Preface	.1
Who Should Use This Book	. 1
How This Book Is Organized	. 1
Typographic Conventions	.2
How to Get Help	.4
Chapter 1. ISCLI Basics	. 5
Accessing the ISCLI	. 5
ISCLI Command Modes	. 5
Global Commands	. 9
Command Line Interface Shortcuts	11
CLI List and Range Inputs	11
Command Abbreviation	11
Tab Completion	11
User Access Levels	12
	13
Chapter 2. Information Commands.	15
System Information.	16
	17
	17
	17
	19
SNMPv3 View Table Information	20
SNMPv3 Access Table Information	21
SNMPv3 Group Table Information.	22
SNMPv3 Community Table Information.	22
SNMPv3 Target Address Table Information	
SNMPv3 Target Parameters Table Information.	
SNMPv3 Notify Table Information	
SNMPv3 Dump Information	
General System Information.	
Show Software Version Information	
Show Recent Syslog Messages	27
User Status	
Stacking Information	29
Stacking Switch Information	30

Layer 2 Information	31
FDB Information	33
Show All FDB Information.	34
Clearing Entries from the Forwarding Database	34
Link Aggregation Control Protocol Information	35
Link Aggregation Control Protocol	35
Layer 2 Failover Information	36
Layer 2 Failover Information	36
Hot Links Information	37
Edge Control Protocol Information	38
LLDP Information	38
LLDP Remote Device Information	38
Unidirectional Link Detection Information	39
UDLD Port Information	40
OAM Discovery Information	41
OAM Port Information	41
vLAG Information	42
vLAG Trunk Information	42
802.1X Information	43
Spanning Tree Information	45
RSTP/MSTP/PVRST Information	47
Common Internal Spanning Tree Information	50
Trunk Group Information	52
VLAN Information	53
Layer 3 Information	55
IP Routing Information.	57
Show All IP Route Information	58
ARP Information	59
Show All ARP Entry Information	60
ARP Address List Information	61
BGP Information	62
BGP Peer information	62
BGP Summary Information	63
BGP Peer Routes Information	63
	63
	64
OSPF General Information	65
OSPF Interface Loopback Information	66
OSPF Interface Information	66
OSPF Database Information	67
OSPF Information Route Codes	68
	69
OSPFv3 Information Dump	00

OSPFv3 Interface Information		71
OSPFv3 Database Information		71
OSPFv3 Route Codes Information		73
Routing Information Protocol		73
RIP Routes Information		73
RIP Interface Information		
IPv6 Routing Information		
IPv6 Routing Table		
IPv6 Neighbor Discovery Cache Information		
IPv6 Neighbor Discovery Cache Information		
IPv6 Neighbor Discovery Prefix Information		77
ECMP Static Route Information		77
ECMP Hashing Result		78
IGMP Multicast Group Information		79
IGMP Querier Information		80
IGMP Group Information		
IGMP Multicast Router Information		
IPMC Group Information		
MLD information	• •	82
VRRP Information	• •	84
IPv6 Interface Information		
IPv6 Path MTU Information		
IKEv2 Information Dump		
IPsec Manual Policy Information		
PIM Component Information	• •	92
PIM Interface Information		
PIM Neighbor Information		
PIM Multicast Route Information Commands		
PIM Multicast Route Information		
Quality of Service Information	• •	95
802.1p Information		
WRED and ECN Information		
Access Control List Information	• •	97
RMON Information Commands	• •	98
RMON History Information	• •	98
RMON Alarm Information	• •	99
RMON Event Information		100
Link Status Information.		102
Port Information		103
Port Transceiver Status		104
Virtual Machines Information		106
VM Information		106
VM Check Information		107
VMware Information		107
VMware Host Information		107

vNIC Information	
Virtual NIC (vNIC) Information	. 108
vNIC Group Information	. 109
SLP Information	. 110
UFP Information.	. 110
Port Information	. 111
CDCP Information	. 112
QoS Information	. 112
TLV Status Information	. 113

Viewing and Saving Changes.			.214

System Configuration.						. 215
System Error Disable and Recovery Configuration.						. 217
System Host Log Configuration						
SSH Server Configuration						
RADIUS Server Configuration						
TACACS+ Server Configuration						
LDAP Server Configuration						
NTP Client Configuration.						
System SNMP Configuration						
SNMPv3 Configuration						
User Security Model Configuration						
SNMPv3 View Configuration.						
View-based Access Control Model Configuration.						
SNMPv3 Group Configuration						
SNMPv3 Community Table Configuration						. 238
SNMPv3 Target Address Table Configuration .						
SNMPv3 Target Parameters Table Configuration						
SNMPv3 Notify Table Configuration						
System Access Configuration						
Management Network Configuration						
User Access Control Configuration						
System User ID Configuration						
Strong Password Configuration						
HTTPS Access Configuration						
Custom Daylight Saving Time Configuration						
sFlow Configuration.						
sFlow Port Configuration						
Port Configuration						
Port Error Disable and Recovery Configuration						
Port Link Configuration						
Temporarily Disabling a Port						
UniDirectional Link Detection Configuration						
Port OAM Configuration						
Port ACL Configuration						
Port Spanning Tree Configuration						
Port Spanning Tree Guard Configuration						
Port WRED Configuration						
Port WRED Transmit Queue Configuration						
Management Port Configuration						. 259
Stacking Configuration						. 200
Stacking Switch Configuration						. 261
Quality of Service Configuration						. 263
802.1p Configuration						. 203
						. 263

Access Control Configuration	38
Access Control List Configuration	
Ethernet Filtering Configuration	70
IPv4 Filtering Configuration	71
TCP/UDP Filtering Configuration	72
Packet Format Filtering Configuration	73
ACL IPv6 Configuration	73
IPv6 Filtering Configuration	74
IPv6 TCP/UDP Filtering Configuration	75
IPv6 Re-Mark Configuration	76
Management ACL Filtering Configuration	76
TCP/UDP Filtering Configuration	78
VMAP Configuration.	79
ACL Group Configuration	30
ACL Metering Configuration	30
ACL Re-Mark Configuration	31
Re-Marking In-Profile Configuration	
Re-Marking Out-of-Profile Configuration	32
IPv6 Re-Marking Configuration	
IPv6 Re-Marking In-Profile Configuration	33
Port Mirroring	34
Port-Mirroring Configuration	34

Layer 2 Configuration.	285
802.1X Configuration	
802.1X Global Configuration.	286
802.1X Guest VLAN Configuration	
802.1X Port Configuration	
RSTP/MSTP/PVRST Configuration	
Common Internal Spanning Tree Configuration	292
CIST Bridge Configuration	
CIST Port Configuration	
Spanning Tree Configuration	
Bridge Spanning Tree Configuration.	
Spanning Tree Port Configuration	
Forwarding Database Configuration	
Static FDB Configuration.	299
Static Multicast MAC Configuration.	
LLDP Configuration.	
LLDP Port Configuration	302
LLDP Optional TLV configuration	
Trunk Configuration.	
IP Trunk Hash Configuration	
Layer 2 Trunk Hash	
Layer 3 Trunk Hash	
Virtual Link Aggregation Group Protocol Configuration	
vLAG Health Check Configuration	
vLAG ISL Configuration	
Link Aggregation Control Protocol Configuration	
LACP Port Configuration	311
Layer 2 Failover Configuration	
Failover Trigger Configuration	
Auto Monitor Configuration	
Failover Manual Monitor Port Configuration	
Failover Manual Monitor Control Configuration	
Hot Links Configuration	
Hot Links Trigger Configuration	
Hot Links Master Configuration.	
Hot Links Backup Configuration	
VLAN Configuration.	
Protocol-Based VLAN Configuration	
Private VLAN Configuration

Preface

This *ISCLI Command Reference* describes how to configure and use the IBM Networking OS 7.5 software with your IBM Flex System EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch. This guide lists each command, together with the complete syntax and a functional description, from the IS Command Line Interface (ISCLI).

For documentation on installing the switches physically, see the *Installation Guide* for your EN4093/EN4093R. For details about the configuration and operation of the EN4093/EN4093R, see the *IBM Networking OS 7.5 Application Guide*.

Who Should Use This Book

This book is intended for network installers and system administrators engaged in configuring and maintaining a network. The administrator should be familiar with Ethernet concepts, IP addressing, the IEEE 802.1D Spanning Tree Protocol, and SNMP configuration parameters.

How This Book Is Organized

Chapter 1, "ISCLI Basics," describes how to connect to the switch and access the information and configuration commands. This chapter provides an overview of the command syntax, including command modes, global commands, and shortcuts.

Chapter 2, "Information Commands," shows how to view switch configuration parameters.

Chapter 3, "Statistics Commands," shows how to view switch performance statistics.

Chapter 4, "Configuration Commands," shows how to configure switch system parameters, ports, VLANs, Spanning Tree Protocol, SNMP, Port Mirroring, IP Routing, Port Trunking, and more.

Chapter 5, "Operations Commands," shows how to use commands which affect switch performance immediately, but do not alter permanent switch configurations (such as temporarily disabling ports). The commands describe how to activate or deactivate optional software features.

Chapter 6, **"Boot Options,"** describes the use of the primary and alternate switch images, how to load a new software image, and how to reset the software to factory defaults.

Chapter 7, "Maintenance Commands," shows how to generate and access a dump of critical switch state information, how to clear it, and how to clear part or all of the forwarding database.

"Index" includes pointers to the description of the key words used throughout the book.

Typographic Conventions

The following table describes the typographic styles used in this book.

Table 1	Typographic	Conventions
rubic r.	rypographic	001100110110

Typeface or Symbol	Meaning
plain fixed-width text	This type is used for names of commands, files, and directories used within the text. For example:
	View the readme.txt file.
	It also depicts on-screen computer output and prompts.
bold fixed-width text	This bold type appears in command examples. It shows text that must be typed in exactly as shown. For example:
	show sys-info
bold body text	This bold type indicates objects such as window names, dialog box names, and icons, as well as user interface objects such as buttons, and tabs.
italicized body text	This italicized type indicates book titles, special terms, or words to be emphasized.
angle brackets < >	Indicate a variable to enter based on the description inside the brackets. Do not type the brackets when entering the command.
	Example: If the command syntax is ping <ip address=""></ip>
	you enter ping 192.32.10.12
braces { }	Indicate required elements in syntax descriptions where there is more than one option. You must choose only one of the options. Do not type the braces when entering the command.
	Example: If the command syntax is show portchannel {<1-64> hash information}
	you enter: show portchannel <1-64>
	or
	show portchannel hash
	or
	show portchannel information

Table 1. Typographic Conventions

Typeface or Symbol	Meaning
brackets []	Indicate optional elements in syntax descriptions. Do not type the brackets when entering the command.
	Example: If the command syntax is show ip interface [<1-128>]
	you enter show ip interface
	or show ip interface <1-128>
vertical line	Separates choices for command keywords and arguments. Enter only one of the choices. Do not type the vertical line when entering the command.
	Example: If the command syntax is show portchannel {<1-64> hash information}
	you must enter: show portchannel <1-64>
	or
	show portchannel hash
	or
	show portchannel information

How to Get Help

If you need help, service, or technical assistance, see the "Getting help and technical assistance" appendix in the *IBM Flex System EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch User Guide*.

Chapter 1. ISCLI Basics

Your EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch (EN4093/EN4093R) is ready to perform basic switching functions right out of the box. Some of the more advanced features, however, require some administrative configuration before they can be used effectively.

This guide describes the individual ISCLI commands available for the EN4093/EN4093R.

The ISCLI provides a direct method for collecting switch information and performing switch configuration. Using a basic terminal, the ISCLI allows you to view information and statistics about the switch, and to perform any necessary configuration.

This chapter explains how to access the IS Command Line Interface (ISCLI) for the switch.

Accessing the ISCLI

The first time you start the EN4093/EN4093R, it boots into IBM Networking OS CLI. To access the ISCLI, enter the following command and reset the EN4093/EN4093R:

Main# boot/mode iscli

To access the menu-based CLI, enter the following command from the ISCLI and reload the EN4093/EN4093R:

Router (config) # boot cli-mode ibmnos-cli

The switch retains your CLI selection, even when you reset the configuration to factory defaults. The CLI boot mode is not part of the configuration settings.

If you downgrade the switch software to an earlier release, it will boot into menu-based CLI. However, the switch retains the CLI boot mode, and will restore your CLI choice.

ISCLI Command Modes

The ISCLI has three major command modes listed in order of increasing privileges, as follows:

User EXEC mode

This is the initial mode of access. By default, password checking is disabled for this mode, on console.

Privileged EXEC mode

This mode is accessed from User EXEC mode. This mode can be accessed using the following command: enable

Global Configuration mode

This mode allows you to make changes to the running configuration. If you save the configuration, the settings survive a reload of the EN4093/EN4093R. Several sub-modes can be accessed from the Global Configuration mode. For more details, see Table 2.

Each mode provides a specific set of commands. The command set of a higher-privilege mode is a superset of a lower-privilege mode—all lower-privilege mode commands are accessible when using a higher-privilege mode.

Table 2 lists the ISCLI command modes.

Table 2. ISCLI Command Modes

Command Mode/Prompt	Command used to enter or exit
User EXEC	Default mode, entered automatically on console
Router>	Exit: exit or logout
Privileged EXEC	Enter Privileged EXEC mode, from User EXEC mode: enable
Router#	Exit to User EXEC mode: disable
	Quit ISCLI: exit or logout
Global Configuration	Enter Global Configuration mode, from Privileged EXEC mode: configure terminal
Router(config)#	Exit to Privileged EXEC: end or exit
Interface IP	Enter Interface IP Configuration mode, from Global Configuration mode: interface ip <i><interface number=""></interface></i>
Router(config-ip-if)#	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Interface Loopback	Enter Interface Loopback Configuration mode, from Global Configuration mode: interface ip loopback <1-5>
Router(config-ip-loopback)#	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Interface Port	Enter Port Configuration mode, from Global Configuration mode:
Router(config-if)#	interface port <pre>port number or alias></pre>
	Exit to Privileged EXEC mode: exit
	Exit to Global Configuration mode: end
Interface PortChannel	Enter PortChannel (trunk group) Configuration mode, from Global Configuration mode:
Router(config-PortChannel)#	<pre>interface portchannel {<trunk number=""> lacp <key>}</key></trunk></pre>
	Exit to Privileged EXEC mode: exit
	Exit to Global Configuration mode: end

Table 2. ISCLI Command Modes (continued)

Command Mode/Prompt	Command used to enter or exit
VLAN	Enter VLAN Configuration mode, from Global Configuration mode:
Router(config-vlan)#	vlan <vlan number=""></vlan>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Router OSPF	Enter OSPF Configuration mode, from Global Configuration mode:
Router(config-router-ospf)#	router ospf
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Router BGP	Enter BGP Configuration mode, from Global Configuration mode:
Router(config-router-bgp)#	router bgp
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Router RIP	Enter RIP Configuration mode, from Global Configuration mode: router rip
Router(config-router-rip)#	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Route Map	Enter Route Map Configuration mode, from Global Configuration mode:
Router(config-route-map)#	route-map <1-32>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
Router VRRP	Enter VRRP Configuration mode, from Global Configuration mode:
Router(config-vrrp)#	router vrrp
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
PIM Component Router(config-ip-pim-comp)#	Enter Protocol Independent Multicast (PIM) Component Configuration mode, from Global Configuration mode: ip pim component <1-2>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end

Table 2. ISCLI Command Modes (continued)

Command Mode/Prompt	Command used to enter or exit
IKEv2 Proposal	Enter IKEv2 Proposal Configuration mode, from Global Configuration mode:
Router(config-ikev2-prop)#	ikev2 proposal
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
MLD Configuration	Enter Multicast Listener Discovery Protocol Configuration mode, from Global Configuration mode:
Router(config-router-mld)#	ipv6 mld
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
VSI Database	Enter Virtual Station Interface Database Configuration mode, from Global Configuration mode:
EN4093/EN4093R(conf-vsidb)#	<pre>virt evb vsidb <vsidb_number></vsidb_number></pre>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
EVB Profile EN4093/EN4093R(conf-evbprof)#	Enter Edge Virtual Bridging VSI Type Profile Configuration mode, from Global Configuration mode: virt evb profile <1-16>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
UFP Virtual Port Configuration	Enter Unified Fabric Port Virtual Port Configuration mode, from Global Configuration mode:
EN4093/EN4093R(config_ufp_vpo rt)#	ufp port <port no.=""> vport <1-4></port>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end
SPAR Configuration	Enter Switch Partition Configuration mode, from Global Configuration mode:
EN4093/EN4093R(config-spar)#	spar <1-8>
	Exit to Global Configuration mode: exit
	Exit to Privileged EXEC mode: end

Global Commands

Some basic commands are recognized throughout the ISCLI command modes. These commands are useful for obtaining online help, navigating through the interface, and for saving configuration changes.

For help on a specific command, type the command, followed by help.

