <1-65535>}</pre> <p>Adds a static multicast entry. You can list ports separated by a space, or enter a range of ports separated by a hyphen (-). For example:</p> <pre>add 01:00:00:23:3f:01 200 int1-int4</pre>
<pre>del <MAC address> <VLAN number> <port alias or number></pre> <p>Deletes a static multicast entry.</p>
<pre>clear {all mac <MAC address> vlan <VLAN number> port <port alias or number> trunk <trunk number> adminkey <1-65535>}</pre> <p>Clears static multicast entries.</p>
<pre>cur</pre> <p>Display current static multicast entries.</p>

/cfg/12/fdb/static Static FDB Configuration Menu

[Static FDB Menu]
<pre>add - Add a permanent FDB entry del - Delete a static FDB entry clear - Clear static FDB entries cur - Display current static FDB configuration</pre>

Use the following commands to configure static entries in the Forwarding Database (FDB).

Table 197. Static FDB Menu Options (/cfg/12/fdb/static)

Command Syntax and Usage
<pre>add <MAC address> <VLAN number> {port <port alias or number> trunk <trunk number> adminkey <value>}</pre> <p>Adds a permanent FDB entry. Enter the MAC address using the following format: xx:xx:xx:xx:xx:xx</p> <p>For example, 08:00:20:12:34:56</p> <p>You can also enter the MAC address as follows:</p> <pre>xxxxxxxxxxxx</pre> <p>For example, 080020123456</p>
<pre>del <MAC address> <VLAN number></pre> <p>Deletes a permanent FDB entry.</p>

Table 197. Static FDB Menu Options (/cfg/l2/fdb/static) (continued)

Command Syntax and Usage	
clear <MAC address> all {mac vlan port}	Clears static FDB entries.
cur	Display current static FDB configuration.

/cfg/l2/lldp LLDP Configuration Menu

[LLDP configuration Menu]	
port	- LLDP Port Menu
msgtxint	- Set transmission interval for LLDPDU
msgtxhld	- Set holdtime multiplier for LLDP advertisement
notifint	- Set minimum interval for successive trap notification
txdelay	- Set delay interval between LLDP advertisements
redelay	- Set reinitialization delay interval
on	- Globally turn LLDP On
off	- Globally turn LLDP Off
cur	- Show current LLDP parameters

Use the following commands to configure Link Layer Detection Protocol (LLDP).

Table 198. LLDP Menu Options (/cfg/l2/lldp)

Command Syntax and Usage	
port <port alias or number>	Displays the LLDP Port Configuration menu. To view menu options, see page 264 .
msgtxint <5-32768>	Configures the message transmission interval, in seconds. The default value is 30.
msgtxhld <2-10>	Configures the message hold time multiplier. The hold time is configured as a multiple of the message transmission interval. The default value is 4.
notifint <1-3600>	Configures the trap notification interval, in seconds. The default value is 5.
txdelay <1-8192>	Configures the transmission delay interval. The transmit delay timer represents the minimum time permitted between successive LLDP transmissions on a port. The default value is 2.

Table 198. LLDP Menu Options (/cfg/12/lldp) (continued)

Command Syntax and Usage	
redelay <1-10>	Configures the re-initialization delay interval, in seconds. The re-initialization delay allows the port LLDP information to stabilize before transmitting LLDP messages. The default value is 2.
on	Globally turns LLDP on. The default setting is on.
off	Globally turns LLDP off.
cur	Display current LLDP configuration.

/cfg/12/lldp/port <port alias or number>
LLDP Port Configuration Menu

[LLDP Port EXT2 Menu]
admstat - Set LLDP admin-status of this port
snmptrap - Enable/disable SNMP trap notification of this port
tlv - Optional TLVs Menu
cur - Show current LLDP port parameters

Use the following commands to configure LLDP port options.

Table 199. LLDP Port Menu Options (/cfg/12/lldp/port)

Command Syntax and Usage	
admstat disabled tx_only rx_only tx_rx	Configures the LLDP transmission type for the port, as follows: <ul style="list-style-type: none"> – Transmit only – Receive only – Transmit and receive – Disabled The default value is tx_rx.
snmptrap e d	Enables or disables SNMP trap notification for LLDP messages.
tlv	Displays the Optional TLV menu for the selected port. To view menu options, see page 265 .
cur	Display current LLDP configuration.

`/cfg/12/11dp/port <port alias or number> /tlv`
LLDP Optional TLV Configuration Menu

```
[Optional TLVs Menu]
portdesc - Enable/disable Port Description TLV for this port
sysname - Enable/disable System Name TLV for this port
sysdescr - Enable/disable System Description TLV for this port
syscap - Enable/disable System Capabilities TLV for this port
mgmtaddr - Enable/disable Management Address TLV for this port
portvid - Enable/disable Port VLAN ID TLV for this port
portprot - Enable/disable Port and Protocol VLAN ID TLV for this port
vlanname - Enable/disable VLAN Name TLV for this port
protid - Enable/disable Protocol Identity TLV for this port
macphy - Enable/disable MAC/PHY Configuration/Status TLV for this port
powermdi - Enable/disable Power Via MDI TLV for this port
linkaggr - Enable/disable Link Aggregation TLV for this port
framesz - Enable/disable Maximum Frame Size TLV for this port
dcbx - Enable/disable DCBX TLV for this port
all - Enable/disable all the Optional TLVs for this port
cur - Display current Optional TLVs configuration
```

Use the following commands to configure LLDP port TLV (Type, Length, Value) options for the selected port.

Table 200. Optional TLV Menu Options (/cfg/12/11dp/port x/tlv)

Command Syntax and Usage	
<code>portdesc d e</code>	Enables or disables the Port Description information type.
<code>sysname d e</code>	Enables or disables the System Name information type.
<code>sysdescr d e</code>	Enables or disables the System Description information type.
<code>syscap d e</code>	Enables or disables the System Capabilities information type.
<code>mgmtaddr d e</code>	Enables or disables the Management Address information type.
<code>portvid d e</code>	Enables or disables the Port VLAN ID information type.
<code>portprot d e</code>	Enables or disables the Port and VLAN Protocol ID information type.
<code>vlanname d e</code>	Enables or disables the VLAN Name information type.
<code>protid d e</code>	Enables or disables the Protocol ID information type.

Table 200. Optional TLV Menu Options (/cfg/12/ldp/port x/tlv) (continued)

Command Syntax and Usage	
macphy d e	Enables or disables the MAC/Phy Configuration information type.
powermdi d e	Enables or disables the Power via MDI information type.
linkaggr d e	Enables or disables the Link Aggregation information type.
framesz d e	Enables or disables the Maximum Frame Size information type.
dcbx d e	Enables or disables the Data Center Bridging Capability Exchange (DCBX) information type.
all d e	Enables or disables all optional TLV information types.
cur	Display current Optional TLV configuration.

/cfg/12/trunk <trunk group number>

Trunk Configuration Menu

[Trunk group 1 Menu]	
add	- Add port to trunk group
rem	- Remove port from trunk group
ena	- Enable trunk group
dis	- Disable trunk group
del	- Delete trunk group
cur	- Display current Trunk Group configuration

Trunk groups can provide super-bandwidth connections between EN2092s or other trunk capable devices. A *trunk* is a group of ports that act together, combining their bandwidth to create a single, larger port. Up to 52 trunk groups can be configured on the EN2092, with the following restrictions:

- Any physical switch port can belong to no more than one trunk group.
- Up to 16 ports can belong to the same trunk group.
- Configure all ports in a trunk group with the same properties (speed, duplex, flow control, STG, VLAN, and so on).
- Trunking from non-BLADE devices must comply with Cisco® EtherChannel® technology.

By default, each trunk group is empty and disabled.

Table 201. Trunk Configuration Menu Options (/cfg/l2/trunk)

Command Syntax and Usage	
add <port alias or number>	Adds a physical port or ports to the current trunk group. You can add several ports, with each port separated by a comma (,) or a range of ports, separated by a dash (-).
rem <port alias or number>	Removes a physical port or ports from the current trunk group.
ena	Enables the current trunk group.
dis	Disables the current trunk group.
del	Removes the current trunk group configuration.
cur	Displays current trunk group parameters.

/cfg/l2/thash

Trunk Hash Configuration Menu

[Trunk Hash Menu]	
set	- Trunk Hash Settings Menu
ingress	- Enable/disable ingress port hash
L4port	- Enable/disable L4 port hash
cur	- Display current Trunk Hash configuration

Use the following commands to configure IP trunk hash settings for the EN2092. Trunk hash parameters are set globally for the EN2092. The trunk hash settings affect both static trunks and LACP trunks.

To achieve the most even traffic distribution, select options that exhibit a wide range of values for your particular network. You may use the configuration settings listed in [Table 202](#) combined with the hash parameters listed in [Table 203](#).

Table 202. Trunk Hash Settings (/cfg/l2/thash)

Command Syntax and Usage	
set	Displays the Trunk Hash Settings menu. To view menu options, see page 268 .
ingress e d	Enables or disables trunk hash computation based on the ingress port. The default setting is disabled.

Table 202. Trunk Hash Settings (/cfg/l2/thash) (continued)

Command Syntax and Usage	
L4port e d	Enables or disables use of Layer 4 service ports (TCP, UDP, and so on) to compute the hash value. The default setting is disabled.
cur	Display current trunk hash configuration.

/cfg/l2/thash/set Trunk Hash Settings

[set Trunk Hash Settings Menu]	
smac	- Enable/disable smac hash
dmac	- Enable/disable dmac hash
sip	- Enable/disable sip hash
dip	- Enable/disable dip hash
cur	- Display current trunk hash setting

You can enable one or two of the following parameters, to configure any of the following valid combinations:

- SMAC (source MAC only)
- DMAC (destination MAC only)
- SIP (source IP only)
- DIP (destination IP only)
- SIP + DIP (source IP and destination IP)
- SMAC + DMAC (source MAC and destination MAC)

Use the following commands to configure IP trunk hash parameters for the EN2092.

Table 203. Trunk Hash Parameters (/cfg/l2/thash/set)

Command Syntax and Usage	
smac enable disable	Enable or disable trunk hashing on the source MAC.
dmac enable disable	Enable or disable trunk hashing on the destination MAC.
sip enable disable	Enable or disable trunk hashing on the source IP.
dip enable disable	Enable or disable trunk hashing on the destination IP.
cur	Display current trunk hash settings.

/cfg/12/lacp

LACP Configuration Menu

[LACP Menu]	
port	- LACP Port Menu
sysprio	- Set LACP system priority
timeout	- Set LACP system timeout scale for timing out partner info
delete	- Delete an LACP trunk
default	- Restore default LACP system configuration
cur	- Display current LACP configuration

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the EN2092.

Table 204. LACP Menu Options (/cfg/12/lacp)

Command Syntax and Usage	
port <port alias or number>	Displays the LACP Port menu. To view menu options, see page 270 .
sysprio <1-65535>	Defines the priority value (1 through 65535) for the EN2092. Lower numbers provide higher priority. The default value is 32768.
timeout short long	Defines the timeout period before invalidating LACP data from a remote partner. Choose short (3 seconds) or long (90 seconds). The default value is long. Note: It is recommended that you use a timeout value of long, to reduce LACPDU processing. If your EN2092's CPU utilization rate remains at 100% for periods of 90 seconds or more, consider using static trunks instead of LACP.
delete <1-65535>	Deletes a selected LACP trunk, based on its <i>admin key</i> . This command is equivalent to disabling LACP on each of the ports configured with the same <i>admin key</i> .
default sysprio timeout	Restores the selected parameters to their default values.
cur	Display current LACP configuration.

`/cfg/12/lacp/port <port alias or number>`
LACP Port Configuration Menu

```
[LACP Port EXT1 Menu]
mode      - Set LACP mode
prio      - Set LACP port priority
adminkey  - Set LACP port admin key
minlinks  - Set LACP port minimum links
default   - Restore default LACP port configuration
cur       - Display current LACP port configuration
```

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the selected port.

Table 205. LACP Port Menu Options (/cfg/12/lacp/port)

Command Syntax and Usage	
<code>mode off active passive</code>	<p>Set the LACP mode for this port, as follows:</p> <ul style="list-style-type: none"> – <code>off</code>: Turn LACP off for this port. You can use this port to manually configure a static trunk. The default value is <code>off</code>. – <code>active</code>: Turn LACP on and set this port to active. Active ports initiate LACPDU s. – <code>passive</code>: Turn LACP on and set this port to passive. Passive ports do not initiate LACPDU s, but respond to LACPDU s from active ports.
<code>prio <1-65535></code>	<p>Sets the priority value for the selected port. Lower numbers provide higher priority. The default value is 32768.</p>
<code>adminkey <1-65535></code>	<p>Set the admin key for this port. Only ports with the same <i>admin key</i> and <i>oper key</i> (operational state generated internally) can form a LACP trunk group.</p>
<code>minlinks <1-16></code>	<p>Set the minimum number of links for this port. If the specified minimum number of ports are not available, the trunk is placed in the <code>down</code> state.</p>
<code>default adminkey mode prio</code>	<p>Restores the selected parameters to their default values.</p>
<code>cur</code>	<p>Displays the current LACP configuration for this port.</p>

/cfg/l2/failovr Layer 2 Failover Configuration Menu

```
[Failover Menu]
trigger - Trigger Menu
vlan    - Globally turn VLAN Monitor ON/OFF
on      - Globally turn Failover ON
off     - Globally turn Failover OFF
cur     - Display current Failover configuration
```

Use this menu to configure Layer 2 Failover. For more information about Layer 2 Failover, see “High Availability” in the *IBM Networking OS Application Guide*.

Table 206. Layer 2 Failover Menu Options (/cfg/l2/failovr)

Command Syntax and Usage	
trigger <1-8>	Displays the Failover Trigger menu. To view menu options, see page 271 .
vlan on off	Globally turns VLAN monitor <code>on</code> or <code>off</code> . When the VLAN Monitor is <code>on</code> , the switch automatically disables only internal ports that belong to the same VLAN as ports in the failover trigger. The default value is <code>off</code> .
on	Globally turns Layer 2 Failover <code>on</code> .
off	Globally turns Layer 2 Failover <code>off</code> .
cur	Displays current Layer 2 Failover parameters.

/cfg/l2/failovr/trigger <1-8> Failover Trigger Configuration Menu

```
[Trigger 1 Menu]
amon    - Auto Monitor Menu
mmon    - Manual Monitor Menu
limit   - Limit of Trigger
ena     - Enable Trigger
dis     - Disable Trigger
del     - Delete Trigger
cur     - Display current Trigger configuration
```

Table 207. Failover Trigger Menu Options (/cfg/12/failovr/trigger)

Command Syntax and Usage	
amon	Displays the Auto Monitor menu for the selected trigger. To view menu options, see page 273 .
mmon	Displays the Manual Monitor menu for the selected trigger. To view menu options, see page 273 .
limit <0-1024>	Configures the minimum number of operational links allowed within each trigger before the trigger initiates a failover event. If you enter a value of zero (0), the switch triggers a failover event only when no links in the trigger are operational.
ena	Enables the selected trigger.
dis	Disables the selected trigger.
del	Deletes the selected trigger.
cur	Displays the current failover trigger settings.

`/cfg/12/failovr/trigger <1-8>/amon`
Auto Monitor Configuration Menu

[Auto Monitor Menu]	
addtrnk	- Add trunk to Auto Monitor
remtrnk	- Remove trunk from Auto Monitor
addkey	- Add LACP port adminkey to Auto Monitor
remkey	- Remove LACP port adminkey from Auto Monitor
cur	- Display current Auto Monitor configuration

Table 208. Auto Monitor Menu Options (/cfg/12/failovr/trigger/amon)

Command Syntax and Usage	
addtrnk <trunk group number>	Adds a trunk group to the Auto Monitor.
remtrnk <trunk group number>	Removes a trunk group from the Auto Monitor.
addkey <1-65535>	Adds an LACP <i>admin key</i> to the Auto Monitor. LACP trunks formed with this <i>admin key</i> will be included in the Auto Monitor.
remkey <1-65535>	Removes an LACP <i>admin key</i> from the Auto Monitor.
cur	Displays the current Auto Monitor settings.

`/cfg/12/failovr/trigger <1-8>/mmon`
Manual Monitor Configuration Menu

[Manual Monitor Menu]	
monitor	- Monitor Menu
control	- Control Menu
cur	- Display current Manual Monitor configuration

Use this menu to configure Failover Manual Monitor. These menus allow you to manually define both the monitor and control ports that participate in failover teaming.

Note: AMON and MMON configurations are mutually exclusive.

Table 209. Failover Manual Monitor options (/cfg/12/failovr/trigger/mmon)

Command Syntax and Usage	
monitor	Displays the Manual Monitor - Monitor menu for the selected trigger.

Table 209. Failover Manual Monitor options (/cfg/l2/failovr/trigger/mmon) (continued)

Command Syntax and Usage	
control	Displays the Manual Monitor - Control menu for the selected trigger.
cur	Displays the current Manual Monitor settings.

/cfg/l2/failovr/trigger <1-8>/mmon/monitor
Manual Monitor Port Configuration Menu

[Monitor Menu]	
addport	- Add port to Monitor
remport	- Remove port from Monitor
addtrnk	- Add trunk to Monitor
remtrnk	- Remove trunk from Monitor
addkey	- Add LACP port adminkey to Monitor
remkey	- Remove LACP port adminkey from Monitor
cur	- Display current Monitor configuration

Use this menu to define the port link(s) to monitor. The Manual Monitor Port configuration accepts only external uplink ports.

Table 210. Failover Manual Monitor Port Options (/cfg/l2/failovr/trigger/mmon/monitor)

Command Syntax and Usage	
addport <port alias or number>	Adds the selected port to the Manual Monitor Port configuration.
remport <port alias or number>	Removes the selected port from the Manual Monitor Port configuration.
addtrnk <trunk number>	Adds a trunk group to the Manual Monitor Port configuration.
remtrnk <trunk number>	Removes a trunk group from the Manual Monitor Port configuration.
addkey <1-65535>	Adds an LACP <i>admin key</i> to the Manual Monitor Port configuration. LACP trunks formed with this <i>admin key</i> will be included in the Manual Monitor Port configuration.
remkey <1-65535>	Removes an LACP admin key from the Manual Monitor Port configuration.
cur	Displays the current Manual Monitor Port configuration.

`/cfg/12/failovr/trigger <1-8>/mmon/control`
Manual Monitor Control Configuration Menu

```
[Control Menu]
  addport - Add port to Control
  remport - Remove port from Control
  addtrnk - Add trunk to Control
  remtrnk - Remove trunk from Control
  addkey  - Add LACP port adminkey to Control
  remkey  - Remove LACP port adminkey from Control
  cur     - Display current Control configuration
```

Use this menu to define the port link(s) to control. The Manual Monitor Control configuration accepts internal and external ports, but not management ports.

Table 211. Failover Manual Monitor Control Options (`/cfg/12/failovr/trigger/mmon/control`)

Command Syntax and Usage	
<code>addport <port alias or number></code>	Adds the selected port to the Manual Monitor Control configuration.
<code>remport <port alias or number></code>	Removes the selected port from the Manual Monitor Control configuration.
<code>addtrnk <trunk number></code>	Adds a trunk group to the Manual Monitor Control configuration.
<code>remtrnk <trunk number></code>	Removes a trunk group from the Manual Monitor Control configuration.
<code>addkey <1-65535></code>	Adds an LACP <i>admin key</i> to the Manual Monitor Control configuration. LACP trunks formed with this <i>admin key</i> will be included in the Manual Monitor Control configuration.
<code>remkey <1-65535></code>	Removes an LACP <i>admin key</i> from the Manual Monitor Control configuration.
<code>cur</code>	Displays the current Manual Monitor Control configuration.

/cfg/12/hotlink

Hot Links Configuration Menu

[Hot Links Menu]	
trigger	- Trigger Menu
bpdu	- Enable/disable BPDU flood
sndfdb	- Enable/disable FDB update
sndrate	- Set FDB update rate
on	- Globally turn Hot Links ON
off	- Globally turn Hot Links OFF
cur	- Display current Hot Links configuration

Table 212 describes the Hot Links menu options.

Table 212. Hot Links Menu Options (/cfg/12/hotlink)

Command Syntax and Usage	
trigger <1-25>	Displays the Hot Links Trigger menu. To view menu options, see page 277 .
bpdu enable disable	Enables or disables flooding of Spanning-Tree BPDUs on the active Hot Links interface when the interface belongs to a Spanning Tree group that is globally turned <code>off</code> . This feature can prevent unintentional loop scenarios (for example, if two uplinks come up at the same time). The default setting is <code>disabled</code> .
sndfdb enable disable	Enables or disables FDB Update, which allows the switch to send FDB and MAC update packets over the active interface. The default setting is <code>disabled</code> .
sndrate <10-1000>	Configures the FDB Update rate, in packets per second.
on	Globally turns Hot Links <code>on</code> . The default value is <code>off</code> .
off	Globally turns Hot Links <code>off</code> .
cur	Displays current Hot Links configuration.

/cfg/12/hotlink/trigger <1-25> Hot Links Trigger Configuration Menu

```
[Trigger 2 Menu]
master - Master Menu
backup - Backup Menu
fdelay - Set Forward Delay (secs)
name - Set Trigger Name
preempt - Enable/disable Preemption
ena - Enable Trigger
dis - Disable Trigger
del - Delete Trigger
cur - Display current Trigger configuration
```

Table 213. Hot Links Trigger Menu Options (/cfg/12/hotlink/trigger)

Command Syntax and Usage	
master	Displays the Master interface menu for the selected trigger. To view menu options, see page 278 .
backup	Displays the Backup interface menu for the selected trigger. To view menu options, see page 278 .
fdelay <0-3600>	Configures the Forward Delay interval, in seconds. The default value is 1.
name <1-32 characters>	Configures a name for the trigger.
preempt e d	Enables or disables pre-emption, which allows the Master interface to transition to the Active state whenever it becomes available. The default setting is <i>enabled</i> .
ena	Enables the Hot Links trigger.
dis	Disables the Hot Links trigger.
del	Deletes the Hot Links trigger.
cur	Displays the current Hot Links trigger configuration.

/cfg/12/hotlink/trigger <1-25>/master Hot Links Trigger Master Configuration Menu

[Master Menu]	
port	- Set port in Master
trunk	- Set trunk in Master
adminkey	- Set adminkey in Master
cur	- Display current Master configuration

Table 214. Hot Links Trigger Master menu (/cfg/12/hotlink/trigger/master)

Command Syntax and Usage	
port <port alias or number>	Adds the selected port to the Master interface. Enter 0 (zero) to clear the port.
trunk <trunk number> 0	Adds the selected trunk group to the Master interface. Enter 0 (zero) to clear the trunk group.
adminkey <1-65535>	Adds an LACP <i>admin key</i> to the Master interface. LACP trunks formed with this <i>admin key</i> will be included in the Master interface. Enter 0 (zero) to clear the <i>admin key</i> .
cur	Displays the current Hot Links Master interface configuration.

/cfg/12/hotlink/trigger <1-25>/backup Hot Links Trigger Backup Configuration Menu

[Backup Menu]	
port	- Set port in Backup
trunk	- Set trunk in Backup
adminkey	- Set adminkey in Backup
cur	- Display current Backup configuration

Table 215. Hot Links Trigger Backup menu (/cfg/12/hotlink/trigger/backup)

Command Syntax and Usage	
port <port alias or number>	Adds the selected port to the Backup interface. Enter 0 (zero) to clear the port.
trunk <trunk number> 0	Adds the selected trunk to the Backup interface. Enter 0 (zero) to clear the trunk group.

Table 215. Hot Links Trigger Backup menu (/cfg/12/hotlink/trigger/backup) (continued)

Command Syntax and Usage	
adminkey <1-65535>	Adds an LACP <i>admin key</i> to the Backup interface. LACP trunks formed with this <i>admin key</i> will be included in the Backup interface. Enter 0 (zero) to clear the <i>admin key</i> .
cur	Displays the current Hot Links Backup interface settings.

/cfg/12/vlan <VLAN number>
VLAN Configuration Menu

[VLAN 1 Menu]	
pvlan	- Protocol VLAN Menu
privlan	- Private-VLAN Menu
name	- Set VLAN name
stg	- Assign VLAN to a Spanning Tree Group
vmap	- Set VMAP for this vlan
add	- Add port to VLAN
rem	- Remove port from VLAN
def	- Define VLAN as list of ports
mgmt	- Enable/Disable this VLAN as additional management VLAN
ena	- Enable VLAN
dis	- Disable VLAN
del	- Delete VLAN
cur	- Display current VLAN configuration

The commands in this menu configure VLAN attributes, change the status of each VLAN, change the port membership of each VLAN, and delete VLANs.

By default, VLAN 1 is the only VLAN configured on the switch. Internal server ports and external uplink ports are members of VLAN 1 by default. Up to 1024 VLANs can be configured on the EN2092.

VLANs can be assigned any number between 1 and 4094. VLAN 4095 is reserved for switch management.

Table 216. VLAN Configuration Menu Options (/cfg/12/vlan)

Command Syntax and Usage	
pvlan <1-8>	Displays the Protocol-based VLAN menu. To view menu options, see page 281 .
privlan	Displays the Private VLAN menu. To view menu options, see page 283 .
name	Assigns a name to the VLAN or changes the existing name. The default VLAN name is the first one.

Table 216. VLAN Configuration Menu Options (/cfg/12/vlan) (continued)

Command Syntax and Usage	
stg <Spanning Tree Group index>	Assigns a VLAN to a Spanning Tree Group.
vmap {add rem} <1-128> [extports intports]	Adds or removes a VLAN Map to the VLAN membership. You can choose to limit operation of the VLAN Map to internal ports only or external ports only. If you do not select a port type, the VMAP is applied to the entire VLAN.
add <port alias or number>	Adds port(s) to the VLAN membership.
rem <port alias or number>	Removes port(s) from this VLAN.
def <list of port numbers>	Defines which ports are members of this VLAN. Every port must be a member of at least one VLAN. By default, internal server ports (INT _x) and external ports (EXT _x) are in VLAN 1.
mgmt enable disable	Configures this VLAN as a management VLAN. You must add the management ports (MGT1) to each new management VLAN. External ports cannot be added to management VLANs.
ena	Enables this VLAN.
dis	Disables this VLAN without removing it from the configuration.
del	Deletes this VLAN.
cur	Displays the current VLAN configuration.

Note: All ports must belong to at least one VLAN. Any port which is removed from a VLAN and which is not a member of any other VLAN is automatically added to default VLAN 1. You cannot remove a port from VLAN 1 if the port has no membership in any other VLAN. Also, you cannot add a port to more than one VLAN unless the port has VLAN tagging turned on (see the `tag` command on [page 212](#)).

`/cfg/12/vlan/pvlan <protocol number>`
Protocol-Based VLAN Configuration Menu

```
[VLAN 1 Protocol 1 Menu]
pty      - Set protocol type
protocol - Select a predefined protocol
prio     - Set priority to protocol
add      - Add port to PVLAN
rem      - Remove port from PVLAN
ports    - Add/Remove a list of ports to/from PVLAN
tagpv1   - Enable/Disable port tagging for PVLAN
taglist  - Enable tagging a port list for PVLAN
ena      - Enable protocol
dis      - Disable protocol
del      - Delete protocol
cur      - Display current PVLAN configuration
```

Use this menu to configure Protocol-based VLAN (PVLAN) for the selected VLAN.

Table 217. PVLAN Menu Options (/cfg/12/vlan/pvlan)

Command Syntax and Usage	
<code>pty <(Ether2 SNAP LLC)> <Ethernet type></code>	Configures the frame type and the Ethernet type for the selected protocol. Ethernet type consists of a 4-digit (16 bit) hex code, such as 0080 (IPv4).
<code>protocol <Protocol type></code>	<p>Selects a pre-defined protocol, as follows:</p> <ul style="list-style-type: none"> - decEther2:DEC Local Area Transport - ipv4Ether2:Internet IP (IPv4) - ipv6Ether2:IPv6 - ipx802.2:Novell IPX 802.2 - ipx802.3:Novell IPX 802.3 - ipxEther2:Novell IPX - ipxSnap:Novell IPX SNAP - netbios:NetBIOS 802.2 - rarpEther2:Reverse ARP - sna802.2:SNA 802.2 - snaEther2:IBM SNA Service on Ethernet - vinesEther2:Banyan VINES - xnsEther2:XNS Compatibility
<code>prio <0-7></code>	Configures the priority value for this PVLAN.
<code>add <port alias or number></code>	Adds a port to the selected PVLAN.
<code>rem <port alias or number></code>	Removes a port from the selected PVLAN.

Table 217. PVLAN Menu Options (/cfg/12/vlan/pvlan) (continued)

Command Syntax and Usage	
ports	<port alias or number, or a list or range of ports> Defines a list of ports that belong to the selected protocol on this VLAN. Enter 0 (zero) to remove all ports.
tagpv1	enable disable Enables or disables port tagging on this PVLAN.
taglist	{<port alias or number, or a list or range of ports> empty} Defines a list of ports that will be tagged by the selected protocol on this VLAN. Enter empty to disable tagging on all ports by this PVLAN.
ena	Enables the selected protocol on the VLAN.
dis	Disables the selected protocol on the VLAN.
del	Deletes the selected protocol configuration from the VLAN.
cur	Displays current parameters for the selected PVLAN.

/cfg/12/vlan/privlan Private VLAN Configuration Menu

```
[privlan Menu]
type      - Set Private-VLAN type
map       - Associate secondary VLAN with a primary VLAN
ena       - Enable Private-VLAN
dis       - Disable Private-VLAN
cur       - Display current Private-VLAN configuration
```

Use this menu to configure a Private VLAN.

