Preface			 	1
Who Should Use This Book				
How This Book Is Organized				1
Typographic Conventions				2
How To Get Help				3
Chapter 1. The Command Line Interface				
Connecting to the Switch				
Accessing the Switch				5
Setup vs. CLI				
Command Line History and Editing				7
Idle Timeout				7
Chapter 2. Menu Basics				
The Main Menu				9
Menu Summary				9
Global Commands				
Command Line History and Editing			 	. 13
Command Line Interface Shortcuts				. 14
CLI List and Range Inputs				. 14
Command Stacking				
Command Abbreviation				
Tab Completion				. 15
Chapter 3. The Information Menu				. 17
Information Menu				. 17
System Information Menu				. 19
Error Disable and Recovery Information				
SNMPv3 System Information Menu				
SNMPv3 USM User Table Information				
SNMPv3 View Table Information				
SNMPv3 Access Table Information				
SNMPv3 Group Table Information				
SNMPv3 Community Table Information				
SNMPv3 Target Address Table Information				
SNMPv3 Target Parameters Table Information.				
SNMPv3 Notify Table Information				
SNMPv3 Dump Information				
Flex System Chassis Information				
General System Information				
Show Recent Syslog Messages				
User Status Information				
Stacking Information Menu				
Stacking Switch Information				
Layer 2 Information Menu				
FDB Information Menu				
Show All FDB Information				
Link Aggregation Control Protocol Information Menu				
Show All LACP Information				
Layer 2 Failover Information Menu				
Show Laver 2 Failover Information

Preface

This *Menu-Based CLI Command Reference* describes how to configure and use the IBM Networking OS 7.5 software with your IBM Flex System EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R).

For documentation on installing the switches physically, see the *Installation Guide* for your EN4093/EN4093R. For details about configuration and operation of your EN4093/EN4093R, see the *IBM Networking OS 7.5 Application Guide*.

Who Should Use This Book

This book is intended for network installers and system administrators engaged in configuring and maintaining a network. The administrator should be familiar with Ethernet concepts, IP addressing, the IEEE 802.1D Spanning Tree Protocol, and SNMP configuration parameters.

How This Book Is Organized

Chapter 1, "The Command Line Interface," describes how to connect to the switch and access the information and configuration menus.

Chapter 2, "First-Time Configuration," describes how to use the Setup utility for initial switch configuration and how to change the system passwords.

Chapter 2, "Menu Basics," provides an overview of the menu system, including a menu map, global commands, and menu shortcuts.

Chapter 3, "The Information Menu," shows how to view switch configuration parameters.

Chapter 4, "The Statistics Menu," shows how to view switch performance statistics.

Chapter 5, "The Configuration Menu," shows how to configure switch system parameters, ports, VLANs, Spanning Tree Protocol, SNMP, Port Mirroring, IP Routing, Port Trunking, and more.

Chapter 6, "The Operations Menu," shows how to use commands which affect switch performance immediately, but do not alter permanent switch configurations (such as temporarily disabling ports). The menu describes how to activate or deactivate optional software features.

Chapter 7, "The Boot Options Menu," describes the use of the primary and alternate switch images, how to load a new software image, and how to reset the software to factory defaults.

Chapter 8, "The Maintenance Menu," shows how to generate and access a dump of critical switch state information, how to clear it, and how to clear part or all of the forwarding database.

Appendix A, "System Log Messages," shows a listing of syslog messages.

Appendix B, "SNMP Agent," lists the Management Interface Bases (MIBs) supported in the switch software.

"Index" includes pointers to the description of the key words used throughout the book.

Typographic Conventions

The following table describes the typographic styles used in this book.

Table 1. Typographic Conventions

Typeface or Symbol	Meaning
plain fixed-width text	This type is used for names of commands, files, and directories used within the text. For example:
	View the readme.txt file.
	It also depicts on-screen computer output and prompts.
bold fixed-width text	This bold type appears in command examples. It shows text that must be typed in exactly as shown. For example:
	/info/sys/gen
bold body text	This bold type indicates objects such as window names, dialog box names, and icons, as well as user interface objects such as buttons, and tabs.
italicized body text	This italicized type indicates book titles, special terms, or words to be emphasized.
angle brackets < >	Indicate a variable to enter based on the description inside the brackets. Do not type the brackets when entering the command.
	Example: If the command syntax is ping <ip address=""></ip>
	you enter ping 192.32.10.12
braces { }	Indicate required elements in syntax descriptions where there is more than one option. You must choose only one of the options. Do not type the braces when entering the command.
	Example: If the command syntax is /cfg/12/vlan/vmap {add rem} <1-127>
	you enter: /cfg/12/vlan/vmap add 1
	or /cfg/12/vlan/vmap rem 1

Table 1. Typographic Conventions

Typeface or Symbol	Meaning
brackets []	Indicate optional elements in syntax descriptions. Do not type the brackets when entering the command.
	Example: If the command syntax is /cfg/sys/dhcp [mgta mgtb] enable
	you enter /cfg/sys/dhcp mgta enable
	Or /cfg/sys/dhcp mgtb enable
vertical line	Separates choices for command keywords and arguments. Enter only one of the choices. Do not type the vertical line when entering the command.
	Example: If the command syntax is /cfg/13/route/ecmphash [sip dipsip]
	you enter: /cfg/l3/route/ecmphash sip
	Or /cfg/l3/route/ecmphash dipsip

Click the Support tab.

The warranty card received with your product provides details for contacting a customer support representative. If you are unable to locate this information, please contact your reseller. Before you call, prepare the following information:

- Serial number of the switch unit
- Software release version number
- Brief description of the problem and the steps you have already taken
- Technical support dump information (# show tech-support)

© Copyright IBM Corp. 2012 Preface 3

Chapter 1. The Command Line Interface

Your EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R) is ready to perform basic switching functions right out of the box. Some of the more advanced features, however, require some administrative configuration before they can be used effectively.

The extensive IBM Networking OS switching software included in your switch provides a variety of options for accessing and configuring the switch:

- A built-in, text-based command line interface and menu system for access via a Telnet session or serial-port connection
- SNMP support for access through network management software such as IBM Director or HP OpenView
- IBM Networking OS Browser-Based Interface (BBI)

The command line interface is the most direct method for collecting switch information and performing switch configuration. Using a basic terminal, you are presented with a hierarchy of menus that enable you to view information and statistics about the switch, and to perform any necessary configuration.

This chapter explains how to access the Command Line Interface (CLI) for the switch.

Connecting to the Switch

You can access the command line interface in any one of the following ways:

- Using a Telnet connection via the chassis management module
- Using a Telnet connection over the network
- Using a SSH connection via the management module
- Using a serial connection via the serial port on the EN4093/EN4093R

Accessing the Switch

To enable better switch management and user accountability, three levels or *classes* of user access have been implemented on the EN4093/EN4093R. Levels of access to CLI, Web management functions, and screens increase as needed to perform various switch management tasks. Conceptually, access classes are defined as follows:

- User interaction with the switch is completely passive—nothing can be changed on the EN4093/EN4093R. Users may display information that has no security or privacy implications, such as switch statistics and current operational state information.
- Operators can only effect temporary changes on the EN4093/EN4093R. These
 changes will be lost when the switch is rebooted/reset. Operators have access to
 the switch management features used for daily switch operations. Because any
 changes an operator makes are undone by a reset of the switch, operators
 cannot severely impact switch operation.
- Administrators are the only ones that may make permanent changes to the switch configuration—changes that are persistent across a reboot/reset of the switch. Administrators can access switch functions to configure and troubleshoot problems on the EN4093/EN4093R. Because administrators can also make temporary (operator-level) changes as well, they must be aware of the interactions between temporary and permanent changes.

© Copyright IBM Corp. 2012

Access to switch functions is controlled through the use of unique surnames and passwords. Once you are connected to the switch via local Telnet, remote Telnet, or SSH, you are prompted to enter a password. The default user names/password for each access level are listed in the following table.

Note: It is recommended that you change default switch passwords after initial configuration and as regularly as required under your network security policies. For more information, see "Setting Passwords" on page 11.

Table 2. User Access Levels

User Account	Description and Tasks Performed	Password
User	The User has no direct responsibility for switch management. He or she can view all switch status information and statistics, but cannot make any configuration changes to the switch.	user
Operator	The Operator manages all functions of the switch. The Operator can reset ports, except the management ports.	oper
Administrator	The superuser Administrator has complete access to all menus, information, and configuration commands on the EN4093/EN4093R, including the ability to change both the user and administrator passwords.	admin

Note: With the exception of the "admin" user, access to each user level can be disabled by setting the password to an empty value.

Setup vs. CLI

Once the administrator password is verified, you are given complete access to the switch. If the switch is still set to its factory default configuration, the system will ask whether you wish to run Setup, a utility designed to help you through the first-time configuration process. If the switch has already been configured, the Main Menu of the CLI is displayed instead.

The following table shows the Main Menu with administrator privileges.

```
[Main Menu]
            - Information Menu
     info
     stats - Statistics Menu
            - Configuration Menu
     oper - Operations Command Menu
            - Boot Options Menu
     boot
     maint - Maintenance Menu
     diff
             - Show pending config changes [global command]
     apply - Apply pending config changes [global command]
             - Save updated config to FLASH [global command]
     revert - Revert pending or applied changes [global command]
            - Exit [global command, always available]
     exit.
```

Note: If you are accessing a user account, some menu options are not available.

Command Line History and Editing

For a description of global commands, shortcuts, and command line editing functions, see "Menu Basics" on page 9."

Idle Timeout

By default, the switch will disconnect your Telnet session after 10 minutes of inactivity. This function is controlled by the idle timeout parameter, which can be set from 1 to 60 minutes, or disabled when set to 0. For information on changing this parameter, see "System Configuration Menu" on page 202.

Chapter 2. Menu Basics

The IBM Networking OS Command Line Interface (CLI) is used for viewing switch information and statistics. In addition, the administrator can use the CLI for performing all levels of switch configuration.

To make the CLI easy to use, the various commands have been logically grouped into a series of menus and sub-menus. Each menu displays a list of commands and/or sub-menus that are available, along with a summary of what each command will do. Below each menu is a prompt where you can enter any command appropriate to the current menu.

This chapter describes the Main Menu commands, and provides a list of commands and shortcuts that are commonly available from all the menus within the CLI.

The Main Menu

The Main Menu appears after a successful connection and login. The following table shows the Main Menu for the administrator login. Some features are not available under the user login.

```
[Main Menu]
     info
             - Information Menu
     stats - Statistics Menu
     cfg
            - Configuration Menu
            - Operations Command Menu
     oper
     boot
             - Boot Options Menu
     maint
            - Maintenance Menu
            - Show pending config changes [global command]
     diff
     apply - Apply pending config changes [global command]
             - Save updated config to FLASH [global command]
     revert - Revert pending or applied changes [global command]
     exit
             - Exit [global command, always available]
```

Menu Summary

The following menus are available from the Main Menu:

Information Menu

Provides sub-menus for displaying information about the current status of the switch: from basic system settings to VLANs, and more.

Statistics Menu

Provides sub-menus for displaying switch performance statistics. Included are port, IF, IP, ICMP, TCP, UDP, SNMP, routing, ARP, DNS, and VRRP statistics.

· Configuration Menu

This menu is available only from an administrator login. It includes sub-menus for configuring every aspect of the switch. Changes to configuration are not active until explicitly applied. Changes can be saved to non-volatile memory.

© Copyright IBM Corp. 2012

Operations Menu

Operations-level commands are used for making immediate and temporary changes to switch configuration. This menu is used for bringing ports temporarily in and out of service, enabling or disabling FDB learning on a port, or sending NTP requests. It is also used for activating or deactivating optional software packages.

· Boot Options Menu

This menu is used for upgrading switch software, selecting configuration blocks, and for resetting the switch when necessary.

Maintenance Menu

This menu is used for debugging purposes, enabling you to generate a dump of the critical state information in the switch, and to clear entries in the forwarding database and the ARP and routing tables.

Global Commands

Some basic commands are recognized throughout the menu hierarchy. These commands are useful for obtaining online help, navigating through menus, and for applying and saving configuration changes.

For help on a specific command, type help. You will see the following screen:

```
Global Commands: [can be issued from any menu]
        list
help
                                                 print
               lines
                               verbose
diff
pwd
                                                exit
              config
revert
quit
                                                apply
                             ping
pushd
chpass_s
save
                                                traceroute
             history
telnet
                                                popd
              chpass_p
                                                clock
who
                dir
The following are used to navigate the menu structure:
  . Print current menu
  .. Move up one menu level
   / Top menu if first, or command separator
   ! Execute command from history
```

Table 3. Description of Global Commands

Command	Action
? command or help	Provides more information about a specific command on the current menu. When used without the <i>command</i> parameter, a summary of the global commands is displayed.
. or print	Display the current menu.
list	Lists the commands available at the current level. You may follow the list command with a text string, and list all of the available commands that match the string.
or up	Go up one level in the menu structure.
/	If placed at the beginning of a command, go to the Main Menu. Otherwise, this is used to separate multiple commands placed on the same line.

Table 3. Description of Global Commands (continued)

Command	Action
lines [<0-300>]	Sets the number of lines per screen displayed in the CLI for the current session. A value of 0 disables paging. By default, it is set to the corresponding /cfg/sys/linevty or /cfg/sys/linecons value effective at login (see page 202 for details). When used without a value, the current setting is displayed.
diff	Show any pending configuration changes.
apply	Apply pending configuration changes.
save	Write configuration changes to non-volatile flash memory.
revert	Remove pending configuration changes between "apply" commands. Use this command to remove any configuration changes made since last apply.
revert apply	Remove pending or applied configuration changes between "save" commands. Use this command to remove any configuration changes made since last save.
exit or quit	Exit from the command line interface and log out.
config	Displays the switch configuration dump.
ping	Use this command to verify station-to-station connectivity across the network. The format is as follows:
	ping <host name=""> <ip address=""> [-n <tries (0-4294967295)="">] [-w <msec (0-4294967295)="" delay="">] [-1 <length (0="" 2080)="" 32-65500="">] [-s <ip source="">] [-v <tos (0-255)="">] [-f] [-t]</tos></ip></length></msec></tries></ip></host>
	Where:
	 - n: Sets the number of attempts (optional). - w: Sets the number of milliseconds between attempts (optional).
	 - 1: Sets the ping request payload size (optional). - s: Sets the IP source address for the IP packet (optional). - v: Sets the Type Of Service bits in the IP header. - f: Sets the don't fragment bit in the IP header (only for IPv4 addresses).
	t: Pings continuously (same as -n 0).
	The DNS parameters must be configured if specifying hostnames (see "Domain Name System Configuration Menu" on page 378).

© Copyright IBM Corp. 2012 Chapter 2: Menu Basics 11

Table 3. Description of Global Commands (continued)

Command	Action
traceroute	Use this command to identify the route used for station-to-station connectivity across the network. The format is as follows:
	traceroute <hostname> <ip address=""> [<max-hops (1-32)=""> [<msec-delay (1-4294967295)="">]]</msec-delay></max-hops></ip></hostname>
	Where <i>hostname/IP address</i> is the hostname or IP address of the target station, <i>max-hops</i> (optional) is the maximum distance to trace (1-32 devices), and <i>msec-delay</i> (optional) is the number of milliseconds to wait for the response.
	As with ping, the DNS parameters must be configured if specifying hostnames.
pwd	Display the command path used to reach the current menu.
verbose n	Sets the level of information displayed on the screen:
	0 = Quiet: Nothing appears except errors—not even prompts.
	1 = Normal: Prompts and requested output are shown, but no menus.
	2 = Verbose: Everything is shown.
	When used without a value, the current setting is displayed.
telnet	This command is used to telnet out of the switch. The format is as follows:
	telnet <hostname> <ip address=""> [<port>]</port></ip></hostname>
	Where IP address is the hostname or IP address of the device.
history	This command displays the most recent commands.
pushd	Save the current menu path, so you can jump back to it using popd.
popd	Go to the menu path and position previously saved by using pushd.
who	Displays a list of users that are logged on to the switch.
chpass_p	Configures the password for the primary TACACS+ server.
chpass_s	Configures the password for the secondary TACACS+ server.
clock	Displays the configured date and time for the switch.
mv file1 file2	Move (rename) a file
dir	Lists image and configuration files. The format is as follows:
	dir [images configs]

Command Line History and Editing

Using the command line interface, you can retrieve and modify previously entered commands with just a few keystrokes. The following options are available globally at the command line:

Table 4. Command Line History and Editing Options

Option	Description
history	Display a numbered list of the last 64 previously entered commands.
1.1	Repeat the last entered command.
! n	Repeat the n^{th} command shown on the history list.
<ctrl-p></ctrl-p>	(Also the up arrow key.) Recall the <i>previous</i> command from the history list. This can be used multiple times to work backward through the last 64 commands. The recalled command can be entered as is, or edited using the options below.
<ctrl-n></ctrl-n>	(Also the down arrow key.) Recall the <i>next</i> command from the history list. This can be used multiple times to work forward through the last 64 commands. The recalled command can be entered as is, or edited using the options below.
<ctrl-a></ctrl-a>	Move the cursor to the beginning of command line.
<ctrl-e></ctrl-e>	Move cursor to the end of the command line.
<ctrl-b></ctrl-b>	(Also the left arrow key.) Move the cursor <i>back</i> one position to the left.
<ctrl-f></ctrl-f>	(Also the right arrow key.) Move the cursor <i>forward</i> one position to the right.
<backspace></backspace>	(Also the Delete key.) Erase one character to the left of the cursor position.
<ctrl-d></ctrl-d>	Delete one character at the cursor position.
<ctrl-k></ctrl-k>	Kill (erase) all characters from the cursor position to the end of the command line.
<ctrl-l></ctrl-l>	Redraw the screen.
<ctrl-u></ctrl-u>	Clear the entire line.
Other keys	Insert new characters at the cursor position.

© Copyright IBM Corp. 2012 Chapter 2: Menu Basics 13

Command Line Interface Shortcuts

The following shortcuts allow you to enter commands quickly and easily.

CLI List and Range Inputs

For CLI commands that allow an individual item to be selected from within a numeric range, lists and ranges of items can now be specified. For example, the /info/vlan command permits the following options:

```
# /info/l2/vlan (show all VLANs)

# /info/l2/vlan 1 (show only VLAN 1)

# /info/l2/vlan 1,3,4095 (show listed VLANs)

# /info/l2/vlan 1-20 (show range 1 through 20)

# /info/l2/vlan 1-5,90-99,4090-4095 (show multiple ranges)

# /info/l2/vlan 1-5,19,20,4090-4095 (show a mix of lists and ranges)
```

The numbers in a range must be separated by a dash:

```
<start of range> - < end of range>
```

Multiple ranges or list items are permitted using a comma:

```
<range or item 1>, <range or item 2>
```

Do not use spaces within list and range specifications.

Ranges can also be used to apply the same command option to multiple items. For example, to enable multiple ports with one command:

```
# /cfg/port 1-4/ena (Enable ports 1 though 4)
```

Note: Port ranges accept only port numbers, not aliases such as INT1 or EXT1.

Command Stacking

As a shortcut, you can type multiple commands on a single line, separated by forward slashes (/). You can connect as many commands as required to access the menu option that you want. For example, the keyboard shortcut to access the Spanning Tree Port Configuration Menu from the Main# prompt is as follows:

```
Main# cfg/l2/stg 1/port
```

Command Abbreviation

Most commands can be abbreviated by entering the first characters which distinguish the command from the others in the same menu or sub-menu. For example, the command shown above could also be entered as follows:

```
Main# c/l2/stg 1/po
```

Tab Completion

By entering the first letter of a command at any menu prompt and hitting <Tab>, the CLI will display all commands or options in that menu that begin with that letter. Entering additional letters will further refine the list of commands or options displayed. If only one command fits the input text when <Tab> is pressed, that command will be supplied on the command line, waiting to be entered. If the <Tab> key is pressed without any input on the command line, the currently active menu will be displayed.

© Copyright IBM Corp. 2012 Chapter 2: Menu Basics 15

Chapter 3. The Information Menu

You can view configuration information for the switch in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch information.

/info

Information Menu

```
[Information Menu]
    sys
            - System Information Menu
    stack
            - Stacking Menu
    12
            - Layer 2 Information Menu
            - Layer 3 Information Menu
            - OoS Menu
    qos
    acl
            - Show ACL information
            - Show RMON information
    link - Show link status
    port
            - Show port information
    transcvr - Show Port Transceiver status
    virt
            - Show Virtualization information
             - CEE Information Menu
             - Fiber Channel Over Ethernet Information Menu
           - Show enabled software features
    swkey
            - Dump all information
    dump
```

The information provided by each menu option is briefly described in Table 5, with pointers to detailed information.

Table 5. Information Menu Options (/info)

Sys Displays the System Information Menu. For details, see page 19. stack Displays the Stacking Information Menu. For details, see page 31. Note: This option only appears if you have stacking turned on. 12 Displays the Layer 2 Information Menu. For details, see page 33. 13 Displays the Layer 3 Information Menu. For details, see page 56. qos Displays the Quality of Service (QoS) Information Menu. For details, see page 90. acl Displays the current configuration profile for each Access Control List (ACL) and ACL Group. For details, see page 92.

© Copyright IBM Corp. 2012

Table 5. Information Menu Options (/info)

Command Syntax and Usage

rmon

Displays the Remote Monitoring (RMON) Information Menu. For details, see page 93.

link

Displays configuration information about each port, including:

- Port alias and number
- Port speed
- Duplex mode (half, full, or auto)
- Flow control for transmit and receive (no, yes, or both)
- Link status (up, down, or disabled)

For details, see page 97.

port

Displays port status information, including:

- Port alias and number
- Whether the port uses VLAN Tagging or not
- Port VLAN ID (PVID)
- Port name
- VLAN membership
- Fast Fowarding status
- FDB Learning status
- Flooding status

For details, see page 98.

transcvr

Displays the status of the port transceiver module on each external port. For details, see page 99.

virt

Displays the Virtualization information menu. For details, see page 100.

cee

Displays the Converged Enhanced Ethernet (CEE) information menu. For details, see page 110.

fcoe

Displays the Fiber Channel over Ethernet (FCoE) information menu. For details, see page 118.

Table 5. Information Menu Options (/info)

Command Syntax and Usage

swkey

Displays the enabled software features.

dump

Dumps all switch information available from the Information Menu (10K or more, depending on your configuration).

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

/info/sys

System Information Menu

```
[System Menu]
    errdis - Errdisable Menu
    snmpv3
            - SNMPv3 Information Menu
    chassis - Show BladeCenter Chassis related information
    general - Show general system information
         - Show last 100 syslog messages
            - Show current user status
            - Dump all system information
```

The information provided by each menu option is briefly described in Table 6, with pointers to where detailed information can be found.

Table 6. System Menu Options (/info/sys)

Command Syntax and Usage

errdis

Displays Error Disable and Recovery Information menu. To view the menu options, see page 20.

Displays SNMPv3 Information Menu. To view the menu options, see page 21.

chassis

Displays information about the Flex System chassis. For details, see page 27.

Table 6. System Menu Options (/info/sys)

Command Syntax and Usage

general

Displays system information, including:

- System date and time
- Switch model name and number
- Switch name and location
- Time of last boot
- MAC address of the switch management processor
- IP address of management interface
- Hardware version and part number
- Software image file and version number
- Configuration name
- Log-in banner, if one is configured

For details, see page 29.

log

Displays most recent syslog messages. For details, see page 30.

user

Displays configured user names and their status. For details, see page 30.

dump

Dumps all switch information available from the Information Menu (10K or more, depending on your configuration).

/info/sys/errdis

Error Disable and Recovery Information

```
[ErrDisable Information Menu]
recovery - Show ErrDisable recovery information
timers - Show ErrDisable timer information
dump - Show all of the above
```

This menu allows you to display information about the Error Disable and Recovery feature for interface ports.

Table 7. Error Disable Information Options

Command Syntax and Usage

recovery

Displays a list ports with their Error Recovery status.

Table 7. Error Disable Information Options

Command Syntax and Usage

timers

Displays a list of active recovery timers, if applicable.

dump

Displays all Error Disable and Recovery information.

/info/sys/snmpv3

SNMPv3 System Information Menu

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 Framework by supporting the following:

- a new SNMP message format
- security for messages
- access control
- remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC2271 to RFC2276.

```
[SNMPv3 Information Menu]
   usm - Show usmUser table information
            - Show vacmViewTreeFamily table information
    access - Show vacmAccess table information
    group - Show vacmSecurityToGroup table information
    comm
            - Show community table information
            - Show targetAddr table information
    taddr
    tparam - Show targetParams table information
    notify - Show notify table information
            - Show all SNMPv3 information
```

Table 8. SNMPv3 information Menu Options (/info/sys/snmpv3)

Command Syntax and Usage

usm

Displays User Security Model (USM) table information. To view the table, see page 22.

view

Displays information about view, sub-trees, mask and type of view. To view a sample, see page 23.

access

Displays View-based Access Control information. To view a sample, see page 23.

group

Displays information about the group that includes, the security model, user name, and group name. To view a sample, see page 24.

Table 8. SNMPv3 information Menu Options (/info/sys/snmpv3)

Command Syntax and Usage

comm

Displays information about the community table information. To view a sample, see page 24.

taddr

Displays the Target Address table information. To view a sample, see page 25.

tparam

Displays the Target parameters table information. To view a sample, see page 26.

notify

Displays the Notify table information. To view a sample, see page 26.

dump

Displays all the SNMPv3 information. To view a sample, see page 27.

/info/sys/snmpv3/usm

SNMPv3 USM User Table Information

The User-based Security Model (USM) in SNMPv3 provides security services such as authentication and privacy of messages. This security model makes use of a defined set of user identities displayed in the USM user table. The USM user table contains the following information:

- the user name
- a security name in the form of a string whose format is independent of the Security Model
- an authentication protocol, which is an indication that the messages sent on behalf of the user can be authenticated
- · the privacy protocol

usmUser Table: User Name	Protocol
adminmd5	HMAC_MD5, DES PRIVACY
adminsha	HMAC_SHA, DES PRIVACY
vlv2only	NO AUTH, NO PRIVACY

Table 9. USM User Table Information Parameters (/info/sys/usm)

Field	Description
User Name	This is a string that represents the name of the user that you can use to access the switch.
Protocol	This indicates whether messages sent on behalf of this user are protected from disclosure using a privacy protocol. IBM Networking OS supports DES algorithm for privacy. The software also supports two authentication algorithms: MD5 and HMAC-SHA.

/info/sys/snmpv3/view

SNMPv3 View Table Information

The user can control and restrict the access allowed to a group to only a subset of the management information in the management domain that the group can access within each context by specifying the group's rights in terms of a particular MIB view for security reasons.

View Name	Subtree	Mask	Туре
iso	1.3		included
v1v2only	1.3		included
v1v2only	1.3.6.1.6.3.15		excluded
v1v2only	1.3.6.1.6.3.16		excluded
v1v2only	1.3.6.1.6.3.18		excluded

Table 10. SNMPv3 View Table Information Parameters (/info/sys/snmpv3/view)

Field	Description		
View Name	Displays the name of the view.		
Subtree	Displays the MIB subtree as an OID string. A view subtree is the set of all MIB object instances which have a common Object Identifier prefix to their names.		
Mask	Displays the bit mask.		
Туре	Displays whether a family of view subtrees is included or excluded from the MIB view.		

/info/sys/snmpv3/access

SNMPv3 Access Table Information

The access control sub system provides authorization services.

The vacmAccessTable maps a group name, security information, a context, and a message type, which could be the read or write type of operation or notification into a MIB view.

The View-based Access Control Model defines a set of services that an application can use for checking access rights of a group. This group's access rights are determined by a read-view, a write-view and a notify-view. The read-view represents the set of object instances authorized for the group while reading the objects. The write-view represents the set of object instances authorized for the group when writing objects. The notify-view represents the set of object instances authorized for the group when sending a notification.

Table 11. SNMPv3 Access Table Information (/info/sys/snmpv3/access)

Field	Description	
Group Name	Displays the name of group.	
Model	Displays the security model used, for example, SNMPv1, or SNMPv2 or USM.	

Table 11. SNMPv3 Access Table Information (/info/sys/snmpv3/access)

Field	Description
Level	Displays the minimum level of security required to gain rights of access. For example, noAuthNoPriv, authNoPriv, or authPriv.
ReadV	Displays the MIB view to which this entry authorizes the read access.
WriteV	Displays the MIB view to which this entry authorizes the write access.
NotifyV	Displays the Notify view to which this entry authorizes the notify access.

/info/sys/snmpv3/group

SNMPv3 Group Table Information

A group is a combination of security model and security name that defines the access rights assigned to all the security names belonging to that group. The group is identified by a group name.

Sec Model	User Name	Group Name
snmpv1	v1v2only	v1v2grp
usm	adminmd5	admingrp
usm	adminsha	admingrp

Table 12. SNMPv3 Group Table Information Parameters (/info/sys/snmpv3/group)

Field	Description
Sec Model	Displays the security model used, which is any one of: USM, SNMPv1, SNMPv2, and SNMPv3.
User Name	Displays the name for the group.
Group Name	Displays the access name of the group.

/info/sys/snmpv3/comm

SNMPv3 Community Table Information

This command displays the community table information stored in the SNMP engine.

Index	Name	User Name	Tag
trap1	public	v1v2only	vlv2trap

Table 13. SNMPv3 Community Table Parameters (/info/sys/snmpv3/comm)

Field	Description
Index	Displays the unique index value of a row in this table
Name	Displays the community string, which represents the configuration.
User Name	Displays the User Security Model (USM) user name.
Tag	Displays the community tag. This tag specifies a set of transport endpoints from which a command responder application accepts management requests and to which a command responder application sends an SNMP trap.

/info/sys/snmpv3/taddr

SNMPv3 Target Address Table Information

This command displays the SNMPv3 target address table information, which is stored in the SNMP engine.

Name	Transport Addr	Port	Taglist	Params
trap1	47.81.25.66	162	v1v2trap	v1v2param

Table 14. SNMPv3 Target Address Table Information Parameters (/info/sys/snmpv3/taddr)

Field	Description	
Name	Displays the locally arbitrary, but unique identifier associated with this snmpTargetAddrEntry.	
Transport Addr	Displays the transport addresses.	
Port	Displays the SNMP UDP port number.	
Taglist	This column contains a list of tag values which are used to select target addresses for a particular SNMP message.	
Params	The value of this object identifies an entry in the snmpTargetParamsTable. The identified entry contains SNMP parameters to be used when generating messages to be sent to this transport address.	

/info/sys/snmpv3/tparam

SNMPv3 Target Parameters Table Information

Name	MP Model	User Name	Sec Model	Sec Level
v1v2param	snmpv2c	v1v2only	snmpv1	noAuthNoPriv

This command displays the SNMPv3 target parameters table information.

Table 15. SNMPv3 Target Parameters Table Information (/info/sys/snmpv3/tparam)

Field	Description
Name	Displays the locally arbitrary, but unique identifier associated with this snmpTargeParamsEntry.
MP Model	Displays the Message Processing Model used when generating SNMP messages using this entry.
User Name	Displays the securityName, which identifies the entry on whose behalf SNMP messages will be generated using this entry.
Sec Model	Displays the security model used when generating SNMP messages using this entry. The system may choose to return an inconsistentValue error if an attempt is made to set this variable to a value for a security model which the system does not support.
Sec Level	Displays the level of security used when generating SNMP messages using this entry.

/info/sys/snmpv3/notify

SNMPv3 Notify Table Information

Name	Tag
v1v2trap	v1v2trap

This command displays the SNMPv3 notify table information.

Table 16. SNMPv3 Notify Table Information (/info/sys/snmpv3/notify)

Field	Description
Name	The locally arbitrary, but unique identifier associated with this snmpNotifyEntry.
Tag	This represents a single tag value that is used to select entries in the snmpTargetAddrTable. Any entry in the snmpTargetAddrTable that contains a tag value equal to the value of this entry, is selected. If this entry contains a value of zero length, no entries are selected.

/info/sys/snmpv3/dump

Each syslog message has a criticality level associated with it, included in text form as a prefix to the log message. One of eight different prefixes is used, depending on the condition that the administrator is being notified of, as shown below.

- EMERG: indicates the system is unusable
- ALERT: Indicates action should be taken immediately
- CRIT: Indicates critical conditions
- ERR: indicates error conditions or errored operations
- WARNING: indicates warning conditions
- NOTICE: indicates a normal but significant condition
- INFO: indicates an information message
- DEBUG: indicates a debug-level message

/info/sys/user

User Status Information

```
Usernames:

user - enabled - offline

oper - disabled - offline

admin - Always Enabled - online 1 session

Current User ID table:

1: name paul , dis, cos user , password valid, offline

Current strong password settings:

strong password status: disabled
```

This command displays the status of the configured usernames.

Stacking Information Menu

```
[Stacking Menu]
    switch - Show switch information
            - Show stack link information
          - Show stack name
    name
    backup - Show backup unit number
            - Show switch firmware information
    path - Show inter switch packet path map
    pushstat - Show config/image push status information
    dump - Dump all stacking information
```

Note: The Stacking Information menu only appears if you have stacking turned on.

Table 17 lists the Stacking information menu options.

Table 17. Stacking Information Menu Options (/info/stack)

Command Syntax and Usage

switch

Displays information about each switch in the stack, including:

- Configured Switch Number (csnum)
- Attached Switch Number (asnum)
- MAC address
- Stacking state

link

Displays link information for each switch in the stack, listed by assigned switch number.

name

Displays the name of the stack.

backup

Displays the unit number of the backup switch.

Displays the firmware version number for the selected switch.

path

Displays the Stacking packet path map that shows how the stack switches are connected.

pushstat

Displays the status of the most recent firmware and configuration file push from the master to member switches.

dump

Displays all stacking information.

Stacking Switch Information

```
Stack name: MyStack
Local switch is the master.
Local switch:
 csnum - 1
MAC - 00:25:03:1c:96:00
Switch Type - 9
 Switch Mode (cfg) - Master
 Priority - 225
Stack MAC - 00:25:03:1c:96:1f
Master switch:
             - 1
- 00:25:03:1c:96:00
  MAC
Configured Switches:
          MAC
                     asnum
C1 00:25:03:1c:96:00 A1
C2 00:ef:61:79:00:00 A2
Attached Switches in Stack:
_____
          MAC csnum State
asnum
-----
A1 00:25:03:1c:96:00 C1 IN_STACK
A2 00:ef:61:79:00:00 C2 IN_STACK
```

Stack switch information includes the following:

- Stack name
- · Details about the local switch from which the command was issued
- Configured switch number and MAC of the Stack Master and Stack Backup
- Configured switch numbers and their associated assigned switch numbers
- Attached switch numbers and their associated configured switch numbers

Layer 2 Information Menu

```
[Layer 2 Menu]
            - Forwarding Database Information Menu
            - Link Aggregation Control Protocol Menu

            - Show CIST information
    trunk - Show Trunk Group information
            - Show VLAN information
    vlan
    pvlan - Show protocol VLAN information
    prvlan - Show private-vlan information
            - Dump all layer 2 information
```

The information provided by each menu option is briefly described in Table 18, with pointers to where detailed information can be found.

Table 18. Layer 2 Information Menu Options (/info/l2)

Command Syntax and Usage

fdb

Displays the Forwarding Database Information Menu. For details, see page 35.

lacp

Displays the Link Aggregation Control Protocol Menu. For details, see page 37.

failovr

Displays the Layer 2 Failover Information menu. For details, see page 38.

hotlink

Displays the Hot Links Information menu. For details, see page 39.

еср

Displays the Edge Control Protocol (ECP) Information menu. For details, see page 40.

11dp

Displays the LLDP Information menu. For details, see page 40.

udld

Displays the Unidirectional Link Detection (UDLD) Information menu. For details, see page 43.

oam

Displays the Operation, Administration, and Maintenance (OAM) Information menu. For details, see page 44.

Table 18. Layer 2 Information Menu Options (/info/l2)

Command Syntax and Usage

vlag

Displays the vLAG Information Menu. For details, see page 45.

8021x

Displays the 802.1X Information Menu. For details, see page 46.

stg

Displays Spanning Tree information, including the status (on or off), Spanning Tree mode (PVRST, RSTP, or MSTP), and VLAN membership.

In addition to seeing if STG is enabled or disabled, you can view the following STG bridge information:

- Priority
- Hello interval
- Maximum age value
- Forwarding delay
- Aging time

You can also see the following port-specific STG information:

- Port alias and priority
- Cost
- State

For details, see page 48.

cist

Displays Common Internal Spanning Tree (CIST) information, including the MSTP digest and VLAN membership.

CIST bridge information includes:

- Priority
- Hello interval
- Maximum age value
- Forwarding delay
- Root bridge information (priority, MAC address, path cost, root port)

CIST port information includes:

- Port number and priority
- Cost
- State

For details, see page 52.

trunk

When trunk groups are configured, you can view the state of each port in the various trunk groups. For details, see page 54.

Table 18. Layer 2 Information Menu Options (/info/l2)

Command Syntax and Usage

vlan

Displays VLAN configuration information, including:

- VLAN Number
- VLAN Name
- Status
- Port membership of the VLAN

For details, see page 54.

pvlan

Displays Protocol VLAN information.

prvlan

Displays Private VLAN information.

dump

Dumps all switch information available from the Layer 2 menu (10K or more, depending on your configuration).

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

/info/12/fdb

FDB Information Menu

```
[Forwarding Database Menu]
     find - Show a single FDB entry by MAC address
     port - Show FDB entries on a single port
     trunk - Show FDB entries on a single trunk
     vlan - Show FDB entries on a single VLAN
     state - Show FDB entries by state
     mcdump - Show FDB multicast entries
     static - Show FDB static entries
     dump - Show all FDB entries
```

The forwarding database (FDB) contains information that maps the media access control (MAC) address of each known device to the switch port where the device address was learned. The FDB also shows which other ports have seen frames destined for a particular MAC address.

Note: The master forwarding database supports up to K MAC address entries on the MP per switch.

Table 19. FDB Information Menu Options (/info/l2/fdb)

Command Syntax and Usage

find <MAC address> [<VLAN>]

Displays a single database entry by its MAC address. You are prompted to enter the MAC address of the device. Enter the MAC address using the format, xx:xx:xx:xx:xx:xx. For example, 08:00:20:12:34:56

You can also enter the MAC address using the format, xxxxxxxxxxxx. For example, 080020123456

port port number or alias>

Displays all FDB entries for a particular port.

trunk <trunk number>

Displays all FDB entries for a particular trunk.

vlan <*VLAN number*>

Displays all FDB entries on a single VLAN.

state unknown|forward|trunk

Displays all FDB entries of a particular state.

mcdump

Displays all Multicast MAC entries in the FDB.

static

Displays all static MAC entries in the FDB.

dump

Displays all entries in the Forwarding Database. For more information, see page 36.

/info/12/fdb/dump

Show All FDB Information

MAC address	VLAN	Port	Trnk	State	Permanent
00:04:38:90:54:18	1	EXT4		FWD	
00:09:6b:9b:01:5f	1	INTA1	3	FWD	
00:09:6b:ca:26:ef	4095	MGT1		FWD	
00:0f:06:ec:3b:00	4095	MGT1		FWD	
00:11:43:c4:79:83	1	EXT4		FWD	P

An address that is in the forwarding (FWD) state, means that it has been learned by the switch. When in the trunking (TRK) state, the port field represents the trunk group number. If the state for the port is listed as unknown (UNK), the MAC address has not yet been learned by the switch, but has only been seen as a destination address.

When an address is in the unknown state, no outbound port is indicated, although ports which reference the address as a destination will be listed under "Reference ports."

Clearing Entries from the Forwarding Database

To clear the entire FDB, refer to "Forwarding Database Maintenance Menu" on page 488.

/info/l2/lacp

Link Aggregation Control Protocol Information Menu

```
[LACP Menu]
    aggr
              - Show LACP aggregator information
    port
             - Show LACP port information
             - Show all LACP ports information
    dump
```

Use these commands to display Link Aggregation Protocol (LACP) status information about each port on the switch.

Table 20. LACP Information Options (/info/I2/lacp)

Command Syntax and Usage	
aggr <aggregator id=""> Displays detailed information about the LACP aggregator.</aggregator>	
port Displays LACP information about the selected port.	
dump Displays a summary of LACP information. For details, see page 37.	

/info/l2/lacp/dump

Show All LACP Information

port	mode	adminkey	operkey	selected	prio	aggr	trunk	status
INTA1	active	30	30	yes	32768	17	19	up
INTA2	active	30	30	yes	32768	17	19	up
INTA3	off	3	3	no	32768			
INTA4	off	4	4	no	32768			

LACP dump includes the following information for each external port in the EN4093/EN4093R:

•	mode	Displays the port's LACP mode (active, passive, or off).
•	adminkey	Displays the value of the port's adminkey.
•	operkey	Shows the value of the port's operational key.
•	selected	Indicates whether the port has been selected to be part of a Link Aggregation Group.

prio Shows the value of the port priority.

aggr
 Displays the aggregator associated with each port.

• trunk This value represents the LACP trunk group number.

• status Displays the status of LACP on the port (up or down).

/info/l2/failovr

Layer 2 Failover Information Menu

```
[Failover Info Menu] trigger - Show Trigger information
```

Table 21 describes the Layer 2 Failover information options.

Table 21. Failover Information Options (/info/l2/failovr)

```
Command Syntax and Usage

trigger <trigger number>
Displays detailed information about the selected Layer 2 Failover trigger.
```

/info/l2/failovr/trigger <trigger number>

Show Layer 2 Failover Information

```
Trigger 1 Auto Monitor: Enabled
Trigger 1 limit: 0
Monitor State: Up
Member Status
-----
trunk 1
EXT2
         Operational
EXT3
         Operational
Control State: Auto Disabled
Member Status
INTA1 Operational
INTA2
        Operational
        Operational
INTA3
INTA4
        Operational
```

A monitor port's Failover status is Operational only if all the following conditions hold true:

- Port link is up.
- If Spanning-Tree is enabled, the port is in the Forwarding state.
- If the port is a member of an LACP trunk group, the port is aggregated.

If any of the above conditions are not true, the monitor port is considered to be failed.

A control port is considered to be operational if the monitor trigger state is Up. Even if a port's link status is Down, Spanning-Tree status is Blocking, and the LACP status is Not Aggregated, from a teaming perspective the port status is Operational, since the trigger is Up.

A control port's status is displayed as Failed only if the monitor trigger state is

/info/l2/hotlink

Hot Links Information Menu

```
[Hot Links Info Menu]
    trigger - Show Trigger information
```

Table 22. Hot Links Information Options (/info/l2/hotlink)

Command Syntax and Usage

trigger

Displays status and configuration information for each Hot Links trigger. To view a sample display, see page 39.

/info/12/hotlink/trigger

Hotlinks Trigger Information

```
Hot Links Info: Trigger
Current global Hot Links setting: ON
bpdu disabled
sndfdb disabled
Current Trigger 1 setting: enabled
name "Trigger 1", preempt enabled, fdelay 1 sec
Active state: None
Master settings:
port EXT1
Backup settings:
port EXT2
```

Hot Links trigger information includes the following:

- Hot Links status (on or off)
- Status of BPDU flood option
- Status of FDB send option
- Status and configuration of each Hot Links trigger

/info/12/ecp

ECP Information

```
[ECP Information Menu]
channels - Show all ECP channels
ulps - Show all Registered ULPs
```

Table 23. ECP Information Options

Command Syntax and Usage

channels

Displays all Edge Control Protocol (ECP) channels.

ulps

Displays all registered Upper-Level Protocols (ULPs).

/info/12/11dp

LLDP Information Menu

```
[LLDP Information Menu]

port - Show LLDP port information

rx - Show LLDP receive state machine information

tx - Show LLDP transmit state machine information

dump - Show all LLDP information
```

Table 24. LLDP Information Menu Options (/info/l2/lldp)

Command Syntax and Usage

```
port <port alias or number>
```

Displays Link Layer Discovery Protocol (LLDP) port information. For more information, see page 40.

rx

Displays information about the LLDP receive state machine.

tx

Displays information about the LLDP transmit state machine.

remodev

Displays information received from LLDP -capable devices. To view a sample display, see page 42.

dump

Displays all LLDP information.

/info/l2/lldp/port

LLDP Port Information

```
[Show LLDP port information]
           - Optional TLVs Menu
             - Show LLDP port information
    dump
```

Table 25. LLDP Information Options

Command Syntax and Usage

tlv

Displays LLDP type-length-value (TLV) information for the port. For more information, see page 41.

dump

Displays all LLDP information for the port.

/info/l2/lldp/port /port no.>/tlv

LLDP Port TLV Information

```
[Optional TLVs Menu]
         - Show EVB TLV information
    evb
             - Show all TLVs information
    dump
```

Table 26. LLDP Information Options

Command Syntax and Usage

evb

Displays Edge Virtual Bridge (EVB) type-length-value (TLV) information.

dump

Displays all TLV information for the port.

LLDP Remote Device Information

LLDP remote device information provides a summary of information about remote devices connected to the switch. To view detailed information about a device, as shown, follow the remodev command with the index number of the remote device. To view detailed information about all devices, use the detail option.

```

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System unit that you are using and the firmware versions and options that are installed.

The following table describes the IEEE 802.1X parameters.

Table 31. 802.1X Parameter Descriptions (/info/l2/8021x)

Parameter	Description						
Port	Displays each port's alias.						
Auth Mode	Displays the Access Control authorization mode for the port. The Authorization mode can be one of the following:						
	• force-unauth						
	• auto						
	• force-auth						
Auth Status	Displays the current authorization status of the port, either authorized or unauthorized.						
Authenticator PAE State	Displays the Authenticator Port Access Entity State. The PAE state can be one of the following:						
	• initialize						
	• disconnected						
	• connecting						
	• authenticating						
	• authenticated						
	• aborting						
	• held						
	• forceAuth						
Backend Auth State	Displays the Backend Authorization State. The Backend Authorization state can be one of the following:						
	• initialize						
	• request						
	• response						
	• success						
	• fail						
	• timeout						
	• idle

* = STP turned off for this port.
```

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex system chassis that you are using and the firmware versions and options that are installed.

The switch software uses the Per VLAN Rapid Spanning Tree Protocol (PVRST) Spanning Tree mode, with IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) or IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), as alternatives. For details see "RSTP/MSTP/PVRST Information" on page 50.

When STP is enabled, in addition to seeing if STG is enabled or disabled, you can view the following STG bridge information:

Table 32. Spanning Tree Bridge Parameter Descriptions

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STG root bridge.

Table 32. Spanning Tree Bridge Parameter Descriptions (continued)

Parameter	Description
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STG network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from listening to learning and from learning state to forwarding state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.

The following port-specific information is also displayed:

Table 33. Spanning Tree Port Parameter Descriptions

Parameter	Description
Priority (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The Port Path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The state field can be FWD (Forwarding), DISC (Discarding) or LRN (Learning).
Role	The role field shows the current role of the port: DESG (Designated), ROOT (Root Port), ALTN (Alternate) or BKUP (Backup).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The Designated Port field shows the port on the Designated Bridge to which this port is connected.

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

The switch software can be set to use the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) or the IEEE 802.1s Multiple Spanning Tree Protocol (MSTP). If RSTP/MSTP is turned on (see page 283), you can view RSTP/MSTP bridge information for the Spanning Tree Group and port-specific RSTP information.

If RSTP/MSTP/PVRST is turned on, you can view the following bridge information for the Spanning Tree Group:.

Table 34. RSTP/MSTP/PVRST Bridge Parameter Descriptions

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STP root bridge.

Table 34. RSTP/MSTP/PVRST Bridge Parameter Descriptions (continued)

Parameter	Description
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the STP network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from listening to learning and from learning state to forwarding state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.

The following port-specific information is also displayed:

Table 35. RSTP/MSTP/PVRST Port Parameter Descriptions

Parameter	Description
Prio (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port Path Cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The State field in RSTP or MSTP mode can be one of the following: Discarding (DISC), Learning (LRN), Forwarding (FWD), or Disabled (DSB).
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.

Table 35. RSTP/MSTP/PVRST Port Parameter Descriptions (continued)

Parameter	Description
	The port ID of the port on the Designated Bridge to which this port is connected.

In addition to seeing if Common Internal Spanning Tree (CIST) is enabled or disabled, you can view CIST bridge and port-specific information. The following table describes the CIST parameters.

Table 36. CIST Parameter Descriptions

Parameter	Description
CIST Root	The CIST Root shows information about the root bridge for the Common Internal Spanning Tree (CIST). Values on this row of information refer to the CIST root.
CIST Regional Root	The CIST Regional Root shows information about the root bridge for this MSTP region. Values on this row of information refer to the regional root.
Priority (bridge)	The bridge priority parameter controls which bridge on the network will become the STP root bridge.
Hello	The hello time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The maximum age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STP network.
FwdDel	The forward delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from learning state to forwarding state.
Hops	The maximum number of bridge hops a packet can traverse before it is dropped. The default value is 20.
Priority (port)	The port priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The state field shows the current state of the port. The state field can be either Discarding (DISC), Learning (LRN), or Forwarding (FWD).
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST), or Unknown (UNK).

Table 36. CIST Parameter Descriptions

Parameter	Description
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The port ID of the port on the Designated Bridge to which this port is connected.
Туре	Type of link connected to the port, and whether the port is an edge port. Link type values are AUTO, P2P, or SHARED.

/info/l2/trunk

Trunk Group Information

```
Trunk group 1: Enabled
Protocol - Static
Port state:

            - Dump all layer 3 information
```

The information provided by each menu option is briefly described in Table 37, with pointers to detailed information.

Table 37. Layer 3 Information Options (/info/l3)

Command Syntax and Usage

route

Displays the IP Routing Menu. Using the options of this menu, the system displays the following for each configured or learned route:

- Route destination IP address, subnet mask, and gateway address
- Type of route
- Tag indicating origin of route
- Metric for RIP tagged routes, specifying the number of hops to the destination (1-15 hops, or 16 for infinite hops)
- The IP interface that the route uses

For details, see page 58.

arp

Displays the Address Resolution Protocol (ARP) Information Menu. For details, see page 60.

bgp

Displays BGP Information Menu. To view menu options, see page 62.

ospf

Displays OSPF routing Information Menu. For details, see page 65.

ospf3

Displays OSPFv3 routing Information Menu. For details, see page 70.

Table 37. Layer 3 Information Options (/info/l3)

rip

Displays Routing Information Protocol Menu. For details, see page 75.

route6

Displays the IPv6 Routing information menu. To view menu options, see page 76.

nbrcache

Displays the IPv6 Neighbor Discovery cache information menu. To view menu options, see page 77.

ndprefix

Displays the IPv6 Neighbor Discovery Prefix information menu. To view menu options, see page 78.

ecmp

Displays information about ECMP static routes. For details, see page 78.

hash <Source IP address> <destination IP address> <number of ECMP paths> Displays information about ECMP hashing results. For details, see page 78.

ip

Displays IP Information. For details, see page 87.

IP information, includes:

- IP interface information: Interface number, IP address, subnet mask, VLAN number, and operational status.
- Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status
- IP forwarding settings, network filter settings, route map settings

igmp

Displays IGMP Information Menu. For details, see page 79.

mld

Displays MLD Information Menu. For details, see page 83.

vrrp

Displays VRRP Information. For details, see page 85.

if

Displays interface information. For details, see page 85.

ip6pmtu [<destination IPv6 address>]

Displays IPv6 Path MTU information. For details, see page 86.

Table 37. Layer 3 Information Options (/info/l3)

iр

Displays IP Information. For details, see page 87.

IP information, includes:

- IP interface information: Interface number, IP address, subnet mask, VLAN number, and operational status.
- Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status
- IP forwarding settings, network filter settings, route map settings

ikev2

Displays IKEv2 Information menu. For details, see page 88.

ipsec

Displays IPsec Information menu. For details, see page 89.

dump

Dumps all switch information available from the Layer 3 menu (10K or more, depending on your configuration).

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

/info/13/route

IP Routing Information Menu

```
[IP Routing Menu]

find - Show a single route by destination IP address
gw - Show routes to a single gateway
type - Show routes of a single type
tag - Show routes of a single tag
if - Show routes on a single interface
dump - Show all routes
```

Using the commands listed in the following table, you can display all or a portion of the IP routes currently held in the switch.

Table 38. Route Information Menu Options (/info/l3/route)

Command Syntax and Usage find <IP address (such as 192.4.17.101)> Displays a single route by destination IP address. gw <default gateway address (such as 192.4.17.44)> Displays routes to a single gateway. type indirect|direct|local|broadcast|martian|multicast Displays routes of a single type. For a description of IP routing types, see Table 39 on page 59.

Table 38. Route Information Menu Options (/info/l3/route)

tag fixed|static|addr|rip|ospf|bgp|broadcast| martian|multicast

Displays routes of a single tag. For a description of IP routing types, see Table 40 on page 60.

if <interface number>

Displays routes on a single interface.

dump

Displays all routes configured in the switch. For more information, see page 59.

* 255.255.255.255	255.255.255.255	12.255.255.255	broadcast	broadcast		2
* 224.0.0.0	224.0.0.0	0.0.0.0	martian	martian		
* 224.0.0.5	255.255.255.255	0.0.0.0	multicast	addr		

The following table describes the ${ t Type}$ parameters.

Table 39. IP Routing Type Parameters

Parameter	Description
indirect	The next hop to the host or subnet destination will be forwarded through a router at the Gateway address.
direct	Packets will be delivered to a destination host or subnet attached to the switch.
local	Indicates a route to one of the switch's IP interfaces.
broadcast	Indicates a broadcast route.
martian	The destination belongs to a host or subnet which is filtered out. Packets to this destination are discarded.
multicast	Indicates a multicast route.

The following table describes the Tag parameters.

Table 40. IP Routing Tag Parameters

Parameter	Description
fixed	The address belongs to a host or subnet attached to the switch.
static	The address is a static route which has been configured on the EN4093/EN4093R.
addr	The address belongs to one of the switch's IP interfaces.
rip	The address was learned by the Routing Information Protocol (RIP).
ospf	The address was learned by Open Shortest Path First (OSPF).
bgp	The address was learned via Border Gateway Protocol (BGP)
broadcast	Indicates a broadcast address.
martian	The address belongs to a filtered group.
multicast	Indicates a multicast address.

/info/l3/arp

ARP Information Menu

```
[Address Resolution Protocol Menu]

find - Show a single ARP entry by IP address

port - Show ARP entries on a single port

vlan - Show ARP entries on a single VLAN

addr - Show ARP address list

dump - Show all ARP entries
```

The ARP information includes IP address and MAC address of each entry, address status flags (see Table 41), VLAN and port for the address, and port referencing information.

Table 41. ARP Information Menu Options (/info/l3/arp)

Command Syntax and Usage	
find <ip (such="" 192.4.17.101="" address="" as,=""> Displays a single ARP entry by IP address.</ip>	
port <pre>port alias or number> Displays the ARP entries on a single port.</pre>	
vlan < <i>VLAN number</i> > Displays the ARP entries on a single VLAN.	

Table 41. ARP Information Menu Options (/info/l3/arp)

addr

Displays the ARP address list: IP address, IP mask, MAC address, and VLAN flags.

dump

Displays all ARP entries. including:

- IP address and MAC address of each entry
- Address status flag (see below)
- The VLAN and port to which the address belongs
- The ports which have referenced the address (empty if no port has routed traffic to the IP address shown)

For more information, see page 61.

/info/l3/arp/dump

Show All ARP Entry Information

IP	address	Flags	MAC address	VLAN	Age	Port
12.2	0.1.1		00:15:40:07:20:42	4095	0	INT8
12.2	0.20.16		00:30:13:e3:44:14	4095	2	INT8
12.2	0.20.18		00:30:13:e3:44:14	4095	2	INT6
12.2	0.23.111		00:1f:29:95:f7:e5	4095	6	INT6

The Port field shows the target port of the ARP entry.

The Flag field is interpreted as follows:

Table 42. ARP Dump Flag Parameters

Flag	Description
Р	Permanent entry created for switch IP interface.
R	Indirect route entry.
U	Unresolved ARP entry. The MAC address has not been learned.

/info/l3/arp/addr

Table 44. OSPF Information Menu Options (/info/l3/ospf)

Command Syntax and Usage

general

Displays general OSPF information. See page 67 for a sample output.

aindex < area index (0-2)>

Displays area information for a particular area index. If no parameter is supplied, it displays area information for all the areas.

if <interface number>

Displays interface information for a particular interface. If no parameter is supplied, it displays information for all the interfaces. See page 67 for a sample output.

loopif <interface number>

Displays loopback information for a particular interface. If no parameter is supplied, it displays loopback information for all the interfaces. See page 67 for a sample output.

virtual

Displays information about all the configured virtual links.

nbr <nbr router-id (A.B.C.D)>

Displays the status of a neighbor with a particular router ID. If no router ID is supplied, it displays the information about all the current neighbors.

dbase

Displays OSPF database menu. To view menu options, see page 67.

sumaddr < area index (0-2)>

Displays the list of summary ranges belonging to non-NSSA areas.

nsumadd < area index (0-2)>

Displays the list of summary ranges belonging to NSSA areas.

Table 44. OSPF Information Menu Options (/info/l3/ospf)

routes

Displays OSPF routing table. See page 70 for a sample output.

dump

Displays the OSPF information.

/info/13/ospf/general

OSPF General Information

```
OSPF Version 2
Router ID: 10.10.10.1
Started at 1663 and the process uptime is 4626
Area Border Router: yes, AS Boundary Router: no
LS types supported are 6
External LSA count 0
External LSA checksum sum 0x0
Number of interfaces in this router is 2
Number of virtual links in this router is 1
16 new lsa received and 34 lsa originated from this router
Total number of entries in the LSDB 10
Database checksum sum 0x0
Total neighbors are 1, of which
                                  2 are >=INIT state,
                                  2 are >=EXCH state,
                                  2 are =FULL state
Number of areas is 2, of which 3-transit 0-nssa
       Area Id : 0.0.0.0
        Authentication : none
        Import ASExtern : yes
       Number of times SPF ran : 8

nw - Network LS Database info
nssa - NSSA External LS Database info
rtr - Router LS Database info
self - Self Originated LS Database info
summ - Network-Summary LS Database info
all - All
```

Table 45. OSPF Database Information Menu Options (/info/l3/ospf/dbase)

Command Syntax and Usage

```
advrtr < router-id (A.B.C.D)>
```

Takes advertising router as a parameter. Displays all the Link State Advertisements (LSAs) in the LS database that have the advertising router with the specified router ID, for example: 20.1.1.1.

```
asbrsum <adv-rtr (A.B.C.D)> | link state id (A.B.C.D> | <self>
```

Displays ASBR summary LSAs. The usage of this command is as follows:

- asbrsum adv-rtr 20.1.1.1

Displays ASBR summary LSAs having the advertising router 20.1.1.1.

- asbrsum link-state-id 10.1.1.1

Displays ASBR summary LSAs having the link state ID 10.1.1.1.

- asbrsum self

Displays the self advertised ASBR summary LSAs.

asbrsum with no parameters displays all the ASBR summary LSAs.

dbsumm

Displays the following information about the LS database in a table format:

- Number of LSAs of each type in each area.
- Total number of LSAs for each area.
- Total number of LSAs for each LSA type for all areas combined.
- Total number of LSAs for all LSA types for all areas combined.

No parameters are required.

```
ext < adv-rtr(A.B.C.D) > | < link state id(A.B.C.D > | < self >
```

Displays the AS-external (type 5) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.

```
nw < adv-rtr(A.B.C.D) > | < link state id(A.B.C.D > | < self >
```

Displays the network (type 2) LSAs with detailed information of each field of the LSA.network LS database. The usage of this command is the same as the usage of the command asbrsum.

Table 45. OSPF Database Information Menu Options (/info/l3/ospf/dbase)

nssa <adv-rtr (A.B.C.D)> | link state id (A.B.C.D> | <self>

Displays the NSSA (type 7) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.

rtr <adv-rtr (A.B.C.D)> | link state id (A.B.C.D> | <self>

Displays the router (type 1) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.

self

Displays all the self-advertised LSAs. No parameters are required.

Displays the network summary (type 3) LSAs with detailed information of each field of the LSAs. The usage of this command is the same as the usage of the command asbrsum.

all

Displays all the LSAs.

/info/l3/ospf/routes

asext < detail> | < hex>

Displays AS-External LSAs database information. If no parameter is supplied, it displays condensed information.

interprf <detail>|<hex>

Displays Inter-Area Prefix LSAs database information. If no parameter is supplied, it displays condensed information.

interrtr <detail> | <hex>

Displays Inter-Area router LSAs database information. If no parameter is supplied, it displays condensed information.

intraprf < detail > | < hex >

Displays Intra-Area Prefix LSAs database information. If no parameter is supplied, it displays condensed information.

link < detail> | < hex>

Displays Link LSAs database information. If no parameter is supplied, it displays condensed information.

network < detail> | < hex>

Displays Network LSAs database information. If no parameter is supplied, it displays condensed information.

rtr <detail>|<hex>

Displays the Router LSAs with detailed information of each field of the LSAs. If no parameter is supplied, it displays condensed information.

nssa < detail> | < hex>

Displays Type-7 (NSSA) LSA database information. If no parameter is supplied, it displays condensed information.

all <*detail*>|<*hex*>

Displays all the LSAs. If no parameter is supplied, it displays condensed information.

10.20.2.2	255.255.255.255	10.234.4.4	1	up
10.20.2.2	255.255.255.255	10.235.5.5	1	up
ECMP health-check	1 3			

ECMP route information shows the status of each ECMP route configured on the switch.

/info/13/hash

ECMP Hashing Result

```
Enter SIP address: 10.0.0.1
Enter DIP address (0 for SIP only): 10.0.0.2
Enter number of ECMP paths: 3
Source 10.0.0.1 will go through route number 3
```

ECMP hashing information shows the status of ECMP hashing.

IGMP Multicast Group Information Menu

```
[IGMP Multicast Menu]
    querier - Show IGMP Querier information
    mrouter - Show IGMP Snooping Multicast Router Port information
    find - Show a single group by IP group address vlan - Show groups on a single vlan
    port
            - Show groups on a single port
    trunk - Show groups on a single trunk
    detail - Show detail of a single group by IP group address
    dump - Show all groups
    ipmcgrp - Show all ipmc groups
```

Table 52 describes the commands used to display information about IGMP groups learned by the switch.

Table 52. IGMP Multicast Group Information Menu Options (/info/l3/igmp)

Command Syntax and Usage querier Displays IGMP Querier information. For details, see page 80. mrouter Displays IGMP Multicast Router menu. To view menu options, see page 80. find <IP address> Displays a single IGMP multicast group by its IP address. vlan <*VLAN number*> Displays all IGMP multicast groups on a single VLAN. port port number or alias> Displays all IGMP multicast groups on a single port. trunk <trunk number> Displays all IGMP multicast groups on a single trunk group. Displays details about IGMP multicast groups, including source and timer information. dump Displays information for all multicast groups. For details, see page 81 ipmcgrp <VLAN number> Displays all IP multicast groups on a single VLAN.

/info/l3/iqmp/querier <VLAN number>

IGMP Querier Information

```
Current IGMP Querier information:

IGMP Querier information for vlan 1:

Other IGMP querier - none

Switch-querier enabled, current state: Querier

Switch-querier type: Ipv4, address 0.0.0.0,

Switch-querier general query interval: 125 secs,

Switch-querier max-response interval: 100 'tenths of secs',

Switch-querier startup interval: 31 secs, count: 2

Switch-querier robustness: 2

IGMP configured version is v3

IGMP Operating version is v3
```

IGMP Querier information includes:

- VLAN number
- Querier status
 - Other IGMP querier-none
 - IGMP querier present, address: (IP or MAC address)
 Other IGMP querier present, interval (minutes:seconds)
- · Querier election type (IPv4 or MAC) and address
- Query interval
- · Querier startup interval
- Maximum query response interval
- · Querier robustness value
- IGMP version number

/info/l3/iqmp/mrouter

IGMP Multicast Router Port Information Menu

```
[IGMP Multicast Router Menu]

static - Show all static multicast router ports installed
dynamic - Show all dynamic multicast router ports installed
vlan - Show all multicast router ports on a single vlan
port - Show all multicast router ports on a single port
trunk - Show all multicast router ports on a single trunk
dump - Show all learned multicast router ports
```

Table 53 describes the commands used to display information about multicast routers (Mrouters) learned through IGMP Snooping.