Table 3. Description of Global Commands

Command	Action
?	Provides more information about a specific command or lists commands available at the current level.
list	Lists the commands available at the current level.
exit	Go up one level in the command mode structure. If already at the top level, exit from the command line interface and log out.
copy running	g-config startup-config
	Write configuration changes to non-volatile flash memory.
logout	Exit from the command line interface and log out.
ping	Use this command to verify station-to-station connectivity across the network. The format is as follows:
	<pre>ping <host name=""> <ip address=""> [-n <tries (0-4294967295)>] [-w <msec (0-4294967295)="" delay="">] [-1 <length (0="" 2080)="" 32-65500="">] [-s <ip source="">] [-v <tos (0-255)>] [-f] [-t]</tos </ip></length></msec></tries </ip></host></pre>
	Where:
	 -n: Sets the number of attempts (optional).
	 -w: Sets the number of milliseconds between attempts (optional).
	 -1: Sets the ping request payload size (optional). -s: Sets the IP source address for the IP packet (optional).
	 -v: Sets the Type Of Service bits in the IP header.
	 - f: Sets the <i>don't fragment</i> bit in the IP header (only for IPv4 addresses).
	 -t: Pings continuously (same as -n 0).
	Where the <i>IP address</i> or <i>hostname</i> specify the target device. Use of a hostname requires DNS parameters to be configured on the switch.
	<i>Tries</i> (optional) is the number of attempts (1-32), and <i>msec delay</i> (optional) is the number of milliseconds between attempts.

Command	Action
traceroute	Use this command to identify the route used for station-to-station connectivity across the network. The format is as follows:
	<pre>traceroute {<hostname> <ip address="">} [<max-hops (1-32)=""></max-hops></ip></hostname></pre>
	<pre>traceroute <hostname> <ip address=""> [<max-hops (1-32)=""> [<msec-delay (1-4294967295)="">]]</msec-delay></max-hops></ip></hostname></pre>
	Where <i>hostname/IP address</i> is the hostname or IP address of the target station, <i>max-hops</i> (optional) is the maximum distance to trace (1-32 devices), and <i>msec-delay</i> (optional) is the number of milliseconds to wait for the response.
	As with ping, the DNS parameters must be configured if specifying hostnames.
telnet	This command is used to form a Telnet session between the switch and another network device. The format is as follows:
	<pre>telnet {<hostname> <ip address="">} [<port>]</port></ip></hostname></pre>
	Where <i>IP address</i> or <i>hostname</i> specifies the target station. Use of a hostname requires DNS parameters to be configured on the switch.
	<i>Port</i> is the logical Telnet port or service number.
show history	This command displays the last ten issued commands.
show who	Displays a list of users who are currently logged in.
show line	Displays a list of users who are currently logged in, in table format.

Table 3. Description of Global Commands (continued)

Command Line Interface Shortcuts

The following shortcuts allow you to enter commands quickly and easily.

CLI List and Range Inputs

For VLAN and port commands that allow an individual item to be selected from within a numeric range, lists and ranges of items can now be specified. For example, the vlan command permits the following options:

# vlan 1,3,4095	(access VLANs 1, 3, and 4095)
# vlan 1-20	(access VLANs 1 through 20)
# vlan 1-5,90-99,4090-4095	(access multiple ranges)
# vlan 1-5,19,20,4090-4095	(access a mix of lists and ranges)

The numbers in a range must be separated by a dash: *<start of range>-<end of range>*

Multiple ranges or list items are permitted using a comma: <*range or item 1*>, <*range or item 2*>

Do not use spaces within list and range specifications.

Ranges can also be used to apply the same command option to multiple items. For example, to access multiple ports with one command:

```
# interface port 1-4 (Access ports 1 though 4)
```

Command Abbreviation

Most commands can be abbreviated by entering the first characters which distinguish the command from the others in the same mode. For example, consider the following full command and a valid abbreviation:

```
Router(config)# spanning-tree stp 2 bridge hello 2
Or
Router(config)# sp stp 2 br h 2
```

Tab Completion

By entering the first letter of a command at any prompt and pressing <Tab>, the ISCLI displays all available commands or options that begin with that letter. Entering additional letters further refines the list of commands or options displayed. If only one command fits the input text when <Tab> is pressed, that command is supplied on the command line, waiting to be entered.

User Access Levels

To enable better switch management and user accountability, three levels or *classes* of user access have been implemented on the EN4093/EN4093R. Levels of access to CLI, Web management functions, and screens increase as needed to perform various switch management tasks. Conceptually, access classes are defined as follows:

user

Interaction with the switch is completely passive—nothing can be changed on the EN4093/EN4093R. Users may display information that has no security or privacy implications, such as switch statistics and current operational state information.

oper

Operators can make temporary changes on the EN4093/EN4093R. These changes are lost when the switch is rebooted/reset. Operators have access to the switch management features used for daily switch operations. Because any changes an operator makes are undone by a reset of the switch, operators cannot severely impact switch operation.

admin

Administrators are the only ones that may make permanent changes to the switch configuration—changes that are persistent across a reboot/reset of the switch. Administrators can access switch functions to configure and troubleshoot problems on the EN4093/EN4093R. Because administrators can also make temporary (operator-level) changes as well, they must be aware of the interactions between temporary and permanent changes.

Access to switch functions is controlled through the use of unique surnames and passwords. Once you are connected to the switch via local Telnet, remote Telnet, or SSH, you are prompted to enter a password. The default user names/password for each access level are listed in the following table.

Note: It is recommended that you change default switch passwords after initial configuration and as regularly as required under your network security policies.

User Account	Description and Tasks Performed	Password
User	The User has no direct responsibility for switch management. He or she can view all switch status information and statistics, but cannot make any configuration changes to the switch.	user
Operator	The Operator can make temporary changes that are lost when the switch is rebooted/reset. Operators have access to the switch management features used for daily switch operations.	
Administrator	The superuser Administrator has complete access to all command modes, information, and configuration commands on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch, including the ability to change both the user and administrator passwords.	admin

Table 4.	User Access	Levels
----------	-------------	--------

Note: With the exception of the "admin" user, access to each user level can be disabled by setting the password to an empty value.

Idle Timeout

By default, the switch will disconnect your Telnet session after ten minutes of inactivity. This function is controlled by the following command, which can be set from 1 to 60 minutes, or disabled when set to 0:

system idle <0-60>

Command mode: Global Configuration

Chapter 2. Information Commands

You can view configuration information for the switch in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch information.

Table 5. Information Commands

show interface status <port alias="" number="" or=""> Displays configuration information about the selected port(s), including:</port>
 Port alias and number Port speed Duplex mode (half, full, or auto) Flow control for transmit and receive (no, yes, or both) Link status (up, down, or disabled) For details, see page 102. Command mode: All
 show interface trunk <port alias="" number="" or=""></port> Displays port status information, including: Port alias and number Whether the port uses VLAN Tagging or not Port VLAN ID (PVID) Port name VLAN membership FDB Learning status Flooding status For details, see page 103. Command mode: All
show interface transceiver Displays the status of the port transceiver module on each external port. For details, see page 104. Command mode: All
show software-key
Displays the enabled software features.
 show information-dump Dumps all switch information available (10K or more, depending on your configuration). If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands. Command mode: All

System Information

The information provided by each command option is briefly described in Table 6 on page 16, with pointers to where detailed information can be found.

Table 6. System Information Commands

Comm	and Syntax and Usage
show	sys-info
Di	splays system information, including:
-	System date and time
_	Switch model name and number
-	Switch name and location
-	Time of last boot
-	MAC address of the switch management processor
-	IP address of management interface
-	Hardware version and part number
-	Software image file and version number
-	Configuration name
-	Log-in banner, if one is configured
Fo	r details, see page 26.
Co	mmand mode: All
show	logging
sy	splays most recent syslog messages, followed by the most recent 2000 slog messages, as displayed by the show logging messages command. r details, see page 27.
Co	ommand mode: All
show	access user
Di	splays configured user names and their status.
Co	mmand mode: Privileged EXEC

CLI Display Information

These commands allow you to display information about the number of lines per screen displayed in the CLI.

Table 7. CLI Display Information Options

snow term	linal-length
	ys the number of lines per screen displayed in the CLI for the current n. A value of 0 means paging is disabled.
Command	I mode: All
show line	console length
•	ys the number of lines per screen displayed in the CLI by default for e sessions. A value of 0 means paging is disabled.
Command	I mode: All
show line	vty length
Disola	ys the number of lines per screen displayed in the CLI by default for

Error Disable and Recovery Information

These commands allow you to display information about the Error Disable and Recovery feature for interface ports.

Table 8. Error Disable Information Commands

and Syntax and Usage	Syntax and Usage	
----------------------	------------------	--

show errdisable recovery

Displays a list ports with their Error Recovery status.

Command mode: All

show errdisable timers

Displays a list of active recovery timers, if applicable.

Command mode: All

show errdisable information

Displays all Error Disable and Recovery information.

Command mode: All

SNMPv3 System Information

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 framework by supporting the following:

- a new SNMP message format
- security for messages
- access control

remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC2271 to RFC2276.

Table 9. SNMPv3 Commands

Command Syntax and Usage
show snmp-server v3 user Displays User Security Model (USM) table information. To view the table, see page 19. Command mode: All
show snmp-server v3 view
Displays information about view, subtrees, mask and type of view. To view a sample, see page 20.
Command mode: All
show snmp-server v3 access
Displays View-based Access Control information. To view a sample, see page 21.
Command mode: All
show snmp-server v3 group Displays information about the group, including the security model, user name, and group name. To view a sample, see page 22. Command mode: All
<pre>show snmp-server v3 community Displays information about the community table information. To view a sample, see page 22. Command mode: All</pre>
show snmp-server v3 target-address
Displays the Target Address table information. To view a sample, see page 23. Command mode: All
show snmp-server v3 target-parameters
Displays the Target parameters table information. To view a sample, see page 23.
Command mode: All
show snmp-server v3 notify
Displays the Notify table information. To view a sample, see page 24. Command mode: All
show snmp-server v3 Displays all the SNMPv3 information. To view a sample, see page 25. Command mode: All

SNMPv3 USM User Table Information

The User-based Security Model (USM) in SNMPv3 provides security services such as authentication and privacy of messages. This security model makes use of a defined set of user identities displayed in the USM user table. The following command displays SNMPv3 user information:

show snmp-server v3 user $% \left({{{\mathbf{r}}_{\mathbf{r}}}} \right)$

Command mode: All

The USM user table contains the following information:

- the user name
- a security name in the form of a string whose format is independent of the Security Model
- an authentication protocol, which is an indication that the messages sent on behalf of the user can be authenticated
- the privacy protocol

usmUser Table: User Name	Protocol
adminmd5	HMAC_MD5, DES PRIVACY
adminsha	HMAC_SHA, DES PRIVACY
v1v2only	NO AUTH, NO PRIVACY

Table 10. USM User Table Information Parameters

Field	Description
User Name	This is a string that represents the name of the user that you can use to access the switch.
Protocol	This indicates whether messages sent on behalf of this user are protected from disclosure using a privacy protocol. IBM Networking OS supports DES algorithm for privacy. The software also supports two authentication algorithms: MD5 and HMAC-SHA.

SNMPv3 View Table Information

The user can control and restrict the access allowed to a group to only a subset of the management information in the management domain that the group can access within each context by specifying the group's rights in terms of a particular MIB view for security reasons.

The following command displays the SNMPv3 View Table:

show snmp-server v3 view

Command mode: All

View Name	Subtree	Mask	Туре
iso	1.3		included
v1v2only	1.3		included
v1v2only	1.3.6.1.6.3.15		excluded
v1v2only	1.3.6.1.6.3.16		excluded
v1v2only	1.3.6.1.6.3.18		excluded

Table 11. SNMPv3 View Table Information Parameters

Field	Description
View Name	Displays the name of the view.
Subtree	Displays the MIB subtree as an OID string. A view subtree is the set of all MIB object instances which have a common Object Identifier prefix to their names.
Mask	Displays the bit mask.
Туре	Displays whether a family of view subtrees is included or excluded from the MIB view.

SNMPv3 Access Table Information

The access control sub system provides authorization services.

The vacmAccessTable maps a group name, security information, a context, and a message type, which could be the read or write type of operation or notification into a MIB view.

The View-based Access Control Model defines a set of services that an application can use for checking access rights of a group. This group's access rights are determined by a read-view, a write-view and a notify-view. The read-view represents the set of object instances authorized for the group while reading the objects. The write-view represents the set of object instances authorized for the group when writing objects. The notify-view represents the set of object instances authorized for the set of object instances authorized for the group when writing objects. The notify-view represents the set of object instances authorized for the group when sending a notification.

The following command displays SNMPv3 access information:

show snmp-server v3 access

Command mode: All

Table 12. SNMPv3 Access Table Information

Field	Description
Group Name	Displays the name of group.
Model	Displays the security model used, for example, SNMPv1, or SNMPv2 or USM.
Level	Displays the minimum level of security required to gain rights of access. For example, noAuthNoPriv, authNoPriv, or authPriv.
ReadV	Displays the MIB view to which this entry authorizes the read access.
WriteV	Displays the MIB view to which this entry authorizes the write access.
NotifyV	Displays the Notify view to which this entry authorizes the notify access.

SNMPv3 Group Table Information

A group is a combination of security model and security name that defines the access rights assigned to all the security names belonging to that group. The group is identified by a group name.

The following command displays SNMPv3 group information:

show snmp-server v3 group

Command mode: All

Sec Model	User Name	Group Name
snmpv1	v1v2only	vlv2grp
usm	adminmd5	admingrp
usm	adminsha	admingrp
1		

Table 13. SNMPv3 Group Table Information Parameters

Field	Description
Sec Model	Displays the security model used, which is any one of: USM, SNMPv1, SNMPv2, and SNMPv3.
User Name	Displays the name for the group.
Group Name	Displays the access name of the group.

SNMPv3 Community Table Information

This command displays the community table information stored in the SNMP engine.

The following command displays SNMPv3 community information:

show snmp-server v3 community

Command mode: All

Index	Name	User Name	Тад
trap1	public	vlv2only	 v1v2trap

Table 14. SNMPv3 Community Table Information Parameters

Field	Description
Index	Displays the unique index value of a row in this table
Name	Displays the community string, which represents the configuration.

Field	Description
User Name	Displays the User Security Model (USM) user name.
Тад	Displays the community tag. This tag specifies a set of transport endpoints from which a command responder application accepts management requests and to which a command responder application sends an SNMP trap.

Table 14. SNMPv3 Community Table Information Parameters (continued)

SNMPv3 Target Address Table Information

The following command displays SNMPv3 target address information:

show snmp-server v3 target-address

Command mode: All

This command displays the SNMPv3 target address table information, which is stored in the SNMP engine.

Name	Transport Addr	Port	Taglist	Params
trap1	47.81.25.66	162	v1v2trap	vlv2param

	Table 15.	SNMPv3 Target Address	Table Information Parameters
--	-----------	-----------------------	------------------------------

Field	Description
Name	Displays the locally arbitrary, but unique identifier associated with this snmpTargetAddrEntry.
Transport Addr	Displays the transport addresses.
Port	Displays the SNMP UDP port number.
Taglist	This column contains a list of tag values which are used to select target addresses for a particular SNMP message.
Params	The value of this object identifies an entry in the snmpTargetParamsTable. The identified entry contains SNMP parameters to be used when generating messages to be sent to this transport address.

SNMPv3 Target Parameters Table Information

The following command displays SNMPv3 target parameters information:

show snmp-server v3 target-parameters

Command mode: All

Name	MP Model	User Name	Sec Model	Sec Level
v1v2param	snmpv2c	v1v2only	snmpv1	noAuthNoPriv

Table 16. SNMPv3 Target Parameters Table Information
--

Field	Description
Name	Displays the locally arbitrary, but unique identifier associated with this snmpTargeParamsEntry.
MP Model	Displays the Message Processing Model used when generating SNMP messages using this entry.
User Name	Displays the securityName, which identifies the entry on whose behalf SNMP messages will be generated using this entry.
Sec Model	Displays the security model used when generating SNMP messages using this entry. The system may choose to return an inconsistentValue error if an attempt is made to set this variable to a value for a security model which the system does not support.
Sec Level	Displays the level of security used when generating SNMP messages using this entry.

SNMPv3 Notify Table Information

The following command displays the SNMPv3 Notify Table:

```
show snmp-server v3 notify
```

Command mode: All

 Name
 Tag

 ----- -----

 vlv2trap
 vlv2trap

Table 17. SNMPv3 Notify Table Information

Field	Description
Name	The locally arbitrary, but unique identifier associated with this snmpNotifyEntry.
Tag	This represents a single tag value which is used to select entries in the snmpTargetAddrTable. Any entry in the snmpTargetAddrTable that contains a tag value equal to the value of this entry, is selected. If this entry contains a value of zero length, no entries are selected.