Table 218. Private VLAN Menu Options (/cfg/12/vlan/privlan)

Command Syntax and Usage	
type {none primary isolated community}	<p>Defines the VLAN type, as follows:</p> <ul style="list-style-type: none"> - none: Clears the Private VLAN type. - primary: A Private VLAN must have only one primary VLAN. The primary VLAN carries unidirectional traffic to ports on the isolated VLAN or to community VLAN. - isolated: The isolated VLAN carries unidirectional traffic from host ports. A Private VLAN may have only one isolated VLAN. - community: Community VLANs carry upstream traffic from host ports. A Private VLAN may have multiple community VLANs.
map <2-4094> none	<p>Configures Private VLAN mapping between a secondary VLAN (<i>isolated</i> or <i>community</i>) and a primary VLAN. Enter the primary VLAN ID.</p>
ena	<p>Enables the Private VLAN.</p>
dis	<p>Disables the Private VLAN.</p>
cur	<p>Displays current parameters for the selected Private VLAN.</p>

rmap <route map number (1-32)>	Displays the Route Map Menu. To view menu options see page 294 .
rip	Displays the Routing Interface Protocol Menu. To view menu options, see page 297 .
ospf	Displays the OSPF Menu. To view menu options, see page 300 .
bgp	Displays the Border Gateway Protocol Menu. To view menu options, see page 310 .
mld	Displays the Multicast Listener Discovery Menu. To view menu options, see page 317 .
igmp	Displays the IGMP Menu. To view menu options, see page 319 .
ikev2	Displays the IKEv2 Menu. To view menu options, see page 330 .
ipsec	Displays the IPsec Menu. To view menu options, see page 333 .
dns	Displays the IP Domain Name System Menu. To view menu options, see page 342 .
bootp	Displays the Bootstrap Protocol Menu. To view menu options, see page 343 .
vrrp	Displays the Virtual Router Redundancy Configuration Menu. To view menu options, see page 345 .
gw6 <gateway number (1, 4)>	Displays the IPv6 Gateway Configuration Menu. To view menu options, see page 353 .
route6	Displays the IPv6 Routing Configuration Menu. To view menu options, see page 354 .

Table 219. Layer 3 Configuration Menu (/cfg/l3) (continued)

Command Syntax and Usage	
nbrcache	Displays the IPv6 Neighbor Discovery Cache Configuration Menu. To view menu options, see page 355 .
ip6pmtu	Displays the IPv6 Path MTU menu. To view menu options, see page 356 .
ospf3	Displays the OSPFv3 Configuration Menu. To view menu options, see page 357 .
ndprefix	Displays the IPv6 Neighbor Discovery Prefix menu. To view menu options, see page 371 .
ppt	Displays the Prefix Policy Table menu. To view menu options, see page 374 .
loopif	Displays the IP Loopback Interface Menu. To view menu options, see page 375 .
rtrid <IP address (such as, 192.4.17.101)>	Sets the router ID.
flooding	Displays the Flooding Configuration Menu. To view menu options, see page 376 .
cur	Displays the current IP configuration.

/cfg/l3/if <interface number>

IP Interface Configuration Menu

[IP Interface 1 Menu]	
addr	- Set IP address
vlan	- Set VLAN number
relay	- Enable/disable BOOTP relay
ena	- Enable IP interface
dis	- Disable IP interface
del	- Delete IP interface
cur	- Display current interface configuration

The EN2092 can be configured with up to 128 IP interfaces. Each IP interface represents the EN2092 on an IP subnet on your network. The Interface option is disabled by default.

IP Interface 128 is reserved for switch management. If the IPv6 feature is enabled on the switch, IP Interface 127 is also reserved.

Note: To maintain connectivity between the management module and the EN2092, use the management module interface to change the IP address of the switch.

Table 220. IP Interface Menu Options (/cfg/13/if)

Command Syntax and Usage	
addr <IPv4 address (such as 192.4.17.101)>	Configures the IPv4 address of the switch interface, using dotted decimal notation.
vlan <VLAN number>	Configures the VLAN number for this interface. Each interface can belong to only one VLAN. Each VLAN can contain multiple IPv4 interfaces.
relay disable enable	Enables or disables the BOOTP relay on this interface. The default setting is enabled.
ena	Enables this IP interface.
dis	Disables this IP interface.
del	Removes this IP interface.
cur	Displays the current interface settings.

/cfg/13/gw <gateway number>

Default Gateway Configuration Menu

[Default gateway 1 Menu]	
addr	- Set IP address
intr	- Set interval between ping attempts
retry	- Set number of failed attempts to declare gateway DOWN
arp	- Enable/disable ARP only health checks
ena	- Enable default gateway
dis	- Disable default gateway
del	- Delete default gateway
cur	- Display current default gateway configuration

The switch can be configured with up to 4 IPv4 gateways.

This option is disabled by default.

Table 221. Default Gateway Menu Options (/cfg/13/gw)

Command Syntax and Usage	
<code>addr</code> <default gateway address (such as, 192.4.17.44)>	Configures the IP address of the default IP gateway using dotted decimal notation.
<code>intr</code> <0-60 seconds>	The switch pings the default gateway to verify that it's up. The <code>intr</code> option sets the time between health checks. The range is from 0 to 60 seconds. The default is 2 seconds.
<code>retry</code> <number of attempts (1-120)>	Sets the number of failed health check attempts required before declaring this default gateway inoperative. The range is from 1 to 120 attempts. The default is 8 attempts.
<code>arp disable enable</code>	Enables or disables Address Resolution Protocol (ARP) health checks. The default value is <code>disabled</code> . The <code>arp</code> option does not apply to management gateways.
<code>ena</code>	Enables the gateway for use.
<code>dis</code>	Disables the gateway.
<code>del</code>	Deletes the gateway from the configuration.
<code>cur</code>	Displays the current gateway settings.

/cfg/13/route

IPv4 Static Route Configuration Menu

[IP Static Route Menu]	
add	- Add static route
rem	- Remove static route
clear	- Clear static routes
interval	- Change ECMP route health check ping interval
retries	- Change the number of retries for ECMP health check
ecmhash	- Choose ECMP hash mechanism sip/dipsip
cur	- Display current static routes

Up to 128 IPv4 static routes can be configured.

Table 222. IP Static Route Configuration Menu Options (cfg/13/route)

Command Syntax and Usage	
add <destination> <mask> <gateway> [<interface number>]	<p>Adds a static route. You will be prompted to enter a destination IP address, destination subnet mask, and gateway address. Enter all addresses using dotted decimal notation.</p> <p>Note: You may add multiple routes with the same IP address, but with different gateways. These routes become Equal Cost Multipath (ECMP) routes. The maximum number of gateways for each destination is five (5).</p>
rem <destination> <mask> [<interface number>]	<p>Removes a static route. The destination address of the route to remove must be specified using dotted decimal notation.</p> <p>Note: The gateway IP address is optional. Include the gateway when you remove an ECMP route. If you do not include the gateway, then all ECMP paths for the route are deleted.</p>
clear <destination IP address> <gateway IP address> all <value>	<p>Clears the selected IPv4 static routes.</p> <p>Note: Use the gateway IP address to clear a single gateway for an ECMP route.</p>
interval <1-60>	<p>Configures the ping interval for ECMP health checks, in seconds. The default value is one second.</p>
retries <1-60>	<p>Configures the number of health check retries allowed before the switch declares that the gateway is down. The default value is 3.</p>
ecmhash [sip][dipsip]	<p>Configures ECMP route hashing parameters. You may choose one of the following parameters:</p> <ul style="list-style-type: none"> - sip: Source IP address - dipsip: Destination IP address and source IP address
cur	<p>Displays the current IPv4 static routes.</p>

/cfg/13/mroute

IP Multicast Route Configuration Menu

[IPMC Static Route Menu]	
addport	- Add static IP Multicast route for port
remport	- Remove static IP Multicast route for port
addtrnk	- Add static IP Multicast route for trunk
remtrnk	- Remove static IP Multicast route for trunk
addkey	- Add static IP Multicast route for LACP adminkey
remkey	- Remove static IP Multicast route or LACP adminkey
cur	- Display current static IPMC route configuration

The following table describes the IP Multicast (IPMC) route menu options. Before you can add an IPMC route, IGMP must be turned on (/cfg/13/igmp on), and IGMP Relay must be enabled (/cfg/13/igmp/relay ena) or IGMP Snooping must be enabled (/cfg/13/igmp/snoop ena).

Table 223. IPMC Route Configuration Options

Command Syntax and Usage	
<pre>addport <IPMC destination> <VLAN number> <port alias or number> primary backup host <virtual router ID> none</pre>	<p>Adds a static multicast route. You will be prompted to enter a destination IP address (in dotted decimal notation), VLAN, and member port. Indicate whether the route is used for a primary, backup, or host multicast router.</p>
<pre>remport <IPMC destination> <VLAN number> <port alias or number> primary backup host <virtual router ID> none</pre>	<p>Removes a static multicast route. The destination address, VLAN, and member port of the route to remove must be specified.</p>
<pre>addtrnk <IPMC destination> <VLAN number> <trunk group number> primary backup host <virtual router ID> none</pre>	<p>Adds a static multicast route. You will be prompted to enter a destination IP address (in dotted decimal notation), VLAN, and member trunk group. Indicate whether the route is used for a primary, backup, or host multicast router.</p>
<pre>remtrnk <IPMC destination> <VLAN number> <trunk group number> primary backup host <virtual router ID> none</pre>	<p>Removes a static multicast route. The destination address, VLAN, and member trunk group of the route to remove must be specified.</p>
<pre>addkey <IPMC destination> <VLAN number> <LACP adminkey> primary backup host <virtual router ID> none</pre>	<p>Adds a static multicast route. You will be prompted to enter a destination IP address (in dotted decimal notation), VLAN, and LACP adminkey. Indicate whether the route is used for a primary, backup, or host multicast router.</p>
<pre>remkey <IPMC destination> <VLAN number> <LACP adminkey> primary backup host <virtual router ID> none</pre>	<p>Removes a static multicast route. The destination address, VLAN, and LACP adminkey of the route to remove must be specified.</p>
<pre>cur</pre>	<p>Displays the current IP multicast routes.</p>

/cfg/13/arp

ARP Configuration Menu

Address Resolution Protocol (ARP) is the TCP/IP protocol that resides within the Internet layer. ARP resolves a physical address from an IP address. ARP queries machines on the local network for their physical addresses. ARP also maintains IP to physical address pairs in its cache memory. In any IP communication, the ARP cache is consulted to see if the IP address of the computer or the router is present in the ARP cache. Then the corresponding physical address is used to send a packet.

```
[ARP Menu]
static - Static ARP Menu
rearp  - Set re-ARP period in minutes
cur    - Display current ARP configuration
```

Table 224. ARP Configuration Menu Options (/cfg/13/arp)

Command Syntax and Usage	
static	Displays Static ARP menu. To view options, see page 291 .
rearp <2-120 minutes>	Defines re-ARP period, in minutes, for entries in the switch arp table. When ARP entries reach this value the switch will re-ARP for the address to attempt to refresh the ARP cache. The default value is 5 minutes.
cur	Displays the current ARP configurations.

/cfg/13/arp/static

ARP Static Configuration Menu

Static ARP entries are permanent in the ARP cache and do not age out like the ARP entries that are learned dynamically. Static ARP entries enable the switch to reach the hosts without sending an ARP broadcast request to the network. Static ARPs are also useful to communicate with devices that do not respond to ARP requests. Static ARPs can also be configured on some gateways as a protection against malicious ARP Cache corruption and possible DOS attacks.

```
[Static ARP Menu]
add    - Add a permanent ARP entry
del    - Delete an ARP entry
clear  - Clear static ARP entries
cur    - Display current static ARP configuration
```

Table 225. ARP Static Configuration Menu Options (/cfg/l3/arp/static)

Command Syntax and Usage	
add <IP address> <MAC address> <VLAN number> <port number>	Adds a permanent ARP entry.
del <IP address (such as, 192.4.17.101)>	Deletes a permanent ARP entry.
clear [all if <interface number> vlan <VLAN number> port <port number>]	Clears static ARP entries.
cur	Displays current static ARP configuration.

/cfg/l3/frwd IP Forwarding Configuration Menu

[IP Forwarding Menu]
dirbr - Enable or disable forwarding directed broadcasts
noicmprd - Enable/disable No ICMP Redirects
icmp6rd - Enable/disable ICMPv6 Redirects
on - Globally turn IP Forwarding ON
off - Globally turn IP Forwarding OFF
cur - Display current IP Forwarding configuration

Table 226. IP Forwarding Configuration Menu Options (/cfg/l3/frwd)

Command Syntax and Usage	
dirbr disable enable	Enables or disables forwarding directed broadcasts. The default setting is disabled.
noicmprd disable enable	Enables or disables ICMP re-directs. The default setting is disabled.
icmp6rd disable enable	Enables or disables IPv6 ICMP re-directs. The default setting is disabled.
on	Enables IP forwarding (routing) on the EN2092. Forwarding is turned on by default.
off	Disables IP forwarding (routing) on the EN2092.
cur	Displays the current IP forwarding settings.

/cfg/13/nwf <1-256>

Network Filter Configuration Menu

```
[IP Network Filter 1 Menu]
  addr    - IP Address
  mask    - IP network filter mask
  enable  - Enable Network Filter
  disable - Disable Network Filter
  delete  - Delete Network Filter
  cur     - Display current Network Filter configuration
```

Table 227. IP Network Filter Menu Options (/cfg/13/nwf)

Command Syntax and Usage	
addr <IP address, such as 192.4.17.44>	Sets the IP address that will be accepted by the peer when the filter is enabled. If used with the mask option, a range of IP addresses is accepted. The default address is 0.0.0.0 For Border Gateway Protocol (BGP), assign the network filter to an access-list in a route map, then assign the route map to the peer.
mask <IP network filter mask>	Sets the network filter mask that is used with addr . The default value is 0.0.0.0 For Border Gateway Protocol (BGP), assign the network filter to a route map, then assign the route map to the peer.
enable	Enables the Network Filter configuration.
disable	Disables the Network Filter configuration.
delete	Deletes the Network Filter configuration.
cur	Displays the current the Network Filter configuration.

/cfg/13/rmap <route map number> Routing Map Configuration Menu

Note: The *map number* (1-32) represents the routing map you wish to configure.

[IP Route Map 1 Menu]	
alist	- Access List number
aspath	- AS Filter Menu
ap	- Set as-path prepend of the matched route
lp	- Set local-preference of the matched route
metric	- Set metric of the matched route
type	- Set OSPF metric-type of the matched route
prec	- Set the precedence of this route map
weight	- Set weight of the matched route
enable	- Enable route map
disable	- Disable route map
delete	- Delete route map
cur	- Display current route map configuration

Routing maps control and modify routing information.

Table 228. Routing Map Menu Options (/cfg/13/rmap)

Command Syntax and Usage	
alist <number 1-8>	Displays the Access List menu. For more information, see page 295 .
aspath <number 1-8>	Displays the Autonomous System (AS) Filter menu. For more information, see page 296 .
ap <AS number> [<AS number>] [<AS number>] none	Sets the AS path preference of the matched route. You can configure up to three path preferences.
lp <(0-4294967294)> none	Sets the local preference of the matched route, which affects both inbound and outbound directions. The path with the higher preference is preferred.
metric <(1-4294967294)> none	Sets the metric of the matched route.
type <value (1 2)> none	Assigns the type of OSPF metric. The default is type 1. <ul style="list-style-type: none"> - Type 1—External routes are calculated using both internal and external metrics. - Type 2—External routes are calculated using only the external metrics. Type 1 routes have more cost than Type 2. - none—Removes the OSPF metric.
prec <value (1-255)>	Sets the precedence of the route map. The smaller the value, the higher the precedence. Default value is 10.

Table 228. Routing Map Menu Options (/cfg/l3/rmap) (continued)

Command Syntax and Usage	
weight <value (0-65534)> none	Sets the weight of the route map.
enable	Enables the route map.
disable	Disables the route map.
delete	Deletes the route map.
cur	Displays the current route configuration.

/cfg/l3/rmap <route map number>/alist <access list number>

IP Access List Configuration Menu

Note: The *route map number* (1-32) and the *access list number* (1-8) represent the IP access list you wish to configure.

[IP Access List 1 Menu]	
nwf	- Network Filter number
metric	- Metric
action	- Set Network Filter action
enable	- Enable Access List
disable	- Disable Access List
delete	- Delete Access List
cur	- Display current Access List configuration

Table 229. IP Access List Menu Options (/cfg/l3/rmap/alist)

Command Syntax and Usage	
nwf <network filter number (1-256)>	Sets the network filter number. See "/cfg/l3/nwf <1-256>" on page 293 for details.
metric <(1-4294967294)> none	Sets the metric value in the AS-External (ASE) LSA.
action permit deny	Permits or denies action for the access list.
enable	Enables the access list.
disable	Disables the access list.

Table 229. IP Access List Menu Options (/cfg/l3/rmap/alist) (continued)

Command Syntax and Usage	
delete	Deletes the access list.
cur	Displays the current Access List configuration.

/cfg/l3/rmap <route map number> /aspath <autonomous system path>
Autonomous System Filter Path Menu

Note: The *rmap number* (1-32) and the *path number* (1-8) represent the AS path you wish to configure.

[AS Filter 1 Menu]	
as	- AS number
action	- Set AS Filter action
enable	- Enable AS Filter
disable	- Disable AS Filter
delete	- Delete AS Filter
cur	- Display current AS Filter configuration

Table 230. AS Filter Menu Options (/cfg/l3/rmap/aspath)

Command Syntax and Usage	
as <AS number (1-65535)>	Sets the Autonomous System filter's path number.
action <permit deny (p d)>	Permits or denies Autonomous System filter action.
enable	Enables the Autonomous System filter.
disable	Disables the Autonomous System filter.
delete	Deletes the Autonomous System filter.
cur	Displays the current Autonomous System filter configuration.

/cfg/l3/rip

Routing Information Protocol Configuration Menu

```
[Routing Information Protocol Menu]
  if      - RIP Interface Menu
  update  - Set update period in seconds
  on      - Globally turn RIP ON
  off     - Globally turn RIP OFF
  current - Display current RIP configuration
```

The RIP Menu is used for configuring Routing Information Protocol (RIP) parameters. This option is turned off by default.

Table 231. RIP Menu Options (/cfg/l3/rip)

Command Syntax and Usage	
<code>if <interface number></code>	Displays the RIP Interface menu. For more information, see page 297 .
<code>update <1-120></code>	Configures the time interval for sending for RIP table updates, in seconds. The default value is 30 seconds.
<code>on</code>	Globally turns RIP on.
<code>off</code>	Globally turns RIP off.
<code>cur</code>	Displays the current RIP configuration.

/cfg/l3/rip/if <interface number>

Routing Information Protocol Interface Configuration Menu

```
[RIP Interface 1 Menu]
  version - Set RIP version
  supply  - Enable/disable supplying route updates
  listen  - Enable/disable listening to route updates
  poison  - Enable/disable poisoned reverse
  split   - Enable/disable split horizon
  trigg   - Enable/disable triggered updates
  mcast   - Enable/disable multicast updates
  default - Set default route action
  metric  - Set metric
  auth    - Set authentication type
  key     - Set authentication key
  enable  - Enable interface
  disable - Disable interface
  current - Display current RIP interface configuration
```

The RIP Interface Menu is used for configuring Routing Information Protocol parameters for the selected interface.

Note: Do not configure RIP version 1 parameters if your routing equipment uses RIP version 2.

Table 232. RIP Interface Menu Options (/cfg/13/rip/if)

Command Syntax and Usage	
version 1 2 both	Configures the RIP version used by this interface. The default value is version 2.
supply disable enable	When enabled, the switch supplies routes to other routers. The default value is enabled.
listen disable enable	When enabled, the switch learns routes from other routers. The default value is enabled.
poison disable enable	When enabled, the switch uses split horizon with poisoned reverse. When disabled, the switch uses only split horizon. The default value is disabled.
split disable enable	Enables or disables split horizon. The default value is enabled.
trigg disable enable	Enables or disables Triggered Updates. Triggered Updates are used to speed convergence. When enabled, Triggered Updates force a router to send update messages immediately, even if it is not yet time for the update message. The default value is enabled.
mcast disable enable	Enables or disables multicast updates of the routing table (using address 224.0.0.9). The default value is enabled.
default none listen supply both	When enabled, the switch accepts RIP default routes from other routers, but gives them lower priority than configured default gateways. When disabled, the switch rejects RIP default routes. The default value is none.
metric <1-15>	Configures the route metric, which indicates the relative distance to the destination. The default value is 1.
auth none password	Configures the authentication type. The default is none.
key <password> none	Configures the authentication key password.
enable	Enables this RIP interface.

Table 232. RIP Interface Menu Options (/cfg/13/rip/if) (continued)

Command Syntax and Usage	
disable	Disables this RIP interface.
current	Displays the current RIP configuration.

/cfg/13/ospf

Open Shortest Path First Configuration Menu

[Open Shortest Path First Menu]	
aindex	- OSPF Area (index) menu
range	- OSPF Summary Range menu
if	- OSPF Interface menu
loopif	- OSPF Loopback Interface Menu
virt	- OSPF Virtual Links menu
md5key	- OSPF MD5 Key Menu
host	- OSPF Host Entry menu
redist	- OSPF Route Redistribute menu
lsdb	- Set the LSDB limit
default	- Originate default route information
on	- Globally turn OSPF ON
off	- Globally turn OSPF OFF
cur	- Display current OSPF configuration

Table 233. OSPF Configuration Menu (/cfg/13/ospf)

Command Syntax and Usage	
aindex <area index (0-2)>	Displays the area index menu. This area index does not represent the actual OSPF area number. See page 302 to view menu options.
range <1-16>	Displays the summary range menu. See page 303 to view menu options.
if <interface number>	Displays the OSPF interface configuration menu. See page 305 to view menu options.
loopif <1-5>	Displays the OSPF loopback interface configuration menu. See page 306 to view menu options.
virt <virtual link (1-3)>	Displays the Virtual Links menu used to configure OSPF for a Virtual Link. See page 307 to view menu options.
md5key <key ID (1-255)>	Assigns a string to MD5 authentication key.
host <1-128>	Displays the menu for configuring OSPF for the host routes. Up to 128 host routes can be configured. Host routes are used for advertising network device IP addresses to external networks to perform server load balancing within OSPF. It also makes Area Border Route (ABR) load sharing and ABR failover possible. See page 308 to view menu options.
redist fixed static rip ebgp ibgp	Displays Route Distribution Menu. See page 309 to view menu options.
lsdb <LSDB limit (0-2048, 0 for no limit)>	Sets the link state database limit.

Table 233. OSPF Configuration Menu (/cfg/13/ospf) (continued)

Command Syntax and Usage	
default	<p><i><metric (1-16777214)></i> <i><metric-type 1 2></i> none</p> <p>Sets one default route among multiple choices in an area. Use none for no default.</p>
on	<p>Enables OSPF on the EN2092.</p>
off	<p>Disables OSPF on the EN2092.</p>
cur	<p>Displays the current OSPF configuration settings.</p>

/cfg/13/ospf/aindex <area index> Area Index Configuration Menu

[OSPF Area (index) 1 Menu]	
areaid	- Set area ID
type	- Set area type
metric	- Set stub area metric
auth	- Set authentication type
spf	- Set time interval between two SPF calculations
enable	- Enable area
disable	- Disable area
delete	- Delete area
cur	- Display current OSPF area configuration

Table 234. Area Index Configuration Menu Options (/cfg/13/ospf/aindex)

Command Syntax and Usage	
areaid <IP address (such as, 192.4.17.101)>	Defines the IP address of the OSPF area number.
type transit stub nssa	<p>Defines the type of area. For example, when a virtual link has to be established with the backbone, the area type must be defined as transit.</p> <p>Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.</p> <p>Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.</p> <p>NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas. External routes from outside the Autonomous System (AS) can be advertised within the NSSA but are not distributed into other areas.</p>
metric <metric value (1-65535)>	<p>Configures a stub area to send a numeric metric value. All routes received via that stub area carry the configured metric to potentially influencing routing decisions.</p> <p>Metric value assigns the priority for choosing the switch for default route. Metric type determines the method for influencing routing decisions for external routes.</p>
auth none password md5	<ul style="list-style-type: none"> - none: No authentication required. - password: Authenticates simple passwords so that only trusted routing devices can participate. - md5: This parameter is used when MD5 cryptographic authentication is required.

Table 234. Area Index Configuration Menu Options (/cfg/l3/ospf/aindex) (continued)

Command Syntax and Usage	
spf <interval (1-255)>	Configures the minimum time interval, in seconds, between two successive SPF (shortest path first) calculations of the shortest path tree using the Dijkstra's algorithm. The default value is 10 seconds.
enable	Enables the OSPF area.
disable	Disables the OSPF area.
delete	Deletes the OSPF area.
cur	Displays the current OSPF configuration.

/cfg/l3/ospf/range <range number>
OSPF Summary Range Configuration Menu

[OSPF Summary Range 1 Menu]	
addr	- Set IP address
mask	- Set IP mask
aindex	- Set area index
hide	- Enable/disable hide range
enable	- Enable range
disable	- Disable range
delete	- Delete range
cur	- Display current OSPF summary range configuration

Table 235. OSPF Summary Range Configuration Menu Options (/cfg/l3/ospf/range)

Command Syntax and Usage	
addr <IP Address (such as, 192.4.17.101)>	Configures the base IP address for the range.
mask <IP mask (such as, 255.255.255.0)>	Configures the IP address mask for the range.
aindex <area index (0-2)>	Configures the area index used by the EN2092.
hide disable enable	Hides the OSPF summary range.
enable	Enables the OSPF summary range.
disable	Disables the OSPF summary range.

Table 235. OSPF Summary Range Configuration Menu Options (/cfg/13/ospf/range)

Command Syntax and Usage	
delete	Deletes the OSPF summary range.
cur	Displays the current OSPF summary range.

`/cfg/13/ospf/if <interface number>`
OSPF Interface Configuration Menu

[OSPF Interface 1 Menu]	
<code>aindex</code>	- Set area index
<code>prio</code>	- Set interface router priority
<code>cost</code>	- Set interface cost
<code>hello</code>	- Set hello interval in seconds or milliseconds
<code>dead</code>	- Set dead interval in seconds or milliseconds
<code>trans</code>	- Set transit delay in seconds
<code>retra</code>	- Set retransmit interval in seconds
<code>key</code>	- Set authentication key
<code>mdkey</code>	- Set MD5 key ID
<code>passive</code>	- Enable/disable passive interface
<code>ptop</code>	- Enable/disable point-to-point interface
<code>enable</code>	- Enable interface
<code>disable</code>	- Disable interface
<code>delete</code>	- Delete interface
<code>cur</code>	- Display current OSPF interface configuration

Table 236. OSPF Interface Configuration Menu Options (`/cfg/13/ospf/if`)

Command Syntax and Usage	
<code>aindex <area index (0-2)></code>	Configures the OSPF area index.
<code>prio <priority value (0-255)></code>	Configures the priority value for the EN2092's OSPF interfaces. (A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the interface cannot be used as Designated Router (DR) or Backup Designated Router (BDR).)
<code>cost <1-65535></code>	Configures cost set for the selected path—preferred or backup. Usually the cost is inversely proportional to the bandwidth of the interface. Low cost indicates high bandwidth.
<code>hello <1-65535></code> <code>hello <50-65535ms></code>	Configures the interval, in seconds or milliseconds, between the <code>hello</code> packets for the interfaces.
<code>dead <1-65535></code> <code>dead <1000-65535ms></code>	Configures the health parameters of a <code>hello</code> packet, in seconds or milliseconds, before declaring a silent router to be down.
<code>trans <1-3600></code>	Configures the transit delay in seconds.
<code>retra <1-3600></code>	Configures the retransmit interval in seconds.
<code>key <key> none</code>	Sets the authentication key to clear the password.

Table 236. OSPF Interface Configuration Menu Options (/cfg/13/ospf/if) (continued)

Command Syntax and Usage
mdkey <key ID (1-255)> none Assigns an MD5 key to the interface.
passive enable disable Sets the interface as passive. On a passive interface, you can disable OSPF protocol exchanges, but the router advertises the interface in its LSAs so that IP connectivity to the attached network segment will be established.
ptop enable disable Sets the interface as point-to-point.
enable Enables OSPF interface.
disable Disables OSPF interface.
delete Deletes OSPF interface.
cur Displays the current settings for OSPF interface.

/cfg/13/ospf/loopback <1-5>

OSPF Loopback Interface Configuration Menu

[OSPF Loopback Interface 1 Menu] aindex - Set area index enable - Enable interface disable - Disable interface delete - Delete interface cur - Display current OSPF interface configuration
--

Table 237. OSPF Loopback Interface Configuration Options (/cfg/13/ospf/loopif)

Command Syntax and Usage
aindex <area index (0-2)> Configures the area index used by the loopback interface.
enable Enables the loopback interface.
disable Disables the loopback interface.

Table 237. OSPF Loopback Interface Configuration Options (/cfg/l3/ospf/loopif) (continued)

Command Syntax and Usage	
delete	Deletes the OSPF loopback interface.
cur	Displays the current parameters for the OSPF loopback interface.

/cfg/l3/ospf/virt <link number>
OSPF Virtual Link Configuration Menu

[OSPF Virtual Link 1 Menu]	
aindex	- Set area index
hello	- Set hello interval in seconds or milliseconds
dead	- Set dead interval in seconds or milliseconds
trans	- Set transit delay in seconds
retra	- Set retransmit interval in seconds
nbr	- Set router ID of virtual neighbor
key	- Set authentication key
mdkey	- Set MD5 key ID
enable	- Enable interface
disable	- Disable interface
delete	- Delete interface
cur	- Display current OSPF interface configuration

Table 238. OSPF Virtual Link Configuration Menu Options (/cfg/l3/ospf/virt)

Command Syntax and Usage	
aindex <area index (0-2)>	Configures the OSPF area index.
hello <1-65535> hello <50-65535ms>	Configures the authentication parameters of a hello packet, in seconds or milliseconds. The default value is 10 seconds.
dead <1-65535> dead <1000-65535ms>	Configures the health parameters of a hello packet, in seconds or milliseconds. The default value is 60 seconds.
trans <1-3600>	Configures the delay in transit, in seconds. The default value is one second.
retra <1-3600>	Configures the retransmit interval, in seconds. The default value is five seconds.
nbr <NBR router ID (IP address)>	Configures the router ID of the virtual neighbor. The default value is 0.0.0.0.