Table 53. IGMP Mrouter Information Menu Options (/info/igmp/mrouter)

```
static
Displays the static multicast router ports configured on the switch.

dynamic
Displays the dynamic multicast router ports learned by the switch.
```

Table 53. IGMP Mrouter Information Menu Options (/info/igmp/mrouter)

vlan <*VLAN number*>

Displays the multicast router ports configured or learned on the selected VLAN.

port port no./alias>

Displays the multicast router ports configured or learned on the specified physical port.

trunk <1-128>

Displays the multicast router ports configured or learned on the specified trunk.

Displays information for all multicast groups learned by the switch.

/info/13/igmp/mrouter/dump

IGMP Multicast Router Dump Information

10.1.1.5 2 23 V2 4:09 125	SrcIP	VLAN	Port	Version	Expires	MRT	QRV	QQIC
10.1.1.5 2 23 V2 4:09 125								
	10.1.1.1	2	21	V3	4:09	128	2	125

[MLD Multicast Router Menu]
dump - Show all MLD multicast router ports
```

Table 55 describes the commands used to display information about MLD Mrouter ports.

Table 55. MLD Mrouter Information Menu Options (/info/l3/mld/mrouter)

Command Syntax and Usage dump Displays information for MLD Mrouter ports. See page 84 for sample output.

/info/13/mld/mrouter/dump

MLD Mrouter Dump Information

```
Source: fe80:0:0:0:200:bff:fe88:2748
Port/Vlan: XGE2/4
Interface: 3
QRV: 2 QQIC:125
Maximum Response Delay: 1000
Version: MLDv2 Expires:1:03
```

Table 56 describes the MLD Mrouter dump information displayed in the output.

Table 56. MLD Mrouter Dump Information (/info/l3/mld/mrouter/dump)

Statistic	Description
Source	Displays the link-local address of the reporter.
Port/Vlan	Displays the port/vlan on which the general query is received.
Interface	Displays the interface number on which the general query is received.
QRV	Displays the Querier's robustness variable value.
QQIC	Displays the Querier's query interval code.
Maximum Response Delay	Displays the configured maximum query response time.
Version	Displays the MLD version configured on the interface.
Expires	Displays the interval after which the multicast router decides that there are no more listeners for a multicast address or a particular source on a link.

/info/l3/vrrp

VRRP Information

Virtual Router Redundancy Protocol (VRRP) support on the EN4093/EN4093R provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

```
VRRP information:
 1: vrid 2, 205.178.18.210, if 1, renter, prio 100, master
 2: vrid 1, 205.178.18.202, if 1, renter, prio 100, backup
 3: vrid 3, 205.178.18.204, if 1, renter, prio 100, master
```

When virtual routers are configured, you can view the status of each virtual router using this command. VRRP information includes:

- Virtual router number
- Virtual router ID and IP address
- Interface number
- Ownership status
 - owner identifies the preferred master virtual router. A virtual router is the owner when the IP address of the virtual router and its IP interface are the same.
 - renter identifies virtual routers which are not owned by this device.
- Priority value. During the election process, the virtual router with the highest priority becomes master.
- Activity status
 - master identifies the elected master virtual router.
 - backup identifies that the virtual router is in backup mode.
 - init identifies that the virtual router is waiting for a startup event. For example, once it receives a startup event, it transitions to master if its priority is 255, (the IP address owner), or transitions to backup if it is not the IP address owner.

/info/l3/if

Interface Information

```
Interface information:
126: IP6 0:0:0:0:0:0:0:0/0
                                                      , vlan 4095, up
       fe80::a17:f4ff:fe0a:1ef
127: IP4 10.43.98.33
                     255.255.255.0 9.43.98.255,
                                                        vlan 4095, up
128: IP4 10.43.95.162
                         255.255.255.0
                                        9.43.95.255,
                                                        vlan 4095, up
```

For each interface, the following information is displayed:

- IPv4 interface address and subnet mask
- IPv6 address and prefix
- VLAN assignment

Status (up, DOWN, disabled)

/info/l3/ip6pmtu [<destination IPv6 address>]

IPv6 Path MTU Information

```
Path MTU Discovery info:

Max Cache Entry Number: 10
Current Cache Entry Number: 2
Cache Timeout Interval: 10 minutes

Destination Address Since PMTU
5000:1::3 00:02:26 1400
FE80::203:A0FF:FED6:141D 00:06:55 1280
```

Path MTU Discovery information provides information about entries in the Path MTU cache. The PMTU field indicates the maximum packet size in octets that can successfully traverse the path from the switch to the destination node. It is equal to the minimum link MTU of all the links in the path to the destination node.

IP Information

```
IP information:
 AS number 0
Interface information:
126: IP6 0:0:0:0:0:0:0:0/0
                                                      , vlan 4095, up
      fe80::200:ff:fe00:ef
128: IP4 9.43.95.121 255.255.255.0 9.43.95.255, vlan 4095, up
Loopback interface information:
Default gateway information: metric strict
 4: 9.43.95.254, FAILED
Default IP6 gateway information:
Current BOOTP relay settings: OFF
Global servers:
Server 1 address 0.0.0.0
Server 2 address 0.0.0.0
Server 3 address 0.0.0.0
Server 4 address 0.0.0.0
Server 5 address 0.0.0.0
Current IP forwarding settings: ON, dirbr disabled, icmprd disabled
Current network filter settings:
Current route map settings:
RIP is disabled.
OSPF is disabled.
OSPFv3 is disabled.
BGP is disabled.
```

IP information includes:

- IP interface information: Interface number, IP address, subnet mask, broadcast address, VLAN number, and operational status.
- Loopback interface information, if applicable
- Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status
- BootP relay settings
- IP forwarding settings, including the forwarding status of directed broadcasts, and the status of ICMP re-directs
- Network filter settings, if applicable
- Route map settings, if applicable

IKEv2 Information

```
[IKEv2 Information Menu]
info - Show IKEv2 information
cacert - Show CA certificate information
hcert - Show host certificate information
```

Table 57 describes the commands used to display information about IKEv2.

Table 57. IKEv2 Information Menu Options (/info/l3/ikev2)

```
info
Displays all IKEv2 information. See page 88 for sample output.

cacert
Displays CA certificate information.

hcert
Displays host certificate information.
```

/info/l3/ikev2/info

IKEv2 Information Dump

```
IKEv2 retransmit time: 20

IKEv2 cookie notification: disable

IKEv2 authentication method: Pre-shared key

IKEv2 proposal:
Cipher: 3des
Authentication: shal
DH Group: dh-2

Local preshare key: ibm123

IKEv2 choose IPv6 address as ID type
No SAD entries.
```

IKEv2 information includes:

- IKEv2 retransmit time, in seconds.
- Whether IKEv2 cookie notification is enabled.
- The IKEv2 proposal in force. This includes the encryption algorithm (cipher), the
 authentication algorithm type, and the Diffie-Hellman (DH) group, which
 determines the strength of the key used in the key exchange process. Higher DH
 group numbers are more secure but require additional time to compute the key.
- The local preshare key.
- Whether IKEv2 is using IPv4 or IPv6 addresses as the ID type.
- Security Association Database (SAD) entries, if applicable.

/info/13/ipsec

 1 0 0 1.3.6.1.2.1.2.2.1.10.1
Index
                      Owner
```

The following table describes the RMON Alarm Information parameters.

Table 66. RMON Alarm Parameter Descriptions

Parameter	Description
Index	Displays the index number that identifies each alarm instance.
Interval	Displays the time interval over which data is sampled and compared with the rising and falling thresholds.
Sample	Displays the method of sampling the selected variable and calculating the value to be compared against the thresholds, as follows: • abs—absolute value, the value of the selected variable is compared directly with the thresholds at the end of the
	 sampling interval. delta-delta value, the value of the selected variable at the last sample is subtracted from the current value, and the difference compared with the thresholds.
Туре	Displays the type of alarm, as follows:
	 falling—alarm is triggered when a falling threshold is crossed.
	rising—alarm is triggered when a rising threshold is crossed.
	either—alarm is triggered when either a rising or falling threshold is crossed.
rLimit	Displays the rising threshold for the sampled statistic.
fLimit	Displays the falling threshold for the sampled statistic.
Last value	Displays the last sampled value.
rEvtldx	Displays the rising alarm event index that is triggered when a rising threshold is crossed.
fEvtIdx	Displays the falling alarm event index that is triggered when a falling threshold is crossed.

Table 66. RMON Alarm Parameter Descriptions (continued)

Parameter	Description
OID	Displays the MIB Object Identifier for each alarm index.
Owner	Displays the owner of the alarm instance.

/info/rmon/event

RMON Event Information

```
RMON Event group configuration:

Index Type Last Sent Description

1 both OD: OH: 1M:20S Event_1

4 trap OD: OH: OM: OS Event_4
5 both OD: OH: OM: OS Log and trap event for Link Down
10 both OD: OH: OM: OS Log and trap event for Link Up
11 both OD: OH: OM: OS Send log and trap for icmpInMsg
15 both OD: OH: OM: OS Send log and trap for icmpInEchos

Index Owner

1 dan
```

The following table describes the RMON Event Information parameters.

Table 67. RMON Event Parameter Descriptions

Parameter	Description
Index	Displays the index number that identifies each event instance.
Туре	Displays the type of notification provided for this event, as follows: none, log, trap, both.
Last sent	Displays the time that passed since the last switch reboot, when the most recent event was triggered. This value is cleared when the switch reboots.
Description	Displays a text description of the event.
Owner	Displays the owner of the event instance.

transceiver module on each port, as follows:

- Port number and media type
- TX: Transmission status
- RXIos: Receive Loss of Signal indicator
- TXflt: Transmission fault indicator
- Volts: Power usage, in volts
- DegsC: Temperature, in degrees centigrade
- TXuW: Transmit power, in micro-watts
- RXuW: Receive power, in micro-watts
- Media type (LX, LR, SX, SR)
- Laser wavelength, in nano-meters
- Approval status

The optical power levels shown for transmit and receive functions for the transceiver should fall within the expected range defined in the IEEE 802-3-2008 specification for each transceiver type. For convenience, the expected range values are summarized in the following table.

Table 68. Expected Transceiver Optical Power Levels

Transceiver Type	Tx Minimum	Tx Maximum	Rx Minimum	Rx Maximum
SFP SX	112μW	1000μW	20μW	1000μW
SFP LX	70.8μW	501μW	12.6μW	501μW
SFP+ SR	186μW	794μW	102μW	794μW
SFP+ LR	151μW	891μW	27.5μW	891μW

Note: Power level values in the IEEE specification are shown in dBm, but have been converted to mW in this table to match the unit of measure shown in the display output.

UFP Information

```
[UFP Information Menu]

cdcp - Show current CDCP status

port - Show UFP port status

qos - Show UFP QoS Information

tlvstat - Show response status of Control TLV

vlan - Show UFP VLAN Information

vport - Show UFP vPort Information and Status
```

Table 73 describes the Unified Fabric Port (UFP) information options.

Table 73. UFP Information Options

Command Syntax and Usage

```
cdcp [<port no./alias>]
```

Displays S-Channel Discovery and Configuration Protocol (CDCP) information for all physical ports or only for a specified physical port. CDCP allows hypervisor hosts to create on-demand S-channels with the switch. For details, see page 103.

```
port [<port no./alias>]
```

Displays UFP status for all physical ports or only for a specified physical port. Information includes wether the UFP is enabled on the physical port, how many virtual ports are enabled and the link stats for each virtual port. For details, see page 106.

```
qos [<port no./alias> | <port no./alias><vport number>]
```

Displays bandwidth allocation between all virtual ports, for virtual ports belonging to a specified physical port, or only for a specific virtual port. For details, see page 107.

```
tlvstat [<port no./alias>]
```

Displays status for Type-Length-Values transmitted on UFP-enabled physical ports. For details, see page 107.

```
vlan [<vlan id>]
```

Displays ports associated to each defined VLAN or to a specified VLAN. For details, see page 108.

```
vport [<port/vport_no.>]
```

Displays state, operating mode and VLAN related information for all virtual ports, for virtual ports belonging to a specified physical port or for a single virtual port. For details, see page 108.

Ethertype 0x8906, action deny.
SMAC 0e:fc:00:00:00:00, SMAC mask ff:ff:ff:00:00:00, action deny.
```

FIP Snooping port information includes the following:

Fiber Channel Forwarding (FCF) mode

- · Number of FCF links connected to the port
- List of FIP Snooping ACLs assigned to the port

/info/dump

Information Dump

Use the dump command to dump all switch information available from the Information Menu (10K or more, depending on your configuration). This data is useful for tuning and debugging switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Chapter 4. The Statistics Menu

You can view switch performance statistics in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch statistics.

/stats

Statistics Menu

```
[Statistics Menu]
    port
            - Port Stats Menu
    trunk
            - Trunk Group Stats Menu
         - Layer 2 Stats Menu
- Layer 3 Stats Menu
    12
            - MP-specific Stats Menu
    acl
            - ACL Stats Menu
    fcoe - FCOE Stats Menu
            - Show SNMP stats
    ntp
             - Show NTP stats
            - Clear all MP related stats
            - Clear CPU utilization
    clrcpu
    clrports - Clear stats for all ports
    dump
             - Dump all stats
```

The information provided by each menu option is briefly described in Table 85, with pointers to detailed information.

Table 85. Statistics Menu Options (/stats)

Command Syntax and Usage

Displays the Port Statistics Menu for the specified port. Use this command to display traffic statistics on a port-by-port basis. Traffic statistics are included in SNMP Management Information Base (MIB) objects. To view menu options, see page 123.

trunk <trunk group number>

Displays the Trunk Statistics Menu for the specified port. To view menu options, see page 139.

12

Displays the Layer 2 Statistics Menu. To view menu options, see page 140.

13

Displays the Layer 3 Stats Menu. To view menu options, see page 147.

mp

Displays the Management Processor Statistics Menu. Use this command to view information on how switch management processes and resources are currently being allocated. To view menu options, see page 179.

acl

Displays ACL Statistics menu. To view menu options, see page 192.

© Copyright IBM Corp. 2012

Table 85. Statistics Menu Options (/stats)

Command Syntax and Usage

fcoe [clear]

Displays Fiber Channel over Ethernet (FCoE) Statistics. To view details, see page 193.

You can use the clear option to delete all FCoE statistics.

snmp

Displays SNMP statistics. See page 194 for sample output.

ntp [clear]

Displays Network Time Protocol (NTP) Statistics. See page 197 for a sample output and a description of NTP Statistics.

You can use the clear option to delete all NTP statistics.

clrmp

Clears all management processor statistics.

clrcpu

Clears all CPU use statistics.

clrports

Clears statistics counters for all ports.

dump

Dumps all switch statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command. For details, see page 198.

Port Statistics Menu

This menu displays traffic statistics on a port-by-port basis. Traffic statistics include SNMP Management Information Base (MIB) objects.

```
[Port Statistics Menu]
    8021x - Show 802.1x stats
    bootp - Show BOOTP relay stats
    brate - Show interface bitrate [Kbps] usage (continuos)
           - Show bridging ("dot1") stats
   brg-rate - Show bridging ("dot1") stats/second
    ether - Show Ethernet ("dot3") stats
    eth-rate - Show Ethernet ("dot3") stats/second
    qos-cnt - Show QoS Queues Counters
    qos-rate - Show QoS Queues Rate
    if - Show interface ("if") stats
    if-rate - Show interface ("if") stats/second
           - Show Internet Protocol ("IP") stats
    ip-rate - Show Internet Protocol ("IP") stats/second
    link - Show link stats
    maint - Show port maintenance stats
    rmon - Show RMON stats
    dump
            - Show all port stats
    clear - Clear all port stats
```

Table 86. Port Statistics Menu Options (/stats/port)

Command Syntax and Usage

8021x Displays IEEE 802.1x statistics for the port. See page 125 for sample output. bootp Displays BOOTP Relay statistics for the port. See page 128 for sample output. brate Displays continuous interface bitrate usage in Kb per second. brg Displays bridging ("dot1") statistics for the port. See page 128 for sample output. brg-rate Displays bridging ("dot1") statistics per second for the port.

Displays Ethernet ("dot3") statistics for the port. See page 129 for sample

output. ether-rate

ether

Displays Ethernet ("dot3") statistics per second for the port.

qos-cnt

Displays the total number of packets and bytes either successfully transmitted or dropped for each gueue of the port. See page 132 for sample output.

Table 86. Port Statistics Menu Options (/stats/port) (continued)

Command Syntax and Usage

qos-rate

Displays the number of packets and bytes per second either successfully transmitted or dropped for each queue of the port. See page 133 for sample output.

if

Displays interface statistics for the port. See page 134 for sample output.

if-rate

Displays interface statistics per second for the port.

ip

Displays IP statistics for the port. See page 136 for sample output.

ip-rate

Displays IP statistics per second for the port.

link

Displays link statistics for the port. See page 137 for sample output.

maint

Displays detailed maintenance statistics for the port.

rmon

Displays Remote Monitoring (RMON) statistics for the port. See page 137 for sample output.

dump

This command dumps all statistics for the selected port.

clear

This command clears all the statistics on the selected port.

802.1x Authenticator Statistics

This menu option enables you to display the 802.1x authenticator statistics of the selected port.

```
Authenticator Statistics:

eapolFramesRx = 925
eapolFramesTx = 3201
eapolStartFramesRx = 2
eapolLogoffFramesRx = 0
eapolRespIdFramesRx = 463
eapolRespFramesRx = 460
eapolReqIdFramesTx = 1820

Table 88. 802.1x Authenticator Diagnostics of a Port (/stats/port/8021x)

Statistics	Description
authEntersConnecting	Total number of times that the state machine transitions to the CONNECTING state from any other state.
authEapLogoffsWhile Connecting	Total number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
authEnters Authenticating	Total number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.
authSuccessesWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant.
authTimeoutsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout.
authFailWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure.

Table 88. 802.1x Authenticator Diagnostics of a Port (/stats/port/8021x)

Statistics	Description
authReauthsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a re-authentication request
authEapStartsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.
authEapLogoffWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
authReauthsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a re-authentication request.
authEapStartsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
authEapLogoffWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
backendResponses	Total number of times that the state machine sends an initial Access-Request packet to the Authentication server. Indicates that the Authenticator attempted communication with the Authentication Server.
backendAccess Challenges	Total number of times that the state machine receives an initial Access-Challenge packet from the Authentication server. Indicates that the Authentication Server has communication with the Authenticator.
backendOtherRequests ToSupplicant	Total number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure, or Success message) to the Supplicant. Indicates that the Authenticator chose an EAP-method.
backendNonNak ResponsesFrom Supplicant	Total number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK. Indicates that the Supplicant can respond to the Authenticator.s chosen EAP-method.

Table 88. 802.1x Authenticator Diagnostics of a Port (/stats/port/8021x)

Description
Total number of times that the state machine receives an Accept message from the Authentication Server. Indicates that the Supplicant has successfully authenticated to the Authentication Server.
Total number of times that the state machine receives a Reject message from the Authentication Server. Indicates that the Supplicant has not authenticated to the Authentication Server.

/stats/port <port alias or number>/bootp

BOOTP Relay Statistics

This menu option enables you to display the BOOTP Relay statistics of the selected port.

```
BOOTP Relay statistics for port EXT1:

Requests received from client: 0
Requests relayed to server: 0
Requests relayed with option 82: 0
Requests dropped due to ...
- relay not allowed: 0
- no server or unreachable server: 0
- packet or processing errors: 0
Replies received from server: 0
Replies relayed to client: 0
Replies dropped due to ...
- packet or processing errors: 0
```

/stats/port /port alias or number>/brq

Bridging Statistics

This menu option enables you to display the bridging statistics of the selected port.

```
Bridging statistics for port INTA1:
dot1PortInFrames: 63242584
dot1PortOutFrames: 63277826
dot1PortInDiscards: 0
dot1TpLearnedEntryDiscards: 0
dot1StpPortForwardTransitions: 0
```

Table 89. Bridging Statistics of a Port (/stats/port/brg)

Statistics	Description
dot1PortInFrames	The number of frames that have been received by this port from its segment. A frame received on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.
dot1PortOutFrames	The number of frames that have been transmitted by this port to its segment. Note that a frame transmitted on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.
dot1PortInDiscards	Count of valid frames received which were discarded (that is, filtered) by the Forwarding Process.
dot1TpLearnedEntry Discards	The total number of Forwarding Database entries, which have been or would have been learnt, but have been discarded due to a lack of space to store them in the Forwarding Database. If this counter is increasing, it indicates that the Forwarding Database is regularly becoming full (a condition which has unpleasant performance effects on the subnetwork). If this counter has a significant value but is not presently increasing, it indicates that the problem has been occurring but is not persistent.
dot1StpPortForward Transitions	The number of times this port has transitioned from the Learning state to the Forwarding state.

/stats/port port alias or number>/ether

Ethernet Statistics

This menu option enables you to display the bridging statistics of the selected port.

Ethernet statistics for port INTA1:		
dot3StatsAlignmentErrors:	NA	
dot3StatsFCSErrors:	0	
dot3StatsSingleCollisionFrames:	0	
dot3StatsMultipleCollisionFrames:	0	
dot3StatsLateCollisions:	0	
dot3StatsExcessiveCollisions:	0	
<pre>dot3StatsInternalMacTransmitErrors:</pre>	0	
dot3StatsFrameTooLongs:	0	
<pre>dot3StatsInternalMacReceiveErrors:</pre>	0	

Table 90. Ethernet Statistics of a Port

Statistics	Description
dot3StatsAlignmentErrors	A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the Frame Check Sequence (FCS) check.
	The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the Logical Link Control (LLC) (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsFCSErrors	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the Frame Check Sequence (FCS) check.
	The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsSingleCollision Frames	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by exactly one collision.
	A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrame object.
dot3StatsMultipleCollision Frames	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by more than one collision.
	A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object.

Table 90. Ethernet Statistics of a Port (continued)

Statistics	Description
dot3StatsLateCollisions	The number of times that a collision is detected on a particular interface later than 512 bit-times into the transmission of a packet. Five hundred and twelve bit-times corresponds to
	51.2 microseconds on a 10 Mbit/s system. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics.
dot3StatsExcessive Collisions	A count of frames for which transmission on a particular interface fails due to excessive collisions.
dot3StatsInternalMac TransmitErrors	A count of frames for which transmission on a particular interface fails due to an internal MAC sub layer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object.
	The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted.
dot3StatsFrameToo Longs	A count of frames received on a particular interface that exceed the maximum permitted frame size.
	The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsInternalMac ReceiveErrors	A count of frames for which reception on a particular interface fails due to an internal MAC sub layer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameToolongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object.
	The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of received errors on a particular interface that are not otherwise counted.

QoS Queue Counter-Based Statistics

This option displays the counter-based QoS queue statistics of the selected port

```
QoS statistics for port INTA14:
QoS Queue 0:
   Tx Packets:
                                      664872
  Dropped Packets:
Tx Bytes:
Dropped Bytes:
                                          0

Table 92. QoS Queue Rate-Based Statistics of a Port

Statistics	Description
Tx Packets	Number of successfully transmitted packets per second for the QoS queue
Dropped Packets	Number of dropped packets per second for the QoS queue
Tx Bytes	Number of successfully transmitted bytes per second for the QoS queue
Dropped Bytes	Number of dropped bytes per second for the QoS queue

Interface Statistics

This menu option enables you to display the interface statistics of the selected port.

Interface statistics f	for port EXT1:		
İ	ifHCIn Counters	ifHCOut Counters	
Octets:	51697080313	51721056808	
UcastPkts:	65356399	65385714	
BroadcastPkts:	0	6516	
MulticastPkts:	0	0	
FlowCtrlPkts:	0	0	
Discards:	0	0	
Errors:	0	21187	
Ingress Discard reason	ns:	Egress Discard reasons:	
VLAN Discards:	0	HOL-blocking Discards:	0
Filter Discards:	0	MMU Discards:	0
Policy Discards:	0	Cell Error Discards:	0
Non-Forwarding State:	0	MMU Aging Discards:	0
IBP/CBP Discards:	0	Other Discards:	0

Table 93. Interface Statistics of a Port (/stats/port/if)

Statistics	Description
ifInOctets	The total number of octets received on the interface, including framing characters.
ifInUcastPkts	The number of packets, delivered by this sub-layer to a higher sub- layer, which were not addressed to a multicast or broadcast address at this sub-layer.
ifInBroadcastPkts	The number of packets, delivered by this sub-layer to a higher sub- layer, which were addressed to a broadcast address at this sub-layer.
ifInMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.
ifInFlowControlPkts	The total number of flow control pause packets received on the interface.
ifInDiscards	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being delivered to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space.

Table 93. Interface Statistics of a Port (/stats/port/if)

Statistics	Description
ifInErrors	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
ifOutUcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent.
ifOutBroadcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts.
ifOutMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts.
ifOutFlowControlPkts	The total number of flow control pause packets transmitted out of the interface.
ifOutDiscards	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space.
ifOutErrors	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors.
VLAN Discards	Discarded because the packet was tagged with a VLAN to which this port is not a member.
Filter Discards	Dropped by the Content Aware Engine (user-configured filter).
Policy Discards	Dropped due to policy setting. For example, due to a user-configured static entry.

Table 93. Interface Statistics of a Port (/stats/port/if)

Statistics	Description
Non-Forwarding State	Discarded because the ingress port is not in the forwarding state.
IBP/CBP Discards	Discarded because of Ingress Back Pressure (flow control), or because the Common Buffer Pool is full (for example, insufficient packet buffering).
HOL-blocking Discards	HOL-blocking Discards = Discarded because of Head Of Line (HOL) blocking mechanism. Low priority packets are placed in a separate queue and can be discarded as applications or the TCP protocol keep track of whether a retransmission is necessary or not. HOL blocking is necessary to wait until an overloaded egress port buffer can receive data again.
MMU Discards	Discarded because of Memory Management Unit.
Other Discards	Discarded packets not included in any category.

/stats/port port alias or number>/ip

Interface Protocol Statistics

This menu option enables you to display the interface statistics of the selected port.

GEA IP statis	tics	for port	INTA1:
ipInReceives	:	0	
ipInHeaderErr	or:	0	
ipInDiscards	:	0	

Table 94. Interface Protocol Statistics of a Port (/stats/port/ip)

Statistics	Description
ipInReceives	The total number of input datagrams received from interfaces, including those received in error.
ipInHeaderErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch).
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.

/stats/port port alias or number>/link

Link Statistics

This menu enables you to display the link statistics of the selected port.

```
Link statistics for port INTAl:
linkStateChange: 1
```

Table 95. Link Statistics of a Port (/stats/port/link)

Statistics	Description
linkStateChange	The total number of link state changes.

/stats/port /port alias or number>/rmon

RMON Statistics

This menu enables you to display the Remote Monitoring (RMON) statistics of the selected port.

RMON statistics for port EXT2:		
etherStatsDropEvents:	NA	
etherStatsOctets:	0	
etherStatsPkts:	0	
etherStatsBroadcastPkts:	0	
etherStatsMulticastPkts:	0	
etherStatsCRCAlignErrors:	0	
etherStatsUndersizePkts:	0	
etherStatsOversizePkts:	0	
etherStatsFragments:	NA	
etherStatsJabbers:	0	
etherStatsCollisions:	0	
etherStatsPkts64Octets:	0	
etherStatsPkts65to1270ctets:	0	
etherStatsPkts128to2550ctets:	0	
etherStatsPkts256to5110ctets:	0	
etherStatsPkts512to1023Octets:	0	
etherStatsPkts1024to1518Octets:	0	

Table 96. RMON Statistics of a Port (/stats/port/rmon)

Statistics	Description
etherStatsDropEvents	The total number of packets received that were dropped because of system resource constraints.
etherStatsOctets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).
etherStatsPkts	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Table 96. RMON Statistics of a Port (/stats/port/rmon)

Statistics	Description
etherStatsBroadcastPkts	The total number of good packets received that were directed to the broadcast address.
etherStatsMulticastPkts	The total number of good packets received that were directed to a multicast address.
etherStatsCRCAlignErrors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
etherStatsUndersizePkts	The total number of packets received that were less than 64 octets long (excluding framing bits but including FCS octets) and were otherwise well formed.
etherStatsOversizePkts	The total number of packets received that were longer than 1518 octets (excluding framing bits but including FCS octets) and were otherwise well formed.
etherStatsFragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
etherStatsJabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Jabber is defined as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
etherStatsCollisions	The best estimate of the total number of collisions on this Ethernet segment.
etherStatsPkts64Octets	The total number of packets (including bad packets) received that were less than or equal to 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts65to127 Octets	The total number of packets (including bad packets) received that were greater than 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts128to255 Octets	The total number of packets (including bad packets) received that were greater than 127 octets in length (excluding framing bits but including FCS octets).

Table 96. RMON Statistics of a Port (/stats/port/rmon)

Statistics	Description
etherStatsPkts256to511 Octets	The total number of packets (including bad packets) received that were greater than 255 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts512to1023 Octets	The total number of packets (including bad packets) received that were greater than 511 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts1024to1518 Octets	The total number of packets (including bad packets) received that were greater than 1023 octets in length (excluding framing bits but including FCS octets).

/stats/trunk <trunk group number>

Trunk Statistics Menu

This menu allows you to display traffic statistics for the selected trunk group.

```
[Trunk Group Statistics Menu]

if - Show interface ("if") stats

clear - Clear all trunk group stats
```

Table 97. Trunk Statistics Menu Options (/stats/trunk)

Command Syntax and Usage
if
Displays interface statistics for the trunk group.
clear
This command clears all the statistics on the selected trunk group.

Layer 2 Statistics Menu

```
[Layer 2 Statistics Menu]

fdb - Show FDB stats
lacp - Show LACP stats
hotlink - Show Hot Links stats
lldp - Show LLDP port stats
oam - Show OAM stats
vlag - Show vLAG stats
```

The Layer 2 statistics provided by each menu option are briefly described in Table 98, with pointers to detailed information.

Table 98. Layer 2 Statistics Menu Options (/stats/l2)

Command Syntax and Usage

```
fdb [clear]
```

Displays FDB statistics. See page 141 for sample output.

Use the clear option to delete all FDB statistics.

```
lacp [<port alias or number>|clear]
```

Displays Link Aggregation Control Protocol (LACP) statistics for a specified port, or for all ports if no port is specified. See page 141 for sample output.

Use the clear option to delete all LACP statistics.

hotlink

Displays Hotlinks statistics. See page 142 for sample output.

```
11dp [<port alias or number>|clear]
```

Displays LLDP statistics for a specified port, or for all ports if no port is specified. See page 143 for sample output.

Use the clear option to delete all LLDP statistics.

oam

Displays the OAM Statistics menu. See page 143 for sample output.

vlag

Displays vLAG Statistics menu. See page 144 for sample output.

/stats/12/fdb [clear]

FDB Statistics

```
FDB statistics:
current: 83 hiwat: 855
```

This menu option enables you to display statistics regarding the use of the forwarding database, including the number of new entries, finds, and unsuccessful searches.

FDB statistics are described in the following table:

Table 99. Forwarding Database Statistics (/stats/fdb)

Statistic	Description
current	Current number of entries in the Forwarding Database.
	Highest number of entries recorded at any given time in the Forwarding Database.

Use the clear option to delete all FDB statistics.

/stats/12/lacp [<port alias or number>|clear]

LACP Statistics

```
Port EXT1:

Valid LACPDUs received: - 870

Valid Marker PDUs received: - 0

Valid Marker Rsp PDUs received: - 0

Unknown version/TLV type: - 0

Illegal subtype received: - 0

LACPDUs transmitted: - 6031

Marker PDUs transmitted: - 0

Marker Rsp PDUs transmitted: - 0
```

Link Aggregation Control Protocol (LACP) statistics are described in the following table:

Table 100. LACP Statistics (/stats/l2/lacp)

Statistic	Description
Valid LACPDUs received	Total number of valid LACP data units received.
Valid Marker PDUs received	Total number of valid LACP marker data units received.
Valid Marker Rsp PDUs received	Total number of valid LACP marker response data units received.
Unknown version/TLV type	Total number of LACP data units with an unknown version or type, length, and value (TLV) received.

Table 100. LACP Statistics (/stats/l2/lacp)

Statistic	Description
Illegal subtype received	Total number of LACP data units with an illegal subtype received.
LACPDUs transmitted	Total number of LACP data units transmitted.
Marker PDUs transmitted	Total number of LACP marker data units transmitted.
Marker Rsp PDUs transmitted	Total number of LACP marker response data units transmitted.

Use the clear option to delete all LACP statistics.

Local faults
-----
0 Link fault records
0 Critical events
0 Dying gasps

Remote faults
-----
0 Link fault records
0 Critical events
0 Dying gasps
```

OAM statistics include the following:

- Total number of OAM Protocol Data Units (OAMPDU) transmitted and received.
- Total number of unsupported OAM Protocol Data Units (OAMPDU) transmitted and received.
- Local faults detected
- Remote faults detected

/stats/12/vlag

vLAG Statistics

```
[vLAG statistics Menu]
isl - Show vLAG ISL statistics
clear - Show health statistics
dump - Show all vLAG statistics
```

The following table describes the vLAG statistics commands:

Table 104. vLAG Statistics Menu Options (/stats/l2/vlag)

```
Command Syntax and Usage

isl

Displays vLAG ISL statistics for the selected port. See page 145 for sample output.

clear

Clears vLAG statistics.

dump

Displays all vLAG statistics. See page 145 for sample output.
```

/stats/l2/vlag/isl

vLAG ISL Statistics

Octets: 2755820 2288 Packets: 21044 26		In Counter	Out Counter
Packets: 21044 26	Octets:	2755820	2288
	Packets:	21044	26

ISL statistics include the total number of octets received/transmitted, and the total number of packets received/transmitted over the Inter-Switch Link (ISL).

/stats/12/vlag/isl/dump

vLAG Statistics

vLAG PDU sent:			
Role Election:	0	System Info:	0
Peer Instance Enable:	0	Peer Instance Disable:	0
FDB Dynamic Add:	0	FDB Dynamic Del:	0
		FDB Inactive Del:	0

FDB Dynamic Add:	0	FDB Dynamic Del:	0
FDB Inactive Add:	0	FDB Inactive Del:	0
Health Check:	0	ISL Hello:	0
Other:	0	Unknown:	0
vLAG IGMP packets for	warded:		
IGMP Reports:	0		
IGMP Leaves:	0		

The following table describes the vLAG statistics:

Table 105. vLAG Statistics

Statistic	Description
Role Election	Total number of vLAG PDUs sent for role elections.
System Info	Total number of vLAG PDUs sent for getting system information.
Peer Instance Enable	Total number of vLAG PDUs sent for enabling peer instance.
Peer Instance Disable	Total number of vLAG PDUs sent for disabling peer instance.
FDB Dynamic Add	Total number of vLAG PDUs sent for addition of FDB dynamic entry.
FDB Dynamic Del	Total number of vLAG PDUs sent for deletion of FDB dynamic entry.
FDB Inactive Add	Total number of vLAG PDUs sent for addition of FDB inactive entry.

Table 105. vLAG Statistics (continued)

Statistic	Description
FDB Inactive Del	Total number of vLAG PDUs sent for deletion of FDB inactive entry.
Health Check	Total number of vLAG PDUs sent for health checks.
ISL Hello	Total number of vLAG PDUs sent for ISL hello.
Other	Total number of vLAG PDUs sent for other reasons.
Unknown	Total number of vLAG PDUs sent for unknown operations.
	vLAG IGMP packets forwarded
IGMP Reports	Total number of IGMP Reports forwarded over vLAG.
IGMP Leaves	Total number of IGMP Leave messages forwarded over vLAG.

    ospf3clr - Clear all OSPFv3 stats
          - Dump layer 3 stats
```

The Layer 3 statistics provided by each menu option are briefly described in Table 106, with pointers to detailed information.

Table 106. Layer 3 Statistics Menu Options (/stats/l3)

```
geal3
Displays the Gigabit Ethernet Aggregators (GEA) statistics menu. GEA statistics are used by service and support personnel.

ip
Displays IP statistics. See page 150 for sample output.

ip6
Displays IPv6 statistics. See page 152 for sample output.

route [clear]
Displays IPv4 route statistics. See page 156 for sample output.
Use the clear option to delete all route statistics.

route6 [clear]
Displays IPv6 route statistics. See page 157 for sample output.
Use the clear option to delete all route statistics.
```

Table 106. Layer 3 Statistics Menu Options (/stats/l3)

Command Syntax and Usage

pmtu6

Displays IPv6 Path MTU statistics. See page 157 for sample output.

arp

Displays Address Resolution Protocol (ARP) statistics. See page 158 for sample output.

dns [clear]

Displays Domain Name System (DNS) statistics. See page 158 for sample output.

Use the clear option to delete all DNS statistics.

icmp [clear]

Displays ICMP statistics. See page 159 for sample output.

Use the clear option to delete all ICMP statistics.

tcp [clear]

Displays TCP statistics. See page 161 for sample output.

Use the clear option to delete all TCP statistics.

udp [clear]

Displays UDP statistics. See page 162 for sample output.

Use the clear option to delete all UDP statistics.

igmp

Displays IGMP statistics. See page 163 for sample output.

mld

Displays the MLD statistics menu. See page 164 for menu options.

ospf

Displays OSPF statistics. See page 167 for sample output.

ospf3

Displays OSPFv3 statistics. See page 172 for sample output.

vrrp

When virtual routers are configured, you can display the protocol statistics for VRRP. See page 177 for sample output.

rip

Displays Routing Information Protocol (RIP) statistics. See page 178 for sample output.

igmpgrps

Displays the total number of IGMP groups that are registered on the switch.

Table 106. Layer 3 Statistics Menu Options (/stats/l3)

Command Syntax and Usage

ipmcgrps

Displays the total number of current IP multicast groups that are registered on the switch.

clrigmp

Clears IGMP statistics.

ipclear

Clears IPv4 statistics. Use this command with caution as it will delete all the IPv4 statistics.

ip6clear

Clears IPv6 statistics. Use this command with caution as it will delete all the IPv6 statistics.

clrvrrp

Clears VRRP statistics.

ripclear

Clears Routing Information Protocol (RIP) statistics.

ospfclr

Clears Open Shortest Path First (OSPF) statistics.

ospf3clr

Clears OSPFv3 statistics.

dump

Dumps all Layer 3 statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command.

IPv4 Statistics

IP statistics:				
ipInReceives:	3115873	ipInHdrErrors:	1	
ipInAddrErrors:	35447	ipForwDatagrams:	0	
ipInUnknownProtos:	500504	ipInDiscards:	0	
ipInDelivers:	2334166	ipOutRequests:	1010542	
ipOutDiscards:	4	ipOutNoRoutes:	4	
ipReasmReqds:	0	ipReasmOKs:	0	
ipReasmFails:	0	ipFragOKs:	0	
ipFragFails:	0	ipFragCreates:	0	
ipRoutingDiscards:	0	ipDefaultTTL:	255	
<pre>ipReasmTimeout:</pre>	5			

Table 107. IPv4 Statistics (stats/l3/ip)

Statistics	Description
ipInReceives	The total number of input datagrams received from interfaces, including those received in error.
ipInHdrErrors	The number of input datagrams discarded due to errors in their IP headers, including bad checksums, version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.
ipInAddrErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses (for example, 0.0.0.0) and addresses of unsupported Classes (for example, Class E). For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.
ipForwDatagrams	The number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source- Route option processing was successful.
ipInUnknownProtos	The number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.
ipInDelivers	The total number of input datagrams successfully delivered to IP user-protocols (including ICMP).

Table 107. IPv4 Statistics (stats/l3/ip)

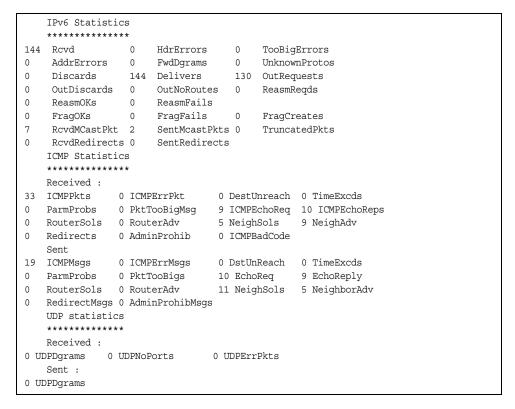

Statistics	Description
ipOutRequests	The total number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission. Note that this counter does not include any datagrams counted in ipForwDatagrams.
ipOutDiscards	The number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space). Note that this counter would include datagrams counted in ipForwDatagrams if any such packets met this (discretionary) discard criterion.
ipOutNoRoutes	The number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this counter includes any packets counted in <code>ipForwDatagrams</code> , which meet this no-route criterion. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.
ipReasmReqds	The number of IP fragments received which needed to be reassembled at this entity (the switch).
ipReasmOKs	The number of IP datagrams successfully re- assembled.
ipReasmFails	The number of failures detected by the IP re- assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.
ipFragOKs	The number of IP datagrams that have been successfully fragmented at this entity (the switch).
ipFragFails	The number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their Don't Fragment flag was set.
ipFragCreates	The number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).
ipRoutingDiscards	The number of routing entries, which were chosen to be discarded even though they are valid. One possible reason for discarding such an entry could be to free-up buffer space for other routing entries.

Table 107. IPv4 Statistics (stats/l3/ip)

Statistics	Description
ipDefaultTTL	The default value inserted into the Time-To-Live (TTL) field of the IP header of datagrams originated at this entity (the switch), whenever a TTL value is not supplied by the transport layer protocol.
ipReasmTimeout	The maximum number of seconds, which received fragments are held while they are awaiting reassembly at this entity (the switch).

/stats/l3/ip6

IPv6 Statistics

The following table describes the IPv6 statistics.

Table 108. IPv6 Statistics (stats/l3/ip6)

Statistics	Description
Rcvd	Number of datagrams received from interfaces, including those received in error.
HdrErrors	Number of datagrams discarded due to errors in their IP headers, including bad checksums, version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.

Table 108. IPv6 Statistics (stats/l3/ip6)

Statistics	Description
TooBigErrors	The number of input datagrams that could not be forwarded because their size exceeded the link MTU of outgoing interface.
AddrErrors	Number of datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses. For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.
FwdDgrams	Number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source- Route option processing was successful.
UnknownProtos	Number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.
Discards	Number of IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.
Delivers	Number of datagrams successfully delivered to IP user-protocols (including ICMP).
OutRequests	Number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission.
OutDiscards	Number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space).
OutNoRoutes	Number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.
ReasmReqds	Number of IP fragments received which needed to be reassembled at this entity (the switch).
ReasmOKs	Number of IP datagrams successfully re- assembled.

Table 108. IPv6 Statistics (stats/l3/ip6)

Statistics	Description
ReasmFails	Number of failures detected by the IP re- assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.
FragOKs	Number of IP datagrams that have been successfully fragmented at this entity (the switch).
FragFails	Number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their <code>Don't Fragment flag was set</code> .
FragCreates	Number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).
RcvdMCastPkt	The number of multicast packets received by the interface.
SentMcastPkts	The number of multicast packets transmitted by the interface.
TruncatedPkts	The number of input datagrams discarded because datagram frame didn't carry enough data.
RcvdRedirects	The number of Redirect messages received by the interface.
SentRedirects	The number of Redirect messages sent.

The following table describes the IPv6 ICMP statistics.

Table 109. ICMP Statistics (stats/l3/ip6)

Statistics	Description		
	Received		
ICMPPkts	Number of ICMP messages which the entity (the switch) received.		
ICMPErrPkt	Number of ICMP messages which the entity (the switch) received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, and so forth).		
DestUnreach	Number of ICMP Destination Unreachable messages received.		
TimeExcds	Number of ICMP Time Exceeded messages received.		
ParmProbs	Number of ICMP Parameter Problem messages received.		
PktTooBigMsg	The number of ICMP Packet Too Big messages received by the interface.		
ICMPEchoReq	Number of ICMP Echo (request) messages received.		

Table 109. ICMP Statistics (stats/l3/ip6)

Statistics	Description		
ICMPEchoReps	Number of ICMP Echo Reply messages received.		
RouterSols	Number of Router Solicitation messages received by the switch.		
RouterAdv	Number of Router Advertisements received by the switch.		
NeighSols	Number of Neighbor Solicitations received by the switch.		
NeighAdv	Number of Neighbor Advertisements received by the switch.		
Redirects	Number of ICMP Redirect messages received.		
AdminProhib	The number of ICMP destination unreachable/communication administratively prohibited messages received by the interface.		
ICMPBadCode	The number of ICMP Parameter Problem messages received by the interface.		
	Sent		
ICMPMsgs	Number of ICMP messages which this entity (the switch) attempted to send.		
ICMPErrMsgs	Number of ICMP messages which this entity (the switch) did not send due to problems discovered within ICMP such as a lack of buffer. This value should not include errors discovered outside the ICMP layer such as the inability of IP to route the resultant datagram. In some implementations there may be no types of errors that contribute to this counter's value.		
DstUnReach	Number of ICMP Destination Unreachable messages sent.		
TimeExcds	Number of ICMP Time Exceeded messages sent.		
ParmProbs	Number of ICMP Parameter Problem messages sent.		
PktTooBigs	The number of ICMP Packet Too Big messages sent by the interface.		
EchoReq	Number of ICMP Echo (request) messages sent.		
EchoReply	Number of ICMP Echo Reply messages sent.		
RouterSols	Number of Router Solicitation messages sent by the switch.		
RouterAdv	Number of Router Advertisements sent by the switch.		
NeighSols	Number of Neighbor Solicitations sent by the switch.		
NeighAdv	Number of Neighbor Advertisements sent by the switch.		
RedirectMsgs	Number of ICMP Redirect messages sent. For a host, this object will always be zero, since hosts do not send redirects.		

Table 109. ICMP Statistics (stats/l3/ip6)

Statistics	Description	
	Number of ICMP destination unreachable/communication administratively prohibited messages sent.	

The following table describes the UDP statistics.

Table 110. UDP Statistics (stats/l3/ip6)

Statistics	Description			
	Received			
UDPDgrams	Number of UDP datagrams received by the switch.			
UDPNoPorts	Number of received UDP datagrams for which there was no application at the destination port.			
UDPErrPkts	Number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.			
Sent				
UDPDgrams	Number of UDP datagrams sent from this entity (the switch).

icmpOutEchos	The number of ICMP Echo (request) messages sent.
icmpOutEchoReps	The number of ICMP Echo Reply messages sent.
icmpOutTimestamps	The number of ICMP Timestamp (request) messages sent.
icmpOutTimestampReps	The number of ICMP Timestamp Reply messages sent.
icmpOutAddrMasks	The number of ICMP Address Mask Request messages sent.
icmpOutAddrMaskReps	The number of ICMP Address Mask Reply messages sent.

Use the clear option to delete all ICMP statistics.

/stats/13/tcp [clear]

TCP Statistics

TCP statistics:			
tcpRtoAlgorithm:	4	tcpRtoMin:	0
tcpRtoMax:	240000	tcpMaxConn:	512
tcpActiveOpens:	252214	tcpPassiveOpens:	7
tcpAttemptFails:	528	tcpEstabResets:	4
tcpInSegs:	756401	tcpOutSegs:	756655
tcpRetransSegs:	0	tcpInErrs:	0
tcpCurBuff:	0	tcpCurConn:	3
tcpOutRsts:	417		

Table 116. TCP Statistics (/stats/l3/tcp)

Statistics	Description		
tcpRtoAlgorithm	The algorithm used to determine the timeout value used for retransmitting unacknowledged octets.		
tcpRtoMin	The minimum value permitted by a TCP implementation for the retransmission timeout, measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission timeout. In particular, when the timeout algorithm is rsre(3), an object of this type has the semantics of the LBOUND quantity described in RFC 793.		
tcpRtoMax	The maximum value permitted by a TCP implementation for the retransmission timeout, measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission timeout. In particular, when the timeout algorithm is rsre(3), an object of this type has the semantics of the UBOUND quantity described in RFC 793.		
tcpMaxConn	The limit on the total number of TCP connections the entity (the switch) can support. In entities where the maximum number of connections is dynamic, this object should contain the value -1.		
tcpActiveOpens	The number of times TCP connections have made a direct transition to the SYN-SENT state from the CLOSED state.		
tcpPassiveOpens	The number of times TCP connections have made a direct transition to the SYN-RCVD state from the LISTEN state.		
tcpAttemptFails	The number of times TCP connections have made a direct transition to the CLOSED state from either the SYN-SENT state or the SYN-RCVD state, plus the number of times TCP connections have made a direct transition to the LISTEN state from the SYN-RCVD state.		
tcpEstabResets	The number of times TCP connections have made a direct transition to the CLOSED state from either the ESTABLISHED state or the CLOSE-WAIT state.		

Table 116. TCP Statistics (/stats/l3/tcp)

Statistics	Description	
tcpInSegs	The total number of segments received, including those received in error. This count includes segments received on currently established connections.	
tcpOutSegs	The total number of segments sent, including those on current connections but excluding those containing only retransmitted octets.	
tcpRetransSegs	The total number of segments retransmitted - that is, the number of TCP segments transmitted containing one or more previously transmitted octets.	
tcpInErrs	The total number of segments received in error (for example, bad TCP checksums).	
tcpCurBuff	The total number of outstanding memory allocations from heap by TCP protocol stack.	
tcpCurConn	The total number of outstanding TCP sessions that are currently opened.	
tcpOutRsts	The number of TCP segments sent containing the RST flag.	

Use the clear option to delete all TCP statistics.

The following table describes the fields in the MLD global statistics output.

Table 120. MLD Global Statistics (/stats/l3/mld/global)

Statistic	Description
Bad Length	Number of messages received with length errors.
Bad Checksum	Number of messages received with an invalid IP checksum.
Bad Receive If	Number of messages received on an interface not enabled for MLD.
Receive non-local	Number of messages received from non-local senders.
Invalid packets	Number of rejected packets.
General Query (v1/v2)	Number of general query packets.
MAS Query(v1/v2)	Number of multicast address specific query packets.
MASSQ Query (v2)	Number of multicast address and source specific query packets.
Listener Report(v1)	Number of packets sent by a multicast listener in response to MLDv1 query.
Listener Done(v1/v2)	Number of packets sent by a host when it wants to stop receiving multicast traffic.
Listener Report(v2)	Number of packets sent by a multicast listener in response to MLDv2 query.
MLDv2 INC mode CSRs	Number of current state records with include filter mode.
MLDv2 EXC mode CSRs	Number of current state records with exclude filter mode.
MLDv2 TO_INC FMCRs	Number of filter mode change records for which the filter mode has changed to include mode.
MLDv2 TO_EXC FMCRs	Number of filter mode change records for which the filter mode has changed to exclude mode.
MLDv2 ALLOW SLCRs	Number of source list change records for which the specified sources from where the data is to be received has changed.
MLDv2 BLOCK SLCRs	Number of source list change records for which the specified sources from where the data is to be received is to be blocked.

Table 122. OSPF General Statistics (stats/l3/ospf/general)

Sta	tistics	Description	
Rx	Rx/Tx Stats:		
	Rx Pkts	The sum total of all OSPF packets received on all OSPF areas and interfaces.	
	Tx Pkts	The sum total of all OSPF packets transmitted on all OSPF areas and interfaces.	
	Rx Hello	The sum total of all Hello packets received on all OSPF areas and interfaces.	
	Tx Hello	The sum total of all Hello packets transmitted on all OSPF areas and interfaces.	
	Rx Database	The sum total of all Database Description packets received on all OSPF areas and interfaces.	

Table 122. OSPF General Statistics (stats/l3/ospf/general) (continued)

Statistics	Description
Tx Database	The sum total of all Database Description packets transmitted on all OSPF areas and interfaces.
Rx Is Requests	The sum total of all Link State Request packets received on all OSPF areas and interfaces.
Tx Is Requests	The sum total of all Link State Request packets transmitted on all OSPF areas and interfaces.
Rx Is Acks	The sum total of all Link State Acknowledgement packets received on all OSPF areas and interfaces.
Tx Is Acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPF areas and interfaces.
Rx Is Updates	The sum total of all Link State Update packets received on all OSPF areas and interfaces.
Tx Is Updates	The sum total of all Link State Update packets transmitted on all OSPF areas and interfaces.
Nbr Change Stats:	
hello	The sum total of all Hello packets received from neighbors on all OSPF areas and interfaces.
Start	The sum total number of neighbors in this state (that is, an indication that Hello packets should now be sent to the neighbor at intervals of HelloInterval seconds.) across all OSPF areas and interfaces.
n2way	The sum total number of bidirectional communication establishment between this router and other neighboring routers.
adjoint ok	The sum total number of decisions to be made (again) as to whether an adjacency should be established/maintained with the neighbor across all OSPF areas and interfaces.
negotiation done	The sum total number of neighbors in this state wherein the Master/slave relationship has been negotiated, and sequence numbers have been exchanged, across all OSPF areas and interfaces.
exchange done	The sum total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets, across all OSPF areas and interfaces.
bad requests	The sum total number of Link State Requests which have been received for a link state advertisement not contained in the database across all interfaces and OSPF areas.

Table 122. OSPF General Statistics (stats/l3/ospf/general) (continued)

Stati	istics	Description
t	oad sequence	The sum total number of Database Description packets which have been received that either:
		a. Has an unexpected DD sequence number
		b. Unexpectedly has the init bit set
		c. Has an options field differing from the last Options field received in a Database Description packet.
		Any of these conditions indicate that some error has occurred during adjacency establishment for all OSPF areas and interfaces.
I	oading done	The sum total number of link state updates received for all out-of-date portions of the database across all OSPF areas and interfaces.
r	n1way	The sum total number of Hello packets received from neighbors, in which this router is not mentioned across all OSPF interfaces and areas.
r	rst_ad	The sum total number of times the Neighbor adjacency has been reset across all OPSF areas and interfaces.
C	down	The total number of Neighboring routers down (that is, in the initial state of a neighbor conversation.) across all OSPF areas and interfaces.

Table 122. OSPF General Statistics (stats/l3/ospf/general) (continued)

Statistics Description			
Intf Change Stats:			
up	The sum total number of interfaces up in all OSPF areas.		
down	The sum total number of interfaces down in all OSPF areas.		
loop	The sum total of interfaces no longer connected to the attached network across all OSPF areas and interfaces.		
unloop	The sum total number of interfaces, connected to the attached network in all OSPF areas.		
wait timer	The sum total number of times the Wait Timer has been fired, indicating the end of the waiting period that is required before electing a (Backup) Designated Router across all OSPF areas and interfaces.		
backup	The sum total number of Backup Designated Routers on the attached network for all OSPF areas and interfaces.		
nbr change	The sum total number of changes in the set of bidirectional neighbors associated with any interface across all OSPF areas.		
Timers Kickoff:	•		
hello	The sum total number of times the Hello timer has been fired (which triggers the send of a Hello packet) across all OPSF areas and interfaces.		
retransmit	The sum total number of times the Retransmit timer has been fired across all OPSF areas and interfaces.		
Isa lock	The sum total number of times the Link State Advertisement (LSA) lock timer has been fired across all OSPF areas and interfaces.		
Isa ack	The sum total number of times the LSA Ack timer has been fired across all OSPF areas and interfaces.		
dbage	The total number of times the data base age (Dbage) has been fired.		
summary	The total number of times the Summary timer has been fired.		
ase export	The total number of times the Autonomous System Export (ASE) timer has been fired.

Table 124. OSPFv3 General Statistics (stats/l3/ospf3/general)

Statistics		Description	
Rx	Rx/Tx Stats:		
	Rx Pkts	The sum total of all OSPFv3 packets received on all OSPFv3 interfaces.	
	Tx Pkts	The sum total of all OSPFv3 packets transmitted on all OSPFv3 interfaces.	
	Discarded Pkts	The sum total of all OSPFv3 packets discarded.	
	Rx hello	The sum total of all Hello packets received on all OSPFv3 interfaces.	
	Tx hello	The sum total of all Hello packets transmitted on all OSPFv3 interfaces.	
	Discarded hello	The sum total of all Hello packets discarded, including packets for which no associated interface has been found.	

Table 124. OSPFv3 General Statistics (stats/l3/ospf3/general) (continued)

tatistics	Description
Rx database	The sum total of all Database Description packets received on all OSPFv3 interfaces.
Tx database	The sum total of all Database Description packets transmitted on all OSPFv3 interfaces.
Discarded database	The sum total of all Database Description packets discarded.
Rx Is requests	The sum total of all Link State Request packets received on all OSPFv3 interfaces.
Tx Is requests	The sum total of all Link State Request packets transmitted on all OSPFv3 interfaces.
Discarded Is requests	The sum total of all Link State Request packets discarded.
Rx Is acks	The sum total of all Link State Acknowledgement packets received on all OSPFv3 interfaces.
Tx Is acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPFv3 interfaces.
Discarded Is acks	The sum total of all Link State Acknowledgement packets discarded.
Rx Is updates	The sum total of all Link State Update packets received on al OSPFv3 interfaces.
Tx Is updates	The sum total of all Link State Update packets transmitted or all OSPFv3 interfaces.
Discarded Is updates	The sum total of all Link State Update packets discarded.
lbr Change Stats	:
down	The total number of Neighboring routers down (that is, in the initial state of a neighbor conversation.) across all OSPFv3 interfaces.
attempt	The total number of transitions into attempt state of neighboring routers across all OSPFv3 interfaces.
init	The total number of transitions into init state of neighboring routers across all OSPFv3 interfaces.
n2way	The total number of bidirectional communication establishment between this router and other neighboring routers.
exstart	The total number of transitions into exstart state of neighboring routers across all OSPFv3 interfaces

Table 124. OSPFv3 General Statistics (stats/l3/ospf3/general) (continued)

Sta	tistics	Description
	exchange done	The total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets, across all OSPFv3 interfaces.
	loading done	The total number of link state updates received for all out-of-date portions of the database across all OSPFv3 interfaces.
	full	The total number of transitions into full state of neighboring routers across all OSPFv3 interfaces.
	all events	The total number of state transitions of neighboring routers across all OSPFv3 interfaces.

Table 124. OSPFv3 General Statistics (stats/l3/ospf3/general) (continued)

Statistics	Description	
ntf Change Stats:		
down	The total number of transitions into down state of all OSPFv3 interfaces.	
loop	The total number of transitions into loopback state of all OSPFv3 interfaces.	
waiting	The total number of transitions into waiting state of all OSPFv3 interfaces.	
ptop	The total number of transitions into point-to-point state of all OSPFv3 interfaces.	
dr	The total number of transitions into Designated Router other state of all OSPFv3 interfaces.	
backup	The total number of transitions into backup state of all OSPFv3 interfaces.	
all events	The total number of changes associated with any OSPFv3 interface, including changes into internal states.	
Timers Kickoff:		
hello	The total number of times the Hello timer has been fired (which triggers the send of a Hello packet) across all OSPFv3 interfaces.	
wait	The total number of times the wait timer has been fired (which causes an interface to exit waiting state), across all OPSFv3 interfaces.	
poll	The total number of times the timer whose firing causes hellos to be sent to inactive NBMA and Demand Circuit neighbors has been fired, across all OPSFv3 interfaces.	
nbr probe	The total number of times the neighbor probe timer has been fired, across all OPSFv3 interfaces.	
Number of LSAs	:	
originated	The number of LSAs originated by this router.	
rcvd newer originations	The number of LSAs received that have been determined to be newer originations.	

/stats/13/vrrp

VRRP Statistics

Virtual Router Redundancy Protocol (VRRP) support on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R) provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

When virtual routers are configured, you can display the protocol statistics for VRRP:

VRRP statistics:				
vrrpInAdvers:	0	vrrpBadAdvers:	0	
vrrpOutAdvers:	0	vrrpOutGratuitousARPs:	0	
vrrpBadVersion:	0	vrrpBadVrid:	0	
vrrpBadAddress:	0	vrrpBadData:	0	
vrrpBadPassword:	0	vrrpBadInterval:	0	

Table 125. VRRP Statistics (/stats/I3/vrrp)

Statistics	Description
vrrpInAdvers	The total number of valid VRRP advertisements that have been received.
vrrpBadAdvers	The total number of VRRP advertisements received that were dropped.
vrrpOutAdvers	The total number of VRRP advertisements that have been sent.
vrrpOut GratuitousARPs	The total number of VRRP gratuitous ARPs that have been sent.
vrrpBadVersion	The total number of VRRP advertisements received that had a bad version number.
vrrpBadVrid	The total number of VRRP advertisements received that had a bad virtual router ID.
vrrpBadAddress	The total number of VRRP advertisements received that had a bad address.
vrrpBadData	The total number of VRRP advertisements received that had bad data.
vrrpBadPassword	The total number of VRRP advertisements received that had a bad password.
vrrpBadInterval	The total number of VRRP advertisements received that had a bad interval.

Statistics	Description
Packet rate	
1-second	The rate of incoming and outgoing packets over 1 second.
4-seconds	The rate of incoming and outgoing packets over 4 seconds.
64-seconds	The rate of incoming and outgoing packets over 64 seconds.
Packets counters	
Total packets	Total number of packets received and sent.
Since bootup	Total number of packets received and sent since the last switch reboot.

Statistics	Description
BPDUs	Total number of spanning-tree Bridge Protocol Data Units received and sent.
Cisco packets	Total number of UniDirectional Link Detection (UDLD) packets and Cisco Discovery Protocol (CDP) packets received and sent.
ARP packets	Total number of Address Resolution Protocol packets received and sent.
IPv4 packets	Total number of IPv4 packets received and sent. Includes the following packet types: - IGMP - PIM - ICMP requests - ICMP replies
TCP packets	Total number of TCP packets received and sent. Includes the following packet types: - FTP - HTTP - SSH - TACACS+ - Telnet - Other
UDP packets	Total number of UDP packets received and sent. Includes the following packet types: - DHCP - NTP - RADIUS - SNMP - TFTP - Other
RIP packets	Total number of Routing Information Protocol packets received and sent.
OSPF packets	Total number of Open Shortest Path First packets received and sent.
BGP packets	Total number of Border Gateway Protocol packets received and sent.
IPv6 packets	Total number of IPv6 packets received and sent.
LLDP PDUs	Total number of Link Layer Discovery Protocol data units received and sent.
ECP PDUs	Total number of Edge Control Protocol data units received and sent.

Statistics Description

MgmtSock Packets Total number of packets received and transmitted

through the management port.

Other Total number of other packets received and

transmitted.

Packet Buffer Statistics

allocs Total number of packet allocations from the packet

buffer pool by the TCP/IP protocol stack.

frees Total number of times the packet buffers are freed

(released) to the packet buffer pool by the TCP/IP

protocol stack.

failures Total number of packet allocation failures from the

packet buffer pool by the TCP/IP protocol stack.

dropped Total number of packets dropped by the packet buffer

pool.

small packet buffers

current Total number of packet allocations with size less than

128 bytes from the packet buffer pool by the TCP/IP

protocol stack.

max Maximum number of small packet allocations

supported

threshold Threshold value for small packet allocations, beyond

which only high-priority small packets are allowed.

hi-watermark The highest number of packet allocation with size

less than 128 bytes from the packet buffer pool by

the TCP/IP protocol stack.

hi-water time Time stamp that indicates when the hi-watermark

was reached.

medium packet buffers

current Total number of packet allocations with size between

128 to 1536 bytes from the packet buffer pool by the

TCP/IP protocol stack.

max Maximum number of medium packet allocations

supported.

threshold Threshold value for medium packet allocations,

beyond which only high-priority medium packets are

allowed.

hi-watermark The highest number of packet allocation with size

between 128 to 1536 bytes from the packet buffer

pool by the TCP/IP protocol stack.

hi-water time Time stamp that indicates when the hi-watermark

was reached.

Statistics	Description
jumbo packet buffers	
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
max	Maximum number of jumbo packet allocations supported.
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
pkt_hdr statistics	
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.
max	Maximum number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack that are supported.
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.

/stats/mp/pkt/logs

Packet Statistics Log Menu

```
[MP Packet Logs Menu]

all - Display logs of all packets received/sent by CPU

rx - Display logs of packets received by CPU

tx - Display logs of packets sent by CPU
```

This menu allows you to display a log of all packets received by CPU. The following table describes the Packet Statistics Log menu options.

Table 128. Packet Statistics Log Menu Options (/stats/mp/pkt/log)

Co	mmand Syntax and Usage
al	
	Displays all packet logs received by and sent from the CPU. To view a sample output and a description of the log entries, see page 186.
rx	
	Displays all packets logs received by the CPU.
tx	
	Displays all packet logs sent from the CPU.

/stats/mp/pkt/logs/all

Packet Log example

```
358. Type: BPDU, sent 1:01:11 Tue Mar 20, 2012
Port EXT2, VLAN 201, Length 57, Reason 0x0, Flags 0x0
Dst MAC: 01:80:c2:00:00:00, Src MAC: 08:17:f4:a7:57:2c

357. Type: ICMP ECHO Req,sent 1:01:09 Tue Mar 20, 2012
Port MGT1, VLAN 4095, Length 16, Reason 0x0, Flags 0x0 FromMgmtSock
Src IP: 9.43.98.125, Dst IP: 9.43.98.254
```

Each packet log entry includes the following information:

- Entry ID
- Packet type
- Date and time
- Port number
- VLAN number
- · Packet length
- Reason code
- Flags
- Source and destination address

/stats/mp/pkt/last

Packet Statistics Last Packet Menu

```
[MP Packet Last Packet Menu]

both - Display logs of the last N packets received/sent by CPU

rx - Display logs of the last N packets received by CPU

tx - Display logs of the last N packets sent by CPU
```

This menu allows you to display a specified number (N) of the most recent packet logs received by or sent from the CPU. The following table describes the Packet Statistics Last Packet menu options.

Table 129. Last Packet Menu Options (/stats/mp/pkt/last)

Command Syntax and Usage

```
both <1-1000>
```

Displays a specified number of recent packet logs received by and sent from the CPU. To view a sample output and a description, see page 186.