SNMPv3 Dump Information

The following command displays SNMPv3 information:

```
show snmp-server v3
```

Command mode: All

User Name			Protoc	col			
adminmd5 adminsha v1v2only			HMAC_N HMAC_S	SHA, DE	S PRIVA S PRIVA PRIVAC	СҮ

Temperature Inlet: 23 C
Temperature Exhaust: 26 C
Power Consumption: 42.570 W (12.000 V, 3.543 A)
Switch is in I/O Module Bay 1
```

Note: The display of temperature will come up only if the temperature of any of the sensors exceeds the temperature threshold. There will be a warning from the software if any of the sensors exceeds this temperature threshold. The switch will shut down if the power supply overheats.

System information includes:

- System date and time
- · Switch model
- Switch name and location
- Time of last boot
- MAC address of the switch management processor
- Software image file and version number, and configuration name.
- IP address of the management interface
- Hardware version and part number
- Log-in banner, if one is configured

Show Software Version Information

The following command displays the software version number, image file, and configuration name:

show version brief

Command mode: All

Show Recent Syslog Messages

The following command displays system log messages:

show logging messages [severity <0-7>] [reverse]

Command mode: All

E	ate		Time	Criticality	level	Message

J	ul	8	17:25:42	NOTICE	system:	link up on port	INTA5
L							

Each syslog message has a severity level associated with it, included in text form as a prefix to the log message. One of eight different prefixes is used, depending on the condition that the administrator is being notified of, as shown below.

- EMERG Indicates the system is unusable
- ALERT Indicates action should be taken immediately
- CRIT Indicates critical conditions
- ERR Indicates error conditions or errored operations
- WARNING Indicates warning conditions
- NOTICE Indicates a normal but significant condition
- INFO Indicates an information message
- DEBUG Indicates a debug-level message

The severity option filters only syslog messages with a specific severity level between 0 and 7, from EMERG to DEBUG correspondingly.

The reverse option displays the output in reverse order, from the newest entry to the oldest.

User Status

The following command displays user status information:

```
show access user
```

Command mode: All except User EXEC

```
Usernames:

user - enabled - offline

oper - disabled - offline

admin - Always Enabled - online 1 session

Current User ID table:

1: name paul , dis, cos user , password valid, offline

Current strong password settings:

strong password status: disabled
```

This command displays the status of the configured usernames.

Stacking Information

Table 18 lists the Stacking information options.

Table 18. Stacking Information Options

Command Syntax and Usage	
show stack switch	
Displays information about each switch in the stack, including:	
 Configured Switch Number (csnum) 	
– Attached Switch Number (asnum)	
– MAC address	
 Stacking state 	
Command mode: All	
show stack switch-number <1-8>	
Displays UUID and Slot ID for all stack switches or for a specific switch.	
Command mode: All	
show stack link	
Displays link information for each switch in the stack, listed by assigned swite number.	ch
Command mode: All	
show stack name	
Displays the name of the stack.	
Command mode: All	
show stack backup	
Displays the unit number of the backup switch.	
Command mode: All	
show stack version	
Displays the firmware version number for the selected switch.	
Command mode: All	
show stack path-map [<1-8>]	
Displays the Stacking packet path map that shows how the stack switches a connected.	re
Command mode: All	
show stack push-status	
Displays the status of the most recent firmware and configuration file push fro the master to member switches.	m
Command mode: All	
show stack dynamic	
Displays all stacking information.	
Command mode: All	

Stacking Switch Information

The following command displays Stacking switch information:

show stack switch

Command mode: All

Stack name: MyStack					
Local switch is the	master.				
Local switch: csnum MAC UUID Bay Number Switch Type Chassis Type Switch Mode (cfg) Priority	- 1 - 34:40:b5:50:89: - e0cc62abc22d470 - 2 - 12 - 6 (Flex Enterpr - Master	4b78	e9d62db50b37d		
MAC	- 1 - 34:40:b5:50:89: - e0cc62abc22d470 - 2		e9d62db50b37d		
Backup switch:	not learnt yet.				
Configured Switches:					
csnum UU	ID	Bay	MAC	asnum	
C1 e0cc62abc22d47					
Attached Switches in					
asnum UU			MAC		
A1 e0cc62abc22d47	04b78e9d62db50b37d	. 2	34:40:b5:50:89:00	C1	IN_STACK

Stack switch information includes the following:

- Stack name
- · Details about the local switch from which the command was issued
- Configured switch number and MAC of the Stack Master and Stack Backup
- Configured switch numbers and their associated assigned switch numbers
- Assigned switch numbers and their associated configured switch numbers

Layer 2 Information

The following commands display Layer 2 information.

Table 19. Layer 2 Information Commands

Com	mand Syntax and Usage
shov	w dot1x information
[Displays 802.1X Information.
(Command mode: All
I	For details, see page 43.
shov	w spanning-tree
	Displays Spanning Tree information, including the status (on or off), Spanning Tree mode (PVRST, RSTP, or MSTP), and VLAN membership.
	In addition to seeing if STG is enabled or disabled, you can view the following STG bridge information:
-	- Priority
-	 Hello interval
-	 Maximum age value
-	 Forwarding delay
-	- Aging time
`	You can also see the following port-specific STG information:
-	 Port alias and priority
-	- Cost
-	- State
(Command mode: All
shov	w spanning-tree stp <1-128> information
[Displays information about a specific Spanning Tree Group.
(Command mode: All
I	For details, see page 45.

Table 19. Layer 2 Information Commands (continued)

	ee mstp cist information
	n Internal Spanning Tree (CIST) information, including the VLAN membership.
CIST bridge infor	mation includes:
 Priority 	
 Hello interval 	
 Maximum age 	value
 Forwarding de 	lay
 Root bridge inf 	formation (priority, MAC address, path cost, root port)
CIST port informa	ation includes:
 Port number a 	nd priority
– Cost	
 State 	
For details, see p	age 50.
Command mode	e: All
show portchannel	information
Displays the state details, see page	e of each port in the various static or LACP trunk groups. For 52.
Command mode	e: All
show vlan	
Displays VLAN co	onfiguration information for all configured VLANs, including:
 VLAN Number 	
 VLAN Name 	
 Status 	
 Port members 	hip of the VLAN
For details, see p	age 53.
Command mode	a: All
show failover tr	igger <trigger number=""></trigger>
	Failover information. For details, see page 36.
······································	· · · · · · · · · · · · · · · · · · ·

Table 19. Layer 2 Information Commands (continued)

Command Syntax and Usage

show hotlinks information

Displays Hot Links information. For details, see page 37.

Command mode: All

show layer2 information

Dumps all Layer 2 switch information available (10K or more, depending on your configuration).

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Command mode: All

FDB Information

The forwarding database (FDB) contains information that maps the media access control (MAC) address of each known device to the switch port where the device address was learned. The FDB also shows which other ports have seen frames destined for a particular MAC address.

Note: The master forwarding database supports up to K MAC address entries on the MP per switch.

Table 20. FDB Information Commands

Command Syntax and Usage
show mac-address-table address < <i>MAC address</i> >
Displays a single database entry by its MAC address. You are prompted to enter the MAC address of the device. Enter the MAC address using the format, xx:xx:xx:xx:xx. For example, 08:00:20:12:34:56
You can also enter the MAC address using the format, xxxxxxxxxxxxx. For example, 080020123456
Command mode: All
show mac-address-table interface port <pre>port alias or number></pre>
Displays all FDB entries for a particular port.
Command mode: All
show mac-address-table interface portchannel <trunk group="" number=""></trunk>
Displays all FDB entries for a particular trunk group (portchannel).
Command mode: All
show mac-address-table vlan < <i>VLAN number</i> >
Displays all FDB entries on a single VLAN.
Command mode: All
show mac-address-table state {unknown forward trunk}
Displays all FDB entries for a particular state.
Command mode: All

Table 20. FDB Information Commands (continued)

show mac-address-table multicast	
Displays all Multicast MAC entries in the FDB.	
Command mode: All	
show mac-address-table static	
Displays all static MAC entries in the FDB.	
Command mode: All	
show mac-address-table configured-static	
Displays all configured static MAC entries in the FDB.	
Command mode: All	
show mac-address-table	
Displays all entries in the Forwarding Database.	
Command mode: All	
For more information, see page 34.	

Show All FDB Information

The following command displays Forwarding Database information:

show mac-address-table

Command mode: All

MAC address	VLAN	Port	Trnk	State	Permanent
00:04:38:90:54:18	1	EXT4		FWD	
00:09:6b:9b:01:5f	1	INTA1	3	FWD	
00:09:6b:ca:26:ef	4095	MGT1		FWD	
00:0f:06:ec:3b:00	4095	MGT1		FWD	
00:11:43:c4:79:83	1	EXT4		FWD	Р

An address that is in the forwarding (FWD) state, means that it has been learned by the switch. When in the trunking (TRK) state, the port field represents the trunk group number. If the state for the port is listed as unknown (UNK), the MAC address has not yet been learned by the switch, but has only been seen as a destination address.

When an address is in the unknown state, no outbound port is indicated, although ports which reference the address as a destination will be listed under "Reference ports."

Clearing Entries from the Forwarding Database

To clear the entire FDB, refer to "Forwarding Database Maintenance" on page 462.

Link Aggregation Control Protocol Information

Use these commands to display LACP status information about each port on the EN4093/EN4093R.

Table 21. LACP Information Commands

ommand Syntax and Usage
how lacp aggregator < <i>aggregator ID</i> >
Displays detailed information about the LACP aggregator.
Command mode: All
how interface port <pre>port alias or number> lacp information</pre>
Displays LACP information about the selected port.
Command mode: All
how lacp information
Displays a summary of LACP information.
Command mode: All
For details, see page 35.

Link Aggregation Control Protocol

The following command displays LACP information:

show lacp information

Command mode: All

port	mode	adminkey	operkey	selected	prio	aggr	trunk	status	minlinks
INTA1	active	30	30	ves	32768	17		 up	1
	active	30	30	yes	32768		19	up	1
INTA3	off	3	3	no	32768				1
INTA4	off	4	4	no	32768				1

LACP dump includes the following information for each external port in the EN4093/EN4093R:

- mode Displays the port's LACP mode (active, passive, or off).
- adminkey Displays the value of the port's adminkey.
- operkey Shows the value of the port's operational key.
- selected Indicates whether the port has been selected to be part of a Link Aggregation Group.
- prio Shows the value of the port priority.
- aggr Displays the aggregator associated with each port.
- trunk
 This value represents the LACP trunk group number.
- status Displays the status of LACP on the port (up or down).

• minlinks Displays the minimum number of links required to establish a trunk.

Layer 2 Failover Information

Table 22. Layer 2 Failover Information Commands

Command Syntax and Usage		
show failover trigger <i><trigger number=""></trigger></i> Displays detailed information about the selected Layer 2 Failover trigger. Command mode: All		
show failover trigger Displays a summary of Layer 2 Failover information. For details, see page 36. Command mode: All		

Layer 2 Failover Information

The following command displays Layer 2 Failover information:

```
show failover trigger
```

Command mode: All

Trigger 1 A	uto Monitor: Enabled
Trigger 1 l:	imit: O
Monitor Stat	te: Up
Member	Status
trunk 1	
EXT2	Operational
EXT3	Operational
Control Stat	te: Auto Disabled
Member	Status
INTA1	Operational
INTA2	Operational
INTA3	Operational
INTA4	Operational

A monitor port's Failover status is <code>Operational</code> only if all the following conditions hold true:

- Port link is up.
- If Spanning-Tree is enabled, the port is in the Forwarding state.
- If the port is a member of an LACP trunk group, the port is aggregated.

If any of the above conditions are not true, the monitor port is considered to be failed.

A control port is considered to be operational if the monitor trigger state is Up. Even if a port's link status is Down, Spanning-Tree status is Blocking, and the LACP status is Not Aggregated, from a teaming perspective the port status is Operational, since the trigger is Up.

A control port's status is displayed as Failed only if the monitor trigger state is Down.

Hot Links Information

The following command displays Hot Links information:

show hotlinks information

Command mode: All

Hot Links Info: Trigger
Current global Hot Links setting: ON bpdu disabled sndfdb disabled
Current Trigger 1 setting: enabled name "Trigger 1", preempt enabled, fdelay 1 sec
Active state: None
Master settings: port EXT1 Backup settings: port EXT2

Hot Links information includes the following:

- Hot Links status (on or off)
- Status of BPDU flood option
- Status of FDB send option
- Status and configuration of each Hot Links trigger

Edge Control Protocol Information

Table 23. ECP Information Options

Command Syntax and Usage

show ecp channels

Displays all Edge Control Protocol (ECP) channels.

Command mode: All

show ecp upper-layer-protocols

Displays all registered Upper-Level Protocols (ULPs).

Command mode: All

LLDP Information

The following commands display LLDP information.

Table 24. LLDP Information Commands

Command	Syntax and Usage
	p port ys Link Layer Discovery Protocol (LLDP) port information. nand mode: All
Display	p receive ys information about the LLDP receive state machine. nand mode: All
Display	p transmit ys information about the LLDP transmit state machine. nand mode: All
Display	p remote-device ys information received from LLDP -capable devices. To view a sample , see page 38.
Display	p port <1-16> tlv evb ys Edge Virtual Bridge (EVB) type-length-value (TLV) information. nand mode: All
Displa	p information ys all LLDP information. nand mode: All

LLDP Remote Device Information

The following command displays LLDP remote device information:

show lldp remote-device [<1-256>|detail]

Command mode: All

LLDP remote device information provides a summary of information about remote devices connected to the switch. To view detailed information about a device, as shown below, follow the command with the index number of the remote device. To view detailed information about all devices, use the detail option.

```
Local Port Alias: EXT1
       Remote Device Index : 15
       Remote Device TTL : 99
       Remote Device RxChanges : false

```

Unidirectional Link Detection Information

The following commands show unidirectional link detection information.

Table 25. UDLD Information Commands

Command Syntax and Usage	
show interface port <pre>port alias or number> udld</pre>	
Displays UDLD information about the selected port.	
Command mode: All	
show udld	
Displays all UDLD information.	
Command mode: All	

UDLD Port Information

The following command displays UDLD information for the selected port:

```
show interface port port alias or number> udld
```

Command mode: All

```
UDLD information on port EXT1

Port enable administrative configuration setting: Enabled

Port administrative mode: normal

Port enable operational state: link up

Port operational state: advertisement

Port bidirectional status: bidirectional

Message interval: 15

Time out interval: 5

Neighbor cache: 1 neighbor detected

Entry #1

Expiration time: 31 seconds

Device Name:

Device ID: 00:da:c0:00:04:00

Port ID: EXT1
```

UDLD information includes the following:

- Status (enabled or disabled)
- Mode (normal or aggressive)
- Port state (link up or link down)
- Bi-directional status (unknown, unidirectional, bidirectional, TX-RX loop, neighbor mismatch)

OAM Discovery Information

Table 26. OAM Discovery Information Commands

Command Syntax and Usage

show interface port port alias or number> oam

Displays OAM information about the selected port.

Command mode: All

show oam

Displays all OAM information.

Command mode: All

OAM Port Information

The following command displays OAM information for the selected port:

show interface port port alias or number> oam

Command mode: All

```
OAM information on port EXT1
State enabled
Mode active
Link up
Satisfied Yes
Evaluating No
Remote port information:
Mode active
MAC address 00:da:c0:00:04:00
Stable Yes
State valid Yes
Evaluating No
```

OAM port display shows information about the selected port and the peer to which the link is connected.

vLAG Information

The following table lists the information commands for Virtual Link Aggregation Group (vLAG) protocol.

Table 27. vLAG Information Options

Command Syn	ax and Usage
show vlag a	dminkey <1-65535>
Displays v	AG LACP information.
Command	mode: All
show vlag p	ortchannel <trunk group="" number=""></trunk>
Displays v	AG static trunk group information.
Command	mode: All
show vlag i	31
Displays v	AG Inter-Switch Link (ISL) information.
Command	mode: All
show vlag i	Iformation
Displays a	vLAG information.
Command	mode: All

vLAG Trunk Information

The following command displays vLAG information for the trunk group:

show vlag portchannel <trunk group number>

Command mode: All