Table 238. OSPF Virtual Link Configuration Menu Options (/cfg/l3/ospf/virt) (continued)

Command Syntax and Usage	
key <password> none	Configures the password (up to eight characters) for each virtual link. The default value is none.
mdkey <key ID (1-255)> none	Sets MD5 key ID for each virtual link. The default value is none.
enable	Enables OSPF virtual link.
disable	Disables OSPF virtual link.
delete	Deletes OSPF virtual link.
cur	Displays the current OSPF virtual link settings.

/cfg/l3/ospf/host <host number>
OSPF Host Entry Configuration Menu

[OSPF Host Entry 1 Menu]	
addr	- Set host entry IP address
aindex	- Set area index
cost	- Set cost of this host entry
enable	- Enable host entry
disable	- Disable host entry
delete	- Delete host entry
cur	- Display current OSPF host entry configuration

Table 239. OSPF Host Entry Configuration Menu Options (/cfg/l3/ospf/host)

Command Syntax and Usage	
addr <IP address (such as, 192.4.17.101)>	Configures the base IP address for the host entry.
aindex <area index (0-2)>	Configures the area index of the host.
cost <1-65535>	Configures the cost value of the host.
enable	Enables OSPF host entry.
disable	Disables OSPF host entry.

Table 239. OSPF Host Entry Configuration Menu Options (/cfg/l3/ospf/host) (continued)

Command Syntax and Usage	
delete	Deletes OSPF host entry.
cur	Displays the current OSPF host entries.

/cfg/l3/ospf/redist fixed|static|rip|ebgp|ibgp OSPF Route Redistribution Configuration Menu

[OSPF Redistribute Fixed Menu]	
add	- Add rmap into route redistribution list
rem	- Remove rmap from route redistribution list
export	- Export all routes of this protocol
cur	- Display current route-maps added

Table 240. OSPF Route Redistribution Menu Options (/cfg/l3/ospf/redist)

Command Syntax and Usage	
add (<route map (1-32)> <route map (1-32)>... all	<p>Adds selected routing maps to the rmap list. To add all the 32 route maps, enter <code>all</code>. To add specific route maps, enter routing map numbers one per line, <code>NULL</code> at the end.</p> <p>This option adds a route map to the route redistribution list. The routes of the redistribution protocol matched by the route maps in the route redistribution list will be redistributed.</p>
rem (<route map (1-32)> <route map (1-32)> ... all	<p>Removes the route map from the route redistribution list.</p> <p>Removes routing maps from the <code>rmap</code> list. To remove all 32 route maps, enter <code>all</code>. To remove specific route maps, enter routing map numbers one per line, <code>NULL</code> at end.</p>
export <metric (1-16777214)> <metric type (1-2)> none	<p>Exports the routes of this protocol as external OSPF AS-external LSAs in which the metric and metric type are specified. To remove a previous configuration and stop exporting the routes of the protocol, enter <code>none</code>.</p>
cur	Displays the current route map settings.

/cfg/13/ospf/md5key <key ID> OSPF MD5 Key Configuration Menu

[OSPF MD5 Key 1 Menu]	
key	- Set authentication key
delete	- Delete key
cur	- Display current MD5 key configuration

Table 241. OSPF MD5 Key Configuration Menu Options (/cfg/ip/ospf/md5key)

Command Syntax and Usage	
key <1-16 characters>	Sets the authentication key for this OSPF packet.
delete	Deletes the authentication key for this OSPF packet.
cur	Displays the current MD5 key configuration.

/cfg/13/bgp Border Gateway Protocol Configuration Menu

[Border Gateway Protocol Menu]	
peer	- Peer menu
aggr	- Aggregation menu
as	- Set Autonomous System (AS) number
pref	- Set Local Preference
on	- Globally turn BGP ON
off	- Globally turn BGP OFF
cur	- Display current BGP configuration

Border Gateway Protocol (BGP) is an Internet protocol that enables routers on a network to share routing information with each other and advertise information about the segments of the IP address space they can access within their network with routers on external networks. BGP allows you to decide what is the “best” route for a packet to take from your network to a destination on another network, rather than simply setting a default route from your border router(s) to your upstream provider(s). You can configure BGP either within an autonomous system or between different autonomous systems. When run within an autonomous system, it's called internal BGP (iBGP). When run between different autonomous systems, it's called external BGP (eBGP). BGP is defined in RFC 1771.

BGP commands enable you to configure the switch to receive routes and to advertise static routes, fixed routes and virtual server IP addresses with other internal and external routers. In the current IBM Networking OS implementation, the EN2092 does not advertise BGP routes that are learned from one iBGP *speaker* to another iBGP *speaker*.

BGP is turned off by default.

Note: Fixed routes are subnet routes. There is one fixed route per IP interface.

Table 242. Border Gateway Protocol Menu (cfg/l3/bgp)

Command Syntax and Usage	
peer <peer number (1-16)>	Displays the menu used to configure each BGP peer. Each border router, within an autonomous system, exchanges routing information with routers on other external networks. To view menu options, see page 312 .
aggr <aggregate number (1-16)>	Displays the Aggregation Menu. To view menu options, see page 316 .
as <0-65535>	Set Autonomous System number.
pref <local preference (0-4294967294)>	Sets the local preference. The path with the higher value is preferred. When multiple peers advertise the same route, use the route with the shortest AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP.
on	Globally turns BGP on.
off	Globally turns BGP off.
cur	Displays the current BGP configuration.

/cfg/13/bgp/peer <peer number> BGP Peer Configuration Menu

[BGP Peer 1 Menu]	
redist	- Redistribution menu
addr	- Set remote IP address
ras	- Set remote autonomous system number
usrc	- Set local IP interface
uloopsrc	- Set local IP loopback interface
hold	- Set hold time
alive	- Set keep alive time
advert	- Set min time between advertisements
retry	- Set connect retry interval
orig	- Set min time between route originations
ttl	- Set time-to-live of IP datagrams
addi	- Add rmap into in-rmap list
addo	- Add rmap into out-rmap list
remi	- Remove rmap from in-rmap list
remo	- Remove rmap from out-rmap list
enable	- Enable peer
disable	- Disable peer
delete	- Delete peer
passwd	- Set password
passive	- Enable/disable BGP passive mode
cur	- Display current peer configuration

This menu is used to configure BGP peers, which are border routers that exchange routing information with routers on internal and external networks. The peer option is disabled by default.

Table 243. BGP Peer Configuration Menu Options (/cfg/13/bgp/peer)

Command Syntax and Usage	
redist	Displays BGP Redistribution Menu. To view the menu options, see page 314 .
addr <IP address (such as 192.4.17.101)>	Defines the IP address for the specified peer (border router), using dotted decimal notation. The default address is 0.0.0.0.
ras <AS number (0-65535)>	Sets the remote autonomous system number for the specified peer.
usrc <interface number>	Sets the local IP interface for this peer.
uloopsrc <1-5>	Sets the loopback interface number for this peer.
hold <hold time (0, 3-65535)>	Sets the period of time, in seconds, that will elapse before the peer session is torn down because the switch hasn't received a "keep alive" message from the peer. The default value is 180.

Table 243. BGP Peer Configuration Menu Options (/cfg/l3/bgp/peer) (continued)

Command Syntax and Usage	
alive <keep-alive time (0, 1-21845)>	Sets the keep-alive time for the specified peer in seconds. The default value is 60.
advert <min adv time (1-65535)>	Sets time, in seconds, between advertisements. The default value is 60 seconds.
retry <connect retry interval (1-65535)>	Sets connection retry interval, in seconds. The default value is 120 seconds.
orig <min orig time (1-65535)>	Sets the minimum time between route originations, in seconds. The default value is 15 seconds.
ttl <number of router hops (1-255)>	<p>Time-to-live (TTL) is a value in an IP packet that tells a network router whether or not the packet has been in the network too long and should be discarded. TTL specifies a certain time span in seconds that, when exhausted, would cause the packet to be discarded. The TTL is determined by the number of router hops the packet is allowed before it must be discarded.</p> <p>This command specifies the number of router hops that the IP packet can make. This value is used to restrict the number of “hops” the advertisement makes. It is also used to support multi-hops, which allow BGP peers to talk across a routed network. The default number is set at 1.</p> <p>Note: The TTL value is significant only to eBGP peers, for iBGP peers the TTL value in the IP packets is always 255 (regardless of the configured value).</p>
addi <route map ID (1-32)>	Adds route map into in-route map list.
addo <route map ID (1-32)>	Adds route map into out-route map list.
remi <route map ID (1-32)>	Removes route map from in-route map list.
remo <route map ID (1-32)>	Removes route map from out-route map list.
enable	Enables this peer configuration.
disable	Disables this peer configuration.
delete	Deletes this peer configuration.

Table 243. BGP Peer Configuration Menu Options (/cfg/13/bgp/peer) (continued)

Command Syntax and Usage	
passwd <1-16 characters> none	Configures the BGP peer password.
passive enable disable	Enables or disables BGP passive mode, which prevents the switch from initiating BGP connections with peers. Instead, the switch waits for the peer to send an open message first.
cur	Displays the current BGP peer configuration.

/cfg/13/bgp/peer/redist BGP Redistribution Configuration Menu

[Redistribution Menu]
metric - Set default-metric of advertised routes
default - Set default route action
rip - Enable/disable advertising RIP routes
ospf - Enable/disable advertising OSPF routes
fixed - Enable/disable advertising fixed routes
static - Enable/disable advertising static routes
cur - Display current redistribution configuration

Table 244. BGP Redistribution Menu Options (/cfg/13/bgp/peer/redist)

Command Syntax and Usage	
metric <metric (1-4294967294)> none	Sets default metric of advertised routes.
default none import originate redistribute	Sets default route action. Default routes can be configured as follows: <ul style="list-style-type: none"> - none: No routes are configured - import: Import these routes. - originate: The switch sends a default route to peers if it does not have any default routes in its routing table. - redistribute: Default routes are either configured through default gateway or learned through other protocols and redistributed to peer. If the routes are learned from default gateway configuration, you have to enable static routes since the routes from default gateway are static routes. Similarly, if the routes are learned from a certain routing protocol, you have to enable that protocol in this redistribute submenu.
rip disable enable	Enables or disables advertising RIP routes
ospf disable enable	Enables or disables advertising OSPF routes.

Table 244. BGP Redistribution Menu Options (/cfg/13/bgp/peer/redist) (continued)

Command Syntax and Usage	
fixed disable enable	Enables or disables advertising fixed routes.
static disable enable	Enables or disables advertising static routes.
cur	Displays current redistribution configuration.

`/cfg/13/bgp/aggr <aggregation number>`
BGP Aggregation Configuration Menu

[BGP Aggr 1 Menu]	
addr	- Set aggregation IP address
mask	- Set aggregation network mask
enable	- Enable aggregation
disable	- Disable aggregation
delete	- Delete aggregation
cur	- Display current aggregation configuration

This menu enables you to configure BGP aggregation to specify the routes/range of IP destinations a peer router accepts from other peers. All matched routes are aggregated to one route, to reduce the size of the routing table. By default, the first aggregation number is enabled and the rest are disabled.

Table 245. BGP Aggregation Configuration Menu Options (`/cfg/13/bgp/aggr`)

Command Syntax and Usage	
<code>addr <IP address (such as 192.4.17.101)></code>	Defines the starting subnet IP address for this aggregation, using dotted decimal notation. The default address is 0.0.0.0.
<code>mask <IP subnet mask (such as, 255.255.255.0)></code>	This IP address mask is used with <code>addr</code> to define the range of IP addresses that will be accepted by the peer when the aggregation is enabled. The default address is 0.0.0.0.
<code>ena</code>	Enables this BGP aggregation.
<code>dis</code>	Disables this BGP aggregation.
<code>del</code>	Deletes this BGP aggregation.
<code>cur</code>	Displays the current BGP aggregation configuration.

/cfg/13/ml d

MLD Configuration Menu

[MLD Menu]	
if	- MLD Interface Menu
on	- Globally turn MLD ON
off	- Globally turn MLD OFF
default	- Set default configuration
cur	- Display current MLD configuration

Table 246 describes the commands used to configure basic Multicast Listener Discovery parameters.

Table 246. MLD Menu Options (/cfg/13/ml d)

Command Syntax and Usage	
if <interface number>	Displays the MLD Interface Menu. To view menu options, see page 318 .
on	Globally turns MLD on.
off	Globally turns MLD off.
default	Resets MLD parameters to their default values.
cur	Displays the current MLD configuration parameters.

`/cfg/13/mld/if <interface number>`
MLD Interface Configuration Menu

[MLD Interface 1 Menu]	
version	- Set Multicast Listener Discovery protocol version
robust	- Set MLD robustness
qinterval	- Set MLD query interval
l1istnr	- Set MLD last listener query interval
qri	- Set MLD query response interval
dmrtr	- Enable/disable dynamic Mrouter learning on interface
ena	- Enable MLD on interface
dis	- Disable MLD on interface
default	- Set MLD settings to factory default
cur	- Display current MLD configuration for this interface

Table 247 describes the commands used to configure Multicast Listener Discovery parameters for an interface.

Table 247. MLD Interface Menu Options (/cfg/13/mld/if)

Command Syntax and Usage	
version <1-2>	Defines the MLD protocol version number.
robust <2-10>	Configures the MLD Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If the subnet is expected to be lossy (high rate of packet loss), increase the value. The default value is 2.
qinterval <2-65535>	Configures the interval for MLD Query messages. The default value is 125 seconds.
l1istnr <1-32>	Configures the query interval for the Querier to send a query after receiving a host done message from a host on the subnet. The default value is 1 second.
qri <1000-65535>	Configures the maximum response delay for MLD General Queries. This can be used to tune the burstiness of MLD messages on the link. The default value is 10,000 milliseconds.
dmrtr enable disable	Enables or disables dynamic Mrouter learning on the interface. The default setting is disabled.
ena	Enables this MLD interface.
dis	Disables this MLD interface.

Table 247. MLD Interface Menu Options (/cfg/l3/mld/if) (continued)

Command Syntax and Usage	
default	Resets MLD parameters for the selected interface to their default values.
cur	Displays the current MLD interface configuration.

/cfg/l3/igmp IGMP Configuration Menu

[IGMP Menu]	
snoop	- IGMP Snoop Menu
relay	- IGMP Relay Menu
mrouter	- Static Multicast Router Menu
igmpflt	- IGMP Filtering Menu
adv	- IGMP Advanced Menu
querier	- IGMP Querier Menu
on	- Globally turn IGMP ON
off	- Globally turn IGMP OFF
cur	- Display current IGMP configuration

Table 248 describes the commands used to configure basic IGMP parameters.

Table 248. IGMP Menu Options (/cfg/l3/igmp)

Command Syntax and Usage	
snoop	Displays the IGMP Snoop Menu. To view menu options, see page 320 .
relay	Displays the IGMP Relay Menu. To view menu options, see page 322 .
mrouter	Displays the Static Multicast Router Menu. To view menu options, see page 324 .
igmpflt	Displays the IGMP Filtering Menu. To view menu options, see page 325 .
adv	Displays the IGMP Advanced Menu. To view menu options, see page 327 .
querier	Displays the IGMP Querier Menu. To view menu options, see page 328 .
on	Globally turns IGMP on.

Table 248. IGMP Menu Options (/cfg/l3/igmp) (continued)

Command Syntax and Usage	
off	Globally turns IGMP off.
cur	Displays the current IGMP configuration parameters.

/cfg/l3/igmp/snoop IGMP Snooping Configuration Menu

[IGMP Snoop Menu]	
igmpv3	- IGMP Version3 Snoop Menu
mrto	- Set multicast router timeout
aggr	- Aggregate IGMP report
srcip	- Set source ip to use when proxying GSO
add	- Add VLAN(s) to IGMP Snooping
rem	- Remove VLAN(s) from IGMP Snooping
clear	- Remove all VLAN(s) from IGMP Snooping
ena	- Enable IGMP Snooping
dis	- Disable IGMP Snooping
def	- Set IGMP Snooping settings to factory default
cur	- Display current IGMP Snooping configuration

IGMP Snooping allows the switch to forward multicast traffic only to those ports that request it. IGMP Snooping prevents multicast traffic from being flooded to all ports. The switch learns which server hosts are interested in receiving multicast traffic, and forwards it only to ports connected to those servers.

Table 249 describes the commands used to configure IGMP Snooping.

Table 249. IGMP Snoop Menu Options (/cfg/l3/igmp/snoop)

Command Syntax and Usage	
igmpv3	Displays the IGMP version 3 Menu. To view menu options, see page 321 .
mrto <1-600 seconds>	Configures the timeout value for IGMP Membership Queries (mrouter). Once the timeout value is reached, the switch removes the multicast router from its IGMP table, if the proper conditions are met. The range is from 1 to 600 seconds. The default is 255 seconds.
aggr enable disable	Enables or disables IGMP Membership Report aggregation.
srcip <IP address (such as, 192.4.17.101)>	Configures the source IP address used as a proxy for IGMP Group Specific Queries.
add <VLAN number>	Adds the selected VLAN(s) to IGMP Snooping.

Table 249. IGMP Snoop Menu Options (/cfg/l3/igmp/snoop) (continued)

Command Syntax and Usage	
rem <VLAN number>	Removes the selected VLAN(s) from IGMP Snooping.
clear	Removes all VLANs from IGMP Snooping.
ena	Enables IGMP Snooping.
dis	Disables IGMP Snooping.
def	Resets IGMP Snooping parameters to their default values.
cur	Displays the current IGMP Snooping parameters.

/cfg/l3/igmp/snoop/igmpv3
IGMP Version 3 Configuration Menu

[IGMP V3 Snoop Menu]	
sources	- Set the number of sources to snoop in group record
v1v2	- Enable/disable snooping IGMPv1/v2 reports
exclude	- Enable/disable snooping EXCLUDE mode reports
ena	- Enable IGMPv3 Snooping
dis	- Disable IGMPv3 Snooping
cur	- Display current IGMP Snooping V3 configuration

Table 250 describes the commands used to configure IGMP version 3.

Table 250. IGMPv3 Menu Options (/cfg/l3/igmp/snoop/igmpv3)

Command Syntax and Usage	
sources <1-64>	Configures the maximum number of IGMP multicast sources to snoop from within the group record. Use this command to limit the number of IGMP sources to provide more refined control. The default value is 8.
v1v2 enable disable	Enables or disables snooping on IGMP version 1 and version 2 reports. When disabled, the switch drops IGMPv1 and IGMPv2 reports. The default value is enabled.
exclude enable disable	Enables or disables snooping on IGMPv3 Exclude Reports. When disabled, the switch ignores Exclude Reports. The default value is enabled.

Table 250. IGMPv3 Menu Options (/cfg/l3/igmp/snoop/igmpv3) (continued)

Command Syntax and Usage	
ena	Enables IGMP version 3. The default value is disabled.
dis	Disables IGMP version 3.
cur	Displays the current IGMP version 3 configuration.

/cfg/l3/igmp/relay IGMP Relay Configuration Menu

[IGMP Relay Menu]	
mrtr	- Upstream Multicast Router Menu
add	- Add VLAN(s) to downstream
rem	- Remove VLAN(s) from downstream
clear	- Remove all VLAN(s) from downstream
report	- Set unsolicited report interval
ena	- Enable IGMP Relay
dis	- Disable IGMP Relay
cur	- Display current IGMP Relay configuration

Table 251 describes the commands used to configure IGMP Relay.

Table 251. IGMP Relay Menu Options (/cfg/l3/igmp/relay)

Command Syntax and Usage	
mrtr <multicast router number (1-2)>	Displays the Upstream Multicast Router Menu. To view menu options, see page 323 .
add <VLAN number>	Adds the VLAN to the list of IGMP Relay VLANs.
rem <VLAN number>	Removes the VLAN from the list of IGMP Relay VLANs.
clear	Removes all VLANs from the list of IGMP Relay VLANs.
report <10-150>	Configures the interval between unsolicited Join reports sent by the switch, in seconds. The default value is 10.
ena	Enables IGMP Relay.

Table 251. IGMP Relay Menu Options (/cfg/l3/igmp/relay) (continued)

Command Syntax and Usage	
dis	Disables IGMP Relay.
cur	Displays the current IGMP Relay configuration.

/cfg/l3/igmp/relay/mrtr <Mrouter number>
IGMP Relay Multicast Router Configuration Menu

[Multicast router 2 Menu]	
addr	- Set IP address of multicast router
intr	- Set interval between ping attempts
retry	- Set number of failed attempts to declare router DOWN
restr	- Set number of successful attempts to declare router UP
version	- Set IGMP version
ena	- Enable multicast router
dis	- Disable multicast router
del	- Delete multicast router
cur	- Display current multicast router configuration

Table 252 describes the commands used to configure the IGMP Relay multicast router.

Table 252. IGMP Relay Mrouter Menu Options (/cfg/l3/igmp/relay/mrtr)

Command Syntax and Usage	
addr <IP address (such as, 224.0.1.0)>	Configures the IP address of the IGMP multicast router used for IGMP Relay.
intr <1-60>	Configures the time interval between ping attempts to the upstream Mrouters, in seconds. The default value is 2.
retry <1-120>	Configures the number of failed ping attempts required before the switch declares this Mrouter is down. The default value is 4.
restr <1-128>	Configures the number of successful ping attempts required before the switch declares this Mrouter is up. The default value is 5.
version <1-2>	Configures the IGMP version (1 or 2) of the multicast router.
ena	Enables the multicast router.

Table 252. IGMP Relay Mrouter Menu Options (/cfg/13/igmp/relay/mrtr) (continued)

Command Syntax and Usage	
dis	Disables the multicast router.
del	Deletes the multicast router from IGMP Relay.
cur	Displays the current IGMP Relay multicast router parameters.

/cfg/13/igmp/mrouter

IGMP Static Multicast Router Configuration Menu

[Static Multicast Router Menu]	
add	- Add port as Multicast Router Port
rem	- Remove port as Multicast Router Port
clear	- Remove all Static Multicast Router Ports
cur	- Display current Multicast Router configuration

Table 253 describes the commands used to configure a static multicast router.

Note: When static Mrouters are used, the switch continues learning dynamic Mrouters via IGMP snooping. However, dynamic Mrouters may not replace static Mrouters. If a dynamic Mrouter has the same port and VLAN combination as a static Mrouter, the dynamic Mrouter is not learned.

Table 253. IGMP Static Multicast Router Menu Options (/cfg/13/igmp/mrouter)

Command Syntax and Usage	
add <port number> <VLAN number> <IGMP version number>	Selects a port/VLAN combination on which the static multicast router is connected, and configures the IGMP version (1, 2, or 3) of the multicast router.
rem <port number> <VLAN number> <IGMP version number>	Removes a static multicast router from the selected port/VLAN combination.
clear	Clears all static multicast routers from the switch.
cur	Displays the current IGMP Static Multicast Router parameters.

/cfg/13/igmp/igmpflt IGMP Filtering Configuration Menu

[IGMP Filter Menu]
filter - IGMP Filter Definition Menu
port - IGMP Filtering Port Menu
ena - Enable IGMP Filtering
dis - Disable IGMP Filtering
cur - Display current IGMP Filtering configuration

Table 254 describes the commands used to configure an IGMP filter.

Table 254. IGMP Filtering Menu Options (/cfg/13/igmp/igmpflt)

Command Syntax and Usage	
filter <filter number (1-16)>	Displays the IGMP Filter Definition Menu. To view menu options, see page 326 .
port <port alias or number>	Displays the IGMP Filtering Port Menu. To view menu options, see page 327 .
ena	Enables IGMP filtering globally.
dis	Disables IGMP filtering globally.
cur	Displays the current IGMP Filtering parameters.

`/cfg/13/igmp/igmpflt/filter <filter number>`
IGMP Filter Definition Menu

[IGMP Filter 1 Definition Menu]	
range	- Set IP Multicast address range
action	- Set filter action
ena	- Enable filter
dis	- Disable filter
del	- Delete filter
cur	- Display current IGMP filter configuration

Table 255 describes the commands used to define an IGMP filter.

Table 255. IGMP Filter Definition Menu Options (/cfg/13/igmp/igmpflt/filter)

Command Syntax and Usage	
range <IP multicast address (such as 225.0.0.10)> <IP multicast address>	Configures the range of IP multicast addresses for this filter.
action allow deny	Allows or denies multicast traffic for the IP multicast addresses specified. The default action is deny.
ena	Enables this IGMP filter.
dis	Disables this IGMP filter.
del	Deletes this filter's parameter definitions.
cur	Displays the current IGMP filter.

`/cfg/13/igmp/igmpflt/port <port number>`
IGMP Filtering Port Configuration Menu

[IGMP Port EXT1 Menu]	
filt	- Enable/disable IGMP filtering on port
add	- Add IGMP filter to port
rem	- Remove IGMP filter from port
cur	- Display current IGMP filtering Port configuration

Table 256 describes the commands used to configure a port for IGMP filtering.

Table 256. IGMP Filter Port Menu Options (`/cfg/13/igmp/igmpflt/port`)

Command Syntax and Usage	
filt enable disable	Enables or disables IGMP filtering on this port.
add <filter number (1-16)>	Adds an IGMP filter to this port.
rem <filter number (1-16)>	Removes an IGMP filter from this port.
cur	Displays the current IGMP filter parameters for this port.

`/cfg/13/igmp/adv`
IGMP Advanced Configuration Menu

[IGMP Advanced Menu]	
qinterval	- Set IGMP query interval
robust	- Set expected packet loss on subnet
timeout	- Set report timeout
fastlv	- Enable/disable Fastleave processing in VLAN
rtralert	- Send IGMP messages with Router Alert option
cur	- Display current IGMP Advanced configuration

Table 257 describes the commands used to configure advanced IGMP parameters.

Table 257. IGMP Advanced Menu Options (`/cfg/13/igmp/adv`)

Command Syntax and Usage	
qinterval <1-600>	Configures the interval for IGMP Query Reports. The default value is 125 seconds.
robust <2-10>	Configures the IGMP Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If the subnet is expected to be lossy (high rate of packet loss), increase the value. The default value is 2.

Table 257. IGMP Advanced Menu Options (/cfg/13/igmp/adv) (continued)

Command Syntax and Usage	
timeout <1-255>	Configures the timeout value for IGMP Membership Reports (host). Once the timeout value is reached, the switch removes the host from its IGMP table, if the conditions are met. The range is from 1 to 255 seconds. The default is 10 seconds.
fastlv <VLAN number> disable enable	Enables or disables Fastleave processing. Fastleave allows the switch to immediately remove a port from the IGMP port list, if the host sends a Leave message, and the proper conditions are met. This command is disabled by default.
retralert ena dis	Enables or disables the Router Alert option in IGMP messages.
cur	Displays the current IGMP Advanced parameters.

/cfg/13/igmp/querier IGMP Querier Configuration

[IGMP Querier Menu]	
ena	- Enable IGMP Querier
dis	- Disable IGMP Querier
vlan	- IGMP Querier vlan Menu
cur	- Display IGMP Querier configuration

Table 258 describes the commands used to configure IGMP Querier.

Table 258. IGMP Querier Options

Command Syntax and Usage	
ena	Enables IGMP Querier.
dis	Disables IGMP Querier.
vlan <VLAN number>	Displays the IGMP Querier VLAN menu. To view menu options, see page 329 .
cur	Displays the current IGMP Querier parameters.

/cfg/13/igmp/querier/vlan <VLAN number>
IGMP Querier VLAN Configuration

[IGMP Querier VLAN 1 Menu]	
type	- Set IGMP querier type
time	- Set Queriers max response time
interval	- Set IGMP querier interval
robust	- Set Queriers robustness
srcip	- Set source IP to be used for IGMP
count	- Set startup count for IGMP
sinter	- Set startup query interval for IGMP
version	- Sets the operating version of the IGMP snooping switch
on	- Globally turn IGMP Querier ON
off	- Globally turn IGMP Querier OFF
default	- Set IGMP Querier settings to factory default
cur	- Display current IGMP Querier configuration

Table 259 describes the commands used to configure IGMP Querier.

Table 259. IGMP Querier Options

Command Syntax and Usage	
type {ipv4 mac}	Sets the IGMP Querier election criteria as IPv4 address or Mac address. The default setting is IPv4.
time <1-256>	Configures the maximum time, in tenths of a second, allowed before responding to a Membership Query message. The default value is 100. By varying the Query Response Interval, an administrator may tune the burstiness of IGMP messages on the subnet; larger values make the traffic less bursty, as host responses are spread out over a larger interval.
interval <1-608>	Configures the interval between IGMP Query broadcasts. The default value is 125 seconds.
robust <2-10>	Configures the IGMP Robustness variable, which is the number of times that the switch sends each IGMP message. The default value is 2.
srcip <IP address>	Configures the IGMP snooping source IP address for the selected VLAN.
count <1-10>	Configures the Startup Query Count, which is the number of IGMP Queries sent out at startup. Each Query is separated by the Startup Query Interval. The default value is 2.
sinter <1-608>	Configures the Startup Query Interval, which is the interval between General Queries sent out at startup.
version {v1 v2 v3}	Configures the IGMP version. The default version is v3.

Table 259. IGMP Querier Options (continued)

Command Syntax and Usage	
on	Enables IGMP Querier on the selected VLAN.
off	Disables IGMP Querier on the selected VLAN.
default	Resets IGMP Querier parameters to default values.
cur	Displays the current IGMP Querier VLAN parameters.

/cfg/13/ikev2

IKEv2 Configuration Menu

[IKEv2 Menu]
prop - IKEv2 Proposal Menu
tx-time - Set retransmission timeout for IKEv2 negotiation
psk - Preshare Key Menu
ident - Certification Service Menu
cookie - Enable or Disable cookie notification, used to prevent DoS
cur - Display current IKEv2 configuration

Table 260 describes the commands used to configure IKEv2.