```
rx <1-1000>
```

Displays a specified number of recent packet logs received by the CPU.

tx <1-1000>

Displays a specified number of recent packet logs sent from the CPU.

Packet Statistics Dump Menu

```
[MP Packet Dump Menu]
all - Display packet statistics and all logs
rx - Display packet statistics and received logs
tx - Display packet statistics and sent logs
```

The following table describes the Packet Statistics Dump menu options.

Table 130. Packet Dump Menu Options (/stats/mp/pkt/dump)

```
Command Syntax and Usage

all
Displays all packet statistics and logs received by and sent from the CPU.

TX
Displays all packet statistics and logs received by the CPU.

tx
Displays all packet statistics and logs sent from the CPU.
```

/stats/mp/pkt/parse

Packet Statistics Parse Menu

```
[MP Packet Parse Menu]
rx - Display Receive packets parsed
tx - Display Sent packets parsed
```

The following table describes the Packet Statistics Parse menu options.

Table 131. Packet Parse Menu Options (/stats/mp/pkt/parse)

```
Command Syntax and Usage

xx <packet type>
Displays specified packet types received by the CPU. Table 132 lists the packet types accepted by this command.

tx <packet type
Displays specified packet types sent from the CPU. Table 132 lists the packet types accepted by this command.
```

Table 132. Packet types accepted by the packet parse command

Packet Type	Description
arp	Display only ARP packets logged.
bgp	Display only BGP packets logged.
bpdu	Display only BPDUs logged.
cisco	Display only Cisco packets (BPDU/CDP/UDLD) logged.

Packet Type	Description
dhcp	Display only DHCP packets logged.
еср	Display only ECP packets logged.
fcoe	Display only FCoE FIP PDUs logged.
ftp	Display only FTP packet logged.
http	Display only HTTP packets logged.
icmp	Display only ICMP packets logged.
igmp	Display only IGMP packet logged.
ip-addr	Display only logged packets with specified IP address.
ipv4	Display only IPv4 packets logged.
ipv6	Display only IPv6 packets logged.
lacp	Display only LACP packets logged.
Ildp	Display only LLDP PDUs logged.
mac	Display only logged packets with specified MAC address.
mgmtsock	Display only packets logged from management ports.
ntp	Display only NTP packets logged.
ospf	Display only OSPF packet logged.
other	Display logs of all packets not explicitly selectable.
pim	Display only PIM packet logged.
port	Display only logged packets with specified port.
radius	Display only RADIUS packets logged.
rarp	Display only Reverse-ARP packets logged.
raw	Display raw packet buffer in addition to headers.
rip	Display only RIP packet logged.
snmp	Display only SNMP packets logged.
ssh	Display only SSH packets logged.
tacacs	Display only TACACS packets logged.
tcp	Display only TCP packets logged.
tcpother	Display only TCP other-port packets logged.
telnet	Display only TELNET packets logged.
tftp	Display only TFTP packets logged.
udp	Display only UDP packets logged.
udpother	Display only UDP other-port packets logged.
vlan	Display only logged packets with specified VLAN.

clrmacl - Clear MACL stats

clrmacl - Clear VMAP stats
```

ACL statistics are described in the following table.

Table 136. ACL Statistics Menu Options (/stats/acl)

Command Syntax and Usage

acl <ACL number>

Displays the Access Control List Statistics for a specific ACL. For details, see page 193.

acl6 < ACL number>

Displays the IPv6 Access Control List Statistics for a specific ACL.

macl <ACL number>

Displays the Management Access Control List (MACL) Statistics for a specific ACL.

dump

Displays all ACL statistics.

vmap <*VMAP number*>

Displays the VLAN Map statistics for a specific VMAP. For details, see page 193.

clracl

Clears all ACL statistics.

clracl6

Clears all IPv6 ACL statistics.

clrmacl

Clears all Management ACL (MACL) statistics.

clrvmap

Clears all VMAP statistics.

/stats/acl/acl [<ACL number>]

ACL Statistics List

This option displays statistics for the selected ACL if an ACL number is specified, or for all ACLs if the option is omitted.

Hits for ACL 1:	26057515	
Hits for ACL 2:	26057497	

/stats/acl/vmap [<VMAP number>|all]

VLAN Map Statistics

This option displays statistics for the selected VLAN Map, or for all VMAPs.

```
Hits for VMAP 1: 57515
Hits for VMAP 2: 74970
```

/stats/acl/meter <meter number>

ACL Meter Statistics

This option displays ACL meter statistics.

```
Out of profile hits for Meter 1, Port EXT1: 0
Out of profile hits for Meter 2, Port EXT1: 0
```

/stats/fcoe [clear]

Fiber Channel over Ethernet Statistics

FCOE statistics:				
FCFAdded:	5	FCFRemoved:	1	
FCOEAdded:	81	FCOERemoved:	24	

Fiber Channel over Ethernet (FCoE) statistics are described in the following table:

Table 137. FCoE Statistics (/stats/fcoe)

Statistic	Description
FCFAdded	Total number of FCoE Forwarders (FCF) added.
FCFRemoved	Total number of FCoE Forwarders (FCF) removed.
FCOEAdded	Total number of FCoE connections added.
FCOERemoved	Total number of FCoE connections removed.

The total can accumulate over several FCoE sessions, until the statistics are cleared.

SNMP Statistics

Note: You can reset the SNMP counter to zero by using clear command, as follows:

>> Statistics# snmp clear

mpInBadVersions: 0 mpInBadC'tyUses: 0 mpEnableAuthTraps: 0
mpInBadC'tyUses: 0
-
mpEnableAuthTraps: 0
····Tr
mpInBadTypes: 0
mpInNoSuchNames: 0
mpInReadOnlys: 0
mpInTotalReqVars: 798464
mpInGetRequests: 17593
mpInSetRequests: 615
mpInTraps: 0
mpOutNoSuchNames: 1
mpOutReadOnlys: 0
mpOutGetRequests: 0
mpOutSetRequests: 0
mpOutTraps: 4
mpProxyDrops: 0

Table 138. SNMP Statistics (/stats/snmp)

Statistics	Description
snmpInPkts	The total number of Messages delivered to the SNMP entity from the transport service.
snmpInBadVersions	The total number of SNMP Messages, which were delivered to the SNMP protocol entity and were for an unsupported SNMP version.
snmpInBadC'tyNames	The total number of SNMP Messages delivered to the SNMP entity which used an SNMP community name not known to the said entity (the switch).
snmpInBadC'tyUses	The total number of SNMP Messages delivered to the SNMP protocol entity which represented an SNMP operation which was not allowed by the SNMP community named in the Message.
snmpInASNParseErrs	The total number of ASN.1 or BER errors encountered by the SNMP protocol entity when decoding SNMP Messages received.
	Note: OSI's method of specifying abstract objects is called ASN.1 (Abstract Syntax Notation One, defined in X.208), and one set of rules for representing such objects as strings of ones and zeros is called the BER (Basic Encoding Rules, defined in X.209). ASN.1 is a flexible notation that allows one to define a variety of data types, from simple types such as integers and bit strings to structured types such as sets and sequences. BER describes how to represent or encode values of each ASN.1 type as a string of eight-bit octets.

Table 138. SNMP Statistics (/stats/snmp) (continued)

Statistics	Description
snmpEnableAuthTraps	An object to enable or disable the authentication traps generated by this entity (the switch).
snmpOutPkts	The total number of SNMP Messages which were passed from the SNMP protocol entity to the transport service.
snmpInBadTypes	The total number of SNMP Messages which failed ASN parsing.
snmpInTooBigs	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>too big.</i>
snmpInNoSuchNames	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is noSuchName.
snmpInBadValues	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is badValue.
snmpInReadOnlys	The total number of valid SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is 'read-Only'. It should be noted that it is a protocol error to generate an SNMP PDU, which contains the value 'read-Only' in the error-status field. As such, this object is provided as a means of detecting incorrect implementations of the SNMP.
snmplnGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is genErr.
snmpInTotalReqVars	The total number of MIB objects which have been retrieved successfully by the SNMP protocol entity as a result of receiving valid SNMP Get-Request and Get-Next Protocol Data Units (PDUs).
snmpInTotalSetVars	The total number of MIB objects, which have been altered successfully by the SNMP protocol entity as a result of receiving valid SNMP Set-Request Protocol Data Units (PDUs).
snmpInGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.

Table 138. SNMP Statistics (/stats/snmp) (continued)

Statistics	Description
snmpInSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInGetResponses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpInTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.
snmpOutTooBigs	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is <i>too big</i> .
snmpOutNoSuchName s	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status is noSuchName.
snmpOutBadValues	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is <code>badValue</code> .
snmpOutReadOnlys	Not in use.
snmpOutGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is genErr.
snmpOutGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutGet Responses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.

Table 138. SNMP Statistics (/stats/snmp) (continued)

Statistics	Description
snmpSilentDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMPv2 entity which were silently dropped because the size of a reply containing an alternate Response-PDU with an empty variable bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.
snmpProxyDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMP entity which were silently dropped because the transmission of the message to a proxy target failed in a manner such that no Response-PDU could be returned.

/stats/ntp

NTP Statistics

IBM Networking OS uses NTP (Network Timing Protocol) version 3 to synchronize the switch's internal clock with an atomic time calibrated NTP server. With NTP enabled, the switch can accurately update its internal clock to be consistent with other devices on the network and generates accurate syslogs.

```
NTP statistics:
       Primary Server via MGT port:
               Requests Sent:
                                            17
               Responses Received:
                                            17
               Updates:
                                            1
       Secondary Server via MGT port:
               Requests Sent:
                                            0
               Responses Received:
                                            0
               Updates:
                                            0
       Last update based on response from primary/secondary server.
        Last update time: 18:04:16 Tue Jan 13, 2012
        Current system time: 18:55:49 Tue Jan 13, 2012
```

Table 139. NTP Statistics Parameters (/stats/ntp)

Field	Description
Primary Server	Requests Sent: The total number of NTP requests the switch sent to the primary NTP server to synchronize time.
	Responses Received: The total number of NTP responses received from the primary NTP server.
	Updates: The total number of times the switch updated its time based on the NTP responses received from the primary NTP server.
Secondary Server	Requests Sent: The total number of NTP requests the switch sent to the secondary NTP server to synchronize time.
	Responses Received: The total number of NTP responses received from the secondary NTP server.
	Updates: The total number of times the switch updated its time based on the NTP responses received from the secondary NTP server.
Last update based on response from primary server	Last update of time on the switch based on either primary or secondary NTP response received.
Last update time	The time stamp showing the time when the switch was last updated.
Current system time	The switch system time when the following command was issued: /stats/ntp

Note: Use the following command to delete all NTP statistics: /stats/ntp clear

/stats/dump

Statistics Dump

Use the dump command to dump all switch statistics available from the Statistics Menu (40K or more, depending on your configuration). This data can be used to tune or debug switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Chapter 5. The Configuration Menu

This chapter discusses how to use the Command Line Interface (CLI) for making, viewing, and saving switch configuration changes. Many of the commands, although not new, display more or different information than in the previous version. Important differences are called out in the text.

           - Backup current configuration to FTP/SFTP/TFTP server
    ptcfa
           - Restore current configuration from FTP/SFTP/TFTP server
    atcfa
            - Display current configuration
```

Each configuration option is briefly described in Table 140, with pointers to detailed menu commands.

Table 140. Configuration Menu Options (/cfg)

Command Syntax and Usage

sys

Displays the System Configuration Menu. To view menu options, see page 202.

port port alias or number>

Displays the Port Configuration Menu. To view menu options, see page 240.

stack

Displays the Stacking Configuration Menu. This menu is visible only if stacking is enabled from the /boot menu, and the switch is reset. To view menu options, see page 250.

Note: This option only appears if you have stacking turned on.

qos

Displays the Quality of Service Configuration Menu. To view menu options, see page 252.

© Copyright IBM Corp. 2012

Table 140. Configuration Menu Options (/cfg) (continued)

Command Syntax and Usage

acl

Displays the ACL Configuration Menu. To view menu options, see page 254.

pmirr

Displays the Mirroring Configuration Menu. To view menu options, see page 273.

12

Displays the Layer 2 Configuration Menu. To view menu options, see page 275.

13

Displays the Layer 3 Configuration Menu. To view menu options, see page 319.

cee

Displays the Converged Ethernet Configuration menu. To view menu options, see page 413.

fcoe

Displays the Fiber Channel over Ethernet Configuration menu. To view menu options, see page 420.

rmon

Displays the Remote Monitoring (RMON) Configuration Menu. To view menu options, see page 422.

virt

Displays the Virtualization Configuration Menu. To view menu options, see page 430.

spar <1-8>

Displays the Switch Partition Configuration Menu. To view menu options, see page 426.

dump

Dumps current configuration to a script file. For details, see page 450.

ptcfg <FTP/TFTP/SFTP server host name or IP address> <filename on host> Backs up current configuration to FTP/TFTP/SFTP server. For details, see page 451.

gtcfg <host name or IP address of FTP/TFTP/SFTP server> <filename on host> Restores current configuration from FTP/TFTP/SFTP server. For details, see page 451.

cur

Displays current configuration parameters.

Viewing, Applying, and Saving Changes

As you use the configuration menus to set switch parameters, the changes you make do not take effect immediately. All changes are considered "pending" until you explicitly apply them. Also, any changes are lost the next time the switch boots unless the changes are explicitly saved.

Note: Some operations can override the settings in the Configuration menu. Therefore, settings you view in the Configuration menu (for example, port status) might differ from run-time information that you view in the Information menu or on the management module. The Information menu displays current run-time information of switch parameters.

While configuration changes are in the pending state, you can do the following:

- View the pending changes
- Apply the pending changes
- Save the changes to flash memory

Viewing Pending Changes

You can view all pending configuration changes by entering diff at the menu prompt.

Note: The diff command is a global command. Therefore, you can enter diff at any prompt in the CLI.

Applying Pending Changes

To make your configuration changes active, you must apply them. To apply configuration changes, enter apply at any prompt in the CLI.

apply

Note: The apply command is a global command. Therefore, you can enter apply at any prompt in the administrative interface.

Saving the Configuration

In addition to applying the configuration changes, you can save them to flash memory on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R).

Note: If you do not save the changes, they will be lost the next time the system is rebooted.

To save the new configuration, enter the following command at any CLI prompt:

save

When you save configuration changes, the changes are saved to the active configuration block. The configuration being replaced by the save is first copied to the backup configuration block. If you do not want the previous configuration block copied to the backup configuration block, enter the following instead:

save n

You can decide which configuration you want to run the next time you reset the switch. Your options include:

- · The active configuration block
- The backup configuration block
- · Factory default configuration

You can view all pending configuration changes that have been applied but not saved to flash memory using the diff flash command. It is a global command that can be executed from any menu.

For instructions on selecting the configuration to run at the next system reset, see "Selecting a Configuration Block" on page 478.

/cfg/sys

System Configuration Menu

```
[System Menu]
    linevty - Lines Telnet SSH Menu
    linecons - Lines Console Menu
    errdis - ErrDisable Menu
    syslog - Syslog Menu
    sshd - SSH Server Menu
    radius - RADIUS Authentication Menu
    tacacs+ - TACACS+ Authentication Menu
    ldap - LDAP Authentication Menu
    ntp
             - NTP Server Menu
            - System SNMP Menu
    access - System Access Menu
            - Custom DST Menu
    dst
    sflow - sFlow Menu
    date - Set system date
    time - Set system time
    timezone - Set system timezone (daylight savings)
    dlight - Set system daylight savings
             - Set timeout for idle CLI sessions
    idle
    notice - Set login notice
bannr - Set login banner
    hprompt - Enable/disable display hostname (sysName) in CLI prompt
    reminder - Enable/disable Reminders
    rstctrl - Enable/disable System reset on panic
            - Display current system-wide parameters
```

This menu provides configuration of switch management parameters such as user and administrator privilege mode passwords, Web-based management settings, and management access lists.

Table 141. System Configuration Menu Options (/cfg/sys)

Command Syntax and Usage

linevty

Configures the number of lines per screen displayed in the CLI by default for Telnet and SSH sessions.

linecons

Configures the number of lines per screen displayed in the CLI by default for console sessions.

Table 141. System Configuration Menu Options (/cfg/sys) (continued)

errdis

Displays the Error Disable Recovery menu. To view menu options, see page 206.

syslog

Displays the Syslog Menu. To view menu options, see page 208.

sshd

Displays the SSH Server Menu. To view menu options, see page 210.

radius

Displays the RADIUS Authentication Menu. To view menu options, see page 211.

tacacs+

Displays the TACACS+ Authentication Menu. To view menu options, see page 212.

ldap

Displays the LDAP Authentication Menu. To view menu options, see page 215.

ntp

Displays the NTP Server menu, which allows you to synchronize the switch clock with a Network Time Protocol server. To view menu options, see page 217.

ssnmp

Displays the System SNMP Menu. To view menu options, see page 219.

access

Displays the System Access Menu. To view menu options, see page 231.

dst

Displays the Custom Daylight Savings Time menu. To view menu options, see page 237.

sflow

Displays the sFlow menu. To view menu options, see page 238.

date

Prompts the user for the system date. The date retains its value when the switch is reset.

time

Configures the system time using a 24-hour clock format. The time retains its value when the switch is reset.

Table 141. System Configuration Menu Options (/cfg/sys) (continued)

timezone

Configures the time zone where the switch resides. You are prompted to select your location (continent, country, region) by the timezone wizard. Once a region is selected, the switch updates the time to reflect local changes to Daylight Savings Time, etc.

dlight enable|disable

Disables or enables daylight savings time in the system clock. When enabled, the switch will add an extra hour to the system clock so that it is consistent with the local clock.

The default value is disabled.

idle <idle timeout in minutes>

Sets the idle timeout for CLI sessions, from 1 to 60 minutes. The default is 10 minutes. A value of 0 disables system idle.

notice <maximum 1024 character multi-line login notice> <'.' to end>

Displays login notice immediately before the "Enter password:" prompt. This notice can contain up to 1024 characters and new lines.

bannr <string, maximum 80 characters>

Configures a login banner of up to 80 characters. When a user or administrator logs into the switch, the login banner is displayed. It is also displayed as part of the output from the /info/sys command.

hprompt disable enable

Enables or disables displaying of the host name (system administrator's name) in the Command Line Interface (CLI).

reminder disable enable

Enables or disables reminder messages in the CLI. The default value is enabled.

rstctrl disable enable

Enables or disables the reset control flag. When enabled, the switch continues to function after a crash of the main processor, using the last known Layer 2/3 information.

The default value is enabled.

cur

Displays the current system parameters.

/cfq/sys/linevty

Lines Per Screen in Telnet/SSH Configuration

```
[Lines Telnet SSH Menu]
    length - Set lines-per-page 0-300, zero for infinite
```

Use this command to configure the number of lines per screen displayed by default in CLI sessions established over Telnet or SSH.

Table 142. Lines Per Screen in Telnet/SSH Configuration Options

Command Syntax and Usage

length < 0-300 >

Configures the number of lines per screen displayed in the CLI by default for Telnet and SSH sessions. Setting it to 0 disables paging. The default value is 28. When used without a value, the current setting is displayed.

/cfg/sys/linecons

Lines Per Screen in Console Configuration

```
[Lines Console Menu]
    length - Set lines-per-page 0-300, zero for infinite
```

User this command to configure the number of lines per screen displayed by default in CLI sessions established over the console.

Table 143. Lines Per Screen in Console Configuration Options

Command Syntax and Usage

length < 0-300 >

Configures the number of lines per screen displayed in the CLI by default for console sessions. Setting it to 0 disables paging. The default value is 28. When used without a value, the current setting is displayed.

/cfq/sys/errdis

Error Disable Configuration

```
[System ErrDisable Menu]

lfd - Link Flap Dampening Menu

timeout - Set ErrDisable timeout (sec)

ena - Enable ErrDisable recovery

dis - Disable ErrDisable recovery

cur - Display current ErrDisable configuration
```

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 144. Error Disable Configuration Options

Command Syntax and Usage

lfd

Displays the Link Flap Dampening menu. To view menu options, see page 206.

```
timeout <30 - 86400>
```

Configures the error-recovery timeout, in seconds. After the timer expires, the switch attempts to re-enable the port. The default value is 300.

Note: When you change the timeout value, all current error-recovery timers are reset.

ena

Globally enables automatic error-recovery for error-disabled ports. The default setting is disabled.

Note: Each port must have error-recovery enabled to participate in automatic error recovery ($/cfg/port \ x/errdis/ena$).

dis

Globally disables error-recovery for error-disabled ports.

cur

Displays the current system Error Disable and Recovery configuration.

/cfq/sys/errdis/lfd

Link Flap Dampening Menu

```
[Link Flap Dampening Menu]

flaps - Set maximum number of flaps allowed in time period

time - Set time period to count flaps (sec)

ena - Enable Link Flap Dampening

dis - Disable Link Flap Dampening

cur - Display current Link Flap Dampening configuration
```

Table 145. Link Flap Dampening Configuration Options

flaps < 1 - 100 >

Sets the maximum number of flaps allowed in a time period.

time < 5 - 500 >

Sets the time period, in seconds, to count flaps.

ena

Enables Link Flap Dampening.

dis

Disables Link Flap Dampening.

cur

Displays the current Link Flap Dampening configuration.

System Host Log Configuration Menu

```
[Syslog Menu]

host - Set IP address of first syslog host
host2 - Set IP address of second syslog host
sever - Set the severity of first syslog host
sever2 - Set the severity of second syslog host
facil - Set facility of first syslog host
facil2 - Set facility of second syslog host
sloopif - Set source loopback interface index
console - Enable/disable console output of syslog messages
consev - Severity Level of console output of syslog messages
log - Enable/disable syslogging of features
buffer - Buffer Menu
cur - Display current syslog settings
```

Table 146. Host Log Menu Options (/cfg/sys/syslog)

Command Syntax and Usage

host < new syslog host IP address>

Sets the IP address of the first syslog host.

host2 < new syslog host IP address>

Sets the IP address of the second syslog host.

sever <syslog host local severity (0-7)>

This option sets the severity level of the first syslog host displayed. The default is 7, which means log all severity levels.

sever2 <syslog host local severity (0-7)>

This option sets the severity level of the second syslog host displayed. The default is 7, which means, log all severity levels.

facil <syslog host local facility (0-7)>

This option sets the facility level of the first syslog host displayed. The default value is 0.

facil2 <syslog host local facility (0-7)>

This option sets the facility level of the second syslog host displayed. The default value is 0.

sloopif <1-5>

Sets the loopback interface number for syslogs.

console disable enable

Enables or disables delivering syslog messages to the console. When necessary, disabling console ensures the switch is not affected by syslog messages. It is enabled by default.

consev <0-7>

Sets the severity level of system log messages to display via the console, Telnet, and SSH. The system displays only messages with the selected severity level and above. For example, if you set the console severity to 2, only messages with severity level of 1 and 2 are displayed.

Table 146. Host Log Menu Options (/cfg/sys/syslog) (continued)

log <feature | all > <enable | disable >

Displays a list of features for which syslog messages can be generated. You can choose to enable or disable specific features (such as vlans, stg, or ssh), or to enable or disable syslog on all available features.

buffer

Displays the system log Buffer menu. To view menu options, see page 209.

cur

Displays the current syslog settings.

/cfg/sys/syslog/buffer

Syslog Log Buffer Configuration

```
[Buffer Menu]
    severity - Severity level of syslog messages write to flash
```

The System Log Buffer menu commands allow you to configure which severity levels to write to flash memory for later retrieval.

Table 147. Syslog Log Buffer Options (/cfg/sys/syslog/buffer)

Command Syntax and Usage

severity <0-7>

Sets the severity level of system log messages that are written to flash buffer. The system saves only messages with the selected severity level and above. For example, if you set the buffer severity to 2, only messages with severity level of 1 and 2 are saved.

SSH Server Configuration Menu

```
[SSHD Menu]

scpadm - Set SCP-only admin password

hkeygen - Generate the RSA host key

sshport - Set SSH server port number

ena - Enable the SCP apply and save

dis - Disable the SCP apply and save

on - Turn SSH server ON

off - Turn SSH server OFF

cur - Display current SSH server configuration
```

For the EN4093/EN4093R, this menu enables Secure Shell access from any SSH client. SSH scripts can be viewed by using the /cfg/dump command (see page 450).

Table 148. SSH Configuration Menu Options (/cfg/sys/sshd)

Command Syntax and Usage
intrval <0-24>
Set the interval, in hours, for auto-generation of the RSA server key.
scpadm
Set the administration password for SCP access.
hkeygen
Generate the RSA host key.
skeygen
Generate the RSA server key.
sshport <tcp number="" port=""></tcp>
Sets the SSH server port number.
ena
Enables the SCP apply and save.
dis
Disables the SCP apply and save.
on
Enables the SSH server.
off
Disables the SSH server.
cur
Displays the current SSH server configuration.

/cfq/sys/radius

RADIUS Server Configuration Menu

```
[RADIUS Server Menu]
   prisrv - Set primary RADIUS server address
   secsrv - Set secondary RADIUS server address
   secret - Set RADIUS secret
   secret2 - Set secondary RADIUS server secret
   port - Set RADIUS port
   retries - Set RADIUS server retries
   timeout - Set RADIUS server timeout
   sloopif - Set RADIUS source loopback interface
   bckdoor - Enable/disable RADIUS backdoor for telnet/ssh/http/https
   secbd - Enable/disable RADIUS secure backdoor for
            telnet/ssh/http/https
           - Turn RADIUS authentication ON
   on
   off
          - Turn RADIUS authentication OFF
         - Display current RADIUS configuration
   cur
```

Table 149. RADIUS Server Configuration Menu Options (/cfg/sys/radius)

Command Syntax and Usage

prisrv <*IP address*>

Sets the primary RADIUS server address.

secsrv < IP address>

Sets the secondary RADIUS server address.

secret <1-32 character secret>

This is the shared secret between the switch and the RADIUS server(s).

secret2 <1-32 character secret>

This is the secondary shared secret between the switch and the RADIUS server(s).

port < RADIUS port>

Enter the number of the UDP port to be configured, between 1500 - 3000. The default is 1645.

retries <RADIUS server retries (1-3)>

Sets the number of failed authentication requests before switching to a different RADIUS server. The default is 3 requests.

timeout <RADIUS server timeout seconds (1-10)>

Sets the amount of time, in seconds, before a RADIUS server authentication attempt is considered to have failed. The default is 3 seconds.

sloopif <1-5>

Sets the RADIUS source loopback interface.

bckdoor disable enable

Enables or disables the RADIUS backdoor for Telnet/SSH/HTTP/HTTPS. The default value is disabled.

To obtain the RADIUS backdoor password for your switch, contact your Service and Support line.

Table 149. RADIUS Server Configuration Menu Options (/cfg/sys/radius) (continued)

secbd enable disable

Enables or disables the RADIUS back door using secure password for telnet/SSH/HTTP/HTTPS. This command does not apply when backdoor (telnet) is enabled.

on

Enables the RADIUS server.

off

Disables the RADIUS server.

cur

Displays the current RADIUS server parameters.

/cfg/sys/tacacs+

TACACS+ Server Configuration Menu

TACACS (Terminal Access Controller Access Control system) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system. TACACS is not an encryption protocol, and therefore less secure than TACACS+ and Remote Authentication Dial-In User Service (RADIUS) protocols. Both TACACS and TACACS+ are described in RFC 1492.

TACACS+ protocol is more reliable than RADIUS, as TACACS+ uses the Transmission Control Protocol (TCP) whereas RADIUS uses the User Datagram Protocol (UDP). Also, RADIUS combines authentication and authorization in a user profile, whereas TACACS+ separates the two operations.

TACACS+ offers the following advantages over RADIUS as the authentication device:

- TACACS+ is TCP-based, so it facilitates connection-oriented traffic.
- It supports full-packet encryption, as opposed to password-only in authentication requests.
- It supports de-coupled authentication, authorization, and accounting.

```
[TACACS+ Server Menu]
  prisrv - Set IP address of primary TACACS+ server secsrv - Set IP address of secondary TACACS+ server
   chpass_p - Set new password for primary server
   chpass s - Set new password for secondary server
   secret - Set secret for primary TACACS+ server
   secret2 - Set secret for secondary TACACS+ server
   port - Set TACACS+ port number
   retries - Set number of TACACS+ server retries
   attempts - Set number of TACACS+ login attempts
   timeout - Set timeout value of TACACS+ server retries
   sloopif - Set TACACS+ source loopback interface
   usermap - Set user privilege mappings
   bckdoor - Enable/disable TACACS+ backdoor for telnet/ssh/http/hhtps
   secbd - Enable/disable TACACS+ secure backdoor
           - Enable/disable TACACS+ new privilege level mapping
   passch - Enable/disable TACACS+ password change
   cauth - Enable/disable TACACS+ command authorization
   clog
           - Enable/disable TACACS+ command logging
           - Enable/disable TACACS+ directed request
   dreq
   acct
            - Enable/disable TACACS+ accounting
            - Enable TACACS+ authentication
   on
   off
            - Disable TACACS+ authentication
   cur
           - Display current TACACS+ settings
```

Table 150. TACACS+ Server Menu Options (/cfg/sys/tacacs)

prisrv <IP address>

Defines the primary TACACS+ server address.

secsrv <IP address>

Defines the secondary TACACS+ server address.

chpass p

Configures the password for the primary TACACS+ server. The CLI will prompt you for input.

chpass s

Configures the password for the secondary TACACS+ server. The CLI will prompt you for input.

secret <1-32 character secret>

This is the shared secret between the switch and the TACACS+ server(s).

secret2 <1-32 character secret>

This is the secondary shared secret between the switch and the TACACS+ server(s).

port <TACACS port>

Enter the number of the TCP port to be configured, between 1 - 65000. The default is 49.

Table 150. TACACS+ Server Menu Options (/cfg/sys/tacacs) (continued)

retries <TACACS server retries, 1-3>

Sets the number of failed authentication requests before switching to a different TACACS+ server. The default is 3 requests.

attempts <1-10>

Sets the number of failed login attempts before disconnecting the user. The default is 2 attempts.

timeout <TACACS server timeout seconds, 4-15>

Sets the amount of time, in seconds, before a TACACS+ server authentication attempt is considered to have failed. The default is 5 seconds.

sloopif < 1-5>

Sets the TACACS+ source loopback interface.

usermap <0-15> user|oper|admin|none

Maps a TACACS+ authorization level to a switch user level. Enter a TACACS+ authorization level (0-15), followed by the corresponding switch user level.

bckdoor disable enable

Enables or disables the TACACS+ back door for Telnet, SSH/SCP, or HTTP/HTTPS.

Enabling this feature allows you to bypass the TACACS+ servers. It is recommended that you use Secure Backdoor to ensure the switch is secured, because Secure Backdoor disallows access through the back door when the TACACS+ servers are responding.

The default setting is disabled.

To obtain the TACACS+ backdoor password for your switch, contact your IBM Service and Support line.

secbd enable disable

Enables or disables TACACS+ secure back door access through Telnet, SSH/SCP, or HTTP/HTTPS only when the TACACS+ servers are not responding.

This feature is recommended to permit access to the switch when the TACACS+ servers become unresponsive. If no back door is enabled, the only way to gain access when TACACS+ servers are unresponsive is to use the back door via the console port.

The default setting is disabled.

cmap enable disable

Enables or disables TACACS+ privilege-level mapping.

The default value is disabled.

passch enable disable

Enables or disables TACACS+ password change.

The default setting is disabled.

Table 150. TACACS+ Server Menu Options (/cfg/sys/tacacs) (continued)

cauth disable enable

Enables or disables TACACS+ command authorization.

clog disable enable

Enables or disables TACACS+ command logging.

dreq disable enable

Enables or disables TACACS+ directed request, which uses a specified TACACS+ server for authentication, authorization, accounting. When enabled, When directed-request is enabled, each user must add a configured TACACS+ server hostname to the username (for example, username@hostname) during login.

This command allows the following options:

- Restricted: Only the username is sent to the specified TACACS+ server.
- No-truncate: The entire login string is sent to the TACACS+ server.

acct enable disable

Enables or disables TACACS+ accounting.

on

Enables the TACACS+ server. This is the default setting.

off

Disables the TACACS+ server.

cur

Displays current TACACS+ configuration parameters.

/cfg/sys/ldap

LDAP Server Configuration Menu

LDAP (Lightweight Directory Access Protocol) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system.

```
[LDAP Server Menu]
   prisrv - Set IP address of primary LDAP server
    secsrv - Set IP address of secondary LDAP server
    port
            - Set LDAP port number
    retries - Set number of LDAP server retries
    timeout - Set timeout value of LDAP server retries
    domain - Set domain name
    bckdoor - Enable/disable LDAP backdoor for telnet/ssh/http/https
    on - Enable LDAP authentication
    off
            - Disable LDAP authentication
         - Display current LDAP settings
```

Table 151. LDAP Server Menu Options (/cfg/sys/ldap)

prisrv <IP address>

Defines the primary LDAP server address.

secsrv <IP address>

Defines the secondary LDAP server address.

port <LDAP port>

Enter the number of the TCP port to be configured, between 1 - 65000. The default is 389.

retries <LDAP server retries, 1-3>

Sets the number of failed authentication requests before switching to a different LDAP server. The default is 3 requests.

timeout <LDAP server timeout seconds, 4-15>

Sets the amount of time, in seconds, before a LDAP server authentication attempt is considered to have failed. The default is 5 seconds.

domain < domain name (1-128 characters) > | none

Sets the domain name for the LDAP server. Enter the full path for your organization. For example:

ou=people,dc=mydomain,dc=com

bckdoor disable enable

Enables or disables the LDAP back door for Telnet, SSH/SCP, or HTTP/HTTPS. The default setting is disabled.

To obtain the LDAP back door password for your switch, contact your Service and Support line.

on

Enables the LDAP server.

off

Disables the LDAP server. This is the default setting.

cur

Displays current LDAP configuration parameters.

/cfq/sys/ntp

NTP Client Configuration Menu

```
[NTP Server Menu]
     prisrv - Set primary NTP server address
     secsrv - Set secondary NTP server address intrval - Set NTP server resync interval
     sloopif - Set NTP source loopback interface
     auth - Enable/Disable NTP authentication
     md5key - NTP MD5 Key Menu
     prikey - Add NTP primary server key
     seckey - Add NTP secondary server key
     addkey - Add NTP trusted key
     remkey - Remove NTP trusted key
     on
               - Turn NTP service ON
              - Turn NTP service OFF
              - Display current NTP configuration
```

This menu enables you to synchronize the switch clock to a Network Time Protocol (NTP) server. By default, this option is disabled.

Table 152. NTP Configuration Menu Options (/cfg/sys/ntp)

Command Syntax and Usage

```
prisrv <IP address> [-m|-mgt|-e|-extm|-d|-data]
```

Prompts for the IP addresses of the primary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt), external management port (extm), or data port (data).

```
secsrv < IP address > [-m|-mgt|-e|-extm|-d|-data]
```

Prompts for the IP addresses of the secondary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt), external management port (extm), or data port (data).

```
intrval <5-44640>
```

Specifies the time interval, in minutes, to re-synchronize the switch clock with the NTP server.

```
auth enable disable
```

Enables or disables NTP authentication. The default setting is disabled.

When authentication is enabled, the switch transmits NTP packets with the MAC address appended.

```
md5key <1-65534>
```

Displays the MD5 Key configuration menu. To view menu options, see page 218.

```
prikey <1-65534>
```

Adds the NTP primary server key, which specifies which MD5 key is used by the primary server.

Table 152. NTP Configuration Menu Options (/cfg/sys/ntp) (continued)

seckey <1-65534>

Adds the NTP secondary server key, which specifies which MD5 key is used by the secondary server.

addkey <1-65534>

Adds an MD5 key code to the list of trusted keys.

remkey <1-65534>

Removes the specified key code from the list of trusted keys.

sloopif <1-5>

Sets the NTP source loopback interface.

Enables the NTP synchronization service.

off

Disables the NTP synchronization service.

cur

Displays the current NTP service settings.

/cfg/sys/ntp/md5key < 1-65534 >

NTP MD5 Key Menu

```
[NTP MD5 Key 1 Menu]
```

key - Set authentication key delete - Delete key

- Display current MD5 key configuration

Table 153. NTP MD5 KEy Configuration Menu Options (/cfg/sys/ntp/md5key)

Command Syntax and Usage

key <1-16 characters>

Configures the selected MD5 key code.

delete

Deletes the selected MD5 key code.

cur

Displays the current NTP MD5 key settings.

System SNMP Configuration Menu

```
[System SNMP Menu]
    snmpv3 - SNMPv3 Menu
    name - Set SNMP "sysName"
locn - Set SNMP "sysLocation"
    cont - Set SNMP "sysContact"
    rcomm - Set SNMP read community string
    wcomm - Set SNMP write community string
    trsrc - Set SNMP trap source interface for SNMPv1
    trloopif - Set SNMP trap source loopback interface
    thostadd - Add a new trap host
    thostrem - Remove an existing trap host
    timeout - Set timeout for the SNMP state machine
             - Enable/disable SNMP "sysAuthenTrap"
           - Enable/disable SNMP link up/down trap
    linkt
    cur - Display current SNMP configuration
```

IBM Networking OS supports SNMP-based network management. In SNMP model of network management, a management station (client/manager) accesses a set of variables known as MIBs (Management Information Base) provided by the managed device (agent). If you are running an SNMP network management station on your network, you can manage the switch using the following standard SNMP MIBs:

- MIB II (RFC 1213)
- Ethernet MIB (RFC 1643)
- Bridge MIB (RFC 1493)

An SNMP agent is a software process on the managed device that listens on UDP port 161 for SNMP messages. Each SNMP message sent to the agent contains a list of management objects to retrieve or to modify.

SNMP parameters that can be modified include:

- System name
- System location
- System contact
- Use of the SNMP system authentication trap function
- Read community string
- Write community string
- Trap community strings

Table 154. System SNMP Menu Options (/cfg/sys/ssnmp)

Command Syntax and Usage snmpv3 Displays SNMPv3 menu. To view menu options, see page 221. name < 1-64 characters> Configures the name for the system. locn < 1-64 characters> Configures the name of the system location.

Table 154. System SNMP Menu Options (/cfg/sys/ssnmp) (continued)

cont <1-64 characters>

Configures the name of the system contact.

rcomm <1-32 characters>

Configures the SNMP read community string. The read community string controls SNMP "get" access to the switch. The default read community string is *public*.

wcomm <1-32 characters>

Configures the SNMP write community string. The write community string controls SNMP "set" and "get" access to the switch. The default write community string is *private*.

trsrc <interface number>

Configures the source interface for SNMP traps. The default value is interface 1.

To send traps through the management ports, specify interface 128.

trloopif <1-5>

Configures the loopback interface for SNMP traps.

thostadd <trap host IP address> <trap host community string>

Adds a trap host server.

thostrem <trap host IP address>

Removes the trap host server.

timeout < 1-30 >

Set the timeout value for the SNMP state machine, in minutes.

auth disable enable

Enables or disables the use of the system authentication trap facility. The default setting is <code>disabled</code>.

linkt <port> {disable | enable}

Enables or disables the sending of SNMP link up and link down traps. The default setting is ${\tt enabled}.$

cur

Displays the current SNMP configuration.

/cfq/sys/ssnmp/snmpv3

SNMPv3 Configuration Menu

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 Framework by supporting the following:

- a new SNMP message format
- security for messages
- access control
- remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC3411 to RFC3418.

```
[SNMPv3 Menu]
   usm - usmUser Table menu
    view
            - vacmViewTreeFamily Table menu
    access - vacmAccess Table menu
    group - vacmSecurityToGroup Table menu
            - community Table menu
    taddr - targetAddr Table menu
    tparam - targetParams Table menu
    notify - notify Table menu
            - Enable/disable V1/V2 access
            - Display current SNMPv3 configuration
```

Table 155. SNMPv3 Configuration Menu Options (/cfg/sys/ssnmp/snmpv3)

Command Syntax and Usage

```
usm < usmUser number (1-16)>
```

Defines a user security model (USM) entry for an authorized user. You can also configure this entry through SNMP. To view menu options, see page 223.

view <vacmViewTreeFamily number (1-128)>

Allows you to create different MIB views. To view menu options, see page 224.

```
access <vacmAccess number (1-32)>
```

Configures the access rights. The View-based Access Control Model defines a set of services that an application can use for checking access rights of the user. You need access control when you have to process retrieval or modification request from an SNMP entity. To view menu options, see page 225.

```
group <vacmSecurityToGroup number (1-16)>
```

Maps the user name to the access group names and their access rights needed to access SNMP management objects. A group defines the access rights assigned to all names that belong to a particular group. To view menu options, see page 226.

```
comm < snmpCommunity number (1-16)>
```

The community table contains objects for mapping community strings and version-independent SNMP message parameters. To view menu options, see page 227.

Table 155. SNMPv3 Configuration Menu Options (/cfg/sys/ssnmp/snmpv3) (continued)

taddr <snmpTargetAddr number (1-16)>

Allows you to configure destination information, consisting of a transport domain and a transport address. This is also termed as transport endpoint. The SNMP MIB provides a mechanism for performing source address validation on incoming requests, and for selecting community strings based on target addresses for outgoing notifications. To view menu options, see page 228.

tparam < target params index (1-16)>

Allows you to configure SNMP parameters, consisting of message processing model, security model, security level, and security name information. There may be multiple transport endpoints associated with a particular set of SNMP parameters, or a particular transport endpoint may be associated with several sets of SNMP parameters. To view menu options, see page 229.

notify <notify index (1-16)>

A notification application typically monitors a system for particular events or conditions, and

generates Notification-Class messages based on these events or conditions. To view menu options, see page 230.

v1v2 disable enable

Allows you to enable or disable the access to SNMP version 1 and version 2. The default setting is disabled.

cur

Displays the current SNMPv3 configuration.

/cfq/sys/ssnmp/snmpv3/usm

User Security Model Configuration Menu

You can make use of a defined set of user identities using this Security Model. An SNMP engine must have the knowledge of applicable attributes of a user.

This menu helps you create a user security model entry for an authorized user. You need to provide a security name to create the USM entry.

```
[SNMPv3 usmUser 1 Menu]
   name - Set USM user name
    auth
            - Set authentication protocol
    authpw - Set authentication password
             - Set privacy protocol
    priv
    privpw - Set privacy password
            - Delete usmUser entry
    del
           - Display current usmUser configuration
```

Table 156. User Security Model Configuration Menu Options (/cfg/sys/ssnmp/snmpv3/usm)

Command Syntax and Usage

```
name <1-32 characters>
```

Defines a string that represents the name of the user. This is the login name that you need in order to access the switch.

```
auth {md5|sha|none}
```

Configures the authentication protocol between HMAC-MD5-96 or HMAC-SHA-96.

The default algorithm is none.

authpw

Allows you to create or change your password for authentication. If you selected an authentication algorithm using the above command, you need to provide a password, otherwise you will get an error message during validation.

priv des none

Configures the type of privacy protocol on your switch. The privacy protocol protects messages from disclosure. The options are des (CBC-DES Symmetric Encryption Protocol) or none. If you specify des as the privacy protocol, then make sure that you have selected one of the authentication protocols (MD5 or HMAC-SHA-96). If you select none as the authentication protocol, you will get an error message.

privpw

Defines the privacy password.

del

Deletes the selected USM user entries.

cur

Displays the selected USM user entries.

/cfq/sys/ssnmp/snmpv3/view

SNMPv3 View Configuration Menu

```
[SNMPv3 vacmViewTreeFamily 1 Menu]

name - Set view name

tree - Set MIB subtree(OID) which defines a family of view subtrees

mask - Set view mask

type - Set view type

del - Delete vacmViewTreeFamily entry

cur - Display current vacmViewTreeFamily configuration
```

Note that the first five default vacmViewTreeFamily entries cannot be removed, and their names cannot be changed.

Table 157. SNMPv3 View Menu Options (/cfg/sys/ssnmp/snmpv3/view)

Command Syntax and Usage

name <1-32 characters>

Defines the name for a family of view subtrees.

tree <object identifier, such as 1.3.6.1.2.1.1.1.0 (1-64 characters)>

Defines the MIB tree which, when combined with the corresponding mask, defines a family of view subtrees.

mask < bitmask, 1-32 characters > | none

Configures the bit mask, which in combination with the corresponding tree, defines a family of view subtrees.

type included excluded

This command indicates whether the corresponding instances of vacmViewTreeFamilySubtree and vacmViewTreeFamilyMask define a family of view subtrees, which is included in or excluded from the MIB view.

del

Deletes the vacmViewTreeFamily group entry.

cur

Displays the current vacmViewTreeFamily configuration.

/cfq/sys/ssnmp/snmpv3/access

View-Based Access Control Model Configuration Menu

The view-based Access Control Model defines a set of services that an application can use for checking access rights of the user. Access control is needed when the user has to process SNMP retrieval or modification request from an SNMP entity.

```
[SNMPv3 vacmAccess 1 Menu]
   name - Set group name
    prefix - Set content prefix
    model
            - Set security model
    level - Set minimum level of security
    match - Set prefix only or exact match
    rview - Set read view index
    wview - Set write view index
    nview - Set notify view index
    del
           - Delete vacmAccess entry
           - Display current vacmAccess configuration
```

Table 158. View-based Access Control Model Menu Options (/cfg/sys/ssnmp/snmpv3/access)

Command Syntax and Usage

name <1-32 characters>

Defines the name of the group.

prefix <1-32 characters>

Defines the name of the context. An SNMP context is a collection of management information that an SNMP entity can access. An SNMP entity has access to many contexts. For more information on naming the management information, see RFC2571, the SNMP Architecture document. The view-based Access Control Model defines a table that lists the locally available contexts by contextName.

model usm|snmpv1|snmpv2

Allows you to select the security model to be used.

level noAuthNoPriv|authNoPriv|authPriv

Defines the minimum level of security required to gain access rights. The level noAuthNoPriv means that the SNMP message will be sent without authentication and without using a privacy protocol. The level authNoPriv means that the SNMP message will be sent with authentication but without using a privacy protocol. The authPriv means that the SNMP message will be sent both with authentication and using a privacy protocol.

match exact prefix

If the value is set to exact, then all the rows whose contextName exactly matches the prefix are selected. If the value is set to prefix then the all the rows where the starting octets of the contextName exactly match the prefix are selected.

rview <1-32 characters>

Defines a read view name that allows you read access to a particular MIB view. If the value is empty or if there is no active MIB view having this value then no access is granted.

Table 158. View-based Access Control Model Menu Options (/cfg/sys/ssnmp/snmpv3/access) (continued)

wview <1-32 characters>

Defines a write view name that allows you write access to the MIB view. If the value is empty or if there is no active MIB view having this value then no access is granted.

nview <1-32 characters>

Defines a long notify view name that allows you notify access to the MIB view.

del

Deletes the View-based Access Control entry.

cur

Displays the View-based Access Control configuration.

/cfg/sys/ssnmp/snmpv3/group

SNMPv3 Group Configuration Menu

```
[SNMPv3 vacmSecurityToGroup 1 Menu]

model - Set security model

uname - Set USM user name

gname - Set group gname

del - Delete vacmSecurityToGroup entry

cur - Display current vacmSecurityToGroup configuration
```

Table 159. SNMPv3 Group Menu Options (/cfg/sys/ssnmp/snmpv3/group)

Command Syntax and Usage

model usm|snmpv1|snmpv2

Defines the security model.

uname <1-32 characters>

Sets the user name as defined in /cfg/sys/ssnmp/snmpv3/usm/name on page 223.

gname <1-32 characters>

The name for the access group as defined in

/cfg/sys/ssnmp/snmpv3/access/name on page 225.

del

Deletes the vacmSecurityToGroup entry.

cur

Displays the current vacmSecurityToGroup configuration.

/cfq/sys/ssnmp/snmpv3/comm

SNMPv3 Community Table Configuration Menu

This command is used for configuring the community table entry. The configured entry is stored in the community table list in the SNMP engine. This table is used to configure community strings in the Local Configuration Datastore (LCD) of SNMP engine.

```
[SNMPv3 snmpCommunityTable 1 Menu]
    index - Set community index
             - Set community string
            - Set USM user name
            - Set community tag
            - Delete communityTable entry
    del
            - Display current communityTable configuration
    cur
```

Table 160. SNMPv3 Community Table Configuration Menu Options (/cfg/sys/ssnmp/snmpv3/comm)

Command Syntax and Usage

index <1-32 characters>

Configures the unique index value of a row in this table.

name <1-32 characters>

Defines the user name as defined in the /cfq/sys/ssnmp/snmpv3/usm/name command.

uname <1-32 characters>

Defines a readable text string that represents the corresponding value of an SNMP community name in a security model.

tag <1-255 characters>

Configures a tag that specifies a set of transport endpoints to which a command responder application sends an SNMP trap.

del

Deletes the community table entry.

cur

Displays the community table configuration.

/cfq/sys/ssnmp/snmpv3/taddr

SNMPv3 Target Address Table Configuration Menu

This command is used to configure the target transport entry. The configured entry is stored in the target address table list in the SNMP engine. This table of transport addresses is used in the generation of SNMP messages.

```
[SNMPv3 snmpTargetAddrTable 1 Menu]

name - Set target address name
addr - Set target transport address IP
port - Set target transport address port
taglist - Set tag list
pname - Set targetParams name
del - Delete targetAddrTable entry
cur - Display current targetAddrTable configuration
```

Table 161. Target Address Table Menu Options (/cfg/sys/ssnmp/snmpv3/taddr)

Command Syntax and Usage

name <1-32 characters>

Defines the locally arbitrary, but unique identifier, target address name associated with this entry.

addr <transport IP address>

Configures a transport IPv4 address that can be used in the generation of SNMP traps.

port <transport address port>

Configures a transport address port that can be used in the generation of SNMP traps.

taglist <1-255 characters>

Allows you to configure a list of tags that are used to select target addresses for a particular operation.

pname <1-32 characters>

Defines the name as defined in the /cfg/sys/ssnmp/snmpv3/tparam/name command on page 229.

del

Deletes the Target Address Table entry.

cur

Displays the current Target Address Table configuration.

/cfq/sys/ssnmp/snmpv3/tparam

SNMPv3 Target Parameters Table Configuration Menu

You can configure the target parameters entry and store it in the target parameters table in the SNMP engine. This table contains parameters that are used to generate a message. The parameters include the message processing model (for example: SNMPv3, SNMPv2c, SNMPv1), the security model (for example: USM), the security name, and the security level (noAuthnoPriv, authNoPriv, or authPriv).

```
[SNMPv3 snmpTargetParamsTable 1 Menu]
   name - Set target params name
    mpmodel - Set message processing model
    model - Set security model
            - Set USM user name
    level
            - Set minimum level of security
            - Delete targetParamsTable entry
    del
           - Display current targetParamsTable configuration
```

Table 162. Target Parameters Table Configuration Menu Options (/cfg/sys/ssnmp/snmpv3/tparam)

Command Syntax and Usage

name <1-32 characters>

Defines the locally arbitrary, but unique identifier that is associated with this entry.

mpmodel snmpv1|snmpv2c|snmpv3

Configures the message processing model that is used to generate SNMP messages.

model usm|snmpv1|snmpv2

Allows you to select the security model to be used when generating the SNMP messages.

uname < 1-32 characters>

Defines the name that identifies the user in the USM table (page 223) on whose behalf the SNMP messages are generated using this entry.

level noAuthNoPriv|authNoPriv|authPriv

Allows you to select the level of security to be used when generating the SNMP messages using this entry. The level noAuthNoPriv means that the SNMP message will be sent without authentication and without using a privacy protocol. The level authNoPriv means that the SNMP message will be sent with authentication but without using a privacy protocol. The authPriv means that the SNMP message will be sent both with authentication and using a privacy protocol.

del

Deletes the targetParamsTable entry.

cur

Displays the current targetParamsTable configuration.

/cfq/sys/ssnmp/snmpv3/notify

SNMPv3 Notify Table Configuration Menu

SNMPv3 uses Notification Originator to send out traps. A notification typically monitors a system for particular events or conditions, and generates Notification-Class messages based on these events or conditions.

```
[SNMPv3 snmpNotifyTable 1 Menu]
name - Set notify name
tag - Set notify tag
del - Delete notifyTable entry
cur - Display current notifyTable configuration
```

Table 163. Notify Table Menu Options (/cfg/sys/ssnmp/snmpv3/notify)

Command Syntax and Usage

name <1-32 characters>

Defines a locally arbitrary but unique identifier associated with this SNMP notify entry.

tag <1-255 characters>

Allows you to configure a tag that contains a tag value which is used to select entries in the Target Address Table. Any entry in the <code>snmpTargetAddrTable</code>, that matches the value of this tag is selected.

del

Deletes the notify table entry.

cur

Displays the current notify table configuration.

/cfq/sys/access

System Access Configuration Menu

```
[System Access Menu]
           - Management Network Definition Menu
    mgmt
    user
             - User Access Control Menu (passwords)
    https - HTTPS Web Access Menu
             - Set SNMP access control
    snmp
    tnport - Set Telnet server port number
    tport - Set the TFTP Port for the system
wport - Set HTTP (Web) server port number
             - Enable/disable HTTP (Web) access
    http
             - Enable/disable Telnet access
    tsbbi
              - Enable/disable Telnet/SSH configuration from BBI
    userbbi - Enable/disable user configuration from BBI
              - Display current system access configuration
```

Table 164. System Access Menu Options (/cfg/sys/access)

Command Syntax and Usage

mgmt

Displays the Management Configuration Menu. To view menu options, see page 232.

user

Displays the User Access Control Menu. To view menu options, see page 233.

https

Displays the HTTPS Menu. To view menu options, see page 236.

snmp {disable|read-only|read-write}

Disables or provides read-only/write-read SNMP access.

tnport <TCP port number>

Sets an optional telnet server port number for cases where the server listens for telnet sessions on a non-standard port.

tport <TFTP port number (1-65535)>

Sets the TFTP port for the switch. The default is port 69.

wport < TCP port number (1-65535)>

Sets the switch port used for serving switch Web content. The default is HTTP port 80. If Global Server Load Balancing is to be used, set this to a different port (such as 8080).

http disable enable

Enables or disables HTTP (Web) access to the Browser-Based Interface. The default setting is disabled.

tnet enable disable

Enables or disables Telnet access. The default setting is disabled.

tsbbi enable disable

Enables or disables Telnet/SSH configuration access through the Browser-Based Interface (BBI).

Table 164. System Access Menu Options (/cfg/sys/access) (continued)

userbbi enable disable

Enables or disables user configuration access through the Browser-Based Interface (BBI).

cur

Displays the current system access parameters.

/cfg/sys/access/mgmt

Management Networks Configuration Menu

```
[Management Networks Menu]

add - Add mgmt network definition

rem - Remove mgmt network definition

cur - Display current mgmt network definitions

clear - Clear current mgmt network definitions
```

This menu is used to define IP address ranges which are allowed to access the switch for management purposes.

Table 165. Management Network Options

Command Syntax and Usage

add <mgmt network IPv4 or IPv6 address> <mgmt network mask or prefix length>

Adds a defined network through which switch access is allowed through Telnet, SNMP, RIP, or the IBM Networking OS browser-based interface. A range of IP addresses is produced when used with a network mask address. Specify an IP address and mask address in dotted-decimal notation.

Note: If you configure the management network without including the switch interfaces, the configuration causes the Firewall Load Balancing health checks to fail and creates a "Network Down" state on the network.

You can add up to 10 management networks.

rem <mgmt network IPv4 or IPv6 address> <mgmt network mask or prefix length>
Removes a defined network, which consists of a management network

address and a management network mask address.

cur

Displays the current configuration.

clear

Removes all defined management networks.

/cfq/sys/access/user

User Access Control Configuration Menu

```
[User Access Control Menu]
   uid
           - Ilser ID Menu
    eject - Eject user
    usrpw - Set user password (user)
    opw - Set operator password (oper)
    admpw - Set administrator password (admin)
    strongpw - Strong password menu
         - Display current user status
```

Note: Passwords can be a maximum of 128 characters.

Table 166. User Access Control Menu Options (/cfg/sys/access/user)

Command Syntax and Usage

```
uid <user ID (1-10)>
```

Displays the User ID Menu. To view menu options, see page 234.

```
eject user|oper|admin|<user name>
```

Ejects the specified user from the EN4093/EN4093R.

```
usrpw <1-128 characters>
```

Sets the user (user) password. The user has no direct responsibility for switch management. The user view switch status information and statistics, but cannot make any configuration changes.

This command will prompt for required information: current admin password. new password (up to 128 characters) and confirmation of the new password.

Note: To disable the user account, set the password to null (no password).

```
opw <1-128 characters>
```

Sets the operator (oper) password. The operator manages all functions of the switch. The operator can view all switch information and statistics and can reset ports.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Note: To disable the operator account, set the password to null (no password). The default setting is disabled (no password).

```
admpw <1-128 characters>
```

Sets the administrator (admin) password. The administrator has complete access to all menus, information, and configuration commands on the EN4093/EN4093R, including the ability to change both the user and administrator passwords.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Access includes "oper" functions.

Note: You cannot disable the administrator password.

Table 166. User Access Control Menu Options (/cfg/sys/access/user) (continued)

strongpw

Displays the Strong User Password Menu. To view menu options, see page 235.

cur

Displays the current user status.

/cfg/sys/access/user/uid <1-10>

System User ID Configuration Menu

```
[User ID 1 Menu]

cos - Set class of service

name - Set user name

pswd - Set user password

ena - Enable user ID

dis - Disable user ID

del - Delete user ID

cur - Display current user configuration
```

Table 167. User ID Configuration Menu Options (/cfg/sys/access/user/uid)

Command Syntax and Usage

cos <user|oper|admin>

Sets the Class-of-Service to define the user's authority level. IBM Networking OS defines these levels as: User, Operator, and Administrator, with User being the most restricted level.

name < 1-8 characters>

Sets the user name (maximum of eight characters).

pswd <1-128 characters>

Sets the user password.

ena

Enables the user ID.

dis

Disables the user ID.

del

Deletes the user ID.

cur

Displays the current user ID configuration.

/cfq/sys/access/user/strongpw

Strong Password Configuration Menu

```
[Strong Pwd Menu]
    ena - Enable usage of strong passwords
            - Disable usage of strong passwords
    expiry - Set password validity
    warning - Set warning days before pswd expiry
    faillog - Set number of failed logins for security notification
            - Display current strong password configuration
```

Table 168. Strong Password Menu Options (/cfg/sys/access/user/strongpw)

Command Syntax and Usage

ena

Enables Strong Password requirement.

dis

Disables Strong Password requirement.

expiry <1-365>

Configures the number of days allowed before the password must be changed. The default value is 60 days.

warning <1-365>

Configures the number of days before password expiration, that a warning is issued to users. The default value is 15 days.

faillog < 1-255>

Configures the number of failed login attempts allowed before a security notification is logged. The default value is 3 login attempts.

cur

Displays the current Strong Password configuration.

/cfg/sys/access/https

HTTPS Access Configuration

```
[https Menu]

access - Enable/Disable HTTPS Web access
port - HTTPS WebServer port number
generate - Generate self-signed HTTPS server certificate
certSave - save HTTPS certificate
gtca - Import ca root certificate via TFTP
gthkey - Import host private key via TFTP
gthcert - Import host certificate via TFTP
cur - Display current SSL Web Access configuration
```

Table 169. HTTPS Access Configuration Menu Options (/cfg/sys/access/https)

Command Syntax and Usage

```
access ena|dis
```

Enables or disables BBI access (Web access) using HTTPS. The default setting is enabled.

```
port <TCP port number>
```

Defines the HTTPS Web server port number. The default port is 443.

generate

Allows you to generate a certificate to connect to the SSL to be used during the key exchange. A default certificate is created when HTTPS is enabled for the first time. The user can create a new certificate defining the information that they want to be used in the various fields. For example:

- Country Name (2 letter code) []: CA
- State or Province Name (full name) []: Ontario
- Locality Name (for example, city) []: Ottawa
- Organization Name (for example, company) []: IBM
- Organizational Unit Name (for example, section) []: Datacenter
- Common Name (for example, user's name) []: Mr Smith
- Email (for example, email address) []: info@ibm.com

You will be asked to confirm if you want to generate the certificate. It will take approximately 30 seconds to generate the certificate. Then the switch will restart SSL agent.

certSave

Allows the client, or the Web browser, to accept the certificate and save the certificate to Flash to be used when the switch is rebooted.

```
gtca { < hostname > | < IP address > } < filename >
```

Enables you to import a Certificate of Authority root certificate using TFTP.