```
vLAG is enabled on trunk 3
Protocol - Static
Current settings: enabled
   ports: 60
Current L2 trunk hash settings:
    smac
Current L3 trunk hash settings:
    sip dip
Current ingress port hash: disabled
Current L4 port hash: disabled
```

802.1X Information

The following command displays 802.1X information:

show dot1x information

Command mode: All

System cap	ability :	Authenticator			
System sta	atus :	disabled			
Protocol v	version :	1			
Guest VLAN	I status :	disabled			
Guest VLAN	1 :	none			
			Authenticator	Backend	Assigned
			PAE State		
*INTA1 for	ce-auth	unauthorized	initialize	initialize	none
*INTB1 for	ce-auth	unauthorized	initialize	initialize	none
*INTC1 for	ce-auth	unauthorized	initialize	initialize	none
*INTA2 for	ce-auth	unauthorized	initialize	initialize	none
*INTB2 for	ce-auth	unauthorized	initialize	initialize	none
*INTC2 for	ce-auth	unauthorized	initialize	initialize	none
*EXT1 for	ce-auth	unauthorized	initialize	initialize	none
*EXT2 for	ce-auth	unauthorized	initialize	initialize	none
*EXT3 for	ce-auth	unauthorized	initialize	initialize	none

* - Port d	lown or dis	abled			

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System unit that you are using and the firmware versions and options that are installed.

The following table describes the IEEE 802.1X parameters.

Parameter	Description		
Port	Displays each port's alias.		
Auth Mode	Displays the Access Control authorization mode for the port. The Autho- rization mode can be one of the following: - force-unauth - auto - force-auth		
Auth Status	Displays the current authorization status of the port, either authorized or unauthorized.		

Table 28. 802.1X Parameter Descriptions

Parameter	Description
Authenticator PAE State	Displays the Authenticator Port Access Entity State. The PAE state can be one of the following:
	– initialize
	- disconnected
	– connecting
	 authenticating
	 authenticated
	- aborting
	– held
	– forceAuth
Backend Auth State	Displays the Backend Authorization State. The Backend Authorization state can be one of the following:
	– initialize
	– request
	– response
	- success
	– fail
	– timeout
	– idle

Table 28. 802.1X Parameter Descriptions (continued)

Spanning Tree Information

The following command displays Spanning Tree information:

show spanning-tree stp <1-128> information

Command mode: All

_____ Pvst+ compatibility mode enabled _____ Spanning Tree Group 1: On (PVRST) VLANs: 1 Current Root: Path-Cost Port Hello MaxAge FwdDel ffff 00:13:0a:4f:7d:d0 0 EXT2 2 20 15 Parameters: Priority Hello MaxAge FwdDel Aging Topology Change Counts 65535 2 20 15 300 0 Port Prio Cost State Role Designated Bridge Des Port Type _____ ____ INTA1 128 2000! Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

The switch software uses the Per VLAN Rapid Spanning Tree Protocol (PVRST) Spanning Tree mode, with IEEE 802.1w Rapid Spanning Tree Protocol (RSTP) or IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), as alternatives. For details, see "RSTP/MSTP/PVRST Information" on page 47. When STP is enabled, in addition to seeing if STG is enabled or disabled, you can view the following STG bridge information:

Table 29.	Spanning	Tree Bridg	e Paramete	r Descriptions

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STG root bridge.
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STG network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from listening to learning and from learning state to forwarding state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.

The following port-specific information is also displayed:

Table 30. Spanning Tree Port Parameter Descriptions

Parameter	Description
Priority (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The Port Path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The state field can be FWD (Forwarding), DISC (Discarding) or LRN (Learning).
Role	The role field shows the current role of the port : DESG (Designated), ROOT (Root Port), ALTN (Alternate) or BKUP (Backup).

Parameter	Description
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The Designated Port field shows the port on the Designated Bridge to which this port is connected.

Table 30. Spanning Tree Port Parameter Descriptions (continued)

RSTP/MSTP/PVRST Information

The following command displays RSTP/MSTP/PVRST information:

show spanning-tree stp <1-128> information

Command mode: All

* = STP turned off for this port.											

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

You can configure the switch software to use the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP), the IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), or Per VLAN Rapid Spanning Tree Protocol (PVRST).

If RSTP/MSTP/PVRST is turned on, you can view the following bridge information for the Spanning Tree Group:.

Parameter	Description
Current Root	The Current Root shows information about the root bridge for the Spanning Tree. Information includes the priority (in hexadecimal notation) and the MAC address of the root.
Priority (bridge)	The Bridge Priority parameter controls which bridge on the network will become the STP root bridge.
Hello	The Hello Time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The Maximum Age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the STP network.
FwdDel	The Forward Delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from listening to learning and from learning state to forwarding state.
Aging	The Aging Time parameter specifies, in seconds, the amount of time the bridge waits without receiving a packet from a station before removing the station from the Forwarding Database.

Table 31. RSTP/MSTP/PVRST Bridge Parameter Descriptions

The following port-specific information is also displayed:

Parameter	Description
Prio (port)	The Port Priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port Path Cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The State field shows the current state of the port. The State field in RSTP or MSTP mode can be one of the following: Discarding (DISC), Learning (LRN), Forwarding (FWD), or Disabled (DSB).

Parameter	Description
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The port ID of the port on the Designated Bridge to which this port is connected.
Туре	Type of link connected to the port, and whether the port is an edge port. Link type values are AUTO, P2P, or SHARED.

Common Internal Spanning Tree Information

The following command displays Common Internal Spanning Tree (CIST) information:

show spanning-tree mstp cist information

Command mode: All

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

In addition to seeing if Common Internal Spanning Tree (CIST) is enabled or disabled, you can view the following CIST bridge information:

Table 33. CIST Parameter Descriptions

Parameter	Description
CIST Root	The CIST Root shows information about the root bridge for the Common Internal Spanning Tree (CIST). Values on this row of information refer to the CIST root.
CIST Regional Root	The CIST Regional Root shows information about the root bridge for this MSTP region. Values on this row of information refer to the regional root.
Priority (bridge)	The bridge priority parameter controls which bridge on the network will become the STP root bridge.
Hello	The hello time parameter specifies, in seconds, how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge hello value.
MaxAge	The maximum age parameter specifies, in seconds, the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigure the STP network.
FwdDel	The forward delay parameter specifies, in seconds, the amount of time that a bridge port has to wait before it changes from learning state to forwarding state.
Hops	The maximum number of bridge hops a packet can traverse before it is dropped. The default value is 20.

The following port-specific CIST information is also displayed:

Table 34. CIST Parameter Descriptions

Parameter	Description
Prio (port)	The port priority parameter helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.
Cost	The port path cost parameter is used to help determine the designated port for a segment. Generally speaking, the faster the port, the lower the path cost. A setting of 0 indicates that the cost will be set to the appropriate default after the link speed has been auto negotiated.
State	The state field shows the current state of the port. The state field can be either Discarding (DISC), Learning (LRN), or Forwarding (FWD).

Parameter	Description
Role	The Role field shows the current role of this port in the Spanning Tree. The port role can be one of the following: Designated (DESG), Root (ROOT), Alternate (ALTN), Backup (BKUP), Disabled (DSB), Master (MAST), or Unknown (UNK).
Designated Bridge	The Designated Bridge shows information about the bridge connected to each port, if applicable. Information includes the priority (in hexadecimal notation) and MAC address of the Designated Bridge.
Designated Port	The port ID of the port on the Designated Bridge to which this port is connected.
Туре	Type of link connected to the port, and whether the port is an edge port. Link type values are AUTO, P2P, or SHARED.

Trunk Group Information

The following command displays Trunk Group information:

show portchannel information

Command mode: All

```
Trunk group 1: Enabled
Protocol - Static
Port state:
EXT1: STG 1 forwarding
EXT2: STG 1 forwarding
```

When trunk groups are configured, you can view the state of each port in the various trunk groups.

Note: If Spanning Tree Protocol on any port in the trunk group is set to forwarding, the remaining ports in the trunk group will also be set to forwarding.

VLAN Information

Command Syntax and Usage	
show vlan <vlan number=""></vlan>	
Displays general VLAN information.	
show protocol-vlan <protocol number=""></protocol>	
Displays protocol VLAN information.	
Command mode: All	
show private-vlan <i><vlan number=""></vlan></i>	
Displays private VLAN information.	
Command mode: All	
show vlan information	
Displays information about all VLANs, including:	
 VLAN number and name 	
 Port membership 	
 VLAN status (enabled or disabled) 	
 Protocol VLAN status 	
 Private VLAN status 	
 Spanning Tree membership 	
 VMAP configuration 	

Table 35. VLAN Information Commands

The following command displays VLAN information:

show vlan

Command mode: All

	Ports	MGT	Status	Name	VLAN
1 Default VLAN ena dis INTA1-INTB14 EXT1-EXT10 EXT15-EXT22	INTA1-INTB14 EXT1-EXT10	dis	ena	Default VLAN	1
4095 Mgmt VLAN ena ena MGT1 EXTM		ena	ena	Mgmt VLAN	4095

Note: The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

This information display includes all configured VLANs and all member ports that have an active link state. Port membership is represented in slot/port format.

VLAN information includes:

- VLAN Number
- VLAN Type
- Status

- Management status of the VLAN
- Port membership of the VLAN
- Protocol-based VLAN information
- Private VLAN configuration

Layer 3 Information

Table 36. Layer 3 Information Commands

ch	ow ip route
SIR	Displays all routes configured on the switch. For details, see page 58.
	Command mode: All
sho	ow arp
	Displays Address Resolution Protocol (ARP) information. For details, see page 59.
	Command mode: All
sho	ow ip bgp information
	Displays Border Gateway Protocol (BGP) information. For details, see page 63.
	Command mode: All
sho	ow ip ospf information
	Displays the OSPF information. For more OSPF information options, see page 64.
	Command mode: All
sho	ow ipv6 ospf information
	Displays OSPFv3 information. For more OSPFv3 information options, see page 69.
	Command mode: All
sho	ow ip rip interface
	Displays RIP user's configuration. For details, see page 73.
	Command mode: All
sh	ow ipv6 route
	Displays IPv6 routing information. For more information options, see page 74
	Command mode: All
sho	ow ipv6 neighbors
	Displays IPv6 Neighbor Discovery cache information. For more information options, see page 76.
	Command mode: All
sho	ow ipv6 prefix
	Displays IPv6 Neighbor Discovery prefix information. For details, see page 7
	Command mode: All
	ow ip ecmp
sh	

Table 36. L	Layer 3 Information	Commands	(continued)
-------------	---------------------	----------	-------------

Command Syntax and Usage	
show ip igmp groups Displays IGMP Information. For more IGMP information options, see pag Command mode : All	je 79.
show ipv6 mld groups Displays Multicast Listener Discovery (MLD) information. For more MLD information options, see page 82. Command mode: All	
show ip vrrp information Displays VRRP information. For details, see page 84. Command mode: All	
show interface ip Displays IPv4 interface information. For details, see page 85. Command mode: All	
show ipv6 interface <i><interface number=""></interface></i> Displays IPv6 interface information. For details, see page 85. Command mode: All	
show ipv6 pmtu [< <i>destination IPv6 address</i> >] Displays IPv6 Path MTU information. For details, see page 86. Command mode: All	
 show ip interface brief Displays IP Information. For details, see page 87. IP information, includes: IP interface information: Interface number, IP address, subnet mask, number, and operational status. Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status IP forwarding settings, network filter settings, route map settings 	√LAN
show ikev2 Displays IKEv2 information. For more information options, see page 88. Command mode: All	
show ipsec manual-policy Displays information about manual key management policy for IP securit more information options, see page 89. Command mode: All	y. For

Table 36. Layer 3 Information Commands (continued)

Command Syntax and Usage

show ip pim component [<1-2>]

Displays Protocol Independent Multicast (PIM) component information. For more PIM information options, see page 90.

Command mode: All

show layer3

Dumps all Layer 3 switch information available (10K or more, depending on your configuration).

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands. **Command mode:** All

IP Routing Information

Using the commands listed below, you can display all or a portion of the IP routes currently held in the switch.

Table 37. Route Information Commands

Command Syntax and Usage
show ip route address < <i>IP address</i> >
Displays a single route by destination IP address.
Command mode: All
show ip route gateway < <i>IP address</i> >
Displays routes to a single gateway.
Command mode: All
<pre>show ip route type {indirect direct local broadcast martian multicast}</pre>
Displays routes of a single type. For a description of IP routing types, see Table 38 on page 58.
Command mode: All
<pre>show ip route tag {fixed static addr rip ospf bgp broadcast martian multicast}</pre>
Displays routes of a single tag. For a description of IP routing tags, see Table 39 on page 59.
Command mode: All
show ip route interface <interface number=""></interface>
Displays routes on a single interface.
Command mode: All

Table 37. Route Information Commands (continued)

Command Syntax and Usage

show ip route static

Displays static routes configured on the switch.

Command mode: All

show ip route

Displays all routes configured in the switch.

Command mode: All

For more information, see page 58.

Show All IP Route Information

The following command displays IP route information:

show ip route

Command mode: All

St	tatus code: * - h Destination		Gateway	Type	Taq	Metr If
				-75-		
*	12.0.0.0	255.0.0.0	11.0.0.1	direct	fixed	128
*	12.0.0.1	255.255.255.255	11.0.0.1	local	addr	128
*	12.255.255.255	255.255.255.255	11.255.255.255	broadcast	broadcast	128
*	12.0.0.0	255.0.0.0	12.0.0.1	direct	fixed	12
*	12.0.0.1	255.255.255.255	12.0.0.1	local	addr	12
*	255.255.255.255	255.255.255.255	12.255.255.255	broadcast	broadcast	2 2
*	224.0.0.0	224.0.0.0	0.0.0.0	martian	martian	
*	224.0.0.5	255.255.255.255	0.0.0.0	multicast	addr	

The following table describes the Type parameters.

Table 38. IP Routing Type Parameters

Parameter	Description
indirect	The next hop to the host or subnet destination will be forwarded through a router at the Gateway address.
direct	Packets will be delivered to a destination host or subnet attached to the switch.
local	Indicates a route to one of the switch's IP interfaces.
broadcast	Indicates a broadcast route.
martian	The destination belongs to a host or subnet which is filtered out. Packets to this destination are discarded.
multicast	Indicates a multicast route.

The following table describes the Tag parameters.

Table 39. IP Routing Tag Parameters

Parameter	Description
fixed	The address belongs to a host or subnet attached to the switch.
static	The address is a static route which has been configured on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch.
addr	The address belongs to one of the switch's IP interfaces.
rip	The address was learned by the Routing Information Protocol (RIP).
ospf	The address was learned by Open Shortest Path First (OSPF).
bgp	The address was learned via Border Gateway Protocol (BGP)
broadcast	Indicates a broadcast address.
martian	The address belongs to a filtered group.
multicast	Indicates a multicast address.

ARP Information

The ARP information includes IP address and MAC address of each entry, address status flags (see Table 41 on page 60), VLAN and port for the address, and port referencing information.

Table 40. ARP Information Commands

Command Syntax and Usage	
show arp find < <i>IP address</i> >	
Displays a single ARP entry by IP address.	
Command mode: All	
show arp interface port <pre>port alias or number></pre>	
Displays the ARP entries on a single port.	
Command mode: All	
show arp vlan <vlan number=""></vlan>	
Displays the ARP entries on a single VLAN.	
Command mode: All	

Table 40. ARP Information Commands (continued)

Command Syntax and Usage

show arp

Displays all ARP entries. including:

- IP address and MAC address of each entry
- Address status flag (see below)
- The VLAN and port to which the address belongs
- The ports which have referenced the address (empty if no port has routed traffic to the IP address shown)

For more information, see page 60.

Command mode: All

```
show arp reply
```

Displays the ARP address list: IP address, IP mask, MAC address, and VLAN flags.

Command mode: All

Show All ARP Entry Information

The following command displays ARP information:

show arp

Command mode: All

 IP address	Flags	MAC address	VLAN	Age	Port
12.20.1.1		00:15:40:07:20:42	4095	0	INT8
12.20.20.16		00:30:13:e3:44:14	4095	2	INT8
12.20.20.18		00:30:13:e3:44:14	4095	2	INT6
12.20.23.111		00:1f:29:95:f7:e5	4095	6	INT6

The Port field shows the target port of the ARP entry.

The Flags field is interpreted as follows:

Table 41. ARP Dump Flag Parameters

Flag	Description
P	Permanent entry created for switch IP interface.
R	Indirect route entry.
U	Unresolved ARP entry. The MAC address has not been learned.

ARP Address List Information

The following command displays owned ARP address list information:

show arp reply

205.178.18.66 255.255.255.255 00:70:cf:03:20:04 P 205.178.50.1 255.255.255 00:70:cf:03:20:06 1 205.178.18.64 255.255.255 00:70:cf:03:20:05 1	IP address	IP mask	MAC address	VLAN	Flags

BGP Information

Table 42. BGP Peer Information Commands

Command Syntax and Usage

show ip bgp neighbor information

Displays BGP peer information. See page 62 for a sample output.

Command mode: All

show ip bgp neighbor summary

Displays peer summary information such as AS, message received, message sent, up/down, state. See page 63 for a sample output.

Command mode: All

show ip bgp aggregate-address

Displays BGP peer routes. See page 63 for a sample output.

Command mode: All

show ip bgp information

Displays the BGP routing table. See page 63 for a sample output.

Command mode: All

BGP Peer information

Following is an example of the information provided by the following command:

show ip bgp neighbor information

```
BGP Peer Information:
 3: 2.1.1.1
                     , version 4, TTL 225 \,
   Remote AS: 100, Local AS: 100, Link type: IBGP
   Remote router ID: 3.3.3.3, Local router ID: 1.1.201.5
   BGP status: idle, Old status: idle
   Total received packets: 0, Total sent packets: 0
   Received updates: 0, Sent updates: 0
   Keepalive: 60, Holdtime: 180, MinAdvTime: 60
   LastErrorCode: unknown(0), LastErrorSubcode: unspecified(0)
   Established state transitions: 1
 4: 2.1.1.4
                    , version 4, TTL 225
   Remote AS: 100, Local AS: 100, Link type: IBGP
   Remote router ID: 4.4.4.4, Local router ID: 1.1.201.5
   BGP status: idle, Old status: idle
   Total received packets: 0, Total sent packets: 0
   Received updates: 0, Sent updates: 0
   Keepalive: 60, Holdtime: 180, MinAdvTime: 60
   LastErrorCode: unknown(0), LastErrorSubcode: unspecified(0)
   Established state transitions: 1
```

BGP Summary Information

Following is an example of the information provided by the following command:

show ip bgp neighbor summary

Command mode: All

BGP Peer Summary	Inf	ormation:			
Peer	V	AS	MsgRcvd	MsgSent Up/Down	State
1: 205.178.23.142	4	142	113	121 00:00:28	established
2: 205.178.15.148	0	148	0	0 never	connect

BGP Peer Routes Information

Following is an example of the information provided by the following command:

show ip bgp aggregate-address

Command mode: All

```
Current BGP neighbor 1 routes:

Status codes: * valid, > best, = multipath, i - internal

Origin codes: i - IGP, e - EGP, ? - incomplete

Network Mask Next Hop Metr LcPrf Wght Path

*> 157.0.0.0 255.255.0 200.0.0.2 256 4 10 i

*> 157.0.2.0 255.255.0 200.0.0.2 256 4 10 i

*> 157.0.3.0 255.255.255.0 200.0.0.2 256 4 10 i

*> 157.0.3.0 255.255.255.0 200.0.0.2 256 4 10 i

*> 157.0.4.0 255.255.255.0 200.0.0.2 256 4 10 i

*> 157.0.4.0 255.255.255.0 200.0.0.2 256 4 10 i

*> 157.0.5.0 255.255.0 200.0.0.2 256 4 10 i
```

Dump BGP Information

Following is an example of the information provided by the following command:

show ip bgp information

	valid, > best, i - - IGP, e - EGP, ? Mask		Metric LcPrf	Wght	Path
*> 10.100.100.0	255.255.255.0 255.255.255.0 255.255.255.0	0.0.0.0		0 0 0	?
The 13.0.0.0 is	filtered out by r	map; or, a loop	o detected.		

OSPF Information

Table 43. USPF Information Commands
Command Syntax and Usage
show ip ospf general-information
Displays general OSPF information.
Command mode: All
See page 65 for a sample output.
show ip ospf area information
Displays area information for all areas.
Command mode: All
show ip ospf area <0-2>
Displays area information for a particular area index.
Command mode: All
show ip ospf interface loopback <1-5>
Displays loopback information for a particular interface. If no parameter is supplied, it displays loopback information for all the interfaces. See page 66 fo a sample output.
Command mode: All
<pre>show interface ip {<interface number="">} ospf Displays interface information for a particular interface. If no parameter is supplied, it displays information for all the interfaces. See page 66 for a sample output.</interface></pre>
Command mode: All
show ip ospf area-virtual-link information
Displays information about all the configured virtual links.
Command mode: All
show ip ospf neighbor
Displays the status of all the current neighbors.
Command mode: All
show ip ospf summary-range $<0-2>$
Displays the list of summary ranges belonging to non-NSSA areas.
Command mode: All
show ip ospf summary-range-nssa <0-2>
Displays the list of summary ranges belonging to NSSA areas.
· · · · · ·

Table 43. OSPF Information Commands

Table 43. OSPF Information Commands (continued)

Command Syntax and Usage

show ip ospf routes

Displays OSPF routing table. See page 68 for a sample output.

Command mode: All

show ip ospf information

Displays the OSPF information.

Command mode: All

OSPF General Information

The following command displays general OSPF information:

show ip ospf general-information

```
OSPF Version 2
Router ID: 10.10.10.1
Started at 1663 and the process uptime is 4626
Area Border Router: yes, AS Boundary Router: no
LS types supported are 6
External LSA count 0
External LSA checksum sum 0x0
Number of interfaces in this router is 2
Number of virtual links in this router is 1
16 new lsa received and 34 lsa originated from this router
Total number of entries in the LSDB 10
Database checksum sum 0x0
Total neighbors are 1, of which
                                  2 are >=INIT state,
                                  2 are >=EXCH state,
                                  2 are =FULL state
Number of areas is 2, of which 3-transit 0-nssa
      Area Id : 0.0.0.0
       Authentication : none
       Import ASExtern : yes
       Number of times SPF ran : 8
       Area Border Router count : 2
       AS Boundary Router count : 0
       LSA count : 5
       LSA Checksum sum : 0x2237B
        Summary : noSummary
```

OSPF Interface Loopback Information

The following command displays OSPF interface loopback information:

show ip ospf interface loopback <interface number>

Command mode: All

```
Ip Address 123.123.123.1, Area 0.0.0.0, Passive interface, Admin Status UP
Router ID 1.1.1.1, State Loopback, Priority 1
Designated Router (ID) 0.0.0.0, Ip Address 0.0.0.0
Backup Designated Router (ID) 0.0.0.0, Ip Address 0.0.0.0
Timer intervals, Hello 10, Dead 40, Wait 40, Retransmit 5, Transit delay 1
Neighbor count is 0 If Events 1, Authentication type none
```

OSPF Interface Information

The following command displays OSPF interface information:

show ip ospf interface <interface number>

```
Ip Address 10.10.12.1, Area 0.0.0.1, Admin Status UP
Router ID 10.10.10.1, State DR, Priority 1
Designated Router (ID) 10.10.10.1, Ip Address 10.10.12.1
Backup Designated Router (ID) 10.10.14.1, Ip Address 10.10.12.2
Timer intervals, Hello 10, Dead 40, Wait 1663, Retransmit 5,
Neighbor count is 1 If Events 4, Authentication type none
```

OSPF Database Information

Command Syntax and Usage
show ip ospf database advertising-router < <i>router ID</i> >
Takes advertising router as a parameter. Displays all the Link State Advertisements (LSAs) in the LS database that have the advertising router with the specified router ID, for example: 20.1.1.1.
Command mode: All
<pre>show ip ospf database asbr-summary [advertising- router <router id=""> link-state-id <a.b.c.d> self]</a.b.c.d></router></pre>
Displays ASBR summary LSAs. The usage of this command is as follows:
a. asbr-summary advertising-router 20.1.1.1 displays ASBR summary LSAs having the advertising router 20.1.1.1.
b. asbr-summary link-state-id 10.1.1.1 displays ASBR summary LSAs having the link state ID 10.1.1.1.
C. asbr-summary self displays the self advertised ASBR summary LSAs.
d. asbr-summary with no parameters displays all the ASBR summary LSAs.
Command mode: All
show ip ospf database database-summary
Displays the following information about the LS database in a table format:
a. Number of LSAs of each type in each area.
b. Total number of LSAs for each area.
c. Total number of LSAs for each LSA type for all areas combined.
d. Total number of LSAs for all LSA types for all areas combined.
No parameters are required.
Command mode: All
show ip ospf database external [advertising-router < <i>router ID</i> > link-state-id < <i>A.B.C.D</i> > self]
Displays the AS-external (type 5) LSAs with detailed information of each field of the LSAs.
Command mode: All
<pre>show ip ospf database network [advertising-router <router id=""> </router></pre>
Displays the network (type 2) LSAs with detailed information of each field of the LSA.network LS database.
Command mode: All
show ip ospf database nssa
Displays the NSSA (type 7) LSAs with detailed information of each field of the LSAs.
Command mode: All

Table 44. OSPF Database Information Commands (continued)

Comman	Id Syntax and Usage
	o ospf database router [advertising-router < <i>router ID</i> > <-state-id < <i>A.B.C.D</i> > self]
Disp LSA:	lays the router (type 1) LSAs with detailed information of each field of the s.
Com	imand mode: All
show ip	o ospf database self
Disp	lays all the self-advertised LSAs. No parameters are required.
Com	imand mode: All
	o ospf database summary [advertising-router <i>uter ID</i> > link-state-id <i><a.b.c.d< i="">> self]</a.b.c.d<></i>
•	lays the network summary (type 3) LSAs with detailed information of each of the LSAs.
Com	mand mode: All
show ip	o ospf database
Disp	lays all the LSAs.
Com	mand mode: All

OSPF Information Route Codes

The following command displays OSPF route information:

show ip ospf routes

```
Codes: IA - OSPF inter area,
     N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
      E1 - OSPF external type 1, E2 - OSPF external type 2
IA 10.10.0.0/16 via 200.1.1.2
IA 40.1.1.0/28 via 20.1.1.2
IA 80.1.1.0/24 via 200.1.1.2
IA 100.1.1.0/24 via 20.1.1.2
IA 140.1.1.0/27 via 20.1.1.2
IA 150.1.1.0/28 via 200.1.1.2
E2 172.18.1.1/32 via 30.1.1.2
E2 172.18.1.2/32 via 30.1.1.2
E2 172.18.1.3/32 via 30.1.1.2
E2 172.18.1.4/32 via 30.1.1.2
E2 172.18.1.5/32 via 30.1.1.2
E2 172.18.1.6/32 via 30.1.1.2
E2 172.18.1.7/32 via 30.1.1.2
E2 172.18.1.8/32 via 30.1.1.2
```

OSPFv3 Information

show	ipv6 ospf area <area (0-2)="" index=""/>
	splays the area information.
	ommand mode: All
	ipv6 ospf areas
	splays the OSPFv3 Area Table.
Co	ommand mode: All
show	<pre>ipv6 ospf interface <interface number=""></interface></pre>
su	splays interface information for a particular interface. If no parameter is pplied, it displays information for all the interfaces. To view a sample display, e page 71.
Co	ommand mode: All
show	ipv6 ospf area-virtual-link
	splays information about all the configured virtual links.
	ommand mode: All
show	ipv6 ospf neighbor <nbr (a.b.c.d)="" router-id=""></nbr>
	splays the status of a neighbor with a particular router ID. If no router ID is
	pplied, it displays the information about all the current neighbors.
Co	ommand mode: All
show	ipv6 ospf host
	splays OSPFv3 host configuration information.
	ommand mode: All
	ipv6 ospf request-list <i><nbr (a.b.c.d)="" router-id=""></nbr></i>
	splays the OSPFv3 request list. If no router ID is supplied, it displays the formation about all the current neighbors.
	ommand mode: All
	ipv6 ospf retrans-list <i><nbr (a.b.c.d)="" router-id=""></nbr></i>
	splays the OSPFv3 retransmission list. If no router ID is supplied, it displays e information about all the current neighbors.
	ommand mode: All
	ipv6 ospf summary-prefix <area (0-2)="" index=""/>
	splays the OSPFv3 external summary-address configuration information.
Co	ommand mode: All
chow	ipv6 ospf redist-config
SHOW	an law of OPDF 2 redictribution information to be explicitly revised to revise logrand
Di	splays OSPFv3 redistribution information to be applied to routes learned on the route table.

Table 45. OSPFv3 Information Options

snow the	ospf area-range information
Displays	SOSPFv3 summary ranges.
Comma	nd mode: All
show ipv6	ospf routes
Displays	OSPFv3 routing table. To view a sample display, see page 73.
Comma	nd mode: All
show ipv6	ospf border-routers
Displays	OSPFv3 routes to an ABR or ASBR.
Comma	nd mode: All
show ipv6	ospf information
Displays	all OSPFv3 information. To view a sample display, see page 71.
Diopiayo	

OSPFv3 Information Dump

OSPFv3 Interface Information

The following command displays OSPFv3 interface information:

show ipv6 ospf interface

Command mode: All

Ospfv3 Interface Information Interface Id: 1 Instance Id: 0 Area Id: 0.0.0.0 Local Address: fe80::222:ff:fe7d:5d00 Router Id: 1.0.0.1 Network Type: BROADCAST Cost: 1 State: BACKUP Designated Router Id: 2.0.0.2 local address: fe80::218:b1ff:fea1:6c01 Backup Designated Router Id: 1.0.0.1 local address: fe80::222:ff:fe7d:5d00 Transmit Delay: 1 sec Priority: 1 IfOptions: 0x0 Timer intervals configured: Hello: 10, Dead: 40, Retransmit: 5 Hello due in 6 sec Neighbor Count is: 1, Adjacent neighbor count is: 1 Adjacent with neighbor 2.0.0.2

OSPFv3 Database Information

Table 46. OSPFv3 Database Information Options . . .

Command Syntax and Usage
<pre>show ipv6 ospf database as-external [detail hex] Displays AS-External LSAs database information. If no parameter is supplied, it displays condensed information. Command mode: All</pre>
show ipv6 ospf database inter-prefix [detail hex]
Displays Inter-Area Prefix LSAs database information. If no parameter is supplied, it displays condensed information.
Command mode: All

Table 46. OSPFv3 Database Information Options

Command Syntax and Usage
show ipv6 ospf database inter-router [detail hex] Displays Inter-Area router LSAs database information. If no parameter is supplied, it displays condensed information.
Command mode: All
show ipv6 ospf database intra-prefix [detail hex] Displays Intra-Area Prefix LSAs database information. If no parameter is supplied, it displays condensed information. Command mode: All
show ipv6 ospf database link [detail hex] Displays Link LSAs database information. If no parameter is supplied, it displays condensed information. Command mode: All
show ipv6 ospf database network [detail hex] Displays Network LSAs database information. If no parameter is supplied, it displays condensed information. Command mode: All
show ipv6 ospf database router [detail hex] Displays the Router LSAs with detailed information of each field of the LSAs. If no parameter is supplied, it displays condensed information. Command mode: All
show ipv6 ospf database nssa [detail hex] Displays Type-7 (NSSA) LSA database information. If no parameter is supplied, it displays condensed information. Command mode: All
show ipv6 ospf database [detail hex] Displays all the LSAs. Command mode: All

OSPFv3 Route Codes Information

The following command displays OSPFv3 route information:

show ipv6 ospf database routes

Command mode: All

Routing Information Protocol

Table 47. Routing Information Protocol Commands

show	ip rip routes
D	isplays RIP routes.
С	command mode: All
F	or more information, see page 73.
show	ip rip interface <i><interface number=""></interface></i>
D	isplays RIP user's configuration.
С	command mode: All
F	or more information, see page 74.

RIP Routes Information

The following command displays RIP route information:

show ip rip routes

Command mode: All

Router(config)

```
30.1.1.0/24 directly connected
3.0.0.0/8 via 30.1.1.11 metric 4
4.0.0.0/16 via 30.1.1.11 metric 16
10.0.0.0/8 via 30.1.1.2 metric 3
20.0.0.0/8 via 30.1.1.2 metric 2
```

This table contains all dynamic routes learned through RIP, including the routes that are undergoing garbage collection with metric = 16. This table does not contain locally configured static routes.

RIP Interface Information

The following command displays RIP user information:

show ip rip interface <interface number>

Command mode: All

```
RIP USER CONFIGURATION :

RIP ON update 30

RIP on Interface 1 : 10.4.4.2, enabled

version 2, listen enabled, supply enabled, default none

poison disabled, split horizon enabled, trigg enabled,

mcast enabled, metric 1

auth none,key none
```

IPv6 Routing Information

Table 48 describes the IPv6 Routing information options.

Table 48. IPv6 Routing Information Commands

Command Syntax and Usage
show ipv6 route address < <i>IPv6 address</i> > Displays a single route by destination IP address.
show ipv6 route gateway < <i>default gateway address</i> > Displays routes to a single gateway.
<pre>show ipv6 route type {connected static ospf} Displays routes of a single type. For a description of IP routing types, see Table 38 on page 58.</pre>
show ipv6 route interface <i><interface number=""></interface></i> Displays routes on a single interface.
show ipv6 route summary Displays a summary of IPv6 routing information, including inactive routes.
show ipv6 route Displays all IPv6 routing information. For more information, see page 75.

IPv6 Routing Table

The following command displays IPv6 routing information:

```
show ipv6 route
```

Command mode: All

Note: The first number inside the brackets represents the metric and the second number represents the preference for the route.

IPv6 Neighbor Discovery Cache Information

Table 49. IPv6 Neighbor Discovery Cache Information Commands

Comr	nand Syntax and Usage
show	v ipv6 neighbors find < <i>IPv6 address</i> >
S	hows a single IPv6 Neighbor Discovery cache entry by IP address.
С	command mode: All
show	pipv6 neighbors interface port <pre>port alias or number></pre>
S	hows IPv6 Neighbor Discovery cache entries on a single port.
С	command mode: All
show	v ipv6 neighbors vlan <i><vlan number=""></vlan></i>
S	hows IPv6 Neighbor Discovery cache entries on a single VLAN.
С	command mode: All
show	pipv6 neighbors static
D	visplays static IPv6 Neighbor Discovery cache entries.
С	command mode: All
show	ipv6 neighbors
	hows all IPv6 Neighbor Discovery cache entries. For more information, see age 76.
С	command mode: All

IPv6 Neighbor Discovery Cache Information

The following command displays a summary of IPv6 Neighbor Discovery cache information:

show ipv6 neighbors

IPv6 Address	Age	Link-layer Addr	State	IF	VLAN	Port
2001:2:3:4::1 fe80::250:bfff:feb7:76b0		00:50:bf:b7:76:b0 00:50:bf:b7:76:b0		-	-	EXT1 EXT2

IPv6 Neighbor Discovery Prefix Information

The following command displays a summary of IPv6 Neighbor Discovery prefix information:

show ipv6 prefix

Command mode: All

```
Codes: A - Address , P - Prefix-Advertisement
D - Default , N - Not Advertised
[L] - On-link Flag is set
[A] - Autonomous Flag is set
AD 10:: 64 [LA] Valid lifetime 2592000 , Preferred lifetime 604800
P 20:: 64 [LA] Valid lifetime 200 , Preferred lifetime 100
```

Neighbor Discovery prefix information includes information about all configured prefixes.

The following command displays IPv6 Neighbor Discovery prefix information for an interface:

show ipv6 prefix interface <interface number>

Command mode: All

ECMP Static Route Information

The following command displays Equal Cost Multi-Path (ECMP) route information:

show ip ecmp

Command mode: All

 Current ecmp static routes:

 Destination
 Mask
 Gateway
 If
 GW Status

 10.10.1.1
 255.255.255.255
 100.10.1.1
 1
 up

 10.20.2.2
 255.255.255.255
 10.233.3.3
 1
 up

 10.234.4.4
 1
 up

 10.235.5.5
 1
 up

ECMP route information shows the status of each ECMP route configured on the switch.

ECMP Hashing Result

The following command displays the status of ECMP hashing on each switch:

show ip route ecmp hash

Command mode: All

Enter SIP address: 10.0.0.1 Enter DIP address (0 for SIP only): 10.0.0.2 Enter number of ECMP paths: 3 Source 10.0.0.1 will go through route number 3

IGMP Multicast Group Information

show ip iqmp queri	er vlan <i><vlan number=""></vlan></i>
	rier information. For details, see page 80.
Command mode: A	
show ip igmp snoop	
Displays IGMP Snoo	
Command mode: A	
show ip igmp relay	
Displays IGMP Rela	
Command mode: A	-
show ip igmp mrout	er information
	icast Router information.
Command mode: A	
	er vlan <i><vlan number=""></vlan></i>
	icast Router information for the specified VLAN.
Command mode: A	-
show ip igmp filte	
	MP Filtering parameters.
Command mode: A	All
show ip igmp profi	
Displays information	about the current IGMP filter.
Command mode: A	All
show ip igmp group	s address < <i>IP address</i> >
Displays a single IG	MP multicast group by its IP address.
Command mode: A	All
show ip igmp group	s vlan <vlan number=""></vlan>
	nulticast groups on a single VLAN.
Command mode: A	All
show ip igmp group	s interface port <port alias="" number="" or=""></port>
Displays all IGMP m	nulticast groups on a single port.
Command mode: A	All
show ip igmp group	s portchannel <trunk number=""></trunk>

Table 50. IGMP Multicast Group Information Commands

Table 50. IGMP Multicast Group Information Commands (continued)

Command Syntax and Usage