Table 260. IKEv2 Menu Options (/cfg/13/ikev2)

Command Syntax and Usage	
prop	Displays the IKEv2 Proposal Menu. To view menu options, see page 331 .
tx-time <1-20>	Sets the retransmission timeout, in seconds, for IKEv2 negotiation. The default value is 20 seconds.
psk	Displays the IKEv2 Preshare Key Menu. To view menu options, see page 331 .
ident	Displays the IKEv2 Identification Menu. To view menu options, see page 332 .
cookie enable disable	Enables or disables cookie notification. The default value is disable.
cur	Displays the current IKEv2 settings.

/cfg/13/ikev2/prop IKEv2 Proposal Configuration Menu

```
[IKEv2 Proposal Menu]
cipher - Set encryption algorithm
auth   - Set the integrity algorithm type
group  - Set DH group
cur    - Display current IKEv2 proposal configuration
```

[Table 261](#) describes the commands used to configure an IKEv2 proposal.

Table 261. IKEv2 Proposal Menu Options (/cfg/13/ikev2/prop)

Command Syntax and Usage
<p>cipher des 3des aes Sets the encryption algorithm. The default value is 3des.</p>
<p>auth sha1 md5 none Sets the authentication algorithm type. The default value is sha1.</p>
<p>group 1 2 5 14 24 Sets the Diffie-Hellman (DH) group. The default group is 2.</p>
<p>cur Displays the current IKEv2 proposal settings.</p>

/cfg/13/ikev2/psk IKEv2 Preshare Key Configuration Menu

```
[IKEv2 Preshare-key Menu]
loc-key - Set local preshare key
rem-key - Remote Preshare Key Menu
cur     - Display current IKEv2 preshare key configuration
```

[Table 262](#) describes the commands used to configure an IKEv2 preshared key.

Table 262. IKEv2 Preshare Key Menu Options (/cfg/13/ikev2/psk)

Command Syntax and Usage
<p>loc-key <1-256 characters> Sets the local preshare key. The default value is ibm123.</p>
<p>rem-key <1-10> Displays the Remote ID menu. To view menu options, see page 332.</p>
<p>cur Displays the current IKEv2 preshare key settings.</p>

/cfg/13/ikev2/psk/rem-key <1-10> IKEv2 Preshare Key Remote ID Configuration Menu

[Remote ID 1 Menu]	
addr	- Set remote IPv6 address
key	- Set remote preshare key
del	- Delete remote preshare key
cur	- Display remote preshare key configuration

Table 263 describes the commands used to configure an IKEv2 preshared key remote ID.

Table 263. IKEv2 Remote ID Menu Options (/cfg/13/ikev2/psk/rem-key)

Command Syntax and Usage	
addr <IPv6 address>	Sets the remote IPv6 address.
key <1-32 characters>	Sets the remote preshare key. The default value is <code>ibm123</code> .
del	Deletes the remote preshare key.
cur	Displays the current IKEv2 preshare key remote ID settings.

/cfg/13/ikev2/ident IKEv2 Identification Configuration Menu

[IKEv2 Identification Menu]	
addr	- Set IPv6 address as identification
fqdn	- Set fully-qualified domain name as identification
email	- Set email address as identification
cur	- Display current IKEv2 identification configuration

Table 264 describes the commands used to configure IKEv2 identification.

Table 264. IKEv2 Identification Menu Options (/cfg/13/ikev2/ident)

Command Syntax and Usage	
addr <IPv6 address>	Sets the supplied IPv6 address as identification.
fqdn <fully-qualified domain name>	Sets the fully-qualified domain name (such as "example.com") as identification.

Table 264. IKEv2 Identification Menu Options (/cfg/l3/ikev2/ident) (continued)

Command Syntax and Usage	
email <Email address>	Sets the supplied email address (such as "xyz@example.com") as identification.
cur	Displays the current IKEv2 identification settings.

/cfg/l3/ipsec IPsec Configuration Menu

[IPsec Menu]	
txform	- IPsec transform-set Menu
selector	- IPsec traffic-selector Menu
policy	- IPsec policy Menu
on	- Globally turn IPsec ON
off	- Globally turn IPsec OFF
cur	- Display current IPsec configuration

Table 265 describes the commands used to configure IPsec.

Table 265. IPsec Menu Options (/cfg/l3/ipsec)

Command Syntax and Usage	
txform <1-10>	Displays the Transform Set Menu. To view menu options, see page 334 .
selector <1-10>	Displays the Traffic Selector Menu. To view menu options, see page 335 .
policy	Displays the IPsec Policy Menu. To view menu options, see page 336 .
on	Globally turns on IPsec.
off	Globally turns off IPsec.
cur	Displays the current IPsec settings.

/cfg/13/ipsec/txform

IPsec Transform Set Configuration Menu

```
[Transform_set 1 Menu]
cipher - Set ESP encryption algorithm
integy - Set ESP integrity algorithm
auth - Set AH authentication algorithm
mode - Set tunnel/transport mode
del - Delete transform
cur - Display current IPsec transform setting configuration
```

[Table 266](#) describes the commands used to configure an IPsec transform set.

Table 266. IPsec Transform Set Menu Options (/cfg/13/ipsec/txform)

Command Syntax and Usage
<code>cipher esp-des esp-3des esp-aes-cbc esp-null</code> Sets the ESP encryption algorithm.
<code>integy esp-sha1 esp-md5 none</code> Sets the ESP integrity algorithm.
<code>auth ah-sha1 ah-md5 none</code> Sets the AH authentication algorithm.
<code>mode tunnel txport</code> Sets tunnel or transport mode. The default is <code>txport</code> .
<code>del</code> Deletes the transform set.
<code>cur</code> Displays the current IPsec Transform Set settings.

/cfg/13/ipsec/selector

IPsec Traffic Selector Configuration Menu

[Traffic_selector 1 Menu]	
action	- Set permit or deny
proto	- Protocol match Menu
src	- Set source ip address
prefix	- Set destination ip address prefix length
dst	- Set destination ip address
del	- Delete traffic-selector
cur	- Display current IPsec selector configuration

Table 267 describes the commands used to configure an IPsec traffic selector.

Table 267. IPsec Transform Set Menu Options (/cfg/13/ipsec/selector)

Command Syntax and Usage	
action permit deny	Configures the selector to permit or deny traffic.
proto	Displays the IPsec Protocol Match menu. To view menu options, see page 336 .
src <IPv6 address> any	Sets the source IP address.
prefix <1-128>	Sets the destination IPv6 prefix length.
dst <IPv6 address> any	Sets the destination IP address.
del	Deletes the traffic selector.
cur	Displays the current IPsec Traffic Selector settings.

/cfg/13/ipsec/selector/proto

IPsec Protocol Match Configuration Menu

[Protocol Menu]	
icmp	- Set icmp for traffic selector
tcp	- Set tcp for traffic selector
any	- Set any for traffic

[Table 268](#) describes the commands used to configure IPsec protocol matching.

Table 268. IPsec Protocol Match Menu Options (/cfg/13/ipsec/selector/proto)

Command Syntax and Usage	
icmp <ICMP type> any	Sets the ICMP type for the traffic selector.
tcp	Sets TCP for the traffic selector.
any	Sets “any” for traffic.

/cfg/13/ipsec/policy

IPsec Policy Configuration Menu

[Policy Menu]	
dynamic	- Dynamic key management policy Menu
manual	- Manual key management policy Menu
cur	- Display current IPsec policy configuration

[Table 269](#) describes the commands used to configure an IPsec policy.

Table 269. IPsec Policy Menu Options (/cfg/13/ipsec/policy)

Command Syntax and Usage	
dynamic <I-10>	Displays the IPsec Dynamic Policy menu. To view menu options, see page 337 .
manual <I-10>	Displays the IPsec Manual Policy menu. To view menu options, see page 338 .
cur	Displays the current IPsec Policy settings.

/cfg/l3/ipsec/policy/dynamic <1-10> IPsec Dynamic Policy Configuration Menu

```
[Dynamic_policy 1 Menu]
peer      - Set the remote peer ip address
selector  - Set traffic-selector for IPsec policy
txform    - Set transform set for IPsec policy
lifetime  - Set IPsec SA lifetime
pfs       - Configure perfect forward security
del       - Delete IPsec dynamic policy
cur       - Display current IPsec dynamic key policy configuration
```

Table 270 describes the commands used to configure an IPsec dynamic policy.

Table 270. IPsec Dynamic Policy Menu Options (/cfg/l3/ipsec/policy/dynamic)

Command Syntax and Usage	
peer <IPv6 address>	Sets the remote peer IP address.
selector <1-10>	Sets the traffic selector for the IPsec policy.
txform <1-10>	Sets the transform set for the IPsec policy.
lifetime <120-86400>	Sets the IPsec SA lifetime in seconds. The default value is 86400 seconds.
pfs enable disable	Enables or disables perfect forward security.
del	Deletes the selected dynamic policy configuration.
cur	Displays the current IPsec dynamic policy settings.

/cfg/13/ipsec/policy/manual <I-10> IPsec Manual Policy Configuration Menu

peer	- Set the remote peer ip address
selector	- Set traffic-selector for IPsec policy
txform	- Set transform set for IPsec policy
in-ah	- AH inbound session options Menu
in-esp	- ESP inbound session options Menu
out-ah	- AH outbound session options Menu
out-esp	- ESP outbound session options Menu
del	- Delete IPsec manual policy
cur	- Display current IPsec manual key policy configuration

[Table 271](#) describes the commands used to configure an IPsec manual policy.

Table 271. IPsec Manual Policy Menu Options (/cfg/13/ipsec/policy/manual)

Command Syntax and Usage	
peer <IPv6 address>	Sets the remote peer IP address.
selector <I-10>	Sets the traffic selector for the IPsec policy.
txform <I-10>	Sets the transform set for the IPsec policy.
in-ah	Displays the Inbound AH Session Options menu. To view menu options, see page 339 .
in-esp	Displays the Inbound ESP Session Options menu. To view menu options, see page 339 .
out-ah	Displays the Outbound AH Session Options menu. To view menu options, see page 340 .
out-esp	Displays the Outbound ESP Session Options menu. To view menu options, see page 341 .
del	Deletes the selected manual policy configuration.
cur	Displays the current IPsec manual policy settings.

/cfg/13/ipsec/policy/manual <1-10>/in-ah
IPsec Manual Policy In-AH Configuration Menu

[in-ah Menu]	
auth-key	- Set inbound AH authenticator key
spi	- Set inbound AH SPI
reset	- Reset to factory setting
cur	- Display current IPsec manual key policy inbound AH session configuration

Table 272 describes the commands used to configure an IPsec manual policy inbound authentication header (AH).

Table 272. IPsec Manual Policy In-AH Menu Options (/cfg/13/ipsec/policy/manual/in-ah)

Command Syntax and Usage	
auth-key <key code (hexadecimal)>	Sets inbound AH authenticator key.
spi <256-4294967295>	Sets the inbound AH Security Parameter Index (SPI).
reset	Resets the inbound AH settings to factory settings.
cur	Displays the current IPsec manual key policy inbound AH session settings.

/cfg/13/ipsec/policy/manual <1-10>/in-esp
IPsec Manual Policy In-ESP Configuration Menu

[in-esp Menu]	
enc-key	- Set inbound ESP cipher key
auth-key	- Set inbound ESP authenticator key
spi	- Set inbound ESP SPI
reset	- Reset to factory setting
cur	- Display current IPsec manual key policy inbound ESP session configuration

Table 273 describes the commands used to configure an IPsec manual policy inbound Encapsulating Security Payload (ESP) header.

Table 273. IPsec Manual Policy In-ESP Menu Options (/cfg/13/ipsec/policy/manual/in-esp)

Command Syntax and Usage	
enc-key <key code (hexadecimal)>	Sets inbound ESP cipher key.
auth-key <key code (hexadecimal)>	Sets inbound ESP authenticator key.

Table 273. IPsec Manual Policy In-ESP Menu Options (/cfg/l3/ipsec/policy/manual/in-esp) (continued)

Command Syntax and Usage	
spi <256-4294967295>	Sets the inbound ESP Security Parameter Index (SPI).
reset	Resets the inbound ESP settings to factory settings.
cur	Displays the current IPsec manual key policy inbound ESP session settings.

/cfg/l3/ipsec/policy/manual <I-I0>/out-ah IPsec Manual Policy Out-AH Configuration Menu

[out-ah Menu]
auth-key - Set the remote peer ip address
spi - Set outbound AH SPI
reset - Reset to factory setting
cur - Display current IPsec manual key policy outbound AH session configuration

Table 274 describes the commands used to configure an IPsec manual policy outbound authentication header (AH).

Table 274. IPsec Manual Policy Out-AH Menu Options (/cfg/l3/ipsec/policy/manual/out-ah)

Command Syntax and Usage	
auth-key <key code (hexadecimal)>	Sets the remote AH authenticator key.
spi <256-4294967295>	Sets the outbound AH Security Parameter Index (SPI).
reset	Resets the outbound AH settings to factory settings.
cur	Displays the current IPsec manual key policy outbound AH session settings.

`/cfg/13/ipsec/policy/manual <1-10>/out-esp`
IPsec Manual Policy Out-ESP Configuration Menu

```
[out-esp Menu]
enc-key - Set outbound ESP cipher key
auth-key - Set outbound ESP authenticator key
spi - Set outbound ESP SPI
reset - Reset to factory setting
cur - Display current IPsec manual key policy outbound ESP
      session configuration
```

Table 275 describes the commands used to configure an IPsec manual policy outbound Encapsulating Security Payload (ESP) header.

Table 275. IPsec Manual Policy Out-ESP Menu Options (/cfg/13/ipsec/policy/manual/out-esp)

Command Syntax and Usage	
<code>enc-key <key code (hexadecimal)></code>	Sets the outbound ESP cipher key.
<code>auth-key <key code (hexadecimal)></code>	Sets outbound ESP authenticator key.
<code>spi <256-4294967295></code>	Sets the outbound Security Parameter Index (SPI).
<code>reset</code>	Resets the outbound ESP settings to factory settings.
<code>cur</code>	Displays the current IPsec manual key policy outbound ESP session settings.

/cfg/13/dns

Domain Name System Configuration Menu

```
[Domain Name System Menu]
  prima   - Set IP address of primary DNS server
  secon   - Set IP address of secondary DNS server
  dname   - Set default domain name
  cur     - Display current DNS configuration
```

The Domain Name System (DNS) Menu is used for defining the primary and secondary DNS servers on your local network, and for setting the default domain name served by the switch services. DNS parameters must be configured prior to using hostname parameters with the `ping`, `traceroute`, and `tftp` commands.

Table 276. Domain Name Service Menu Options (/cfg/13/dns)

Command Syntax and Usage	
<code>prima <IPv4 or IPv6 address></code>	Sets the IPv4 or IPv6 address for your primary DNS server.
<code>secon <IPv4 or IPv6 address></code>	Sets the IPv4 or IPv6 address for your secondary DNS server. If the primary DNS server fails, the configured secondary is used instead.
<code>dname <dotted DNS notation> none</code>	Sets the default domain name used by the switch. For example: <code>mycompany.com</code>
<code>cur</code>	Displays the current Domain Name System settings.

/cfg/13/bootp

Bootstrap Protocol Relay Configuration Menu

[Bootstrap Protocol Relay Menu]	
server	- Set BOOTP server properties
bdomain	- Broadcast domain menu
on	- Globally turn BOOTP relay ON
off	- Globally turn BOOTP relay OFF
cur	- Display current BOOTP relay configuration

The Bootstrap Protocol (BOOTP) Relay Menu is used to allow hosts to obtain their configurations from a Dynamic Host Configuration Protocol (DHCP) server. The BOOTP configuration enables the switch to forward a client request for an IP address to two DHCP/BOOTP servers with IP addresses that have been configured on the EN2092.

BOOTP relay is turned off by default.

Table 277. Global BOOTP Relay Configuration Options

Command Syntax and Usage	
server <1-4>	Displays the BOOTP Server menu, which allows you to configure an IP address for up to 4 global BOOTP servers. To view menu options, see page 344 .
bdomain <1-10>	Displays the BOOTP Broadcast Domain menu, which allows you to configure BOOTP servers for a specific broadcast domain. To view menu options, see page 344 .
on	Globally turns on BOOTP relay.
off	Globally turns off BOOTP relay.
cur	Displays the current BOOTP relay configuration.

/cfg/13/bootp/server <1-4> BOOTP Relay Server Configuration

```
[BOOTP Server 2 Menu]
address - Set BOOTP server address
delete  - Delete BOOTP server
```

This menu allows you to configure an IP address for a global BOOTP server.

Table 278. BOOTP Relay Server Configuration Options

Command Syntax and Usage	
address <IPv4 address>	Sets the IP address of the BOOTP server.
delete	Deletes the selected BOOTP server configuration.

/cfg/13/bootp/bdomain <1-10> BootP Relay Broadcast Domain Configuration

```
[Broadcast Domain 2 Menu]
vlan      - VLAN number
server    - Set IP address of BOOTP server
enable    - Enable broadcast domain
disable   - Disable broadcast domain
delete    - Delete broadcast domain
cur       - Display current broadcast domain configuration
```

This menu allows you to configure a BOOTP server for a specific broadcast domain, based on its associated VLAN.

Table 279. BOOTP Relay Broadcast Domain Configuration Options

Command Syntax and Usage	
vlan <VLAN number>	Configures the VLAN of the broadcast domain. Each broadcast domain must have a unique VLAN.
server <1-4>	Displays the BOOTP Server menu, which allows you to configure an IP address for the BOOTP server. To view menu options, see page 344 .
enable	Enables BOOTP Relay for the broadcast domain.
disable	Disables BOOTP Relay for the broadcast domain. When disabled, BOOTP Relay is performed by one of the global BOOTP servers.

Table 279. BOOTP Relay Broadcast Domain Configuration Options

Command Syntax and Usage	
delete	Deletes the selected broadcast domain configuration.
cur	Displays the current parameters for the BOOTP Relay Broadcast Domain.

/cfg/13/vrrp VRRP Configuration Menu

[Virtual Router Redundancy Protocol Menu]	
vr	- VRRP Virtual Router menu
group	- VRRP Virtual Router Group menu
if	- VRRP Interface menu
track	- VRRP Priority Tracking menu
hotstan	- Enable/disable hot-standby processing
on	- Globally turn VRRP ON
off	- Globally turn VRRP OFF
cur	- Display current VRRP configuration

Virtual Router Redundancy Protocol (VRRP) support on EN2092s provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

By default, VRRP is disabled. IBM Networking OS has extended VRRP to include virtual servers as well, allowing for full active/active redundancy between switches. For more information on VRRP, see the “High Availability” chapter in the *Application Guide*.

Table 280. VRRP Menu Options (/cfg/13/vrrp)

Command Syntax and Usage	
vr <virtual router number (1-128)>	Displays the VRRP Virtual Router Menu. This menu is used for configuring virtual routers on this switch. To view menu options, see page 346 .
group	Displays the VRRP virtual router group menu, used to combine all virtual routers together as one logical entity. Group options must be configured when using two or more switches in a hot-standby failover configuration where only one switch is active at any given time. To view menu options, see page 349 .
if <interface number>	Displays the VRRP Virtual Router Interface Menu. To view menu options, see page 352 .

Table 280. VRRP Menu Options (/cfg/13/vrrp) (continued)

Command Syntax and Usage	
track	Displays the VRRP Tracking Menu. This menu is used for weighting the criteria used when modifying priority levels in the master router election process. To view menu options, see page 353 .
hotstandby disable enable	Enables or disables hot standby processing, in which two or more switches provide redundancy for each other. By default, this option is disabled.
on	Globally enables VRRP on this switch.
off	Globally disables VRRP on this switch.
cur	Displays the current VRRP parameters.

/cfg/13/vrrp/vr <router number>

Virtual Router Configuration Menu

[VRRP Virtual Router 1 Menu]	
track	- Priority Tracking Menu
vrid	- Set virtual router ID
addr	- Set IP address
if	- Set interface number
prio	- Set router priority
adver	- Set advertisement interval
preem	- Enable or disable preemption
ena	- Enable virtual router
dis	- Disable virtual router
del	- Delete virtual router
cur	- Display current VRRP virtual router configuration

This menu is used for configuring virtual routers for this switch. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Virtual routers are disabled by default.

Table 281. VRRP Virtual Router Menu Options (/cfg/l3/vrrp/vr)

Command Syntax and Usage	
track	Displays the VRRP Priority Tracking Menu for this virtual router. Tracking is a IBM Networking OS proprietary extension to VRRP, used for modifying the standard priority system used for electing the master router. To view menu options, see page 348 .
vrid <virtual router ID (1-255)>	<p>Defines the virtual router ID. This is used in conjunction with <code>addr</code> (below) to define a virtual router on this switch. To create a pool of VRRP-enabled routing devices which can provide redundancy to each other, each participating VRRP device must be configured with the same virtual router: one that shares the same <code>vrid</code> and <code>addr</code> combination.</p> <p>The <code>vrid</code> for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. The default value is 1.</p> <p>All <code>vrid</code> values must be unique within the VLAN to which the virtual router's IP interface belongs.</p>
addr <IP address (such as, 192.4.17.101)>	Defines the IP address for this virtual router using dotted decimal notation. This is used in conjunction with the <code>vrid</code> (above) to configure the same virtual router on each participating VRRP device. The default address is 0.0.0.0.
if <interface number>	<p>Selects a switch IP interface. If the IP interface has the same IP address as the <code>addr</code> option above, this switch is considered the "owner" of the defined virtual router. An owner has a special priority of 255 (highest) and will always assume the role of master router, even if it must pre-empt another virtual router which has assumed master routing authority. This pre-emption occurs even if the <code>preem</code> option below is disabled. The default interface is 1.</p>
prio <1-254>	<p>Defines the election priority bias for this virtual server. This can be any integer between 1 and 254. The default value is 100.</p> <p>During the master router election process, the routing device with the highest virtual router priority number wins. If there is a tie, the device with the highest IP interface address wins. If this virtual router's IP address (<code>addr</code>) is the same as the one used by the IP interface, the priority for this virtual router will automatically be set to 255 (highest).</p> <p>When priority tracking is used (<code>/cfg/l3/vrrp/track</code> or <code>/cfg/l3/vrrp/vr #/track</code>), this base priority value can be modified according to a number of performance and operational criteria.</p>
adver <1-255>	Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default value is 1.

Table 281. VRRP Virtual Router Menu Options (/cfg/13/vrrp/vr) (continued)

Command Syntax and Usage	
preem disable enable	Enables or disables master preemption. When enabled, if this virtual router is in backup mode but has a higher priority than the current master, this virtual router will preempt the lower priority master and assume control. Note that even when <code>preem</code> is disabled, this virtual router will always preempt any other master if this switch is the owner (the IP interface address and virtual router <code>addr</code> are the same). By default, this option is enabled.
ena	Enables this virtual router.
dis	Disables this virtual router.
del	Deletes this virtual router from the switch configuration.
cur	Displays the current configuration information for this virtual router.

`/cfg/13/vrrp/vr <router number> /track`

Virtual Router Priority Tracking Configuration Menu

[VRRP Virtual Router 1 Priority Tracking Menu]	
vrs	- Enable/disable tracking master virtual routers
ifs	- Enable/disable tracking other interfaces
ports	- Enable/disable tracking VLAN switch ports
cur	- Display current VRRP virtual router configuration

This menu is used for modifying the priority system used when electing the master router from a pool of virtual routers. Various tracking criteria can be used to bias the election results. Each time one of the tracking criteria is met, the priority level for the virtual router is increased by an amount defined through the VRRP Tracking Menu (see [page 353](#)).

Criteria are tracked dynamically, continuously updating virtual router priority levels when enabled. If the virtual router pre-emption option (see `preem` in [Table 281 on page 347](#)) is enabled, this virtual router can assume master routing authority when its priority level rises above that of the current master.

Some tracking criteria (`vrs`, `ifs`, and `ports` below) apply to standard virtual routers, otherwise called “virtual interface routers.” A virtual *server* router is defined as any virtual router whose IP address (`addr`) is the same as any configured virtual server IP address.

Table 282. Virtual Router Priority Tracking Options (`/cfg/l3/vrrp/vr #/track`)

Command Syntax and Usage
<p><code>vrs disable enable</code></p> <p>When enabled, the priority for this virtual router will be increased for each virtual router in master mode on this switch. This is useful for making sure that traffic for any particular client/server pairing are handled by the same switch, increasing routing and load balancing efficiency. This command is disabled by default.</p>
<p><code>ifs disable enable</code></p> <p>When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.</p>
<p><code>ports disable enable</code></p> <p>When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered “active” if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.</p>
<p><code>cur</code></p> <p>Displays the current configuration for priority tracking for this virtual router.</p>

`/cfg/l3/vrrp/group`

Virtual Router Group Configuration Menu

[VRRP Virtual Router Group Menu]	
<code>track</code>	- Priority Tracking Menu
<code>vrid</code>	- Set virtual router ID
<code>if</code>	- Set interface number
<code>prio</code>	- Set rener priority
<code>adver</code>	- Set advertisement interval
<code>preem</code>	- Enable or disable preemption
<code>ena</code>	- Enable virtual router
<code>dis</code>	- Disable virtual router
<code>del</code>	- Delete virtual router
<code>cur</code>	- Display current VRRP virtual router configuration

The Virtual Router Group menu is used for associating all virtual routers into a single logical virtual router, which forces all virtual routers on the EN2092 to either be master or backup as a group. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Note: This option is required to be configured only when using at least two EN2092s in a hot-standby failover configuration, where only one switch is active at any time.

Table 283. Virtual Router Group Menu Options (/cfg/l3/vrrp/group)

Command Syntax and Usage	
track	Displays the VRRP Priority Tracking Menu for the virtual router group. Tracking is a IBM Networking OS proprietary extension to VRRP, used for modifying the standard priority system used for electing the master router. To view menu options, see page 351 .
vrid <virtual router ID (1-255)>	Defines the virtual router ID. The <code>vrid</code> for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. All <code>vrid</code> values must be unique within the VLAN to which the virtual router's IP interface (see <code>if</code> below) belongs. The default virtual router ID is 1.
if <interface number>	Selects a switch IP interface. The default switch IP interface number is 1.
prio <1-254>	Defines the election priority bias for this virtual router group. This can be any integer between 1 and 254. The default value is 100. During the master router election process, the routing device with the highest virtual router priority number wins. Each virtual router group is treated as one entity regardless of how many virtual routers are in the group. When the switch tracks the virtual router group, it measures the resources contained in the group (such as interfaces, VLAN ports, real servers). The priority is updated as a group. Every virtual router in the group has the same priority. The <code>owner</code> parameter does not apply to the virtual router group. The group itself cannot be an owner and therefore the priority is 1-254.
adver <1-255>	Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default is 1.
preem disable enable	Enables or disables master preemption. When enabled, if the virtual router group is in backup mode but has a higher priority than the current master, this virtual router will preempt the lower priority master and assume control. Note that even when <code>preem</code> is disabled, this virtual router will always preempt any other master if this switch is the owner (the IP interface address and virtual router <code>addr</code> are the same). By default, this option is enabled.
ena	Enables the virtual router group.
dis	Disables the virtual router group.

Table 283. Virtual Router Group Menu Options (/cfg/l3/vrrp/group) (continued)

Command Syntax and Usage	
del	Deletes the virtual router group from the switch configuration.
cur	Displays the current configuration information for the virtual router group.

/cfg/l3/vrrp/group/track

Virtual Router Group Priority Tracking Configuration Menu

[Virtual Router Group Priority Tracking Menu]	
ifs	- Enable/disable tracking other interfaces
ports	- Enable/disable tracking VLAN switch ports
cur	- Display current VRRP Group Tracking configuration

Note: If *Virtual Router Group Tracking* is enabled, then the tracking option will be available only under *group* option. The tracking setting for the other individual virtual routers will be ignored.

Table 284. Virtual Router Group Priority Tracking Menu (/cfg/l3/vr/group/track)

Command Syntax and Usage	
ifs disable enable	When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.
ports disable enable	When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered "active" if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.
cur	Displays the current configuration for priority tracking for this virtual router.

/cfg/13/vrrp/if <interface number>

VRRP Interface Configuration Menu

Note: The *interface-number* represents the IP interface on which authentication parameters must be configured.

[VRRP Interface 1 Menu]
auth - Set authentication types
passw - Set plain-text password
del - Delete interface
cur - Display current VRRP interface configuration

This menu is used for configuring VRRP authentication parameters for the IP interfaces used with the virtual routers.

Table 285. VRRP Interface Menu Options (/cfg/13/vrrp/if)

Command Syntax and Usage	
auth none password	Defines the type of authentication that will be used: none (no authentication), or password (password authentication).
passw <password>	Defines a plain text password up to eight characters long. This password will be added to each VRRP packet transmitted by this interface when password authentication is chosen (see auth above).
del	Clears the authentication configuration parameters for this IP interface. The IP interface itself is not deleted.
cur	Displays the current configuration for this IP interface's authentication parameters.

/cfg/13/vrrp/track VRRP Tracking Configuration Menu

```
[VRRP Tracking Menu]
vrs      - Set priority increment for virtual router tracking
ifs      - Set priority increment for IP interface tracking
ports    - Set priority increment for VLAN switch port tracking
cur      - Display current VRRP Priority Tracking configuration
```

This menu is used for setting weights for the various criteria used to modify priority levels during the master router election process. Each time one of the tracking criteria is met (see “VRRP Virtual Router Priority Tracking Menu” on [page 348](#)), the priority level for the virtual router is increased by an amount defined through this menu.