```
gthkey { < hostname > | < IP address > } < filename >
```

Enables you to import a host private key using TFTP.

Table 169. HTTPS Access Configuration Menu Options (/cfg/sys/access/https) (continued)

Command Syntax and Usage gthcert {<hostname>|<IP address>} <filename> Enables you to import a host certificate using TFTP. cur Displays the current SSL Web Access configuration.

/cfq/sys/dst

Custom Daylight Savings Time Configuration Menu

```
[Custom DST Menu]
    dststart - Set the DST start day
    dstend - Set the DST stop day
            - Enable custom DST
             - Disable custom DST
            - Display custom DST configuration
```

Use this menu to configure custom Daylight Savings Time. The DST will be defined by two rules, the start rule and end rule. The rules specify the date and time when the DST starts and finishes. These dates are represented as specific calendar dates or as relative offsets in a month (for example, 'the second Sunday of September').

Relative offset example:

2070901 = Second Sunday of September, at 1:00 a.m.

Calendar date example:

Command Syntax and Usage

0070901 = September 7, at 1:00 a.m.

Table 170. Custom DST Configuration Menu Options (/cfg/sys/dst)

```
dststart {<WDDMMhh>}
   Configures the start date for custom DST, as follows:
   WDMMhh
   W = week (0-5, where 0 means use the calender date)
   D = day of the week (01-07, where 01 is Monday)
   MM = month (1-12)
   hh = hour (0-23)
   Note: Week 5 is always considered to be the last week of the month.
dstend {<WDDMMhh>}
   Configures the end date for custom DST, as follows:
   WDMMhh
   W = \text{week } (0-5, \text{ where } 0 \text{ means use the calender date})
   D = day of the week (01-07, where 01 is Monday)
   MM = month (1-12)
   hh = hour (0-23)
   Note: Week 5 is always considered to be the last week of the month.
```

Table 170. Custom DST Configuration Menu Options (/cfg/sys/dst) (continued)

ena Enables the Custom Daylight Savings Time settings. dis Disables the Custom Daylight Savings Time settings. cur Displays the current Custom DST configuration.

/cfg/sys/sflow

sFlow Configuration Menu

```
[sFlow Menu]
ena - Enable sFlow
dis - Disable sFlow
saddress - Set the sFlow Analyzer IP address
sport - Set the sFlow Analyzer port
port - sFlow port Menu
cur - Display sFlow configuration
```

IBM Networking OS supports sFlow version 5. sFlow is a sampling method used for monitoring high speed switched networks. Use this menu to configure the sFlow agent on the switch.

Table 171. sFlow Configuration Menu Options (/cfg/sys/sflow)

ena Enables the sFlow agent. dis Disables the sFlow agent. saddress <IP address> Defines the sFlow server address. sport <I-65535> Configures the UDP port for the sFlow server. The default value is 6343. port <port alias or number> Configures the sFlow interface port. cur Displays the current sFlow configuration.

/cfg/sys/sflow/port port alias or number>

sFlow Port Configuration Menu

```
[sFlow Port Menu]
                                                                                                                                               polling - Set the sFlow polling interval
                                                                                                                                                           sampling - Set the sFlow sampling rate % \left( 1\right) =\left( 1\right) \left( 1\right) 
                                                                                                                                                                                                                                                                                                                                                                         - Display sFlow port configuration
```

Use this menu to configure the sFlow port on the switch.

Table 172. sFlow Port Configuration Menu Options (/cfg/sys/sflow/port)

Command Syntax and Usage

```
polling <5-60>|0
```

Configures the sFlow polling interval, in seconds. The default value is 0 (disabled).

```
sampling <256-65536>|0|
```

Configures the sFlow sampling rate, in packets per sample. The default value is 0 (disabled).

cur

Displays the current sFlow port configuration.

/cfg/port port alias or number>

Port Configuration Menu

    oam
    aclqos - Acl/Qos Configuration Menu
           - STP Menu
    8021ppri - Set default 802.1p priority
    pvid - Set default port VLAN id
          - Set port name
    bpdugrd - Enable/disable BPDU Guard
    dscpmrk - Enable/disable DSCP remarking for port
    rmon - Enable/disable RMON for port
            - Enable/disable VLAN tagging for port
    tagpvid - Enable/disable tagging on pvid
    tagipvid - Enable/disable adding PVID as outer tag on ingress packets
    floodblk - Enable/disable Port flood blocking
    brate - Set BroadCast Threshold
    mrate - Set MultiCast Threshold
    drate - Set Dest. Lookup Fail Threshold
    evbprof - Set EVB Port Profile
            - Enable port
    ena
    dis
            - Disable port
    dis - Disable port
cur - Display current port configuration
```

Use the Port Configuration menu to configure settings for internal ports (INTx) and external ports (EXTx). However, if you are configuring management ports (MGT1 or EXTM), see "Management Port Configuration Menu" on page 249.

Table 173. Port Configuration Menu Options (/cfg/port)

Command Syntax and Usage

errdis

Displays the Error Disable and Recovery menu. To view menu options, see page 243.

gig

If a port is configured to support Gigabit Ethernet, this option displays the Gigabit Ethernet Physical Link Menu. To view menu options, see page 244.

udld

Displays the Unidirectional Link Detection (UDLD) Menu. To view menu options, see page 245.

oam

Displays the OAM Discovery Configuration Menu. To view menu options, see page 246.

aclqos

Displays the ACL/QoS Configuration Menu. To view menu options, see page 247.

stp

Displays the Spanning Tree Port menu. To view menu options, see page 247.

Table 173. Port Configuration Menu Options (/cfg/port) (continued)

8021ppri <0-7>

Configures the port's 802.1p priority level.

pvid <*VLAN number*>

Sets the default VLAN number which will be used to forward frames which are not VLAN tagged. The default number is 1 for non-management ports.

name < 1-64 characters > | none

Sets a name for the port. The assigned port name appears next to the port number on some information and statistics screens. The default setting is none.

bpdugrd e d

Enables or disables BPDU guard, to avoid spanning-tree loops on ports with Port Fast Forwarding enabled.

dscpmark

Enables or disables DSCP re-marking on a port.

rmon e d

Enables or disables Remote Monitoring for the port. RMON must be enabled for any RMON configurations to function.

tag disable enable

Disables or enables VLAN tagging for this port. The default setting is disabled for external ports (EXTx) and enabled for internal server ports (INTx).

tagpvid disable enable

Disables or enables VLAN tag persistence. When disabled, the VLAN tag is removed from packets whose VLAN tag matches the port PVID. The default setting is disabled for external (EXTx) ports and internal server ports (INTx), and enabled for MGT ports.

tagipvid disable enable

Enables or disables tagging the ingress frames with the port's VLAN ID. When enabled, the PVID tag is inserted into untagged and 802.1Q single-tagged ingress frames as outer VLAN ID. The default setting is disabled.

floodblk disable enable

Enables or disables port Flood Blocking. When enabled, unicast and multicast packets with unknown destination MAC addresses are blocked from the port.

brate <0-262143>|dis

Limits the number of broadcast packets per second to the specified value. If disabled (dis), the port forwards all broadcast packets.

mrate <0-262143>|dis

Limits the number of multicast packets per second to the specified value. If disabled (dis), the port forwards all multicast packets.

Table 173. Port Configuration Menu Options (/cfg/port) (continued)

drate <0-262143>|dis

Limits the number of unknown unicast packets per second to the specified value. If disabled (dis), the port forwards all unknown unicast packets.

evbprof <0-16>

Adds the specified Edge Virtual Bridge (EVB) profile to the port.

ena

Enables the port.

dis

Disables the port. (To temporarily disable a port without changing its configuration attributes, refer to "Temporarily Disabling a Port" on page 242.)

cur

Displays current port parameters.

Temporarily Disabling a Port

To temporarily disable a port without changing its stored configuration attributes, enter the following command at any prompt:

Main# /oper/port port alias or number>/dis

Because this configuration sets a temporary state for the port, you do not need to use apply or save. The port state will revert to its original configuration when the EN4093/EN4093R is reset. See the "Operations Menu" on page 453 for other operations-level commands.

/cfq/port <

Port Error Disable and Recovery Configuration

```
[Port 2 ErrDisable Menu]
    lfd - Link Flap Dampening Menu
    ena
            - Enable ErrDisable recovery
    dis
            - Disable ErrDisable recovery
            - Display current ErrDisable configuration
```

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 174. Port Error Disable Configuration Options

Command Syntax and Usage

Displays the Link Flap Dampening menu. To view menu options, see page 243.

ena

Enables automatic error-recovery for the port. The default setting is enabled.

Note: Error-recovery must be enabled globally before port-level commands become active (/cfg/sys/errdis/ena).

dis

Disables automatic error-recovery for the port.

cur

Displays current port Error Disable parameters.

/cfq/port <port alias or number > / errdis/lfd

Link Flap Dampening Menu

```
[Port INTA1 Link Flap Dampening Menu]
         - Enable Link Flap Dampening
    ena
             - Disable Link Flap Dampening
             - Display current Link Flap Dampening configuration
```

The following table describes the link flap dampening options.

Table 175. Link Flap Dampening Options

Command Syntax and Usage

ena

Enables link flap dampening.

Table 175. Link Flap Dampening Options

dis

Disables link flap dampening.

cur

Displays the current Link Flap Dampening configuration.

/cfg/port <port alias or number>/gig

Port Link Configuration Menu

```
[Gigabit Link Menu]
speed - Set link speed
mode - Set full or half duplex mode
fctl - Set flow control
auto - Set autonegotiation
cur - Display current gig link configuration
```

Link menu options are described in the following table.

Table 176. Port Link Configuration Menu Options (/cfg/port/gig)

Command Syntax and Usage

```
speed 10|100|1000|10000|any
```

Sets the link speed. Some options are not valid on all ports. The choices include:

- 10 Mbps
- 100 Mbps
- 1000 Mbps
- 10000 Mbps
- any (auto negotiate port speed)

Note: External 1/10Gb port speed becomes fixed when a transceiver is plugged into the port.

```
mode full|half|any
```

Sets the operating mode. Some options are not valid on all ports. The choices include:

- Full-duplex
- Half-duplex
- "Any," for auto negotiation (default)

Table 176. Port Link Configuration Menu Options (/cfg/port/gig) (continued)

fctl rx|tx|both|none

Sets the flow control. The choices include:

- Receive flow control
- Transmit flow control
- Both receive and transmit flow control
- No flow control

Note: For external ports (EXTx) the default setting is no flow control, and for internal ports (INTx) the default setting is both receive and transmit.

auto on off

Turns auto-negotiation on or off.

cur

Displays current port parameters.

/cfg/port <port alias or number>/udld

UniDirectional Link Detection Configuration Menu

[UDLD Menu] mode - Set UDLD mode ena - Enable UDLD - Disable UDLD - Display current port UDLD configuration

UDLD menu options are described in the following table.

Table 177. Port UDLD Configuration Menu Options (/cfg/port/udld)

Command Syntax and Usage

mode normal aggressive

Configures the UDLD mode for the selected port, as follows:

- Normal: Detect unidirectional links that have mis-connected interfaces. The port is disabled if UDLD determines that the port is mis-connected.
- Aggressive: In addition to the normal mode, the aggressive mode disables the port if the neighbor stops sending UDLD probes for 7 seconds.

Enables UDLD on the port.

dis

Disables UDLD on the port.

cur

Displays current port UDLD parameters.

/cfg/port <port alias or number> / oam

Port OAM Configuration Menu

[OAM Menu]
ena - Enable OAM Discovery process
dis - Disable OAM Discovery process
mode - Set OAM mode
cur - Display current port OAM configuration

Operation, Administration, and Maintenance (OAM) protocol allows the switch to detect faults on the physical port links. OAM is described in the IEEE 802.3ah standard.

OAM menu options are described in the following table.

Table 178. Port OAM Configuration Menu Options (/cfg/port/oam)

Command Syntax and Usage

ena

Enables OAM discovery on the port.

dis

Disables OAM discovery on the port.

mode active|passive

Configures the OAM discovery mode, as follows:

- Active: This port link initiates OAM discovery.
- Passive: This port allows its peer link to initiate OAM discovery.

If OAM determines that the port is in an anomalous condition, the port is disabled.

cur

Displays current port OAM parameters.

/cfq/port <

Port ACL Configuration Menu

```
[Port INT2 ACL Menu]
    add
         - Add ACL or ACL group to this port
            - Remove ACL or ACL group from this port
            - Display current ACLs for this port
```

Table 179. Port ACL Menu Options (/cfg/port/aclqos)

Displays current ACL QoS parameters.

Command Syntax and Usage add acl|acl6|grp < ACL or ACL group number> Adds the specified ACL or ACL group to the port. You can add multiple ACL groups to a port. rem acl|acl6|grp < ACL or ACL group number> Removes the specified ACL or ACL group from the port. cur

/cfq/port /port alias or number>/stp

Port Spanning Tree Configuration Menu

```
[Port INTA1 STP Menu]
   edge - Enable/disable edge port (for PVRST only)
   link - Set port link type (auto, p2p, or shared; default: auto)
   guard - Set Port Guard Type Menu
   cur - Display current port stp configuration
```

Table 180. Port STP Menu Options (/cfg/port/stp)

Command Syntax and Usage

```
edge e d
```

Enables or disables this port as an edge port. An edge port is not connected to a bridge, and can begin forwarding traffic as soon as the link is up. Configure server ports as edge ports (enabled).

Note: After you configure the port as an edge port, you must disable the port (/oper/port x/dis) and then re-enable the port (/oper/port x/ena) for the change to take effect.

link auto|p2p|shared

Defines the type of link connected to the port, as follows:

- auto: Configures the port to detect the link type, and automatically match its settings.
- p2p: Configures the port for Point-To-Point protocol.
- shared: Configures the port to connect to a shared medium (usually a

The default link type is auto.

Table 180. Port STP Menu Options (/cfg/port/stp) (continued)

guard

Displays the Spanning Tree Guard menu for the port. To view menu options, see page 249.

cur

Displays current STP parameters for the port.

/cfq/port /cfq/port /cfq/port /cfq/port /stp/quard

Port Spanning Tree Guard Configuration

```
[Guard Menu]
    default - Set guard type to default
    type - Set guard type
           - Display current quard type
```

Table 181. Port STP Guard Options

Command Syntax and Usage

default

Sets the Spanning Tree guard parameters to their default values.

```
type loop|root|none
```

Defines the Spanning Tree guard type, as follows:

- loop: STP loop guard prevents the port from forwarding traffic if no BPDUs are received. The port is placed into a loop-inconsistent blocking state until a BPDU is received.
- root: STP root guard enforces the position of the root bridge. If the bridge receives a superior BPDU, the port is placed into a root-inconsistent state (listening).
- none: Disables STP loop guard and root guard.

cur

Displays current Spanning Tree guard parameters for the port.

/cfg/port MGT1 | EXTM

Management Port Configuration Menu

```
[Gigabit Link Menu]
   speed - Set link speed
    mode
            - Set full or half duplex mode
    fctl
           - Set flow control
    ena
            - Enable management port
            - Disable management port
            - Display current configuration
```

Use these menu options to set port parameters for management ports. Use this menu to set port parameters for the port link. For MGT1 and EXTM, the values for speed, duplex, and flow control are fixed, and cannot be configured.

Table 182. Management Port Configuration Menu Options (/cfg/port x)

Command Syntax and Usage

speed 10|100|1000|any

Sets the link speed. The choices include:

- Any for automatic detection (default)
- 10 Mbps
- 100 Mbps
- 1000 Mbps

mode full|half|any

Sets the operating mode. The choices include:

- Any used for auto negotiation (default)
- Full-duplex
- Half-duplex

fctl rx|tx|both|none

Sets the flow control. The choices include:

- Receive flow control
- Transmit flow control
- Both receive and transmit flow control (default)
- No flow control

ena

Enables the port.

dis

Disables the port.

cur

Displays current port parameters.

/cfq/stack

Stacking Configuration Menu

```
[Stacking Menu]
swnum - Switch Number Menu
name - Set stack name
backup - Set backup switch number
cur - Display current stacking configuration
```

A *stack* is a group of switches that work together as a unified system. The network views a stack of switches as a single entity, identified by a single network IP address. The Stacking Configuration menu is used to configure a stack, and to define the Master and Backup interface that represents the stack on the network.

The Stacking Configuration menu is available only after Stacking is enabled and the switch is reset. For more information, see "Stacking Boot Menu" on page 469.

Table 183. Stacking Menu Options (/cfg/stack)

Command Syntax and Usage

swnum <switch number (1-8)>

Displays the Stacking Switch menu. To view menu options, see page 251.

name <1-63 characters>

Defines a name for the stack.

backup <1-8>|0

Defines the backup switch in the stack, based on its configured switch number (csnum).

cur

Displays the current stacking parameters.

/cfq/stack/swnum <1-8>

Stacking Switch Menu

```
[Switch 1 Menu]
    uuid - Set Switch Chassis UUID
    bay
            - Set Switch Bay Number
    bind
            - Bind UUID/Bay to switch in stack
    del
           - Delete switch
            - Display current Switch configuration
```

Table 184. Stacking Switch Menu Options (/cfg/stack/swnum)

Command Syntax and Usage

uuid < UUID>

Binds the selected switch to the stack, based on the UUID of the chassis in which the switch resides. You also must enter the bay number to specify a switch within the chassis. Following is an example UUID:

uuid 49407441b1a511d7b95df58f4b6f99fe

bay <1-10>

Binds the selected switch to the stack, based on its bay number in the chassis. You also must enter the UUID to specify the chassis in which the switch resides.

bind $\langle asnum(1-8) \rangle$

Binds the selected switch to the stack, based on its attached switch number (asnum).

Table 184. Stacking Switch Menu Options (/cfg/stack/swnum) (continued)

del

Deletes the selected switch from the stack.

cur

Displays the current stacking switch parameters.

/cfg/qos

Quality of Service Configuration Menu

```
[QOS Menu]

8021p - 802.1p Menu
dscp - Dscp Menu
cur - Display current QOS configuration
```

Use the Quality of Service (QoS) menus to configure the 802.1p priority value and DiffServ Code Point (DSCP) value of incoming packets. This allows you to differentiate between various types of traffic, and provide different priority levels.

Table 185. Quality of Service Menu Options (/cfg/qos)

Command Syntax and Usage

8021p

Displays 802.1p configuration menu. To view menu options, see page 253.

dscp

Displays DSCP configuration menu. To view menu options, see page 254.

cur

Displays QoS configuration parameters.

802.1p Configuration Menu

```
[802.1p Menu]
             - Set priority to COS queue mapping
    priq
    qweight - Set weight to a COS queue
         - Display current 802.1p configuration
```

This feature provides the capability to filter IP packets based on the 802.1p bits in the packet's VLAN header. The 802.1p bits specify the priority that you should give to the packets while forwarding them. The packets with a higher (non-zero) priority bits are given forwarding preference over packets with numerically lower priority bits value.

Table 186. 802.1p Menu Options (/cfg/qos/8021p)

Command Syntax and Usage

```
priq <priority (0-7)> <COSq number>
```

Maps the 802.1p priority to the Class of Service queue (COSq) priority. Enter the 802.1p priority value (0-7), followed by the COSq that handles the matching traffic. The valid range of the COSq number is set using the numcos command.

```
qweight <COSq number> <weight (0-15)>
```

Configures the weight of the selected COSq. Enter the COSq number, followed by the scheduling weight (0-15)..

cur

Displays the current 802.1p parameters.

/cfq/qos/dscp

DSCP Configuration Menu

```
[dscp Menu]

dscp - Remark DSCP value to a new DSCP value

prio - Remark DSCP value to a 802.1p priority

on - Globally turn DSCP remarking ON

off - Globally turn DSCP remarking OFF

cur - Display current DSCP remarking configuration
```

Use this menu map the DiffServ Code Point (DSCP) value of incoming packets to a new value, or to an 802.1p priority value.

Table 187. DSCP Menu Options (/cfg/qos/dscp)

```
Command Syntax and Usage

dscp <DSCP (0-63)> <new DSCP (0-63)>

Maps the initial DiffServ Code Point (DSCP) value to a new value. Enter the DSCP value (0-63) of incoming packets, followed by the new value.

prio <DSCP (0-63)> <pri>priority (0-7)>
    Maps the DiffServ Code point value to an 802.1p priority value. Enter the DSCP value, followed by the corresponding 802.1p value.

on
    Turns on DSCP re-marking globally.

off
    Turns off DSCP re-marking globally.

cur
    Displays the current DSCP parameters.
```

/cfg/acl

Access Control List Configuration Menu

```
[ACL Menu]
acl - Access Control List Item Config Menu
acl6 - IPv6 Access Control List Item Config Menu
group - Access Control List Group Config Menu
macl - Management ACL Config Menu
vmap - Vlan Map Config Menu
cur - Display current ACL configuration
```

Use this menu to create Access Control Lists (ACLs) and ACL groups. ACLs define matching criteria used for IP filtering and Quality of Service functions.

For information about assigning ACLs to ports, see "Port ACL Configuration Menu" on page 247.

Table 188. ACL Menu Options (/cfg/acl)

Command Syntax and Usage

acl <1-640>

Displays Access Control List configuration menu. To view menu options, see page 255.

acl6 <1-128>

Displays Access Control List configuration menu. To view menu options, see page 264.

group <1-640>

Displays ACL group configuration menu. To view menu options, see page 270.

macl <1-128>

Displays the Management ACL configuration menu. To view menu options, see page 271.

vmap <1-128>

Displays ACL VLAN Map configuration menu. To view menu options, see page 273.

cur

Displays the current ACL parameters.

/cfq/acl/acl <ACL number>

ACL Configuration Menu

```
[ACL 1 Menu]
    ethernet - Ethernet Header Options Menu
    ipv4 - IP Header Options Menu
    tcpudp - TCP/UDP Header Options Menu
   pktfmt - Set to filter specific packet format types
   egrport - Set to filter for packets egressing this port
   action - Set filter action
   stats - Enable/disable statistics for this acl
    reset - Reset filtering parameters
            - Display current filter configuration
```

These menus allow you to define filtering criteria for each Access Control List (ACL).

Table 189. ACL Menu Options (/cfg/acl/acl x)

Command Syntax and Usage

ethernet

Displays the ACL Ethernet Header menu. To view menu options, see page 256.

ipv4

Displays the ACL IP Header menu. To view menu options, see page 257.

Table 189. ACL Menu Options (/cfg/acl/acl x) (continued)

tcpudp

Displays the ACL TCP/UDP Header menu. To view menu options, see page 258.

pktfmt <packet format>

Displays the ACL Packet Format menu. To view menu options, see page 263.

egrport port alias or number>

Configures the ACL to function on egress packets.

action permit|deny|setprio <0-7>

Configures a filter action for packets that match the ACL definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).

stats e|d

Enables or disables the statistics collection for the Access Control List.

reset

Resets the ACL parameters to their default values.

cur

Displays the current ACL parameters.

/cfg/acl/acl <ACL number>/ethernet

Ethernet Filtering Configuration Menu

```
smac - Set to filter on source MAC
dmac - Set to filter on destination MAC
vlan - Set to filter on VLAN ID
etype - Set to filter on ethernet type
pri - Set to filter on priority
reset - Reset all fields
cur - Display current parameters
```

This menu allows you to define Ethernet matching criteria for an ACL.

Table 190. Ethernet Filtering Menu Options (/cfg/acl/acl x/ethernet)

Command Syntax and Usage

smac <MAC address (such as 00:60:cf:40:56:00)> <mask (FF:FF:FF:FF:FF)> Defines the source MAC address for this ACL.

dmac <MAC address (such as 00:60:cf:40:56:00)> <mask (FF:FF:FF:FF:FF)> Defines the destination MAC address for this ACL.

vlan <**VLAN number> <VLAN mask (0xfff)>**

Defines a VLAN number and mask for this ACL.

Table 190. Ethernet Filtering Menu Options (/cfg/acl/acl x/ethernet) (continued)

Command Syntax and Usage etype [ARP|IP|IPv6|MPLS|RARP|any|none|<other (0x600-0xFFFF)>] Defines the Ethernet type for this ACL. pri <0-7> Defines the Ethernet priority value for the ACL. Resets Ethernet parameters for the ACL to their default values. cur Displays the current Ethernet parameters for the ACL.

/cfq/acl/acl <ACL number>/ipv4

IPv4 Filtering Configuration Menu

```
[Filtering IPv4 Menu]
             - Set to filter on source IP address
             - Set to filter on destination IP address
    dip
    proto
           - Set to filter on prototype
            - Set to filter on TOS
    tos
    reset - Reset all fields
             - Display current parameters
```

This menu allows you to define IP version 4 matching criteria for an ACL.

Table 191. IPv4 Filtering Menu Options (/cfg/acl/acl x/ipv4)

Command Syntax and Usage

sip <IP address> <mask (such as 255.255.255.0)>

Defines a source IP address for the ACL. If defined, traffic with this source IP address will match this ACL. Specify an IP address in dotted decimal notation.

dip <IP address> <mask (such as 255.255.255.0)>

Defines a destination IP address for the ACL. If defined, traffic with this destination IP address will match this ACL.

```
proto <0-255>
```

Defines an IP protocol for the ACL. If defined, traffic from the specified protocol matches this filter. Specify the protocol number. Listed below are some of the well-known protocols.

Number	Name
1	icmp
2	igmp
6	tcp
17	udp
89 112	ospf
112	vrrp

Table 191. IPv4 Filtering Menu Options (/cfg/acl/acl x/ipv4) (continued)

tos <0-255>

Defines a Type of Service (ToS) value for the ACL. For more information on ToS, refer to RFC 1340 and 1349.

reset

Resets the IPv4 parameters for the ACL to their default values.

cur

Displays the current IPv4 parameters.

/cfg/acl/acl <ACL number>/tcpudp

TCP/UDP Filtering Configuration Menu

```
[Filtering TCP/UDP Menu]
sport - Set to filter on TCP/UDP source port
dport - Set to filter on TCP/UDP destination port
flags - Set to filter TCP/UDP flags
reset - Reset all fields
cur - Display current parameters
```

This menu allows you to define TCP/UDP matching criteria for an ACL.

Table 192. TCP/UDP Filtering Menu Options (/cfg/acl/acl x/tcpudp)

Command Syntax and Usage

sport <source port (1-65535)> <mask (0xFFFF)>

Defines a source port for the ACL. If defined, traffic with the specified TCP or UDP source port will match this ACL. Specify the port number. Listed below are some of the well-known ports:

some of the well-known ports: Number Name 20 ftp-data 21 ftp 22 ssh 23 telnet 25 smtp 37 time 42 name 43 whois 53 domain 69 tftp 70 gopher 79 finger 80 http

dport <destination port (1-65535)> <mask (0xFFFF)>

Defines a destination port for the ACL. If defined, traffic with the specified TCP or UDP destination port will match this ACL. Specify the port number, just as with sport above.

Table 192. TCP/UDP Filtering Menu Options (/cfg/acl/acl x/tcpudp) (continued)

flags <value (0x0-0x3f)> <mask (0x0-0x3f)> Defines a TCP/UDP flag for the ACL.

reset

Resets the TCP/UDP parameters for the ACL to their default values.

cur

Displays the current TCP/UDP Filtering parameters.

/cfq/acl/acl <ACL number>/meter

ACL Metering Configuration Menu

```
cir - Set committed rate in kilobits per second
mbsize - Set maximum burst size in kilobits
enable - Enable/disable port metering
dpass - Set to Drop or Pass out of profile traffic
        - Reset meter parameters
reset
        - Display current settings
```

This menu defines the metering profile for the selected ACL.

Table 193. ACL Metering Menu Options (/cfg/acl/acl x/meter)

Command Syntax and Usage

cir <64-40000000>

Configures the committed rate, in Kilobits per second. The committed rate must be a multiple of 64.

mbsize <32-4096>

Configures the maximum burst size, in Kilobits. Enter one of the following values for mbsize: 32, 64, 128, 256, 512, 1024, 2048, 4096

enable e d

Enables or disables metering on the ACL.

dpass drop pass

Configures the ACL meter to either drop or pass out-of-profile traffic.

reset

Reset ACL metering parameters to their default values.

cur

Displays current ACL metering parameters.

/cfg/acl/acl <ACL number>/re-mark

Re-Mark Configuration Menu

```
[Re-mark Menu]
inprof - In Profile Menu
outprof - Out Profile Menu
uplp - Set Update User Priority Menu
reset - Reset re-mark settings
cur - Display current settings
```

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

Table 194. ACL Re-Mark Menu Options (/cfg/acl/acl x/re-mark)

Command Syntax and Usage

inprof

Displays the Re-Mark In-Profile menu. To view menu options, see page 261.

outprof

Displays the Re-Mark Out-of-Profile menu. To view menu options, see page 262.

up1p

Displays the Re-Mark Update User Priority menu. To view menu options, see page 261.

reset

Reset ACL re-mark parameters to their default values.

cur

Displays current re-mark parameters.

/cfq/acl/acl <ACL number>/re-mark/inprof

Re-Marking In-Profile Configuration Menu

```
[Re-marking - In Profile Menu]
            - Set Update User Priority Menu
    updscp - Set the update DSCP
    reset - Reset update DSCP settings
            - Display current settings
```

Table 195. ACL Re-Mark In-Profile Menu (/cfg/acl/acl x/re-mark/inprof)

Command Syntax and Usage

up1p

Displays the Re-Mark Update User Priority menu. To view menu options, see page 261.

updscp <0-63>

Re-marks the DiffServ Code Point (DSCP) of in-profile packets to the selected

reset

Resets the re-mark parameters for in-profile packets to their default values.

cur

Displays current re-mark in-profile parameters.

/cfq/acl/acl <ACL number>/re-mark/up1p

Update User Priority Configuration

```
[Update User Priority Menu]
    value - Set the update user priority
    utosp - Enable/Disable use of TOS precedence
    reset - Reset in profile uplp settings
    cur - Display current settings
```

Table 196. ACL Re-Mark Update User Priority Options

Command Syntax and Usage

```
value < 0-7 >
```

Re-marks the 802.1p value. The value is the priority bits information in the packet structure.

```
utosp enable|disable
```

Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.

Table 196. ACL Re-Mark Update User Priority Options

reset

Resets UP1P settings to their default values.

cur

Displays current re-mark User Priority parameters for in-profile packets.

/cfg/acl/acl <ACL number>/re-mark/outprof

Re-Marking Out-of-Profile Configuration Menu

```
[Re-marking - Out Of Profile Menu]

updscp - Set the update DSCP

reset - reset update DSCP setting

cur - Display current settings
```

Table 197. ACL Re-Mark Out-of-Profile Menu (/cfg/acl/acl x/re-mark/outprof)

Command Syntax and Usage

updscp <0-63>

Re-marks the DiffServ Code Point (DSCP) for out-of-profile packets to the selected value. The switch sets the DSCP value on out-of-profile packets.

reset

Resets the update DSCP parameters for out-of-profile packets to their default values.

cur

Displays current re-mark parameters for out-of-profile packets.

/cfg/acl/acl <ACL number>/pktfmt

Packet Format Filtering Configuration Menu

```
[Filtering Packet Format Menu]
    ethfmt - Set to filter on ethernet format
    tagfmt - Set to filter on ethernet tagging format
            - Set to filter on IP format
    reset - Reset all fields
            - Display current parameters
    cur
```

This menu allows you to define Packet Format matching criteria for an ACL.

Table 198. ACL Packet Format Filtering Menu Options (/cfg/acl/acl x/pktfmt)

```
Command Syntax and Usage
ethfmt {none|eth2|SNAP|LLC}
   Defines the Ethernet format for the ACL.
tagfmt {disabled|any|none|tagged}
   Defines the tagging format for the ACL.
ipfmt {none|v4|v6}
   Defines the IP format for the ACL.
reset
   Resets Packet Format parameters for the ACL to their default values.
cur
   Displays the current Packet Format parameters for the ACL.
```

/cfq/acl/acl6 <ACL number>

ACL IPv6 Configuration

```
[ACL6 2 Menu]

ipv6 - IPv6 Header Options Menu

tcpudp - TCP/UDP Header Options Menu

re-mark - ACL Re-mark Configuration Menu

egrport - Set to filter for packets egressing this port

action - Set filter action

stats - Enable/disable statistics

reset - Reset filtering parameters

cur - Display current filter configuration
```

These menus allow you to define filtering criteria for each IPv6 Access Control List (ACL).

Table 199. IPv6 ACL Options

Command Syntax and Usage

ipv6

Displays the ACL IP Header menu. To view menu options, see page 265.

tcpudp

Displays the ACL TCP/UDP Header menu. To view menu options, see page 266.

re-mark

Displays the ACL Re-Mark menu. To view menu options, see page 267.

egrport <port alias or number>

Configures the ACL to function on egress packets.

action permit|deny|setprio <0-7>

Configures a filter action for packets that match the ACL definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).

stats e d

Enables or disables the statistics collection for the Access Control List.

reset

Resets the ACL parameters to their default values.

cur

Displays the current ACL parameters.

/cfq/acl/acl6 < ACL number > /ipv6

IP version 6 Filtering Configuration

```
[Filtering IPv6 Menu]
    sip - Set to filter on source IPv6 address
             - Set to filter on destination IPv6 address
    dip
    nexthd - Set to filter on IPv6 next header
    flabel - Set to filter on IPv6 flow label
    tclass - Set to filter on IPv6 traffic class
            - Reset all fields
    reset
            - Display current parameters
```

This menu allows you to define IPv6 matching criteria for an ACL.

Table 200. IP version 6 Filtering Options

Command Syntax and Usage

sip <IPv6 address> <prefix length>

Defines a source IPv6 address for the ACL. If defined, traffic with this source IP address will match this ACL.

dip <IPv6 address> <prefix length>

Defines a destination IPv6 address for the ACL. If defined, traffic with this destination IP address will match this ACL.

nexthd <0-255>

Defines the next header value for the ACL. If defined, traffic with this next header value will match this ACL.

flabel <0-1048575>

Defines the flow label for the ACL. If defined, traffic with this flow label will match this ACL.

tclass <0-255>

Defines the traffic class for the ACL. If defined, traffic with this traffic class will match this ACL.

reset

Resets the IPv6 parameters for the ACL to their default values.

cur

Displays the current IPv6 parameters.

/cfg/acl/acl6 <ACL number>/tcpudp

IPv6 TCP/UDP Filtering Configuration

```
[Filtering TCP/UDP Menu]

sport - Set to filter on TCP/UDP source port

dport - Set to filter on TCP/UDP destination port

flags - Set to filter TCP/UDP flags

reset - Reset all fields

cur - Display current parameters
```

This menu allows you to define TCP/UDP matching criteria for an ACL.

Table 201. IPv6 ACL TCP/UDP Filtering Options

Command Syntax and Usage sport <source port (1-65535)> <mask (0xFFFF)> Defines a source port for the ACL. If defined, traffic with the specified TCP or UDP source port will match this ACL. Specify the port number. Listed here are some of the well-known ports: **Number Name** 20 ftp-data 21 ftp 22 ssh 23 telnet 25 smtp 37 time

80 http
dport <destination port (1-65535)> <mask (0xFFFF)>

Defines a destination port for the ACL. If defined, traffic with the specified TCP or UDP destination port will match this ACL. Specify the port number, just as with sport above.

```
flags <value (0x0-0x3f)> <mask (0x0-0x3f)>
```

Defines a TCP/UDP flag for the ACL.

reset

Displays the current TCP/UDP Filtering parameters.

/cfg/acl/acl6 <ACL number>/re-mark

IPv6 Re-Mark Configuration

```
[Re-mark Menu]
    inprof - In Profile Menu
              - Set Update User Priority Menu
    up1p
            - Set update 32-
- Reset re-mark settings
             - Display current settings
     cur
```

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

Table 202. IPv6 ACL Re-Mark Options

Displays current re-mark parameters.

Command Syntax and Usage Displays the Re-Mark In-Profile menu. To view menu options, see page 261. up1p Displays the Update User Priority menu. To view menu options, see page 261. reset Reset ACL re-mark parameters to their default values. cur

/cfg/acl/acl6 <ACL number>/re-mark/up1p

IPv6 Re-Marking User Priority Configuration

```
[Update User Priority Menu]

value - Set the update user priority

utosp - Enable/Disable use of TOS precedence

reset - Reset in profile uplp settings

cur - Display current settings
```

Table 203. IPv6 ACL Update User Priority Options

Command Syntax and Usage

```
value <0-7>
```

Re-marks the 802.1p value. The value is the priority bits information in the packet structure.

```
utosp enable|disable
```

Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.

reset

Resets UP1P settings to their default values.

cur

Displays current re-mark User Priority parameters for in-profile packets.

/cfg/acl/acl6 <ACL number>/re-mark/inprof

IPv6 Re-Marking In-Profile Configuration

```
[Re-marking - In Profile Menu]

updscp - Set the update DSCP

reset - Reset update DSCP settings

cur - Display current settings
```

Table 204. IPv6 ACL Re-mark In-Profile Options

Command Syntax and Usage

uplp

Displays the Re-Mark Update User Priority menu. To view menu options, see page 269.

```
updscp <0-63>
```

Re-marks the DiffServ Code Point (DSCP) of in-profile packets to the selected value.

Table 204. IPv6 ACL Re-mark In-Profile Options

reset

Resets the update DSCP parameters to their default values.

cur

Displays current re-mark parameters for in-profile packets.

/cfg/acl/acl6 <ACL number>/re-mark/inprof/up1p

Update User Priority Configuration

[Update User Priority Menu]

value - Set the update user priority

- Enable/Disable use of TOS precedence utosp reset - Reset in profile uplp settings

- Display current settings

Table 205. ACL Re-Mark Update User Priority Options

Command Syntax and Usage

value <*0-7*>

Re-marks the 802.1p value. The value is the priority bits information in the packet structure.

utosp enable disable

Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.

reset

Resets UP1P settings to their default values.

cur

Displays current re-mark User Priority parameters for in-profile packets.

/cfg/acl/group <ACL group number>

ACL Group Configuration Menu

```
[ACL Group 1 Menu]
add - Add ACL to group
rem - Remove ACL from group
cur - Display current ACL items in ACL group
```

This menu allows you to compile one or more ACLs into an ACL group. Once you create an ACL group, you can assign the ACL group to one or more ports.

Table 206. ACL Group Menu Options (/cfg/acl/group x)

Command Syntax and Usage add acl <1-640> Adds the selected ACL to the ACL group. rem acl <1-640> Removes the selected ACL from the ACL group. cur Displays the current ACL group parameters.

/cfq/acl/macl < 1-128 >

To view menu options, see page 272. action Sets the filter action. stats enable|disable Enables/Disables statistics. reset Resets filtering parameters. ena Enables the MACL. dis Disables the MACL. cur

/cfq/acl/macl <1-128>/ipv4

MACL IP Header Configuration

```
[Filtering IPv4 Menu]
            - Set to filter on source IP address
    sip
             - Set to filter on destination IP address
    proto - Set to filter on protocol
    reset
            - Reset all fields
             - Display current parameters
```

Displays the current filter configuration.

The following options are available for configuring MACL IP headers.

Table 208. MACL IP Header Configuration Parameters (/cfg/acl/macl/ipv4)

Command Syntax and Usage

sip <source IP address> <address mask> | reset

Sets IPv4 filtering to filter on source IP address.

dip <destination IP address> <address mask> | reset

Sets IPv4 filtering to filter on destination IP address.

```
proto <0-255>
```

Defines an IP protocol for the MACL. If defined, traffic from the specified protocol matches this filter. Specify the protocol number. Listed here are some of the well-known protocols.

Number	Name
1	icmp
2	igmp
6	tcp
17	udp
89	ospf
112	vrrp

reset

Resets all fields.

cur

Displays the current settings.

/cfg/acl/macl <1-128>/tcpudp

TCP/UDP Header Configuration

```
[Filtering TCP/UDP Menu]
sport - Set to filter on TCP/UDP source port
dport - Set to filter on TCP/UDP destination port
reset - Reset all fields
cur - Display current parameters
```

The following options are available for configuring TCP/UDP headers.

Table 209. TCP/UDP Header Configuration Parameters (/cfg/acl/macl/tcpudp)

Command Syntax and Usage

```
sport port number> <address mask> | reset
```

Sets IPv4 filtering to filter on TCP/UDP source port.

dport port number> <address mask> | reset

Sets IPv4 filtering to filter on TCP/UDP destination port.

Table 209. TCP/UDP Header Configuration Parameters (/cfg/acl/macl/tcpudp) (continued)

```
Command Syntax and Usage
reset
   Resets all fields.
cur
   Displays the current parameters.
```

/cfg/acl/vmap < 1-128>

VMAP Configuration

```
[VMAP 1 Menu]
   mirror - Mirror Options Menu
    ethernet - Ethernet Header Options Menu
   ipv4 - IP Header Options Menu
    tcpudp - TCP/UDP Header Options Menu
   meter - ACL Metering Configuration Menu
   re-mark - ACL Re-mark Configuration Menu
   pktfmt - Set to filter specific packet format types
    egrport - Set to filter for packets egressing this port
   action - Set filter action
            - Enable/disable statistics
    stats
    reset - Reset filtering parameters
    cur - Display current filter configuration
```

A VLAN Map is an Access Control List (ACL) that can be assigned to a VLAN or a VM group instead of a port. In a virtualized environment where Virtual Machines move between physical servers, VLAN Maps allow you to create traffic filtering and metering policies associated with a VM's VLAN.

For more information about VLAN Map configuration commands, see "Access Control List Configuration Menu" on page 254.

For more information about assigning VLAN Maps to a VLAN, see "VLAN Configuration Menu" on page 314.

For more information about assigning VLAN Maps to a VM group, see "VM Group" Configuration" on page 443.

/cfg/pmirr

Port Mirroring Configuration

```
[Port Mirroring Menu]
     monport - Monitoring Port based PM Menu
     mirror - Enable/Disable Mirroring
             - Display All Mirrored and Monitoring Ports
```

Port mirroring is disabled by default. For more information about port mirroring on the EN4093/EN4093R, see "Appendix A: Troubleshooting" in the IBM Networking OS Application Guide.

Note: Traffic on VLAN 4095 is not mirrored to the external ports.

The Port Mirroring Menu is used to configure, enable, and disable the monitor port. When enabled, network packets being sent and/or received on a target port are duplicated and sent to a monitor port. By attaching a network analyzer to the monitor port, you can collect detailed information about your network performance and usage.

Table 210. Port Mirroring Menu Options (/cfg/pmirr)

Command Syntax and Usage monport <port alias or number> Displays port-mirroring menu. To view menu options, see page 274. mirror disable|enable Enables or disables port mirroring cur Displays current settings of the mirrored and monitoring ports.

/cfq/pmirr/monport <port alias or number>

Port-Mirroring Configuration Menu

```
[Port EXT1 Menu]

add - Add "Mirrored" port

rem - Rem "Mirrored" port

delete - Delete this "Monitor" port

cur - Display current Port-based Port Mirroring configuration
```

Table 211. Port Mirroring Monitor Port Menu Options (/cfg/pmirr/monport)

Command Syntax and Usage

add <mirrored port (port to mirror from)> <direction (in, out, or both)>

Adds the port to be mirrored. This command also allows you to enter the direction of the traffic. It is necessary to specify the direction because:

If the source port of the frame matches the mirrored port and the mirrored direction is ingress or both (ingress and egress), the frame is sent to the monitoring port.

If the destination port of the frame matches the mirrored port and the mirrored direction is egress or both, the frame is sent to the monitoring port.

rem <mirrored port (port to mirror from)>

Removes the mirrored port.

delete

Deletes this monitor port.

cur

Displays the current settings of the monitoring port.

Layer 2 Configuration Menu

```
[Layer 2 Menu]

    pvstcomp - Enable/disable PVST+ compatibility mode
    loopgrd - Enable/disable Spanning Tree Loop Guard
    macnotif - Enable/disable MAC address notification
          - Display current layer 2 parameters
```

Table 212. Layer 2 Configuration Menu (/cfg/l2)

Command Syntax and Usage

8021x

Displays the 802.1X Configuration Menu. To view menu options, see page 277.

mrst

Displays the Rapid Spanning Tree/Multiple Spanning Tree Protocol Configuration Menu. To view menu options, see page 283.

nostp enable disable

When enabled, globally turns Spanning Tree off. All ports are placed into forwarding state. Any BPDU's received are flooded. BPDU Guard is not affected by this command.

stg <group number (1-128)>

Displays the Spanning Tree Configuration Menu. To view menu options, see page 287.

fdb

Displays the Forwarding Database Menu. To view menu options, see page 291.

еср

Displays the Edge Control Protocol menu. To view menu options, see page 293.

11dp

Displays the LLDP Menu. To view menu options, see page 294.

Table 212. Layer 2 Configuration Menu (/cfg/l2) (continued)

trunk <trunk number>

Displays the Trunk Group Configuration Menu. To view menu options, see page 297.

thash

Displays the Trunk Hash Menu. To view menu options, see page 298.

vlaq

Displays the Virtual Link Aggregation Control Protocol (vLAG) menu. To view menu options, see page 301.

lacp

Displays the Link Aggregation Control Protocol Menu. To view menu options, see page 304.

failovr

Displays the Failover Configuration Menu. To view menu options, see page 306.

hotlink

Displays the Hot Links Configuration menu. To view menu options, see page 311.

vlan <*VLAN number (1-4095)*>

Displays the VLAN Configuration Menu. To view menu options, see page 314.

vlanstg enable disable

Enables or disables VLAN Automatic STG Assignment (VASA). When enabled, each time a new VLAN is configured, the switch will automatically assign the new VLAN its own STG. Conversely, when a VLAN is deleted, if its STG is not associated with any other VLAN, the STG is returned to the available pool.

Note: VASA applies only to PVRST mode.

pvstcomp enable disable

Enables or disables VLAN tagging of Spanning Tree BPDUs. The default setting is <code>enabled</code>.

loopgrd enable disable

Enables or disables Spanning Tree Loop Guard.

cur

Displays current Layer 2 parameters.

802.1X Configuration Menu

             - Disable 802.1x access control
             - Show 802.1x configuration
     cur
```

This feature allows you to configure the EN4093/EN4093R as an IEEE 802.1X Authenticator, to provide port-based network access control.

Table 213. 802.1X Configuration Menu (/cfg/l2/8021x)

Command Syntax and Usage qlobal Displays the global 802.1X Configuration Menu. To view menu options, see page 278. port <port alias or number> Displays the 802.1X Port Menu. To view menu options, see page 281. Globally enables 802.1X. dis Globally disables 802.1X. cur Displays current 802.1X parameters.

/cfg/l2/8021x/global

802.1X Global Configuration Menu

```
[802.1X Global Configuration Menu]
gvlan - 802.1X Guest VLAN configuration menu
mode - Set access control mode
qtperiod - Set EAP-Request/Identity quiet time interval
txperiod - Set EAP-Request/Identity retransmission timeout
suptmout - Set EAP-Request retransmission timeout
svrtmout - Set server authentication request timeout
maxreq - Set max number of EAP-Request retransmissions
raperiod - Set reauthentication time interval
reauth - Set reauthentication status to on or off
vassign - Set dynamic VLAN assignment status to on or off
default - Restore default 802.1X configuration
cur - Display current 802.1X configuration
```

The global 802.1X menu allows you to configure parameters that affect all ports in the EN4093/EN4093R.

Table 214. 802.1X Global Configuration Menu Options (/cfg/l2/8021x/global)

Command Syntax and Usage

qvlan

Displays the 802.1X Guest VLAN Configuration Menu. To view menu options, see page 280.

mode force-unauth|auto|force-auth

Sets the type of access control for all ports:

- force-unauth: the port is unauthorized unconditionally.
- auto: the port is unauthorized until it is successfully authorized by the RADIUS server.
- force-auth: the port is authorized unconditionally, allowing all traffic.

The default value is force-auth.

```
qtperiod <0-65535>
```

Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/ Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.

```
txperiod <1-65535>
```

Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds.

```
suptmout <1-65535>
```

Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet to the authentication server. The default value is 30 seconds.

svrtmout <1-65535>

Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value is 30 seconds.

The time interval between transmissions of the RADIUS Access-Request packet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of /cfg/sys/radius/timeout (default is 3 seconds).

maxreq <1-10>

Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.

raperiod <1-604800>

Sets the time, in seconds, the authenticator waits before re-authenticating a supplicant (client) when periodic re-authentication is enabled. The default value is 3600 seconds.

reauth on off

Sets the re-authentication status to on or off. The default value is off.

vassign on off

Sets the dynamic VLAN assignment status to on or off. The default value is off.

default

Resets the global 802.1X parameters to their default values.

cur

Displays current global 802.1X parameters.

/cfg/l2/8021x/global/gvlan

802.1X Guest VLAN Configuration Menu

```
[802.1X Guest VLAN Configuration Menu]

vlan - Set 8021.x Guest VLAN number

ena - Enable 8021.xGuest VLAN

dis - Disable 8021.x Guest VLAN

cur - Display current Guest VLAN configuration
```

The 802.1X Guest VLAN menu allows you to configure a Guest VLAN for unauthenticated ports. The Guest VLAN provides limited access to switch functions.

Table 215. 802.1X Guest VLAN Configuration Menu (/cfg/l2/8021x/global/gvlan)

Command Syntax and Usage vlan <VLAN number> Configures the Guest VLAN number. ena Enables the 802.1X Guest VLAN. dis Disables the 802.1X Guest VLAN. cur Displays current 802.1X Guest VLAN parameters.

802.1X Port Configuration Menu

```
[802.1X Port Configuration Menu]
   mode - Set access control mode
   qtperiod - Set EAP-Request/Identity quiet time interval
   txperiod - Set EAP-Request/Identity retransmission timeout
   suptmout - Set EAP-Request retransmission timeout
   svrtmout - Set server authentication request timeout
   maxreq - Set max number of EAP-Request retransmissions
   raperiod - Set reauthentication time interval
   reauth - Set reauthentication status to on or off
   vassign - Set dynamic VLAN assignment status to on or off
   default - Restore default 802.1X configuration
   global - Apply current global 802.1X configuration to this port
           - Display current 802.1X configuration
```

The 802.1X port menu allows you to configure parameters that affect the selected port in the EN4093/EN4093R. These settings override the global 802.1X parameters.

Table 216. 802.1X Port Configuration Menu Options (/cfg/l2/8021x/port)

Command Syntax and Usage

mode force-unauth auto force-auth

Sets the type of access control for the port:

- force-unauth the port is unauthorized unconditionally.
- auto the port is unauthorized until it is successfully authorized by the RADIUS server.
- force-auth the port is authorized unconditionally, allowing all traffic.

The default value is force-auth.

```
qtperiod <0-65535>
```

Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/ Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.

```
txperiod <1-65535>
```

Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds.

```
suptmout <1-65535>
```

Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet to the authentication server. The default value is 30 seconds.

Table 216. 802.1X Port Configuration Menu Options (/cfg/l2/8021x/port) (continued)

svrtmout <1-65535>

Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value is 30 seconds.

The time interval between transmissions of the RADIUS Access-Request packet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of /cfg/sys/radius/timeout (default is 3 seconds).

maxreq <1-10>

Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.

raperiod <1-604800>

Sets the time, in seconds, the authenticator waits before re-authenticating a supplicant (client) when periodic re-authentication is enabled. The default value is 3600 seconds.

reauth on off

Sets the re-authentication status to on or off. The default value is off.

vassign on off

Sets the dynamic VLAN assignment status to on or off. The default value is off.

default

Resets the 802.1X port parameters to their default values.

global

Applies current global 802.1X configuration parameters to the port.

cur

Displays current 802.1X port parameters.

RSTP/MSTP/PVRST Configuration Menu

```
[Multiple Spanning Tree Menu]
  cist - Common and Internal Spanning Tree menu
  name - Set MST region name
         - Set revision level of this MST region
  maxhop - Set Maximum Hop Count for MST (4 - 60)
        - Spanning Tree Mode
         - Display current MST parameters
```

IBM Networking OS supports the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP), IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), and Per VLAN Rapid Spanning Tree Protocol (PVRST). MSTP allows you to map many VLANs to a small number of Spanning Tree Groups (STGs), each with its own topology.

Up to 32 Spanning Tree Groups can be configured in MSTP mode. MRST is turned off by default and the default STP mode is PVRST.

Note: When Multiple Spanning Tree is turned on, VLAN 4095 is moved from Spanning Tree Group 128 to the Common Internal Spanning Tree (CIST). When Multiple Spanning Tree is turned off, VLAN 4095 is moved back to Spanning Tree Group 128.

Table 217. MSTP/RSTP/PVRST Configuration Menu Options (/cfg/l2/mrst)

Command Syntax and Usage

cist

Displays the Common Internal Spanning Tree (CIST) Menu. To view menu options, see page 284.

name <1-32 characters>

Configures a name for the MSTP region. All devices within a MSTP region must have the same region name.

rev <0-65535>

Configures a version number for the MSTP region. The version is used as a numerical identifier for the region. All devices within a MSTP region must have the same version number.

maxhop <4-60>

Configures the maximum number of bridge hops a packet may traverse before it is dropped. The default is 20.

mode rstp | mstp | pvrst

Selects the Spanning Tree mode, as follows: Multiple Spanning Tree (mstp), Rapid Spanning Tree (rstp), Per VLAN Rapid Spanning Tree Plus (pvrst).

The default mode is STP/PVRST+.

cur

Displays the current RSTP/MSTP/PVRST+ configuration.

Common Internal Spanning Tree Configuration Menu

```
[Common Internal Spanning Tree Menu]

brg - CIST Bridge parameter menu

port - CIST Port parameter menu

add - Add VLAN(s) to CIST

default - Default Common Internal Spanning Tree and Member parameters

cur - Display current CIST parameters
```

Table 218 describes the commands used to configure Common Internal Spanning Tree (CIST) parameters. The CIST provides compatibility with different MSTP regions and with devices running different Spanning Tree instances. It is equivalent to Spanning Tree Group 0.

Table 218. CIST Menu Options (/cfg/l2/mrst/cist)

Displays the CIST Bridge Menu. To view menu options, see page 285. port <port alias or number> Displays the CIST Port Menu. To view menu options, see page 286. add <VLAN numbers> Adds selected VLANs to the CIST. default Resets all CIST parameters to their default values. cur Displays the current CIST configuration.

/cfq/l2/mrst/cist/brq

CIST Bridge Configuration Menu

```
[CIST Bridge Menu]
     prior - Set CIST bridge Priority (0-65535)
     mxage - Set CIST bridge Max Age (6-40 secs)
     fwd - Set CIST bridge Forward Delay (4-30 secs)
     cur - Display current CIST bridge parameters
```

CIST bridge parameters are used only when the switch is in MSTP mode. CIST parameters do not affect operation of STP/PVST+.

Table 219. CIST Bridge Configuration Menu Options (/cfg/l2/mrst/cist/brg)

Command Syntax and Usage

```
prior <0-65535>
```

Configures the CIST bridge priority. The bridge priority parameter controls which bridge on the network is the MSTP root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority.

The range is 0 to 65535, in steps of 4096 (0, 4096, 8192...). The default value is 61440.

```
mxage <6-40 seconds>
```

Configures the CIST bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the MSTP network. The range is 6 to 40 seconds, and the default is 20 seconds.

```
fwd <4-30 seconds>
```

Configures the CIST bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.

cur

Displays the current CIST bridge configuration.

/cfg/l2/mrst/cist/port port alias or number>

CIST Port Configuration Menu

```
[CIST Port 1 Menu]

prior - Set port Priority (0-240)

cost - Set port Path Cost (1-200000000, 0 for auto)

hello - Set CIST port Hello Time (1-10 secs)

pvst-pro - Enable/disable PVST Protection (for MSTP only)

on - Turn port's Spanning Tree ON

off - Turn port's Spanning Tree OFF

cur - Display current port Spanning Tree parameters
```

CIST port parameters are used to modify MRST operation on an individual port basis. CIST parameters do not affect operation of STP/PVST+, RSTP, or PVRST+. For each port, RSTP/MSTP is turned on by default.

Table 220. CIST Port Configuration Menu Options (/cfg/l2/mrst/cist/port)

Command Syntax and Usage

```
prior <0-240>
```

Configures the CIST port priority. The port priority helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment. The range is 0 to 240, in steps of 16 (0, 16, 32...), and the default is 128.

```
cost <0-2000000000>
```

Configures the CIST port path cost. The port path cost is used to help determine the designated port for a segment. Port path cost is based on the port speed, and is calculated as follows:

- -100Mbps = 200000
- 1Gbps = 20000
- -10Gbps = 2000

The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.

```
hello <1-10 seconds>
```

Configures the CIST port Hello time. The Hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge Hello value. The range is 1 to 10 seconds, and the default is 2 seconds.

```
pvst-pro enable|disable
```

Enables or disables PVST Protection on the selected port. If the port receives any PVST+/PVRST+ BPDUs, it error disabled. PVST Protection works only in MSTP mode. The default setting is disabled.

on

Enables MRST on the port.

Table 220. CIST Port Configuration Menu Options (/cfg/l2/mrst/cist/port) (continued)

Command Syntax and Usage off Disables MRST on the port. cur Displays the current CIST port configuration.

/cfq/l2/stq <STP group index>

Spanning Tree Configuration Menu

```
[Spanning Tree Group 1 Menu]
    brg - Bridge parameter menu
    port - Port parameter menu
    add - Add VLAN(s) to Spanning Tree Group
    remove - Remove VLAN(s) from Spanning Tree Group
    clear - Remove all VLANs from Spanning Tree Group
    off
          - Globally turn Spanning Tree OFF
    default - Default Spanning Tree and Member parameters
    cur - Display current bridge parameters
```

IBM Networking OS supports the IEEE 802.1D Spanning Tree Protocol (STP). STP is used to prevent loops in the network topology. Up to 128 Spanning Tree Groups can be configured on the switch (STG reserved for management).

Note: When VRRP is used for active/active redundancy, STG must be turned on.

Table 221. Spanning Tree Configuration Menu (/cfg/l2/stg)

Command Syntax and Usage

brq

Displays the Bridge Spanning Tree Menu. To view menu options, see page 288.

Displays the Spanning Tree Port Menu. To view menu options, see page 289.

add <*VLAN number*>

Associates a VLAN with a Spanning Tree and requires a VLAN ID as a parameter.

remove < VLAN number>

Breaks the association between a VLAN and a Spanning Tree and requires a VLAN ID as a parameter.

clear

Removes all VLANs from a Spanning Tree.

on

Globally enables Spanning Tree Protocol. STG is turned on by default.

Table 221. Spanning Tree Configuration Menu (/cfg/l2/stg) (continued)

off

Globally disables Spanning Tree Protocol.

default

Restores a Spanning Tree instance to its default configuration.

cur

Displays current Spanning Tree Protocol parameters.

/cfq/12/stq <STP group number>/brq

Spanning Tree Bridge Configuration Menu

```
[Bridge Spanning Tree Menu]

prior - Set bridge Priority [0-65535]

hello - Set bridge Hello Time [1-10 secs]

mxage - Set bridge Max Age (6-40 secs)

fwd - Set bridge Forward Delay (4-30 secs)

cur - Display current bridge parameters
```

Spanning Tree bridge parameters affect the global STG operation of the switch. STG bridge parameters include:

- · Bridge priority
- Bridge hello time
- Bridge maximum age
- Forwarding delay

Table 222. Spanning Tree Bridge Menu Options (/cfg/l2/stg/brg)

Command Syntax and Usage

prior <new bridge priority (0-65535)>

Configures the bridge priority. The bridge priority parameter controls which bridge on the network is the STG root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority. The default value is 65534.

RSTP/MSTP: The range is 0 to 61440, in steps of 4096 (0, 4096, 8192...), and the default is 61440.

hello <new bridge hello time (1-10 secs)>

Configures the bridge hello time. The hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value. The range is 1 to 10 seconds, and the default is 2 seconds.

This command does not apply to MSTP (see CIST on page 284).

Table 222. Spanning Tree Bridge Menu Options (/cfg/l2/stg/brg) (continued)

mxage < new bridge max age (6-40 secs)>

Configures the bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it re configures the STG network. The range is 6 to 40 seconds, and the default is 20 seconds.

This command does not apply to MSTP (see CIST on page 284).

fwd < new bridge Forward Delay (4-30 secs)>

Configures the bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.

This command does not apply to MSTP (see CIST on page 284).

cur

Displays the current bridge STG parameters.

When configuring STG bridge parameters, the following formulas must be used:

- 2*(fwd-1) > mxage
- $2*(hello+1) \leq mxage$

/cfg/12/stg <STP group index>/port <port alias or number>

Spanning Tree Port Configuration Menu

```
[Spanning Tree Port EXT1 Menu]
         - Set port Priority (0-255)
         - Set port Path Cost (1-65535 (802.1D) /
          1-200000000 (MSTP/RSTP) /0 for auto)
         - Turn port's Spanning Tree ON
 off
         - Turn port's Spanning Tree OFF
         - Display current port Spanning Tree parameters
```

By default for STP/PVST+, Spanning Tree is turned off for internal ports and management ports, and turned on for external ports. By default for RSTP/MSTP, Spanning Tree is turned off for internal ports and management ports, and turned on for external ports, with internal ports configured as edge ports. STG port parameters include:

- Port priority
- Port path cost

For more information about port Spanning Tree commands, see "Port Spanning Tree Configuration Menu" on page 247.

Table 223. Spanning Tree Port Menu Options (/cfg/l2/stg/port)

Command Syntax and Usage

prior <new port Priority (0-255)>

Configures the port priority. The port priority helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment. The default value is 128.

RSTP/MSTP: The range is 0 to 240, in steps of 16 (0, 16, 32...).

Note: In Stacking mode, the range is 0-255, in steps of 4 (0, 4, 8, 12...).

cost <1-65535, 0 for default)>

Configures the port path cost. The port path cost is used to help determine the designated port for a segment. Port path cost is based on the port speed, and is calculated as follows:

- -100Mbps = 19
- -1Gbps = 4
- 10Gbps = 2

The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.

on

Enables STG on the port.

off

Disables STG on the port.

cur

Displays the current STG port parameters.

Forwarding Database Configuration Menu

```
[FDB Menu]
    mcast
             - Static Multicast Menu
    static
            - Static FDB Menu
             - Configure FDB aging value
    aging
             - Display current FDB configuration
```

Use the following commands to configure the Forwarding Database (FDB) for the EN4093/EN4093R.

Table 224. FDB Menu Options (/cfg/l2/fdb)

```
Command Syntax and Usage
mcast
    Displays the static Multicast menu. To view menu options, see page 291.
static
    Displays the static FDB menu. To view menu options, see page 292.
aging < 0-65535 >
    Configures the aging value for FDB entries, in seconds. The default value is
    300.
cur
    Displays the current FDB parameters.
```

/cfq/12/fdb/mcast

Static Multicast MAC Configuration Menu

```
[Static Multicast Menu]
    add - Add a Multicast Address entry
            - Delete a Multicast Address entry
    del
    clear
            - Clear all Multicast Address entries
            - Display current Multicast Address configuration
```

The following options are available to control the forwarding of known and unknown multicast packets:

- All multicast packets are flooded to the entire VLAN. This is the default switch behavior.
- Known multicast packets are forwarded only to those ports specified. Unknown multicast packets are flooded to the entire VLAN. To configure this option, define the Multicast MAC address for the VLAN and specify ports that are to receive multicast packets (/cfq/12/fdb/mcast/add).
- Known multicast packets are forwarded only to those ports specified. Unknown multicast packets are dropped. To configure this option:
 - Define the Multicast MAC address for the VLAN and specify ports that are to receive multicast packets (/cfg/12/fdb/mcast/add).
 - Enable Flood Blocking on ports that are not to receive multicast packets (/cfg/port x/floodblk ena).

Use the following commands to configure static Multicast MAC entries in the Forwarding Database (FDB).

Table 225. Static Multicast MAC Menu Options (/cfg/l2/fdb/mcast)

/cfq/l2/fdb/static

Static FDB Configuration Menu

```
[Static FDB Menu]

add - Add a permanent FDB entry

del - Delete a static FDB entry

clear - Clear static FDB entries

cur - Display current static FDB configuration
```

Use the following commands to configure static entries in the Forwarding Database (FBD).

Table 226. Static FDB Menu Options (/cfg/l2/fdb/static)

```
Command Syntax and Usage

add <MAC address> <VLAN number> {port <port alias or number> |
    trunk <trunk number> | adminkey <value> }

Adds a permanent FDB entry. Enter the MAC address using the following format: xx:xx:xx:xx:xx:xx

For example, 08:00:20:12:34:56

You can also enter the MAC address as follows:
    xxxxxxxxxxx

For example, 08:00:20:12:34:56

del <MAC address> <VLAN number>
    Deletes a permanent FDB entry.
```

Table 226. Static FDB Menu Options (/cfg/l2/fdb/static) (continued)

clear <MAC address>|all {mac|vlan|port}

Clears static FDB entries.

cur

Display current static FDB configuration.

/cfg/l2/ecp

ECP Configuration

```
[Edge Control Protocol Configuration Menu]
    retrans - Set ECP retransmission interval
             - Show current ECP parameters
```

Use the following commands to configure Edge Control Protocol (ECP).

Table 227. ECP Configuration Options

Command Syntax and Usage

retrans < retransmission value>

Sets the retransmission value, in milliseconds. The default value is 1000ms.

cur

Display the current ECP configuration.

LLDP Configuration Menu

```
[LLDP configuration Menu]

port - LLDP Port Menu

msgtxint - Set transmission interval for LLDPDU

msgtxhld - Set holdtime multiplier for LLDP advertisement

notifint - Set minimum interval for successive trap notification

txdelay - Set delay interval between LLDP advertisements

redelay - Set reinitialization delay interval

on - Globally turn LLDP On

off - Globally turn LLDP Off

cur - Show current LLDP parameters
```

Use the following commands to configure Link Layer Detection Protocol (LLDP).

Table 228. LLDP Menu Options (/cfg/l2/lldp)

Command Syntax and Usage

port <port alias or number>

Displays the LLDP Port Configuration menu. To view menu options, see page 295.