```
show ip igmp groups detail <IP address>
```

Displays details about an IGMP multicast group, including source and timer information.

Command mode: All

show ip igmp groups

Displays information for all multicast groups.

Command mode: All

IGMP Querier Information

The following command displays IGMP Querier information:

show ip igmp querier vlan <VLAN number>

Command mode: All

```
Current IGMP Querier information:
IGMP Querier information for vlan 1:
Other IGMP querier - none
Switch-querier enabled, current state: Querier
Switch-querier type: Ipv4, address 0.0.0.0,
Switch-querier general query interval: 125 secs,
Switch-querier max-response interval: 100 'tenths of secs',
Switch-querier startup interval: 31 secs, count: 2
Switch-querier robustness: 2
IGMP configured version is v3
IGMP Operating version is v3
```

IGMP Querier information includes:

- VLAN number
- Querier status
 - Other IGMP querier-none
 - IGMP querier present, address: (IP or MAC address)
 - Other IGMP querier present, interval (minutes:seconds)
- Querier election type (IPv4 or MAC) and address
- Query interval
- Querier startup interval
- Maximum query response interval
- Querier robustness value
- IGMP version number

IGMP Group Information

The following command displays IGMP Group information:

show ip igmp groups

Command mode: All

Note: Local	groups (224.0.0.x)	are not	snooped	d/relayed	and wil	l not app	ear.
Source	Group	VLAN	Port	Version	Mode	Expires	Fwd
10.1.1.1	232.1.1.1	2	EXT4	V3	INC	4:16	Yes
10.1.1.5	232.1.1.1	2	EXT4	V3	INC	4:16	Yes
*	232.1.1.1	2	EXT4	V3	INC	-	No
10.10.10.43	235.0.0.1	9	EXT1	V3	INC	2:26	Yes
*	236.0.0.1	9	EXT1	V3	EXC	-	Yes

IGMP Group information includes:

- IGMP source address
- IGMP Group address
- VLAN and port
- IGMP version
- IGMPv3 filter mode
- Expiration timer value
- IGMP multicast forwarding state

IGMP Multicast Router Information

The following command displays Mrouter information:

show ip igmp mrouter information

Command mode: All

SrcIP	VLAN	Port	Version	Expires	MRT	QRV	QQIC	
10.1.1.1	2	21	V3	4:09	128	2	125	
10.1.1.5	2	23	V2	4:09	125	-	-	
10.10.10.43	9	24	V2	-	-	-	-	

IGMP Mrouter information includes:

- Source IP address
- VLAN and port where the Mrouter is connected
- IGMP version
- Mrouter expiration
- Maximum query response time
- Querier's Robustness Variable (QRV)
- Querier's Query Interval Code (QQIC)

IPMC Group Information

The following command displays IPMC group information:

```
show ip igmp ipmcgrp
```

Command mode: All

Total number of Legend(possible SH - static host SP - static prin SB - static back O - other	values in Type DR - dyr mary DU - dyr	e column) namic regi namic unre	: istered		
0 - Other					
Source	Group	Vlan	Port	 Туре	Timeleft
*	232.0.0.1	1	-	= DU	6 sec
*	232.0.0.2	1	-	DU	6 sec
*	232.0.0.3	1	-	DU	6 sec
*	232.0.0.4	1	-	DU	6 sec

IGMP IPMC Group information includes:

- IGMP source address
- IGMP Group address
- VLAN and port
- Type of IPMC group
- Expiration timer value

MLD information

Table 51 describes the commands used to view Multicast Listener Discovery (MLD) information.

Table 51. MLD Information Commands

show ipv6 mld groups
Displays MLD multicast group information.
Command mode: All
show ipv6 mld groups address < <i>IPv6 address</i> >
Displays group information for the specified IPv6 address.
Command mode: All
show ipv6 mld groups interface port <port alias="" number="" or=""></port>
Displays MLD groups on a single interface port.
Command mode: All
show ipv6 mld groups portchannel <trunk group="" number=""></trunk>
Displays groups on a single port channel.
Command mode: All

Table 51. MLD Information Commands

Command Syntax and Usage	
show ipv6 mld groups vlan < <i>VLAN number></i>	
Displays groups on a single VLAN.	
Command mode: All	
show ipv6 mld mrouter	
Displays all MLD Mrouter ports. See page 83 for sample output.	
Command mode: All	

MLD Mrouter Information

The following command displays MLD Mrouter information:

show ipv6 mld mrouter

Command mode: All

```
Source: fe80:0:0:200:14ff:fea8:40c9
Port/Vlan: 26/4
Interface: 3
QRV: 2 QQIC:125
Maximum Response Delay: 1000
Version: MLDv2 Expires:1:02
```

The following table describes the MLD Mrouter information displayed in the output.

Statistic	Description
Source	Displays the link-local address of the reporter.
Port/Vlan	Displays the port/vlan on which the general query is received.
Interface	Displays the interface number on which the general query is received.
QRV	Displays the Querier's robustness variable value.
QQIC	Displays the Querier's query interval code.
Maximum Response Delay	Displays the configured maximum query response time.
Version	Displays the MLD version configured on the interface.
Expires	Displays the amount of time that must pass before the multicast router decides that there are no more listeners for a multicast address or a particular source on a link.

Table 52. MLD Mrouter

VRRP Information

Virtual Router Redundancy Protocol (VRRP) support on EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

The following command displays VRRP information:

show ip vrrp information

Command mode: All

```
VRRP information:
    1: vrid 2, 205.178.18.210, if 1, renter, prio 100, master
    2: vrid 1, 205.178.18.202, if 1, renter, prio 100, backup
    3: vrid 3, 205.178.18.204, if 1, renter, prio 100, master
```

When virtual routers are configured, you can view the status of each virtual router using this command. VRRP information includes:

- Virtual router number
- Virtual router ID and IP address
- Interface number
- · Ownership status
 - owner identifies the preferred master virtual router. A virtual router is the owner when the IP address of the virtual router and its IP interface are the same.
 - renter identifies virtual routers which are not owned by this device.
- Priority value. During the election process, the virtual router with the highest priority becomes master.
- Activity status
 - master identifies the elected master virtual router.
 - backup identifies that the virtual router is in backup mode.
 - init identifies that the virtual router is waiting for a startup event.
 For example, once it receives a startup event, it transitions to master if its priority is 255, (the IP address owner), or transitions to backup if it is not the IP address owner.

Interface Information

The following command displays interface information:

```
show interface ip
```

Command mode: All

```
Interface information:

126: IP6 0:0:0:0:0:0:0/0 , vlan 4095, up

fe80::a17:f4ff:fe0a:lef

127: IP4 10.43.98.33 255.255.0 9.43.98.255, vlan 4095, up

128: IP4 10.43.95.162 255.255.0 9.43.95.255, vlan 4095, up
```

For each interface, the following information is displayed:

- IPv4 interface address and subnet mask
- IPv6 address and prefix
- VLAN assignment
- Status (up, down, disabled)

IPv6 Interface Information

The following command displays IPv6 interface information:

show ipv6 interface <interface number>

Command mode: All

```
Interface information:
 2: IP6 2001:0:0:0:225:3ff:febb:bb15/64
                                                     , vlan 1, up
         fe80::225:3ff:febb:bb15
   Link local address:
       fe80::225:3ff:febb:bb15
   Global unicast address(es):
       2001::225:3ff:febb:bb15/64
   Anycast address(es):
       Not Configured.
   Joined group address(es):
       ff02::1
       ff02::2
       ff02::1:ffbb:bb15
   MTU is 1500
   ICMP redirects are enabled
   ND DAD is enabled, Number of DAD attempts: 1
   ND router advertisement is disabled
```

For each interface, the following information is displayed:

- IPv6 interface address and prefix
- VLAN assignment
- Status (up, down, disabled)
- Path MTU size
- Status of ICMP redirects
- Status of Neighbor Discovery (ND) Duplicate Address Detection (DAD)
- · Status of Neighbor Discovery router advertisements

IPv6 Path MTU Information

The following command displays IPv6 Path MTU information:

show ipv6 pmtu [<destination IPv6 address>]

Command mode: All

Path MTU Discovery info:			
Max Cache Entry Number : 10			
Current Cache Entry Number: 2			
Cache Timeout Interval : 10 minutes			
Destination Address	Since	PMTU	
5000:1::3	00:02:26	1400	
FE80::203:A0FF:FED6:141D	00:06:55	1280	

Path MTU Discovery information provides information about entries in the Path MTU cache. The PMTU field indicates the maximum packet size in octets that can successfully traverse the path from the switch to the destination node. It is equal to the minimum link MTU of all the links in the path to the destination node.

IP Information

The following command displays Layer 3 information:

```
show ip interface brief
```

Command mode: All

```
IP information:
 AS number 0
Interface information:
126: IP6 0:0:0:0:0:0:0/0
                                                    , vlan 4095, up
       fe80::200:ff:fe00:ef
128: IP4 9.43.95.121 255.255.0 9.43.95.255, vlan 4095, up
Loopback interface information:
Default gateway information: metric strict
 4: 9.43.95.254, FAILED
Default IP6 gateway information:
Current BOOTP relay settings: OFF
Global servers:
------
Server 1 address 0.0.0.0
Server 2 address 0.0.0.0
Server 3 address 0.0.0.0
Server 4 address 0.0.0.0
Server 5 address 0.0.0.0
Current IP forwarding settings: ON, dirbr disabled, icmprd disabled
Current network filter settings:
 none
Current route map settings:
RIP is disabled.
OSPF is disabled.
OSPFv3 is disabled.
BGP is disabled.
```

IP information includes:

- IP interface information: Interface number, IP address, subnet mask, broadcast address, VLAN number, and operational status.
- Default gateway information: Metric for selecting which configured gateway to use, gateway number, IP address, and health status
- BootP relay settings
- IP forwarding settings, including the forwarding status of directed broadcasts, and the status of ICMP re-directs
- Network filter settings, if applicable
- Route map settings, if applicable

IKEv2 Information

The following table lists commands that display information about IKEv2.

Command	Syntax and Usage
show ike Display	v^2 ys all IKEv2 information. See page 88 for sample output.
511011 1110	v2 ca-cert ys the CA certificate.
511011 1110	v2 host-cert ys the host certificate.
	v2 identity ys IKEv2 identity information.
	v2 preshare-key ys the IKEv2 preshare key.
	v2 proposal ys the IKEv2 proposal.
511011 1110	v2 retransmit-interval ys the IKEv2 retransmit interval.
show ike Display	v2_sa ys the IKEv2 SA.

IKEv2 Information Dump

The following command displays IKEv2 information:

show ikev2

IKEv2 retransmit time:	20
IKEv2 cookie notification:	disable
IKEv2 authentication method:	Pre-shared key
IKEv2 proposal:	
Cipher:	3des
Authentication:	shal
DH Group:	dh-2
Local preshare key:	ibm123
IKEv2 choose IPv6 address as No SAD entries.	ID type

IKEv2 information includes:

- IKEv2 retransmit time, in seconds.
- Whether IKEv2 cookie notification is enabled.
- The IKEv2 proposal in force. This includes the encryption algorithm (cipher), the authentication algorithm type, and the Diffie-Hellman (DH) group, which determines the strength of the key used in the key exchange process. Higher DH group numbers are more secure but require additional time to compute the key.
- The local preshare key.
- Whether IKEv2 is using IPv4 or IPv6 addresses as the ID type.
- Security Association Database (SAD) entries, if applicable.

IPsec Information

The following table describes the commands used to display information about IPsec.

Table 54. IPsec Information Commands

Command Syntax and Usage
show ipsec sa Displays all security association information.
show ipsec spd Displays all security policy information.
show ipsec dynamic-policy <1-10> Displays dynamic policy information.
show ipsec manual-policy <1-10> Displays manual policy information. See page 90 for sample output.
show ipsec transform-set <1-10> Displays IPsec transform set information.
show ipsec traffic-selector <1-10> Displays IPsec traffic selector information.

IPsec Manual Policy Information

The following command displays IPsec manual key management policy information:

```
show ipsec manual-policy
```

Command mode: All

IPsec manual policy 1	
IP Address:	2002:0:0:0:0:0:151
Associated transform ID:	1
Associated traffic selector ID:	1
IN-ESP SPI:	9900
IN-ESP encryption KEY:	3456789abcdef012
IN-ESP authentication KEY:	23456789abcdef0123456789abcdef0123456789
OUT-ESP SPI:	7700
OUT-ESP encryption KEY:	6789abcdef012345
OUT-ESP authentication KEY:	56789abcdef0123456789abcdef0123456789abc
Applied on interface:	
interface 1	

IPsec manual policy information includes:

- The IP address of the remote peer
- The transform set ID associated with this policy
- · Traffic selector ID associated with this policy
- ESP inbound SPI
- ESP inbound encryption key
- ESP inbound authentication key
- ESP outbound SPI
- ESP outbound encryption key
- ESP outbound authentication key
- The interface to which this manual policy has been applied

PIM Information

Table 55. PIM Information Options

Command Syntax and Usage						
show ip pim bsr [<component id="">]</component>						
Displays information about the PIM bootstrap router (BSR).						
Command mode: All						
show ip pim component [<component (1-2)="" id="">]</component>						
Displays PIM component information. For details, see page 92.						
Command mode: All						
show ip pim interface [<interface number="">] detail loopback</interface>						
Displays PIM interface information. To view sample output, see page 92.						
Command mode: All						

Table 55. PIM Information Options (continued)

Command Syntax and Usage
show ip pim neighbor [< <i>interface number</i> >]
Displays PIM neighbor information. To view sample output, see page 93.
Command mode: All
show ip pim neighbor-filters
Displays information about PIM neighbor filters.
Command mode: All
<pre>show ip pim mroute [<component id="">] count flags group <multicast address="" group=""> interface <interface number=""> source <multicast address="" source=""></multicast></interface></multicast></component></pre>
Displays information about PIM multicast routes. For more information about displaying PIM multicast route information, see page 93.
Command mode: All
show ip pim rp-candidate [< <i>component ID</i> >]
Displays a list of the candidate Rendezvous Points configured.
Command mode: All
show ip pim rp-set [< <i>RP IP address</i> >]
Displays a list of the Rendezvous Points learned.
Command mode: All
show ip pim rp-static [< <i>component ID</i> >]
Displays a list of the static Rendezvous Points configured.
Command mode: All
show ip pim elected-rp [group <multicast address="" group="">]</multicast>
Displays a list of the elected Rendezvous Points.
Command mode: All

PIM Component Information

The following command displays Protocol Independent Multicast (PIM) component information:

show ip pim component [<component ID>]

Command mode: All

```
PIM Component Information
Component-Id: 1
PIM Mode: sparse, PIM Version: 2
Elected BSR: 0.0.0.0
Candidate RP Holdtime: 0
```

PIM component information includes the following:

- Component ID
- Mode (sparse, dense)
- PIM Version
- Elected Bootstrap Router (BSR) address
- · Candidate Rendezvous Point (RP) hold time, in seconds

PIM Interface Information

The following command displays information about PIM interfaces:

show ip pim interface

Command mode: All

Address	IfName/IfId	Ver/Mode		Qry Interval	DR-Address	DR-Prio
40.0.0.3	net4/4	2/Sparse	1	30	40.0.0.3	1
50.0.0.3	net5/5	2/Sparse	0	30	50.0.0.3	1

PIM interface information includes the following for each PIM interface:

- IP address
- Name and ID
- Version and mode
- Neighbor count
- Query interval
- Designated Router address
- Designated Router priority value

PIM Neighbor Information

The following command displays PIM neighbor information:

show ip pim neighbor

Command mode: All

40.0.0.2 net4/4 00:00:37/79 v2 1/S 1 0 0 40.0.0.4 net1/160 00:03:41/92 v2 32/S 2 0 0	Neighbour Address	IfName/Idx	Uptime/Expiry	Ver	DRPri/Mode	CompId	Override Interval	Lan Delay
40.0.0.4 net1/160 00:03:41/92 v2 32/S 2 0 0	40.0.0.2	net4/4	00:00:37/79	v2	1/S	1	0	0
	40.0.0.4	net1/160	00:03:41/92	v2	32/S	2	0	0

PIM neighbor information includes the following:

- · Neighbor IP address, interface name, and interface ID
- Name and ID of interface used to reach the PIM neighbor
- Up time (the time since this neighbor became the neighbor of the local router)
- Expiry Time (the minimum time remaining before this PIM neighbor expires)
- Version number
- Designated Router priority and mode
- Component ID
- Override interval
- LAN delay interval

PIM Multicast Route Information Commands

Table 56. PIM Multicast Route Information Options

Command Syntax and Usage
show ip pim mroute [< <i>component ID</i> >] Displays PIM multicast routes for the selected component.
Command mode: All
show ip pim mroute flags [s] [r] [w]
Displays PIM multicast routes based on the selected entry flags. Enter flags in any combination:
 S: Shortest Path Tree (SPT) bit
 R: Rendezvous Point Tree (RPT) bit
– ₩: Wildcard bit
Command mode: All
show ip pim mroute group <multicast address="" group="" ip=""></multicast>
Displays PIM multicast routes for the selected multicast group.
Command mode: All
show ip pim mroute interface <interface number=""></interface>
Displays PIM multicast routes for the selected incoming IP interface.
Command mode: All

Table 56. PIM Multicast Route Information Options (continued)

	e source <multicast address="" ip="" source=""></multicast>
Displays PIM multic	cast routes for the selected source IP address.
Command mode:	All
show ip pim mroute	e count
Displays a count of	PIM multicast routes of each type.
Command mode:	All
show ip pim mroute	
Displays informatio	n about all PIM multicast routes.
Command mode:	A 11

PIM Multicast Route Information

The following command displays PIM multicast route information:

show ip pim mroute