Table 286. VRRP Tracking Menu Options (/cfg/13/vrrp/track)

Command Syntax and Usage
<p>vrs <0-254></p> <p>Defines the priority increment value (0 through 254) for virtual routers in master mode detected on this switch. The default value is 2.</p>
<p>ifs <0-254></p> <p>Defines the priority increment value (0 through 254) for active IP interfaces detected on this switch. The default value is 2.</p>
<p>ports <0-254></p> <p>Defines the priority increment value (0 through 254) for active ports on the virtual router’s VLAN. The default value is 2.</p>
<p>cur</p> <p>Displays the current configuration of priority tracking increment values.</p>

Note: These priority tracking options only define increment values. These options do not affect the VRRP master router election process until options under the VRRP Virtual Router Priority Tracking Menu (see [page 348](#)) are enabled.

/cfg/13/gw6 <gateway number> IPv6 Default Gateway Configuration Menu

```
[Default IP6 gateway 1 Menu]
addr     - Set IP address
ena      - Enable default gateway
dis      - Disable default gateway
del      - Delete default gateway
cur      - Display current default gateway configuration
```

The switch supports IPv6 default gateways:

- Gateway 1 is used for data traffic.
- Gateway 4 is reserved for management.

The following table describes the IPv6 default gateway configuration options.

Table 287. IPv6 Default Gateway Menu Options (/cfg/l3/gw6)

Command Syntax and Usage	
addr <IPv6 address, such as 3001:0:0:0:0:abcd:12>	Configures the IPv6 address of the default gateway, in hexadecimal format with colons.
ena	Enables the default gateway.
dis	Disables the default gateway.
del	Deletes the default gateway.
cur	Displays current IPv6 default gateway settings.

/cfg/l3/route6

IPv6 Static Route Configuration Menu

[IPv6 Static Route Menu]	
add	- Add static route
rem	- Remove static route
clear	- Clear static routes
cur	- Display current IPv6 static route configuration

The following table describes the IPv6 static route configuration options.

Table 288. IPv6 Static Route Menu Options (/cfg/l3/route6)

Command Syntax and Usage	
add <IPv6 address, such as 3001:0:0:0:0:abcd:12> <Prefix length> <gateway address> [<interface number>]	Adds an IPv6 static route.
rem <IPv6 address, such as 3001:0:0:0:0:abcd:12> <Prefix length> [<interface number>]	Removes the IPv6 static route.

Table 288. IPv6 Static Route Menu Options (/cfg/l3/route6) (continued)

Command Syntax and Usage	
clear	<p>Clears IPv6 static routes. You are prompted to select the routes to clear, based on the following criteria:</p> <ul style="list-style-type: none"> – dest: Destination IPv6 address of the route – gw: Default gateway address used by the route – if: Interface used by the route – a11: All IPv6 static routes
cur	<p>Displays the current IPv6 static route configuration.</p>

/cfg/l3/nbrcache

IPv6 Neighbor Discovery Cache Configuration Menu

[Static NBR Cache Menu]	
add	- Add a static NBR Cache entry
del	- Delete a static NBR Cache entry
clear	- Clear static neighbor cache table
cur	- Display current static NBR Cache configuration

The following table describes the IPv6 Neighbor Discovery cache configuration options.

Table 289. Static NBR Cache Menu Options (/cfg/l3/nbrcache)

Command Syntax and Usage	
add	<p><i><IPv6 address, such as 3001:0:0:0:0:abcd:12> <MAC address, such as 00:60:af:00:02:30> <VLAN number> <port number or alias></i></p> <p>Adds a static entry to the Neighbor Discovery cache table. You are prompted for the following information:</p> <ul style="list-style-type: none"> – IP address – MAC address – VLAN number – Port
del	<p><i><IPv6 address, such as 3001:0:0:0:0:abcd:12></i></p> <p>Deletes the selected entry from the Neighbor Discovery cache table.</p>

Table 289. Static NBR Cache Menu Options (/cfg/13/nbrcache) (continued)

Command Syntax and Usage	
clear	<p>Clears static entries in the Neighbor Discovery cache table. You are prompted to select the entries to clear, based on the following criteria:</p> <ul style="list-style-type: none"> – IF: Entries associated with the selected interface – VLAN: Entries associated with the selected VLAN – Port: Entries associated with the selected port – All: All IPv6 Neighbor cache entries.
cur	<p>Displays the current configuration of the Neighbor Discovery static cache table.</p>

/cfg/13/ip6pmtu IPv6 Path MTU Configuration

[IP6 Path MTU Menu]	
timeout	- Set timeout duration of PMTU cache in minutes
clear	- Clear IP6 Path MTU stats
cur	- Display current PMTU configuration

The following table describes the configuration options for Path MTU (Maximum Transmission Unit). The Path MTU cache can consume system memory and affect performance. These commands allow you to manage the Path MTU cache.

Table 290. IPv6 Path MTU Options

Command Syntax and Usage	
timeout 0 <10-100>	<p>Sets the timeout value for Path MTU cache entries, in minutes. Enter 0 (zero) to set the timeout to infinity (no timeout).</p> <p>The default value is 10 minutes.</p>
clear	<p>Clears all entries in the Path MTU cache.</p>
cur	<p>Displays the current Path MTU configuration.</p>

/cfg/13/ospf3

Open Shortest Path First Version 3 Configuration Menu

[Open Shortest Path First v3 Menu]	
aindex	- OSPFv3 Area (index) Menu
range	- OSPFv3 Summary Range Menu
summpref	- OSPFv3 AS-External Range Menu
if	- OSPFv3 Interface Menu
virt	- OSPFv3 Virtual Links Menu
host	- OSPFv3 Host Entry Menu
rdstcfg	- OSPFv3 Route Redistribute Entry Menu
redist	- OSPFv3 Route Redistribution Menu
abrtype	- Set the alternative ABR type
lsdb	- Set the LSDB limit for external LSA
exoverfl	- Set exit overflow interval in seconds
refbw	- Set reference bandwidth for dflt intf metric calc
spfdelay	- Set delay between topology change and SPF calc
spfhold	- Set hold time between two consecutive SPF calc
rtrid	- Set a fixed router ID
nasbrdfr	- Enable/disable set P-bit by an NSSA internal ASBR
on	- Globally turn OSPFv3 ON
off	- Globally turn OSPFv3 OFF
cur	- Display current OSPFv3 configuration

Table 291. OSPFv3 Configuration Menu (/cfg/13/ospf3)

Command Syntax and Usage	
aindex <area index (0-2)>	Displays the area index menu. This area index does not represent the actual OSPFv3 area number. See page 359 to view menu options.
range <1-16>	Displays summary routes menu for up to 16 IP addresses. See page 360 to view menu options.
summpref <1-16>	Displays the OSPFv3 summary prefix configuration menu. See page 362 to view menu options.
if <interface number>	Displays the OSPFv3 interface configuration menu. See page 363 to view menu options.
virt <virtual link (1-3)>	Displays the Virtual Links menu used to configure OSPFv3 for a Virtual Link. See page 367 to view menu options.
host <1-128>	Displays the menu for configuring OSPFv3 for the host routes. Up to 128 host routes can be configured. Host routes are used for advertising network device IP addresses to external networks to perform server load balancing within OSPF. It also makes Area Border Route (ABR) load sharing and ABR failover possible. See page 368 to view menu options.

Table 291. OSPFv3 Configuration Menu (/cfg/13/ospf3) (continued)

Command Syntax and Usage	
rdstcfg <1-128>	Displays the OSPF route redistribution entry menu. See page 369 to view menu options.
redist connected static	Displays route redistribution menu. See page 370 to view menu options.
abrtype {standard cisco ibm}	Configures the Area Border Router (ABR) type, as follows: <ul style="list-style-type: none"> – Standard – Cisco – IBM The default setting is <code>standard</code> .
lsdb <LSDB limit (0-2147483647)> none	Sets the link state database limit.
exoverfl <0-4294967295>	Configures the number of seconds that a router takes to exit Overflow State. The default value is 0 (zero).
refbw <0-4294967295>	Configures the reference bandwidth, in kilobits per second, used to calculate the default interface metric. The default value is 100,000.
spfdelay <0-65535>	Configures the number of seconds that SPF calculation is delayed after a topology change message is received. The default value is 5.
spfhold <0-65535>	Configures the number of seconds between SPF calculations. The default value is 10.
rtrid <IP address>	Defines the router ID.
nasbrdfr e d	Enables or disables setting of the P-bit in the default Type 7 LSA generated by an NSSA internal ASBR. The default setting is <code>disabled</code> .
on	Enables OSPFv3 on the switch.
off	Disables OSPFv3 on the switch.
cur	Displays the current OSPF configuration settings.

/cfg/13/ospf3/aindex <area index>
Area Index Configuration Menu

[OSPFv3 Area (index) 1 Menu]	
areaid	- Set area ID
type	- Set area type
metric	- Set metric for the default route into stub/NSSA area
mettype	- Set default metric for stub/NSSA area
stb	- Set stability interval for the NSSA area
trnsrole	- Set translation role for the NSSA area
nosumm	- Enable/disable prevent sending summ LSA into stub/NSSA area
enable	- Enable area
disable	- Disable area
delete	- Delete area
cur	- Display current OSPF area configuration

Table 292. OSPFv3 Area Index Configuration Options (/cfg/13/ospf3/aindex)

Command Syntax and Usage	
areaid <IP address (such as, 192.4.17.101)>	Defines the IP address of the OSPFv3 area index.
type transit stub nssa	<p>Defines the type of area. For example, when a virtual link has to be established with the backbone, the area type must be defined as transit.</p> <p>Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.</p> <p>Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.</p> <p>NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas. External routes from outside the Autonomous System (AS) can be advertised within the NSSA but are not distributed into other areas.</p>
metric <metric value (1-16777215)>	Configures the cost for the default summary route in a stub area or NSSA.
mettype <1-3>	<p>Configures the default metric type applied to the route.</p> <p>This command applies only to area type of Stub/NSSA.</p>
stb <1-255>	Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40.

Table 292. OSPFv3 Area Index Configuration Options (/cfg/l3/ospf3/aindex) (continued)

Command Syntax and Usage	
trnsrole always candidate	<p>Configures the translation role for an NSSA area, as follows:</p> <ul style="list-style-type: none"> – always: Type 7 LSAs are always translated into Type 5 LSAs. – candidate: An NSSA border router participates in the translator election process. <p>The default setting is candidate.</p>
nosumm e d	<p>Enables or disables the no-summary option. When enabled, the area-border router neither originates nor propagates Inter-Area-Prefix LSAs into stub/NSSA areas. Instead it generates a default Inter-Area-Prefix LSA.</p> <p>The default setting is disabled.</p>
enable	Enables the OSPFv3 area.
disable	Disables the OSPFv3 area.
delete	Deletes the OSPFv3 area.
cur	Displays the current OSPFv3 area configuration.

/cfg/l3/ospf3/range <range number>
OSPFv3 Summary Range Configuration Menu

[OSPFv3 Summary Range 1 Menu]	
addr	- Set IPv6 address

disable	- Disable range
delete	- Delete range
cur	- Display current OSPFv3 summary range configuration

Table 293. OSPFv3 Summary Range Configuration Options (/cfg/l3/ospf3/range)

Command Syntax and Usage	
addr <IPv6 address>	Configures the base IPv6 address for the range.
preflen <IPv6 prefix length (1-128)>	Configures the subnet IPv6 prefix length. The default value is 0 (zero).

Table 293. OSPFv3 Summary Range Configuration Options (/cfg/l3/ospf3/range)

Command Syntax and Usage	
a i n d e x <area index (0-2)>	Configures the area index used by the switch.
l s a t y p e s u m m a r y T y p e 7	Configures the LSA type, as follows: – Summary LSA – Type7 LSA
t a g <0-4294967295>	Configures the route tag.
h i d e d i s a b l e e n a b l e	Hides the OSPFv3 summary range.
e n a b l e	Enables the OSPFv3 summary range.
d i s a b l e	Disables the OSPFv3 summary range.
d e l e t e	Deletes the OSPFv3 summary range.
c u r	Displays the current OSPFv3 summary range configuration.

`/cfg/13/ospf3/summpref <range number>`
OSPFv3 AS-External Range Configuration Menu

[OSPFv3 AS-External Range 1 Menu]	
<code>addr</code>	- Set IPv6 address
<code>preflen</code>	- Set IPv6 prefix length
<code>aindex</code>	- Set area index
<code>aggreff</code>	- Set aggregation effect
<code>transl</code>	- Enable/disable set P-bit in the generated LSA
<code>enable</code>	- Enable range
<code>disable</code>	- Disable range
<code>delete</code>	- Delete range
<code>cur</code>	- Display current OSPFv3 AS-External range configuration

Table 294. OSPFv3 AS External Range Configuration Options (/cfg/13/ospf3/range)

Command Syntax and Usage	
<code>addr <IPv6 address></code>	Configures the base IPv6 address for the range.
<code>preflen <IPv6 prefix length (1-128)></code>	Configures the subnet IPv6 prefix length. The default value is 0 (zero).
<code>aindex <area index (0-2)></code>	Configures the area index used by the switch.
<code>aggreff allowAll denyAll advertise not-advertise</code>	Configures the aggregation effect, as follows: <ul style="list-style-type: none"> – <code>allowAll</code>: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are generated. Aggregated Type-7 LSAs are generated in all the attached NSSAs for the range. – <code>denyAll</code>: Type-5 and Type-7 LSAs are not generated. – <code>advertise</code>: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are generated. For other area IDs, aggregated Type-7 LSAs are generated in the NSSA area. – <code>not-advertise</code>: If the area ID is 0.0.0.0, Type-5 LSAs are not generated, while all NSSA LSAs within the range are cleared and aggregated Type-7 LSAs are generated for all NSSAs. For other area IDs, aggregated Type-7 LSAs are not generated in the NSSA area.
<code>transl e d</code>	When enabled, the P-bit is set in the generated Type-7 LSA. When disabled, the P-bit is cleared. The default setting is <code>disabled</code> .
<code>enable</code>	Enables the OSPFv3 AS-external range.
<code>disable</code>	Disables the OSPFv3 AS-external range.

Table 294. OSPFv3 AS External Range Configuration Options (/cfg/l3/ospf3/range)

Command Syntax and Usage	
delete	Deletes the OSPFv3 AS-external range.
cur	Displays the current OSPFv3 AS-external range.

/cfg/l3/ospf3/if <interface number>

OSPFv3 Interface Configuration Menu

[OSPFv3 Interface 1 Menu]	
aindex	- Set area index
ipsec	- Set ipsec on the interface
instance	- Set instance id
prio	- Set interface router priority
cost	- Set interface cost
hello	- Set hello interval in seconds
dead	- Set dead interval in seconds
transm	- Set transmit delay in seconds
retra	- Set retransmit interval in seconds
passive	- Enable/disable passive interface
enable	- Enable interface
disable	- Disable interface
delete	- Delete interface
cur	- Display current OSPFv3 interface configuration

Table 295. OSPFv3 Interface Configuration Options (/cfg/l3/ospf3/if)

Command Syntax and Usage	
aindex <area index (0-2)>	Configures the OSPFv3 area index.
ipsec	Displays the OSPFv3 over IPsec configuration menu. See page 364 to view menu options.
instance <0-255>	Configures the instance ID for the interface.
prio <priority value (0-255)>	Configures the priority value for the switch's OSPFv3 interface. A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the interface cannot be used as Designated Router (DR).
cost <1-65535>	Configures the metric value for sending a packet on the interface.
hello <1-65535>	Configures the indicated interval, in seconds, between the hello packets, that the router sends on the interface.

Table 295. OSPFv3 Interface Configuration Options (/cfg/l3/ospf3/if) (continued)

Command Syntax and Usage	
dead <1-65535>	Configures the time period, in seconds, for which the router waits for hello packet from the neighbor before declaring this neighbor down.
transm <1-1800>	Configures the estimated time, in seconds, taken to transmit LS update packet over this interface.
retra <1-1800>	Configures the interval in seconds, between LSA retransmissions for adjacencies belonging to interface.
passive enable disable	Enables or disables the passive setting on the interface. On a passive interface, OSPFv3 protocol packets are suppressed.
enable	Enables the OSPFv3 interface.
disable	Disables the OSPFv3 interface.
delete	Deletes the OSPFv3 interface.
cur	Displays the current settings for OSPFv3 interface.

/cfg/l3/ospf3/if <interface number>/ipsec

OSPFv3 IPsec Configuration Menu

[OSPFv3 Interface 1 IPsec Menu]	
ah	- Set AH protocol
esp	- Set ESP protocol

The following menus enable you to configure IPsec on OSPFv3.

Table 296. OSPFv3 IPsec Configuration Options (/cfg/l3/ospf3/if/ipsec)

Command Syntax and Usage	
ah	Displays the Authentication Header (AH) configuration menu. To view menu options, see page 365 .
esp	Displays the Encapsulating Security Payload (ESP) configuration menu. To view menu options, see page 366 .

`/cfg/l3/ospf3/if <interface number>/ipsec/ah`
OSPFv3 IPsec Authentication Header Configuration Menu

```
[Set AH protocol]
auth      - Select the authentication algorithm
authkey   - Set the authentication key
spi       - Set the security parameter index
enable    - Enable AH
disable   - Disable AH
reset     - Reset AH configuration
cur       - Display current AH settings
```

The following menus enable you to configure an IPsec Authentication Header on OSPFv3.

Table 297. OSPFv3 IPsec AH Configuration Options (/cfg/l3/ospf3/if/ipsec/ah)

Command Syntax and Usage	
<code>auth sha1 md5 none</code>	Sets the authentication algorithm.
<code>authkey <Hexadecimal string (MD5 key - 32 chars SHA1 key - 40 chars)></code>	Configures the authentication key password.
<code>spi <256-4294967295></code>	Sets the IPsec in AH Security Parameter Index (SPI).
<code>enable</code>	Enables the authentication header.
<code>disable</code>	Disables the authentication header.
<code>reset</code>	Resets the AH settings to factory settings.
<code>current</code>	Displays the current AH configuration.

`/cfg/13/ospf3/if <interface number>/ipsec/esp`
OSPFv3 over IPsec Configuration Menu

```
[OSPFv3 Interface 1 ESP Menu]
auth      - Select the authentication algorithm
authkey   - Set the authentication key
encrypt   - Select the encryption algorithm
encrykey  - Set the encryption key
spi       - Set the security parameter index
enable    - Enable ESP
disable   - Disable ESP
reset     - Reset ESP configuration
cur       - Display current ESP settings
```

The following menus enable you to configure an IPsec Encapsulating Security Payload on OSPFv3.

Table 298. OSPFv3 IPsec ESP Configuration Options (/cfg/13/ospf3/if/ipsec/esp)

Command Syntax and Usage	
<code>auth sha1 md5 none</code>	Sets the authentication algorithm.
<code>authkey <Hexadecimal string (MD5 - 32 chars SHA1 - 40 chars)></code>	Configures the authentication key password.
<code>encrypt des 3des aes null</code>	Sets the encryption algorithm.
<code>encrykey <Hexadecimal string (3DES - 32 chars AES - 40 chars DES - 16 chars)></code>	Sets the encryption key.
<code>spi <256-4294967295></code>	Sets the IPsec in AH Security Parameter Index (SPI).
<code>enable</code>	Enables the encapsulating security payload.
<code>disable</code>	Disables the encapsulating security payload.
<code>reset</code>	Resets the ESP settings to factory settings.
<code>current</code>	Displays the current ESP configuration.

`/cfg/l3/ospf3/virt <link number>`
OSPFv3 Virtual Link Configuration Menu

```
[OSPFv3 Virtual Link 1 Menu]
aindex - Set area index
hello - Set hello interval in seconds
dead - Set dead interval in seconds
trans - Set transit delay in seconds
retra - Set retransmit interval in seconds
nbr - Set router ID of virtual neighbor
enable - Enable interface
disable - Disable interface
delete - Delete interface
cur - Display current OSPFv3 interface configuration
```

Table 299. OSPFv3 Virtual Link Configuration Options (`/cfg/l3/ospf3/virt`)

Command Syntax and Usage	
<code>aindex <area index (0-2)></code>	Configures the OSPFv3 area index.
<code>hello <1-65535></code>	Configures the indicated interval, in seconds, between the hello packets, that the router sends on the interface.
<code>dead <1-65535></code>	Configures the time period, in seconds, for which the router waits for hello packet from the neighbor before declaring this neighbor down.
<code>trans <1-1800></code>	Configures the estimated time, in seconds, taken to transmit LS update packet over this interface.
<code>retra <1-1800></code>	Configures the interval, in seconds, between link-state advertisement (LSA) retransmissions for adjacencies belonging to the OSPFv3 virtual link interface. The default value is five seconds.
<code>nbr <NBR router ID (IP address)></code>	Configures the router ID of the virtual neighbor. The default setting is 0.0.0.0
<code>enable</code>	Enables OSPFv3 virtual link.
<code>disable</code>	Disables the OSPFv3 virtual link.
<code>delete</code>	Deletes the OSPFv3 virtual link.
<code>cur</code>	Displays the current OSPFv3 virtual link settings.

`/cfg/13/ospf3/host <host number>`
OSPFv3 Host Entry Configuration Menu

[OSPF Host Entry 1 Menu]	
<code>addr</code>	- Set host entry IP address
<code>aindex</code>	- Set area index
<code>cost</code>	- Set cost of this host entry
<code>enable</code>	- Enable host entry
<code>disable</code>	- Disable host entry
<code>delete</code>	- Delete host entry
<code>cur</code>	- Display current OSPF host entry configuration

Table 300. OSPFv3 Host Entry Configuration Options (/cfg/13/ospf3/host)

Command Syntax and Usage	
<code>addr <IPv6 address></code>	Configures the base IPv6 address for the host entry.
<code>a i n d e x <area index (0-2)></code>	Configures the area index of the host.
<code>cost <1-65535></code>	Configures the cost value of the host.
<code>enable</code>	Enables OSPF host entry.
<code>disable</code>	Disables OSPF host entry.
<code>delete</code>	Deletes OSPF host entry.
<code>cur</code>	Displays the current OSPF host entries.

`/cfg/13/ospf3/rdstcfg <1-128>`
OSPFv3 Redist Entry Configuration Menu

```
[OSPFv3 Redist Entry 1 Menu]
addr      - Set redistrib entry IPv6 address
preflen  - Set IPv6 prefix length
metric    - Set metric to be applied to the route
mettype   - Set metric type
tag       - Set route tag
enable    - Enable redistrib entry
disable   - Disable redistrib entry
delete    - Delete redistrib entry
cur       - Display current OSPF redistrib entry configuration
```

Table 301. OSPFv3 Redist Entry Configuration Options (/cfg/13/ospf3/rdstcfg)

Command Syntax and Usage	
<code>addr <IPv6 address></code>	Configures the base IPv6 address for the redistribution entry.
<code>preflen <IPv6 prefix length (1-128)></code>	Configures the subnet IPv6 prefix length. The default value is 64.
<code>metric <1-16777215></code>	Configures the route metric value applied to the route before it is advertised into the OSPFv3 domain.
<code>mettype asExttype1 asExttype2</code>	Configures the metric type applied to the route before it is advertised into the OSPFv3 domain.
<code>tag <0-4294967295> unset</code>	Configures the route tag. To clear the route tag, enter unset.
<code>enable</code>	Enables the OSPFv3 redistribution entry.
<code>disable</code>	Disables the OSPFv3 redistribution entry.
<code>delete</code>	Deletes the OSPFv3 redistribution entry.
<code>cur</code>	Displays the current OSPFv3 redistribution configuration entries.

/cfg/13/ospf3/redirect connected|static OSPFv3 Redistribute Configuration Menu

```
[OSPF Redistribute Static Menu]
export - Export all routes of this protocol
cur    - Display current redistribution setting
```

Table 302. OSPFv3 Redistribute Configuration Options (/cfg/13/ospf3/redirect)

Command Syntax and Usage
<pre>export [<metric value (1-16777215)> none] [<metric type (1-2)>] [<tag (0-4294967295)> unset]</pre> <p>Exports the routes of this protocol as external OSPFv3 AS-external LSAs in which the metric, metric type, and route tag are specified. To remove a previous configuration and stop exporting the routes of the protocol, enter <code>none</code>.</p> <p>To clear the route tag, enter <code>unset</code>.</p>
<pre>cur</pre> <p>Displays the current OSPFv3 route redistribution settings.</p>

/cfg/13/ndprefix

IPv6 Neighbor Discovery Prefix Configuration

[IPv6 Neighbor Discovery Prefix Menu]
profile - Profile of ND Prefix
add - Add Neighbour Discovery Prefix
rem - Remove Neighbour Discovery Prefix
clear - Clear Neighbour Discovery Prefix
cur - Display current Neighbour Discovery Prefix configuration

The following table describes the Neighbor Discovery prefix configuration options. These commands allow you to define a list of prefixes to be placed in Prefix Information options in Router Advertisement messages sent from an interface.

Table 303. IPv6 Neighbor Discovery Prefix Options

Command Syntax and Usage
<p>profile <1-127></p> <p>Displays the Neighbor Discovery Profile menu. You can configure up to 127 profiles. You must attach a profile to each Neighbor Discovery prefix.</p>
<p>add {<IPv6 prefix> <prefix length> <interface number> <profile index>}</p> <p>Adds a Neighbor Discovery prefix to an interface.</p> <p>Note: A profile index of 0 (zero) adds the default profile, as follows:</p> <ul style="list-style-type: none">– Prefix Advertisement: enabled– Valid Lifetime: 2592000– Valid Lifetime Fixed Flag: enabled– Preferred Lifetime: 604800– Preferred Lifetime Fixed Flag: enabled– On-link Flag: enabled– Autonomous Flag: enabled
<p>rem {<IPv6 prefix> <prefix length>}</p> <p>Removes a Neighbor Discovery prefix.</p>
<p>clear <interface number> all</p> <p>Clears the selected Neighbor Discovery prefixes. If you include an interface number, all ND prefixes for that interface are cleared.</p>
<p>cur</p> <p>Displays current Neighbor Discovery prefix parameters.</p>

/cfg/13/ndprefix/profile <1-127> IPv6 Neighbor Discovery Profile Configuration

```
[IP6 Neighbor Discovery Profile 1 Menu]
valft - Set Prefix Valid lifetime
valftfix - Set Prefix Valid lifetime FIXED Flag
prlft - Set Prefix Preferred lifetime
prlftfix - Set Prefix Preferred lifetime FIXED Flag
onlink - Set Prefix on-link Flag
autoflag - Set Prefix Autonomous Flag
ena - Enable Prefix advertisement
dis - Disable Prefix advertisement
del - Delete profile
cur - Display current Neighbor Discovery Prefix configuration
```

The following table describes the Neighbor Discovery Profile configuration options. Information in the ND profile can be used to supplement information included in an ND prefix.

Table 304. IPv6 Neighbor Discovery Profile Options

Command Syntax and Usage	
valft <0-4294967295>	<p>Configures the Valid Lifetime of the prefix, in seconds. The Valid Lifetime is the length of time (relative to the time the packet is sent) that the prefix is valid for the purpose of on-link determination. Enter the maximum value to configure a Valid Lifetime of infinity.</p> <p>The default value is 2592000.</p>
valftfix enable disable	<p>Enables or disables the Valid Lifetime fixed flag. When enabled, the Valid Lifetime value represents a fixed time that stays the same in consecutive advertisements.</p> <p>When disabled, the Valid Lifetime value represents a time that decrements in real time, that is, one that will result in a value of zero at a specified time in the future.</p> <p>The default setting is enabled.</p>
prlft <0-4294967295>	<p>Configures the Preferred Lifetime of the prefix, in seconds. The Preferred Lifetime is the length of time (relative to the time the packet is sent) that addresses generated from the prefix via stateless address autoconfiguration remain preferred. Enter the maximum value to configure a Preferred Lifetime value of infinity.</p> <p>The default value is 604800.</p> <p>Note: The Preferred Lifetime value must not exceed the Valid Lifetime value.</p>

Table 304. IPv6 Neighbor Discovery Profile Options

Command Syntax and Usage	
prlftfix enable disable	<p>Enables or disables the Preferred Lifetime fixed flag. When enabled, the Preferred Lifetime value represents a fixed time that stays the same in consecutive advertisements.</p> <p>When disabled, the Preferred Lifetime value represents a time that decrements in real time, that is, one that will result in a value of zero at a specified time in the future.</p> <p>The default setting is <i>enabled</i>.</p>
onlink enable disable	<p>Enables or disables the on-link flag. When enabled, indicates that this prefix can be used for on-link determination. When disabled, the advertisement makes no statement about on-link or off-link properties of the prefix.</p> <p>The default setting is <i>enabled</i>.</p>
autoflag enable disable	<p>Enables or disables the autonomous flag. When enabled, indicates that the prefix can be used for stateless address configuration.</p> <p>The default setting is <i>enabled</i>.</p>
ena	<p>Enables the selected profile.</p>
dis	<p>Disables the selected profile</p>
del	<p>Delete the selected Neighbor Discovery profile.</p>
cur	<p>Displays the current Neighbor Discovery profile parameters.</p>

/cfg/13/ppt

IPv6 Prefix Policy Table Configuration

[Prefix Policy Table Menu]	
add	- Add prefix Policy
rem	- Remove prefix policy
cur	- Display prefix policy table

The following table describes the configuration options for the IPv6 Prefix Policy Table. The Prefix Policy Table allows you to override the default address selection criteria.

Table 305. IPv6 Prefix Policy Table Options

Command Syntax and Usage	
add <IPv6 prefix> <prefix length> <precedence (0-100)> <label (0-100)>	Adds a Prefix Policy Table entry. Enter the following parameters: <ul style="list-style-type: none">– IPv6 address prefix– Prefix length– Precedence: The precedence is used to sort destination addresses. Prefixes with a higher precedence are sorted before those with a lower precedence.– Label: The label allows you to select prefixes based on matching labels. Source prefixes are coupled with destination prefixes if their labels match.
rem <IPv6 prefix> <prefix length> <precedence (0-100)> <label (0-100)>	Removes a prefix policy table entry.
cur	Displays the current Prefix Policy Table configuration.

/cfg/13/loopif <interface number (1-5)> IP Loopback Interface Configuration Menu

[IP Loopback Interface 2 Menu]	
addr	- Set IP address
mask	- Set subnet mask
ena	- Enable IP interface
dis	- Disable IP interface
del	- Delete IP interface
cur	- Display current interface configuration

An IP loopback interface is not connected to any physical port. A loopback interface is always accessible over the network.