```
msqtxint <5-32768>
```

Configures the message transmission interval, in seconds. The default value is 30.

```
msqtxhld <2-10>
```

Configures the message hold time multiplier. The hold time is configured as a multiple of the message transmission interval.

The default value is 4.

```
notifint <1-3600>
```

Configures the trap notification interval, in seconds. The default value is 5.

```
txdelay <1-8192>
```

Configures the transmission delay interval. The transmit delay timer represents the minimum time permitted between successive LLDP transmissions on a port.

The default value is 2.

```
redelay <1-10>
```

Configures the re-initialization delay interval, in seconds. The re-initialization delay allows the port LLDP information to stabilize before transmitting LLDP messages.

The default value is 2.

on

Globally turns LLDP on. The default setting is on.

Table 228. LLDP Menu Options (/cfg/l2/lldp) (continued)

off

Globally turns LLDP off.

cur

Display current LLDP configuration.

mgmtaddr - Enable/disable Management Address TLV for this port
portvid - Enable/disable Port VLAN ID TLV for this port
portprot - Enable/disable Port and Protocol VLAN ID TLV for this port
vlanname - Enable/disable VLAN Name TLV for this port
protid - Enable/disable Protocol Identity TLV for this port
macphy - Enable/disable MAC/PHY Configuration/Status TLV for this port
powermdi - Enable/disable Power Via MDI TLV for this port
linkaggr - Enable/disable Link Aggregation TLV for this port
framesz - Enable/disable Maximum Frame Size TLV for this port
        - Enable/disable DCBX TLV for this port
all
        - Enable/disable all the Optional TLVs for this port
cur - Display current Optional TLVs configuration
```

Use the following commands to configure LLDP port TLV (Type, Length, Value) options for the selected port.

Table 230. Optional TLV Menu Options (/cfg/l2/lldp/port x/tlv)

```
Command Syntax and Usage
portdesc d e
   Enables or disables the Port Description information type.
sysname de
   Enables or disables the System Name information type.
sysdescr d|e
   Enables or disables the System Description information type.
syscap d|e
   Enables or disables the System Capabilities information type.
mgmtaddr d|e
   Enables or disables the Management Address information type.
portvid d|e
   Enables or disables the Port VLAN ID information type.
portprot d|e
   Enables or disables the Port and VLAN Protocol ID information type.
vlanname d|e
   Enables or disables the VLAN Name information type.
protid d|e
   Enables or disables the Protocol ID information type.
```

Table 230. Optional TLV Menu Options (/cfg/l2/lldp/port x/tlv) (continued)

Command Syntax and Usage macphy d|e Enables or disables the MAC/Phy Configuration information type. powermdi d|e Enables or disables the Power via MDI information type. linkaggr d|e Enables or disables the Link Aggregation information type. framesz d|e Enables or disables the Maximum Frame Size information type. dcbx d|e Enables or disables the Data Center Bridging Capability Exchange (DCBX) information type. all d|e Enables or disables all optional TLV information types.

cur

Display current Optional TLV configuration.

/cfg/l2/trunk <trunk group number>

Trunk Configuration Menu

```
[Trunk group 1 Menu]
     add - Add port to trunk group
            - Remove port from trunk group
     rem
     ena - Enable trunk group
     dis - Disable trunk group
     del
            - Delete trunk group
            - Display current Trunk Group configuration
```

Trunk groups can provide super-bandwidth connections between EN4093/EN4093Rs or other trunk capable devices. A trunk is a group of ports that act together, combining their bandwidth to create a single, larger port. Up to 64 trunk groups can be configured on the EN4093/EN4093R, with the following restrictions:

- Any physical switch port can belong to no more than one trunk group.
- Up to 22 ports can belong to the same trunk group (32 ports when stacking is enabled).
- Configure all ports in a trunk group with the same properties (speed, duplex, flow control, STG, VLAN, and so on).
- Trunking from non-BLADE devices must comply with Cisco[®] EtherChannel[®] technology.

By default, each trunk group is empty and disabled.

Table 231. Trunk Configuration Menu Options (/cfg/l2/trunk)

Command Syntax and Usage

add <port alias or number>

Adds a physical port or ports to the current trunk group. You can add several ports, with each port separated by a comma (,) or a range of ports, separated by a dash (-).

rem <port alias or number>

Removes a physical port or ports from the current trunk group.

ena

Enables the current trunk group.

dis

Disables the current trunk group.

del

Removes the current trunk group configuration.

cur

Displays current trunk group parameters.

/cfg/l2/thash

Trunk Hash Configuration Menu

```
[Trunk Hash Menu]

12thash - L2 Trunk Hash Control

13thash - L3 Trunk Hash Control

ingress - Enable/disable ingress port hash

L4port - Enable/disable L4 port hash

cur - Display current Trunk Hash configuration
```

Use the following commands to configure IP trunk hash settings for the EN4093/EN4093R. Trunk hash parameters are set globally for the EN4093/EN4093R. The trunk hash settings affect both static trunks and LACP trunks.

To achieve the most even traffic distribution, select options that exhibit a wide range of values for your particular network. You may use the configuration settings listed in Table 232 combined with the hash parameters listed in Table 233.

Table 232. Trunk Hash Settings (/cfg/l2/thash)

Command Syntax and Usage

12thash

Displays the Layer 2 Trunk Hash Settings menu. To view menu options, see page 299.

13thash

Displays the Layer 3 Trunk Hash Settings menu. To view menu options, see page 300.

ingress e d

Enables or disables trunk hash computation based on the ingress port. The default setting is disabled.

L4port e d

Enables or disables use of Layer 4 service ports (TCP, UDP, and so on) to compute the hash value. The default setting is disabled.

cur

Display current trunk hash configuration.

/cfq/l2/thash/l2thash

Layer 2 Trunk Hash Menu

```
[L2 Trunk Hash Menu]
             - Enable/disable smac hash
    dmac
             - Enable/disable dmac hash
            - Display current trunk hash setting for L2 traffic
```

Layer 2 trunk hash parameters are set globally. You can enable one or both parameters, to configure any of the following valid combinations:

- SMAC (source MAC only)
- DMAC (destination MAC only)
- SMAC and DMAC

Use the following commands to configure Layer 2 trunk hash parameters for the switch.

Table 233. Layer 2 Trunk Hash Options (/cfg/l2/thash/l2thash)

Command Syntax and Usage

smac enable disable

Enables or disable Layer 2 trunk hashing on the source MAC.

Table 233. Layer 2 Trunk Hash Options (/cfg/l2/thash/l2thash) (continued)

dmac enable|disable

Enables or disable Layer 2 trunk hashing on the destination MAC.

cur

Displays current Layer 2 trunk hash settings.

/cfg/l2/thash/l3thash

Layer 3 Trunk Hash Menu

```
[L3 Trunk Hash Menu]

useL2 - Enable/disable L2 hash for IP packet

sip - Enable/disable sip hash for IP packet

dip - Enable/disable dip hash for IP packet

cur - Display current trunk hash setting for L3 traffic
```

Layer 3 trunk hash parameters are set globally. You can enable one or both parameters, to configure any of the following valid combinations:

- SIP (source IP only)
- DIP (destination IP only)
- SIP and DIP

Use the following commands to configure Layer 3 trunk hash parameters for the switch.

Table 234. Layer 3 Trunk Hash Options (/cfg/l2/thash/l3thash)

Command Syntax and Usage

useL2 enable disable

Enables or disables use of Layer 2 hash parameters only. When enabled, Layer 3 hashing parameters are cleared.

sip enable disable

Enables or disables Layer 3 trunk hashing on the source IP address.

dip enable disable

Enables or disables Layer 3 trunk hashing on the destination IP address.

cur

Displays current Layer 3 trunk hash settings.

Virtual Link Aggregation Control Protocol Configuration

```
[vLAG Menu]
    trunk
            - Set vLAG underlying Trunk
    adminkey - Set vLAG underlying LACP channel
    hlthchk - Set vLAG Health Check Menu
    isl - Set ISL properties
    enable - Enable vLAG globally
    disable - Disable vLAG globally
    tier-id - Set vLAG Tier ID
    priority - Set vLAG priority
    delay - Set vLAG Startup Delay interval
            - Display current vLAG configuration
```

vLAG groups allow you to enhance redundancy and prevent implicit loops without using STP. The vLAG group acts as a single virtual entity for the purpose of establishing a multi-port trunk.

Table 235. vLAG Configuration Options

Command Syntax and Usage

trunk <trunk group number>

Defines a trunk group as a vLAG. To view menu options, see page 302.

adminkey < 1-65535 >

Defines an LACP admin key as a vLAG. LACP trunks formed with this admin key will be included in the vLAG configuration. To view menu options, see page 302.

hlthchk

Displays the vLAG health check menu. To view menu options, see page 302.

isl

Displays the ISL Configuration menu. To view menu options, see page 303.

enable

Enables vLAG globally.

disable

Disables vLAG globally.

tier-id <0-512>

Sets the vLAG peer ID. To disable this, set the vLAG peer ID to 0 (zero).

priority <0-65535>

Configures the vLAG priority for the switch, used for election of Primary and Secondary vLAG switches. The switch with lower priority is elected to the role of Primary vLAG switch.

delay <0-3600 seconds>

Sets the vLAG startup delay interval, in seconds.

cur

Displays current vLAG parameters.

/cfg/l2/vlag/trunk <trunk ID>

vLAG Trunk Configuration

```
[vLAG trunk 4 Menu]
ena - Enable a vLAG
dis - Disable a vLAG
cur - Display current vLAG configuration
```

Table 236. vLAG Trunk Configuration Options

ena Enables vLAG on the selected trunk group. dis Disables vLAG on the selected trunk group. cur Displays current vLAG trunk parameters.

/cfg/l2/vlag/adminkey <1-65535>

vLAG LACP Configuration

```
[Set vLAG underlying LACP channel]
ena - Enable a vLAG
dis - Disable a vLAG
cur - Display current vLAG configuration
```

Table 237. vLAG LACP Configuration Options

```
ena
Enables vLAG on LACP trunks formed from the selected LACP admin key.

dis
Disables vLAG on LACP trunks formed from the selected LACP admin key.

cur
Displays current vLAG LACP parameters.
```

/cfq/12/vlaq/hlthchk

vLAG Health Check Configuration

```
[vLAG Health Check Menu]
    peer-ip
                          - Set health check peer ip
    connect-retry-interval - Set health check Connect-retry interval
    keepalive-attempts - Set health check keepalive attempts
    keepalive-interval
                         - Set health check Keepalive interval
```

These commands allow you to configure a health check of synchronization between vLAG peers.

Table 238. vLAG Health Check Configuration Options

Command Syntax and Usage

```
peer-ip <IP address>
```

Configures the IP address of the vLAG peer.

```
connect-retry-interval <1-300>
```

Sets the vLAG health check connect retry interval, in seconds. The default value is 30.

```
keepalive-attempts <1-24>
```

Sets the number of vLAG keep alive attempts. The default value is 3.

```
keepalive-interval <2-300>
```

Sets the time between vLAG keep alive attempts, in seconds. The default value is 5.

/cfq/l2/vlaq/isl

vLAG ISL Configuration

```
[vLAG ISL Menu]
    trunk - Set ISL Trunk
    adminkey - Set ISL LACP channel
    vlan - Set ISL VLAN
            - Display current vLAG configuration
```

These commands allow you to configure a dedicated inter-switch link (ISL) for synchronization between vLAG peers.

Table 239. vLAG ISL Configuration Options

Command Syntax and Usage

trunk <trunk group number>

Defines a trunk group used for the vLAG Inter-Switch Link (ISL).

```
adminkey <1-65535>
```

Defines an LACP admin key used for the vLAG Inter-Switch Link (ISL). LACP trunks formed with this admin key will be included in the ISL.

Table 239. vLAG ISL Configuration Options

vlan <VLAN number>

Defines the VLAN used to carry vLAG protocol data.

cur

Displays current vLAG ISL parameters.

/cfg/l2/lacp

LACP Configuration Menu

```
[LACP Menu]

port - LACP Port Menu

sysprio - Set LACP system priority

timeout - Set LACP system timeout scale for timing out partner

info

delete - Delete an LACP trunk

default - Restore default LACP system configuration

cur - Display current LACP configuration
```

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the EN4093/EN4093R.

Table 240. LACP Menu Options (/cfg/l2/lacp)

Command Syntax and Usage

port <port alias or number>

Displays the LACP Port menu. To view menu options, see page 305.

```
sysprio <1-65535>
```

Defines the priority value (1 through 65535) for the EN4093/EN4093R. Lower numbers provide higher priority. The default value is 32768.

```
timeout short long
```

Defines the timeout period before invalidating LACP data from a remote partner. Choose short (3 seconds) or long (90 seconds). The default value is long.

Note: It is recommended that you use a timeout value of long, to reduce LACPDU processing. If your EN4093/EN4093R's CPU utilization rate remains at 100% for periods of 90 seconds or more, consider using static trunks instead of LACP.

```
delete <1-65535>
```

Deletes a selected LACP trunk, based on its *admin key*. This command is equivalent to disabling LACP on each of the ports configured with the same *admin key*.

Table 240. LACP Menu Options (/cfg/l2/lacp) (continued)

default sysprio|timeout

Restores the selected parameters to their default values.

cur

Display current LACP configuration.

/cfg/l2/lacp/port cfg/l2/lacp/port cfg/l2/lacp/port cfg/l2/lacp/port

LACP Port Configuration Menu

```
[LACP Port EXT1 Menu]
   mode - Set LACP mode
    prio - Set LACP port priority
    adminkey - Set LACP port admin key
    minlinks - Set LACP port minimum links
    default - Restore default LACP port configuration
         - Display current LACP port configuration
```

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the selected port.

Table 241. LACP Port Menu Options (/cfg/l2/lacp/port)

Command Syntax and Usage

mode off|active|passive

Set the LACP mode for this port, as follows:

- off: Turn LACP off for this port. You can use this port to manually configure a static trunk. The default value is off.
- active: Turn LACP on and set this port to active. Active ports initiate LACPDUs.
- passive: Turn LACP on and set this port to passive. Passive ports do not initiate LACPDUs, but respond to LACPDUs from active ports.

```
prio <1-65535>
```

Sets the priority value for the selected port. Lower numbers provide higher priority. The default value is 32768.

```
adminkey <1-65535>
```

Set the admin key for this port. Only ports with the same admin key and oper key (operational state generated internally) can form a LACP trunk group.

```
minlinks < 1-32 >
```

Set the minimum number of links for this port. If the specified minimum number of ports are not available, the trunk is placed in the down state.

Table 241. LACP Port Menu Options (/cfg/l2/lacp/port) (continued)

default adminkey | mode | prio

Restores the selected parameters to their default values.

cur

Displays the current LACP configuration for this port.

/cfg/l2/failovr

Layer 2 Failover Configuration Menu

```
[Failover Menu]

trigger - Trigger Menu

vlan - Globally turn VLAN Monitor ON/OFF

on - Globally turn Failover ON

off - Globally turn Failover OFF

cur - Display current Failover configuration
```

Use this menu to configure Layer 2 Failover. For more information about Layer 2 Failover, see "High Availability" in the *IBM Networking OS Application Guide*.

Table 242. Layer 2 Failover Menu Options (/cfg/l2/failovr)

Command Syntax and Usage

trigger <1-8>

Displays the Failover Trigger menu. To view menu options, see page 307.

vlan on|off

Globally turns VLAN monitor on or off. When the VLAN Monitor is on, the switch automatically disables only internal ports that belong to the same VLAN as ports in the failover trigger. The default value is off.

on

Globally turns Layer 2 Failover on.

off

Globally turns Layer 2 Failover off.

cur

Displays current Layer 2 Failover parameters.

/cfq/l2/failovr/trigger <1-8>

Failover Trigger Configuration Menu

```
[Trigger 1 Menu]
   amon - Auto Monitor Menu
    mmon - Manual Monitor Menu
   limit - Limit of Trigger
    ena - Enable Trigger
    dis
          - Disable Trigger
    del
           - Delete Trigger
    cur - Display current Trigger configuration
```

Table 243. Failover Trigger Menu Options (/cfg/l2/failovr/trigger)

Command Syntax and Usage

amon

Displays the Auto Monitor menu for the selected trigger. To view menu options, see page 308.

mmon

Displays the Manual Monitor menu for the selected trigger. To view menu options, see page 308.

limit <0-1024>

Configures the minimum number of operational links allowed within each trigger before the trigger initiates a failover event. If you enter a value of zero (0), the switch triggers a failover event only when no links in the trigger are operational.

Enables the selected trigger.

dis

Disables the selected trigger.

del

Deletes the selected trigger.

cur

Displays the current failover trigger settings.

/cfg/l2/failovr/trigger <1-8>/amon

Auto Monitor Configuration Menu

```
[Auto Monitor Menu]

addtrnk - Add trunk to Auto Monitor

remtrnk - Remove trunk from Auto Monitor

addkey - Add LACP port adminkey to Auto Monitor

remkey - Remove LACP port adminkey from Auto Monitor

cur - Display current Auto Monitor configuration
```

Table 244. Auto Monitor Menu Options (/cfg/l2/failovr/trigger/amon)

Command Syntax and Usage

addtrnk <trunk group number)>

Adds a trunk group to the Auto Monitor.

remtrnk <trunk group number>

Removes a trunk group from the Auto Monitor.

addkey <1-65535>

Adds an LACP *admin key* to the Auto Monitor. LACP trunks formed with this *admin key* will be included in the Auto Monitor.

remkey <1-65535>

Removes an LACP admin key from the Auto Monitor.

cur

Displays the current Auto Monitor settings.

/cfg/l2/failovr/trigger <1-8>/mmon

Manual Monitor Configuration Menu

```
[Manual Monitor Menu]

monitor - Monitor Menu

control - Control Menu

cur - Display current Manual Monitor configuration
```

Use this menu to configure Failover Manual Monitor. These menus allow you to manually define both the monitor and control ports that participate in failover teaming.

Note: AMON and MMON configurations are mutually exclusive.

Table 245. Failover Manual Monitor options (/cfg/l2/failovr/trigger/mmon)

Command Syntax and Usage

monitor

Displays the Manual Monitor - Monitor menu for the selected trigger.

Table 245. Failover Manual Monitor options (/cfg/l2/failovr/trigger/mmon) (continued)

control

Displays the Manual Monitor - Control menu for the selected trigger.

cur

Displays the current Manual Monitor settings.

/cfg/l2/failovr/trigger <1-8>/mmon/monitor

Manual Monitor Port Configuration Menu

```
[Monitor Menu]
    addport - Add port to Monitor
    remport - Remove port from Monitor
    addtrnk - Add trunk to Monitor
    remtrnk - Remove trunk from Monitor
    addkey - Add LACP port adminkey to Monitor
    remkey - Remove LACP port adminkey from Monitor
             - Display current Monitor configuration
```

Use this menu to define the port link(s) to monitor. The Manual Monitor Port configuration accepts only external uplink ports.

Table 246. Failover Manual Monitor Port Options (/cfg/l2/failovr/trigger/mmon/monitor)

Command Syntax and Usage

addport <port alias or number>

Adds the selected port to the Manual Monitor Port configuration.

remport <port alias or number>

Removes the selected port from the Manual Monitor Port configuration.

addtrnk < trunk number>

Adds a trunk group to the Manual Monitor Port configuration.

remtrnk <trunk number>

Removes a trunk group from the Manual Monitor Port configuration.

addkey <1-65535>

Adds an LACP admin key to the Manual Monitor Port configuration. LACP trunks formed with this admin key will be included in the Manual Monitor Port configuration.

remkey < 1-65535 >

Removes an LACP admin key from the Manual Monitor Port configuration.

cur

Displays the current Manual Monitor Port configuration.

/cfg/l2/failovr/trigger <1-8>/mmon/control

Manual Monitor Control Configuration Menu

```
[Control Menu]

addport - Add port to Control

remport - Remove port from Control

addtrnk - Add trunk to Control

remtrnk - Remove trunk from Control

addkey - Add LACP port adminkey to Control

remkey - Remove LACP port adminkey from Control

cur - Display current Control configuration
```

Use this menu to define the port link(s) to control. The Manual Monitor Control configuration accepts internal and external ports, but not management ports.

Table 247. Failover Manual Monitor Control Options (/cfg/l2/failovr/trigger/mmon/control)

Command Syntax and Usage

addport port alias or number>

Adds the selected port to the Manual Monitor Control configuration.

remport <port alias or number>

Removes the selected port from the Manual Monitor Control configuration.

addtrnk <trunk number>

Adds a trunk group to the Manual Monitor Control configuration.

remtrnk <trunk number>

Removes a trunk group from the Manual Monitor Control configuration.

addkey <1-65535>

Adds an LACP *admin key* to the Manual Monitor Control configuration. LACP trunks formed with this *admin key* will be included in the Manual Monitor Control configuration.

remkey <1-65535>

Removes an LACP admin key from the Manual Monitor Control configuration.

cur

Displays the current Manual Monitor Control configuration.

/cfq/l2/hotlink

Hot Links Configuration Menu

```
[Hot Links Menu]
     trigger - Trigger Menu
     bpdu - Enable/disable BPDU flood
sndfdb - Enable/disable FDB update
     sndrate - Set FDB update rate
              - Globally turn Hot Links ON
              - Globally turn Hot Links OFF
              - Display current Hot Links configuration
```

Table 248 describes the Hot Links menu options.

Table 248. Hot Links Menu Options (/cfg/l2/hotlink)

Command Syntax and Usage

trigger <1-25>

Displays the Hot Links Trigger menu. To view menu options, see page 312.

bpdu enable|disable

Enables or disables flooding of Spanning-Tree BPDUs on the active Hot Links interface when the interface belongs to a Spanning Tree group that is globally turned off. This feature can prevent unintentional loop scenarios (for example, if two uplinks come up at the same time).

The default setting is disabled.

sndfdb enable|disable

Enables or disables FDB Update, which allows the switch to send FDB and MAC update packets over the active interface.

The default setting is disabled.

sndrate <10-1000>

Configures the FDB Update rate, in packets per second.

on

Globally turns Hot Links on. The default value is off.

off

Globally turns Hot Links off.

cur

Displays current Hot Links configuration.

/cfg/l2/hotlink/trigger <1-25>

Hot Links Trigger Configuration Menu

```
[Trigger 2 Menu]

master - Master Menu
backup - Backup Menu
fdelay - Set Forward Delay (secs)
name - Set Trigger Name
preempt - Enable/disable Preemption
ena - Enable Trigger
dis - Disable Trigger
del - Delete Trigger
cur - Display current Trigger configuration
```

Table 249. Hot Links Trigger Menu Options (/cfg/l2/hotlink/trigger)

Command Syntax and Usage

master

Displays the Master interface menu for the selected trigger. To view menu options, see page 313.

backup

Displays the Backup interface menu for the selected trigger. To view menu options, see page 313.

fdelay <0-3600>

Configures the Forward Delay interval, in seconds. The default value is 1.

name <1-32 characters>

Configures a name for the trigger.

preempt e d

Enables or disables pre-emption, which allows the Master interface to transition to the Active state whenever it becomes available.

The default setting is enabled.

ena

Enables the Hot Links trigger.

dis

Disables the Hot Links trigger.

del

Deletes the Hot Links trigger.

cur

Displays the current Hot Links trigger configuration.

/cfq/l2/hotlink/trigger <1-25>/master

Hot Links Trigger Master Configuration Menu

```
[Master Menu]
   port - Set port in Master
    trunk - Set trunk in Master
    adminkey - Set adminkey in Master
    cur - Display current Master configuration
```

Table 250. Hot Links Trigger Master menu (/cfg/l2/hotlink/trigger/master)

Command Syntax and Usage

Adds the selected port to the Master interface. Enter 0 (zero) to clear the port.

```
trunk <trunk number> | 0
```

Adds the selected trunk group to the Master interface. Enter 0 (zero) to clear the trunk group.

```
adminkey < 1-65535 >
```

Adds an LACP admin key to the Master interface. LACP trunks formed with this admin key will be included in the Master interface. Enter 0 (zero) to clear the admin key.

cur

Displays the current Hot Links Master interface configuration.

/cfg/l2/hotlink/trigger <1-25>/backup

Hot Links Trigger Backup Configuration Menu

```
[Backup Menu]
   port - Set port in Backup
    trunk - Set trunk in Backup
    adminkey - Set adminkey in Backup
    cur - Display current Backup configuration
```

Table 251. Hot Links Trigger Backup menu (/cfg/l2/hotlink/trigger/backup)

Command Syntax and Usage

port <port alias or number>

Adds the selected port to the Backup interface. Enter 0 (zero) to clear the port.

trunk < trunk number > | 0

Adds the selected trunk to the Backup interface. Enter 0 (zero) to clear the trunk group.

Table 251. Hot Links Trigger Backup menu (/cfg/l2/hotlink/trigger/backup) (continued)

```
adminkey <1-65535>
```

Adds an LACP *admin key* to the Backup interface. LACP trunks formed with this *admin key* will be included in the Backup interface. Enter 0 (zero) to clear the *admin key*.

cur

Displays the current Hot Links Backup interface settings.

/cfg/12/vlan <*VLAN number*>

VLAN Configuration Menu

```
[VLAN 1 Menu]
    pvlan - Protocol VLAN Menu
    privlan - Private-VLAN Menu
    name - Set VLAN name
            - Assign VLAN to a Spanning Tree Group
            - Set VMAP for this vlan
    vmap
    add
            - Add port to VLAN
            - Remove port from VLAN
    def
           - Define VLAN as list of ports
    mgmt - Enable/Disable this VLAN as additional management VLAN
    addvport - Add virtual port to this VLAN
    remvport - Remove virtual port from this VLAN
            - Enable VLAN
    dis
            - Disable VLAN
    del
            - Delete VLAN
            - Display current VLAN configuration
```

The commands in this menu configure VLAN attributes, change the status of each VLAN, change the port membership of each VLAN, and delete VLANs.

By default, VLAN 1 is the only VLAN configured on the switch. Internal server ports and external uplink ports are members of VLAN 1 by default. Up to 4094 VLANs can be configured on the EN4093/EN4093R.

VLANs can be assigned any number between 1 and 4094. VLAN 4095 is reserved for switch management.

Table 252. VLAN Configuration Menu Options (/cfg/l2/vlan)

Command Syntax and Usage

pvlan < 1-8 >

Displays the Protocol-based VLAN menu. To view menu options, see page 316.

privlan

Displays the Private VLAN menu. To view menu options, see page 318.

name

Assigns a name to the VLAN or changes the existing name. The default VLAN name is the first one.

Table 252. VLAN Configuration Menu Options (/cfg/l2/vlan) (continued)

stg <Spanning Tree Group index>

Assigns a VLAN to a Spanning Tree Group.

vmap {add|rem} <1-128> [extports|intports]

Adds or removes a VLAN Map to the VLAN membership. You can choose to limit operation of the VLAN Map to internal ports only or external ports only. If you do not select a port type, the VMAP is applied to the entire VLAN.

add <port alias or number>

Adds port(s) to the VLAN membership.

rem <port alias or number>

Removes port(s) from this VLAN.

def <list of port numbers>

Defines which ports are members of this VLAN. Every port must be a member of at least one VLAN. By default, internal server ports (INTx) and external ports (EXTx) are in VLAN 1.

mgmt enable|disable

Configures this VLAN as a management VLAN. You must add the management ports to each new management VLAN. External ports cannot be added to management VLANs.

addvport <2-4094>.<1-4>

Adds a virtual port to this VLAN.

remvport <2-4094>.<1-4>

Removes a virtual port from this VLAN.

ena

Enables this VLAN.

dis

Disables this VLAN without removing it from the configuration.

del

Deletes this VLAN.

cur

Displays the current VLAN configuration.

Note: All ports must belong to at least one VLAN. Any port which is removed from a VLAN and which is not a member of any other VLAN is automatically added to default VLAN 1. You cannot remove a port from VLAN 1 if the port has no membership in any other VLAN. Also, you cannot add a port to more than one VLAN unless the port has VLAN tagging turned on (see the tag command on page 240).

/cfq/l2/vlan/pvlan cfq/l2/vlan/pvlan cfq/l2/vlan/pvlan

Protocol-Based VLAN Configuration Menu

```
[VLAN 1 Protocol 1 Menu]
   pty - Set protocol type
    protocol - Select a predefined protocol
    prio - Set priority to protocol
           - Add port to PVLAN
    add
    rem - Remove port from PVLAN
    ports - Add/Remove a list of ports to/from PVLAN
    tagpvl - Enable/Disable port tagging for PVLAN
    taglist - Enable tagging a port list for PVLAN
    ena - Enable protocol
    dis
           - Disable protocol
    del
            - Delete protocol
          - Display current PVLAN configuration
```

Use this menu to configure Protocol-based VLAN (PVLAN) for the selected VLAN.

```
Table 253. PVLAN Menu Options (/cfg/l2/vlan/pvlan)
Command Syntax and Usage
pty <(Ether2|SNAP|LLC)> <Ethernet type>
   Configures the frame type and the Ethernet type for the selected protocol.
   Ethernet type consists of a 4-digit (16 bit) hex code, such as 0080 (IPv4).
protocol <Protocol type>
   Selects a pre-defined protocol, as follows:
   - decEther2:DEC Local Area Transport
   - ipv4Ether2:Internet IP (IPv4)
   - ipv6Ether2:IPv6
   - ipx802.2:Novell IPX 802.2
   - ipx802.3:Novell IPX 802.3
   - ipxEther2:Novell IPX
   ipxSnap:Novell IPX SNAP
   - netbios: NetBIOS 802.2
   - rarpEther2:Reverse ARP
   - sna802.2:SNA 802.2

    snaEther2:IBM SNA Service on Ethernet

   - vinesEther2:Banyan VINES
   - xnsEther2:XNS Compatibility
prio <0-7>
   Configures the priority value for this PVLAN.
add <port alias or number>
   Adds a port to the selected PVLAN.
rem <port alias or number>
   Removes a port from the selected PVLAN.
```

Table 253. PVLAN Menu Options (/cfg/l2/vlan/pvlan) (continued)

Defines a list of ports that belong to the selected protocol on this VLAN. Enter 0 (zero) to remove all ports.

tagpvl enable disable

Enables or disables port tagging on this PVLAN.

taglist { < port alias or number, or a list or range of ports > | empty}

Defines a list of ports that will be tagged by the selected protocol on this VLAN. Enter empty to disable tagging on all ports by this PVLAN.

ena

Enables the selected protocol on the VLAN.

dis

Disables the selected protocol on the VLAN.

del

Deletes the selected protocol configuration from the VLAN.

cur

Displays current parameters for the selected PVLAN.

/cfq/l2/vlan/privlan

Private VLAN Configuration Menu

```
[privlan Menu]

type - Set Private-VLAN type

map - Associate secondary VLAN with a primary VLAN

ena - Enable Private-VLAN

dis - Disable Private-VLAN

cur - Display current Private-VLAN configuration
```

Use this menu to configure a Private VLAN.

Table 254. Private VLAN Menu Options (/cfg/l2/vlan/privlan)

Command Syntax and Usage

type {none|primary|isolated|community}

Defines the VLAN type, as follows:

- none: Clears the Private VLAN type.
- primary: A Private VLAN must have only one primary VLAN. The primary VLAN carries unidirectional traffic to ports on the isolated VLAN or to community VLAN.
- isolated: The isolated VLAN carries unidirectional traffic from host ports.
 A Private VLAN may have only one isolated VLAN.
- community: Community VLANs carry upstream traffic from host ports. A Private VLAN may have multiple community VLANs.

```
map <2-4094> | none
```

Configures Private VLAN mapping between a secondary VLAN (isolated or community) and a primary VLAN. Enter the primary VLAN ID.

ena

Enables the Private VLAN.

dis

Disables the Private VLAN.

cur

Displays current parameters for the selected Private VLAN.

Layer 3 Configuration Menu

ppt

Displays the Prefix Policy Table menu. To view menu options, see page 410.

loopif

Displays the IP Loopback Interface Menu. To view menu options, see page 411.

rtrid <IP address (such as, 192.4.17.101)>

Sets the router ID.

flooding

Displays the Flooding Configuration Menu. To view menu options, see page 412.

cur

Displays the current IP configuration.

/cfq/l3/if <interface number>

IP Interface Configuration Menu

```
[IP Interface 1 Menu]
    addr - Set IP address
    vlan - Set VLAN number
    relay - Enable/disable BOOTP relay
    ena
            - Enable IP interface
    dis
            - Disable IP interface
            - Delete IP interface
    del
            - Display current interface configuration
```

The EN4093/EN4093R can be configured with up to 128 IP interfaces. Each IP interface represents the EN4093/EN4093R on an IP subnet on your network. The Interface option is disabled by default.

IP interfaces 127 and 128 are reserved for switch management. If the IPv6 feature is enabled on the switch, IP interfaces 125 and 126 are also reserved.

Note: To maintain connectivity between the management module and the EN4093/EN4093R, use the management module interface to change the IP address of the switch.

Table 256. IP Interface Menu Options (/cfg/l3/if)

Command Syntax and Usage

addr <IPv4 address (such as 192.4.17.101)>

Configures the IPv4 address of the switch interface, using dotted decimal notation.

vlan <*VLAN number*>

Configures the VLAN number for this interface. Each interface can belong to only one VLAN. Each VLAN can contain multiple IPv4 interfaces.

relay disable enable

Enables or disables the BOOTP relay on this interface. The default setting is enabled.

ena

Enables this IP interface.

dis

Disables this IP interface.

del

Removes this IP interface.

cur

Displays the current interface settings.

/cfg/l3/gw < gateway number >

Default Gateway Configuration Menu

```
[Default gateway 1 Menu]

addr - Set IP address

intr - Set interval between ping attempts

retry - Set number of failed attempts to declare gateway DOWN

arp - Enable/disable ARP only health checks

ena - Enable default gateway

dis - Disable default gateway

del - Delete default gateway

cur - Display current default gateway configuration
```

The switch can be configured with up to 4 IPv4 gateways.

This option is disabled by default.

Table 257. Default Gateway Menu Options (/cfg/l3/gw)

Command Syntax and Usage

addr <default gateway address (such as, 192.4.17.44)>

Configures the IP address of the default IP gateway using dotted decimal notation.

intr <0-60 seconds>

The switch pings the default gateway to verify that it's up. The introption sets the time between health checks. The range is from 0 to 60 seconds. The default is 2 seconds.

retry < number of attempts (1-120)>

Sets the number of failed health check attempts required before declaring this default gateway inoperative. The range is from 1 to 120 attempts. The default is 8 attempts.

arp disable enable

Enables or disables Address Resolution Protocol (ARP) health checks. The default value is disabled. The arp option does not apply to management gateways.

ena

Enables the gateway for use.

dis

Disables the gateway.

del

Deletes the gateway from the configuration.

cur

Displays the current gateway settings.

IPv4 Static Route Configuration Menu

```
[IP Static Route Menu]

add - Add static route

rem - Remove static route

clear - Clear static routes

interval - Change ECMP route health check ping interval

retries - Change the number of retries for ECMP health check

ecmphash - Choose ECMP hash mechanism sip/dipsip

cur - Display current static routes
```

Up to 128 IPv4 static routes can be configured.

Table 258. IP Static Route Configuration Menu Options (cfg/l3/route)

Command Syntax and Usage

```
add <destination> <mask> <gateway> [<interface number>]
```

Adds a static route. You will be prompted to enter a destination IP address, destination subnet mask, and gateway address. Enter all addresses using dotted decimal notation.

Note: You may add multiple routes with the same IP address, but with different gateways. These routes become Equal Cost Multipath (ECMP) routes. The maximum number of gateways for each destination is five (5).

```
rem <destination> <mask> [<interface number>]
```

Removes a static route. The destination address of the route to remove must be specified using dotted decimal notation.

Note: The gateway IP address is optional. Include the gateway when you remove an ECMP route. If you do not include the gateway, then all ECMP paths for the route are deleted.

```
clear <destination IP address> | <gateway IP address> | all <value>
```

Clears the selected IPv4 static routes.

Note: Use the gateway IP address to clear a single gateway for an ECMP route.

```
interval <1-60>
```

Configures the ping interval for ECMP health checks, in seconds. The default value is one second.

```
retries < 1-60>
```

Configures the number of health check retries allowed before the switch declares that the gateway is down. The default value is 3.

```
ecmphash [sip] [dipsip]
```

Configures ECMP route hashing parameters. You may choose one of the following parameters:

- sip: Source IP address
- dipsip: Destination IP address and source IP address

cur

Displays the current IPv4 static routes.

IP Multicast Route Configuration Menu

```
[IPMC Static Route Menu]
    addport - Add static IP Multicast route for port
    remport - Remove static IP Multicast route for port
    addtrnk - Add static IP Multicast route for trunk
    remtrnk - Remove static IP Multicast route for trunk
    addkey - Add static IP Multicast route for Lacp adminkey
    remkey - Remove static IP Multicast route or Lacp adminkey
            - Display current static IPMC route configuration
```

The following table describes the IP Multicast (IPMC) route menu options. Before you can add an IPMC route, IGMP must be turned on (/cfg/13/igmp on), and IGMP Relay must be enabled (/cfg/13/igmp/relay ena) or IGMP Snooping must be enabled (/cfq/13/iqmp/snoop ena).

Table 259. IPMC Route Configuration Options

Command Syntax and Usage

addport <IPMC destination> <VLAN number> <port alias or number> primary | backup | host < virtual router ID > | none

Adds a static multicast route. You will be prompted to enter a destination IP address (in dotted decimal notation), VLAN, and member port. Indicate whether the route is used for a primary, backup, or host multicast router.

remport <IPMC destination> <VLAN number> <port alias or number> primary|backup|host <virtual router ID>|none

Removes a static multicast route. The destination address. VLAN, and member port of the route to remove must be specified.

addtrnk <IPMC destination> <VLAN number> <trunk group number> primary | backup | host < virtual router ID > | none

Adds a static multicast route. You will be prompted to enter a destination IP address (in dotted decimal notation), VLAN, and member trunk group. Indicate whether the route is used for a primary, backup, or host multicast router.

remtrnk <IPMC destination> <VLAN number> <trunk group number> primary|backup|host <virtual router ID>|none

Removes a static multicast route. The destination address. VLAN, and member trunk group of the route to remove must be specified.

addkey <IPMC destination> <VLAN number> <LACP adminkey> primary|backup|host <virtual router ID>|none

Adds a static multicast route. You will be prompted to enter a destination IP address (in dotted decimal notation), VLAN, and LACP adminkey. Indicate whether the route is used for a primary, backup, or host multicast router.

remkey <IPMC destination> <VLAN number> <LACP adminkey> primary|backup|host <virtual router ID>|none

Removes a static multicast route. The destination address, VLAN, and LACP adminkey of the route to remove must be specified.

cur

Displays the current IP multicast routes.

ARP Configuration Menu

Address Resolution Protocol (ARP) is the TCP/IP protocol that resides within the Internet layer. ARP resolves a physical address from an IP address. ARP queries machines on the local network for their physical addresses. ARP also maintains IP to physical address pairs in its cache memory. In any IP communication, the ARP cache is consulted to see if the IP address of the computer or the router is present in the ARP cache. Then the corresponding physical address is used to send a packet.

```
[ARP Menu]
static - Static ARP Menu
rearp - Set re-ARP period in minutes
cur - Display current ARP configuration
```

Table 260. ARP Configuration Menu Options (/cfg/l3/arp)

Command Syntax and Usage

static

Displays Static ARP menu. To view options, see page 326.

```
rearp <2-120 minutes>
```

Defines re-ARP period, in minutes, for entries in the switch arp table. When ARP entries reach this value the switch will re-ARP for the address to attempt to refresh the ARP cache.

The default value is 5 minutes.

cur

Displays the current ARP configurations.

/cfg/l3/arp/static

ARP Static Configuration Menu

Static ARP entries are permanent in the ARP cache and do not age out like the ARP entries that are learned dynamically. Static ARP entries enable the switch to reach the hosts without sending an ARP broadcast request to the network. Static ARPs are also useful to communicate with devices that do not respond to ARP requests. Static ARPs can also be configured on some gateways as a protection against malicious ARP Cache corruption and possible DOS attacks.

```
[Static ARP Menu]

add - Add a permanent ARP entry

del - Delete an ARP entry

clear - Clear static ARP entries

cur - Display current static ARP configuration
```

Table 261. ARP Static Configuration Menu Options (/cfg/l3/arp/static)

Command Syntax and Usage add <IP address> <MAC address> <VLAN number> <port number> Adds a permanent ARP entry. add <IP address> <multicst MAC address> <VLAN number> Adds a static multicast ARP entry for Network Load Balancing (NLB). del <IP address (such as, 192.4.17.101)> Deletes a permanent ARP entry. clear [all|if <interface number>|vlan <VLAN number>| port port number>] Clears static ARP entries. cur Displays current static ARP configuration.

/cfg/l3/frwd

IP Forwarding Configuration Menu

```
[IP Forwarding Menu]
    dirbr - Enable or disable forwarding directed broadcasts
    noicmprd - Enable/disable No ICMP Redirects
    icmp6rd - Enable/disable ICMPv6 Redirects
           - Globally turn IP Forwarding ON
    off
            - Globally turn IP Forwarding OFF
    cur - Display current IP Forwarding configuration
```

Table 262. IP Forwarding Configuration Menu Options (/cfg/l3/frwd)

Command Syntax and Usage dirbr disable enable Enables or disables forwarding directed broadcasts. The default setting is disabled. noicmprd disable enable Enables or disables ICMP re-directs. The default setting is disabled. icmp6rd disable enable Enables or disables IPv6 ICMP re-directs. The default setting is disabled. on Enables IP forwarding (routing) on the EN4093/EN4093R. Forwarding is turned on by default. off Disables IP forwarding (routing) on the EN4093/EN4093R. cur Displays the current IP forwarding settings.

Network Filter Configuration Menu

```
[IP Network Filter 1 Menu]

addr - IP Address

mask - IP network filter mask

enable - Enable Network Filter

disable - Disable Network Filter

delete - Delete Network Filter

cur - Display current Network Filter configuration
```

Table 263. IP Network Filter Menu Options (/cfg/l3/nwf)

Command Syntax and Usage

```
addr <IP address, such as 192.4.17.44>
```

Sets the IP address that will be accepted by the peer when the filter is enabled. If used with the <code>mask</code> option, a range of IP addresses is accepted. The default address is 0.0.0.0.

For Border Gateway Protocol (BGP), assign the network filter to an access-list in a route map, then assign the route map to the peer.

mask <IP network filter mask>

Sets the network filter mask that is used with addr. The default value is 0.0.0.0

For Border Gateway Protocol (BGP), assign the network filter to a route map, then assign the route map to the peer.

enable

Enables the Network Filter configuration.

disable

Disables the Network Filter configuration.

delete

Deletes the Network Filter configuration.

cur

Displays the current the Network Filter configuration.

/cfq/l3/rmap < route map number >

Routing Map Configuration Menu

Note: The *map number* (1-32) represents the routing map you wish to configure.

```
[IP Route Map 1 Menu]
    alist - Access List number
     aspath - AS Filter Menu
     ap - Set as-path prepend of the matched route
            - Set local-preference of the matched route
     metric - Set metric of the matched route
     type - Set OSPF metric-type of the matched route
     prec - Set the precedence of this route map
     weight - Set weight of the matched route
     enable - Enable route map
     disable - Disable route map
     delete - Delete route map
     cur - Display current route map configuration
```

Routing maps control and modify routing information.

Table 264. Routing Map Menu Options (/cfg/l3/rmap)

Command Syntax and Usage alist <number 1-8> Displays the Access List menu. For more information, see page 330. aspath <number 1-8> Displays the Autonomous System (AS) Filter menu. For more information, see page 331. ap $\langle AS number \rangle [\langle AS number \rangle] [\langle AS number \rangle] |$ none Sets the AS path preference of the matched route. You can configure up to three path preferences. lp <(0-4294967294)>|none Sets the local preference of the matched route, which affects both inbound and outbound directions. The path with the higher preference is preferred. metric <(1-4294967294)>|none

Sets the metric of the matched route.

```
type \langle value(1|2) \rangle | none
```

Assigns the type of OSPF metric. The default is type 1.

- Type 1—External routes are calculated using both internal and external
- Type 2—External routes are calculated using only the external metrics. Type 1 routes have more cost than Type 2.
- none—Removes the OSPF metric.

```
prec <value (1-255)>
```

Sets the precedence of the route map. The smaller the value, the higher the precedence. Default value is 10.

Table 264. Routing Map Menu Options (/cfg/l3/rmap) (continued)

```
Command Syntax and Usage

weight <value (0-65534)>|none
Sets the weight of the route map.

enable
Enables the route map.

disable
Disables the route map.

delete
Deletes the route map.

cur
Displays the current route configuration.
```

/cfg/l3/rmap <route map number>/alist <access list number>

IP Access List Configuration Menu

Note: The *route map number* (1-32) and the *access list number* (1-8) represent the IP access list you wish to configure.

```
[IP Access List 1 Menu]

nwf - Network Filter number

metric - Metric

action - Set Network Filter action

enable - Enable Access List

disable - Disable Access List

delete - Delete Access List

cur - Display current Access List configuration
```

Table 265. IP Access List Menu Options (/cfg/l3/rmap/alist)

```
Command Syntax and Usage

nwf <network filter number (1-256)>
Sets the network filter number. See "/cfg/l3/nwf <1-256>" on page 328 for details.

metric <(1-4294967294)>|none
Sets the metric value in the AS-External (ASE) LSA.

action permit|deny
Permits or denies action for the access list.

enable
Enables the access list.

disable
Disables the access list.
```

Table 265. IP Access List Menu Options (/cfg/l3/rmap/alist) (continued)

Command Syntax and Usage delete Deletes the access list. cur

Displays the current Access List configuration.

/cfg/l3/rmap <route map number>/aspath <autonomous system path> **Autonomous System Filter Path Menu**

Note: The *rmap number* (1-32) and the *path number* (1-8) represent the AS path you wish to configure.

```
[AS Filter 1 Menu]
     as - AS number
     action - Set AS Filter action
     enable - Enable AS Filter
     disable - Disable AS Filter
     delete - Delete AS Filter
            - Display current AS Filter configuration
```

Table 266. AS Filter Menu Options (/cfg/l3/rmap/aspath)

Command Syntax and Usage as <AS number (1-65535)> Sets the Autonomous System filter's path number. action < permit | deny(p|d) >Permits or denies Autonomous System filter action. enable Enables the Autonomous System filter. disable Disables the Autonomous System filter. Deletes the Autonomous System filter. cur Displays the current Autonomous System filter configuration.

/cfg/l3/rip

Routing Information Protocol Configuration Menu

```
[Routing Information Protocol Menu]

if - RIP Interface Menu

update - Set update period in seconds

on - Globally turn RIP ON

off - Globally turn RIP OFF

current - Display current RIP configuration
```

The RIP Menu is used for configuring Routing Information Protocol (RIP) parameters. This option is turned off by default.

Table 267. RIP Menu Options (/cfg/l3/rip)

```
if <interface number>
Displays the RIP Interface menu. For more information, see page 332.

update <1-120>
Configures the time interval for sending for RIP table updates, in seconds. The default value is 30 seconds.

on
Globally turns RIP on.

off
Globally turns RIP off.

cur
Displays the current RIP configuration.
```

/cfg/l3/rip/if <interface number>

Routing Information Protocol Interface Configuration Menu

```
[RIP Interface 1 Menu]
    version - Set RIP version
    supply - Enable/disable supplying route updates
    listen - Enable/disable listening to route updates
    poison - Enable/disable poisoned reverse
split - Enable/disable split horizon
    trigg - Enable/disable triggered updates
           - Enable/disable multicast updates
    mcast
    default - Set default route action
    metric - Set metric
    auth - Set authentication type
             - Set authentication key
    key
    enable - Enable interface
    disable - Disable interface
    current - Display current RIP interface configuration
```

The RIP Interface Menu is used for configuring Routing Information Protocol parameters for the selected interface.

Note: Do not configure RIP version 1 parameters if your routing equipment uses RIP version 2.

Table 268. RIP Interface Menu Options (/cfg/l3/rip/if)

Command Syntax and Usage

version 1|2|both

Configures the RIP version used by this interface. The default value is version

supply disable enable

When enabled, the switch supplies routes to other routers. The default value is enabled.

listen disable enable

When enabled, the switch learns routes from other routers. The default value is enabled.

poison disable enable

When enabled, the switch uses split horizon with poisoned reverse. When disabled, the switch uses only split horizon. The default value is disabled.

split disable enable

Enables or disables split horizon. The default value is enabled.

trigg disable enable

Enables or disables Triggered Updates. Triggered Updates are used to speed convergence. When enabled, Triggered Updates force a router to send update messages immediately, even if it is not yet time for the update message. The default value is enabled.

mcast disable enable

Enables or disables multicast updates of the routing table (using address 224.0.0.9). The default value is enabled.

default none|listen|supply|both

When enabled, the switch accepts RIP default routes from other routers, but gives them lower priority than configured default gateways. When disabled, the switch rejects RIP default routes. The default value is none.

metric <1-15>

Configures the route metric, which indicates the relative distance to the destination. The default value is 1.

auth none|password

Configures the authentication type. The default is none.

key < password > | none

Configures the authentication key password.

enable

Enables this RIP interface.

Table 268. RIP Interface Menu Options (/cfg/l3/rip/if) (continued)

disable

Disables this RIP interface.

current

Displays the current RIP configuration.

/cfq/l3/ospf

Open Shortest Path First Configuration Menu

```
[Open Shortest Path First Menu]
     aindex - OSPF Area (index) menu
     range - OSPF Summary Range menu
            - OSPF Interface menu
     loopif - OSPF Loopback Interface Menu
     virt - OSPF Virtual Links menu
     md5key - OSPF MD5 Key Menu
     host - OSPF Host Entry menu
     redist - OSPF Route Redistribute menu
     lsdb - Set the LSDB limit
     default - Originate default route information
     on \,\, - Globally turn OSPF ON
            - Globally turn OSPF OFF
     cur - Display current OSPF configuration
```

Table 269. OSPF Configuration Menu (/cfg/l3/ospf)

Command Syntax and Usage

```
aindex \langle area index (0-2) \rangle
```

Displays the Area Index menu. This area index does not represent the actual OSPF area number. See page 337 to view menu options.

range <1-16>

Displays the Summary Range menu. See page 338 to view menu options.

if <interface number>

Displays the OSPF Interface configuration menu. See page 340 to view menu options.

loopif <1-5>

Displays the OSPF Loopback Interface configuration menu. See page 341 to view menu options.

virt <virtual link (1-3)>

Displays the Virtual Links menu used to configure OSPF for a Virtual Link. See page 343 to view menu options.

md5key < key ID (1-255)>

Assigns a string to MD5 authentication key.

host <1-128>

Displays the menu for configuring OSPF for the host routes. Up to 128 host routes can be configured. Host routes are used for advertising network device IP addresses to external networks to perform server load balancing within OSPF. It also makes Area Border Route (ABR) load sharing and ABR failover possible. See page 344 to view menu options.

redist fixed|static|rip|ebgp|ibgp

Displays Route Distribution menu. See page 345 to view menu options.

lsdb < LSDB limit (0-2048, 0 for no limit)>

Sets the link state database limit.

Table 269. OSPF Configuration Menu (/cfg/l3/ospf) (continued)

default < metric (1-16777214) > < metric-type 1 | 2 > | none

Sets one default route among multiple choices in an area. Use ${\tt none}$ for no default.

on

Enables OSPF on the EN4093/EN4093R.

off

Disables OSPF on the EN4093/EN4093R.

cur

Displays the current OSPF configuration settings.

/cfq/l3/ospf/aindex < area index>

Area Index Configuration Menu

```
[OSPF Area (index) 1 Menu]
    areaid - Set area ID
     type - Set area type
     metric - Set stub area metric
     auth - Set authentication type
     spf
            - Set time interval between two SPF calculations
     enable - Enable area
     disable - Disable area
     delete - Delete area
             - Display current OSPF area configuration
```

Table 270. Area Index Configuration Menu Options (/cfg/l3/ospf/aindex)

Command Syntax and Usage

```
areaid <IP address (such as, 192.4.17.101)>
```

Defines the IP address of the OSPF area number.

```
type transit|stub|nssa
```

Defines the type of area. For example, when a virtual link has to be established with the backbone, the area type must be defined as transit.

Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.

Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.

NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas. External routes from outside the Autonomous System (AS) can be advertised within the NSSA but are not distributed into other areas.

```
metric < metric value (1-65535)>
```

Configures a stub area to send a numeric metric value. All routes received via that stub area carry the configured metric to potentially influencing routing decisions.

Metric value assigns the priority for choosing the switch for default route. Metric type determines the method for influencing routing decisions for external routes.

auth none password md5

- none: No authentication required.
- password: Authenticates simple passwords so that only trusted routing devices can participate.
- md5: This parameter is used when MD5 cryptographic authentication is required.

Table 270. Area Index Configuration Menu Options (/cfg/l3/ospf/aindex) (continued)

spf <interval (1-255)>

Configures the minimum time interval, in seconds, between two successive SPF (shortest path first) calculations of the shortest path tree using the Dijkstra's algorithm. The default value is 10 seconds.

enable

Enables the OSPF area.

disable

Disables the OSPF area.

delete

Deletes the OSPF area.

cur

Displays the current OSPF configuration.

/cfg/l3/ospf/range <range number>

OSPF Summary Range Configuration Menu

```
[OSPF Summary Range 1 Menu]
addr - Set IP address
mask - Set IP mask
aindex - Set area index
hide - Enable/disable hide range
enable - Enable range
disable - Disable range
delete - Delete range
cur - Display current OSPF summary range configuration
```

Table 271. OSPF Summary Range Configuration Menu Options (/cfg/l3/ospf/range)

Command Syntax and Usage

addr < IP Address (such as, 192.4.17.101)>

Configures the base IP address for the range.

mask < IP mask (such as, 255.255.255.0)>

Configures the IP address mask for the range.

aindex < area index (0-2)>

Configures the area index used by the EN4093/EN4093R.

hide disable enable

Hides the OSPF summary range.

enable

Enables the OSPF summary range.

disable

Disables the OSPF summary range.

Table 271. OSPF Summary Range Configuration Menu Options (/cfg/l3/ospf/range)

delete

Deletes the OSPF summary range.

cur

Displays the current OSPF summary range.

/cfg/l3/ospf/if <interface number>

OSPF Interface Configuration Menu

```
[OSPF Interface 1 Menu]
     aindex - Set area index
     prio - Set interface router priority
    cost - Set interface cost
     hello - Set hello interval in seconds or milliseconds
     dead - Set dead interval in seconds or milliseconds
     trans - Set transit delay in seconds
     retra - Set retransmit interval in seconds
            - Set authentication key
     key
     mdkey - Set MD5 key ID
     passive - Enable/disable passive interface
     ptop - Enable/disable point-to-point interface
     enable - Enable interface
     disable - Disable interface
     delete - Delete interface
     cur - Display current OSPF interface configuration
```

Table 272. OSPF Interface Configuration Menu Options (/cfg/l3/ospf/if)

Command Syntax and Usage

aindex < area index (0-2)>

Configures the OSPF area index.

```
prio <pri>priority value (0-255)>
```

Configures the priority value for the EN4093/EN4093R's OSPF interfaces.

(A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the interface cannot be used as Designated Router (DR) or Backup Designated Router (BDR).)

```
cost <1-65535>
```

Configures cost set for the selected path—preferred or backup. Usually the cost is inversely proportional to the bandwidth of the interface. Low cost indicates high bandwidth.

```
hello <1-65535> hello <50-65535ms>
```

Configures the interval, in seconds or milliseconds, between the ${\tt hello}$ packets for the interfaces.

```
dead <1-65535> dead <1000-65535ms>
```

Configures the health parameters of a hello packet, in seconds or milliseconds, before declaring a silent router to be down.

```
trans <1-3600>
```

Configures the transit delay in seconds.

```
retra <1-3600>
```

Configures the retransmit interval in seconds.

```
key < key > | none
```

Sets the authentication key to clear the password.

Table 272. OSPF Interface Configuration Menu Options (/cfg/l3/ospf/if) (continued)

mdkey < key ID (1-255) > | none

Assigns an MD5 key to the interface.

passive enable disable

Sets the interface as passive. On a passive interface, you can disable OSPF protocol exchanges, but the router advertises the interface in its LSAs so that IP connectivity to the attached network segment will be established.

ptop enable disable

Sets the interface as point-to-point.

enable

Enables OSPF interface.

disable

Disables OSPF interface.

delete

Deletes OSPF interface.

cur

Displays the current settings for OSPF interface.

/cfq/l3/ospf/loopback <1-5>

OSPF Loopback Interface Configuration Menu

```
[OSPF Loopback Interface 1 Menu]
    aindex - Set area index

             - Display current OSPF interface configuration
```

Table 273. OSPF Loopback Interface Configuration Options (/cfg/l3/ospf/loopif)

Command Syntax and Usage

aindex < area index (0-2) >

Configures the area index used by the loopback interface.

enable

Enables the loopback interface.

disable

Disables the loopback interface.

Table 273. OSPF Loopback Interface Configuration Options (/cfg/l3/ospf/loopif) (continued)

delete

Deletes the OSPF loopback interface.

cur

Displays the current parameters for the OSPF loopback interface.

/cfq/l3/ospf/virt < link number>

OSPF Virtual Link Configuration Menu

```
[OSPF Virtual Link 1 Menu]
     aindex - Set area index
     hello - Set hello interval in seconds or milliseconds
     dead - Set dead interval in seconds or milliseconds
     trans - Set transit delay in seconds
     retra - Set retransmit interval in seconds
            - Set router ID of virtual neighbor
     nbr
     kev
            - Set authentication key
     mdkey - Set MD5 key ID
     enable - Enable interface
     disable - Disable interface
     delete - Delete interface
             - Display current OSPF interface configuration
```

Table 274. OSPF Virtual Link Configuration Menu Options (/cfg/l3/ospf/virt)

```
Command Syntax and Usage
```

aindex $\langle area index (0-2) \rangle$

Configures the OSPF area index.

```
hello < 1-65535 >
hello <50-65535ms>
```

Configures the authentication parameters of a hello packet, in seconds or milliseconds. The default value is 10 seconds.

```
dead < 1-65535 >
dead <1000-65535ms>
```

Configures the health parameters of a hello packet, in seconds or milliseconds. The default value is 60 seconds.

```
trans <1-3600>
```

Configures the delay in transit, in seconds. The default value is one second.

```
retra <1-3600>
```

Configures the retransmit interval, in seconds. The default value is five seconds.

```
nbr < NBR router ID (IP address)>
```

Configures the router ID of the virtual neighbor. The default value is 0.0.0.0.

```
key < password > | none
```

Configures the password (up to eight characters) for each virtual link. The default value is none.

```
mdkey < key ID (1-255) > | none
```

Sets MD5 key ID for each virtual link. The default value is none.

enable

Enables OSPF virtual link.

disable

Disables OSPF virtual link.

Table 274. OSPF Virtual Link Configuration Menu Options (/cfg/l3/ospf/virt) (continued)

Command Syntax and Usage delete Deletes OSPF virtual link. cur Displays the current OSPF virtual link settings.

/cfg/l3/ospf/host <host number>

OSPF Host Entry Configuration Menu

```
[OSPF Host Entry 1 Menu]
addr - Set host entry IP address
aindex - Set area index
cost - Set cost of this host entry
enable - Enable host entry
disable - Disable host entry
delete - Delete host entry
cur - Display current OSPF host entry configuration
```

Table 275. OSPF Host Entry Configuration Menu Options (/cfg/l3/ospf/host)

addr <IP address (such as, 192.4.17.101)> Configures the base IP address for the host entry. aindex <area index (0-2)> Configures the area index of the host. cost <1-65535> Configures the cost value of the host. enable Enables OSPF host entry. disable Disables OSPF host entry. delete Deletes OSPF host entry. cur Displays the current OSPF host entries.

/cfq/l3/ospf/redist fixed|static|rip|ebqp|ibqp

OSPF Route Redistribution Configuration Menu

```
[OSPF Redistribute Fixed Menu]
     add - Add rmap into route redistribution list
            - Remove rmap from route redistribution list
     export - Export all routes of this protocol
            - Display current route-maps added
```

Table 276. OSPF Route Redistribution Menu Options (/cfg/l3/ospf/redist)

Command Syntax and Usage

```
add (<route map (1-32)> <route map (1-32)>... |all
```

Adds selected routing maps to the rmap list. To add all the 32 route maps, enter all. To add specific route maps, enter routing map numbers one per line. NULL at the end.

This option adds a route map to the route redistribution list. The routes of the redistribution protocol matched by the route maps in the route redistribution list will be redistributed.

```
rem (<route map (1-32)> <route map (1-32)> ... |all
```

Removes the route map from the route redistribution list.

Removes routing maps from the rmap list. To remove all 32 route maps, enter all. To remove specific route maps, enter routing map numbers one per line, NULL at end.

```
export < metric (1-16777214)> < metric type (1-2)> | none
```

Exports the routes of this protocol as external OSPF AS-external LSAs in which the metric and metric type are specified. To remove a previous configuration and stop exporting the routes of the protocol, enter none.

cur

Displays the current route map settings.

/cfg/l3/ospf/md5key <key ID>

OSPF MD5 Key Configuration Menu

```
[OSPF MD5 Key 1 Menu]

key - Set authentication key

delete - Delete key

cur - Display current MD5 key configuration
```

Table 277. OSPF MD5 Key Configuration Menu Options (/cfg/ip/ospf/md5key)

Command Syntax and Usage key <1-16 characters> Sets the authentication key for this OSPF packet. delete Deletes the authentication key for this OSPF packet. cur Displays the current MD5 key configuration.

Border Gateway Protocol Configuration Menu

```
[Border Gateway Protocol Menu]
    peer
            - Peer menu
     aggr
            - Aggregation menu
            - Set Autonomous System (AS) number
     as
     pref - Set Local Preference
            - Globally turn BGP ON
           - Globally turn BGP OFF
     cur - Display current BGP configuration
```

Border Gateway Protocol (BGP) is an Internet protocol that enables routers on a network to share routing information with each other and advertise information about the segments of the IP address space they can access within their network with routers on external networks. BGP allows you to decide what is the "best" route for a packet to take from your network to a destination on another network, rather than simply setting a default route from your border router(s) to your upstream provider(s). You can configure BGP either within an autonomous system or between different autonomous systems. When run within an autonomous system, it's called internal BGP (iBGP). When run between different autonomous systems, it's called external BGP (eBGP). BGP is defined in RFC 1771.