Table 306. IP Loopback Interface Menu Options (/cfg/13/loopif)

Command Syntax and Usage	
addr <IP address>	Defines the loopback interface IP address.
mask <subnet mask>	Defines the loopback interface subnet mask.
ena	Enables the loopback interface.
dis	Disables the loopback interface.
del	Deletes the selected loopback interface.
cur	Displays the current IP loopback interface parameters.

/cfg/13/flooding Flooding Configuration Menu

[flooding Menu]	
vlan	- VLAN Flooding Menu
cur	- Display current Flooding configuration

Table 307. Flooding Menu Options (/cfg/13/flooding)

Command Syntax and Usage	
vlan <VLAN number>	Displays the flooding configuration menu for the VLAN. See page 376 to view menu options.
cur	Displays the current flooding parameters.

/cfg/13/flooding/vlan <VLAN number> Flooding VLAN Configuration Menu

[VLAN 1 Flooding Menu]	
flood	- Flood unregistered IPMC
cpu	- Send unregistered IPMC to CPU
optflood	- Enable/disable optimized flooding
cur	- Display current Flooding configuration for this vlan

Table 308. Flooding VLAN Menu Options (/cfg/13/flooding/vlan)

Command Syntax and Usage	
flood enable disable	Configures the switch to flood unregistered IP multicast traffic to all ports. The default setting is <i>enabled</i> . Note: If none of the IGMP hosts reside on the VLAN of the streaming server for a IPMC group, you must disable IGMP flooding to ensure that multicast data is forwarded across the VLANs for that IPMC group.
cpu enable disable	Configures the switch to forward unregistered IP multicast traffic to the MP, which adds an entry in the IPMC table, as follows: <ul style="list-style-type: none"> – If no Mrouter is present, drop subsequent packets with same IPMC. – If an Mrouter is present, forward subsequent packets to the Mrouter(s) on the ingress VLAN. The default setting is <i>enabled</i> . Note: If both <i>flood</i> and <i>cpu</i> are disabled, then the switch drops all unregistered IPMC traffic.

Table 308. Flooding VLAN Menu Options (/cfg/l3/flooding/vlan) (continued)

Command Syntax and Usage	
optflood enable disable	Enables or disables optimized flooding. When enabled, optimized flooding avoids packet loss during the learning period. The default setting is disabled.
cur	Displays the current flooding parameters for the selected VLAN.

/cfg/rmon

Remote Monitoring Configuration

[RMON Menu]	
hist	- RMON History Menu
event	- RMON Event Menu
alarm	- RMON Alarm Menu
cur	- Display current RMON configuration

Remote Monitoring (RMON) allows you to monitor traffic flowing through the switch. The RMON MIB is described in RFC 1757.

Table 309 describes the Remote Monitoring (RMON) configuration menu options.

Table 309. Remote Monitoring (RMON) Menu Options (/cfg/rmon)

Command Syntax and Usage	
hist </-65535>	Displays the RMON History Configuration menu. To view menu options, see page 378 .
event </-65535>	Displays the RMON Event Configuration menu. To view menu options, see page 379 .
alarm </-65535>	Displays the RMON Alarm Configuration menu. To view menu options, see page 379 .
cur	Displays the current RMON parameters.

/cfg/rmon/hist <1-65535>
RMON History Configuration Menu

[RMON History 2 Menu]	
ifoid	- Set interface MIB object to monitor
rbnum	- Set the number of requested buckets
interval	- Set polling interval
owner	- Set owner for the RMON group of statistics
delete	- Delete this history and restore defaults
cur	- Display current history configuration

Table 310 describes the RMON History Menu options.

Table 310. RMON History Menu Options (/cfg/rmon/hist)

Command Syntax and Usage	
ifoid <1-127 characters>	Configures the interface MIB Object Identifier. The IFOID must correspond to the standard interface OID, as follows: 1.3.6.1.2.1.2.2.1.1.x where x is the ifIndex
rbnum <1-65535>	Configures the requested number of buckets, which is the number of discrete time intervals over which data is to be saved. The default value is 30. The maximum number of buckets that can be granted is 50.
interval <1-3600>	Configures the time interval over which the data is sampled for each bucket. The default value is 1800.
owner <1-127 characters>	Enter a text string that identifies the person or entity that uses this History index.
delete	Deletes the selected History index.
cur	Displays the current RMON History parameters.

/cfg/rmon/event <1-65535> RMON Event Configuration Menu

```
[RMON Event 2 Menu]
descn    - Set description for the event
type     - Set event type
owner    - Set owner for the event
delete   - Delete this event and restore defaults
cur      - Display current event configuration
```

Table 311 describes the RMON Event Menu options.

Table 311. RMON Event Menu Options (/cfg/rmon/event)

Command Syntax and Usage	
descn <1-127 characters>	Enter a text string to describe the event.
type none log trap both	Selects the type of notification provided for this event. For log events, an entry is made in the log table and sent to the configured syslog host. For trap events, an SNMP trap is sent to the management station.
owner <1-127 characters>	Enter a text string that identifies the person or entity that uses this event index.
delete	Deletes the selected RMON Event index.
cur	Displays the current RMON Event parameters.

/cfg/rmon/alarm <1-65535> RMON Alarm Configuration Menu

```
[RMON Alarm 2 Menu]
oid      - Set MIB oid datasource to monitor
interval - Set alarm interval
sample   - Set sample type
almtype  - Set startup alarm type
rlimit   - Set rising threshold
flimit   - Set falling threshold
revtidx  - Set event index to fire on rising threshold crossing
fevtidx  - Set event index to fire on falling threshold crossing
owner    - Set owner for the alarm
delete   - Delete this alarm and restore defaults
cur      - Display current alarm configuration
```

The Alarm RMON group can track rising or falling values for a MIB object. The MIB object must be a counter, gauge, integer, or time interval. Each alarm index must correspond to an event index that triggers once the alarm threshold is crossed.

Table 312 describes the RMON Alarm Menu options.

Table 312. RMON Alarm Menu Options (/cfg/rmon/alarm)

Command Syntax and Usage	
<code>oid <1-127 characters></code>	Configures an alarm MIB Object Identifier.
<code>interval <1-65535></code>	Configures the time interval over which data is sampled and compared with the rising and falling thresholds. The default value is 1800.
<code>sample abs delta</code>	Configures the method of sampling the selected variable and calculating the value to be compared against the thresholds, as follows: <ul style="list-style-type: none"> – <code>abs</code>—absolute value, the value of the selected variable is compared directly with the thresholds at the end of the sampling interval. – <code>delta</code>—delta value, the value of the selected variable at the last sample is subtracted from the current value, and the difference compared with the thresholds.
<code>alarmtype rising falling either</code>	Configures the alarm type as rising, falling, or either (rising or falling).
<code>rlimit <-2147483647 - 2147483647></code>	Configures the rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event is generated.
<code>flimit <-2147483647 - 2147483647></code>	Configures the falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event is generated.
<code>revtidx <1-65535></code>	Configures the rising alarm event index that is triggered when a rising threshold is crossed.
<code>fevtidx <1-65535></code>	Configures the falling alarm event index that is triggered when a falling threshold is crossed.
<code>owner <1-127 characters></code>	Enter a text string that identifies the person or entity that uses this alarm index.
<code>delete</code>	Deletes the selected RMON Alarm index.
<code>cur</code>	Displays the current RMON Alarm parameters.

/cfg/virt Virtualization Configuration

[Virtualization Menu]	
vmpolicy	- Virtual Machines Policy Configuration Menu
vmgroup	- Virtual Machines Groups Menu
vmprof	- Virtual Machine Profiles Menu
vmware	- VMware-specific Settings Menu
enavmr	- Enable VMready
disvmr	- Disable VMready
cur	- Display all current virtualization settings

Table 313 describes the general virtualization configuration options. More detailed information is available in the following sections.

Table 313. Virtualization Configuration Options (/cfg/virt)

Command Syntax and Usage	
vmpolicy	Displays the Virtual Machines Policy menu. To view menu options, see page 382 .
vmgroup <I-1024>	Displays the Virtual Machine Groups menu. To view menu options, see page 384 .
vmprof	Displays the Virtual Machine Profiles menu. To view menu options, see page 386 .
vmware	Displays the VMware settings menu. To view menu options, see page 388 .
enavmr	Enables VMready. The default setting is disabled.
disvmr	Disables VMready.
cur	Displays the current virtualization parameters.

/cfg/virt/vmpolicy

Virtual Machines Policy Configuration

```
[VM Policy Configuration Menu]
vmbwidth - VM Bandwidth Configuration Menu
```

Table 314 describes the Virtual Machines (VM) policy configuration options.

Table 314. VM Policy Options (/cfg/virt/vmpolicy)

Command Syntax and Usage
<pre>vmbwidth <MAC address> <UUID> <name> <IP address> <index number></pre> <p>Displays the bandwidth management menu for the selected Virtual Machine. Enter a unique identifier to select a VM.</p>

/cfg/virt/vmpolicy/vmbwidth <VM identifier>

VM Policy Bandwidth Management

```
[VM Bandwidth Management Menu]
txrate - Set VM Transmit Bandwidth (Ingress for switch)
rxrate - Set VM Receive Bandwidth (Egress for switch)
bwctrl - Enable/Disable VM Bandwidth Control
delete - Delete VM bandwidth control Entry
cur     - Display current VM bandwidth configuration
```

Table 315 describes the bandwidth management options for the selected VM. Use these commands to limit the bandwidth used by each VM.

Table 315. VM Bandwidth Management Options (/cfg/virt/vmpolicy/vmbwidth)

Command Syntax and Usage
<pre>txrate <64-1000000> [32 64 128 256 512 1024 2048 4096] <1-640></pre> <p>The first value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the VM to the switch, in kilobits per second. Enter the value in multiples of 64.</p> <p>The second values configures the maximum burst size, in kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.</p> <p>The third value represents the ACL assigned to the transmission rate. The ACL is automatically, in sequential order, if not specified by the user. If there are no available ACLs, the TXrate cannot be configured. Each TXrate configuration reduces the number of available ACLs by one.</p>
<pre>rxrate <64-1000000> [32 64 128 256 512 1024 2048 4096]</pre> <p>The first value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the switch to the VM, in kilobits per second. Enter the value in multiples of 64.</p> <p>The second values configures the maximum burst size, in Kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.</p>

Table 315. VM Bandwidth Management Options (/cfg/virt/vmpolicy/vmbwidth) (continued)

Command Syntax and Usage	
<code>bwctrl e d</code>	Enables or disables bandwidth control on the VM policy.
<code>delete</code>	Deletes the bandwidth management settings from this VM policy.
<code>cur</code>	Displays the current VM bandwidth management parameters.

/cfg/virt/vmgroup <1-1024> VM Group Configuration

[VM group 1 Menu]	
vlan	- Set the group's vlan (only for groups with no VM profile)
vmap	- Set VMAP for this group
tag	- Enable vlan tagging on all VM group ports
addvm	- Add a virtual entity to the group
remvm	- Remove a virtual entity from the group
addprof	- Add a VM profile to the group
remprof	- Delete any VM profile associated with the group
addport	- Add ports to the group
remport	- Remove ports from the group
addtrunk	- Add trunk to the group
remtrunk	- Remove trunk from the group
addkey	- Add LACP trunk to the group
remkey	- Remove LACP trunk from the group
stg	- Assign VM group vlan to a Spanning Tree Group
del	- Delete group
cur	- Display current group configuration

[Table 316](#) describes the Virtual Machine (VM) group configuration options. A VM group is a collection of members, such as VMs, ports, or trunk groups. Members of a VM group share certain properties, including VLAN membership, ACLs (VMAP), and VM profiles.

Table 316. VM Group Options (/cfg/virt/vmgroup)

Command Syntax and Usage	
vlan <VLAN number>	<p>Assigns a VLAN to this VM group. If you do not assign a VLAN to the VM group, the switch automatically assigns an unused VLAN when adding a port or a VM to the VM Group.</p> <p>Note: If you add a VM profile to this group, the group will use the VLAN assigned to the profile.</p>
vmap add rem <VMAP number> intports extports	<p>Assigns the selected VLAN Map to this VM group. You can choose to limit operation of the VLAN Map to internal ports only or external ports only. If you do not select a port type, the VMAP is applied to the entire VM Group.</p> <p>For more information about configuring VLAN Maps, see “VMAP Configuration” on page 243.</p>
tag e d	<p>Enables or disables VLAN tagging on ports in this VM group.</p>
addvm <MAC address> <UUID> <name> <IP address> <index number>	<p>Adds a VM to the VM group. Enter a unique identifier to select a VM. The UUID and name parameters apply only if Virtual Center information is configured (/cfg/virt/vmware/vcspec). The VM index number is found in the VM information dump (/info/virt/vm/dump).</p> <p>Note: If the VM is connected to a port that is contained within the VM group, do not add the VM to the VM group.</p>

Table 316. VM Group Options (/cfg/virt/vmgroup) (continued)

Command Syntax and Usage	
remvm <MAC address> <UUID> <name> <IP address> <index number>	Removes a VM from the VM group. Enter a unique identifier to select a VM. The UUID and name parameters apply only if Virtual Center information is configured (/cfg/virt/vmware/vcspec). The VM index number is found in the VM information dump (/info/virt/vm/dump).
addprof <profile name (1-39 characters)>	Adds the selected VM profile to the VM group.
remprof	Removes the VM profile assigned to the VM group.
addport <port number or alias>	Adds the selected port to the VM group. Note: Add a port to a VM group only if no VMs on that port are members of the VM group.
remport <port number or alias>	Removes the selected port from the VM group.
addtrunk <trunk number>	Adds the selected trunk group to the VM group.
remtrunk <trunk number>	Removes the selected trunk group from the VM group.
addkey <1-65535>	Adds an LACP admin key to the VM group. LACP trunks formed with this admin key will be included in the VM group.
remkey <1-65535>	Removes an LACP admin key from the VM group.
stg <STG number>	Assigns the VM group VLAN to a Spanning Tree Group (STG).
del	Deletes the VM group.
cur	Displays the current VM group parameters.

/cfg/virt/vmprof

VM Profile Configuration

```
[VM Profiles Menu]
create - Create a VM profile
edit   - Edit a VM profile
cur    - Display details of all VM profiles
```

Configuration of VMs with the VM Agent requires the use of VM profiles, which ease the configuration and management of VM Agent-based VM groups. The VM profile contains a set of properties that will be configured on the Virtual Switch.

After a VM profile has been defined, it can be assigned to a VM group or exported to one or more VMware hosts.

[Table 317](#) describes the VM Profiles configuration options.

Table 317. VM Profile options (/cfg/virt/vmprof)

Command Syntax and Usage	
create <profile name (1-39 characters)>	Defines a name for the VM profile. The switch supports up to 32 VM profiles.
edit <profile name>	Displays the VM Profile Edit menu for the selected profile. To view menu options, see page 387 .
cur	Displays the current VM Profiles parameters.

/cfg/virt/vmprof/edit <profile name> VM Profile Edit

```
[VM profile "myProfile" Menu]
vlan      - Set the VM profile's VLAN ID
shaping   - Set or delete the VM profile's traffic shaping parameters
eshaping  - Set or delete the VM profile's traffic eshaping parameters
delete    - Delete this VM profile
cur       - Show details of the current VM profile
```

Table 318 describes the VM Profile Edit options.

Table 318. Edit VM Profile options (/cfg/virt/vmprof/edit)

Command Syntax and Usage	
vlan <VLAN number>	Assigns a VLAN to the VM profile.
shaping [<average (1-1000000000)> <burst (1-1000000000)> <peak (1-1000000000)>] delete	Configures traffic shaping parameters implemented in the hypervisor, as follows: <ul style="list-style-type: none"> – Average traffic, in Kilobits per second – Maximum burst size, in Kilobytes – Peak traffic, in Kilobits per second – Delete traffic shaping parameters.
eshaping [<average (1-1000000000)> <burst (1-1000000000)> <peak (1-1000000000)>] delete	Configures traffic eshaping parameters implemented in the hypervisor, as follows: <ul style="list-style-type: none"> – Average traffic, in Kilobits per second – Maximum burst size, in Kilobytes – Peak traffic, in Kilobits per second – Delete traffic shaping parameters.
delete	Deletes the selected VM Profile.
cur	Displays the current VM Profiles parameters.

/cfg/virt/vmware

VMWare Configuration

```
[VMware-specific Settings Menu]
hbport - Set ESX/ESXi server to vCenter heartbeat UDP port number
vcspec - Create, update or delete Virtual Center access information
cur    - Display current VMware-specific settings
```

[Table 319](#) describes the VMware configuration options. When the user configures the VMware Virtual Center, the VM Agent module in the switch can perform advanced functionality by communicating with the VMware management console. The Virtual Center provides VM and Host names, IP addresses, Virtual Switch and port group information. The VM Agent on the switch communicates with the Virtual Center to synchronize VM profiles between the switch and the VMware virtual switch.

Table 319. VMware Options (/cfg/virt/vmware)

Command Syntax and Usage
<pre>hbport </I-65535></pre> <p>Configures the UDP port number used for heartbeat communication from the VM host to the Virtual Center. The default value is port 902.</p>
<pre>vcspec [<IP address> [<username> noauth] [delete]</pre> <p>Defines the Virtual Center credentials on the switch. Once you configure the Virtual Center, VM Agent functionality is enabled across the system.</p> <p>You are prompted for the following information:</p> <ul style="list-style-type: none">– IP address of the Virtual Center– User name and password for the Virtual Center– Whether to authenticate the SSL security certificate (yes or no)
<pre>cur</pre> <p>Displays the current VMware parameters.</p>

/cfg/dump

Dump

The dump program writes the current switch configuration to the terminal screen. To start the dump program, at the `Configuration#` prompt, enter:

```
Configuration# dump
```

The configuration is displayed with parameters that have been changed from the default values. The screen display can be captured, edited, and placed in a script file, which can be used to configure other switches through a Telnet connection. When using Telnet to configure a new switch, paste the configuration commands from the script file at the command line prompt of the switch. The active configuration can also be saved or loaded via TFTP, as described on [page 389](#).

`/cfg/ptcfg <FTP/TFTP server> <filename> <username>`

Saving the Active Switch Configuration

When the `ptcfg` command is used, the switch's active configuration commands (as displayed using `/cfg/dump`) will be uploaded to the specified script configuration file on the FTP/TFTP server. To start the switch configuration upload, at the `Configuration#` prompt, enter:

```
Configuration# ptcfg <FTP or TFTP server> <filename>[mgt|data]
```

Where *server* is the FTP/TFTP server IPv4 address or hostname, and *filename* is the name of the target script configuration file. Select the port to use for the file transfer:

- `mgt`: Selects the internal management port. This is the default option.
- `data`: Selects a data port (EXT x).

Note: The output file is formatted with line-breaks but no carriage returns—the file cannot be viewed with editors that require carriage returns (such as Microsoft Notepad).

Note: If the FTP/TFTP server is running SunOS or the Solaris operating system, the specified `ptcfg` file must exist prior to executing the `ptcfg` command and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current configuration data.

`/cfg/gtcfg <FTP/TFTP server> <filename>`

Restoring the Active Switch Configuration

When the `gtcfg` command is used, the active configuration will be replaced with the commands found in the specified configuration file. The file can contain a full switch configuration or a partial switch configuration. The configuration loaded using `gtcfg` is not activated until the `apply` command is used. If the `apply` command is found in the configuration script file loaded using this command, the `apply` action will be performed automatically.

To start the switch configuration download, at the `Configuration#` prompt, enter:

```
Configuration# gtcfg <FTP or TFTP server> <filename> <username>
```

Where *server* is the FTP/TFTP server IPv4 address or hostname, and *filename* is the name of the target script configuration file. Select the port to use for the file transfer:

- `mgt`: Selects the internal management port. This is the default option.
- `data`: Selects a data port (EXT x).

Chapter 6. The Operations Menu

The Operations Menu is generally used for commands that affect switch performance immediately, but do not alter permanent switch configurations. For example, you can use the Operations Menu to immediately disable a port (without the need to apply or save the change), with the understanding that when the switch is reset, the port returns to its normally configured operation.

`/oper` Operations Menu

[Operations Menu]	
<code>port</code>	- Operational Port Menu
<code>vrrp</code>	- Operational Virtual Router Redundancy Menu
<code>ip</code>	- Operational IP Menu
<code>prm</code>	- Protected Mode Menu
<code>sys</code>	- Operational System Menu
<code>virt</code>	- Virtualization Operations Menu
<code>passwd</code>	- Change current user password
<code>clrlog</code>	- Clear syslog messages
<code>tnetsshc</code>	- Close all telnet/SSH connections
<code>conlog</code>	- Enable/disable session console logging
<code>cfgtrk</code>	- Track last config change made
<code>ntpreq</code>	- Send NTP request
<code>swkey</code>	- Software License Menu

The commands of the Operations Menu enable you to alter switch operational characteristics without affecting switch configuration.

Table 320. Operations Menu (`/oper`)

Command Syntax and Usage	
<code>port <port alias or number></code>	Displays the Operational Port Menu. To view menu options, see page 392 .
<code>vrrp</code>	Displays the Operational Virtual Router Redundancy Menu. To view menu options, see page 394 .
<code>ip</code>	Displays the IP Operations Menu, which has one sub-menu/option, the Operational Border Gateway Protocol Menu. To view menu options, see page 394 .
<code>prm</code>	Displays the Protected Mode menu. To view menu options, see page 396 .
<code>sys</code>	Displays the Operational System menu. To view menu options, see page 397 .
<code>virt</code>	Displays the Virtualization Operations Menu. To view menu options, see page 397 .

Table 320. Operations Menu (/oper) (continued)

Command Syntax and Usage	
passwd <1-128 characters>	Allows the user to change the password. You need to enter the current password in use for validation.
clrlog	Clears all Syslog messages.
tnetsshc	Closes all open Telnet and SSH connections.
conlog enable disable	Enables or disables console logging of the current session.
cfgtrk	Displays a list of configuration changes made since the last apply command. Each time the apply command is sent, the configuration-tracking log is cleared.
ntpreq	Allows the user to send requests to the NTP server.
swkey	Displays the Software Key menu. To view menu options, see page 402 .

/oper/port <port alias or number> **Operations-Level Port Options Menu**

[Operations Port INTA1 Menu]	
8021x	- 8021.x Menu
rmon	- Enable/disable RMON for port
ena	- Enable port
dis	- Disable port
cur	- Current port state

Operations-level port options are used for temporarily disabling or enabling a port, and for re-setting the port.

Table 321. Operations-Level Port Menu Options (/oper/port)

Command Syntax and Usage	
8021x	Displays the 802.1X Port Menu. To view menu options, see page 393 .
rmon e d	Enables or disables Remote Monitoring (RMON) for the port. The default setting is disabled.

Table 321. Operations-Level Port Menu Options (/oper/port) (continued)

Command Syntax and Usage	
ena	Temporarily enables the port. The port will be returned to its configured operation mode when the switch is reset.
dis	Temporarily disables the port. The port will be returned to its configured operation mode when the switch is reset.
1ena	Temporarily enables FDB learning on the port.
1dis	Temporarily disables FDB learning on the port.
cur	Displays the current settings for the port.

/oper/port <port alias or number>/8021x
Operations-Level Port 802.1X Options Menu

[802.1X Operation Menu] reset - Reinitialize 802.1X access control on this port reauth - Initiate reauthentication on this port now

Operations-level port 802.1X options are used to temporarily set 802.1X parameters for a port.

Table 322. Operations-Level Port 802.1X Menu Options (/oper/port x/8021x)

Command Syntax and Usage	
reset	Re-initializes the 802.1X access-control parameters for the port. The following actions take place, depending on the 802.1X port configuration: <ul style="list-style-type: none"> – force unauth - the port is placed in unauthorized state, and traffic is blocked. – auto - the port is placed in unauthorized state, then authentication is initiated. – force auth - the port is placed in authorized state, and authentication is not required.
reauth	Re-authenticates the supplicant (client) attached to the port. This command only applies if the port's 802.1X mode is configured as <i>auto</i> .

/oper/vrrp

Operations-Level VRRP Options Menu

[VRRP Operations Menu] back - Set virtual router to backup

Table 323. Operations-Level VRRP Menu Options (/oper/vrrp)

Command Syntax and Usage
back <virtual router number (1-255)> <p>Forces the specified master virtual router on this switch into backup mode. This is generally used for passing master control back to a preferred switch once the preferred switch has been returned to service after a failure. When this command is executed, the current master gives up control and initiates a new election by temporarily advertising its own priority level as 0 (lowest). After the new election, the virtual router forced into backup mode by this command will resume master control in the following cases:</p> <ul style="list-style-type: none">– This switch owns the virtual router (the IP addresses of the virtual router and its IP interface are the same)– This switch's virtual router has a higher priority and preemption is enabled.– There are no other virtual routers available to take master control.

/oper/ip

Operations-Level IP Options Menu

[IP Operations Menu] bgp - Operational Border Gateway Protocol Menu
--

Table 324. Operations-Level IP Menu Options (/oper/ip)

Command Syntax and Usage
bgp <p>Displays the Border Gateway Protocol Operations Menu. To view the menu options see page 395.</p>

/oper/ip/bgp Operations-Level BGP Options Menu

[Border Gateway Protocol Operations Menu]
start - Start peer session
stop - Stop peer session
cur - Current BGP operational state

Table 325. Operations-Level BGP Menu Options (/oper/ip/bgp)

Command Syntax and Usage
start <peer number> Starts the peer session.
stop <peer number> Stops the peer session.
cur Displays the current BGP operational state.

/oper/prm

Protected Mode Options Menu

```
[Protected Mode Menu]
mgt - Enable/disable local control of external management
ext - Enable/disable local control of external ports
fact - Enable/disable local control of factory default reset
mif - Enable/disable local control of Mgmt VLAN interface
on - Turn on/alter protected mode by applying enabled features
off - Turn off protected mode by removing all features
cur - Display current PRM configuration
```

Protected Mode is used to secure certain switch management options, so they cannot be changed by the management module.

Table 326. Protected Mode Options (/oper/prm)

Command Syntax and Usage	
mgt enable disable	<p>Enables exclusive local control of switch management. When Protected Mode is set to on, the management module cannot be used to disable external management on the switch. The default value is enabled.</p> <p>Note: Due to current management module implementation, this setting cannot be disabled.</p>
ext enable disable	<p>Enables exclusive local control of external ports. When Protected Mode is set to on, the management module cannot be used to disable external ports on the switch. The default value is enabled.</p> <p>Note: Due to current management module implementation, this setting cannot be disabled.</p>
fact enable disable	<p>Enables exclusive local control of factory default resets. When Protected Mode is set to on, the management module cannot be used to reset the switch software to factory default values. The default value is enabled.</p> <p>Note: Due to current management module implementation, this setting cannot be disabled.</p>
mif enable disable	<p>Enables exclusive local control of the management interface. When Protected Mode is set to on, the management module cannot be used to configure parameters for the management interface. The default value is enabled.</p> <p>Note: Due to current management module implementation, this setting cannot be disabled.</p>
on	<p>Turns Protected Mode on. When Protected Mode is turned on, the switch takes exclusive local control of all enabled options.</p>

Table 326. Protected Mode Options (/oper/prm) (continued)

Command Syntax and Usage	
off	Turns Protected Mode off. When Protected Mode is turned off, the switch relinquishes exclusive local control of all enabled options.
cur	Displays the current Protected Mode configuration.

/oper/sys System Operations Menu

```
[Operational System Menu]
i2c      - System I2C
srvled   - Enable/disable Service Required LED
```

I2C device commands are to be used only by Technical Support personnel.

/oper/virt Virtualization Operations

```
[Virtualization Operations Menu]
vmware   - VMware Operations Menu
```

Table 327 describes general virtualization operations options. More details are available in the following sections.

Table 327. Virtualization Options (/oper/virt)

Command Syntax and Usage	
vmware	Displays the VMware operations menu.

/oper/virt/vmware VMware Operations

[VMware Operations Menu]	
dvswitch	- VMware dvSwitch Operations
dpg	- VMware distributed port group operation
addpg	- Add a port group to a Host
addvsw	- Add a Vswitch to a Host
delpg	- Delete a port group from a Host
delvsw	- Delete a Vswitch from a Host
export	- Create or update a VM profile on one or more Hosts
scan	- Perform a VM Agent scan operation now
vmacpg	- Change a VM NIC's port group
updpg	- Update a port group on a Host

Use these commands to perform minor adjustments to the VMware operation. Use these commands to perform Virtual Switch operations directly from the switch. Note that these commands require the configuration of Virtual Center access information (/cfg/virt/vmware/vcspec).

Table 328. VMware Operations (/oper/virt/vmware)

Command Syntax and Usage	
dvswitch	Displays the Distributed vSwitch Operations menu. To view the menu options see page 400 .
dpg	Displays the Distributed Port Groups Operations menu. To view the menu options see page 401 .
addpg	<p>[<Port Group name> <host ID> <Vswitch name> <VLAN number> <shaping-enabled> <average-Kbps> <burst-KB> <peak-Kbps>]</p> <p>Adds a Port Group to a VMware host. You are prompted for the following information:</p> <ul style="list-style-type: none"> - Port Group name - VMware host ID (Use host UUID, host IP address, or host name.) - Virtual Switch name - VLAN ID of the Port Group - Whether to enable the traffic-shaping profile (y or n). If you choose y (yes), you are prompted to enter the traffic shaping parameters.
addvsw	<p><host ID> <Virtual Switch name></p> <p>Adds a Virtual Switch to a VMware host. Use one of the following identifiers to specify the host:</p> <ul style="list-style-type: none"> - UUID - IP address - Host name

Table 328. VMware Operations (/oper/virt/vmware) (continued)

Command Syntax and Usage	
delpg <Port Group name> <host ID>	<p>Removes a Port Group from a VMware host. Use one of the following identifiers to specify the host:</p> <ul style="list-style-type: none"> – UUID – IP address – Host name
delvsw <host ID> <Virtual Switch name>	<p>Removes a Virtual Switch from a VMware host. Use one of the following identifiers to specify the host:</p> <ul style="list-style-type: none"> – UUID – IP address – Host name
export <VM profile name> <VMware host ID (one per line, 'null' to end)> <Virtual Switch name>	<p>Exports a VM Profile to one or more VMware hosts. This command allows you to distribute a VM Profile to VMware hosts.</p> <p>Use one of the following identifiers to specify each host:</p> <ul style="list-style-type: none"> – UUID – IP address – Host name <p>The switch displays a list of available Virtual Switches. You may enter a VSwitch name from the list, or enter a new name to create a new Virtual Switch.</p>
scan	<p>Performs a scan of the VM Agent, and updates VM information.</p>
vmacpg <MAC address> <Port Group name>	<p>Changes a VM NIC's configured Port Group.</p>
updpg <Port Group name> <host ID> <VLAN number> [<shaping enabled> <average (1-1000000000)> <burst (1-1000000000)> <peak (1-1000000000)>]	<p>Updates a VMware host's Port Group parameters. Use one of the following identifiers for the host ID:</p> <ul style="list-style-type: none"> – UUID – IP address – Host name <p>Enter the traffic shaping parameters as follows:</p> <ul style="list-style-type: none"> – Shaping enabled – Average traffic, in Kilobits per second – Maximum burst size, in Kilobytes – Peak traffic, in Kilobits per second – Delete traffic shaping parameters.

/oper/virt/vmware/dvswitch Distributed vSwitch Operations

[VMware dvSwitch operations Menu]	
add	- Add a dvSwitch to a DataCenter
del	- Delete a dvSwitch from a DataCenter
addhost	- Add a host to a dvSwitch
remhost	- Remove a host from a dvSwitch
adduplink	- Add a physical NIC to dvSwitch uplink ports
remuplink	- Remove a physical NIC from dvSwitch uplink ports

Table 329 describes distributed vSwitch operations.

Table 329. Distributed vSwitch Options (/oper/virt/vmware/dvswitch)

Command Syntax and Usage	
add <datacenter name> <dvSwitch name> <vSwitch version>	Adds a distributed vSwitch to a datacenter.
del <datacenter name> <dvSwitch name>	Deletes a distributed vSwitch from a datacenter.
addhost <dvSwitch name> <host UUID, IP address, or name>	Adds a host to a distributed vSwitch.
remhost <dvSwitch name> <host UUID, IP address, or name>	Removes a host from a distributed vSwitch.
adduplink <dvSwitch name> <host UUID, IP address, or name> <uplink name>	Adds a NIC to the distributed vSwitch, to use as an uplink.
remuplink <dvSwitch name> <host UUID, IP address, or name> <uplink name>	Removes an uplink NIC from the distributed vSwitch.

/oper/virt/vmware/dpg Distributed Port Group Operations

[VMware distributed port group operations Menu]	
add	- Add a port group to a dvSwitch
addmac	- Add a VM NIC to a port group
update	- Update a port group on a dvSwitch
del	- Delete a port group from a dvSwitch

[Table 330](#) describes distributed port group operations.

Table 330. Distributed Port Group Options (/oper/virt/vmware/dpg)

Command Syntax and Usage	
<pre>add <port group name> <dvSwitch name> <VLAN number> [ingress-shaping-enabled <average Kbps> <burst KB> <peak Kbps>] [egress-shaping-enabled <average Kbps> <burst KB> <peak Kbps>]</pre>	<p>Adds a port group to a distributed vSwitch. Follow the prompts to complete the operation.</p> <p>Note: Ingress shaping and egress shaping parameters are optional.</p>
<pre>addmac <vNIC MAC> <port group name></pre>	<p>Adds a vNIC to a distributed port group.</p>
<pre>update <port group name> <dvSwitch name> <VLAN number> [ingress-shaping-enabled <average Kbps> <burst KB> <peak Kbps>] [egress-shaping-enabled <average Kbps> <burst KB> <peak Kbps>]</pre>	<p>Updates the parameters of a distributed port group. Follow the prompts to complete the operation.</p> <p>Note: Ingress shaping and egress shaping parameters are optional.</p>
<pre>del <port group name> <dvSwitch name></pre>	<p>Deletes a port group from a distributed vSwitch.</p>

/oper/swkey **Software Key Menu**

[Software License Menu] fodkey - Feature on Demand Key Menu
--

The commands in this menu configure the software license key feature.

Table 331. Software Key options (/oper/swkey)

Command Syntax and Usage
fodkey Displays the Feature on Demand Key menu.

/oper/swkey/fodkey **Feature on Demand Options Menu**

[Feature on Demand Key Menu] enakey - Enable FoD Key rmkey - Remove FoD Key ptkey - Upload FoD Key File invkeys - Upload inventory installed activation keys
--

Use the commands in this menu to upgrade the port mode. Base port mode is the default. To upgrade the port mode, you must obtain a software license key.

Note: After selecting a port mode, you must reset the switch for the change to take affect.

Table 332. Feature on Demand Key Options (/oper/swkey/fodkey)

Command Syntax and Usage
enakey <hostname or IP address> <file name> tftp Allows you to unlock the software port expansion feature. You are prompted to enter the host name or IP address of the server where the license key is stored, and the license key file name, as follows: - Key1 - Key2 Note: You may upgrade the port mode using Key1, Key2, or both.
rmkey <feature name> Removes the specified software feature.
ptkey <hostname or IP address> <file name> tftp Loads the specified key file to a server.
invkeys <hostname or IP address> <file name> tftp Loads key code inventory information to a server.

Chapter 7. The Boot Options Menu

To use the Boot Options Menu, you must be logged in to the switch as the administrator. The Boot Options Menu provides options for:

- Selecting a switch software image to be used when the switch is next reset
- Selecting a configuration block to be used when the switch is next reset
- Downloading or uploading a new software image to the switch via FTP/TFTP

In addition to the Boot Menu, you can use a Web browser or SNMP to work with switch image and configuration files. To use SNMP, refer to [“Switch Images and Configuration Files” on page 447](#).

/boot Boot Menu

```
[Boot Options Menu]
 sched   - Scheduled Switch Reset Menu
 image   - Select software image to use on next boot
 conf    - Select config block to use on next boot
 netboot - NetBoot and NetConfig menu
 mode    - Select CLI mode to use on next boot
 prompt  - Prompt for selectable boot mode
 gting   - Download new software image via TFTP
 ptimg   - Upload selected software image via TFTP
 reset   - Reset switch [WARNING: Restarts Spanning Tree]
 cur     - Display current boot options
```

Each of these options is discussed in greater detail in the following sections.

/boot/sched Scheduled Reboot Menu

```
[Boot Schedule Menu]
 set     - Set switch reset time
 cancel  - Cancel pending switch reset
 cur     - Display current switch reset schedule
```

This feature allows you to schedule a reboot to occur at a particular time in the future. This feature is particularly helpful if the user needs to perform switch upgrades during off-peak hours. You can set the reboot time, cancel a previously scheduled reboot, and check the time of the currently set reboot schedule.

Table 333. Boot Scheduling Options (/boot/sched)

Command Syntax and Usage
<pre>set</pre> <p>Defines the reboot schedule. Follow the prompts to configure schedule options.</p>

Table 333. Boot Scheduling Options (/boot/sched)

Command Syntax and Usage	
cancel	Cancels the next pending scheduled reboot.
cur	Displays the current reboot scheduling parameters.

`/boot/netboot` Netboot Configuration Menu

```
[Netboot configuration Menu]
ena      - Enable netconfig
dis      - Disable netconfig
tftpaddr - TFTP Server IP address
cfgfile  - Location of config file on tftp server
cur      - Display current configuration
```

Netboot allows the switch to automatically download its configuration file over the network during switch reboot, and apply the new configuration. Upon reboot, the switch includes the following options in its DHCP requests:

- Option 66 (TFTP server address)
- Option 67 (file path)

If the DHCP server returns the information, the switch initiates a TFTP file transfer, and loads the configuration file into the active configuration block. As the switch boots up, it applies the new configuration file. Note that the option 66 TFTP server address must be specified in IP-address format (host name is not supported).

If DHCP is not enabled, or the DHCP server does not return the required information, the switch uses the manually-configured TFTP server address and file path.

Table 334. Netboot Options (/boot/netboot)

Command Syntax and Usage	
<code>ena</code>	Enables Netboot. When enabled, the switch boots into factory-default configuration, and attempts to download a new configuration file.
<code>dis</code>	Disables Netboot.
<code>tftpaddr <IP address></code>	Configures the IP address of the TFTP server used for manual configuration. This server is used if DHCP is not enabled, or if the DHCP server does not return the required information.
<code>cfgfile <1-31 characters></code>	Defines the file path for the configuration file on the TFTP server. For example: <code>/directory/sub/config.cfg</code>
<code>cur</code>	Displays the current Netboot parameters.

Updating the Switch Software Image

The switch software image is the executable code running on the EN2092 1Gb Ethernet Scalable Switch (EN2092). A version of the image ships with the switch, and comes pre-installed on the device. As new versions of the image are released, you can upgrade the software running on your switch. To get the latest version of software available for your switch, go to:

<http://www.ibm.com/systems/support>

On the support site, click on software updates. On the switch, use the `/boot/cur` command to determine the current software version.

The typical upgrade process for the software image consists of the following steps:

- Place the new image onto a FTP or TFTP server on your network, or on a local computer.
- Transfer the new image to your switch.
- Select the new software image to be loaded into switch memory the next time the switch is reset.

Loading New Software to Your Switch

The switch can store up to two different software images, called `image1` and `image2`, as well as boot software, called `boot`. When you load new software, you must specify where it should be placed: either into `image1`, `image2`, or `boot`.

For example, if your active image is currently loaded into `image1`, you would probably load the new image software into `image2`. This lets you test the new software and reload the original active image (stored in `image1`), if needed.

Using the BBI

You can use the Browser-Based Interface to load software onto the EN2092. The software image to load can reside in one of the following locations:

- FTP server
- TFTP server
- Local computer

After you log onto the BBI, perform the following steps to load a software image:

1. Click the Configure context button in the toolbar.
2. In the Navigation Window, select System > Config/Image Control.

The Switch Image and Configuration Management page appears.

Switch Image and Configuration Management	
Image 1 Version	version 6.9.0, downloaded 16:48:58 Sat Feb 25, 2012
Image 2 Version	version 6.9.1, downloaded 12:07:07 Sun Sep 23, 2012
Boot Version	version 6.9.1
Active Image Version	6.9.1
Next Boot Image Selection	image 2 ▾

Active Configuration Block	active config
Next Boot Configuration Block Selection	active config ▾
Next CLI Boot Mode Selection	IBMNOS CLI ▾
Prompt for selectable boot mode	ENABLE ▾

NetBoot	
NetConfig for next boot	DISABLE ▾
TFTP IP Address	0.0.0.0
Config file	

FTP/TFTP Settings	
Hostname or IP Address of FTP/TFTP server	100.10.1.2
Username for FTP Server or Blank for TFTP Server	
Password for FTP Server	
Port for Transfer	MGT ▾

3. If you are loading software from your computer (HTTP client), go to [Step 4](#). If you are loading software from a FTP/TFTP server, enter the server's information in the FTP/TFTP Settings section.
4. In the Image Settings section, select the image version you want to replace (Image for Transfer).
 - If you are loading software from a FTP/TFTP server, enter the file name and click Get Image.
 - If you are loading software from your computer, click Browse. In the File Upload Dialog, select the file and click OK. Click Download via Browser.

Once the image has loaded, the page refreshes to show the new software.

Using the CLI

To load a new software image to your switch, you need the following:

- The image or boot software loaded on a FTP/TFTP server on your network
- The hostname or IP address of the FTP/TFTP server
- The name of the new software image or boot file

Note: The DNS parameters must be configured if specifying hostnames. See [“Domain Name System Configuration Menu” on page 342.](#)

When the above requirements are met, use the following procedure to download the new software to your switch.

1. At the `Boot Options#` prompt, enter:

```
Boot Options# gting
```

2. Enter the name of the switch software to be replaced:

```
Enter name of switch software image to be replaced  
["image1"/"image2"/"boot"]: <image>
```

3. Enter the hostname or IP address of the FTP or TFTP server.

```
Enter hostname or IP address of FTP/TFTP server: <name or IP address>
```

4. Enter the name of the new software file on the server.

```
Enter name of file on FTP/TFTP server: <filename>
```

The exact form of the name will vary by server. However, the file location is normally relative to the FTP or TFTP directory (usually `/tftpboot`).

5. Enter your username for the server, if applicable.

```
Enter username for FTP server or hit return for TFTP server: <username> or <Enter>
```

6. Enter the switch port to use for the file transfer. The default option is `mgt`.

```
Enter the port to use for downloading the image  
["mgt"|"data"]:
```

7. The system prompts you to confirm your request.

You will next select a software image to run, as described in the following section.

Selecting a Software Image to Run

You can select which software image (`image1` or `image2`) you want to run in switch memory for the next reboot.

1. At the `Boot Options#` prompt, enter:

```
Boot Options# image
```

2. Enter the name of the image you want the switch to use upon the next boot. The system informs you of which image is currently set to be loaded at the next reset, and prompts you to enter a new choice:

```
Currently set to use switch software "image1" on next reset.  
Specify new image to use on next reset ["image1"/"image2"]:
```

Uploading a Software Image from Your Switch

You can upload a software image from the switch to a FTP or TFTP server.

1. At the `Boot Options#` prompt, enter:

```
Boot Options# ptimg
```

2. The system prompts you for information. Enter the desired image:

```
Enter name of switch software image to be uploaded  
["image1"|"image2"|"boot"]: <image>
```

3. Enter the name or the IP address of the FTP or TFTP server:

```
Enter hostname or IP address of FTP/TFTP server: <name or IP address>
```

4. Enter the name of the file into which the image will be uploaded on the FTP or TFTP server:

```
Enter name of file on FTP/TFTP server: <filename>
```

5. Enter the switch port to use for the file transfer. The default option is `mgt`.

```
Enter the port to use for uploading the image  
["mgt"|"data"]:
```

6. The system then requests confirmation of what you have entered. To have the file uploaded, enter `Y`.

```
image2 currently contains Software Version 7.2.0  
that was downloaded at 0:23:39 Thu Jan 4, 2012.  
Upload will transfer image2 (2788535 bytes) to file "image1"  
on FTP/TFTP server 192.1.1.1. over the MGT port.  
Confirm upload operation (y/n) ? y
```

Selecting a Configuration Block

When you make configuration changes to the EN2092, you must save the changes so that they are retained beyond the next time the switch is reset. When you perform the `save` command, your new configuration changes are placed in the *active* configuration block. The previous configuration is copied into the *backup* configuration block.

There is also a *factory* configuration block. This holds the default configuration set by the factory when your EN2092 was manufactured. Under certain circumstances, it may be desirable to reset the switch configuration to the default. This can be useful when a custom-configured EN2092 is moved to a network environment where it will be re-configured for a different purpose.

Note: You also can use Netboot to automatically download a configuration file when the switch reboots. For more details, see [“Netboot Configuration Menu” on page 405](#).

Use the following procedure to set which configuration block you want the switch to load the next time it is reset:

1. At the `Boot Options#` prompt, enter:

```
Boot Options# conf
```

2. Enter the name of the configuration block you want the switch to use:

The system informs you of which configuration block is currently set to be loaded at the next reset, and prompts you to enter a new choice:

```
Currently set to use active configuration block on next reset.  
Specify new block to use ["active"/"backup"/"factory"]:
```

Resetting the Switch

You can reset the switch to make your software image file and configuration block changes occur.

Note: Resetting the switch causes the Spanning Tree Group to restart. This process can be lengthy, depending on the topology of your network.

To reset the switch, at the `Boot Options#` prompt, enter:

```
>> Boot Options# reset
```

You are prompted to confirm your request.

Accessing the ISCLI

The default command-line interface for the EN2092 is the menu-based CLI. To access the ISCLI, enter the following command and reset the EN2092:

```
Main# boot/mode iscli
```

To access the menu-based CLI, enter the following command from the ISCLI and reload the EN2092:

```
Switch (config)# boot cli-mode ibmnos-cli
```

Users can select the CLI mode upon login, if the `/boot/prompt` command is enabled. Only an administrator can view and enable `/boot/prompt`. When `/boot/prompt` is enabled, the first user to log in can select the CLI mode. Subsequent users must use the selected CLI mode, until all users have logged out.

Using the Boot Management Menu

The Boot Management menu allows you to switch the software image, reset the switch to factory defaults, or to recover from a failed software download.

You can interrupt the boot process and enter the Boot Management menu from the serial console port. When the system displays Memory Test, press **<Shift B>**. The Boot Management menu appears.

```
Resetting the System ...
Memory Test .....

1 - Change booting image
2 - Change configuration block
3 - Boot in recovery mode (tftp and xmodem download of images to
   recover switch)
4 - Xmodem download (for boot image only - use recovery mode for
   application images)
5 - Reboot
6 - Exit

Please choose your menu option: 3
```

The Boot Management menu allows you to perform the following actions:

- To change the booting image, press 1 and follow the screen prompts.
- To change the configuration block, press 2, and follow the screen prompts.
- To perform a software image recovery, press 3 and follow the screen prompts.
- To perform an Xmodem download (boot image only), press 4 and follow the screen prompts.
- To exit the Boot Management menu, press 6. The booting process continues.

Recovering from a Failed Software Upgrade

Use the following procedure to recover from a failed software upgrade.

1. Connect a PC to the serial port of the switch.
2. Open a terminal emulator program that supports Xmodem download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:
 - Speed: 9600 bps
 - Data Bits: 8
 - Stop Bits: 1
 - Parity: None
 - Flow Control: None
3. Boot the switch and access the Boot Management menu by pressing **<Shift B>** while the Memory Test is in progress and the dots are being displayed.

4. Select **3** for **Boot in recovery mode**. You will see the following display:

```
Entering Rescue Mode.
Please select one of the following options:
  T) Configure networking and tftp download an image
  X) Use xmodem 1K to serial download an image
  R) Reboot
  E) Exit
```

- If you choose option **x** (Xmodem serial download), go to step 5.
- If you choose option **t** (TFTP download), go to step 6.

5. **Xmodem download**: When you see the following message, change the Serial Port characteristics to 115200 bps:

```
Change the baud rate to 115200 bps and hit the <ENTER> key before
initiating the download.
```

- Press **<Enter>** to set the system into download accept mode. When the readiness meter displays (a series of “C” characters), start XModem on your terminal emulator.
- When you see the following message, change the Serial Port characteristics to 9600 bps:

```
Change the baud rate back to 9600 bps, hit the <ESC> key.
```

- When you see the following prompt, enter the image number where you want to install the new software and press **<Enter>**.

```
Install image as image 1 or 2 (hit return to just boot image): 1
```

- The following message is displayed when the image download is complete. Continue to step 7.

```
Installing image as image1..
Image1 updated successfully
Please select one of the following options:
  T) Configure networking and tftp download an image
  X) Use xmodem 1K to serial download an image
  R) Reboot
  E) Exit
```

6. **TFTP download**: The switch prompts you to enter the following information:

```
Performing TFTP rescue. Please answer the following questions (enter
'q' to quit):
IP addr   :
Server addr:
Netmask   :
Gateway   :
Image Filename:
```

- a. Enter the required information and press **<Enter>**.
- b. You will see a display similar to the following:

```
Host IP      : 10.10.98.110
Server IP   : 10.10.98.100
Netmask     : 255.255.255.0
Broadcast   : 10.10.98.255
Gateway     : 10.10.98.254
Installing image 6.8.3_OS.img from TFTP server 10.10.98.100
```

- c. When you see the following prompt, enter the image number where you want to install the new software and press **<Enter>**.

```
Install image as image 1 or 2 (hit return to just boot image): 1
```

- d. The following message is displayed when the image download is complete. Continue to step 7.

```
Installing image as image1...
Image1 updated successfully
Please select one of the following options:
  T) Configure networking and tftp download an image
  X) Use xmodem 1K to serial download an image
  R) Reboot
  E) Exit
```

7. Image recovery is complete. Perform one of the following steps:
 - Press **r** to reboot the switch.
 - Press **e** to exit the Boot Management menu
 - Press the Escape key (**<Esc>**) to re-display the Boot Management menu.

Recovering a Failed Boot Image

Use the following procedure to recover from a failed boot image upgrade.

1. Connect a PC to the serial port of the switch.
2. Open a terminal emulator program that supports Xmodem download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:
 - Speed: 9600 bps
 - Data Bits: 8
 - Stop Bits: 1
 - Parity: None
 - Flow Control: None
3. Boot the switch and access the Boot Management menu by pressing **<Shift B>** while the Memory Test is in progress and the dots are being displayed.
4. Select **4** for **Xmodem download**. You will see the following display:

```
Perform xmodem download

To download an image use 1K Xmodem at 115200 bps.
```

5. When you see the following message, change the Serial Port characteristics to 115200 bps:

Change the baud rate to 115200 bps and hit the <ENTER> key before initiating the download.

- a. Press <Enter> to set the system into download accept mode. When the readiness meter displays (a series of "C" characters), start Xmodem on your terminal emulator. You will see a display similar to the following:

```
Extracting images ... Do *NOT* power cycle the switch.
**** RAMDISK ****
Un-Protected 38 sectors
Erasing Flash...
..... done
Erased 38 sectors
Writing to
Flash...9....8....7....6....5....4....3....2....1....done
Protected 38 sectors
**** KERNEL ****
Un-Protected 24 sectors
Erasing Flash...
..... done
Erased 24 sectors
Writing to Flash...9....8....7....6....5....4....3....2....1....
```

- b. When you see the following message, change the Serial Port characteristics to 9600 bps:

Change the baud rate back to 9600 bps, hit the <ESC> key.

Boot image recovery is complete.

Chapter 8. The Maintenance Menu

The Maintenance Menu is used to manage dump information and forward database information. It also includes a debugging menu to help with troubleshooting.

`/maint`

Maintenance Menu

Note: To use the Maintenance Menu, you must be logged in to the switch as the administrator.

```
[Maintenance Menu]
  sys      - System Maintenance Menu
  fdb      - Forwarding Database Manipulation Menu
  debug    - Debugging Menu
  lldp     - LLDP Cache Manipulation Menu
  arp      - ARP Cache Manipulation Menu
  route    - IP Route Manipulation Menu
  igmp     - IGMP Multicast Group Menu
  mld      - MLD Multicast Group Menu
  lacp     - LACP Menu
  stp      - STP Maint Menu
  tacacs+  - TACACS+ Maint Menu
  nbrcache - IP6 NBR Cache Manipulation Menu
  route6   - IP6 Route Manipulation Menu
  uudmp    - Uuencode FLASH dump
  ptdmp    - Upload FLASH dump via FTP/TFTP
  ptlog    - Upload file via TFTP
  cltmp    - Clear FLASH dump
  tsdmp    - Tech support dump
  pttsdmp  - Upload tech support dump via FTP/TFTP
```

Dump information contains internal switch state data that is written to flash memory on the EN2092 1Gb Ethernet Scalable Switch (EN2092) after any one of the following occurs:

- The watchdog timer forces a switch reset. The purpose of the watchdog timer is to reboot the switch if the switch software freezes.
- The switch detects a hardware or software problem that requires a reboot.

Table 335. Maintenance Menu (`/maint`)

Command Syntax and Usage	
<code>sys</code>	Displays the System Maintenance Menu. To view menu options, see page 420 .
<code>fdb</code>	Displays the Forwarding Database Manipulation Menu. To view menu options, see page 420 .
<code>debug</code>	Displays the Debugging Menu. To view menu options, see page 421 .

Table 335. Maintenance Menu (/maint)

Command Syntax and Usage	
lldp	Displays the LLDP Cache Manipulation Menu. To view menu options, see page 423 .
arp	Displays the ARP Cache Manipulation Menu. To view menu options, see page 424 .
route	Displays the IP Route Manipulation Menu. To view menu options, see page 425 .
igmp	Displays the IGMP Maintenance Menu. To view menu options, see page 426 .
mld	Displays the Multicast Listener Discovery (MLD) Maintenance menu. To view menu options, see page 428 .
lacp	Displays the Link Aggregation Control Protocol Maintenance menu. To view menu options, see page 429 .
stp	Displays the Spanning Tree Maintenance menu. STP maintenance commands are reserved for Technical Support Personnel.
tacacs+	Displays the TACACS+ Maintenance menu. TACACS+ maintenance commands are reserved for Technical Support Personnel.
nbrcache	Displays the IPv6 Neighbor Cache Manipulation Menu. To view menu options, see page 429 .
route6	Displays the IPv6 Route Manipulation Menu. To view menu options, see page 430 .
uudmp	Displays dump information in uuencoded format. For details, see page 430 .
ptdmp <host name> <file name>	Saves the system dump information via TFTP. For details, see page 431 .
ptlog	Saves the system log file (SYSLOG) via TFTP.
cltmp	Clears dump information from flash memory. For details, see page 431 .

Table 335. Maintenance Menu (/maint)

Command Syntax and Usage	
<code>tsdmp</code>	Dumps all EN2092 information, statistics, and configuration. You can log the tsdump output into a file.
<code>pttsdmp</code>	Redirects the technical support dump (tsdmp) to an external TFTP server.

/maint/sys

System Maintenance Menu

This menu is reserved for use by IBM Service Support. The options are used to perform system debugging.

```
[System Maintenance Menu]
  flags - Set NVRAM flag word
  tmask - Set MP trace mask word
```

Table 336. System Maintenance Menu Options (/maint/sys)

Command Syntax and Usage
<pre>flags <new NVRAM flags word as 0xXXXXXXXX></pre> <p>This command sets the flags that are used for debugging purposes by Technical Support personnel.</p>
<pre>tmask <new trace mask word as 0xXXXXXXXX> [p]</pre> <p>This command sets the trace mask that is used for debugging purposes by Technical Support personnel.</p>

/maint/fdb

Forwarding Database Maintenance Menu

```
[FDB Manipulation Menu]
  find - Show a single FDB entry by MAC address
  port - Show FDB entries for a single port
  trunk - Show FDB entries for a single trunk
  vlan - Show FDB entries for a single VLAN
  dump - Show all FDB entries
  del - Delete an FDB entry
  clear - Clear entire FDB
```

The Forwarding Database Manipulation Menu can be used to view information and to delete a MAC address from the forwarding database or clear the entire forwarding database. This is helpful in identifying problems associated with MAC address learning and packet forwarding decisions.

Table 337. FDB Manipulation Menu Options (/maint/fdb)

Command Syntax and Usage
<pre>find <MAC address> [<VLAN number>]</pre> <p>Displays a single database entry by its MAC address. You are prompted to enter the MAC address of the device. Enter the MAC address using one of the following formats:</p> <ul style="list-style-type: none">- xx:xx:xx:xx:xx:xx (such as 08:00:20:12:34:56)- xxxxxxxxxxxx (such as 080020123456)
<pre>port <port alias or number></pre> <p>Displays all FDB entries for a particular port.</p>

Table 337. FDB Manipulation Menu Options (/maint/fdb)

Command Syntax and Usage	
trunk <trunk group number>	Displays all FDB entries for a particular Trunk Group.
vlan <VLAN number>	Displays all FDB entries on a single VLAN.
dump	Displays all entries in the Forwarding Database. For details, see page 34 .
del <MAC address> [<VLAN number>]	Removes a single FDB entry.
clear	Clears the entire Forwarding Database from switch memory.

/maint/debug Debugging Menu

[Miscellaneous Debug Menu]	
tbuf	- Show MP trace buffer
dumpbt	- Dump backtrace log
snap	- Show MP snap (or post-mortem) trace buffer
clrcfg	- Clear all flash configs
sec	- IP security Debug Menu
gea	- GEA 5690 Menu

The Miscellaneous Debug Menu displays trace buffer information about events that can be helpful in understanding switch operation. You can view the following information using the debug menu:

- Events traced by the Management Processor (MP)
- Events traced to a buffer area when a reset occurs

Note: IBM Networking OS debug commands are intended for advanced users. Use debug commands with caution as they can disrupt the operation of the switch under high load conditions. When debug is running under high load conditions, the CLI prompt may appear unresponsive. Before debugging, check the MP utilization to verify there is sufficient processing capacity available to perform the debug operation.

If the switch resets for any reason, the MP trace buffer is saved into the snap trace buffer area. The output from these commands can be interpreted by Service Support personnel.

Table 338. Miscellaneous Debug Menu Options (/maint/debug)

Command Syntax and Usage	
tbuf	<p>Displays the Management Processor trace buffer. Header information similar to the following is shown:</p> <pre>MP trace buffer at 13:28:15 Fri May 30, 2008; mask: 0x2ffdf748</pre> <p>The buffer information is displayed after the header.</p>
dumpbt	<p>Displays the backtrace log.</p>
snap	<p>Displays the Management Processor snap (or post-mortem) trace buffer. This buffer contains information traced at the time that a reset occurred.</p>
clrcfg	<p>Deletes all flash configuration blocks.</p>
sec	<p>Displays the IP Security Maintenance menu. This menu is reserved for Technical Support Personnel.</p>
gea	<p>Displays the GEA Maintenance menu. GEA maintenance commands are reserved for Technical Support Personnel.</p>

/maint/lldp

LLDP Cache Manipulation Menu

[LLDP Menu]	
port	- Show LLDP port information
rx	- Show LLDP receive state machine information
tx	- Show LLDP transmit state machine information
remodev	- Show LLDP remote devices information
dump	- Show all LLDP information
clear	- Clear LLDP remote devices information

Table 339 describes the LLDP cache manipulation commands.

Table 339. LLDP Cache Manipulation Options (/maint/lldp)

Command Syntax and Usage	
port <port alias or number>	Displays Link Layer Discovery Protocol (LLDP) port information.
rx	Displays information about the LLDP receive state machine.
tx	Displays information about the LLDP transmit state machine.
remodev <1-256>	Displays information received from LLDP -capable devices.
dump	Displays all LLDP information.
clear	Clears the LLDP cache.