BGP commands enable you to configure the switch to receive routes and to advertise static routes, fixed routes and virtual server IP addresses with other internal and external routers. In the current IBM Networking OS implementation, the EN4093/EN4093R does not advertise BGP routes that are learned from one iBGP speaker to another iBGP speaker.

BGP is turned off by default.

Note: Fixed routes are subnet routes. There is one fixed route per IP interface.

Table 278. Border Gateway Protocol Menu (/cfg/l3/bgp)

Command Syntax and Usage

```
peer  peer number (1-12)>
```

Displays the menu used to configure each BGP peer. Each border router, within an autonomous system, exchanges routing information with routers on other external networks. To view menu options, see page 348.

```
aggr <aggregate number (1-16)>
```

Displays the Aggregation Menu. To view menu options, see page 352.

```
as <0-65535>
```

Set Autonomous System number.

```
pref <local preference (0-4294967294)>
```

Sets the local preference. The path with the higher value is preferred.

When multiple peers advertise the same route, use the route with the shortest AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP.

on

Globally turns BGP on.

Table 278. Border Gateway Protocol Menu (/cfg/l3/bgp) (continued)

Command Syntax and Usage off Globally turns BGP off. cur Displays the current BGP configuration.

/cfg/l3/bgp/peer /peer number>

BGP Peer Configuration Menu

```
[BGP Peer 1 Menu]
    redist - Redistribution menu
     addr - Set remote IP address
    ras
             - Set remote autonomous system number
     usrc
            - Set local IP interface
     uloopsrc - Set local IP loopback interface
     hold - Set hold time
     alive - Set keep alive time
     advert - Set min time between advertisements
     retry - Set connect retry interval
     orig - Set min time between route originations
     ttl
            - Set time-to-live of IP datagrams
     addi
            - Add rmap into in-rmap list
     addo
            - Add rmap into out-rmap list
     remi
             - Remove rmap from in-rmap list
             - Remove rmap from out-rmap list
     enable - Enable peer
     disable - Disable peer
     delete - Delete peer
     passwd - Set password
     passive - Enable/disable BGP passive mode
             - Display current peer configuration
```

This menu is used to configure BGP peers, which are border routers that exchange routing information with routers on internal and external networks. The peer option is disabled by default.

Table 279. BGP Peer Configuration Menu Options (/cfg/l3/bgp/peer)

```
Command Syntax and Usage

redist
   Displays BGP Redistribution Menu. To view the menu options, see page 350.

addr < IP address (such as 192.4.17.101)>
   Defines the IP address for the specified peer (border router), using dotted decimal notation. The default address is 0.0.0.0.

ras < AS number (0-65535)>
   Sets the remote autonomous system number for the specified peer.

usrc < interface number>
   Sets the local IP interface for this peer.
```

uloopsrc <1-5>

Sets the loopback interface number for this peer.

hold < hold time (0, 3-65535)>

Sets the period of time, in seconds, that will elapse before the peer session is torn down because the switch hasn't received a "keep alive" message from the peer. The default value is 180.

alive < keep-alive time (0, 1-21845)>

Sets the keep-alive time for the specified peer in seconds. The default value is 60.

advert $< min \ adv \ time \ (1-65535) >$

Sets time, in seconds, between advertisements. The default value is 60 seconds.

retry <connect retry interval (1-65535)>

Sets connection retry interval, in seconds. The default value is 120 seconds.

orig <min orig time (1-65535)>

Sets the minimum time between route originations, in seconds. The default value is 15 seconds.

ttl < number of router hops (1-255)>

Time-to-live (TTL) is a value in an IP packet that tells a network router whether or not the packet has been in the network too long and should be discarded. TTL specifies a certain time span in seconds that, when exhausted, would cause the packet to be discarded. The TTL is determined by the number of router hops the packet is allowed before it must be discarded.

This command specifies the number of router hops that the IP packet can make. This value is used to restrict the number of "hops" the advertisement makes. It is also used to support multi-hops, which allow BGP peers to talk across a routed network. The default number is set at 1.

Note: The TTL value is significant only to eBGP peers, for iBGP peers the TTL value in the IP packets is always 255 (regardless of the configured value).

addi <route map ID (1-32)>

Adds route map into in-route map list.

addo < route map ID (1-32) >

Adds route map into out-route map list.

remi < route map ID (1-32)>

Removes route map from in-route map list.

remo < route map ID (1-32)>

Removes route map from out-route map list.

enable

Enables this peer configuration.

Table 279. BGP Peer Configuration Menu Options (/cfg/l3/bgp/peer) (continued)

disable

Disables this peer configuration.

delete

Deletes this peer configuration.

passwd <1-16 characters> | none

Configures the BGP peer password.

passive enable disable

Enables or disables BGP passive mode, which prevents the switch from initiating BGP connections with peers.

Instead, the switch waits for the peer to send an open message first.

cur

Displays the current BGP peer configuration.

/cfg/l3/bgp/peer/redist

BGP Redistribution Configuration Menu

```
[Redistribution Menu]

metric - Set default-metric of advertised routes

default - Set default route action

rip - Enable/disable advertising RIP routes

ospf - Enable/disable advertising OSPF routes

fixed - Enable/disable advertising fixed routes

static - Enable/disable advertising static routes

cur - Display current redistribution configuration
```

Table 280. BGP Redistribution Menu Options (/cfg/l3/bgp/peer/redist)

Command Syntax and Usage

metric < metric (1-4294967294) > | none

Sets default metric of advertised routes.

default none|import|originate|redistribute

Sets default route action. Default routes can be configured as follows:

- none: No routes are configured
- import: Import these routes.
- originate: The switch sends a default route to peers if it does not have any default routes in its routing table.
- redistribute: Default routes are either configured through default
 gateway or learned through other protocols and redistributed to peer. If the
 routes are learned from default gateway configuration, you have to enable
 static routes since the routes from default gateway are static routes.
 Similarly, if the routes are learned from a certain routing protocol, you have
 to enable that protocol in this redistribute submenu.

Table 280. BGP Redistribution Menu Options (/cfg/l3/bgp/peer/redist) (continued)

rip disable enable

Enables or disables advertising RIP routes

ospf disable enable

Enables or disables advertising OSPF routes.

fixed disable enable

Enables or disables advertising fixed routes.

static disable enable

Enables or disables advertising static routes.

cur

Displays current redistribution configuration.

/cfg/l3/bgp/aggr < aggregation number>

BGP Aggregation Configuration Menu

```
[BGP Aggr 1 Menu]

addr - Set aggregation IP address

mask - Set aggregation network mask

enable - Enable aggregation

disable - Disable aggregation

delete - Delete aggregation

cur - Display current aggregation configuration
```

This menu enables you to configure BGP aggregation to specify the routes/range of IP destinations a peer router accepts from other peers. All matched routes are aggregated to one route, to reduce the size of the routing table. By default, the first aggregation number is enabled and the rest are disabled.

Table 281. BGP Aggregation Configuration Menu Options (/cfg/l3/bgp/aggr)

Command Syntax and Usage

addr <IP address (such as 192.4.17.101)>

Defines the starting subnet IP address for this aggregation, using dotted decimal notation. The default address is 0.0.0.0.

mask < IP subnet mask (such as, 255.255.255.0)>

This IP address mask is used with addr to define the range of IP addresses that will be accepted by the peer when the aggregation is enabled. The default address is 0.0.0.0.

ena

Enables this BGP aggregation.

dis

Disables this BGP aggregation.

del

Deletes this BGP aggregation.

cur

Displays the current BGP aggregation configuration.

MLD Configuration Menu

```
[MLD Menu]
               - MLD Interface Menu
    on - Globally turn MLD ON off - Globally turn MLD OFF
     default - Set default configuration
               - Display current MLD configuration
```

Table 282 describes the commands used to configure basic Multicast Listener Discovery parameters.

Table 282. MLD Menu Options (/cfg/l3/mld)

Command Syntax and Usage if <interface number> Displays the MLD Interface Menu. To view menu options, see page 354. on Globally turns MLD on. off Globally turns MLD off. default Resets MLD parameters to their default values. cur Displays the current MLD configuration parameters.

/cfg/l3/mld/if <interface number>

MLD Interface Configuration Menu

```
[MLD Interface 1 Menu]

version - Set Multicast Listener Discovery protocol version

robust - Set MLD robustness

qintrval - Set MLD query interval

llistnr - Set MLD last listener query interval

qri - Set MLD query response interval

dmrtr - Enable/disable dynamic Mrouter learning on interface

ena - Enable MLD on interface

dis - Disable MLD on interface

default - Set MLD settings to factory default

cur - Display current MLD configuration for this interface
```

Table 283 describes the commands used to configure Multicast Listener Discovery parameters for an interface.

Table 283. MLD Interface Menu Options (/cfg/l3/mld/if)

Command Syntax and Usage

version < 1-2 >

Defines the MLD protocol version number.

robust <2-10>

Configures the MLD Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If the subnet is expected to be lossy (high rate of packet loss), increase the value. The default value is 2.

qintrval <2-65535>

Configures the interval for MLD Query messages. The default value is 125 seconds.

llistnr <*1-32*>

Configures the query interval for the Querier to send a query after receiving a host done message from a host on the subnet. The default value is 1 second.

qri <1000-65535>

Configures the maximum response delay for MLD General Queries. This can be used to tune the burstiness of MLD messages on the link.

The default value is 10,000 milliseconds.

dmrtr enable disable

Enables or disables dynamic Mrouter learning on the interface. The default setting is disabled.

ena

Enables this MLD interface.

dis

Disables this MLD interface.

Table 283. MLD Interface Menu Options (/cfg/l3/mld/if) (continued)

default

Resets MLD parameters for the selected interface to their default values.

cur

Displays the current MLD interface configuration.

/cfg/l3/iqmp

    on \,\, - Globally turn IGMP ON
            - Globally turn IGMP OFF
    cur - Display current IGMP configuration
```

Table 284 describes the commands used to configure basic IGMP parameters.

Table 284. IGMP Menu Options (/cfg/l3/igmp)

Command Syntax and Usage snoop Displays the IGMP Snoop Menu. To view menu options, see page 356. Displays the IGMP Relay Menu. To view menu options, see page 358. Displays the Static Multicast Router Menu. To view menu options, see page 360. igmpflt Displays the IGMP Filtering Menu. To view menu options, see page 361. adv Displays the IGMP Advanced Menu. To view menu options, see page 363. querier Displays the IGMP Querier Menu. To view menu options, see page 364. on Globally turns IGMP on.

Table 284. IGMP Menu Options (/cfg/l3/igmp) (continued)

off Globally turns IGMP off. cur Displays the current IGMP configuration parameters.

/cfg/l3/igmp/snoop

IGMP Snooping Configuration Menu

```
[IGMP Snoop Menu]

igmpv3 - IGMP Version3 Snoop Menu

mrto - Set multicast router timeout

aggr - Aggregate IGMP report

srcip - Set source ip to use when proxying GSQ

add - Add VLAN(s) to IGMP Snooping

rem - Remove VLAN(s) from IGMP Snooping

clear - Remove all VLAN(s) from IGMP Snooping

ena - Enable IGMP Snooping

dis - Disable IGMP Snooping

def - Set IGMP Snooping settings to factory default

cur - Display current IGMP Snooping configuration
```

IGMP Snooping allows the switch to forward multicast traffic only to those ports that request it. IGMP Snooping prevents multicast traffic from being flooded to all ports. The switch learns which server hosts are interested in receiving multicast traffic, and forwards it only to ports connected to those servers.

Table 285 describes the commands used to configure IGMP Snooping.

Table 285. IGMP Snoop Menu Options (/cfg/l3/igmp/snoop)

Command Syntax and Usage igmpv3 Displays the IGMP version 3 Menu. To view menu options, see page 357. mrto <1-600 seconds> Configures the timeout value for IGMP Membership Queries (mrouter). Once the timeout value is reached, the switch removes the multicast router from its IGMP table, if the proper conditions are met. The range is from 1 to 600 seconds. The default is 255 seconds. aggr enable | disable | Enables or disables IGMP Membership Report aggregation. srcip <IP address (such as, 192.4.17.101)> Configures the source IP address used as a proxy for IGMP Group Specific Queries. add <VLAN number> Adds the selected VLAN(s) to IGMP Snooping.

Table 285. IGMP Snoop Menu Options (/cfg/l3/igmp/snoop) (continued)

rem <*VLAN number*>

Removes the selected VLAN(s) from IGMP Snooping.

clear

Removes all VLANs from IGMP Snooping.

ena

Enables IGMP Snooping.

dis

Disables IGMP Snooping.

def

Resets IGMP Snooping parameters to their default values.

cur

Displays the current IGMP Snooping parameters.

/cfq/l3/iqmp/snoop/iqmpv3

IGMP Version 3 Configuration Menu

```
[IGMP V3 Snoop Menu]
    sources - Set the number of sources to snoop in group record
    v1v2 - Enable/disable snooping IGMPv1/v2 reports
    exclude - Enable/disable snooping EXCLUDE mode reports
    ena - Enable IGMPv3 Snooping
            - Disable IGMPv3 Snooping
    dis
            - Display current IGMP Snooping V3 configuration
```

Table 286 describes the commands used to configure IGMP version 3.

Table 286. IGMPv3 Menu Options (/cfg/l3/igmp/snoop/igmpv3)

Command Syntax and Usage

sources <1-64>

Configures the maximum number of IGMP multicast sources to snoop from within the group record. Use this command to limit the number of IGMP sources to provide more refined control. The default value is 8.

v1v2 enable|disable

Enables or disables snooping on IGMP version 1 and version 2 reports. When disabled, the switch drops IGMPv1 and IGMPv2 reports. The default value is enabled.

exclude enable disable

Enables or disables snooping on IGMPv3 Exclude Reports. When disabled, the switch ignores Exclude Reports. The default value is enabled.

Table 286. IGMPv3 Menu Options (/cfg/l3/igmp/snoop/igmpv3) (continued)

ena

Enables IGMP version 3. The default value is disabled.

dis

Disables IGMP version 3.

cur

Displays the current IGMP version 3 configuration.

/cfg/l3/igmp/relay

IGMP Relay Configuration Menu

```
[IGMP Relay Menu]
mrtr - Upstream Multicast Router Menu
add - Add VLAN(s) to downstream
rem - Remove VLAN(s) from downstream
clear - Remove all VLAN(s) from downstream
report - Set unsolicited report interval
ena - Enable IGMP Relay
dis - Disable IGMP Relay
def - Set IGMP Relay settings to factory default
cur - Display current IGMP Relay configuration
```

Table 287 describes the commands used to configure IGMP Relay.

Table 287. IGMP Relay Menu Options (/cfg/l3/igmp/relay)

Command Syntax and Usage

mrtr <multicast router number (1-2)>

Displays the Upstream Multicast Router Menu. To view menu options, see page 359.

add < VLAN number>

Adds the VLAN to the list of IGMP Relay VLANs.

rem <*VLAN number*>

Removes the VLAN from the list of IGMP Relay VLANs.

clear

Removes all VLANs from the list of IGMP Relay VLANs.

report <10-150>

Configures the interval between unsolicited Join reports sent by the switch, in seconds.

The default value is 10.

ena

Enables IGMP Relay.

Table 287. IGMP Relay Menu Options (/cfg/l3/igmp/relay) (continued)

Command Syntax and Usage dis Disables IGMP Relay. def Resets IGMP Relay settings. cur Displays the current IGMP Relay configuration.

/cfg/l3/igmp/relay/mrtr < Mrouter number>

IGMP Relay Multicast Router Configuration Menu

```
[Multicast router 2 Menu]
   addr - Set IP address of multicast router
             - Set interval between ping attempts
   retry - Set number of failed attempts to declare router DOWN restr - Set number of successful attempts to declare router UP
   version - Set IGMP version
             - Enable multicast router
    dis
             - Disable multicast router
    del
             - Delete multicast router
    cur - Display current multicast router configuration
```

Table 288 describes the commands used to configure the IGMP Relay multicast

Table 288. IGMP Relay Mrouter Menu Options (/cfg/l3/igmp/relay/mrtr)

Command Syntax and Usage

addr <IP address (such as, 224.0.1.0)>

Configures the IP address of the IGMP multicast router used for IGMP Relay.

intr <1-60>

Configures the time interval between ping attempts to the upstream Mrouters, in seconds.

The default value is 2.

retry <1-120>

Configures the number of failed ping attempts required before the switch declares this Mrouter is down. The default value is 4.

restr <1-128>

Configures the number of successful ping attempts required before the switch declares this Mrouter is up. The default value is 5.

version < 1-2 >

Configures the IGMP version (1 or 2) of the multicast router.

Table 288. IGMP Relay Mrouter Menu Options (/cfg/l3/igmp/relay/mrtr) (continued)

ena Enables the multicast router. dis Disables the multicast router. del Deletes the multicast router from IGMP Relay.

cur

Displays the current IGMP Relay multicast router parameters.

/cfg/l3/igmp/mrouter

IGMP Static Multicast Router Configuration Menu

```
[Static Multicast Router Menu]

add - Add port as Multicast Router Port

rem - Remove port as Multicast Router Port

clear - Remove all Static Multicast Router Ports

cur - Display current Multicast Router configuration
```

Table 289 describes the commands used to configure a static multicast router.

Note: When static Mrouters are used, the switch continues learning dynamic Mrouters via IGMP snooping. However, dynamic Mrouters may not replace static Mrouters. If a dynamic Mrouter has the same port and VLAN combination as a static Mrouter, the dynamic Mrouter is not learned.

Table 289. IGMP Static Multicast Router Menu Options (/cfg/l3/igmp/mrouter)

Command Syntax and Usage add <port number> <VLAN number> <IGMP version number> Selects a port/VLAN combination on which the static multicast router is connected, and configures the IGMP version (1, 2, or 3) of the multicast router. rem <port number> <VLAN number> <IGMP version number> Removes a static multicast router from the selected port/VLAN combination. clear Clears all static multicast routers from the switch. cur Displays the current IGMP Static Multicast Router parameters.

/cfg/l3/igmp/igmpflt

IGMP Filtering Configuration Menu

```
[IGMP Filter Menu]
    filter - IGMP Filter Definition Menu
     port - IGMP Filtering Port Menu
     ena - Enable IGMP Filtering
     dis - Disable IGMP Filtering
     cur - Display current IGMP Filtering configuration
```

Table 290 describes the commands used to configure an IGMP filter.

Table 290. IGMP Filtering Menu Options (/cfg/l3/igmp/igmpflt)

Displays the current IGMP Filtering parameters.

Command Syntax and Usage filter <filter number (1-16)> Displays the IGMP Filter Definition Menu. To view menu options, see page 362. port port alias or number> Displays the IGMP Filtering Port Menu. To view menu options, see page 363. ena Enables IGMP filtering globally. dis Disables IGMP filtering globally. cur

/cfg/l3/igmp/igmpflt/filter <filter number>

IGMP Filter Definition Menu

```
[IGMP Filter 1 Definition Menu]
range - Set IP Multicast address range
action - Set filter action
ena - Enable filter
dis - Disable filter
del - Delete filter
cur - Display current IGMP filter configuration
```

Table 291 describes the commands used to define an IGMP filter.

Table 291. IGMP Filter Definition Menu Options (/cfg/l3/igmp/igmpflt/filter)

Command Syntax and Usage

range <IP multicast address (such as 225.0.0.10)> <IP multicast address> Configures the range of IP multicast addresses for this filter.

action allow deny

Allows or denies multicast traffic for the IP multicast addresses specified. The default action is deny.

ena

Enables this IGMP filter.

dis

Disables this IGMP filter.

del

Deletes this filter's parameter definitions.

cur

Displays the current IGMP filter.

/cfq/l3/iqmp/iqmpflt/port cfq/l3/iqmp/iqmpflt/port cport number>

IGMP Filtering Port Configuration Menu

```
[IGMP Port EXT1 Menu]
     filt - Enable/disable IGMP filtering on port
          - Add IGMP filter to port
     rem - Remove IGMP filter from port
            - Display current IGMP filtering Port configuration
```

Table 292 describes the commands used to configure a port for IGMP filtering.

Table 292. IGMP Filter Port Menu Options (/cfg/l3/igmp/igmpflt/port)

```
Command Syntax and Usage
filt enable disable
    Enables or disables IGMP filtering on this port.
add <filter number (1-16)>
   Adds an IGMP filter to this port.
rem <filter number (1-16)>
    Removes an IGMP filter from this port.
cur
    Displays the current IGMP filter parameters for this port.
```

/cfq/l3/iqmp/adv

IGMP Advanced Configuration Menu

```
[TGMP Advanced Menul
    gintrval - Set IGMP query interval
    robust - Set expected packet loss on subnet
    timeout - Set report timeout
    fastlv - Enable/disable Fastleave processing in VLAN
    rtralert - Send IGMP messages with Router Alert option
             - Display current IGMP Advanced configuration
```

Table 293 describes the commands used to configure advanced IGMP parameters.

Table 293. IGMP Advanced Menu Options (/cfg/l3/igmp/adv)

Command Syntax and Usage qinterval <1-600>

Configures the interval for IGMP Query Reports. The default value is 125 seconds.

```
robust <2-10>
```

Configures the IGMP Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If the subnet is expected to be lossy (high rate of packet loss), increase the value. The default value is 2.

Table 293. IGMP Advanced Menu Options (/cfg/l3/igmp/adv) (continued)

timeout <1-255>

Configures the timeout value for IGMP Membership Reports (host). Once the timeout value is reached, the switch removes the host from its IGMP table, if the conditions are met. The range is from 1 to 255 seconds. The default is 10 seconds.

fastlv < VLAN number > disable enable

Enables or disables Fastleave processing. Fastleave allows the switch to immediately remove a port from the IGMP port list, if the host sends a Leave message, and the proper conditions are met. This command is disabled by default.

retralert ena|dis

Enables or disables the Router Alert option in IGMP messages.

cur

Displays the current IGMP Advanced parameters.

/cfg/l3/igmp/querier

IGMP Querier Configuration

```
[IGMP Querier Menu]
ena - Enable IGMP Querier
dis - Disable IGMP Querier
vlan - IGMP Querier vlan Menu
cur - Display IGMP Querier configuration
```

Table 294 describes the commands used to configure IGMP Querier.

Table 294. IGMP Querier Options

ena Enables IGMP Querier. dis Disables IGMP Querier. vlan < VLAN number> Displays the IGMP Querier VLAN menu. To view menu options, see page 365. cur Displays the current IGMP Querier parameters.

/cfq/13/iqmp/querier/vlan <*VLAN number*>

IGMP Querier VLAN Configuration

```
[IGMP Querier VLAN 1 Menu]
    type - Set IGMP querier type
    time - Set Queriers max response time
    interval - Set IGMP querier interval
    robust - Set Queriers robustness
    srcip - Set source IP to be used for IGMP
             - Set startup count for IGMP
    count
    sinter - Set startup query interval for IGMP
    version - Sets the operating version of the IGMP snooping switch
    on
    on - Globally turn IGMP Querier ON off - Globally turn IGMP Querier OFF
            - Globally turn IGMP Querier ON
    default - Set IGMP Querier settings to factory default
          - Display current IGMP Querier configuration
```

Table 295 describes the commands used to configure IGMP Querier.

Table 295. IGMP Querier Options

Command Syntax and Usage

```
type {ipv4|mac}
```

Sets the IGMP Querier election criteria as IPv4 address or Mac address. The default setting is IPv4.

```
time < 1-256 >
```

Configures the maximum time, in tenths of a second, allowed before responding to a Membership Query message. The default value is 100.

By varying the Query Response Interval, an administrator may tune the burstiness of IGMP messages on the subnet; larger values make the traffic less bursty, as host responses are spread out over a larger interval.

```
interval <1-608>
```

Configures the interval between IGMP Query broadcasts. The default value is 125 seconds.

```
robust <2-10>
```

Configures the IGMP Robustness variable, which is the number of times that the switch sends each IGMP message. The default value is 2.

```
srcip <IP address>
```

Configures the IGMP snooping source IP address for the selected VLAN.

```
count <1-10>
```

Configures the Startup Query Count, which is the number of IGMP Queries sent out at startup. Each Query is separated by the Startup Query Interval. The default value is 2.

```
sinter <1-608>
```

Configures the Startup Query Interval, which is the interval between General Queries sent out at startup.

```
version \{v1|v2|v3\}
```

Configures the IGMP version. The default version is v3.

Table 295. IGMP Querier Options (continued)

on

Enables IGMP Querier on the selected VLAN.

off

Disables IGMP Querier on the selected VLAN.

default

Resets IGMP Querier parameters to default values.

cur

Displays the current IGMP Querier VLAN parameters.

/cfg/l3/ikev2

IKEv2 Configuration Menu

[IKEv2 Menu]

- IKEv2 Proposal Menu

tx-time - Set retransmission timeout for IKEv2 negotiation

psk - Preshare Key Menu

ident - Certification Service Menu

cookie - Enable or Disable cookie notification, used to prevent DoS

      - Set inbound ESP SPI
reset - Reset to factory setting
      - Display current IPSec manual key policy inbound ESP
          session configuration
```

Table 309 describes the commands used to configure an IPsec manual policy inbound Encapsulating Security Payload (ESP) header.

Table 309. IPsec Manual Policy In-ESP Menu Options (/cfg/l3/ipsec/policy/ manual/in-esp)

```
Command Syntax and Usage
enc-key < key code (hexadecimal)>
   Sets inbound ESP cipher key.
auth-key < key code (hexadecimal)>
   Sets inbound ESP authenticator key.
```

Table 309. IPsec Manual Policy In-ESP Menu Options (/cfg/l3/ipsec/policy/manual/in-esp) (continued)

spi <256-4294967295>

Sets the inbound ESP Security Parameter Index (SPI).

reset

Resets the inbound ESP settings to factory settings.

cur

Displays the current IPsec manual key policy inbound ESP session settings.

/cfg/l3/ipsec/policy/manual <1-10>/out-ah

IPsec Manual Policy Out-AH Configuration Menu

```
[out-ah Menu]

auth-key - Set the remote peer ip address

spi - Set outbound AH SPI

reset - Reset to factory setting

cur - Display current IPSec manual key policy outbound AH

session configuration
```

Table 310 describes the commands used to configure an IPsec manual policy outbound authentication header (AH).

Table 310. IPsec Manual Policy Out-AH Menu Options (/cfg/l3/ipsec/policy/manual/out-ah)

Command Syntax and Usage

auth-key < key code (hexadecimal)>

Sets the remote AH authenticator key.

spi <256-4294967295>

Sets the outbound AH Security Parameter Index (SPI).

reset

Resets the outbound AH settings to factory settings.

cur

Displays the current IPsec manual key policy outbound AH session settings.

/cfq/l3/ipsec/policy/manual <1-10>/out-esp

IPsec Manual Policy Out-ESP Configuration Menu

```
[out-esp Menu]
   enc-key - Set outbound ESP cipher key
    auth-key - Set outbound ESP authenticator key
    spi - Set outbound ESP SPI
    reset - Reset to factory setting
    cur - Display current IPSec manual key policy outbound ESP
              session configuration
```

Table 311 describes the commands used to configure an IPsec manual policy outbound Encapsulating Security Payload (ESP) header.

Table 311. IPsec Manual Policy Out-ESP Menu Options (/cfg/l3/ipsec/policy/ manual/out-esp)

Command Syntax and Usage enc-key < key code (hexadecimal)> Sets the outbound ESP cipher key. auth-key <key code (hexadecimal)> Sets outbound ESP authenticator key. spi <256-4294967295> Sets the outbound Security Parameter Index (SPI). Domain Name System Configuration Menu

```
[Domain Name System Menu]

prima - Set IP address of primary DNS server

secon - Set IP address of secondary DNS server

dname - Set default domain name

cur - Display current DNS configuration
```

The Domain Name System (DNS) Menu is used for defining the primary and secondary DNS servers on your local network, and for setting the default domain name served by the switch services. DNS parameters must be configured prior to using hostname parameters with the ping, traceroute, and tftp commands.

Table 312. Domain Name Service Menu Options (/cfg/l3/dns)

```
Command Syntax and Usage

prima <IPv4 or IPv6 address>
Sets the IPv4 or IPv6 address for your primary DNS server.

secon <IPv4 or IPv6 address>
Sets the IPv4 or IPv6 address for your secondary DNS server. If the primary DNS server fails, the configured secondary is used instead.

dname <dotted DNS notation> | none
Sets the default domain name used by the switch. For example:
mycompany.com

cur
Displays the current Domain Name System settings.
```

/cfg/l3/bootp

Bootstrap Protocol Relay Configuration Menu

```
[Bootstrap Protocol Relay Menu]
server - Set BOOTP server properties
bdomain - Broadcast domain menu
on - Globally turn BOOTP relay ON
off - Globally turn BOOTP relay OFF
cur - Display current BOOTP relay configuration
```

The Bootstrap Protocol (BOOTP) Relay Menu is used to allow hosts to obtain their configurations from a Dynamic Host Configuration Protocol (DHCP) server. The BOOTP configuration enables the switch to forward a client request for an IP address to two DHCP/BOOTP servers with IP addresses that have been configured on the EN4093/EN4093R.

BOOTP relay is turned off by default.

Table 313. Global BOOTP Relay Configuration Options

Command Syntax and Usage

server <1-4>

Displays the BOOTP Server menu, which allows you to configure an IP address for up to 4 global BOOTP servers. To view menu options, see page 379.

bdomain <1-10>

Displays the BOOTP Broadcast Domain menu, which allows you to configure BOOTP servers for a specific broadcast domain. To view menu options, see page 380.

on

Globally turns on BOOTP relay.

off

Globally turns off BOOTP relay.

cur

Displays the current BOOTP relay configuration.

/cfq/l3/bootp/server <1-4>

BOOTP Relay Server Configuration

[BOOTP Server 2 Menu] address - Set BOOTP server address delete - Delete BOOTP server

This menu allows you to configure an IP address for a global BOOTP server.

Table 314. BOOTP Relay Server Configuration Options

Command Syntax and Usage

address < IPv4 address>

Sets the IP address of the BOOTP server.

delete

Deletes the selected BOOTP server configuration.

/cfg/13/bootp/bdomain < 1-10>

BootP Relay Broadcast Domain Configuration

```
[Broadcast Domain 2 Menu]

vlan - VLAN number

server - Set IP address of BOOTP server

enable - Enable broadcast domain

disable - Disable broadcast domain

delete - Delete broadcast domain

cur - Display current broadcast domain configuration
```

This menu allows you to configure a BOOTP server for a specific broadcast domain, based on its associated VLAN.

Table 315. BOOTP Relay Broadcast Domain Configuration Options

Command Syntax and Usage

vlan <*VLAN number*>

Configures the VLAN of the broadcast domain. Each broadcast domain must have a unique VLAN.

server <1-4>

Displays the BOOTP Server menu, which allows you to configure an IP address for the BOOTP server. To view menu options, see page 379.

enable

Enables BOOTP Relay for the broadcast domain.

disable

Disables BOOTP Relay for the broadcast domain. When disabled, BOOTP Relay is performed by one of the global BOOTP servers.

delete

Deletes the selected broadcast domain configuration.

cur

Displays the current parameters for the BOOTP Relay Broadcast Domain.

/cfq/l3/vrrp

VRRP Configuration Menu

```
[Virtual Router Redundancy Protocol Menu]
    vr - VRRP Virtual Router menu
     group - VRRP Virtual Router Group menu
     if
            - VRRP Interface menu
     track - VRRP Priority Tracking menu
     hotstan - Enable/disable hot-standby processing
     on - Globally turn VRRP ON
     off - Globally turn VRRP OFF
     cur - Display current VRRP configuration
```

Virtual Router Redundancy Protocol (VRRP) support on EN4093/EN4093Rs provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

By default, VRRP is disabled. IBM Networking OS has extended VRRP to include virtual servers as well, allowing for full active/active redundancy between switches. For more information on VRRP, see the "High Availability" chapter in the Application Guide.

Table 316. VRRP Menu Options (/cfg/l3/vrrp)

Command Syntax and Usage

vr <virtual router number (1-128)>

Displays the VRRP Virtual Router Menu. This menu is used for configuring virtual routers on this switch. To view menu options, see page 382.

Displays the VRRP virtual router group menu, used to combine all virtual routers together as one logical entity. Group options must be configured when using two or more switches in a hot-standby failover configuration where only one switch is active at any given time. To view menu options, see page 385.

if <interface number>

Displays the VRRP Virtual Router Interface Menu. To view menu options, see page 387.

track

Displays the VRRP Tracking Menu. This menu is used for weighting the criteria used when modifying priority levels in the master router election process. To view menu options, see page 388.

hotstan disable enable

Enables or disables hot standby processing, in which two or more switches provide redundancy for each other. By default, this option is disabled.

on

Globally enables VRRP on this switch.

Table 316. VRRP Menu Options (/cfg/l3/vrrp) (continued)

off

Globally disables VRRP on this switch.

cur

Displays the current VRRP parameters.

/cfg/l3/vrrp/vr <router number>

Virtual Router Configuration Menu

```
[VRRP Virtual Router 1 Menu]

track - Priority Tracking Menu

vrid - Set virtual router ID

addr - Set IP address

if - Set interface number

prio - Set router priority

adver - Set advertisement interval

preem - Enable or disable preemption

ena - Enable virtual router

dis - Disable virtual router

del - Delete virtual router

cur - Display current VRRP virtual router configuration
```

This menu is used for configuring virtual routers for this switch. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Virtual routers are disabled by default.

Table 317. VRRP Virtual Router Menu Options (/cfg/l3/vrrp/vr)

Command Syntax and Usage

track

Displays the VRRP Priority Tracking Menu for this virtual router. Tracking is a IBM Networking OS proprietary extension to VRRP, used for modifying the standard priority system used for electing the master router. To view menu options, see page 384.

vrid <virtual router ID (1-255)>

Defines the virtual router ID. This is used in conjunction with addr (below) to define a virtual router on this switch. To create a pool of VRRP-enabled routing devices which can provide redundancy to each other, each participating VRRP device must be configured with the same virtual router: one that shares the same vrid and addr combination.

The vrid for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. The default value is 1.

All vrid values must be unique within the VLAN to which the virtual router's IP interface belongs.

addr < IP address (such as, 192.4.17.101)>

Defines the IP address for this virtual router using dotted decimal notation. This is used in conjunction with the vrid (above) to configure the same virtual router on each participating VRRP device. The default address is 0.0.0.0.

if <interface number>

Selects a switch IP interface. If the IP interface has the same IP address as the addr option above, this switch is considered the "owner" of the defined virtual router. An owner has a special priority of 255 (highest) and will always assume the role of master router, even if it must pre-empt another virtual router which has assumed master routing authority. This pre-emption occurs even if the preem option below is disabled. The default interface is 1.

prio <1-254>

Defines the election priority bias for this virtual server. This can be any integer between 1 and 254. The default value is 100.

During the master router election process, the routing device with the highest virtual router priority number wins. If there is a tie, the device with the highest IP interface address wins. If this virtual router's IP address (addr) is the same as the one used by the IP interface, the priority for this virtual router will automatically be set to 255 (highest).

When priority tracking is used (/cfg/l3/vrrp/track or /cfq/l3/vrrp/vr #/track), this base priority value can be modified according to a number of performance and operational criteria.

adver <1-255>

Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default value is 1.

preem disable enable

Enables or disables master preemption. When enabled, if this virtual router is in backup mode but has a higher priority than the current master, this virtual router will preempt the lower priority master and assume control. Note that even when preem is disabled, this virtual router will always preempt any other master if this switch is the owner (the IP interface address and virtual router addr are the same). By default, this option is enabled.

ena

Enables this virtual router.

dis

Disables this virtual router.

del

Deletes this virtual router from the switch configuration.

cur

Displays the current configuration information for this virtual router.

/cfg/l3/vrrp/vr <router number>/track

Virtual Router Priority Tracking Configuration Menu

```
[VRRP Virtual Router 1 Priority Tracking Menu]

vrs - Enable/disable tracking master virtual routers

ifs - Enable/disable tracking other interfaces

ports - Enable/disable tracking VLAN switch ports

cur - Display current VRRP virtual router configuration
```

This menu is used for modifying the priority system used when electing the master router from a pool of virtual routers. Various tracking criteria can be used to bias the election results. Each time one of the tracking criteria is met, the priority level for the virtual router is increased by an amount defined through the VRRP Tracking Menu (see page 388).

Criteria are tracked dynamically, continuously updating virtual router priority levels when enabled. If the virtual router pre-emption option (see preem in Table 317 on page 382) is enabled, this virtual router can assume master routing authority when its priority level rises above that of the current master.

Some tracking criteria (vrs, ifs, and ports below) apply to standard virtual routers, otherwise called "virtual interface routers." A virtual server router is defined as any virtual router whose IP address (addr) is the same as any configured virtual server IP address.

Table 318. Virtual Router Priority Tracking Options (/cfg/l3/vrrp/vr #/track)

Command Syntax and Usage

```
vrs disable enable
```

When enabled, the priority for this virtual router will be increased for each virtual router in master mode on this switch. This is useful for making sure that traffic for any particular client/server pairing are handled by the same switch, increasing routing and load balancing efficiency. This command is disabled by default.

```
ifs disable enable
```

When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.

```
ports disable enable
```

When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered "active" if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.

cur

Displays the current configuration for priority tracking for this virtual router.

/cfq/l3/vrrp/group

Virtual Router Group Configuration Menu

```
[VRRP Virtual Router Group Menu]
    track - Priority Tracking Menu
     vrid - Set virtual router ID
     if - Set interface number
     prio - Set renter priority
     adver - Set advertisement interval
     preem - Enable or disable preemption
     ena
            - Enable virtual router
            - Disable virtual router
     del
            - Delete virtual router
            - Display current VRRP virtual router configuration
```

The Virtual Router Group menu is used for associating all virtual routers into a single logical virtual router, which forces all virtual routers on the EN4093/EN4093R to either be master or backup as a group. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Note: This option is required to be configured only when using at least two EN4093/EN4093Rs in a hot-standby failover configuration, where only one switch is active at any time.

Table 319. Virtual Router Group Menu Options (/cfg/l3/vrrp/group)

Command Syntax and Usage

track

Displays the VRRP Priority Tracking Menu for the virtual router group. Tracking is a IBM Networking OS proprietary extension to VRRP, used for modifying the standard priority system used for electing the master router. To view menu options, see page 387.

vrid <virtual router ID (1-255)>

Defines the virtual router ID.

The vrid for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. All vrid values must be unique within the VLAN to which the virtual router's IP interface (see if below) belongs. The default virtual router ID is 1.

if <interface number>

Selects a switch IP interface. The default switch IP interface number is 1.

Table 319. Virtual Router Group Menu Options (/cfg/l3/vrrp/group) (continued)

prio <1-254>

Defines the election priority bias for this virtual router group. This can be any integer between 1 and 254. The default value is 100.

During the master router election process, the routing device with the highest virtual router priority number wins.

Each virtual router group is treated as one entity regardless of how many virtual routers are in the group. When the switch tracks the virtual router group, it measures the resources contained in the group (such as interfaces, VLAN ports, real servers). The priority is updated as a group. Every virtual router in the group has the same priority.

The *owner* parameter does not apply to the virtual router group. The group itself cannot be an owner and therefore the priority is 1-254.

adver <1-255>

Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default is 1.

preem disable enable

Enables or disables master preemption. When enabled, if the virtual router group is in backup mode but has a higher priority than the current master, this virtual router will preempt the lower priority master and assume control. Note that even when preem is disabled, this virtual router will always preempt any other master if this switch is the owner (the IP interface address and virtual router addr are the same). By default, this option is enabled.

ena

Enables the virtual router group.

dis

Disables the virtual router group.

del

Deletes the virtual router group from the switch configuration.

cur

Displays the current configuration information for the virtual router group.

/cfq/l3/vrrp/group/track

Virtual Router Group Priority Tracking Configuration Menu

```
[Virtual Router Group Priority Tracking Menu]
    ifs - Enable/disable tracking other interfaces
     ports - Enable/disable tracking VLAN switch ports
     cur - Display current VRRP Group Tracking configuration
```

Note: If Virtual Router Group Tracking is enabled, then the tracking option will be available only under *group* option. The tracking setting for the other individual virtual routers will be ignored.

Table 320. Virtual Router Group Priority Tracking Menu (/cfg/l3/vr/group/track)

Command Syntax and Usage

```
ifs disable enable
```

When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.

```
ports disable enable
```

When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered "active" if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.

cur

Displays the current configuration for priority tracking for this virtual router.

/cfq/l3/vrrp/if <interface number>

VRRP Interface Configuration Menu

Note: The interface-number represents the IP interface on which authentication parameters must be configured.

```
[VRRP Interface 1 Menu]
     auth - Set authentication types
     passw
            - Set plain-text password
     del
            - Delete interface
            - Display current VRRP interface configuration
     cur
```

This menu is used for configuring VRRP authentication parameters for the IP interfaces used with the virtual routers.

Table 321. VRRP Interface Menu Options (/cfg/l3/vrrp/if)

Command Syntax and Usage

auth none password

Defines the type of authentication that will be used: none (no authentication), or password (password authentication).

passw < password>

Defines a plain text password up to eight characters long. This password will be added to each VRRP packet transmitted by this interface when password authentication is chosen (see auth above).

del

Clears the authentication configuration parameters for this IP interface. The IP interface itself is not deleted.

cur

Displays the current configuration for this IP interface's authentication parameters.

/cfg/l3/vrrp/track

VRRP Tracking Configuration Menu

```
[VRRP Tracking Menu]

vrs - Set priority increment for virtual router tracking

ifs - Set priority increment for IP interface tracking

ports - Set priority increment for VLAN switch port tracking

cur - Display current VRRP Priority Tracking configuration
```

This menu is used for setting weights for the various criteria used to modify priority levels during the master router election process. Each time one of the tracking criteria is met (see "VRRP Virtual Router Priority Tracking Menu" on page 384), the priority level for the virtual router is increased by an amount defined through this menu.

Table 322. VRRP Tracking Menu Options (/cfg/l3/vrrp/track)

Command Syntax and Usage

```
vrs <0-254>
```

Defines the priority increment value (0 through 254) for virtual routers in master mode detected on this switch. The default value is 2.

```
ifs <0-254>
```

Defines the priority increment value (0 through 254) for active IP interfaces detected on this switch. The default value is 2.

Table 322. VRRP Tracking Menu Options (/cfg/l3/vrrp/track) (continued)

ports <0-254>

Defines the priority increment value (0 through 254) for active ports on the virtual router's VLAN. The default value is 2.

Displays the current configuration of priority tracking increment values.

Note: These priority tracking options only define increment values. These options do not affect the VRRP master router election process until options under the VRRP Virtual Router Priority Tracking Menu (see page 384) are enabled.

/cfq/13/qw6 < gateway number>

IPv6 Default Gateway Configuration Menu

```
[Default IP6 gateway 1 Menu]
    addr
            - Set IP address
            - Enable default gateway
    ena
         - Disable default gateway
    dis
           - Delete default gateway
            - Display current default gateway configuration
```

The switch supports IPv6 default gateways:

- Gateway 1 is used for data traffic.
- Gateways 3 and 4 are reserved for management.

The following table describes the IPv6 default gateway configuration options.

Table 323. IPv6 Default Gateway Menu Options (/cfg/l3/gw6)

Command Syntax and Usage addr <IPv6 address, such as 3001:0:0:0:0:0:abcd:12> Configures the IPv6 address of the default gateway, in hexadecimal format with colons. ena Enables the default gateway. dis Disables the default gateway. del Deletes the default gateway. cur Displays current IPv6 default gateway settings.

IPv6 Static Route Configuration Menu

```
[IP6 Static Route Menu]
add - Add static route
rem - Remove static route
clear - Clear static routes
cur - Display current IP6 static route configuration
```

The following table describes the IPv6 static route configuration options.

Table 324. IP6 Static Route Menu Options (/cfg/l3/route6)

Command Syntax and Usage

```
add <IPv6 address, such as 3001:0:0:0:0:0:0:abcd:12> <Prefix length> <gateway address> [<interface number>]
```

Adds an IPv6 static route.

```
rem <IPv6 address, such as 3001:0:0:0:0:0:0:0:abcd:12> <Prefix length> [<interface number>]
```

Removes the IPv6 static route.

clear

Clears IPv6 static routes. You are prompted to select the routes to clear, based on the following criteria:

- dest: Destination IPv6 address of the route
- gw: Default gateway address used by the route
- if: Interface used by the route
- all: All IPv6 static routes

cur

Displays the current IPv6 static route configuration.

/cfq/l3/nbrcache

IPv6 Neighbor Discovery Cache Configuration Menu

[Static NBR Cache Menu] add - Add a static NBR Cache entry - Delete a static NBR Cache entry del clear - Clear static neighbor cache table - Display current static NBR Cache configuration

The following table describes the IPv6 Neighbor Discovery cache configuration options.

Table 325. Static NBR Cache Menu Options (/cfg/l3/nbrcache)

Command Syntax and Usage

add <IPv6 address, such as 3001:0:0:0:0:0:0:abcd:12> <MAC address, such as 00:60:af:00:02:30> <VLAN number> <port number or alias>

Adds a static entry to the Neighbor Discovery cache table. You are prompted for the following information:

- IP address
- MAC address
- VLAN number
- Port

del <IPv6 address, such as 3001:0:0:0:0:0:0:abcd:12>

Deletes the selected entry from the Neighbor Discovery cache table.

clear

Clears static entries in the Neighbor Discovery cache table. You are prompted to select the entries to clear, based on the following criteria:

- IF: Entries associated with the selected interface
- VLAN: Entries associated with the selected VLAN
- Port: Entries associated with the selected port
- All: All IPv6 Neighbor cache entries.

cur

Displays the current configuration of the Neighbor Discovery static cache table.

IPv6 Path MTU Configuration

```
[IP6 Path MTU Menu]
timeout - Set timeout duration of PMTU cache in minutes
clear - Clear IP6 Path MTU stats
cur - Display current PMTU configuration
```

The following table describes the configuration options for Path MTU (Maximum Transmission Unit). The Path MTU cache can consume system memory and affect performance. These commands allow you to manage the Path MTU cache.

Table 326. IPv6 Path MTU Options

Command Syntax and Usage

timeout 0|<10-100>

Sets the timeout value for Path MTU cache entries, in minutes. Enter 0 (zero) to set the timeout to infinity (no timeout).

The default value is 10 minutes.

clear

Clears all entries in the Path MTU cache.

cur

Displays the current Path MTU configuration.

/cfq/l3/ospf3

Open Shortest Path First Version 3 Configuration Menu

```
[Open Shortest Path First v3 Menu]
   aindex - OSPFv3 Area (index) Menu
            - OSPFv3 Summary Range Menu
    summpref - OSPFv3 AS-External Range Menu
    if - OSPFv3 Interface Menu
   virt - OSPFv3 Virtual Links Menu
   host - OSPFv3 Host Entry Menu
    rdstcfg - OSPFv3 Route Redistribute Entry Menu
    redist - OSPFv3 Route Redistribution Menu
    abrtype - Set the alternative ABR type
    lsdb - Set the LSDB limit for external LSA
    exoverfl - Set exit overflow interval in seconds
    refbw - Set reference bandwidth for dflt intf metric calc
    spfdelay - Set delay between topology change and SPF calc
    spfhold - Set hold time between two consecutive SPF calc
    rtrid - Set a fixed router ID
    nasbrdfr - Enable/disable set P-bit by an NSSA internal ASBR
    on - Globally turn OSPFv3 ON
    off
          - Globally turn OSPFv3 OFF
    cur - Display current OSPFv3 configuration
```

Table 327. OSPFv3 Configuration Menu (/cfg/l3/ospf3)

Command Syntax and Usage

```
aindex < area index (0-2) >
```

Displays the area index menu. This area index does not represent the actual OSPFv3 area number. See page 395 to view menu options.

```
range <1-16>
```

Displays summary routes menu for up to 16 IP addresses. See page 396 to view menu options.

```
summpref < 1-16 >
```

Displays the OSPFv3 summary prefix configuration menu. See page 398 to view menu options.

if <interface number>

Displays the OSPFv3 interface configuration menu. See page 399 to view menu options.

```
virt <virtual link (1-3)>
```

Displays the Virtual Links menu used to configure OSPFv3 for a Virtual Link. See page 403 to view menu options.

```
host <1-128>
```

Displays the menu for configuring OSPFv3 for the host routes. Up to 128 host routes can be configured. Host routes are used for advertising network device IP addresses to external networks to perform server load balancing within OSPF. It also makes Area Border Route (ABR) load sharing and ABR failover possible. See page 404 to view menu options.

Table 327. OSPFv3 Configuration Menu (/cfg/l3/ospf3) (continued)

rdstcfg <1-128>

Displays the OSPF route redistribution entry menu. See page 405 to view menu options.

redist connected static

Displays route redistribution menu. See page 406 to view menu options.

abrtype {standard|cisco|ibm}

Configures the Area Border Router (ABR) type, as follows:

- Standard
- Cisco
- IBM

The default setting is standard.

lsdb < LSDB limit (0-2147483647)> | none

Sets the link state database limit.

exoverf1 <0-4294967295>

Configures the number of seconds that a router takes to exit Overflow State. The default value is 0 (zero).

refbw <0-4294967295>

Configures the reference bandwidth, in kilobits per second, used to calculate the default interface metric. The default value is 100,000.

spfdelay < 0-65535 >

Configures the number of seconds that SPF calculation is delayed after a topology change message is received. The default value is 5.

spfhold < 0-65535 >

Configures the number of seconds between SPF calculations. The default value is 10.

rtrid <IP address>

Defines the router ID.

nasbrdfr e|d

Enables or disables setting of the P-bit in the default Type 7 LSA generated by an NSSA internal ASBR. The default setting is disabled.

on

Enables OSPFv3 on the switch.

off

Disables OSPFv3 on the switch.

cur

Displays the current OSPF configuration settings.

/cfq/13/ospf3/aindex < area index>

Area Index Configuration Menu

```
[OSPFv3 Area (index) 1 Menu]
areaid - Set area ID
type - Set area type
metric - Set metric for the default route into stub/NSSA area
mettype - Set default metric for stub/NSSA area
stb - Set stability interval for the NSSA area
trnsrole - Set translation role for the NSSA area
\hbox{no summ} \quad \hbox{- Enable/disable prevent sending summ LSA into stub/NSSA area} \\
         - Enable area
disable - Disable area
delete - Delete area
         - Display current OSPF area configuration
```

Table 328. OSPFv3 Area Index Configuration Options (/cfg/l3/ospf3/aindex)

Command Syntax and Usage

```
areaid <IP address (such as, 192.4.17.101)>
```

Defines the IP address of the OSPFv3 area index.

```
type transit|stub|nssa
```

Defines the type of area. For example, when a virtual link has to be established with the backbone, the area type must be defined as transit.

Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.

Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.

NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas. External routes from outside the Autonomous System (AS) can be advertised within the NSSA but are not distributed into other areas.

```
metric <metric value (1-16777215)>
```

Configures the cost for the default summary route in a stub area or NSSA.

```
mettype <1-3>
```

Configures the default metric type applied to the route.

This command applies only to area type of Stub/NSSA.

```
stb <1-255>
```

Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40.

Table 328. OSPFv3 Area Index Configuration Options (/cfg/l3/ospf3/aindex) (continued)

trnsrole always candidate

Configures the translation role for an NSSA area, as follows:

- always: Type 7 LSAs are always translated into Type 5 LSAs.
- candidate: An NSSA border router participates in the translator election process.

The default setting is candidate.

```
nosumm e d
```

Enables or disables the no-summary option. When enabled, the area-border router neither originates nor propagates Inter-Area-Prefix LSAs into stub/NSSA areas. Instead it generates a default Inter-Area-Prefix LSA.

The default setting is disabled.

enable

Enables the OSPFv3 area.

disable

Disables the OSPFv3 area.

delete

Deletes the OSPFv3 area.

cur

Displays the current OSPFv3 area configuration.

/cfg/l3/ospf3/range < range number >

OSPFv3 Summary Range Configuration Menu

```
[OSPFv3 Summary Range 1 Menu]

addr - Set IPv6 address
preflen - Set IPv6 prefix length
aindex - Set area index
lsatype - Set LSA type for aggregation
tag - Set route tag
hide - Enable/disable hide range
enable - Enable range
disable - Disable range
delete - Delete range
cur - Display current OSPFv3 summary range configuration
```

Table 329. OSPFv3 Summary Range Configuration Options (/cfg/l3/ospf3/range)

Command Syntax and Usage

addr < IPv6 address>

Configures the base IPv6 address for the range.

preflen <IPv6 prefix length (1-128)>

Configures the subnet IPv6 prefix length. The default value is 0 (zero).

Table 329. OSPFv3 Summary Range Configuration Options (/cfg/l3/ospf3/range)

aindex < area index (0-2)>

Configures the area index used by the switch.

lsatype summary | Type7

Configures the LSA type, as follows:

- Summary LSA
- Type7 LSA

tag <0-4294967295>

Configures the route tag.

hide disable enable

Hides the OSPFv3 summary range.

enable

Enables the OSPFv3 summary range.

disable

Disables the OSPFv3 summary range.

delete

Deletes the OSPFv3 summary range.

cur

Displays the current OSPFv3 summary range configuration.

/cfg/l3/ospf3/summpref < range number >

OSPFv3 AS-External Range Configuration Menu

```
[OSPFv3 AS-External Range 1 Menu]

addr - Set IPv6 address

preflen - Set IPv6 prefix length

aindex - Set area index

aggreff - Set aggregation effect

transl - Enable/disable set P-bit in the generated LSA

enable - Enable range

disable - Disable range

delete - Delete range

cur - Display current OSPFv3 AS-External range configuration
```

Table 330. OSPFv3 AS External Range Configuration Options (/cfg/l3/ospf3/range)

Command Syntax and Usage

addr < IPv6 address>

Configures the base IPv6 address for the range.

preflen < IPv6 prefix length (1-128)>

Configures the subnet IPv6 prefix length. The default value is 0 (zero).

aindex < area index (0-2)>

Configures the area index used by the switch.

aggreff allowAll|denyAll|advertise|not-advertise

Configures the aggregation effect, as follows:

- allowAll: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are generated.
 Aggregated Type-7 LSAs are generated in all the attached NSSAs for the range.
- denyAll: Type-5 and Type-7 LSAs are not generated.
- advertise: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are generated. For other area IDs, aggregated Type-7 LSAs are generated in the NSSA area.
- not-advertise: If the area ID is 0.0.0.0, Type-5 LSAs are not generated, while all NSSA LSAs within the range are cleared and aggregated Type-7 LSAs are generated for all NSSAs. For other area IDs, aggregated Type-7 LSAs are not generated in the NSSA area.

```
transl e|d
```

When enabled, the P-bit is set in the generated Type-7 LSA. When disabled, the P-bit is cleared. The default setting is disabled.

enable

Enables the OSPFv3 AS-external range.

disable

Disables the OSPFv3 AS-external range.

Table 330. OSPFv3 AS External Range Configuration Options (/cfg/l3/ospf3/range)

delete

Deletes the OSPFv3 AS-external range.

cur

Displays the current OSPFv3 AS-external range.

/cfq/l3/ospf3/if <interface number>

OSPFv3 Interface Configuration Menu

```
[OSPFv3 Interface 1 Menu]
   aindex - Set area index
    ipsec - Set ipsec on the interface
   instance - Set instance id
   prio - Set interface router priority
            - Set interface cost
   hello - Set hello interval in seconds
   dead
            - Set dead interval in seconds
   transm - Set transmit delay in seconds
             - Set retransmit interval in seconds
    retra
    passive - Enable/disable passive interface
    enable - Enable interface
    disable - Disable interface
    delete - Delete interface
    cur - Display current OSPFv3 interface configuration
```

Table 331. OSPFv3 Interface Configuration Options (/cfg/l3/ospf3/if)

Command Syntax and Usage

aindex < area index (0-2)>

Configures the OSPFv3 area index.

ipsec

Displays the OSPFv3 over IPsec configuration menu. See page 400 to view menu options.

instance <0-255>

Configures the instance ID for the interface.

prio <priority value (0-255)>

Configures the priority value for the switch's OSPFv3 interface.

A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the interface cannot be used as Designated Router (DR).

cost <1-65535>

Configures the metric value for sending a packet on the interface.

hello <1-65535>

Configures the indicated interval, in seconds, between the hello packets, that the router sends on the interface.

Table 331. OSPFv3 Interface Configuration Options (/cfg/l3/ospf3/if) (continued)

dead < 1-65535 >

Configures the time period, in seconds, for which the router waits for hello packet from the neighbor before declaring this neighbor down.

transm < 1-1800>

Configures the estimated time, in seconds, taken to transmit LS update packet over this interface.

retra <1-1800>

Configures the interval in seconds, between LSA retransmissions for adjacencies belonging to interface.

passive enable disable

Enables or disables the passive setting on the interface. On a passive interface, OSPFv3 protocol packets are suppressed.

enable

Enables the OSPFv3 interface.

disable

Disables the OSPFv3 interface.

delete

Deletes the OSPFv3 interface.

cur

Displays the current settings for OSPFv3 interface.

/cfg/l3/ospf3/if <interface number>/ipsec

OSPFv3 IPsec Configuration Menu

```
[OSPFv3 Interface 1 IPSec Menu]
ah - Set AH protocol
esp - Set ESP protocol
```

The following menus enable you to configure IPsec on OSPFv3.

Table 332. OSPFv3 IPsec Configuration Options (/cfg/l3/ospf3/if/ipsec)

Command Syntax and Usage

ah

Displays the Authentication Header (AH) configuration menu. To view menu options, see page 401.

esp

Displays the Encapsulating Security Payload (ESP) configuration menu. To view menu options, see page 402.

/cfg/l3/ospf3/if <interface number>/ipsec/ah

OSPFv3 IPsec Authentication Header Configuration Menu

```
[Set AH protocol]
   auth - Select the authentication algorithm
    authkey - Set the authentication key
   spi - Set the security parameter index
    enable - Enable AH
    disable - Disable AH
    reset - Reset AH configuration
            - Display current AH settings
```

The following menus enable you to configure an IPsec Authentication Header on OSPFv3.

Table 333. OSPFv3 IPsec AH Configuration Options (/cfg/l3/ospf3/if/ipsec/ah)

Command Syntax and Usage auth sha1 | md5 | none Sets the authentication algorithm. authkey < Hexadecimal string (MD5 key - 32 chars|SHA1 key - 40 chars)> Configures the authentication key password. spi <256-4294967295> Sets the IPsec in AH Security Parameter Index (SPI). Enables the authentication header. disable Disables the authentication header. Resets the AH settings to factory settings. Displays the current AH configuration.

/cfg/l3/ospf3/if <interface number>/ipsec/esp

OSPFv3 over IPsec Configuration Menu

```
[OSPFv3 Interface 1 ESP Menu]

auth - Select the authentication algorithm

authkey - Set the authentication key

encrypt - Select the encryption algorithm

encrykey - Set the encryption key

spi - Set the security parameter index

enable - Enable ESP

disable - Disable ESP

reset - Reset ESP configuration

cur - Display current ESP settings
```

The following menus enable you to configure an IPsec Encapsulating Security Payload on OSPFv3.

Table 334. OSPFv3 IPsec ESP Configuration Options (/cfg/l3/ospf3/if/ipsec/esp)

```
Command Syntax and Usage
auth sha1 | md5 | none
   Sets the authentication algorithm.
authkey < Hexadecimal string (MD5 - 32 chars|SHA1 - 40 chars)>
   Configures the authentication key password.
encrypt des | 3des | aes | null
   Sets the encryption algorithm.
encrykey < Hexadecimal string (3DES - 32 chars AES - 40 chars DES - 16 chars)>
   Sets the encryption key.
spi <256-4294967295>
   Sets the IPsec in AH Security Parameter Index (SPI).
enable
   Enables the encapsulating security payload.
disable
   Disables the encapsulating security payload.
reset
   Resets the ESP settings to factory settings.
current
   Displays the current ESP configuration.
```

/cfq/l3/ospf3/virt < link number>

OSPFv3 Virtual Link Configuration Menu

```
[OSPFv3 Virtual Link 1 Menu]
    aindex - Set area index
    hello - Set hello interval in seconds
    dead - Set dead interval in seconds
    trans - Set transit delay in seconds
    retra - Set retransmit interval in seconds
            - Set router ID of virtual neighbor
    nbr
    enable
           - Enable interface
    disable - Disable interface
    delete - Delete interface
             - Display current OSPFv3 interface configuration
```

Table 335. OSPFv3 Virtual Link Configuration Options (/cfg/l3/ospf3/virt)

Command Syntax and Usage

aindex < area index (0-2) >

Configures the OSPFv3 area index.

hello < l-65535>

Configures the indicated interval, in seconds, between the hello packets, that the router sends on the interface.

dead < 1-65535 >

Configures the time period, in seconds, for which the router waits for hello packet from the neighbor before declaring this neighbor down.

Configures the estimated time, in seconds, taken to transmit LS update packet over this interface.

retra <1-1800>

Configures the interval, in seconds, between link-state advertisement (LSA) retransmissions for adjacencies belonging to the OSPFv3 virtual link interface. The default value is five seconds.

nbr <NBR router ID (IP address)>

Configures the router ID of the virtual neighbor. The default setting is 0.0.0.0

enable

Enables OSPFv3 virtual link.

disable

Disables the OSPFv3 virtual link.

delete

Deletes the OSPFv3 virtual link.

cur

Displays the current OSPFv3 virtual link settings.

/cfg/l3/ospf3/host <host number>

OSPFv3 Host Entry Configuration Menu

```
[OSPF Host Entry 1 Menu]
addr - Set host entry IP address
aindex - Set area index
cost - Set cost of this host entry
enable - Enable host entry
disable - Disable host entry
delete - Delete host entry
cur - Display current OSPF host entry configuration
```

Table 336. OSPFv3 Host Entry Configuration Options (/cfg/l3/ospf3/host)

addr <IPv6 address> Configures the base IPv6 address for the host entry. aindex <area index (0-2)> Configures the area index of the host. cost <1-65535> Configures the cost value of the host. enable Enables OSPF host entry. disable Disables OSPF host entry. delete Deletes OSPF host entry. cur Displays the current OSPF host entries.

/cfq/l3/ospf3/rdstcfq <1-128>

OSPFv3 Redist Entry Configuration Menu

```
[OSPFv3 Redist Entry 1 Menu]
   addr - Set redist entry IPv6 address
    preflen - Set IPv6 prefix length
   metric - Set metric to be applied to the route
   mettype - Set metric type
   tag - Set route tag
    enable - Enable redist entry
    disable - Disable redist entry
    delete - Delete redist entry
            - Display current OSPF redist entry configuration
```

Table 337. OSPFv3 Redist Entry Configuration Options (/cfg/l3/ospf3/rdstcfg)

Command Syntax and Usage

addr < IPv6 address>

Configures the base IPv6 address for the redistribution entry.

preflen < IPv6 prefix length (1-128)>

Configures the subnet IPv6 prefix length. The default value is 64.

metric <1-16777215>

Configures the route metric value applied to the route before it is advertised into the OSPFv3 domain.

mettype asExttype1|asExttype2

Configures the metric type applied to the route before it is advertised into the OSPFv3 domain.

taq <0-4294967295>|unset

Configures the route tag. To clear the route tag, enter unset.

enable

Enables the OSPFv3 redistribution entry.

disable

Disables the OSPFv3 redistribution entry.

Deletes the OSPFv3 redistribution entry.

cur

Displays the current OSPFv3 redistribution configuration entries.

/cfg/l3/ospf3/redist connected|static

OSPFv3 Redistribute Configuration Menu

```
[OSPF Redistribute Static Menu]
export - Export all routes of this protocol
cur - Display current redistribution setting
```

Table 338. OSPFv3 Redistribute Configuration Options (/cfg/l3/ospf3/redist)

Command Syntax and Usage

```
export [<metric value (1-16777215)> | none] [<metric type (1-2)>] [<tag (0-4294967295)> | unset]
```

Exports the routes of this protocol as external OSPFv3 AS-external LSAs in which the metric, metric type, and route tag are specified. To remove a previous configuration and stop exporting the routes of the protocol, enter none.

To clear the route tag, enter unset.

cur

Displays the current OSPFv3 route redistribution settings.

/cfq/l3/ndprefix

IPv6 Neighbor Discovery Prefix Configuration

```
[IP6 Neighbor Discovery Prefix Menu]
    profile - Profile of ND Prefix
    add - Add Neighbour Discovery Prefix
    rem
            - Remove Neighbour Discovery Prefix
    clear - Clear Neighbour Discovery Prefix
           - Display current Neighbour Discovery Prefix configuration
    cur
```

The following table describes the Neighbor Discovery prefix configuration options. These commands allow you to define a list of prefixes to be placed in Prefix Information options in Router Advertisement messages sent from an interface.

Table 339. IPv6 Neighbor Discovery Prefix Options

Command Syntax and Usage

```
profile <1-127>
```

Displays the Neighbor Discovery Profile menu. You can configure up to 127 profiles. You must attach a profile to each Neighbor Discovery prefix.

```
add {<IPv6 prefix> <prefix length> <interface number> <prefile index>}
```

Adds a Neighbor Discovery prefix to an interface.

Note: A profile index of 0 (zero) adds the default profile, as follows:

- Prefix Advertisement: enabled
- Valid Lifetime: 2592000
- Valid Lifetime Fixed Flag: enabled
- Preferred Lifetime: 604800
- Preferred Lifetime Fixed Flag: enabled
- On-link Flag: enabled
- Autonomous Flag: enabled

```
rem { < IPv6 prefix > < prefix length > }
```

Removes a Neighbor Discovery prefix.

```
clear <interface number>|all
```

Clears the selected Neighbor Discovery prefixes. If you include an interface number, all ND prefixes for that interface are cleared.

cur

Displays current Neighbor Discovery prefix parameters.

/cfg/l3/ndprefix/profile <1-127>

IPv6 Neighbor Discovery Profile Configuration

```
[IP6 Neighbor Discovery Profile 1 Menu]

valft - Set Prefix Valid lifetime

valftfix - Set Prefix Valid lifetime FIXED Flag

prlft - Set Prefix Preferred lifetime

prlftfix - Set Prefix Preferred lifetime FIXED Flag

onlink - Set Prefix on-link Flag

autoflag - Set Prefix Autonomous Flag

ena - Enable Prefix advertisement

dis - Disable Prefix advertisement

del - Delete profile

cur - Display current Neighbor Discovery Prefix configuration
```

The following table describes the Neighbor Discovery Profile configuration options. Information in the ND profile can be used to supplement information included in an ND prefix.

Table 340. IPv6 Neighbor Discovery Profile Options

Command Syntax and Usage

```
valft <0-4294967295>
```

Configures the Valid Lifetime of the prefix, in seconds. The Valid Lifetime is the length of time (relative to the time the packet is sent) that the prefix is valid for the purpose of on-link determination. Enter the maximum value to configure a Valid Lifetime of infinity.

The default value is 2592000.

```
valftfix enable|disable
```

Enables of disables the Valid Lifetime fixed flag. When enabled, the Valid Lifetime value represents a fixed time that stays the same in consecutive advertisements.

When disabled, the Valid Lifetime value represents a time that decrements in real time, that is, one that will result in a value of zero at a specified time in the future.

The default setting is enabled.

```
prlft <0-4294967295>
```

Configures the Preferred Lifetime of the prefix, in seconds. The Preferred Lifetime is the length of time (relative to the time the packet is sent) that addresses generated from the prefix via stateless address autoconfiguration remain preferred. Enter the maximum value to configure a Preferred Lifetime value of infinity.

The default value is 604800.

Note: The Preferred Lifetime value must not exceed the Valid Lifetime value.

Table 340. IPv6 Neighbor Discovery Profile Options

prlftfix enable disable

Enables or disables the Preferred Lifetime fixed flag. When enabled, the Preferred Lifetime value represents a fixed time that stays the same in consecutive advertisements.

When disabled, the Preferred Lifetime value represents a time that decrements in real time, that is, one that will result in a value of zero at a specified time in the future.

The default setting is enabled.

onlink enable disable

Enables or disables the on-link flag. When enabled, indicates that this prefix can be used for on-link determination. When disabled, the advertisement makes no statement about on-link or off-link properties of the prefix.

The default setting is enabled.

autoflag enable disable

Enables or disables the autonomous flag. When enabled, indicates that the prefix can be used for stateless address configuration.

The default setting is enabled.

ena

Enables the selected profile.

dis

Disables the selected profile

del

Delete the selected Neighbor Discovery profile.

cur

Displays the current Neighbor Discovery profile parameters.

IPv6 Prefix Policy Table Configuration

```
[Prefix Policy Table Menu]

add - Add prefix Policy

rem - Remove prefix policy

cur - Display prefix policy table
```

The following table describes the configuration options for the IPv6 Prefix Policy Table. The Prefix Policy Table allows you to override the default address selection criteria.

Table 341. IPv6 Prefix Policy Table Options

Command Syntax and Usage

- IPv6 address prefix
- Prefix length
- Precedence: The precedence is used to sort destination addresses.
 Prefixes with a higher precedence are sorted before those with a lower precedence.
- Label: The label allows you to select prefixes based on matching labels.
 Source prefixes are coupled with destination prefixes if their labels match.

```
rem <IPv6 prefix>
```

cur

Displays the current Prefix Policy Table configuration.

/cfg/l3/loopif <interface number (1-5)>

IP Loopback Interface Configuration Menu

```
[IP Loopback Interface 2 Menu]
    addr
          - Set IP address
    mask
            - Set subnet mask
    ena
           - Enable IP interface
    dis
           - Disable IP interface
            - Delete IP interface
    del
           - Display current interface configuration
```

An IP loopback interface is not connected to any physical port. A loopback interface is always accessible over the network.

Table 342. IP Loopback Interface Menu Options (/cfg/l3/loopif)

Command Syntax and Usage addr < IP address> Defines the loopback interface IP address. mask <*subnet mask*> Defines the loopback interface subnet mask. ena Enables the loopback interface. dis Disables the loopback interface. del Deletes the selected loopback interface. cur Displays the current IP loopback interface parameters.

/cfg/l3/flooding

Flooding Configuration Menu

```
[flooding Menu]
vlan - VLAN Flooding Menu
cur - Display current Flooding configuration
```

Table 343. Flooding Menu Options (/cfq/l3/flooding)

Command Syntax and Usage

vlan <*VLAN number*>

Displays the flooding configuration menu for the VLAN. See page 412 to view menu options.

cur

Displays the current flooding parameters.

/cfg/l3/flooding/vlan <*VLAN number*>

Flooding VLAN Configuration Menu

```
[VLAN 1 Flooding Menu]
flood - Flood unregistered IPMC
cpu - Send unregistered IPMC to CPU
optflood - Enable/disable optimized flooding
cur - Display current Flooding configuration for this vlan
```

Table 344. Flooding VLAN Menu Options (/cfg/l3/flooding/vlan)

Command Syntax and Usage

```
flood enable disable
```

Configures the switch to flood unregistered IP multicast traffic to all ports. The default setting is <code>enabled</code>.

Note: If none of the IGMP hosts reside on the VLAN of the streaming server for a IPMC group, you must disable IGMP flooding to ensure that multicast data is forwarded across the VLANs for that IPMC group.

```
cpu enable|disable
```

Configures the switch to forward unregistered IP multicast traffic to the MP, which adds an entry in the IPMC table, as follows:

- If no Mrouter is present, drop subsequent packets with same IPMC.
- If an Mrouter is present, forward subsequent packets to the Mrouter(s) on the ingress VLAN.

The default setting is enabled.

Note: If both flood and cpu are disabled, then the switch drops all unregistered IPMC traffic.

Table 344. Flooding VLAN Menu Options (/cfg/l3/flooding/vlan) (continued)

optflood enable|disable

Enables or disables optimized flooding. When enabled, optimized flooding avoids packet loss during the learning period. The default setting is disabled.

Displays the current flooding parameters for the selected VLAN.

/cfq/cee

Converged Enhanced Ethernet Configuration

```
[CEE Configuration Menu]
    global - Global CEE Configuration Menu
    port - Port CEE Configuration Menu
          - Globally turn ISCSI TLV advertisement ON/OFF
    on \,\, - Globally turn CEE Features ON
            - Globally turn CEE Features OFF
          - Display current CEE configuration
```

Table 345 describes the Converged Enhanced Ethernet (CEE) configuration menu options.

Table 345. CEE Configuration Options (/cfg/cee)

Command Syntax and Usage

qlobal

Displays the CEE Global Configuration menu. To view menu options, see page 414.

port

Displays the CEE Port Configuration menu. To view menu options, see page 417.

iscsi e d

Enables or disables ISCSI TLV advertisements.

on

Globally turns CEE on.

off

Globally turns CEE off.

[Global CEE Configuration Menu]
ets - Enhanced Transmission Selection Menu
pfc - Priority Flow Control Menu
cur - Display current CEE configuration
```

Table 346 describes the global CEE configuration options.

Table 346. CEE Global Options (/cfg/cee/global)

Command Syntax and Usage

ets

Displays the Enhanced Transmission Selection menu. To view menu options, see page 414.

pfc

Displays the Priority Flow Control menu. To view menu options, see page 415.

cur

Displays the current global CEE parameters.

/cfg/cee/global/ets

ETS Global Configuration

```
[Global Enhanced Transmission Selection Menu]

pg - Priority Group Menu

cur - Displays current ETS configuration
```

Enhanced Transmission Selection (ETS) allows you to allocate bandwidth to different traffic types, based on 802.1p priority.

Table 347 describes the global ETS configuration options.

Note: ETS configuration supersedes the QoS 802.1p menu. When ETS is enabled, you cannot configure the 802.1p menu options.

Table 347. CEE Global ETS Options (/cfg/cee/global/ets)

Command Syntax and Usage

```
pg <0-7, 15>
```

Displays the Enhanced Transmission Selection menu for the selected Priority Group. To view menu options, see page 415.

cur

Displays the current global CEE parameters.

/cfg/cee/global/ets/pq <0-7.15>

ETS Global Priority Group Configuration

[PGID 1 Menu] create - Create Priority Group - Set bandwidth percentage for the Priority Group prio - Assign one or more 802.1p priorities to Priority Group desc - Set description for the Priority Group - Display current Priority Group configuration

An ETS Priority Group can be assigned one or more 802.1p priority values. Switch bandwidth is allocated by percentage to each Priority Group.

Note: The create and bw options are not available for Priority Group 15. In stacking mode, the internal COS7 is used for stack communication and the ETS Priority Group 7 is not available for configuration.

Table 348 describes the global ETS Priority Group configuration options.

Table 348. Global ETS Priority Group Options (/cfg/cee/global/ets/pg)

Command Syntax and Usage

create { < bandwidth percentage (0, 10-100) > } < 802.1p value (0-7) >

Allows you to configure Priority Group parameters. You can enter the link bandwidth percentage allocated to the Priority Group, and also assign one or more 802.1p values to the Priority Group.

bw <bandwidth percentage (0, 10-100)>

Configures the link bandwidth allocation for the Priority Group, as a percentage from 10% to 100%. Enter 0 (zero) to disable bandwidth allocation to the Priority Group.

```
prio <0-7>
```

Adds one or more 802.1p priority values to the Priority Group. Enter one value per line, null to end.

```
desc <1-31 characters>
```

Enter text that describes this Priority Group.

cur

Displays the current ETS global Priority Group parameters.

/cfq/cee/qlobal/pfc

Priority Flow Control Global Configuration

```
[Global Priority Flow Control Menu]
    pri - 802.1p Priority PFC Menu
            - Globally turn PFC ON
    on
    off
            - Globally turn PFC OFF
            - Display current PFC configuration
```

Priority-based Flow Control (PFC) enhances flow control by allowing the switch to pause traffic based on its 802.1p priority value, while allowing traffic at other priority levels to continue.

Priority-based Flow Control global configuration configure all ports with one command. The difference between ETS and PFC global configuration is that the ETS commands are applied in running as global commands, whereas the PFC commands are applied on a per-port basis even though they are configured from the global menu.

Table 349 describes the global Priority Flow Control (PFC) configuration options.

Table 349. Global Priority Flow Control Options (/cfg/cee/global/pfc)

```
Command Syntax and Usage

pri <0-7>
    Displays the 802.1p Priority PFC menu. To view menu options, see page 416.

on
    Globally turns PFC on.

off
    Globally turns PFC off.

cur

Table 351 describes the Converged Enhanced Ethernet (CEE) port configuration options.

Table 351. CEE Port Options (/cfg/cee/port)

Command Syntax and Usage

dcbx

Displays the DCB Capability Exchange Protocol (DCBX) menu for the selected port. To view menu options, see page 417.

pfc

Displays the Priority Flow Control (PFC) menu for the selected port. To view menu options, see page 419.

cur

Displays the current CEE port parameters.

/cfq/cee/port port alias or number>/dcbx

DCBX Port Configuration

```
[Port EXT1 DCBX Config Menu]
   appadv - Set Advertise flag for Application Protocol
    appwill - Set Willing flag for Application Protocol
    etsadv - Set Advertise flag for PG
    etswill - Set Willing flag for PG
    pfcadv - Set Advertise flag for PFC
    pfcwill - Set Willing flag for PFC
    dis - Disable DCBX
    ena
            - Enable DCBX
            - Display current port DCBX configuration
```

Data Center Bridging Capability Exchange (DCBX) protocol is used by Converged Enhanced Ethernet (CEE) networks to exchange advanced detection and configuration data.

Table 352 describes the port DCB Capability Exchange Protocol (DCBX) configuration options.

Table 352. Port DCBX Options (/cfg/cee/port x/dcbx)

Command Syntax and Usage

appadv enable disable

Enables or disables DCBX Application Protocol advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).

appwill enable disable

Enables or disables Application Protocol willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).

etsadv enable disable

Enables or disables DCBX ETS advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).

etswill enable disable

Enables or disables ETS willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).

pfcadv enable|disable

Enables or disables DCBX PFC advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).

pfcwill enable disable

Enables or disables PFC willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).

dis

Disables DCBX on the port.

ena

Enables DCBX on the port.

cur

Displays the current DCBX parameters on the port.

/cfq/cee/port /pfc

PFC Port Configuration

```
[Port EXT2 PFC Configuration Menu]
    pri - 802.1p Priority PFC Menu
            - Turn ON PFC
    on
    off
            - Turn OFF PFC
            - Display current PFC configuration
```

Table 353 describes the port Priority Flow Control (PFC) configuration options.

Table 353. Port PFC Options (/cfg/cee/port x/pfc)

Command Syntax and Usage

pri <0-7>

Displays the 802.1p Priority PFC menu for the selected port. To view menu options, see page 419.

on

Turns PFC on for the selected port.

off

Turns PFC off for the selected port.

cur

Displays the current PFC parameters for the selected port.

/cfg/cee/port <port alias or number>/pfc/pri <0-7>

802.1p PFC Port Configuration

```
[Priority 1 Menu]
    ena - Enable PFC on this priority queue
            - Disable PFC on this priority queue
    desc - Set a description string to identify the priority queue
            - Display current PFC configuration
```

Table 354 describes the port-level Priority Flow Control (PFC) configuration options.

Table 354. Port 802.1p PFC Options (/cfg/cee/port x/pfc/pri)

Command Syntax and Usage

ena

Enables Priority Flow Control on the selected 802.1p priority.

Note: PFC can be enabled on 802.1p priority 3 and one other priority only.

dis

Disables Priority Flow Control on the selected 802.1p priority.

Table 354. Port 802.1p PFC Options (/cfg/cee/port x/pfc/pri) (continued)

desc <1-31 characters>

Enter text to describe the 802.1p priority value.

Displays the current 802.1p Priority Flow Control parameters.

/cfg/fcoe

Fiber Channel over Ethernet Configuration

```
[Fiber Channel over Ethernet Configuration Menu]
fips - FCoE Initialization Protocol (FIP) Snooping Menu
cur - Display current FCOE configuration
```

Fiber Channel over Ethernet (FCoE) transports Fiber Channel frames over an Ethernet fabric. The CEE features and FCoE features allow you to create a lossless Ethernet transport mechanism.

Note: On EN4093 models, FCoE is not supported in stacking mode.

Table 355 describes the FCoE configuration options.

Table 355. FCoE Options (/cfg/fcoe)

Command Syntax and Usage

fips

Displays the FCoE Initialization Protocol (FIP) Snooping menu. To view menu options, see page 420.

cur

Displays the current FCoE parameters.

/cfg/fcoe/fips

FIPS Configuration

```
[FIP Snooping Configuration Menu]

port - Port FIP snooping Menu

on - Globally turn FIP snooping ON

off - Globally turn FIP snooping OFF

aclto - Enable/Disable the removal of expired FCFs and FCOE ACLs

autovlan - Enable/Disable the automatic creation of fcoe vlans

cur - Display current FIP snooping global configuration
```

FIP Snooping allows the switch to monitor FCoE Initialization Protocol (FIP) frames to gather discovery, initialization, and maintenance data. This data is used to automatically configure ACLs that provide FCoE connections and data security.

Table 356 describes the FCoE Initialization Protocol (FIP) Snooping configuration options.

Table 356. FIP Snooping Options (/cfg/fcoe/fips)

Command Syntax and Usage

port port number>

Displays the FCoE Initialization Protocol (FIP) Snooping menu for the selected port. To view menu options, see page 422.

on

Globally turns FIP Snooping on.

off

Globally turns FIP Snooping off.

aclto e|d

Enables or disables ACL time-out removal. When enabled, ACLs associated with expired FCFs and FCoE connections are removed from the system.

autovlan e|d

Enables or disables automatic VLAN creation, based on response received from the connected device.

cur

Displays the current FIP Snooping parameters.

/cfg/fcoe/fips/port port alias or number>

FIPS Port Configuration

```
[Port 1 FIP Snooping Configuration Menu]

fcfmode - Set whether FCF is connected to this port
ena - Enable FIP snooping
dis - Disable FIP snooping
cur - Display current FIP snooping configuration
```

Table 350 describes the port FCoE Initialization Protocol (FIP) Snooping configuration options.

Table 357. Port FIP Snooping Options (/cfg/fcoe/fips/port)

Command Syntax and Usage

fcfmode auto|on|off

Configures FCoE Forwarding (FCF) on the port, as follows:

- on: Configures the port as a Fiber Channel Forwarding (FCF) port.
- off: Configures the port as an FCoE node (ENode).
- auto: Automatically detect the configuration of the connected device, and configure this port to match.

ena

Enables FIP Snooping on the port. The default setting is enabled.

Note: If IPv6 ACLs are assigned to the port, you cannot enable FCoE.

dis

Disables FIP Snooping on the port.

cur

Displays the current FIP Snooping parameters.

/cfg/rmon

Remote Monitoring Configuration

```
[RMON Menu]
hist - RMON History Menu
event - RMON Event Menu
alarm - RMON Alarm Menu
cur - Display current RMON configuration
```

Remote Monitoring (RMON) allows you to monitor traffic flowing through the switch. The RMON MIB is described in RFC 1757.

Table 358 describes the Remote Monitoring (RMON) configuration menu options.

Table 358. Remote Monitoring (RMON) Menu Options (/cfg/rmon)

Command Syntax and Usage

hist <1-65535>

Displays the RMON History Configuration menu. To view menu options, see page 423.

event <1-65535>

Displays the RMON Event Configuration menu. To view menu options, see page 424.

alarm <*1-65535*>

Displays the RMON Alarm Configuration menu. To view menu options, see page 425.

cur

Displays the current RMON parameters.

/cfg/rmon/hist < 1-65535>

RMON History Configuration Menu

```
[RMON History 2 Menu]
    ifoid - Set interface MIB object to monitor
    rbnum - Set the number of requested buckets
    intrval - Set polling interval
    owner - Set owner for the RMON group of statistics
            - Delete this history and restore defaults
    delete
            - Display current history configuration
```

Table 359 describes the RMON History Menu options.

Table 359. RMON History Menu Options (/cfg/rmon/hist)

Command Syntax and Usage

ifoid <1-127 characters>

Configures the interface MIB Object Identifier. The IFOID must correspond to the standard interface OID, as follows:

1.3.6.1.2.1.2.2.1.1.x

where x is the ifIndex

rbnum <1-65535>

Configures the requested number of buckets, which is the number of discrete time intervals over which data is to be saved. The default value is 30.

The maximum number of buckets that can be granted is 50.

intrval <1-3600>

Configures the time interval over which the data is sampled for each bucket. The default value is 1800.

Table 359. RMON History Menu Options (/cfg/rmon/hist) (continued)

owner <1-127 characters>

Enter a text string that identifies the person or entity that uses this History index.

delete

Deletes the selected History index.

cur

Displays the current RMON History parameters.

/cfg/rmon/event < 1-65535 >

RMON Event Configuration Menu

```
[RMON Event 2 Menu]

descn - Set description for the event

type - Set event type

owner - Set owner for the event

delete - Delete this event and restore defaults

cur - Display current event configuration
```

Table 360 describes the RMON Event Menu options.

Table 360. RMON Event Menu Options (/cfg/rmon/event)

Command Syntax and Usage

descn <1-127 characters>

Enter a text string to describe the event.

```
type none|log|trap|both
```

Selects the type of notification provided for this event. For log events, an entry is made in the log table and sent to the configured syslog host. For trap events, an SNMP trap is sent to the management station.

owner <1-127 characters>

Enter a text string that identifies the person or entity that uses this event index.

delete

Deletes the selected RMON Event index.

cur

Displays the current RMON Event parameters.

/cfg/rmon/alarm < 1-65535>

RMON Alarm Configuration Menu

```
[RMON Alarm 2 Menu]
    oid - Set MIB oid datasource to monitor
    intrval - Set alarm interval
    sample - Set sample type
    almtype - Set startup alarm type
    rlimit - Set rising threshold
    flimit - Set falling threshold
    revtidx - Set event index to fire on rising threshold crossing
    fevtidx - Set event index to fire on falling threshold crossing
    owner - Set owner for the alarm
    delete - Delete this alarm and restore defaults
            - Display current alarm configuration
```

The Alarm RMON group can track rising or falling values for a MIB object. The MIB object must be a counter, gauge, integer, or time interval. Each alarm index must correspond to an event index that triggers once the alarm threshold is crossed.

Table 361 describes the RMON Alarm Menu options.

Table 361. RMON Alarm Menu Options (/cfg/rmon/alarm)

Command Syntax and Usage

oid <1-127 characters>

Configures an alarm MIB Object Identifier.

intrval <1-65535>

Configures the time interval over which data is sampled and compared with the rising and falling thresholds. The default value is 1800.

```
sample abs delta
```

Configures the method of sampling the selected variable and calculating the value to be compared against the thresholds, as follows:

- abs—absolute value, the value of the selected variable is compared directly with the thresholds at the end of the sampling interval.
- delta-delta value, the value of the selected variable at the last sample is subtracted from the current value, and the difference compared with the thresholds.

```
almtype rising|falling|either
```

Configures the alarm type as rising, falling, or either (rising or falling).

```
rlimit <-2147483647 - 2147483647>
```

Configures the rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last sampling interval was less than this threshold, a single event is generated.

```
flimit <-2147483647 - 214748364)
```

Configures the falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single event is generated.

Table 361. RMON Alarm Menu Options (/cfg/rmon/alarm)

revtidx <1-65535>

Configures the rising alarm event index that is triggered when a rising threshold is crossed.

fevtidx <1-65535>

Configures the falling alarm event index that is triggered when a falling threshold is crossed.

owner <1-127 characters>

Enter a text string that identifies the person or entity that uses this alarm index.

delete

Deletes the selected RMON Alarm index.

cur

Displays the current RMON Alarm parameters.

/cfq/spar <1-8>

Switch Partition (SPAR) Configuration

Switch partitions (SPARs) divide the data plane inside a physical switch into independent switching domains. Switch partitions do not communicate with each other, forcing hosts on different SPARs to bridge traffic over an upstream switch, even if they belong to the same VLAN.

Up to 8 SPARs can be defined on a switch. Each SPAR supports up to 32 local VLANs for further partitioning flexibility.

```
[SPAR 1 Configuration Menu]

uplink - SPAR Uplink Configuration Menu
domain - SPAR Domain Configuration Menu
name - Set SPAR Name
ena - Enable SPAR
dis - Disable SPAR
delete - Delete SPAR
cur - Display current SPAR configuration
```

Table 362 describes the Switch Partition (SPAR) configuration options.

Table 362. SPAR Configuration Options (/cfg/spar)

Command Syntax and Usage

uplink

Displays the Uplink Configuration menu. To view menu options, see page 427.

domain

Displays the Domain Configuration menu. To view menu options, see page 428.

Table 362. SPAR Configuration Options (/cfg/spar) (continued)

name

Configures a name for the SPAR.

ena

Enables the SPAR.

dis

Disables the SPAR.

delete

Deletes the current SPAR configuration.

cur

Displays the current SPAR configuration.

/cfq/spar <1-8>/uplink

Uplink Configuration

```
[SPAR 1 Uplink Configuration Menu]
    port - Set port as SPAR uplink
    trunk - Set static trunk as SPAR uplink
            - Set LACP key as SPAR uplink
            - Display current SPAR Uplink configuration
```

Table 363 describes the Uplink Configuration menu for the SPAR. A single port, static trunk, or LACP channel can be used for the uplink. All uplinks within a SPAR are automatically assigned to the SPAR domain's default VLAN (for details, see page 429) and to any SPAR local VLANs (for details, see page 429)

Table 363. SPAR Uplink Configuration Options (/cfg/spar/uplink)

Command Syntax and Usage

port <0, port no.>

Configures a physical port for uplink connectivity. Default value is 0 (disabled).

trunk <0-64>

Configures a static trunk for uplink connectivity. Default value is 0 (disabled).

key <0-65535>

Configures a LACP channel for uplink connectivity. Default value is 0 (disabled).

Displays the current SPAR uplink configuration.

/cfg/spar <1-8>/domain

Domain Configuration

[SPAR 1 Domain Configuration Menu]

dvlan - SPAR Default VLAN Domain Configuration Menu
lvlan - SPAR Local VLAN Domain Configuration Menu
mode - Set SPAR Domain Mode
cur - Display current SPAR Domain configuration

Table 364 describes the domain configuration menu for the SPAR.

Table 364. SPAR Domain Configuration Options (/cfg/spar/domain)

Command Syntax and Usage

dvlan

Displays the Default VLAN configuration menu. To view menu options, see page 429.

lvlan <1-32>

Displays the Local VLAN configuration menu. To view menu options, see page 429.

mode passthrough|local

Configures the SPAR domain mode:

- passthrough references member ports only by the SPAR default VLAN.
 This provides VLAN-unaware uplink connectivity and pass-through tunnel domain switching for SPAR member ports.
- local references member ports by both SPAR default VLAN and SPAR local domain VLANs. This provides VLAN-aware uplink connectivity via local domain switching for SPAR member ports.

Default value is passthrough.

cur

Displays the current SPAR domain configuration.

/cfq/spar <1-8>/domain/dvlan

Default VLAN Configuration

```
[SPAR 1 Default VLAN Domain Configuration Menu]
    addsport - Add server port to Default VLAN Domain
    remsport - Remove server port from Default VLAN Domain
    sparvid - Set SPAR Default VLAN ID
             - Display current SPAR Default VLAN Domain configuration
```

Table 365 describes the Default VLAN configuration menu for the SPAR.

Table 365. SPAR Default VLAN Configuration Options (/cfg/spar/domain/dvlan)

Command Syntax and Usage

addsport cport no.>

Adds server ports to the SPAR.

remsport <port no.>

Removes server ports from the SPAR.

sparvid <2-4094>

Configures the default SPAR VLAN ID. A unique factory default VLAN ID is assigned to each SPAR as "408x", where x is the SPAR ID <1-8>. This option provides an override to the factory default selection if conflicts arise with a customer VLAN ID on the upstream network.

cur

Displays the current SPAR domain default VLAN configuration.

/cfg/spar < l-8 > /domain/lvlan < l-32 >

Local VLAN Configuration

```
[SPAR 1 Local VLAN Domain 1 Configuration Menu]
    addsport - Add server port to Local VLAN Domain

    disvmr - Disable VMready
             - Display all current virtualization settings
```

Table 367 describes the general virtualization configuration options. More detailed information is available in the following sections.

```
Table 367. Virtualization Configuration Options (/cfg/virt)
Command Syntax and Usage
vmpolicy
    Displays the Virtual Machines Policy menu. To view menu options, see
   page 431.
vnic
    Displays the Virtual NIC (vNIC) menu. To view menu options, see page 433.
```

Table 367. Virtualization Configuration Options (/cfg/virt) (continued)

ufp

Displays the Unified Fabric Port menu. To view menu options, see page 437.

vmcheck

Displays the VM Check menu. To view menu options, see page 441.

vmgroup <1-1024>

Displays the Virtual Machine Groups menu. To view menu options, see page 443.

vmprof

Displays the Virtual Machine Profiles menu. To view menu options, see page 445.

vmware

Displays the VMware settings menu. To view menu options, see page 447.

enavmr

Enables VMready. The default setting is disabled.

disvmr

Disables VMready.

evb

Displays the Edge Virtual Bridge menu. To view menu options, see page 449.

cur

Displays the current virtualization parameters.

/cfg/virt/vmpolicy

Virtual Machines Policy Configuration

```
[VM Policy Configuration Menu]
    vmbwidth - VM Bandwidth Configuration Menu
```

Table 368 describes the Virtual Machines (VM) policy configuration options.

Table 368. VM Policy Options (/cfg/virt/vmpolicy)

Command Syntax and Usage

vmbwidth <MAC address>|<UUID>|<name>|<IP address>|<index number>

Displays the bandwidth management menu for the selected Virtual Machine. Enter a unique identifier to select a VM.

/cfg/virt/vmpolicy/vmbwidth < VM identifier>

VM Policy Bandwidth Management

```
[VM Bandwidth Management Menu]

txrate - Set VM Transmit Bandwidth (Ingress for switch)

rxrate - Set VM Receive Bandwidth (Egress for switch)

bwctrl - Enable/Disable VM Bandwidth Control

delete - Delete VM bandwidth control Entry

cur - Display current VM bandwidth configuration
```

Table 369 describes the bandwidth management options for the selected VM. Use these commands to limit the bandwidth used by each VM.

Table 369. VM Bandwidth Management Options (/cfg/virt/vmpolicy/vmbwidth)

Command Syntax and Usage

```
txrate <64-10000000> [32|64|128|256|512|1024|2048|4096] <1-640>
```

The first value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the VM to the switch, in kilobits per second. Enter the value in multiples

of 64.

The second values configures the maximum burst size, in kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.

The third value represents the ACL assigned to the transmission rate. The ACL is automatically, in sequential order, if not specified by the user. If there are no available ACLs, the TXrate cannot be configured. Each TXrate configuration reduces the number of available ACLs by one.

```
rxrate <64-1000000> [32|64|128|256|512|1024|2048|4096]
```

The first value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the switch to the VM, in kilobits per second. Enter the value in multiples

of 64.

The second values configures the maximum burst size, in Kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.

bwctrl e|d

Enables or disables bandwidth control on the VM policy.

delete

Deletes the bandwidth management settings from this VM policy.

cur

Displays the current VM bandwidth management parameters.

/cfq/virt/vnic

Virtual NIC Configuration

    addvnic - Add vNIC to vNIC group
    remvnic - Remove vNIC from vNIC group
    addport - Add port to vNIC group
    remport - Remove port from vNIC group
    addtrnk - Add trunk to vNIC group
    remtrnk - Remove trunk from vNIC group
    ena - Enable vNIC group
    dis
            - Disable vNIC group
    del
            - Delete vNIC group
          - Display current vNIC group configuration
```

Table 373 describes the Virtual NIC (vNIC) group configuration options.

Table 373. Port vNIC Group options (/cfg/virt/vnic/vnicgrp)

Command Syntax and Usage

vnicvlan <*VLAN number*>

Assigns a VLAN to the vNIC group.

failover e d

Enables or disables uplink failover for the vNIC Group. Uplink Failover for the vNIC Group will disable only the affected vNIC links on the port. Other port functions continue to operate normally.

The default setting is disabled.

addvnic <vNICID>

Adds a vNIC to the vNIC Group. The vNIC ID is comprised of the port number and the vNIC number. For example: intA1.1

remvnic <vNICID>

Removes the selected vNIC from the vNIC Group.

addport addport

Adds the selected switch port to the vNIC Group.

remport /port number>

Removes the selected switch port from the vNIC Group.

addtrnk < trunk number>

Adds the selected trunk group to the vNIC Group.

remtrnk <trunk number>

Removes the selected trunk group from the vNIC Group.

ena

Enables the vNIC Group.

Table 373. Port vNIC Group options (/cfg/virt/vnic/vnicgrp)

Command Syntax and Usage
dis
Disables the vNIC Group.
del
Deletes the vNIC Group.
cur
Displays the current vNIC Group parameters.

/cfq/virt/ufp

UFP Global Configuration

```
[UFP Global Configuration Menu]
    port - UFP Port Configuration Menu
             - Globally turn UFP feature ON
    on
    off
            - Globally turn UFP feature OFF
             - Display current UFP configuration
```

Table 374 describes the Unified Fabric Port (UFP) global configuration options. UFP allows defining up to 4 virtual ports per physical port. Each virtual port can be set up to operate in a specific mode (access, trunk, tunnel, FCoE) and within predefined bandwidth limits.

Note: vNIC and UFP are mutually exclusive. Only one of them can be globally enabled at any point in time.

Table 374. UFP Global Configuration (/cfg/virt/ufp)

```
Command Syntax and Usage
port port number>
   Displays the UFP port menu. To view menu options, see page 437.
on
   Globally turns UFP on.
off
   Globally turns UFP off. UFP is disabled by default.
cur

cur - Display current virtual port configuration
```

Table 376 describes the UFP virtual port configuration options.

Table 376. UFP Virtual Port Options (/cfg/virt/ufp/port/vport)

Command Syntax and Usage

network

Displays the network configuration menu for this virtual port. To view menu options, see page 439.

qos

Displays the Quality of Service configuration menu for this virtual port. To view menu options, see page 440.

ena

Enables this virtual port.

dis

Disables this virtual port. This setting disables UFP on the virtual port even if UFP is enabled globally or on the physical port

delete

Clears all network and QoS settings currently configured on this virtual port.

cur

Displays the current UFP configuration for this virtual port.

/cfq/virt/ufp/port /cfq/virt/ufp/port /port number>/vport <1-4>/network

UFP Virtual Port Network Configuration

[Virtual Port INTA1.1 Network Configuration Menu] mode - Set virtual port mode defvlan - Set default VLAN deftag - Enable/disable tagging on default VLAN - Display current virtual port network configuration

Table 377 describes the UFP virtual port network configuration options.

Table 377. UFP Virtual Port Network Options (/cfg/virt/ufp/port/vport/network)

Command Syntax and Usage

mode {access|trunk|tunnel|fcoe}

Configures this virtual port's operating mode:

- access allows the virtual port to associate only with the default customer VLAN, as defined by the defvlan option. This setting is equivalent to the /cfg/port /cfg/port /cfg/port port no./tag disable command on a physical port.
- trunk allows the virtual port to associate with up to 32 customer VLANs. This setting is equivalent to the /cfg/port /cfg/port /cfg/port /cfg/port command on a physical port.
- tunnel makes the virtual port VLAN agnostic
- fcoe configures the virtual port to carry Fiber Channel over Ethernet traffic when linked to a Fiber Channel virtual Host Bus Adapter. Setting a virtual port in fcoe mode enables Priority Flow Control on the physical port.

Note: VLANs 4001-4004 cannot be used as customer VLANs

Note: A customer VLAN cannot be configured on multiple virtual ports of the same physical port.

The default setting is tunnel.

defvlan <*2-4094*>

Configures the default VLAN ID for this virtual port. This setting is equivalent to the /cfg/port < port no. > /pvid < 1-4095 > command on a physical port.

deftag {enable|disable}

Enables or disables tagging egress frames with the default VLAN ID when the virtual port is in access or trunk mode and defvlan is defined. Default setting is disabled. This setting is equivalent to the /cfg/port /cfg/port /cfg/port /cfg/port {enable|disable} command on a physical port.

cur

Displays the current UFP network configuration for this virtual port.

UFP Virtual Port Quality of Service Configuration

```
[Virtual Port INTA1.1 QOS Configuration Menu]

bw - Virtual Port Bandwidth Control Menu

cur - Display current virtual port QOS configuration
```

Table 378 describes the UFP virtual port Quality of Service configuration options.

Table 378. UFP Virtual Port QoS Options (/cfg/virt/ufp/port/vport/qos)

Command Syntax and Usage

bw

Displays the bandwidth configuration menu for this virtual port. To view menu options, see page 440.

cur

Displays the current UFP Quality of Service configuration for this virtual port.

```
[Virtual Port INTA1.1 Bandwidth Configuration Menu]
minbw - Set minimum guaranteed bandwidth
maxbw - Set maximum allowed bandwidth
cur - Display current virtual port QOS bandwidth configuration
```

Table 378 describes the UFP virtual port bandwidth configuration options.

Table 379. UFP Virtual Port Bandwidth Options (/cfg/virt/ufp/port/vport/qos/bw)

Command Syntax and Usage

```
minbw <10-100>
```

Configures the minimum bandwidth guaranteed for this virtual port as a percentage of the physical port's bandwidth. The default value is 25.

Note: The aggregated minimum bandwidth guaranteed for all the virtual ports within a physical port cannot exceed 100.

maxbw

Configures the maximum bandwidth allowed for this virtual port as a percentage of the physical port's bandwidth. The default value is 100.

cur

Displays the current bandwidth configuration for this virtual port.

/cfg/virt/vmcheck

VM Check Configuration

[VM Check Settings Menu] action - Actions to take for spoofed VMs acls - Number of ACLs to use for spoofed macs trust - Add a port to trusted ports notrust - Remove a port from trusted ports - Show current VM Check settings

Table 380 describes the the VM Check validation options used for MAC address spoof prevention.

Table 380. VM Check Options

Command Syntax and Usage

action

Configures the actions taken when detecting MAC address spoofing. To view menu options, see page 442

acls <1-640>

Configures the maximum number of ACLs that can be set up for MAC address spoofing prevention in advanced validation mode. Default value is 50.

trust <ports>

Enables trusted ports for VM communication. By default, all ports are disabled.

notrust <ports>

Disables trusted ports for VM communication.

cur

Displays the current VM Check settings.

/cfq/virt/vmcheck/action

VM Check Actions Configuration

```
[VM Check actions settings Menu]

basic - Action to take in basic mode validation
advanced - Action to take in advanced mode validation
cur - Show current VM Check Action settings
```

Table 381 describes the VM Check actions available for handling MAC address spoof attempts.

Table 381. VM Check Action Options

Command Syntax and Usage

basic < log|link>

Sets up action taken when detecting MAC address spoofing in basic validation mode:

- log registers a syslog entry
- link registers a syslog entry and disables the corresponding switch port

Default setting is link.

advanced < log | acl | link >

Sets up action taken when detecting MAC address spoofing in advanced validation mode:

- log registers a syslog entry
- acl registers a syslog entry and installs an ACL to drop traffic incoming on the corresponding switch port originating from the spoofed MAC address
- link registers a syslog entry and disables the corresponding switch port

Default setting is acl.

cur

Displays the current VM Check actions settings.

/cfq/virt/vmgroup <1-1024>

VM Group Configuration

```
[VM group 1 Menu]
  vlan - Set the group's vlan (only for groups with no VM profile)
  vmap
           - Set VMAP for this group
          - Enable vlan tagging on all VM group ports
  addvm - Add a virtual entity to the group
  remvm - Remove a virtual entity from the group
  validate - Sets secure mode for all VMs in this group
  addprof - Add a VM profile to the group
  remprof - Delete any VM profile associated with the group
  addport - Add ports to the group
  remport - Remove ports from the group
  addtrunk - Add trunk to the group
  remtrunk - Remove trunk from the group
  addkey - Add LACP trunk to the group
  remkey - Remove LACP trunk from the group
          - Assign VM group vlan to a Spanning Tree Group
          - Delete group
          - Display current group configuration
```

Table 382 describes the Virtual Machine (VM) group configuration options. A VM group is a collection of members, such as VMs, ports, or trunk groups. Members of a VM group share certain properties, including VLAN membership, ACLs (VMAP), and VM profiles.

Table 382. VM Group Options (/cfg/virt/vmgroup)

Command Syntax and Usage

vlan <*VLAN number*>

Assigns a VLAN to this VM group. If you do not assign a VLAN to the VM group, the switch automatically assigns an unused VLAN when adding a port or a VM to the VM Group.

Note: If you add a VM profile to this group, the group will use the VLAN assigned to the profile.

```
vmap add|rem <VMAP number> intports|extports
```

Assigns the selected VLAN Map to this VM group. You can choose to limit operation of the VLAN Map to internal ports only or external ports only. If you do not select a port type, the VMAP is applied to the entire VM Group.

For more information about configuring VLAN Maps, see "VMAP Configuration" on page 273.

```
taq e|d
```

Enables or disables VLAN tagging on ports in this VM group.

```
addvm <MAC address> | <UUID> | <name> | <IP address> | <index number>
```

Adds a VM to the VM group. Enter a unique identifier to select a VM. The UUID and name parameters apply only if Virtual Center information is configured (/cfg/virt/vmware/vcspec).

The VM index number is found in the VM information dump (/info/virt/vm/dump).

Note: If the VM is connected to a port that is contained within the VM group, do not add the VM to the VM group.

Table 382. VM Group Options (/cfg/virt/vmgroup) (continued)

remvm <MAC address> | <UUID> | <name> | <IP address> | <index number>

Removes a VM from the VM group. Enter a unique identifier to select a VM. The UUID and name parameters apply only if Virtual Center information is configured (/cfg/virt/vmware/vcspec).

The VM index number is found in the VM information dump (/info/virt/vm/dump).

validate [disable|basic|advanced]

Configures MAC address spoof prevention for the VM group.

- basic validation ensures lightweight port-based protection by cross-checking the VM MAC address, switch port and switch ID between the switch and the hypervisor. Applicable for "trusted" hypervisors, which are not susceptible to duplicating or reusing MAC addresses on virtual machines.
- advanced validation ensures heavyweight VM-based protection by cross-checking the VM MAC address, VM UUID, switch port and switch ID between the switch and the hypervisor. Applicable for "untrusted" hypervisors, which are susceptible to duplicating or reusing MAC addresses on virtual machines.
- disable stops MAC address spoof prevention.

Default setting is disabled.

addprof rofile name (1-39 characters)>

Adds the selected VM profile to the VM group.

remprof

Removes the VM profile assigned to the VM group.

addport port number or alias>

Adds the selected port to the VM group.

Note: Add a port to a VM group only if no VMs on that port are members of the VM group.

remport port number or alias>

Removes the selected port from the VM group.

addtrunk <trunk number>

Adds the selected trunk group to the VM group.

remtrunk <trunk number>

Removes the selected trunk group from the VM group.

addkey <1-65535>

Adds an LACP admin key to the VM group. LACP trunks formed with this admin key will be included in the VM group.

remkey <1-65535>

Removes an LACP admin key from the VM group.

Table 382. VM Group Options (/cfg/virt/vmgroup) (continued)

stg <STG number>

Assigns the VM group VLAN to a Spanning Tree Group (STG).

del

Deletes the VM group.

cur

Displays the current VM group parameters.

/cfg/virt/vmprof

VM Profile Configuration

```
[VM Profiles Menu]
    create - Create a VM profile
    edit - Edit a VM profile
            - Display details of all VM profiles
```

Configuration of VMs with the VM Agent requires the use of VM profiles, which ease the configuration and management of VM Agent-based VM groups. The VM profile contains a set of properties that will be configured on the Virtual Switch.

After a VM profile has been defined, it can be assigned to a VM group or exported to one or more VMware hosts.

Table 383 describes the VM Profiles configuration options.

Table 383. VM Profile options (/cfg/virt/vmprof)

Command Syntax and Usage

create <profile name (1-39 characters)>

Defines a name for the VM profile. The switch supports up to 32 VM profiles.

edit profile name>

Displays the VM Profile Edit menu for the selected profile. To view menu options, see page 446.

cur

Displays the current VM Profiles parameters.

/cfg/virt/vmprof/edit /cfg/virt/vmprof/edit

VM Profile Edit

```
[VM profile "myProfile" Menu]
vlan - Set the VM profile's VLAN ID
shaping - Set or delete the VM profile's traffic shaping parameters
eshaping - Set or delete the VM profile's traffic eshaping parameters
delete - Delete this VM profile
cur - Show details of the current VM profile
```

Table 384 describes the VM Profile Edit options.

Table 384. Edit VM Profile options (/cfg/virt/vmprof/edit)

Command Syntax and Usage

vlan < VLAN number>

Assigns a VLAN to the VM profile.

Configures traffic shaping parameters implemented in the hypervisor, as follows:

- Average traffic, in Kilobits per second
- Maximum burst size, in Kilobytes
- Peak traffic, in Kilobits per second
- Delete traffic shaping parameters.

Configures traffic eshaping parameters implemented in the hypervisor, as follows:

- Average traffic, in Kilobits per second
- Maximum burst size, in Kilobytes
- Peak traffic, in Kilobits per second
- Delete traffic shaping parameters.

delete

Deletes the selected VM Profile.

cur

Displays the current VM Profiles parameters.

/cfq/virt/vmware

VMWare Configuration

[VMware-specific Settings Menu] hbport - Set ESX/ESXi server to vCenter heartbeat UDP port number vcspec - Create, update or delete Virtual Center access information hello - VM HELLO menu - Display current VMware-specific settings

Table 385 describes the VMware configuration options. When the user configures the VMware Virtual Center, the VM Agent module in the switch can perform advanced functionality by communicating with the VMware management console. The Virtual Center provides VM and Host names, IP addresses, Virtual Switch and port group information. The VM Agent on the switch communicates with the Virtual Center to synchronize VM profiles between the switch and the VMware virtual switch.

Table 385. VMware Options (/cfg/virt/vmware)

Command Syntax and Usage

hbport <1-65535>

Configures the UDP port number used for heartbeat communication from the VM host to the Virtual Center. The default value is port 902.

```
vcspec [<IP address>| [<username> noauth] | [delete]
```

Defines the Virtual Center credentials on the switch. Once you configure the Virtual Center, VM Agent functionality is enabled across the system.

You are prompted for the following information:

- IP address of the Virtual Center
- User name and password for the Virtual Center
- Whether to authenticate the SSL security certificate (yes or no)

hello

Displays the VM Hello menu. To view menu options, see page 448.

cur

Displays the current VMware parameters.

VM Hello Configuration

[VM HELLO-specific settings Menu]
ena - Enable HELLO advertisements
dis - Disable HELLO advertisements
addport - Add PORT to HELLO
rmport - Remove PORT from HELLO
haddr - HELLO address
htimer - HELLO periodicity
cur - Show current HELLO settings

VM Hello configures the CDP (Cisco Discovery Protocol) advertisements sent periodically to VMware ESX hypervisors. Exchanging CDP message with ESX hypervisors, facilitates MAC address spoof prevention. Table 386 describes the VM Hello configuration options.

Table 386. VM Hello Configuration Options

ena Enables CDP advertisements transmission. Default setting is disabled. dis Disables CDP advertisements transmission. addport <ports> Add ports to the list of ports that can transmit CDP advertisements. rmport <ports> Remove ports from the list of ports that can transmit CDP advertisements haddr <IP_address> Advertises a specific IP address instead of the default 0.0.0.0 IP. htimer <1-60> Sets the number of seconds between successive CDP advertisements. Default value is 30. cur Displays current VM Hello settings.

Edge Virtual Bridge Configuration

```
[Edge Virtual Bridge Configuration Menu]
   vsidb - Virtual Station Interface Type DataBase
    profile - evb profile menu
    cur - Show current EVB parameters
```

You can configure your switch to use Edge Virtual Bridging (EVB). These configuration commands are only available using the IBM Networking OS CLI and the Miscellaneous VMready Configuration Menu. Table 387 describes the Edge Virtual Bridge configuration options.

Note: On EN4093 models, EVB does not work in stacked mode.

Table 387. Edge Virtual Bridge Configuration Options

```
Command Syntax and Usage
vsidb
   Displays the Virtual Station Interface Type database menu. To view menu
   options, see page 449.
profile <1-16>
   Displays the EVB Profile menu. To view menu options, see page 450.
cur
   Displays the current EVB parameters.
```

/cfq/virt/evb/vsidb

VSI Type Database Configuration

```
[VSI Type DB 1 Menu]
   managrip - Set VSI DB Manager IP
    port - Set VSI DB Manager Port
    docpath - Set VSI DB Document Path
    alltypes - Set VSI DB Document Path
    interval - Set VSI DB Update Interval
    cur - Display current VSI Type configuration
    reset - Reset VSIDB Info
```

Table 388 describes the Virtual Station Interface Type database configuration options.

Table 388. Virtual Station Interface Type Database Options

```
Command Syntax and Usage
managrip < IP address>
   Sets the Virtual Station Interface Type database manager IP address.
port <1-65534>
   Sets the Virtual Station Interface Type database manager port.
```

Table 388. Virtual Station Interface Type Database Options

docpath < URI path>

Sets the Virtual Station Interface Type database document path.

alltypes <URI path>

Sets the Virtual Station Interface Type database document path for all types.

cur

Displays the current Virtual Station Interface Type database parameters.

reset

Resets the Virtual Station Interface Type database information to the default values.

/cfg/virt/evb/profile <1-16>

EVB Profile Configuration

```
[evb profile menu]
rr - Enable/Disable VEPA Mode (Reflective Relay Capability)
vsidisc - Enable/Disable VSI Discovery (ECP and VDP)
cur - Display current configuration
```

Table 389 describes the Edge Virtual Bridge Profile configuration options.

Table 389. Edge Virtual Bridge Profile Configuration Options

Command Syntax and Usage

rr enable|disable

Enables or disables VEPA mode (Reflective Relay capability).

vsidisc enable|disable

Enables or disables VSI Discovery (ECP and VDP).

cur

Displays the current EVB profile parameters.

/cfg/dump

Dump

The dump program writes the current switch configuration to the terminal screen. To start the dump program, at the Configuration# prompt, enter:

```
Configuration# dump
```

The configuration is displayed with parameters that have been changed from the default values. The screen display can be captured, edited, and placed in a script file, which can be used to configure other switches through a Telnet connection. When using Telnet to configure a new switch, paste the configuration commands

from the script file at the command line prompt of the switch. The active configuration can also be saved or loaded via TFTP or SFTP, as described on page 451.

/cfq/ptcfq <FTP/TFTP/SFTP server> <filename> <username>

Saving the Active Switch Configuration

When the ptcfq command is used, the switch's active configuration commands (as displayed using /cfg/dump) will be uploaded to the specified script configuration file on the FTP/TFTP/SFTP server. To start the switch configuration upload, at the Configuration# prompt, enter:

Configuration# ptcfg <FTP, TFTP or SFTP server> <filename> [mgt|extm|data]

Where server is the FTP/TFTP/SFTP server IPv4 address or hostname, and filename is the name of the target script configuration file. Select the port to use for the file transfer:

- mgt: Selects the internal management port. This is the default option.
- extm: Selects the external management port (EXTx)
- data: Selects a data port (EXTx).

Note: The output file is formatted with line-breaks but no carriage returns—the file cannot be viewed with editors that require carriage returns (such as Microsoft Notepad).

Note: If the FTP/TFTP/SFTP server is running SunOS or the Solaris operating system, the specified ptcfq file must exist prior to executing the ptcfq command and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current configuration data.

/cfq/qtcfq <FTP/TFTP/SFTP server> <filename>

Restoring the Active Switch Configuration

When the gtcfg command is used, the active configuration will be replaced with the commands found in the specified configuration file. The file can contain a full switch configuration or a partial switch configuration. The configuration loaded using gtcfg is not activated until the apply command is used. If the apply command is found in the configuration script file loaded using this command, the apply action will be performed automatically.

To start the switch configuration download, at the Configuration# prompt, enter:

Configuration# gtcfg <FTP, TFTP or SFTP server> <filename> <username>

Where server is the FTP/TFTP/SFTP server IPv4 address or hostname, and filename is the name of the target script configuration file. Select the port to use for the file transfer:

- mgt: Selects the internal management port. This is the default option.
- extm: Selects the external management port (EXTx)
- data: Selects a data port (EXTx).

Chapter 6. The Operations Menu

The Operations Menu is generally used for commands that affect switch performance immediately, but do not alter permanent switch configurations. For example, you can use the Operations Menu to immediately disable a port (without the need to apply or save the change), with the understanding that when the switch is reset, the port returns to its normally configured operation.

/oper

Operations Menu

```
[Operations Menu]
   port
           - Operational Port Menu
    fcoe - Operational Fiber Channel Over Ethernet Menu
    vrrp - Operational Virtual Router Redundancy Menu
    ip
            - Operational IP Menu
            - Protected Mode Menu
    sys
          - Operational System Menu
   virt - Virtualization Operations Menu
   passwd - Change current user password
   clrlog - Clear syslog messages
    tnetsshc - Close all telnet/SSH connections
    conlog - Enable/disable session console logging
    cfgtrk - Track last config change made
    ntpreq - Send NTP request
            - Software License Menu
    swkev
```

The commands of the Operations Menu enable you to alter switch operational characteristics without affecting switch configuration.

Table 390. Operations Menu (/oper)

port port alias or number> Displays the Operational Port Menu. To view menu options, see page 455. fcoe Displays the Fiber Channel over Ethernet (FCoE) Operations Menu. To view menu options, see page 456. vrrp Displays the Operational Virtual Router Redundancy Menu. Table 390. Operations Menu (/oper) (continued)

Command Syntax and Usage

sys

Displays the Operational System menu. To view menu options, see page 460.

virt

Displays the Virtualization Operations Menu. To view menu options, see page 460.

passwd <1-128 characters>

Allows the user to change the password. You need to enter the current password in use for validation.

clrlog

Clears all Syslog messages.

tnetsshc

Closes all open Telnet and SSH connections.

conlog enable disable

Enables of disables console logging of the current session.

cfgtrk

Displays a list of configuration changes made since the last apply command. Each time the apply command is sent, the configuration-tracking log is cleared.

ntpreq

Allows the user to send requests to the NTP server.

swkey

Displays the Software Key menu. To view menu options, see page 467.

/oper/port port alias or number>

Operations-Level Port Options Menu

```
[Operations Port INTA1 Menu]
    8021x - 8021.x Menu
    rmon - Enable, - - Enable port
            - Enable/disable RMON for port
         - Disable port
    dis
    lena - Enable FDB Learning
    ldis - Disable FDB Learning
           - Current port state
```

Operations-level port options are used for temporarily disabling or enabling a port, and for re-setting the port.

Table 391. Operations-Level Port Menu Options (/oper/port)

Command Syntax and Usage

8021x

Displays the 802.1X Port Menu. To view menu options, see page 456.

rmon e d

Enables or disables Remote Monitoring (RMON) for the port. The default setting is disabled.

ena

Temporarily enables the port. The port will be returned to its configured operation mode when the switch is reset.

dis

Temporarily disables the port. The port will be returned to its configured operation mode when the switch is reset.

lena

Temporarily enables FDB learning on the port.

ldis

Temporarily disables FDB learning on the port.

cur

Displays the current settings for the port.

/oper/port /port alias or number>/8021x

Operations-Level Port 802.1X Options Menu

```
[802.1X Operation Menu]

reset - Reinitialize 802.1X access control on this port
reauth - Initiate reauthentication on this port now
```

Operations-level port 802.1X options are used to temporarily set 802.1X parameters for a port.

Table 392. Operations-Level Port 802.1X Menu Options (/oper/port x/8021x)

Command Syntax and Usage

reset

Re-initializes the 802.1X access-control parameters for the port. The following actions take place, depending on the 802.1X port configuration:

- force unauth the port is placed in unauthorized state, and traffic is blocked.
- auto the port is placed in unauthorized state, then authentication is initiated.
- force auth the port is placed in authorized state, and authentication is not required.

reauth

Re-authenticates the supplicant (client) attached to the port. This command only applies if the port's 802.1X mode is configured as auto.

/oper/fcoe

Operations-Level FCoE Menu

```
[Operational FCOE Menu]
fips - Operational FIP Snooping Menu
```

Table 393. Operations-Level FCoE Options (/oper/fcoe)

Command Syntax and Usage

fips

Displays the FCoE Initialization Protocol Snooping operations menu.

/oper/fcoe/fips

FCoE FIP Snooping Operations

```
[FIP Snooping Operational Menu]
    delfcf - Delete an FCF entry and the associated ACLs from the database
```

Table 394. FIP Snooping Operations (/oper/fcoe/fips)

Command Syntax and Usage

delfcf < MAC address > [VLAN no.]

Deletes the selected FCoE Forwarder (FCF), and any associated ACLs.

/oper/vrrp

Operations-Level VRRP Options Menu

```
[VRRP Operations Menu]
       back - Set virtual router to backup
```

Table 395. Operations-Level VRRP Menu Options (/oper/vrrp)

Command Syntax and Usage

back <virtual router number (1-255)>

Forces the specified master virtual router on this switch into backup mode. This is generally used for passing master control back to a preferred switch once the preferred switch has been returned to service after a failure. When this command is executed, the current master gives up control and initiates a new election by temporarily advertising its own priority level as 0 (lowest). After the new election, the virtual router forced into backup mode by this command will resume master control in the following cases:

- This switch owns the virtual router (the IP addresses of the virtual router and its IP interface are the same)
- This switch's virtual router has a higher priority and preemption is enabled.
- There are no other virtual routers available to take master control.

Operations-Level IP Options Menu

```
[IP Operations Menu]
bgp - Operational Border Gateway Protocol Menu
```

Table 396. Operations-Level IP Menu Options (/oper/ip)

Command Syntax and Usage

bgp

Displays the Border Gateway Protocol Operations Menu. To view the menu options see page 458.

/oper/ip/bgp

Operations-Level BGP Options Menu

```
[Border Gateway Protocol Operations Menu]
start - Start peer session
stop - Stop peer session
cur - Current BGP operational state
```

Table 397. Operations-Level BGP Menu Options (/oper/ip/bgp)

Command Syntax and Usage start <peer number> Starts the peer session. stop <peer number> Stops the peer session. cur Displays the current BGP operational state.

Protected Mode Options Menu

```
[Protected Mode Menu]
   mgt - Enable/disable local control of external management
   ext - Enable/disable local control of external ports
   fact - Enable/disable local control of factory default reset
   mif - Enable/disable local control of Mgmt VLAN interface
   on - Turn on/alter protected mode by applying enabled features
   off - Turn off protected mode by removing all features
   cur - Display current PRM configuration
```

Protected Mode is used to secure certain switch management options, so they cannot be changed by the management module.

Table 398. Protected Mode Options (/oper/prm)

Command Syntax and Usage

```
mgt enable disable
```

Enables exclusive local control of switch management. When Protected Mode is set to on, the management module cannot be used to disable external management on the switch. The default value is enabled.

Note: Due to current management module implementation, this setting cannot be disabled.

```
ext enable disable
```

Enables exclusive local control of external ports. When Protected Mode is set to on, the management module cannot be used to disable external ports on the switch. The default value is enabled.

Note: Due to current management module implementation, this setting cannot be disabled.

```
fact enable disable
```

Enables exclusive local control of factory default resets. When Protected Mode is set to on, the management module cannot be used to reset the switch software to factory default values. The default value is enabled.

Note: Due to current management module implementation, this setting cannot be disabled.

```
mif enable disable
```

Enables exclusive local control of the management interface. When Protected Mode is set to on, the management module cannot be used to configure parameters for the management interface. The default value is enabled.

Note: Due to current management module implementation, this setting cannot be disabled.

on

Turns Protected Mode on. When Protected Mode is turned on, the switch takes exclusive local control of all enabled options.

Table 398. Protected Mode Options (/oper/prm) (continued)

Command Syntax and Usage

off

Turns Protected Mode off. When Protected Mode is turned off, the switch relinquishes exclusive local control of all enabled options.

cur

Displays the current Protected Mode configuration.

/oper/sys

System Operations Menu

```
[Operational System Menu]
i2c - System I2C
srvled - Enable/disable Service Required LED
```

I2C device commands are to be used only by Technical Support personnel.

/oper/virt

Virtualization Operations

```
[Virtualization Operations Menu]
vmware - VMware Operations Menu
vmcheck - VMcheck Operations Menu
evb - EVB Operations Menu
```

Table 399 describes general virtualization operations options. More details are available in the following sections.

Table 399. Virtualization Options (/oper/virt)

Command Syntax and Usage

vmware

Displays the VMware Operations menu. To view the menu options see page 461.

vmcheck

Displays the VMcheck Operations menu. To view the menu options see page 465.

ewh

Displays the Edge Virtual Bridge operations menu. To view the menu options see page 466.

/oper/virt/vmware

VMware Operations

```
[VMware Operations Menu]
    dvswitch - VMware dvSwitch Operations
            - VMware distributed port group operation
    addpg
            - Add a port group to a Host
    addvsw - Add a Vswitch to a Host
    delpg - Delete a port group from a Host
    delvsw - Delete a Vswitch from a Host
    export - Create or update a VM profile on one or more Hosts
    scan - Perform a VM Agent scan operation now
    vmacpg - Change a VM NIC's port group
    updpg - Update a port group on a Host
```

Use these commands to perform minor adjustments to the VMware operation. Use these commands to perform Virtual Switch operations directly from the switch. Note that these commands require the configuration of Virtual Center access information (/cfg/virt/vmware/vcspec).

Table 400. VMware Operations (/oper/virt/vmware)

Command Syntax and Usage

dvswitch

Displays the Distributed vSwitch Operations menu. To view the menu options see page 463.

dpg

Displays the Distributed Port Groups Operations menu. To view the menu options see page 464.

```
addpg [<Port Group name> <host ID> <Vswitch name> <VLAN number>
   <shaping-enabled> <average-Kbps> <burst-KB> <peak-Kbps>]
```

Adds a Port Group to a VMware host. You are prompted for the following information:

- Port Group name
- VMware host ID (Use host UUID, host IP address, or host name.)
- Virtual Switch name
- VLAN ID of the Port Group
- Whether to enable the traffic-shaping profile (y or n). If you choose y (yes), you are prompted to enter the traffic shaping parameters.