/maint/arp

ARP Cache Maintenance Menu

[Address Resolution Protocol Menu]	
find	- Show a single ARP entry by IP address
port	- Show ARP entries on a single port
vlan	- Show ARP entries on a single VLAN
addr	- Show ARP entries for switch's interfaces
dump	- Show all ARP entries
clear	- Clear ARP cache

Table 340 describes the ARP cache maintenance menu options.

Table 340. ARP Maintenance Menu Options (/maint/arp)

Command Syntax and Usage	
find <IP address (such as, 192.4.17.101)>	Shows a single ARP entry by IP address.
port <port alias or number>	Shows ARP entries on a single port.
vlan <VLAN number>	Shows ARP entries on a single VLAN.
addr	Shows the list of IP addresses which the switch will respond to for ARP requests.
dump	Shows all ARP entries.
clear	Clears the entire ARP list from switch memory.

Note: To display all ARP entries currently held in the switch, or a portion according to one of the options listed on the menu above (*find*, *port*, *vlan*, *dump*), you can also refer to “ARP Information” on [page 56](#).

/maint/route

IPv4 Route Manipulation Menu

[IP Routing Menu]	
find	- Show a single route by destination IP address
gw	- Show routes to a single gateway
type	- Show routes of a single type
tag	- Show routes of a single tag
if	- Show routes on a single interface
dump	- Show all routes
clear	- Clear route table
nh	- Nexhop list
re	- Route entry Nexhop list

Table 341 describes the IPv4 route manipulation menu options.

Table 341. IPv4 Route Manipulation Menu Options (/maint/route)

Command Syntax and Usage	
find <IP address (such as, 192.4.17.101)>	Shows a single route by destination IP address.
gw <default gateway address (such as, 192.4.17.44)>	Shows routes to a default gateway.
type indirect direct local broadcast martian multicast	Shows routes of a single type. For a description of IP routing types, see Table 33 on page 55 .
tag fixed static addr rip ospf bgp broadcast martian multicast	Shows routes of a single tag. For a description of IP routing tags, see Table 34 on page 56 .
if <interface number>	Shows routes on a single interface.
dump	Shows all routes.
clear	Clears the route table from switch memory.
nh	Displays the Next Hop list.
re	Displays the route entry Next Hop list

Note: To display all routes, you can also refer to “IPv4 Routing Information” on [page 54](#).

/maint/igmp

IGMP Maintenance Menu

```
[IGMP Multicast Group Menu]
group    - Multicast Group Menu
mrouter  - IGMP Multicast Router Port Menu
clear    - Clear group and mrouter tables
```

[Table 342](#) describes the IGMP Maintenance commands.

Table 342. IGMP Maintenance Menu Options (/maint/igmp)

Command Syntax and Usage	
group	Displays the Multicast Group menu. To view menu options, see page 426 .
mrouter	Displays the Multicast Router Port menu. To view menu options, see page 426 .
clear	Clears the IGMP group table and Mrouter tables.

/maint/igmp/group

IGMP Group Maintenance Menu

```
[IGMP Multicast Group Menu]
find     - Show a single group by IP group address
vlan     - Show groups on a single vlan
port     - Show groups on a single port
trunk    - Show groups on a single trunk
detail   - Show detail of a single group by IP address
dump     - Show all groups
clear    - Clear group tables
```

[Table 343](#) describes the IGMP Maintenance commands.

Table 343. IGMP Multicast Group Maintenance Menu Options (/maint/igmp/group)

Command Syntax and Usage	
find <IP address>	Displays a single IGMP multicast group by its IP address.
vlan <VLAN number>	Displays all IGMP multicast groups on a single VLAN.
port <port number or alias>	Displays all IGMP multicast groups on a single port.
trunk <trunk number>	Displays all IGMP multicast groups on a single trunk group.

Table 343. IGMP Multicast Group Maintenance Menu Options (/maint/igmp/group)

Command Syntax and Usage	
detail <IP address>	Displays detailed information about a single IGMP multicast group.
dump	Displays information for all multicast groups.
clear	Clears the IGMP group tables.

/maint/igmp/mrouter

IGMP Multicast Routers Maintenance Menu

[IGMP Multicast Routers Menu]	
vlan	- Show all multicast router ports on a single vlan
dump	- Show all multicast router ports
clear	- Clear multicast router port table

Table 344 describes the IGMP multicast router (Mrouter) maintenance commands.

Table 344. IGMP Mrouter Maintenance Menu Options (/maint/igmp/mrouter)

Command Syntax and Usage	
vlan <VLAN number>	Shows all IGMP multicast router ports on a single VLAN.
dump	Shows all multicast router ports.
clear	Clears the IGMP Multicast Router port table.

/maint/mld

MLD Multicast Group Manipulation

[MLD Multicast Group Menu]	
groups	- Show all groups
find	- Show a single group by IP group address
vlan	- Show groups on a single vlan
port	- Show groups on a single port
trunk	- Show groups on a single trunk
if	- Show interface(s) mld information
mrclear	- Clear dynamic MLD mrouter group tables
grclear	- Clear dynamic MLD registered group tables
clear	- Clear dynamic MLD group tables

Table 347 describes the Multicast Listener Discovery (MLD) maintenance options.

Table 345. MLD Maintenance (/maint/mld)

Command Syntax and Usage	
groups	Shows all MLD groups.
find <IPv6 address>	Shows a MLD single group by IP group address.
vlan <VLAN number>	Shows MLD groups on a single VLAN.
port <port alias or number>	Shows MLD groups on a single port.
trunk <trunk group number>	Shows MLD groups on a single trunk.
if <interface number>	Shows MLD groups on the specified interface.
mrclear	Clears all dynamic MLD multicast router group tables.
grclear	Clears all dynamic MLD registered group tables.
clear	Clears all dynamic MLD group tables.

/maint/lacp

LACP Maintenance

[Link Aggregation Control Protocol Menu] txmarker - Send an LACP Marker packet (only for debug purpose)
--

Table 347 describes the Link Aggregation Control Protocol manipulation options.

Table 346. Link Aggregation Control Protocol Manipulation

Command Syntax and Usage
txmarker <port number> Send an LACP Marker packet (for debugging only).

/maint/nbrcache

IPv6 Neighbor Discovery Cache Manipulation

[Neighbor Cache Manipulation Menu] find - Show a single NBR Cache entry by IP address port - Show NBR Cache entries on a single port vlan - Show NBR Cache entries on a single VLAN dump - Show all NBR Cache entries clear - Clear neighbor cache

Table 347 describes the IPv6 Neighbor Discovery cache manipulation options.

Table 347. IPv6 Neighbor Discovery Cache Manipulation (/maint/nbrcache)

Command Syntax and Usage
find <IPv6 address> Shows a single IPv6 Neighbor Discovery cache entry by IP address.
port <port alias or number> Shows IPv6 Neighbor Discovery cache entries on a single port.
vlan <VLAN number> Shows IPv6 Neighbor Discovery cache entries on a single VLAN.
dump Shows all IPv6 Neighbor Discovery cache entries.
clear Clears all IPv6 Neighbor Discovery cache entries from switch memory.

/maint/route6

IPv6 Route Manipulation Menu

[IPv6 Routing Menu]	
dump	- Show all routes
clear	- Clear route table

[Table 348](#) describes the IPv6 Route maintenance options.

Table 348. IPv6 Route Manipulation (/maint/route6)

Command Syntax and Usage	
dump	Shows all IPv6 routes.
clear	Clears all IPv6 routes from switch memory.

/maint/uudmp

Uuencode Flash Dump

Using this command, dump information is presented in uuencoded format. This format makes it easy to capture the dump information as a file or a string of characters.

If you want to capture dump information to a file, set your communication software on your workstation to capture session data prior to issuing the `uudmp` command. This will ensure that you do not lose any information. Once entered, the `uudmp` command will cause approximately 23,300 lines of data to be displayed on your screen and copied into the file.

Using the `uudmp` command, dump information can be read multiple times. The command does not cause the information to be updated or cleared from flash memory.

Note: Dump information is not cleared automatically. In order for any subsequent dump information to be written to flash memory, you must manually clear the dump region. For more information on clearing the dump region, see [page 431](#).

To access dump information, at the `Maintenance#` prompt, enter:

```
Maintenance# uudmp
```

The dump information is displayed on your screen and, if you have configured your communication software to do so, captured to a file. If the dump region is empty, the following appears:

```
No FLASH dump available.
```

`/maint/ptdmp <FTP/TFTP server> <filename>[-mgt | -data]` **FTP/TFTP System Dump Put**

Use this command to `put` (save) the system dump to a FTP/TFTP server.

Note: If the FTP/TFTP server is running SunOS or the Solaris operating system, the specified `ptdmp` file must exist *prior* to executing the `ptdmp` command, and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current dump data.

To save dump information via FTP/TFTP, at the `Maintenance#` prompt, enter:

```
Maintenance# ptdmp <FTP/TFTP server> <filename>[-mgt|-data]
```

Where *server* is the FTP/TFTP server IP address or hostname, and *filename* is the target dump file. The default port option is `-mgt`.

`/maint/cltmp` **Clearing Dump Information**

To clear dump information from flash memory, at the `Maintenance#` prompt, enter:

```
Maintenance# cltmp
```

The switch clears the dump region of flash memory and displays the following message:

```
FLASH dump region cleared.
```

If the flash dump region is already clear, the switch displays the following message:

```
FLASH dump region is already clear.
```

Unscheduled System Dumps

If there is an unscheduled system dump to flash memory, the following message is displayed when you log on to the switch:

```
Note: A system dump exists in FLASH. The dump was saved
at 13:43:22 Wednesday January 30, 2010. Use /maint/uudmp to
extract the dump for analysis and /maint/cltmp to
clear the FLASH region. The region must be cleared
before another dump can be saved.
```

Appendix A. IBM Networking OS System Log Messages

The EN2092 1Gb Ethernet Scalable Switch (EN2092) uses the following syntax when outputting system log (syslog) messages:

<Time stamp><Log Label><Thread ID> : <Message>

The following parameters are used:

- *<Timestamp>*

The time of the message event is displayed in the following format:

<month (3 characters)> <day> <hour (1-24)> : <minute> : <second>

For example: Aug 19 14:20:30

- *<Log Label>*

The following types of log messages are recorded: LOG_CRIT, LOG_WARNING, LOG_ALERT, LOG_ERR, LOG_NOTICE, and LOG_INFO

- *<Thread ID>*

This is the software thread that reports the log message. For example:

stg, ip, console, telnet, vrrp, system, web server, ssh, bgp

- *<Message>*: The log message

Following is a list of potential syslog messages. To keep this list as short as possible, only the *<Thread ID>* and *<Message>* are shown. The messages are sorted by *<Log Label>*.

Where the *<Thread ID>* is listed as `mgmt`, one of the following may be shown: console, telnet, web server, or ssh.

LOG_ALERT

Thread	LOG_ALERT Message		
	Possible buffer overrun attack detected!

Appendix B. IBM Networking OS SNMP Agent

SNMP Overview

The IBM Networking OS SNMP agent supports SNMP version 3. Security is provided through SNMP community strings. The default community strings are “public” for SNMP GET operation and “private” for SNMP SET operation. The community string can be modified only through the Command Line Interface (CLI). IBM is registered as Vendor 20301.

Detailed SNMP MIBs and trap definitions of the IBM Networking OS SNMP agent are contained in the following IBM Networking OS enterprise MIB document:

SCSE-1G-L2L3.mib

The IBM Networking OS SNMP agent supports the following standard MIBs:

- rfc1213.mib
- rfc1215.mib
- rfc1493.mib
- rfc1573.mib
- rfc1643.mib
- rfc1757.mib
- rfc1907.mib
- rfc2037.mib
- rfc2571.mib
- rfc2572.mib
- rfc2573.mib
- rfc2574.mib
- rfc2575.mib
- rfc2576.mib
- ieee8021ab.mib
- dot1x.mib
- rfc1657.mib
- rfc1850.mib

The IBM Networking OS SNMP agent supports the following generic traps as defined in RFC 1215:

- ColdStart
- WarmStart
- LinkDown
- LinkUp
- AuthenticationFailure

The SNMP agent also supports two Spanning Tree traps as defined in RFC 1493:

- NewRoot
- TopologyChange

The following are the enterprise SNMP traps supported in IBM Networking OS:

Table 349. IBM Networking OS-Supported Enterprise SNMP Traps

Trap Name	Description
altSwDefGwUp	Signifies that the default gateway is alive.
altSwDefGwDown	Signifies that the default gateway is down.
altSwDefGwInService	Signifies that the default gateway is up and in service
altSwDefGwNotInService	Signifies that the default gateway is alive but not in service
altSwVrrpNewMaster	Indicates that the sending agent has transitioned to 'Master' state.
altSwVrrpNewBackup	Indicates that the sending agent has transitioned to 'Backup' state.
altSwVrrpAuthFailure	Signifies that a packet has been received from a router whose authentication key or authentication type conflicts with this router's authentication key or authentication type. Implementation of this trap is optional.
altSwLoginFailure	Signifies that someone failed to enter a valid username/password combination.
altSwTempExceedThreshold	Signifies that the switch temperature has exceeded maximum safety limits.
altSwTempReturnThreshold	Signifies that the switch temperature has returned below maximum safety limits.
altSwStgNewRoot	Signifies that the bridge has become the new root of the STG.
altSwStgTopologyChanged	Signifies that there was a STG topology change.
altSwStgBlockingState	An altSwStgBlockingState trap is sent when port state is changed in blocking state.
altSwCistNewRoot	Signifies that the bridge has become the new root of the CIST.
altSwCistTopologyChanged	Signifies that there was a CIST topology change.
altSwHotlinksMasterUp	Signifies that the Master interface is active.
altSwHotlinksMasterDn	Signifies that the Master interface is not active.
altSwHotlinksBackupUp	Signifies that the Backup interface is active.
altSwHotlinksBackupDn	Signifies that the Backup interface is not active.
altSwHotlinksNone	Signifies that there are no active interfaces.

Switch Images and Configuration Files

This section describes how to use MIB calls to work with switch images and configuration files. You can use a standard SNMP tool to perform the actions, using the MIBs listed in [Table 350](#).

[Table 350](#) lists the MIBs used to perform operations associated with the Switch Image and Configuration files.

Table 350. MIBs for Switch Image and Configuration Files

MIB Name	MIB OID
agTransferServer	1.3.6.1.4.1.20301.2.5.1.1.7.1.0
agTransferImage	1.3.6.1.4.1.20301.2.5.1.1.7.2.0
agTransferImageFileName	1.3.6.1.4.1.20301.2.5.1.1.7.3.0
agTransferCfgFileName	1.3.6.1.4.1.20301.2.5.1.1.7.4.0
agTransferDumpFileName	1.3.6.1.4.1.20301.2.5.1.1.7.5.0
agTransferAction	1.3.6.1.4.1.20301.2.5.1.1.7.6.0
agTransferLastActionStatus	1.3.6.1.4.1.20301.2.5.1.1.7.7.0
agTransferUserName	1.3.6.1.4.1.20301.2.5.1.1.7.9.0
agTransferPassword	1.3.6.1.4.1.20301.2.5.1.1.7.10.0
agTransferTSDumpFileName	1.3.6.1.4.1.20301.2.5.1.1.7.11.0

The following SNMP actions can be performed using the MIBs listed in [Table 350](#).

- Load a new Switch image (boot or running) from a FTP/TFTP server
- Load a previously saved switch configuration from a FTP/TFTP server
- Save the switch configuration to a FTP/TFTP server
- Save a switch dump to a FTP/TFTP server

Loading a New Switch Image

To load a new switch image with the name "MyNewImage-1.img" into image2, follow the steps below. This example assumes you have a FTP/TFTP server at 192.168.10.10.

1. Set the FTP/TFTP server address where the switch image resides:
`Set agTransferServer.0 "192.168.10.10"`
2. Set the area where the new image will be loaded:
`Set agTransferImage.0 "image2"`
3. Set the name of the image:
`Set agTransferImageFileName.0 "MyNewImage-1.img"`
4. If you are using an FTP server, enter a username:
`Set agTransferUserName.0 "MyName"`
5. If you are using an FTP server, enter a password:
`Set agTransferPassword.0 "MyPassword"`
6. Initiate the transfer. To transfer a switch image, enter 2 (gting):
`Set agTransferAction.0 "2"`

Loading a Saved Switch Configuration

To load a saved switch configuration with the name "MyRunningConfig.cfg" into the switch, follow the steps below. This example assumes you have a TFTP server at 192.168.10.10.

1. Set the FTP/TFTP server address where the switch Configuration File resides:
`Set agTransferServer.0 "192.168.10.10"`
2. Set the name of the configuration file:
`Set agTransferCfgFileName.0 "MyRunningConfig.cfg"`
3. If you are using an FTP server, enter a username:
`Set agTransferUserName.0 "MyName"`
4. If you are using an FTP server, enter a password:
`Set agTransferPassword.0 "MyPassword"`
5. Initiate the transfer. To restore a running configuration, enter 3:
`Set agTransferAction.0 "3"`

Saving the Switch Configuration

To save the switch configuration to a FTP/TFTP server follow the steps below. This example assumes you have a FTP/TFTP server at 192.168.10.10.

1. Set the FTP/TFTP server address where the configuration file is saved:
`Set agTransferServer.0 "192.168.10.10"`
2. Set the name of the configuration file:
`Set agTransferCfgFileName.0 "MyRunningConfig.cfg"`
3. If you are using an FTP server, enter a username:
`Set agTransferUserName.0 "MyName"`
4. If you are using an FTP server, enter a password:
`Set agTransferPassword.0 "MyPassword"`
5. Initiate the transfer. To save a running configuration file, enter 4:
`Set agTransferAction.0 "4"`

Saving a Switch Dump

To save a switch dump to a FTP/TFTP server, follow the steps below. This example assumes you have a FTP/TFTP server at 192.168.10.10.

1. Set the FTP/TFTP server address where the configuration will be saved:
`Set agTransferServer.0 "192.168.10.10"`
2. Set the name of dump file:
`Set agTransferDumpFileName.0 "MyDumpFile.dmp"`
3. If you are using an FTP server, enter a username:
`Set agTransferUserName.0 "MyName"`
4. If you are using an FTP server, enter a password:
`Set agTransferPassword.0 "MyPassword"`
5. Initiate the transfer. To save a dump file, enter 5:
`Set agTransferAction.0 "5"`

Appendix C. Getting help and technical assistance

If you need help, service, or technical assistance or just want more information about IBM products, you will find a wide variety of sources available from IBM to assist you. This section contains information about where to go for additional information about IBM and IBM products, what to do if you experience a problem with your system, and whom to call for service, if it is necessary.

Before you call

Before you call, make sure that you have taken these steps to try to solve the problem yourself:

- Check all cables to make sure that they are connected.
- Check the power switches to make sure that the system and any optional devices are turned on.
- Use the troubleshooting information in your system documentation, and use the diagnostic tools that come with your system. Information about diagnostic tools is in the *Problem Determination and Service Guide* on the IBM Documentation CD that comes with your system.
- Go to the IBM support website at <http://www.ibm.com/systems/support/> to check for technical information, hints, tips, and new device drivers or to submit a request for information.

You can solve many problems without outside assistance by following the troubleshooting procedures that IBM provides in the online help or in the documentation that is provided with your IBM product. The documentation that comes with IBM systems also describes the diagnostic tests that you can perform. Most systems, operating systems, and programs come with documentation that contains troubleshooting procedures and explanations of error messages and error codes. If you suspect a software problem, see the documentation for the operating system or program.

Using the documentation

Information about your IBM system and pre-installed software, if any, or optional device is available in the documentation that comes with the product. That documentation can include printed documents, online documents, ReadMe files, and Help files. See the troubleshooting information in your system documentation for instructions for using the diagnostic programs. The troubleshooting information or the diagnostic programs might tell you that you need additional or updated device drivers or other software. IBM maintains pages on the World Wide Web where you can get the latest technical information and download device drivers and updates. To access these pages, go to <http://www.ibm.com/systems/support/> and follow the instructions. Also, some documents are available through the IBM Publications Center at <http://www.ibm.com/shop/publications/order/>.

Getting help and information on the World Wide Web

On the World Wide Web, the IBM website has up-to-date information about IBM systems, optional devices, services, and support. The address for IBM System x[®] and xSeries[®] information is <http://www.ibm.com/systems/x/>. The address for IBM Flex System information is <http://www.ibm.com/systems/bladecenter/>. The address for IBM IntelliStation[®] information is <http://www.ibm.com/intellistation/>.

You can find service information for IBM systems and optional devices at <http://www.ibm.com/systems/support/>.

Software service and support

Through IBM Support Line, you can get telephone assistance, for a fee, with usage, configuration, and software problems with System x and x Series servers, Flex System products, IntelliStation workstations, and appliances. For information about which products are supported by Support Line in your country or region, see <http://www.ibm.com/services/sl/products/>.

For more information about Support Line and other IBM services, see <http://www.ibm.com/services/>, or see <http://www.ibm.com/planetwide/> for support telephone numbers. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

Hardware service and support

You can receive hardware service through your IBM reseller or IBM Services. To locate a reseller authorized by IBM to provide warranty service, go to <http://www.ibm.com/partnerworld/> and click **Find Business Partners** on the right side of the page. For IBM support telephone numbers, see <http://www.ibm.com/planetwide/>. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

In the U.S. and Canada, hardware service and support is available 24 hours a day, 7 days a week. In the U.K., these services are available Monday through Friday, from 9 a.m. to 6 p.m.

Appendix D. Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

*IBM Director of Licensing
IBM Corporation

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corporation in the United States, other countries, or both. If these and other IBM trademarked terms are marked on their first occurrence in this information with a trademark symbol (® or ™), these symbols indicate U.S. registered or common law trademarks owned by IBM at the time this information was published. Such trademarks may also be registered or common law trademarks in other countries. A current list of IBM trademarks is available on the web at "Copyright and trademark information" at <http://www.ibm.com/legal/copytrade.shtml>.

Adobe and PostScript are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.

Cell Broadband Engine is a trademark of Sony Computer Entertainment, Inc., in the United States, other countries, or both and is used under license therefrom.

Intel, Intel Xeon, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc., in the United States, other countries, or both.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft, Windows, and Windows NT are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Other company, product, or service names may be trademarks or service marks of others.

Important Notes

Processor speed indicates the internal clock speed of the microprocessor; other factors also affect application performance.

CD or DVD drive speed is the variable read rate. Actual speeds vary and are often less than the possible maximum.

When referring to processor storage, real and virtual storage, or channel volume, KB stands for 1024 bytes, MB stands for 1 048 576 bytes, and GB stands for 1 073 741 824 bytes.

When referring to hard disk drive capacity or communications volume, MB stands for 1 000 000 bytes, and GB stands for 1 000 000 000 bytes. Total user-accessible capacity can vary depending on operating environments.

Maximum internal hard disk drive capacities assume the replacement of any standard hard disk drives and population of all hard disk drive bays with the largest currently supported drives that are available from IBM.

Maximum memory might require replacement of the standard memory with an optional memory module.

IBM makes no representation or warranties regarding non-IBM products and services that are ServerProven, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. These products are offered and warranted solely by third parties.

IBM makes no representations or warranties with respect to non-IBM products. Support (if any) for the non-IBM products is provided by the third party, not IBM.

Some software might differ from its retail version (if available) and might not include user manuals or all program functionality.

Particulate contamination

Attention: Airborne particulates (including metal flakes or particles) and reactive gases acting alone or in combination with other environmental factors such as humidity or temperature might pose a risk to the device that is described in this document. Risks that are posed by the presence of excessive particulate levels or concentrations of harmful gases include damage that might cause the device to malfunction or cease functioning altogether. This specification sets forth limits for particulates and gases that are intended to avoid such damage. The limits must not be viewed or used as definitive limits, because numerous other factors, such as temperature or moisture content of the air, can influence the impact of particulates or environmental corrosives and gaseous contaminant transfer. In the absence of specific limits that are set forth in this document, you must implement practices that maintain particulate and gas levels that are consistent with the protection of human health and safety. If IBM determines that the levels of particulates or gases in your environment have caused damage to the device, IBM may condition provision of repair or replacement of devices or parts on implementation of appropriate remedial measures to mitigate such environmental contamination. Implementation of such remedial measures is a customer responsibility.

Contaminant	Limits
Particulate	<ul style="list-style-type: none">• The room air must be continuously filtered with 40% atmospheric dust spot efficiency (MERV 9) according to ASHRAE Standard 52.2¹.• Air that enters a data center must be filtered to 99.97% efficiency or greater, using high-efficiency particulate air (HEPA) filters that meet MIL-STD-282.• The deliquescent relative humidity of the particulate contamination must be more than 60%².• The room must be free of conductive contamination such as zinc whiskers.
Gaseous	<ul style="list-style-type: none">• Copper: Class G1 as per ANSI/ISA 71.04-1985³• Silver: Corrosion rate of less than 300 Å in 30 days

¹ ASHRAE 52.2-2008 - *Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size*. Atlanta: American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.

² The deliquescent relative humidity of particulate contamination is the relative humidity at which the dust absorbs enough water to become wet and promote ionic conduction.

³ ANSI/ISA-71.04-1985. *Environmental conditions for process measurement and control systems: Airborne contaminants*. Instrument Society of America, Research Triangle Park, North Carolina, U.S.A.

Documentation format

The publications for this product are in Adobe Portable Document Format (PDF) and should be compliant with accessibility standards. If you experience difficulties when you use the PDF files and want to request a web-based format or accessible PDF document for a publication, direct your mail to the following address:

Information Development

Electronic emission notices

Federal Communications Commission (FCC) statement

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. IBM is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Industry Canada Class A emission compliance statement

This Class A digital apparatus complies with Canadian ICES-003.

Avis de conformité à la réglementation d'Industrie Canada

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Australia and New Zealand Class A statement

Attention: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

European Union EMC Directive conformance statement

This product is in conformity with the protection requirements of EU Council Directive 2004/108/EC on the approximation of the laws of the Member States relating to electromagnetic compatibility. IBM cannot accept responsibility for any failure to satisfy the protection requirements resulting from a nonrecommended modification of the product, including the fitting of non-IBM option cards.

Attention: This is an EN 55022 Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Germany Class A statement

Deutschsprachiger EU Hinweis:

Hinweis für Geräte der Klasse A EU-Richtlinie zur Elektromagnetischen Verträglichkeit

Dieses Produkt entspricht den Schutzanforderungen der EU-Richtlinie 2004/108/EG zur Angleichung der Rechtsvorschriften über die elektromagnetische Verträglichkeit in den EU-Mitgliedsstaaten und hält die Grenzwerte der EN 55022 Klasse A ein.

Um dieses sicherzustellen, sind die Geräte wie in den Handbüchern beschrieben zu installieren und zu betreiben. Des Weiteren dürfen auch nur von der IBM empfohlene Kabel angeschlossen werden. IBM übernimmt keine Verantwortung für die Einhaltung der Schutzanforderungen, wenn das Produkt ohne Zustimmung der IBM verändert bzw. wenn Erweiterungskomponenten von Fremdherstellern ohne Empfehlung der IBM gesteckt/eingebaut werden.

EN 55022 Klasse A Geräte müssen mit folgendem Warnhinweis versehen werden: "Warnung: Dieses ist eine Einrichtung der Klasse A. Diese Einrichtung kann im Wohnbereich Funk-Störungen verursachen; in diesem Fall kann vom Betreiber verlangt werden, angemessene Maßnahmen zu ergreifen und dafür aufzukommen."

Deutschland: Einhaltung des Gesetzes über die elektromagnetische Verträglichkeit von Geräten

Dieses Produkt entspricht dem "Gesetz über die elektromagnetische Verträglichkeit von Geräten (EMVG)". Dies ist die Umsetzung der EU-Richtlinie 2004/108/EG in der Bundesrepublik Deutschland.

Zulassungsbescheinigung laut dem Deutschen Gesetz über die elektromagnetische Verträglichkeit von Geräten (EMVG) (bzw. der EMC EG Richtlinie 2004/108/EG) für Geräte der Klasse A

Dieses Gerät ist berechtigt, in Übereinstimmung mit dem Deutschen EMVG das EG-Konformitätszeichen - CE - zu führen.

Verantwortlich für die Einhaltung der EMV Vorschriften ist der Hersteller:

International Business Machines Corp.
New Orchard Road
Armonk, New York 10504
914-499-1900

Der verantwortliche Ansprechpartner des Herstellers in der EU ist:

IBM Deutschland
Technical Regulations, Department M456
IBM-Allee 1, 71137 Ehningen, Germany
Telephone: +49 7032 15-2937
E-mail: tjahn@de.ibm.com

Generelle Informationen:

Das Gerät erfüllt die Schutzanforderungen nach EN 55024 und EN 55022 Klasse A.

Japan VCCI Class A statement

この装置は、クラス A 情報技術装置です。この装置を家庭環境で使用する
と電波妨害を引き起こすことがあります。この場合には使用者が適切な対策
を講ずるよう要求されることがあります。 VCCI-A

This is a Class A product based on the standard of the Voluntary Control Council for Interference (VCCI). If this equipment is used in a domestic environment, radio interference may occur, in which case the user may be required to take corrective actions.

Korea Communications Commission (KCC) statement

이 기기는 업무용으로 전자파 적합등록을 받은 기기
이오니, 판매자 또는 사용자는 이점을 주의하시기
바라며, 만약 잘못 구입하셨을 때에는 구입한 곳에
서 비업무용으로 교환하시기 바랍니다.

Please note that this equipment has obtained EMC registration for commercial use. In the event that it has been mistakenly sold or purchased, please exchange it for equipment certified for home use.

Russia Electromagnetic Interference (EMI) Class A statement

ВНИМАНИЕ! Настоящее изделие относится к классу А.
В жилых помещениях оно может создавать радиопомехи, для
снижения которых необходимы дополнительные меры