```
addvsw < host ID> < Virtual Switch name>
```

Adds a Virtual Switch to a VMware host. Use one of the following identifiers to specify the host:

- UUID
- IP address
- Host name

Table 400. VMware Operations (/oper/virt/vmware) (continued)

Command Syntax and Usage

delpg <Port Group name> <host ID>

Removes a Port Group from a VMware host. Use one of the following identifiers to specify the host:

- UUID
- IP address
- Host name

delvsw <host ID> <Virtual Switch name>

Removes a Virtual Switch from a VMware host. Use one of the following identifiers to specify the host:

- UUID
- IP address
- Host name

Exports a VM Profile to one or more VMware hosts. This command allows you to distribute a VM Profile to VMware hosts.

Use one of the following identifiers to specify each host:

- UUID
- IP address
- Host name

The switch displays a list of available Virtual Switches. You may enter a VSwitch name from the list, or enter a new name to create a new Virtual Switch.

scan

Performs a scan of the VM Agent, and updates VM information.

vmacpg < MAC address > < Port Group name >

Changes a VM NIC's configured Port Group.

updpg <*Port Group name*> <*host ID*> <*VLAN number*> [<*shaping enabled*> <*average (1-1000000000)*> <*burst (1-1000000000)*> <*peak (1-1000000000)*>]

Updates a VMware host's Port Group parameters. Use one of the following identifiers for the host ID:

- UUID
- IP address
- Host name

Enter the traffic shaping parameters as follows:

- Shaping enabled
- Average traffic, in Kilobits per second
- Maximum burst size, in Kilobytes
- Peak traffic, in Kilobits per second
- Delete traffic shaping parameters.

/oper/virt/vmware/dvswitch

Distributed vSwitch Operations

```
[VMware dvSwitch operations Menu]
          - Add a dvSwitch to a DataCenter
             - Delete a dvSwitch from a DataCenter
    addhost - Add a host to a dvSwitch
    remhost - Remove a host from a dvSwitch
    adduplnk - Add a physical NIC to dvSwitch uplink ports
    remuplnk - Remove a physical NIC from dvSwitch uplink ports
```

Table 401 describes distributed vSwitch operations.

Table 401. Distributed vSwitch Options (/oper/virt/vmware/dvswitch)

```
Command Syntax and Usage
add <datacenter name> <dvSwitch name> <vSwitch version>
   Adds a distributed vSwitch to a datacenter.
del <datacenter name> <dvSwitch name>
    Deletes a distributed vSwitch from a datacenter.
addhost <dvSwitch name> <host UUID, IP address, or name>
    Adds a host to a distributed vSwitch.
remhost <dvSwitch name> <host UUID, IP address, or name>
    Removes a host from a distributed vSwitch.
adduplink <dvSwitch name> <host UUID, IP address, or name> <uplink name>
   Adds a NIC to the distributed vSwitch, to use as an uplink.
remuplink <dvSwitch name> <host UUID, IP address, or name> <uplink name>
    Removes an uplink NIC from the distributed vSwitch.
```

/oper/virt/vmware/dpg

Distributed Port Group Operations

```
[VMware distributed port group operations Menu]

add - Add a port group to a dvSwitch

addmac - Add a VM NIC to a port group

update - Update a port group on a dvSwitch

del - Delete a port group from a dvSwitch
```

Table 402 describes distributed port group operations.

Table 402. Distributed Port Group Options (/oper/virt/vmware/dpg)

Command Syntax and Usage

```
add content group name > <dvSwitch name > <VLAN number >
[ingress-shaping-enabled <average Kbps > <burst KB > <peak Kbps >]
[egress-shaping-enabled <average Kbps > <burst KB > <peak Kbps >]
```

Adds a port group to a distributed vSwitch. Follow the prompts to complete the operation.

Note: Ingress shaping and egress shaping parameters are optional.

```
addmac <vNIC MAC> <port group name>
```

Adds a vNIC to a distributed port group.

Updates the parameters of a distributed port group. Follow the prompts to complete the operation.

Note: Ingress shaping and egress shaping parameters are optional.

```
del <port group name> <dvSwitch name>
```

Deletes a port group from a distributed vSwitch.

/oper/virt/vmcheck/acl

VMcheck ACL Operations

[VMcheck ACL operations Menu]

remall - Delete all VMcheck ACLs
remmac - Delete an ACL by mac address [and port] remport - Delete all ACLs installed on a port

Table 403 describes ACL removal operations.

Table 403. ACL removal Options (/oper/virt/vmcheck/acl)

Command Syntax and Usage

remall

Deletes all ACLs

remmac <ACL MAC address> [<port number>]

Removes ACLs based on the MAC address and, optionally, based on port number.

remport port number>

Removes ACLs based on port number

Edge Virtual Bridging Operations

```
[EVB Operations Menu]
cleanvms - Clean VM Associations
dbupdate - Update VSI DataBase
dbclean - Clean VSI DataBase
```

Use these commands to perform minor adjustments to Edge Virtual Bridging (EVB) operations. Use these commands to perform Virtual Switch operations directly from the switch.

Note: These commands are only valid in the IBM Networking OS CLI interface.

Table 404. EVB Operations (/oper/virt/evb)

Command Syntax and Usage

cleanvms [port <Port number>|MAC <MAC ID>|vlan <VLAN number>
 typeid <type ID number>]

Cleans VM associations. If no argument is given, it erases all VM associations.

dbupdate

Updates the VSI database

dbclean

Cleans the VSI database

/oper/swkey

Software Key Menu

```
[Software License Menu]
    fodkey - Feature on Demand Key Menu
```

The commands in this menu configure the software license key feature.

Table 405. Software Key options (/oper/swkey)

Command Syntax and Usage

fodkey

Displays the Feature on Demand Key menu.

/oper/swkey/fodkey

Feature on Demand Options Menu

```
[Feature on Demand Key Menu]
    enakey - Enable FoD Key
    rmkey - Remove FoD Key
    ptkey - Upload FoD Key File
    invkeys - Upload inventory installed activation keys
```

Use the commands in this menu to upgrade the port mode. Base port mode is the default. To upgrade the port mode, you must obtain a software license key.

After selecting a port mode, you must reset the switch for the change to take affect.

Table 406. Feature on Demand Key Options (/oper/swkey/fodkey)

Command Syntax and Usage

```
enakey <hostname or IP address> <file name> [<SFTP username>]
```

Allows you to unlock the software port expansion feature. You are prompted to enter the host name or IP address of the server where the license key is stored, and the license key file name, as follows:

- 46Port
- 64Port

Note: You must upgrade to 46Port port mode before you can upgrade to 64Port port mode.

rmkey < feature name>

Removes the specified software feature.

ptkey <hostname or IP address> <file name> [<SFTP username>]

Loads the specified key file to a server.

```
invkeys <hostname or IP address> <file name> [<SFTP username>]
```

Loads key code inventory information to a server.

Chapter 7. The Boot Options Menu

To use the Boot Options Menu, you must be logged in to the switch as the administrator. The Boot Options Menu provides options for:

- Selecting a switch software image to be used when the switch is next reset
- Selecting a configuration block to be used when the switch is next reset
- Downloading or uploading a new software image to the switch via FTP/TFTP/SFTP

In addition to the Boot Menu, you can use a Web browser or SNMP to work with switch image and configuration files. To use SNMP, refer to "Switch Images and Configuration Files" on page 517.

/boot

Boot Menu

```
[Boot Options Menu]
    stack - Stacking Menu
            - Scheduled Switch Reset Menu
    sched
            - Select software image to use on next boot
    image
   conf - Select config block to use on next boot
    netboot - NetBoot and NetConfig menu
    qsfp40q - QSFP 40G Ports Menu
            - Select CLI mode to use on next boot
    prompt - Prompt for selectable boot mode
    gtimg - Download new software image via TFTP
             - Upload selected software image via TFTP
    ptima
            - Reset switch [WARNING: Restarts Spanning Tree]
    reset
            - Display current boot options
```

Each of these options is discussed in greater detail in the following sections.

/boot/stack

Stacking Boot Menu

```
[Boot Stacking Menu]

mode - Set the stacking mode for the switch

stktrnk - Set external 10G ports for Stack Trunks

vlan - Set VLAN number for control communication

clear - Set stacking parameters to factory default

ena - Enable the stacking mode

dis - Disable the stacking mode

cur - Display current stacking boot parameters
```

The Stacking Boot menu is used to define the role of the switch in a stack: either as the Master that controls the stack, or as a participating Member switch. Options are available for loading stack software to individual Member switches, and to configure the VLAN that is reserved for inter-switch stacking communications.

You must enable Stacking and reset the switch to enter Stacking mode. When the switch enters Stacking mode, the Stacking configuration menu appears. For more information, see "Stacking Configuration Menu" on page 250.

© Copyright IBM Corp. 2012 469

Table 407 lists the Boot Stacking command options.

Table 407. Boot Stacking Options (/boot/stack)

Command Syntax and Usage

mode master member

Configures the Stacking mode for the selected switch.

stktrnk < list of ports>

Configures the ports used to connect the switch to the stack. Enter only 10Gb external ports.

vlan <*VLAN number*>

Configures the VLAN used for Stacking control communication.

clear

Resets the Stacking boot parameters to their default values.

ena

Enables the switch stack.

dis

Disables the switch stack.

cur

Displays current Stacking boot parameters.

When in stacking mode, the following stand-alone features are not supported:

- Active Multi-Path Protocol (AMP)
- SFD
- sFlow port monitoring
- Uni-Directional Link Detection (UDLD)
- Port flood blocking
- BCM rate control
- Link Layer Detection Protocol (LLDP)
- Private VLANs
- RIP
- OSPF and OSPFv3
- IPv6
- Virtual Router Redundancy Protocol (VRRP)
- Loopback Interfaces
- Router IDs
- Route maps
- Border Gateway Protocol (BGP)
- MAC address notification
- Static MAC address adding
- Static multicast
- Static routes
- Converged Enhanced Ethernet (CEE) and Fibre Channel over Ethernet (FCOE)
- MSTP and RSTP settings for CIST, Name, Rev, and Maxhop
- IGMP Relay and IGMPv3

Virtual NICs

Switch menus and commands for unsupported features may be unavailable, or may have no effect on switch operation.

/boot/sched

Scheduled Reboot Menu

```
[Boot Schedule Menu]
   set - Set switch reset time
    cancel - Cancel pending switch reset
            - Display current switch reset schedule
```

This feature allows you to schedule a reboot to occur at a particular time in the future. This feature is particularly helpful if the user needs to perform switch upgrades during off-peak hours. You can set the reboot time, cancel a previously scheduled reboot, and check the time of the currently set reboot schedule.

Table 408. Boot Scheduling Options (/boot/sched)

Command Syntax and Usage set Defines the reboot schedule. Follow the prompts to configure schedule options. cancel Cancels the next pending scheduled reboot. cur Displays the current reboot scheduling parameters.

Netboot Configuration Menu

```
[Netboot configuration Menu]
ena - Enable netconfig
dis - Disable netconfig
tftpaddr - TFTP Server IP address
cfgfile - Location of config file on tftp server
cur - Display current configuration
```

Netboot allows the switch to automatically download its configuration file over the network during switch reboot, and apply the new configuration. Upon reboot, the switch includes the following options in its DHCP requests:

- Option 66 (TFTP server address)
- Option 67 (file path)

If the DHCP server returns the information, the switch initiates a TFTP file transfer, and loads the configuration file into the active configuration block. As the switch boots up, it applies the new configuration file. Note that the option 66 TFTP server address must be specified in IP-address format (host name is not supported).

If DHCP is not enabled, or the DHCP server does not return the required information, the switch uses the manually-configured TFTP server address and file path.

Table 409. Netboot Options (/boot/netboot)

Command Syntax and Usage

ena

Enables Netboot. When enabled, the switch boots into factory-default configuration, and attempts to download a new configuration file.

dis

Disables Netboot.

tftpaddr <IP address>

Configures the IP address of the TFTP server used for manual configuration. This server is used if DHCP is not enabled, or if the DHCP server does not return the required information.

cfqfile <1-31 characters>

Defines the file path for the configuration file on the TFTP server. For example:

```
/directory/sub/config.cfg
```

cur

Displays the current Netboot parameters.

/boot/qsfp40g

QSFP+ Port Configuration Menu

```
[QSFP 40G Mode Menu]
    add - Enable 40G mode for QSFP ports, effective after reboot
               - Disable 40G mode for QSFP ports, effective after reboot
           - Disable 40G mode for your poles, class - Display 40G mode ports configuration
```

Table 410. QSFP Port Options

Command Syntax and Usage

add < EXT15, EXT19>

Enables 40GbE mode on the selected QSFP+ ports. When enabled, each QSFP+ port is set as a single 40GbE port.

You must reboot the switch for this change to take effect.

rem < EXT15, EXT19>

Disables 40GbE mode on the selected QSFP+ ports. When disabled, each QSFP+ port is configured to breakout into four 10GbE ports.

You must reboot the switch for this change to take effect.

cur

Displays the current QSFP+ port settings.

Updating the Switch Software Image

The switch software image is the executable code running on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R). A version of the image ships with the switch, and comes pre-installed on the device. As new versions of the image are released, you can upgrade the software running on your switch. To get the latest version of software available for your switch, go to:

http://www.ibm.com/systems/support

On the support site, click on software updates. On the switch, use the /boot/cur command to determine the current software version.

The typical upgrade process for the software image consists of the following steps:

- Place the new image onto a FTP, TFTP or SFTP server on your network, or on a local computer.
- Transfer the new image to your switch.
- Select the new software image to be loaded into switch memory the next time the switch is reset.

Loading New Software to Your Switch

The switch can store up to two different software images, called image1 and image2, as well as boot software, called boot. When you load new software, you must specify where it should be placed: either into image1, image2, or boot.

For example, if your active image is currently loaded into image1, you would probably load the new image software into image2. This lets you test the new software and reload the original active image (stored in image1), if needed.

Note: EN4093R models do not support image releases prior to 7.5.

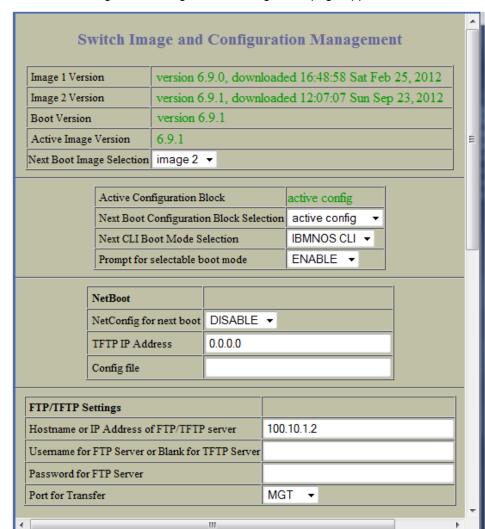

Using the BBI

You can use the Browser-Based Interface to load software onto the EN4093/EN4093R. The software image to load can reside in one of the following locations:

- · FTP server
- TFTP server
- SFTP server
- Local computer

After you log onto the BBI, perform the following steps to load a software image:

- 1. Click the Configure context button in the toolbar.
- 2. In the Navigation Window, select System > Config/Image Control.

The Switch Image and Configuration Management page appears.

- 3. If you are loading software from your computer (HTTP client), go to Step 4. If you are loading software from a FTP/TFTP/SFTP server, enter the server's information in the FTP/TFTP/SFTP Settings section.
- 4. In the Image Settings section, select the image version you want to replace (Image for Transfer).
 - If you are loading software from a FTP/TFTP/SFTP server, enter the file name and click Get Image.
 - If you are loading software from your computer, click Browse. In the File Upload Dialog, select the file and click OK. Click Download via Browser.

Once the image has loaded, the page refreshes to show the new software.

Using the CLI

To load a new software image to your switch, you need the following:

- The image or boot software loaded on a FTP/TFTP/SFTP server on your network
- The hostname or IPv4/IPv6 address of the FTP/TFTP/SFTP server
- · The name of the new software image or boot file

Note: The DNS parameters must be configured if specifying hostnames. See "Domain Name System Configuration Menu" on page 378.

When the above requirements are met, use the following procedure to download the new software to your switch.

1. At the Boot Options# prompt, enter:

```
Boot Options# gtimg
```

2. Enter the name of the switch software to be replaced:

```
Enter name of switch software image to be replaced
["image1"/"image2"/"boot"]: <image>
```

3. Enter the hostname or IPv4/IPv6 address of the FTP, TFTP or SFTP server.

```
Enter hostname or IP address of SFTP/FTP/TFTP server: < name or IP address>
```

4. Enter the name of the new software file on the server.

```
Enter name of file on SFTP/FTP/TFTP server: <filename>
```

The exact form of the name will vary by server. However, the file location is normally relative to the FTP, TFTP or SFTP directory (usually /tftpboot).

5. Enter your username for the server, if applicable.

```
Enter username for SFTP/FTP server or hit return for TFTP server: <username> or <Enter>
```

6. Enter the switch port to use for the file transfer. The default option is mgt.

```
Enter the port to use for downloading the image
["mgt"|"extm"|"data"]:
```

7. The system prompts you to confirm your request.

You will next select a software image to run, as described in the following section.

Selecting a Software Image to Run

You can select which software image (image1 or image2) you want to run in switch memory for the next reboot.

1. At the Boot Options# prompt, enter:

```
Boot Options# image
```

2. Enter the name of the image you want the switch to use upon the next boot. The system informs you of which image is currently set to be loaded at the next reset, and prompts you to enter a new choice:

```
Currently set to use switch software "image1" on next reset.
Specify new image to use on next reset ["image1"/"image2"]:
```

Uploading a Software Image from Your Switch

You can upload a software image from the switch to a FTP/SFTP or TFTP server.

1. At the Boot Options# prompt, enter:

```
Boot Options# ptimg
```

The system prompts you for information. Enter the desired image:

```
Enter name of switch software image to be uploaded
["image1"|"image2"|"boot"]: <image>
```

3. Enter the name or the IP address of the FTP. TFTP or SFTP server:

```
Enter hostname or IP address of SFTP/FTP/TFTP server: < name or IP address>
```

4. Enter the name of the file into which the image will be uploaded on the FTP, TFTP or SFTP server:

```
Enter name of file on SFTP/FTP/TFTP server: <filename>
```

5. Enter the switch port to use for the file transfer. The default option is mgt.

```
Enter the port to use for uploading the image
["mgt"|"extm"|"data"]:
```

6. The system then requests confirmation of what you have entered. To have the file uploaded, enter Y.

```
image2 currently contains Software Version 7.5.0
that was downloaded at 0:23:39 Thu Jan 4, 2012.
Upload will transfer image2 (2788535 bytes) to file "image1"
on SFTP/FTP/TFTP server 192.1.1.1. over the MGT port.
Confirm upload operation (y/n) ? y
```

Selecting a Configuration Block

When you make configuration changes to the EN4093/EN4093R, you must save the changes so that they are retained beyond the next time the switch is reset. When you perform the <code>save</code> command, your new configuration changes are placed in the *active* configuration block. The previous configuration is copied into the *backup* configuration block.

There is also a *factory* configuration block. This holds the default configuration set by the factory when your EN4093/EN4093R was manufactured. Under certain circumstances, it may be desirable to reset the switch configuration to the default. This can be useful when a custom-configured EN4093/EN4093R is moved to a network environment where it will be re-configured for a different purpose.

Note: You also can use Netboot to automatically download a configuration file when the switch reboots. For more details, see "Netboot Configuration Menu" on page 472.

Use the following procedure to set which configuration block you want the switch to load the next time it is reset:

1. At the Boot Options# prompt, enter:

Boot Options# conf

Enter the name of the configuration block you want the switch to use:
 The system informs you of which configuration block is currently set to be loaded at the next reset, and prompts you to enter a new choice:

Currently set to use active configuration block on next reset. Specify new block to use ["active"/"backup"/"factory"]:

Resetting the Switch

You can reset the switch to make your software image file and configuration block changes occur.

Note: Resetting the switch causes the Spanning Tree Group to restart. This process can be lengthy, depending on the topology of your network.

To reset the switch, at the Boot Options# prompt, enter:

>> Boot Options# reset

You are prompted to confirm your request.

Accessing the ISCLI

The default command-line interface for the EN4093/EN4093R is the menu-based CLI. To access the ISCLI, enter the following command and reset the EN4093/EN4093R:

Main# boot/mode iscli

To access the menu-based CLI, enter the following command from the ISCLI and reload the EN4093/EN4093R:

Switch (config) # boot cli-mode ibmnos-cli

Users can select the CLI mode upon login, if the /boot/prompt command is enabled. Only an administrator can view and enable /boot/prompt. When /boot/prompt is enabled, the first user to log in can select the CLI mode. Subsequent users must use the selected CLI mode, until all users have logged out.

Using the Boot Management Menu

The Boot Management menu allows you to switch the software image, reset the switch to factory defaults, or to recover from a failed software download.

You can interrupt the boot process and enter the Boot Management menu from the serial console port. When the system displays Memory Test, press **<Shift B>**. The Boot Management menu appears.

The Boot Management menu allows you to perform the following actions:

- To change the booting image, press 1 and follow the screen prompts.
- · To change the configuration block, press 2, and follow the screen prompts.
- To perform a software image recovery, press 3 and follow the screen prompts.
- To perform an Xmodem download (boot image only), press 4 and follow the screen prompts.
- To exit the Boot Management menu, press 6. The booting process continues.

Recovering from a Failed Software Upgrade

Use the following procedure to recover from a failed software upgrade.

- 1. Connect a PC to the serial port of the switch.
- Open a terminal emulator program that supports Xmodem download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:

Speed: 9600 bps

Data Bits: 8Stop Bits: 1Parity: NoneFlow Control: None

Boot the switch and access the Boot Management menu by pressing **Shift B**> while the Memory Test is in progress and the dots are being displayed.

4. Select **3** for **Boot in recovery mode**. You will see the following display:

```
Entering Rescue Mode.
Please select one of the following options:
       T) Configure networking and tftp download an image
        X) Use xmodem 1K to serial download an image
        R) Reboot
        E) Exit
```

- If you choose option x (Xmodem serial download), go to step 5.
- If you choose option t (TFTP download), go to step 6.
- 5. Xmodem download: When you see the following message, change the Serial Port characteristics to 115200 bps:

```
Change the baud rate to 115200 bps and hit the <ENTER> key before
initiating the download.
```

- a. Press **Enter**> to set the system into download accept mode. When the readiness meter displays (a series of "C" characters), start XModem on your terminal emulator.
- b. When you see the following message, change the Serial Port characteristics to 9600 bps:

```
Change the baud rate back to 9600 bps, hit the <ESC> key.
```

c. When you see the following prompt, enter the image number where you want to install the new software and press < Enter>.

```
Install image as image 1 or 2 (hit return to just boot image): 1
```

d. The following message is displayed when the image download is complete. Continue to step 7.

```
Installing image as image1...
Image1 updated successfully
Please select one of the following options:
       T) Configure networking and tftp download an image
        X) Use xmodem 1K to serial download an image
        R) Reboot
        E) Exit
```

6. **TFTP download**: The switch prompts you to enter the following information:

```
Performing TFTP rescue. Please answer the following questions (enter
'q' to quit):
IP addr
Server addr:
Netmask
Gateway
Image Filename:
```

- a. Enter the required information and press **Enter**>.
- b. You will see a display similar to the following:

```
Host IP : 10.10.98.110
Server IP : 10.10.98.100
Netmask : 255.255.255.0
Broadcast : 10.10.98.255
Gateway : 10.10.98.254
Installing image 6.8.3_os.img from TFTP server 10.10.98.100
```

c. When you see the following prompt, enter the image number where you want to install the new software and press **<Enter>**.

```
Install image as image 1 or 2 (hit return to just boot image): 1
```

d. The following message is displayed when the image download is complete. Continue to step 7.

```
Installing image as image1...
Image1 updated successfully
Please select one of the following options:

T) Configure networking and tftp download an image

X) Use xmodem 1K to serial download an image

R) Reboot
E) Exit
```

- 7. Image recovery is complete. Perform one of the following steps:
 - Press **r** to reboot the switch.
 - Press e to exit the Boot Management menu
 - Press the Escape key (**Esc>**) to re-display the Boot Management menu.

Recovering a Failed Boot Image

Use the following procedure to recover from a failed boot image upgrade.

- 1. Connect a PC to the serial port of the switch.
- Open a terminal emulator program that supports Xmodem download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:

Speed: 9600 bps

Data Bits: 8Stop Bits: 1Parity: NoneFlow Control: None

- 3. Boot the switch and access the Boot Management menu by pressing **<Shift B>** while the Memory Test is in progress and the dots are being displayed.
- 4. Select **4** for **Xmodem download**. You will see the following display:

```
Perform xmodem download

To download an image use 1K Xmodem at 115200 bps.
```

5. When you see the following message, change the Serial Port characteristics to 115200 bps:

```
Change the baud rate to 115200 bps and hit the <ENTER> key before
initiating the download.
```

a. Press **<Enter>** to set the system into download accept mode. When the readiness meter displays (a series of "C" characters), start Xmodem on your terminal emulator. You will see a display similar to the following:

```
Extracting images ... Do *NOT* power cycle the switch.
**** RAMDISK ****
Un-Protected 38 sectors
Erasing Flash...
..... done
Erased 38 sectors
Writing to
Flash...9....8....7....6....5....4....3....2....1....done
Protected 38 sectors
**** KERNEL ****
Un-Protected 24 sectors
Erasing Flash...
..... done
Erased 24 sectors
Writing to Flash...9....8....7....6....5....4....3....2....1....
```

b. When you see the following message, change the Serial Port characteristics to 9600 bps:

```
Change the baud rate back to 9600 bps, hit the <ESC> key.
```

Boot image recovery is complete.

Chapter 8. The Maintenance Menu

The Maintenance Menu is used to manage dump information and forward database information. It also includes a debugging menu to help with troubleshooting.

/maint

Maintenance Menu

Note: To use the Maintenance Menu, you must be logged in to the switch as the administrator.

```
[Maintenance Menu]
            - System Maintenance Menu
            - Forwarding Database Manipulation Menu
    fdb
    debug - Debugging Menu
    dcbx
            - DCBX Debug Menu
            - UFP Maintenance Menu
    lldp
            - LLDP Cache Manipulation Menu
            - ARP Cache Manipulation Menu
    arp
    route - IP Route Manipulation Menu
    igmp
          - IGMP Multicast Group Menu
    mld
           - MLD Multicast Group Menu
    lacp
           - LACP Menu
    stp
            - STP Maint Menu
    tacacs+ - TACACS+ Maint Menu
    nbrcache - IP6 NBR Cache Manipulation Menu
    route6 - IP6 Route Manipulation Menu
            - Uuencode FLASH dump
    uudmp
    ptdmp - Upload FLASH dump via FTP/SFTP/TFTP
    ptlog - Upload file via SFTP/TFTP
    cldmp - Clear FLASH dump
    tsdmp - Tech support dump
    pttsdmp - Upload tech support dump via FTP/SFTP/TFTP
```

Dump information contains internal switch state data that is written to flash memory on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R) after any one of the following occurs:

- The watchdog timer forces a switch reset. The purpose of the watchdog timer is to reboot the switch if the switch software freezes.
- The switch detects a hardware or software problem that requires a reboot.

Table 411. Maintenance Menu (/maint)

```
Sys
Displays the System Maintenance Menu. To view menu options, see page 487.

fdb
Displays the Forwarding Database Manipulation Menu. To view menu options, see page 488.

debug
Displays the Debugging Menu. To view menu options, see page 489.
```

© Copyright IBM Corp. 2012 485

Table 411. Maintenance Menu (/maint)

Command Syntax and Usage

dcbx

Displays the DCBX Debugging Menu. To view menu options, see page 490

ufp

Displays Unified Fabric Port Debugging Menu. To view menu options, see page 491.

11dp

Displays the LLDP Cache Manipulation menu. To view menu options, see page 492.

arp

Displays the ARP Cache Manipulation menu. To view menu options, see page 493.

route

Displays the IP Route Manipulation menu. To view menu options, see page 494.

igmp

Displays the IGMP Maintenance menu. To view menu options, see page 495.

mld

Displays the Multicast Listener Discovery (MLD) Maintenance menu. To view menu options, see page 497.

lacp

Displays the Link Aggregation Control Protocol Maintenance menu. To view menu options, see page 498.

stp

Displays the Spanning Tree Maintenance menu. STP maintenance commands are reserved for Technical Support Personnel.

tacacs+

Displays the TACACS+ Maintenance menu. TACACS+ maintenance commands are reserved for Technical Support Personnel.

nhrcache

Displays the IPv6 Neighbor Cache Manipulation menu. To view menu options, see page 498.

route6

Displays the IPv6 Route Manipulation menu. To view menu options, see page 499.

uudmp

Displays dump information in uuencoded format. For details, see page 499.

Table 411. Maintenance Menu (/maint)

Command Syntax and Usage

ptdmp <host name> <file name>

Saves the system dump information via FTP/TFTP/SFTP. For details, see page 500.

ptlog

Saves the system log file (SYSLOG) via SFTP/TFTP.

cldmp

Clears dump information from flash memory. For details, see page 500.

tsdmp

Dumps all EN4093/EN4093R information, statistics, and configuration. You can log the tsdump output into a file.

pttsdmp

Redirects the technical support dump (tsdmp) to an external FTP/TFTP/SFTP server.

/maint/sys

System Maintenance Menu

This menu is reserved for use by IBM Service Support. The options are used to perform system debugging.

```
[System Maintenance Menu]
     flags - Set NVRAM flag word
     tmask - Set MP trace mask word
```

Table 412. System Maintenance Menu Options (/maint/sys)

Command Syntax and Usage

flags < new NVRAM flags word as 0xXXXXXXXX

This command sets the flags that are used for debugging purposes by Technical Support personnel.

tmask < new trace mask word as 0xXXXXXXXX [p]

This command sets the trace mask that is used for debugging purposes by Technical Support personnel.

Forwarding Database Maintenance Menu

```
[FDB Manipulation Menu]

find - Show a single FDB entry by MAC address

port - Show FDB entries for a single port

trunk - Show FDB entries for a single trunk

vlan - Show FDB entries for a single VLAN

dump - Show all FDB entries

del - Delete an FDB entry

clear - Clear entire FDB
```

The Forwarding Database Manipulation Menu can be used to view information and to delete a MAC address from the forwarding database or clear the entire forwarding database. This is helpful in identifying problems associated with MAC address learning and packet forwarding decisions.

Table 413. FDB Manipulation Menu Options (/maint/fdb)

Command Syntax and Usage find <MAC address> [<VLAN number>] Displays a single database entry by its MAC address. You are prompted to enter the MAC address of the device. Enter the MAC address using one of the following formats: - xx:xx:xx:xx:xx (such as 08:00:20:12:34:56) - xxxxxxxxxxx (such as 080020123456) port port alias or number> Displays all FDB entries for a particular port. trunk <trunk group number> Displays all FDB entries for a particular Trunk Group. vlan <*VLAN number*> Displays all FDB entries on a single VLAN. dump Displays all entries in the Forwarding Database. For details, see page 36. del <MAC address> [<VLAN number>] Removes a single FDB entry. clear Clears the entire Forwarding Database from switch memory.

/maint/debug

Debugging Menu

```
[Miscellaneous Debug Menu]
    tbuf
             - Show MP trace buffer
    dumpbt - Dump backtrace log
            - Show MP snap (or post-mortem) trace buffer
    snap
            - Clear all flash configs
    clrcfg
             - IP security Debug Menu
    sec
             - GEA 5690 Menu
```

The Miscellaneous Debug Menu displays trace buffer information about events that can be helpful in understanding switch operation. You can view the following information using the debug menu:

- Events traced by the Management Processor (MP)
- Events traced to a buffer area when a reset occurs

Note: IBM Networking OS debug commands are intended for advanced users. Use debug commands with caution as they can disrupt the operation of the switch under high load conditions. When debug is running under high load conditions, the CLI prompt may appear unresponsive. Before debugging, check the MP utilization to verify there is sufficient processing capacity available to perform the debug operation.

If the switch resets for any reason, the MP trace buffer is saved into the snap trace buffer area. The output from these commands can be interpreted by Service Support personnel.

Table 414. Miscellaneous Debug Menu Options (/maint/debug)

Command Syntax and Usage

tbuf

Displays the Management Processor trace buffer. Header information similar to the following is shown:

```
MP trace buffer at 13:28:15 Fri May 30, 2008; mask:
0x2ffdf748
```

The buffer information is displayed after the header.

dumpbt

Displays the backtrace log.

snap

Displays the Management Processor snap (or post-mortem) trace buffer. This buffer contains information traced at the time that a reset occurred.

clrcfq

Deletes all flash configuration blocks.

sec

Displays the IP Security Maintenance menu. This menu is reserved for Technical Support Personnel.

gea

Displays the GEA Maintenance menu. GEA maintenance commands are reserved for Technical Support Personnel.

DCBX Maintenance

```
[DCBX Debug Menu]
featcfg - Display Feature Configuration
ctrlst - Display Control State Machine state
featst - Display Feature State Machine state
txlist - Display DCBX TX TLV list
rxlist - Display DCBX RX TLV list
vniccur - Display current VNIC cfg
vnicpeer - Display if the peers on port support VNIC
```

Table 415. DCBX Maintenance Options

```
featcfg
Displays DCBX feature information.

ctrlst <port alias or number>
Displays information about the Control state machine for the selected port.

featst <port alias or number>
Displays information about the Feature state machine for the selected port.

txlist
Displays the Type-Length-Value (TLV) list transmitted in the DCBX TLV.

rxlist
Displays the Type-Length-Value (TLV) list received in the DCBX TLV.

vniccur <port alias or number>
Displays the current vNIC configuration parameters for the selected port.

vnicpeer
Displays a list of peers that support vNIC functionality.
```

/maint/ufp

Unified Fabric Port Menu

```
[UFP Maint Menu]
     txcap - Display TX UFP Capability Discovery TLV
     rxcap - Display RX UFP Capability Discovery TLV txcdcp - Display TX CDCP TLV rxcdcp - Display RX CDCP TLV
     getvlan - Display UFP relevant VLAN information
```

Table 416 describes the Unified Fabric Port commands.

Table 416. UFP Options (/maint/ufp)

Command Syntax and Usage

txcap port alias or number>

Displays transmitted UFP Capability Discovery TLV for a specified physical

rxcap <port alias or number>

Displays received UFP Capability Discovery TLV for a specified physical port.

txcdcp <port alias or number>

Displays transmitted S-Channel Discovery and Configuration Protocol TLV for a specified physical port.

rxcdcp <port alias or number>

Displays received S-Channel Discovery and Configuration Protocol TLV for a specified physical port.

getvlan <VLAN number>

Displays UFP relevant VLAN information for a specified VLAN ID.

LLDP Cache Manipulation Menu

```
[LLDP Menu]

port - Show LLDP port information

rx - Show LLDP receive state machine information

tx - Show LLDP transmit state machine information

remodev - Show LLDP remote devices information

dump - Show all LLDP information

clear - Clear LLDP remote devices information
```

Table 417 describes the LLDP cache manipulation commands.

Table 417. LLDP Cache Manipulation Options (/maint/lldp)

```
Command Syntax and Usage

port <port alias or number>
    Displays Link Layer Discovery Protocol (LLDP) port information.

rx
    Displays information about the LLDP receive state machine.

tx
    Displays information about the LLDP transmit state machine.

remodev [<1-256>|detail]
    Displays information received from LLDP -capable devices. To view information about a specific device, enter the index number of that device. To view detailed information about all devices, use the detail option.

dump
    Displays all LLDP information.

clear
    Clears the LLDP cache.
```

/maint/arp

ARP Cache Maintenance Menu

```
[Address Resolution Protocol Menu]

find - Show a single ARP entry by IP address

port - Show ARP entries on a single port

vlan - Show ARP entries on a single VLAN

addr - Show ARP entries for switch's interfaces

dump - Show all ARP entries

clear - Clear ARP cache
```

Table 418 describes the ARP cache maintenance menu options.

Table 418. ARP Maintenance Menu Options (/maint/arp)

```
find <IP address (such as, 192.4.17.101)>
Shows a single ARP entry by IP address.

port <port alias or number>
Shows ARP entries on a single port.

vlan <VLAN number>
Shows ARP entries on a single VLAN.

addr
Shows the list of IP addresses which the switch will respond to for ARP requests.

dump
Shows all ARP entries.

clear
Clears the entire ARP list from switch memory.
```

Note: To display all ARP entries currently held in the switch, or a portion according to one of the options listed on the menu above (find, port, vlan, dump), you can also refer to "ARP Information" on page 60.

IPv4 Route Manipulation Menu

```
[IP Routing Menu]

find - Show a single route by destination IP address
gw - Show routes to a single gateway
type - Show routes of a single type
tag - Show routes of a single tag
if - Show routes on a single interface
dump - Show all routes
clear - Clear route table
nh - Nexhop list
re - Route entry Nexhop list
```

Table 419 describes the IPv4 route manipulation menu options.

Table 419. IPv4 Route Manipulation Menu Options (/maint/route)

```
Command Syntax and Usage
find <IP address (such as, 192.4.17.101)>
   Shows a single route by destination IP address.
gw <default gateway address (such as, 192.4.17.44)>
   Shows routes to a default gateway.
type indirect|direct|local|broadcast|martian|multicast
   Shows routes of a single type. For a description of IP routing types, see
   Table 39 on page 59.
tag fixed|static|addr|rip|ospf|bgp|broadcast|martian|multicast
   Shows routes of a single tag. For a description of IP routing tags, see Table 40
   on page 60.
if <interface number>
   Shows routes on a single interface.
dump
   Shows all routes.
clear
   Clears the route table from switch memory.
nh
   Displays the Next Hop list.
re
   Displays the route entry Next Hop list
```

Note: To display all routes, you can also refer to "IPv4 Routing Information" on page 58.

IGMP Maintenance Menu

```
[IGMP Multicast Group Menu]
    group - Multicast Group Menu
    mrouter - IGMP Multicast Router Port Menu
    clear - Clear group and mrouter tables
```

Table 420 describes the IGMP Maintenance commands.

Table 420. IGMP Maintenance Menu Options (/maint/igmp)

Command Syntax and Usage group Displays the Multicast Group menu. To view menu options, see page 495. mrouter Displays the Multicast Router Port menu. To view menu options, see page 495. Clears the IGMP group table and Mrouter tables.

/maint/iqmp/group

IGMP Group Maintenance Menu

```
[IGMP Multicast Group Menu]
    find - Show a single group by IP group address
    vlan - Show groups on a single vlan
    port
           - Show groups on a single port
    trunk
            - Show groups on a single trunk
    detail - Show detail of a single group by IP address
            - Show all groups
    dump
    clear - Clear group tables
```

Table 421 describes the IGMP Maintenance commands.

Table 421. IGMP Multicast Group Maintenance Menu Options (/maint/igmp/group)

```
Command Syntax and Usage
find <IP address>
    Displays a single IGMP multicast group by its IP address.
vlan <VLAN number>
    Displays all IGMP multicast groups on a single VLAN.
port  port number or alias>
    Displays all IGMP multicast groups on a single port.
trunk <trunk number>
    Displays all IGMP multicast groups on a single trunk group.
```

Table 421. IGMP Multicast Group Maintenance Menu Options (/maint/igmp/group)

Command Syntax and Usage detail <IP address> Displays detailed information about a single IGMP multicast group. dump

Displays information for all multicast groups.

clear

Clears the IGMP group tables.

/maint/igmp/mrouter

IGMP Multicast Routers Maintenance Menu

```
[IGMP Multicast Routers Menu]

vlan - Show all multicast router ports on a single vlan

dump - Show all multicast router ports

clear - Clear multicast router port table
```

Table 422 describes the IGMP multicast router (Mrouter) maintenance commands.

Table 422. IGMP Mrouter Maintenance Menu Options (/maint/igmp/mrouter)

Command Syntax and Usage

vlan <*VLAN number*>

Shows all IGMP multicast router ports on a single VLAN.

dump

Shows all multicast router ports.

clear

Clears the IGMP Multicast Router port table.

MLD Multicast Group Manipulation

```
[MLD Multicast Group Menu]
groups - Show all groups
find - Show a single group by IP group address
vlan - Show groups on a single vlan
port - Show groups on a single port
trunk - Show groups on a single trunk
if - Show interface(s) mld information
mrclear - Clear dynamic MLD mrouter group tables
grclear - Clear dynamic MLD group tables
clear - Clear dynamic MLD group tables
```

Table 425 describes the Multicast Listener Discovery (MLD) maintenance options.

Table 423. MLD Maintenance (/maint/mld)

```
Command Syntax and Usage
groups
   Shows all MLD groups.
find < IPv6 address>
   Shows a MLD single group by IP group address.
vlan <VLAN number>
   Shows MLD groups on a single VLAN.
port port alias or number>
   Shows MLD groups on a single port.
trunk trunk group number>
   Shows MLD groups on a single trunk.
if <interface number>
   Shows MLD groups on the specified interface.
mrclear
   Clears all dynamic MLD multicast router group tables.
grclear
   Clears all dynamic MLD registered group tables.
clear
   Clears all dynamic MLD group tables.
```

LACP Maintenance

```
[Link Aggregation Control Protocol Menu] txmarker - Send an LACP Marker packet (only for debug purpose)
```

Table 425 describes the Link Aggregation Control Protocol manipulation options.

Table 424. Link Aggregation Control Protocol Manipulation

Command Syntax and Usage

txmarker <port number>

Send an LACP Marker packet (for debugging only).

/maint/nbrcache

IPv6 Neighbor Discovery Cache Manipulation

```
[Neighbor Cache Manipulation Menu]
find - Show a single NBR Cache entry by IP address
port - Show NBR Cache entries on a single port
vlan - Show NBR Cache entries on a single VLAN
dump - Show all NBR Cache entries
clear - Clear neighbor cache
```

Table 425 describes the IPv6 Neighbor Discovery cache manipulation options.

Table 425. IPv6 Neighbor Discovery Cache Manipulation (/maint/nbrcache)

Command Syntax and Usage

find <IPv6 address>

Shows a single IPv6 Neighbor Discovery cache entry by IP address.

port port alias or number>

Shows IPv6 Neighbor Discovery cache entries on a single port.

vlan <*VLAN number*>

Shows IPv6 Neighbor Discovery cache entries on a single VLAN.

dump

Shows all IPv6 Neighbor Discovery cache entries.

clear

Clears all IPv6 Neighbor Discovery cache entries from switch memory.

/maint/route6

IPv6 Route Manipulation Menu

```
[IP6 Routing Menu]
    dump
              - Show all routes
              - Clear route table
     clear
```

Table 426 describes the IPv6 Route maintenance options.

Table 426. IPv6 Route Manipulation (/maint/route6)

Command Syntax and Usage

dump

Shows all IPv6 routes.

clear

Clears all IPv6 routes from switch memory.

/maint/uudmp

Uuencode Flash Dump

Using this command, dump information is presented in uuencoded format. This format makes it easy to capture the dump information as a file or a string of characters.

If you want to capture dump information to a file, set your communication software on your workstation to capture session data prior to issuing the uudmp command. This will ensure that you do not lose any information. Once entered, the uudmp command will cause approximately 23,300 lines of data to be displayed on your screen and copied into the file.

Using the uudmp command, dump information can be read multiple times. The command does not cause the information to be updated or cleared from flash memory.

Note: Dump information is not cleared automatically. In order for any subsequent dump information to be written to flash memory, you must manually clear the dump region. For more information on clearing the dump region, see page 500.

To access dump information, at the Maintenance# prompt, enter:

```
Maintenance# uudmp
```

The dump information is displayed on your screen and, if you have configured your communication software to do so, captured to a file. If the dump region is empty, the following appears:

No FLASH dump available.

```
/maint/ptdmp <FTP/TFTP/SFTP server>
<filename>[-mgt|-extm|-data]
```

FTP/TFTP/SFTP System Dump Put

Use this command to put (save) the system dump to a FTP/TFTP/SFTP server.

Note: If the FTP/TFTP/SFTP server is running SunOS or the Solaris operating system, the specified ptdmp file must exist *prior* to executing the ptdmp command, and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current dump data.

To save dump information via FTP/TFTP/SFTP, at the Maintenance# prompt, enter:

```
\label{eq:maintenance} \verb|Maintenance|| ptdmp < & FTP/TFTP/SFTP server> & & | -mgt| - extm | -data| \\
```

Where *server* is the FTP/TFTP/SFTP server IP address or hostname, and *filename* is the target dump file. The default port option is -mgt.

/maint/cldmp

Clearing Dump Information

To clear dump information from flash memory, at the Maintenance# prompt, enter:

```
Maintenance# cldmp
```

The switch clears the dump region of flash memory and displays the following message:

```
FLASH dump region cleared.
```

If the flash dump region is already clear, the switch displays the following message:

```
FLASH dump region is already clear.
```

Unscheduled System Dumps

If there is an unscheduled system dump to flash memory, the following message is displayed when you log on to the switch:

```
Note: A system dump exists in FLASH. The dump was saved at 13:43:22 Wednesday January 30, 2012. Use /maint/uudmp to extract the dump for analysis and /maint/cldmp to clear the FLASH region. The region must be cleared before another dump can be saved.
```

Appendix A. System Log Messages

The EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R) uses the following syntax when outputting system log (syslog) messages:

```
<Time stamp><Log Label><Thread ID>:<Message>
```

The following parameters are used:

<Timestamp>

The time of the message event is displayed in the following format:

```
<month (3 characters)> <day> <hour (1-24)>:<minute>:<second> For example: Aug 19 14:20:30
```

<Log Label>

The following types of log messages are recorded: LOG_CRIT, LOG_WARNING, LOG ALERT, LOG ERR, LOG NOTICE, and LOG INFO

<Thread ID>

This is the software thread that reports the log message. For example: stg, ip, console, telnet, vrrp, system, web server, ssh, bgp

• <*Message*>: The log message

Following is a list of potential syslog messages. To keep this list as short as possible, only the <*Thread ID>* and <*Message>* are shown. The messages are sorted by <*Log Label>*.

Where the <Thread ID> is listed as mgmt, one of the following may be shown: console, telnet, web server, Or ssh.

© Copyright IBM Corp. 2012 501

Appendix B. SNMP Agent

SNMP Overview

The IBM Networking OS SNMP agent supports SNMP version 3. Security is provided through SNMP community strings. The default community strings are "public" for SNMP GET operation and "private" for SNMP SET operation. The community string can be modified only through the Command Line Interface (CLI). IBM is registered as Vendor 20301.

Detailed SNMP MIBs and trap definitions of the IBM Networking OS SNMP agent are contained in the following IBM Networking OS enterprise MIB document:

```
ScSE-10G-L2L3.mib
```

The IBM Networking OS SNMP agent supports the following standard MIBs:

- rfc1213.mib
- rfc1215.mib
- rfc1493.mib
- rfc1573.mib
- rfc1643.mib
- rfc1757.mib
- rfc1907.mib
- rfc2037.mib
- rfc2571.mib
- rfc2572.mib
- rfc2573.mib
- rfc2574.mib
- rfc2575.mib
- rfc2576.mib
- ieee8021ab.mib
- dot1x.mib
- rfc1657.mib
- rfc1850.mib

The IBM Networking OS SNMP agent supports the following generic traps as defined in RFC 1215:

- ColdStart
- WarmStart
- LinkDown
- LinkUp
- AuthenticationFailure

The SNMP agent also supports two Spanning Tree traps as defined in RFC 1493:

- NewRoot
- TopologyChange

© Copyright IBM Corp. 2012 515

The following are the enterprise SNMP traps supported in IBM Networking OS:

Table 427. IBM Networking OS-Supported Enterprise SNMP Traps

Trap Name	Description
altSwDefGwUp	Signifies that the default gateway is alive.
altSwDefGwDown	Signifies that the default gateway is down.
altSwDefGwInService	Signifies that the default gateway is up and in service
altSwDefGwNotInService	Signifies that the default gateway is alive but not in service
altSwVrrpNewMaster	Indicates that the sending agent has transitioned to 'Master' state.
altSwVrrpNewBackup	Indicates that the sending agent has transitioned to 'Backup' state.
altSwVrrpAuthFailure	Signifies that a packet has been received from a router whose authentication key or authentication type conflicts with this router's authentication key or authentication type. Implementation of this trap is optional.
altSwLoginFailure	Signifies that someone failed to enter a valid username/password combination.
altSwTempExceedThreshold	Signifies that the switch temperature has exceeded maximum safety limits.
altSwTempReturnThreshold	Signifies that the switch temperature has returned below maximum safety limits.
altSwStgNewRoot	Signifies that the bridge has become the new root of the STG.
altSwStgTopologyChanged	Signifies that there was a STG topology change.
altSwStgBlockingState	An altSwStgBlockingState trap is sent when port state is changed in blocking state.
altSwCistNewRoot	Signifies that the bridge has become the new root of the CIST.
altSwCistTopologyChanged	Signifies that there was a CIST topology change.
altSwHotlinksMasterUp	Signifies that the Master interface is active.
altSwHotlinksMasterDn	Signifies that the Master interface is not active.
altSwHotlinksBackupUp	Signifies that the Backup interface is active.
altSwHotlinksBackupDn	Signifies that the Backup interface is not active.
altSwHotlinksNone	Signifies that there are no active interfaces.

Switch Images and Configuration Files

This section describes how to use MIB calls to work with switch images and configuration files. You can use a standard SNMP tool to perform the actions, using the MIBs listed in Table 428.

Table 428 lists the MIBS used to perform operations associated with the Switch Image and Configuration files.

Table 428. MIBs for Switch Image and Configuration Files

MIB Name	MIB OID
agTransferServer	1.3.6.1.4.1.20301.2.5.1.1.7.1.0
agTransferImage	1.3.6.1.4.1.20301.2.5.1.1.7.2.0
agTransferImageFileName	1.3.6.1.4.1.20301.2.5.1.1.7.3.0
agTransferCfgFileName	1.3.6.1.4.1.20301.2.5.1.1.7.4.0
agTransferDumpFileName	1.3.6.1.4.1.20301.2.5.1.1.7.5.0
agTransferAction	1.3.6.1.4.1.20301.2.5.1.1.7.6.0
agTransferLastActionStatus	1.3.6.1.4.1.20301.2.5.1.1.7.7.0
agTransferUserName	1.3.6.1.4.1.20301.2.5.1.1.7.9.0
agTransferPassword	1.3.6.1.4.1.20301.2.5.1.1.7.10.0
agTransferTSDumpFileName	1.3.6.1.4.1.20301.2.5.1.1.7.11.0

The following SNMP actions can be performed using the MIBs listed in Table 428.

- Load a new Switch image (boot or running) from a FTP/TFTP server
- Load a previously saved switch configuration from a FTP/TFTP server
- Save the switch configuration to a FTP/TFTP server
- Save a switch dump to a FTP/TFTP server

Loading a New Switch Image

To load a new switch image with the name "MyNewImage-1.img" into image2, follow the steps below. This example assumes you have a FTP/TFTP server at 192.168.10.10.

1. Set the FTP/TFTP server address where the switch image resides:

```
Set agTransferServer.0 "192.168.10.10"
```

2. Set the area where the new image will be loaded:

```
Set agTransferImage.0 "image2"
```

3. Set the name of the image:

```
Set agTransferImageFileName.0 "MyNewImage-1.img"
```

4. If you are using an FTP server, enter a username:

```
Set agTransferUserName.0 "MyName"
```

5. If you are using an FTP server, enter a password:

```
Set agTransferPassword.0 "MyPassword"
```

6. Initiate the transfer. To transfer a switch image, enter 2 (gtimg):

```
Set agTransferAction.0 "2"
```

Loading a Saved Switch Configuration

To load a saved switch configuration with the name "MyRunningConfig.cfg" into the switch, follow the steps below. This example assumes you have a TFTP server at 192.168.10.10.

1. Set the FTP/TFTP server address where the switch Configuration File resides:

```
Set agTransferServer.0 "192.168.10.10"
```

2. Set the name of the configuration file:

```
Set agTransferCfgFileName.0 "MyRunningConfig.cfg"
```

3. If you are using an FTP server, enter a username:

```
Set agTransferUserName.0 "MyName"
```

4. If you are using an FTP server, enter a password:

```
Set agTransferPassword.0 "MyPassword"
```

5. Initiate the transfer. To restore a running configuration, enter 3:

```
Set agTransferAction.0 "3"
```

Saving the Switch Configuration

To save the switch configuration to a FTP/TFTP server follow the steps below. This example assumes you have a FTP/TFTP server at 192.168.10.10.

1. Set the FTP/TFTP server address where the configuration file is saved:

```
Set agTransferServer.0 "192.168.10.10"
```

2. Set the name of the configuration file:

```
Set agTransferCfgFileName.0 "MyRunningConfig.cfg"
```

3. If you are using an FTP server, enter a username:

```
Set agTransferUserName.0 "MyName"
```

4. If you are using an FTP server, enter a password:

```
Set agTransferPassword.0 "MyPassword"
```

5. Initiate the transfer. To save a running configuration file, enter 4:

```
Set agTransferAction.0 "4"
```

Saving a Switch Dump

To save a switch dump to a FTP/TFTP server, follow the steps below. This example assumes you have a FTP/TFTP server at 192.168.10.10.

Set the FTP/TFTP server address where the configuration will be saved:

```
Set agTransferServer.0 "192.168.10.10"
```

2. Set the name of dump file:

```
Set agTransferDumpFileName.0 "MyDumpFile.dmp"
```

3. If you are using an FTP server, enter a username:

```
Set agTransferUserName.0 "MyName"
```

4. If you are using an FTP server, enter a password:

```
Set agTransferPassword.0 "MyPassword"
```

Initiate the transfer. To save a dump file, enter 5:

```
Set agTransferAction.0 "5"
```

Appendix C. Appendix D. Getting help and technical assistance

If you need help, service, or technical assistance or just want more information about IBM products, you will find a wide variety of sources available from IBM to assist you. This section contains information about where to go for additional information about IBM and IBM products, what to do if you experience a problem with your system, and whom to call for service, if it is necessary.

Before you call

Before you call, make sure that you have taken these steps to try to solve the problem yourself:

- Check all cables to make sure that they are connected.
- Check the power switches to make sure that the system and any optional devices are turned on.
- Use the troubleshooting information in your system documentation, and use the diagnostic tools that come with your system. Information about diagnostic tools is in the *Problem Determination and Service Guide* on the IBM *Documentation* CD that comes with your system.
- Go to the IBM support website at http://www.ibm.com/systems/support/ to check for technical information, hints, tips, and new device drivers or to submit a request for information.

You can solve many problems without outside assistance by following the troubleshooting procedures that IBM provides in the online help or in the documentation that is provided with your IBM product. The documentation that comes with IBM systems also describes the diagnostic tests that you can perform. Most systems, operating systems, and programs come with documentation that contains troubleshooting procedures and explanations of error messages and error codes. If you suspect a software problem, see the documentation for the operating system or program.

Using the documentation

Information about your IBM system and pre-installed software, if any, or optional device is available in the documentation that comes with the product. That documentation can include printed documents, online documents, ReadMe files, and Help files. See the troubleshooting information in your system documentation for instructions for using the diagnostic programs. The troubleshooting information or the diagnostic programs might tell you that you need additional or updated device drivers or other software. IBM maintains pages on the World Wide Web where you can get the latest technical information and download device drivers and updates. To access these pages, go to http://www.ibm.com/systems/support/ and follow the instructions. Also, some documents are available through the IBM Publications Center at http://www.ibm.com/shop/publications/order/.

© Copyright IBM Corp. 2012 519

Getting help and information on the World Wide Web

On the World Wide Web, the IBM website has up-to-date information about IBM systems, optional devices, services, and support. The address for IBM System $x^{(B)}$ and xSeries information is http://www.ibm.com/systems/x/. The address for IBM Flex System information is http://www.ibm.com/systems/bladecenter/. The address for IBM IntelliStation information is http://www.ibm.com/intellistation/.

You can find service information for IBM systems and optional devices at http://www.ibm.com/systems/support/.

Software service and support

Through IBM Support Line, you can get telephone assistance, for a fee, with usage, configuration, and software problems with System x and x Series servers, Flex System products, IntelliStation workstations, and appliances. For information about which products are supported by Support Line in your country or region, see http://www.ibm.com/services/sl/products/.

For more information about Support Line and other IBM services, see http://www.ibm.com/services/, or see http://www.ibm.com/planetwide/ for support telephone numbers. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

Hardware service and support

You can receive hardware service through your IBM reseller or IBM Services. To locate a reseller authorized by IBM to provide warranty service, go to http://www.ibm.com/partnerworld/ and click **Find Business Partners** on the right side of the page. For IBM support telephone numbers, see http://www.ibm.com/planetwide/. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

In the U.S. and Canada, hardware service and support is available 24 hours a day, 7 days a week. In the U.K., these services are available Monday through Friday, from 9 a.m. to 6 p.m.

IBM Taiwan product service

台灣IBM產品服務聯絡方式: 台灣國際商業機器股份有限公司 台北市松仁路7號3樓 電話:0800-016-888

IBM Taiwan product service contact information:

IBM Taiwan Corporation 3F, No 7, Song Ren Rd. Taipei, Taiwan

Telephone: 0800-016-888

Appendix E. Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. UNIX is a registered trademark of The Open Group in the United States and other countries.

Other company, product, or service names may be trademarks or service marks of others.

Important Notes

Processor speed indicates the internal clock speed of the microprocessor; other factors also affect application performance.

CD or DVD drive speed is the variable read rate. Actual speeds vary and are often less than the possible maximum.

When referring to processor storage, real and virtual storage, or channel volume, KB stands for 1024 bytes, MB stands for 1 048 576 bytes, and GB stands for 1 073 741 824 bytes.

When referring to hard disk drive capacity or communications volume, MB stands for 1 000 000 bytes, and GB stands for 1 000 000 bytes. Total user-accessible capacity can vary depending on operating environments.

Maximum internal hard disk drive capacities assume the replacement of any standard hard disk drives and population of all hard disk drive bays with the largest currently supported drives that are available from IBM.

Maximum memory might require replacement of the standard memory with an optional memory module.

IBM makes no representation or warranties regarding non-IBM products and services that are ServerProven, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. These products are offered and warranted solely by third parties.

IBM makes no representations or warranties with respect to non-IBM products. Support (if any) for the non-IBM products is provided by the third party, not IBM.

Some software might differ from its retail version (if available) and might not include user manuals or all program functionality.

Particulate contamination

Attention: Airborne particulates (including metal flakes or particles) and reactive gases acting alone or in combination with other environmental factors such as humidity or temperature might pose a risk to the device that is described in this document. Risks that are posed by the presence of excessive particulate levels or concentrations of harmful gases include damage that might cause the device to malfunction or cease functioning altogether. This specification sets forth limits for particulates and gases that are intended to avoid such damage. The limits must not be viewed or used as definitive limits, because numerous other factors, such as temperature or moisture content of the air, can influence the impact of particulates or environmental corrosives and gaseous contaminant transfer. In the absence of specific limits that are set forth in this document, you must implement practices that maintain particulate and gas levels that are consistent with the protection of human health and safety. If IBM determines that the levels of particulates or gases in your environment have caused damage to the device, IBM may condition provision of repair or replacement of devices or parts on implementation of appropriate remedial measures to mitigate such environmental contamination. Implementation of such remedial measures is a customer responsibility.

Contaminant	Limits
Particulate	 The room air must be continuously filtered with 40% atmospheric dust spot efficiency (MERV 9) according to ASHRAE Standard 52.2¹. Air that enters a data center must be filtered to 99.97% efficiency or greater, using high-efficiency particulate air (HEPA) filters that meet MIL-STD-282. The deliquescent relative humidity of the particulate contamination must be more than 60%². The room must be free of conductive contamination such as zinc whiskers.
Gaseous	 Copper: Class G1 as per ANSI/ISA 71.04-1985³ Silver: Corrosion rate of less than 300 Å in 30 days

¹ ASHRAE 52.2-2008 - *Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size*. Atlanta: American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.

Documentation format

The publications for this product are in Adobe Portable Document Format (PDF) and should be compliant with accessibility standards. If you experience difficulties when you use the PDF files and want to request a web-based format or accessible PDF document for a publication, direct your mail to the following address:

Information Development
IBM Corporation
205/A0153039 E. Cornwallis Road
P.O. Box 12195
Research Triangle Park, North Carolina 27709-2195
U.S.A.

© Copyright IBM Corp. 2012 Appendix E: Notices 523

² The deliquescent relative humidity of particulate contamination is the relative humidity at which the dust absorbs enough water to become wet and promote ionic conduction.

³ ANSI/ISA-71.04-1985. *Environmental conditions for process measurement and control systems: Airborne contaminants*. Instrument Society of America, Research Triangle Park, North Carolina, U.S.A.

In the request, be sure to include the publication part number and title.

Electronic emission notices

Federal Communications Commission (FCC) statement

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. IBM is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Industry Canada Class A emission compliance statement

This Class A digital apparatus complies with Canadian ICES-003.

Avis de conformité à la réglementation d'Industrie Canada

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Australia and New Zealand Class A statement

Attention: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

European Union EMC Directive conformance statement

This product is in conformity with the protection requirements of EU Council Directive 2004/108/EC on the approximation of the laws of the Member States relating to electromagnetic compatibility. IBM cannot accept responsibility for any failure to satisfy the protection requirements resulting from a nonrecommended modification of the product, including the fitting of non-IBM option cards.

Attention: This is an EN 55022 Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Germany Class A statement

Deutschsprachiger EU Hinweis:

Hinweis für Geräte der Klasse A EU-Richtlinie zur Elektromagnetischen Verträglichkeit

Dieses Produkt entspricht den Schutzanforderungen der EU-Richtlinie 2004/108/EG zur Angleichung der Rechtsvorschriften über die elektromagnetische Verträglichkeit in den EU-Mitgliedsstaaten und hält die Grenzwerte der EN 55022 Klasse A ein.

Um dieses sicherzustellen, sind die Geräte wie in den Handbüchern beschrieben zu installieren und zu betreiben. Des Weiteren dürfen auch nur von der IBM empfohlene Kabel angeschlossen werden. IBM übernimmt keine Verantwortung für die Einhaltung der Schutzanforderungen, wenn das Produkt ohne Zustimmung der IBM verändert bzw. wenn Erweiterungskomponenten von Fremdherstellern ohne Empfehlung der IBM gesteckt/eingebaut werden.

EN 55022 Klasse A Geräte müssen mit folgendem Warnhinweis versehen werden: "Warnung: Dieses ist eine Einrichtung der Klasse A. Diese Einrichtung kann im Wohnbereich Funk-Störungen verursachen; in diesem Fall kann vom Betreiber verlangt werden, angemessene Maßnahmen zu ergreifen und dafür aufzukommen."

Deutschland: Einhaltung des Gesetzes über die elektromagnetische Verträglichkeit von Geräten

Dieses Produkt entspricht dem "Gesetz über die elektromagnetische Verträglichkeit von Geräten (EMVG)". Dies ist die Umsetzung der EU-Richtlinie 2004/108/EG in der Bundesrepublik Deutschland.

Zulassungsbescheinigung laut dem Deutschen Gesetz über die elektromagnetische Verträglichkeit von Geräten (EMVG) (bzw. der EMC EG Richtlinie 2004/108/EG) für Geräte der Klasse A

Dieses Gerät ist berechtigt, in Übereinstimmung mit dem Deutschen EMVG das EG-Konformitätszeichen - CE - zu führen.

Verantwortlich für die Einhaltung der EMV Vorschriften ist der Hersteller:

International Business Machines Corp. New Orchard Road Armonk, New York 10504 914-499-1900

IBM Deutschland Technical Regulations, Department M456 IBM-Allee 1, 71137 Ehningen, Germany Telephone: +49 7032 15-2937 E-mail: tjahn@de.ibm.com

Generelle Informationen:

Das Gerät erfüllt die Schutzanforderungen nach EN 55024 und EN 55022 Klasse A.

Japan VCCI Class A statement

この装置は、クラス A 情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。 VCCI-A

This is a Class A product based on the standard of the Voluntary Control Council for Interference (VCCI). If this equipment is used in a domestic environment, radio interference may occur, in which case the user may be required to take corrective actions.

Korea Communications Commission (KCC) statement

이기기는 업무용으로 전자파 적합등록을 받은 기기 이오니, 판매자 또는 사용자는 이점을 주의하시기 바라며, 만약 잘못 구입하셨을 때에는 구입한 곳에 서 비업무용으로 교환하시기 바랍니다.

Please note that this equipment has obtained EMC registration for commercial use. In the event that it has been mistakenly sold or purchased, please exchange it for equipment certified for home use.

Russia Electromagnetic Interference (EMI) Class A statement

ВНИМАНИЕ! Настоящее изделие относится к классу А. В жилых помещениях оно может создавать радиопомехи, для снижения которых необходимы дополнительные меры

People's Republic of China Class A electronic emission statement

中华人民共和国"A类"警告声明

声明

此为A级产品,在生活环境中,该产品可能会造成无线电干扰。在这种情况下,可能需要用户对其干扰采取切实可行的措施。

Taiwan Class A compliance statement

警告使用者: 這是甲類的資訊產品,在 居住的環境中使用時,可 能會造成射頻干擾,在這 種情況下,使用者會被要 求採取某些適當的對策。