```
IP Multicast Routing Table
.....
Route Flags S: SPT Bit W: Wild Card Bit R: RPT Bit
Timers: Uptime/Expires
(8.8.8.111, 224.2.2.100) ,00:42:03/00:01:11
Incoming Interface : net44 ,RPF nbr : 44.44.44.1 ,Route Flags : S
Outgoing InterfaceList :
    net17, Forwarding/Sparse ,00:42:03/---
(*, 224.2.2.100) ,00:45:15/--- ,RP : 88.88.88.2
Incoming Interface : net5 ,RPF nbr : 5.5.5.2 ,Route Flags : WR
Outgoing InterfaceList :
    net17, Forwarding/Sparse ,00:45:15/---
Total number of (*,G) entries : 1
Total number of (S,G) entries : 1
```

Quality of Service Information

Table 57. QoS Information Options

show qos	transmit-queue
	rs mapping of 802.1p value to Class of Service queue number, and COS weight value.
Comm	and mode: All
show qos	transmit-queue information
Displa	/s all 802.1p information.
Comm	and mode: All
For de	tails, see page 95.
show qos	random-detect
Displa	vs WRED ECN information.
Comm	and mode: All
For de	tails, see page 95.

802.1p Information

The following command displays 802.1p information:

show qos transmit-queue information

Current	priorit	y to COS	queue i	nformation:		
	cy COSq		-			
0	0	1				
1	1	2				
2	2	3				
3	3	4				
4	4	5				
5	5					
6	6	15				
7	7	0				
Current	t port pr	iority in	formati	on:		
Port	Priority	COSq W	leight			
	0					
INTA2	0	0	1			
•••						
	0		1			
	0		1			
	0		1			
EXT3		0	1			
EXT4	0	0	1			

The following table describes the IEEE 802.1p priority-to-COS queue information.

Table 58. 802.1p Priority-to-COS Queue Parameter Descriptions

Parameter	Description
Priority	Displays the 802.1p Priority level.
COSq	Displays the Class of Service queue.
Weight	Displays the scheduling weight of the COS queue.

The following table describes the IEEE 802.1p port priority information.

Table 59. 802.1p Port Priority Parameter Descriptions

Parameter	Description
Port	Displays the port alias.
Priority	Displays the 802.1p Priority level.
COSq	Displays the Class of Service queue.
Weight	Displays the scheduling weight.

WRED and ECN Information

The following command displays WRED and ECN information:

show qos random-detect

Global	ECN:	Disable		cion:			
Global	WRED:	Disable					
WRED	TcpMi TQ0:	nThrT Dis	cpMaxThr1 0	CcpDrateN 0	onTcpMinThr- 0	-NonTcpMaxT 0	hrNonTcpDrate 0

0	TQ7:	Dis	0	0	0	0	0
0 	~ `						

Access Control List Information Commands

Table 60. ACL Information Options

show access-cont	crol list <acl number=""></acl>	
Displays ACL lis	t information. For details, see page 97.	
Command mod	e: All	
show access-cont	trol list6 <acl number=""></acl>	
Displays IPv6 A	CL list information.	
Command mod	e: All	
show access-cont	crol group <acl group="" number=""></acl>	
Displays ACL gr	oup information.	
Command mod	e: All	
show access-cont	crol vmap <vmap number=""></vmap>	
Displays VMAP	information.	

Access Control List Information

The following command displays Access Control List (ACL) information:

show access-control list <ACL number>

Command mode: All

Current ACL inform	ation:	
Filter 2 profile	:	
Ethernet		
- VID	: 2/0xfff	
Actions	: Permit	
Statistics	: enabled	

Access Control List (ACL) information includes configuration settings for each ACL and ACL Group.

Table 61. ACL Parameter Descriptions

Parameter	Description
Filter x profile	Indicates the ACL number.
Actions	Displays the configured action for the ACL.
Statistics	Displays the status of ACL statistics configuration (enabled or disabled).

RMON Information Commands

The following table describes the Remote Monitoring (RMON) Information commands.

Table 62. RMON Information commands

Displays RMON History information. For details, see page 98. Command mode: All show rmon alarm Displays RMON Alarm information. For details, see page 99. Command mode: All show rmon event Displays RMON Event information. For details, see page 100. Command mode: All show rmon	show rmon h	story	
show rmon alarm Displays RMON Alarm information. For details, see page 99. Command mode: All show rmon event Displays RMON Event information. For details, see page 100. Command mode: All	Displays RI	NON History information. For details, see page 98.	
Displays RMON Alarm information. For details, see page 99. Command mode: All show rmon event Displays RMON Event information. For details, see page 100. Command mode: All	Command	mode: All	
Command mode: All show rmon event Displays RMON Event information. For details, see page 100. Command mode: All	show rmon al	arm	
show rmon event Displays RMON Event information. For details, see page 100. Command mode: All	Displays RI	NON Alarm information. For details, see page 99.	
Displays RMON Event information. For details, see page 100. Command mode: All	Command	mode: All	
Command mode: All	show rmon ev	rent	
	Displays RI	NON Event information. For details, see page 100.	
show rmon	Command	mode: All	
	show rmon		
Displays all RMON information.	Displays all	RMON information.	

RMON History Information

The following command displays RMON History information:

show rmon history

Command mode: All

ndex	IFOID	Interval	Rbnum	Gbnum
1	1.3.6.1.2.1.2.2.1.1.24	30	5	5
2	1.3.6.1.2.1.2.2.1.1.22	30	5	5
3	1.3.6.1.2.1.2.2.1.1.20	30	5	5
4	1.3.6.1.2.1.2.2.1.1.19	30	5	5
5	1.3.6.1.2.1.2.2.1.1.24	1800	5	5
ndex	Owner			

The following table describes the RMON History Information parameters.

Table 63. RMON History Parameter Descriptions

Parameter	Description
Index	Displays the index number that identifies each history instance.
IFOID	Displays the MIB Object Identifier.

Parameter	Description
Interval	Displays the time interval for each sampling bucket.
Rbnum	Displays the number of requested buckets, which is the number of data slots into which data is to be saved.
Gbnum	Displays the number of granted buckets that may hold sampled data.
Owner	Displays the owner of the history instance.

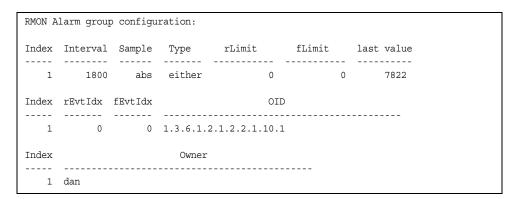

Table 63. RMON History Parameter Descriptions (continued)

RMON Alarm Information

The following command displays RMON Alarm information:

show rmon alarm

Command mode: All

The following table describes the RMON Alarm Information parameters.

Table 64. RMON Alarm Parameter Descriptions

Parameter	Description
Index	Displays the index number that identifies each alarm instance.
Interval	Displays the time interval over which data is sampled and compared with the rising and falling thresholds.
Sample	Displays the method of sampling the selected variable and calculating the value to be compared against the thresholds, as follows:
	 abs-absolute value, the value of the selected variable is compared directly with the thresholds at the end of the sampling interval.
	 delta-delta value, the value of the selected variable at the last sample is subtracted from the current value, and the difference compared with the thresholds.

Parameter	Description
Туре	 Displays the type of alarm, as follows: falling-alarm is triggered when a falling threshold is crossed. rising-alarm is triggered when a rising threshold is crossed. either-alarm is triggered when either a rising or falling threshold is crossed.
rLimit	Displays the rising threshold for the sampled statistic.
fLimit	Displays the falling threshold for the sampled statistic.
Last value	Displays the last sampled value.
rEvtldx	Displays the rising alarm event index that is triggered when a rising threshold is crossed.
fEvtIdx	Displays the falling alarm event index that is triggered when a falling threshold is crossed.
OID	Displays the MIB Object Identifier for each alarm index.
Owner	Displays the owner of the alarm instance.

Table 64. RMON Alarm Parameter Descriptions (continued)

RMON Event Information

The following command displays RMON Alarm information:

show rmon event

RMON	RMON Event group configuration:									
Index	Index Type Last Sent					Description				
1	both	OD:	0H:	1M:2	20S	Event_1				
2	none	0D:	0H:	OM:	0S	Event_2				
3	log	0D:	0H:	0M:	0S	Event_3				
4	trap	0D:	0H:	0M:	0S	Event_4				
5	both	0D:	0H:	0M:	0S	Log and trap event for Link Down				
10	both	0D:	0H:	OM:	0S	Log and trap event for Link Up				
11	both	0D:	0H:	OM:	0S	Send log and trap for icmpInMsg				
15	both	0D:	0H:	0M:	0S	Send log and trap for icmpInEchos				
Index						Owner				
1	dan									

The following table describes the RMON Event Information parameters.

Table 65. RMON Event Parameter Descrip
--

Parameter	Description
Index	Displays the index number that identifies each event instance.
Туре	Displays the type of notification provided for this event, as follows: none, log, trap, both.
Last sent	Displays the time that passed since the last switch reboot, when the most recent event was triggered. This value is cleared when the switch reboots.
Description	Displays a text description of the event.
Owner	Displays the owner of the alarm instance.

Link Status Information

The following command displays link information:

show interface status [<port alias or number>]

Command mode:All

Alias	Port	-	Duplex		Ctrl		Name	
INTA1	1	1G/10G	full	-	yes		INTA1	
INTA2	2	-	full	-	yes		INTA2

The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex system chassis that you are using and the firmware versions and options that are installed.

Use this command to display link status information about each port on the EN4093/EN4093R, including:

- Port alias and port number
- Port speed and Duplex mode (half, full, any)
- Flow control for transmit and receive (no, yes, or both)
- Link status (up, down, or disabled)
- Port name

Port Information

The following command displays port information:

show interface information

Command mode: All

Alias	Port	Tag	RMON	Lrn	Fld	PVID	NAME	VLAN(s)

<pre>* = PVID is tagged.</pre>								

The sample screens that appear in this document might differ slightly from the screens displayed by your system. Screen content varies based on the type of Flex System chassis that you are using and the firmware versions and options that are installed.

Port information includes:

- Port alias and number
- Whether the port uses VLAN tagging or not (y or n)
- Type of port (Internal, External, or Management)
- Whether the port has Remote Monitoring (RMON) enabled
- Whether the port has FDB Learning enabled (Lrn)
- Whether the port has Port Flooding enabled (Fld)
- Port VLAN ID (PVID)
- Port name
- VLAN membership

Port Transceiver Status

The following command displays the status of the transceiver module on each external port:

show interface transceiver

Command mode: All

TX Link TXFlt Volts DegsC TXuW RXuW Media Laser Approval Name 44 SFP+ 2 < NO Device Installed > 45 SFP+ 3 Ena LINK no 3.29 29.5 556.9 580.5 SR SFP+ 850nm Approved Blade Network Part:BN-CKM-SP-SR Date:110329 S/N:AA1113AG1B1 46 SFP+ 4 < NO Device Installed > 47 SFP+ 5 N/A LINK -N/A- -.-- --.- CU SFP -N/A- Approved Part:BN-CKM-S-T Blade Network Date:080710 S/N:BNT0828075 48 SFP+ 6 < NO Device Installed > 49 SFP+ 7 N/A Down -N/A- -.-- --.- CU SFP -N/A- Approved Date:080710 S/N:BNT08280W0 Blade Network Part:BN-CKM-S-T 50 SFP+ 8 < NO Device Installed > 51 SFP+ 9 N/A Down -N/A- -.-- --.- ---.- CU SFP -N/A- Approved Blade Network Part:BN-CKM-S-T Date:100717 S/N:BNT10288NM 52 SFP+ 10 < NO Device Installed > . . . < NO Device Installed > 57 O10G 15.1 58 O10G 15.2 < NO Device Installed > 59 Q10G 15.3 < NO Device Installed > 60 Q10G 15.4 < NO Device Installed > 61 010G 16.1 N/A Down -N/A- ---- ---- ---- 3m ODAC -N/A- Accepted BLADE NETWORK Part:BN-QS-QS-CBL-3M Date:110422 S/N:3549Y350VT14K0HN 62 Q10G 16.2 N/A Down -N/A- ---- ---- ---- 3m QDAC -N/A- Accepted BLADE NETWORK Part:BN-QS-QS-CBL-3M Date:110422 S/N:3549Y350VT14K0HN 63 010G 16.3 N/A Down -N/A- -.-- ---- ---- 3m ODAC -N/A- Accepted BLADE NETWORK Part: BN-QS-QS-CBL-3M Date: 110422 S/N: 3549Y350VT14K0HN 64 Q10G 16.4 N/A Down -N/A- -.-- ---- 3m QDAC -N/A- Accepted BLADE NETWORK Part:BN-QS-QS-CBL-3M Date:110422 S/N:3549Y350VT14K0HN

This command displays information about the transceiver module on each port, as follows:

- Port number and media type
- TX: Transmission status
- RXlos: Receive Loss of Signal indicator
- TXflt: Transmission fault indicator
- Volts: Power usage, in volts
- DegsC: Temperature, in degrees centigrade
- TXuW: Transmit power, in micro-watts
- RXuW: Receive power, in micro-watts
- Media type (LX, LR, SX, SR)
- Laser wavelength, in nano-meters
- Approval status

The optical power levels shown for transmit and receive functions for the transceiver should fall within the expected range defined in the IEEE 802-3-2008 specification for each transceiver type. For convenience, the expected range values are summarized in the following table.

Transceiver Type	Tx Minimum	Tx Maximum	Rx Minimum	Rx Maximum
SFP SX	112μW	1000μW	20µW	1000μW
SFP LX	70.8μW	501µW	12.6μW	501µW
SFP+ SR	186µW	794µW	102μW	794µW
SFP+ LR	151μW	891µW	27.5μW	891µW

Table 66. Expected Transceiver Optical Power Levels

Note: Power level values in the IEEE specification are shown in dBm, but have been converted to mW in this table to match the unit of measure shown in the display output.

Virtual Machines Information

The following command display information about Virtual Machines (VMs).

```
Table 67. Virtual Machines Information Options
```

show virt port <port alias or number>

Displays Virtual Machine information for the selected port.

Command mode: All

```
show virt vm [-v]
```

Displays all Virtual Machine information. The -v option enables verbose mode. **Command mode:** All

VM Information

The following command displays VM information:

```
show virt vm
```

Command mode: All

E.						
	IP Address	VMAC Address	Index	Port	VM Group	(Profile)

	* indicates VMwar	re ESX Service Consol	le Inte	erface		
	+ indicates VMwar	re ESX/ESXi VMKernel	or Mar	nagement	Interface	2
I		•		2		

VM information includes the following for each Virtual Machine (VM):

- IP address
- MAC address
- Index number assigned to the VM
- Internal port on which the VM was detected
- VM group that contains the VM, if applicable

VM Check Information

The following command displays VM Check information:

show virt vmcheck

Command mode: All

```
Default actions to take for spoofed VMs:
Basic: Oper disable the link
Advanced: Install ACL to drop traffic
Maximum number of acls that can be used for mac spoofing: the maximum number of acls
configurable on the switch (256)
Trusted ports by configuration: empty
```

VMware Information

Use these commands to display information about Virtual Machines (VMs) and VMware hosts in the data center. These commands require the presence of a configured Virtual Center.

Table 68. VMware Information Options

Command Syntax and Usage					
show virt vmware hosts					
Displays	a list of VMware hosts.				
Commar	nd mode: All				
show virt	vmware showhost <host uuid=""> <host address="" ip=""> <host name=""></host></host></host>				
Displays	detailed information about a specific VMware host.				
Commar	nd mode: All				
show virt	vmware showvm <vm uuid=""> <vm address="" ip=""> <vm name=""></vm></vm></vm>				
Displays	detailed information about a specific Virtual Machine (VM).				
Commar	nd mode: All				
show virt	vmware vms				
Displays	a list of VMs.				
Commar	nd mode: All				

VMware Host Information

The following command displays VM host information:

show virt vmware hosts

Command mode: All

UUID	Name(s), IP Address
80a42681-d0e5-5910-a0bf-bd23bd3f7803	127.12.41.30
3c2e063c-153c-dd11-8b32-a78dd1909a69	127.12.46.10
64f1fe30-143c-dd11-84f2-a8ba2cd7ae40	127.12.44.50
c818938e-143c-dd11-9f7a-d8defa4b83bf	127.12.46.20

009a581a-143c-dd11-be4c-c9fb65ff04ec	127.12.46.40

VM host information includes the following:

- UUID associated with the VMware host.
- Name or IP address of the VMware host.

vNIC Information

The following commands display information about Virtual NICs (vNICs).

Table 69. vNIC Information Options

Command Syntax and Usage			
show vnic vnic			
Displays information about each vNIC.			
Command mode: All			
show vnic vnicgroup			
Displays information about each vNIC Group, including:			
 Status (enabled or disabled) 			
 VLAN assigned to the vNIC Group 			
 Uplink Failover status (enabled or disabled) 			
 Link status for each vNIC (up, down, or disabled) 			
 Port link status for each port associated with the vNIC Group (up, down, or disabled) 			
Command mode: All			
show vnic information-dump			
Displays all vNIC information.			
Command mode: All			

Virtual NIC (vNIC) Information

The following command displays Virtual NIC (vNIC) information:

show vnic vnic

Command mode: All

vNICvNICGroupVlanMaxBandwidthTypeMACAddressLinkINTA1.1110125Default00:00:c9:5b:b7:d0upINTA2.2210210Default00:00:c9:5b:cf:d1downINTB1.21220225Default00:00:c9:5b:b7:c9upINTB9.4#*25Defaultnonedisabled# = Not added to any vNIC group*= Not added to any vNIC group or no vlan set for its vNIC group*

vNIC information includes the following for each vNIC:

- vNIC ID
- vNIC Group that contains the vNIC
- VLAN assigned to the vNIC Group
- Maximum bandwidth allocated to the vNIC
- MAC address of the vNIC, if applicable
- Link status (up, down, or disabled)

vNIC Group Information

The following command displays vNIC Group information:

show vnic vnicgroup

Command mode: All

vNIC Group	1: enabled
VLAN Failover	: 101 : disabled
vNIC INTA9.1 INTA10.1 INTB10.2	 up up
Port INTA11 u	
UplinkPort EXT6	Link up

vNIC Group information includes the following for each vNIC Group:

- Status (enabled or disabled)
- VLAN assigned to the vNIC Group
- Uplink Failover status (enabled or disabled)
- Link status for each vNIC (up, down, or disabled)
- Port link status for each port associated with the vNIC Group (up, down, or disabled)

SLP Information

The following commands display information about Service Location Protocol settings:

```
Table 70. SLP Information Options
```

Command Syntax and Usage					
show ip slp information					
Displays the SLP version, whether SLP is enabled or disabled and whether DA auto-discovery is enabled or disabled					
Command mode: All					
show ip slp directory-agents					
Lists all detected DAs					
Command mode: All					
show ip slp user-agents					
Lists all detected UAs					
Command mode: All					

UFP Information

The following commands display information about Unified Fabric Port (UFP) settings.

Table 71. UFP Information Options

Command Syntax and Usage
<pre>show ufp [port <port_no.>] [vport <l-4>] [network qos] Displays the UFP network and QoS settings applied on all ports or on specified physical and virtual ports.</l-4></port_no.></pre>
Command mode: All
<pre>show ufp information port [<port_no.>] Displays UFP status for all physical ports or only for a specified physical port. Information includes wether the UFP is enabled on the physical port, how many virtual ports are enabled and the link stats for each virtual port. For details, see page 111.</port_no.></pre>

	INTA13	13	dis	0	disabled	disabled	disabled	disabled
	INTA14	14	dis	0	disabled	disabled	disabled	disabled

Port information includes the following for each physical port:

- Port alias
- Port number
- UFP state
- Number of virtual ports enabled
- Link status on each channel (up, down or disabled)

CDCP Information

The following command displays S-Channel Discovery and Configuration Protocol information:

show ufp information cdcp

Command mode: All

INTA1	:	Channel	Request
INTA2	:	Channel	Request
INTA3	:		TxSVIDs
INTA4	:		TxSVIDs
INTA5	:		Disable
INTA6	:		Disable
INTA7	:		Disable
INTA8	:		Disable
INTA9	:		Disable
INTA10	:		Disable
INTA11	:		Disable
INTA12	:		Disable
INTA13	:		Disable
INTA14	:		Disable

CDCP information includes the following for each physical port:

- Whether there is a channel set up
- CDCP communication status for active channels

QoS Information

The following command displays Quality of Service information:

show ufp information qos

Command mode: All

Globa	l UFP QOS	3 mode: U	JFP QOS BW
Port	Vport	Minbw%	Maxbw%
1	1	15	100
	2	25	50
	3	25	100
	4	25	100
2	1	25	100
	2	25	100
	3	25	100
	4	25	100
3	1	25	100
	2	25	100
	3	25	100
	4	25	100

QoS information includes the following:

- Physical port number
- Virtual port number
- Minimum guaranteed bandwidth allocated
- Maximum bandwidth achievable

TLV Status Information

The following command displays Type-Length-Values information:

show ufp information tlvstat

Command mode: All

INTA1	:	Success	
INTA2	:	Success	
INTA3	:	Disabled	
INTA4	:	Disabled	
INTA5	:	Disabled	
INTA6	:	Disabled

INTA8	:	Disabled	
INTA9	:	Disabled	
INTA10	:	Disabled	
INTA11	:	Disabled	
INTA12	:	Disabled	
INTA13	:	Disabled	
INTA14	:	Disabled	

TLV status information includes the following:

- · Physical port alias
- Type-Length-Values status

Virtual Port Information

The following command displays virtual port information:

show ufp information vport

Command mode: All

vPort	state	mode	svid	defvlan	deftag	VLANs
1.1	dis	tunnel	0	0	dis	
1.2	dis	tunnel	0	0	dis	
1.3	dis	tunnel	0	0	dis	
1.4	down	trunk	4005	22	ena	22
2.1	dis	tunnel	0	0	dis	
2.2	dis	tunnel	0	0	dis	
2.3	dis	tunnel	0	0	dis	
2.4	dis	tunnel	0	0	dis	
3.1	dis	tunnel	0	0	dis	
3.2	dis	tunnel	0	0	dis	
3.3	dis	tunnel	0	0	dis	

Virtual port information includes the following for each virtual port:

- Virtual port number
- Channel status
- Operating mode (trunk, access, tunnel or FCoE)
- S-channel VLAN ID
- Default VLAN ID
- Default VLAN ID tagging enforcement
- · VLANs the virtual port is associated with

VLAN Information

The following command displays VLAN information:

```
show ufp information vlan
```

Command mode: All

```
VLAN
----
22
vPort list:
INTA1.4
EXT Port list:
INT Port list:
UFP Port list:
INTA1
```

VLAN information includes the following for each VLAN:

- VLAN ID
- Associated virtual ports
- Associated external ports
- Associated internal ports
- Associated UFP ports

TLV Information

The following commands display TLV information:

show ufp receive cap port port_no.>

Command mode: All

```
UFP Capability Discovery TLV Received on port INTA2:

tlv : Type 127 Length 7 OUI 00-18-b1 Subtype 1

version : Max 1 Oper 1

cna : Req 1 Oper 1 Res 0x00

switch : Cap 1 Oper 1 Res 0x00
```

UFP Capability Discovery TLV information includes the following:

- TLV type and length
- IBM Organizationally Unique Identifier
- TLV Subtype
- Max Version and Operation Version
- UFP CNA Status which include UFP Request and UFP Operation
- UFP Switch Status which includes UFP Capable and UFP Operation

show ufp transmit cdcp port port_no.>

Command mode: All

SCID 2 : SVID 4002

SCID 3 : SVID 4003

SCID 4 : SVID 0

SCID 5 : SVID 0
```

UFP Channel Discovery and Configuration Protocol TLV includes the following:

- TLV type and length
- IBM Organizationally Unique Identifier
- TLV Subtype
- Role bit
- S-Component bit
- Channel Cap
- Corresponding index/SVID pairs

Converged Enhanced Ethernet Information

Table 72 describes the Converged Enhanced Ethernet (CEE) information options.

Table 72. CEE Information Options

Command Syntax and Usage

show cee information

Displays all CEE information, including DCBX, ETS and PFC.

Command mode: All

DCBX Information

 Table 73 describes the Data Center Bridging Capability Exchange (DCBX) protocol information options.

Table 73. DCBX Information Options

Command Syntax and Usage
<pre>show cee information dcbx port <port alias="" number="" or=""> control Displays information about the DCBX Control state machine for the selected port. For details, see page 117. Command mode: All</port></pre>
<pre>show cee information dcbx port <pre>port alias or number> feature Displays information about the DCBX Feature state machine for the selected port. For details, see page 117. Command mode: All</pre></pre>
<pre>show cee information dcbx port <port alias="" number="" or=""> ets Displays information about the DCBX ETS state machine. For details, see page 118. Command mode: All</port></pre>
<pre>show cee information dcbx port <port alias="" number="" or=""> pfc Displays information about the DCBX PFC state machine. For details, see page 119. Command mode: All</port></pre>
<pre>show cee information dcbx port <port alias="" number="" or=""> app_proto Displays information about the DCBX Application Protocol state machine on the selected port. For details, see page 119. Command mode: All</port></pre>
show cee information dcbx port <i><port alias="" number="" or=""></port></i> Displays all DCBX information. Command mode: All

DCBX Control Information

The following command displays DCBX Control information:

show cee information dcbx port port alias or number> control

Command mode: All

Alias	Port	OperStatus	OperVer	MaxVer	SeqNo	AckNo
INTA1	1	enabled	0	0	0	0
INTA2	2	enabled	0	0	4	2
INTA3	3	enabled	0	0	0	0
INTA4	4	enabled	0	0	1	1

DCBX Control information includes the following:

- Port alias and number
- DCBX status (enabled or disabled)
- · Operating version negotiated with the peer device
- Maximum operating version supported by the system
- Sequence number that changes each time a DCBX parameter in one or more DCB feature TLVs changes
- Sequence number of the most recent DCB feature TLV that has been acknowledged

DCBX Feature Information

The following command displays DCBX Feature information:

show cee information dcbx port port alias or number> feature

Command mode: All

DCBX Po	DCBX Port Feature State-machine Info											
======				=====:	===							
Alias	Port	Туре	AdmState	Will	Advrt	OpVer	MxVer	PrWill	SeqNo	Err	OperMode	Syncd
INTA1	1	ETS	enabled	No	Yes	0	0	No	0	No	disabled	No
INTA2	2	ETS	enabled	No	Yes	0	0	Yes	4	No	enabled	Yes
INTA3	3	ETS	enabled	No	Yes	0	0	No	0	No	disabled	No
INTA4	4	ETS	enabled	No	Yes	0	0	Yes	1	No	enabled	Yes
INTA5	5	ETS	enabled	No	Yes	0	0	Yes	1	No	enabled	Yes
INTA6	6	ETS	disabled	No	Yes	0	0	No	0	No	disabled	No
INTA7	7	ETS	disabled	No	Yes	0	0	No	0	No	disabled	No
INTA8	8	ETS	disabled	No	Yes	0	0	No	0	No	disabled	No
INTA9	9	ETS	disabled	No	Yes	0	0	No	0	No	disabled	No
INTA10	10	ETS	enabled	No	Yes	0	0	No	0	No	disabled	No

The following table describes the DCBX Feature information.

Table 74. DCBX Feature Information Fields

Parameter	Description
Alias	Displays each port's alias.
Port	Displays each port's number.

Parameter	Description
Туре	Feature type
AdmState	Feature status (Enabled or Disabled)
Will	Willing flag status (Yes/True or No/Untrue)
Advrt	Advertisement flag status (Yes/True or No/Untrue)
OpVer	Operating version negotiated with the peer device
MxVer	Maximum operating version supported by the system
PrWill	Peer's Willing flag status (Yes/True or No/Untrue)
SeqNo	Sequence number that changes each time a DCBX parameter in one or more DCB feature TLVs changes
Err	Error condition flag (Yes or No). Yes indicates that an error occurred during the exchange od configuration data with the peer.
OperMode	Operating status negotiated with the peer device (enabled or disabled)
Syncd	Synchronization status between this port and the peer (Yes or No)

Table 74. DCBX Feature Information Fields

DCBX ETS Information

The following command displays DCBX ETS information:

show cee information dcbx port port alias or number> ets

DCBX	DCBX Port Priority Group - Priority Allocation Table

INTA2	2	1	50 5	0	50		
INTA2	2	2	40 4	0	0		

The following table describes the DCBX ETS information.

Table 75. DCBX Feature Information Fields

Parameter	Description				
DCBX Port Priority Group - Priority Allocation Table					
Alias	Displays each port's alias				
Port	Displays each port's number				
PgldDes	Priority Group ID configured on this switch				
PgldOper	Priority Group negotiated with the peer (operating Priority Group).				
PgldPeer	Priority Group ID configured on the peer				
DCBX Port Pr	iority Group - Bandwidth Allocation Table				
BwDes	Bandwidth allocation configured on this switch				
BwOper	Bandwidth allocation negotiated with the peer (operating bandwidth)				
BwPeer	Bandwidth allocation configured on the peer				

DCBX PFC Information

The following command displays DCBX Priority Flow Control (PFC) information:

show cee information dcbx port port alias or number> pfc

Command mode: All

DCBX I	DCBX Port Priority Flow Control Table					
======						
Alias	Port	Priority	EnableDesr	EnableOper	EnablePeer	
INT2	2	0	disabled	disabled	disabled	
INT2	2	1	disabled	disabled	disabled	
INT2	2	2	disabled	disabled	disabled	
INT2	2	3	enabled	disabled	disabled	
INT2	2	4	disabled	disabled	disabled	
INT2	2	5	disabled	disabled	disabled	
INT2	2	6	disabled	disabled	disabled	
INT2	2	7	disabled	disabled	disabled	

DCBX PFC information includes the following:

- Port alias and number
- 802.1p value
- EnableDesr: Status configured on this switch
- EnableOper: Status negotiated with the peer (operating status)
- EnablePeer: Status configured on the peer

DCBX Application Protocol Information

The following command displays DCBX Application Protocol information:

show cee information dcbx port port alias or number> app_proto

Command mode: All

DCBX Application Protocol Table

The following table describes the DCBX Application Protocol information.

Table 76.	DCBX Applic	ation Protocol	Information Fields

Parameter	Description
Protocol ID	Identifies the supported Application Protocol.
Selector Field	Specifies the Application Protocol type, as follows: – 0 = Ethernet Type – 1 = TCP socket ID
Organizationall y Unique ID	DCBX TLV identifier
Alias	Port alias
Port	Port number
Priority	802.1p value

Parameter	Description
EnableDesr	Status configured on this switch
EnableOper	Status negotiated with the peer (operating status)
EnablePeer	Status configured on the peer

Table 76. DCBX Application Protocol Information Fields

ETS Information

Table 77 describes the Enhanced Transmission Selection (ETS) information options

Table 77. ETS Information Options

Command Syntax and Usage
show cee global ets information
Displays global ETS information.
Command mode: All

The following command displays ETS information:

show cee global ets information

Command mode: All

Global ETS information:				
Number of COSq: 8				
Mapping of 802.1p Priority to Priority Groups:				
Priority PGID COSq				
0 0 0				
1 0 0				
2 0 0				
3 1 1				
4 2 2				
5 2 2				
6 2 2				
7 2 2				
Bandwidth Allocation to Priority Groups:				
PGID PG% Description				
0 10				
1 50				
2 40				

Enhanced Transmission Selection (ETS) information includes the following:

- Number of Class of Service queues (COSq) configured
- 802.1p mapping to Priority Groups and Class of Service queues
- Bandwidth allocated to each Priority Group

PFC Information

Table 78 describes the Priority Flow Control (PFC) information options.

Table 78. PFC Information Options

Command S	Syntax	and Usage		
show cee	port	<port alias="" number="" or=""></port>	pfc	information
Display	s PFC	information.		

The following command displays PFC information for a port:

show cee port port alias or number> pfc information

Command mode: All

Global PFC	C Informa	ation:
PFC - ON		
Priority	State	Description
0	Dis	
1	Dis	
2	Dis	
3	Ena	
4	Dis	
5	Dis	
6	Dis	
7	Dis	
State - ir	ndicates	whether PFC is Enabled/Disabled on a particular priority

FCoE Information

Table 79 describes the Fibre Channel over Ethernet (FCoE) information options.

Table 79. FCoE Information Options

Command Syntax and Usage	
show fcoe information	
Displays all current FCoE information.	
Command mode: All	

FIP Snooping Information

 Table 80 describes the Fibre Channel Initialization Protocol (FIP) Snooping information options

Table 80. FIP Snooping Information Options

Command Syntax and Usage	
show fcoe fips port <pre>port alias or number> information</pre>	
Displays FIP Snooping (FIPS) information for the selected por of current FIPS ACLs.	t, including a list
Command mode: All	
show fcoe fips fcf	
Displays FCF information for all ports.	
Command mode: All	
show fcoe fips fcoe	
Displays FCoE connections established on the switch.	
Command mode: All	
show fcoe fips information	
Displays FIP Snooping information for all ports.	
Command mode: All	

The following command displays FIP Snooping information for the selected port:

show fcoe fips port port alias or number> information

Command mode: All

```
FIP Snooping on port INT2:
This port has been configured to automatically detect FCF.
It has currently detected to have 0 FCF connecting to it.
FIPS ACLs configured on this port:
SMAC 00:c0:dd:13:9b:6f, action deny.
SMAC 00:c0:dd:13:9b:70, action deny.
SMAC 00:c0:dd:13:9b:6d, action deny.
SMAC 00:c0:dd:13:9b:6e, action deny.
DMAC 00:c0:dd:13:9b:6f, ethertype 0x8914, action permit.
DMAC 00:c0:dd:13:9b:70, ethertype 0x8914, action permit.
DMAC 00:c0:dd:13:9b:6d, ethertype 0x8914, action permit.
DMAC 00:c0:dd:13:9b:6e, ethertype 0x8914, action permit.
SMAC 0e:fc:00:01:0a:00, DMAC 00:c0:dd:13:9b:6d, ethertype 0x8906, vlan 1002, action
permit.
DMAC 01:10:18:01:00:01, Ethertype 0x8914, action permit.
DMAC 01:10:18:01:00:02, Ethertype 0x8914, action permit.
Ethertype 0x8914, action deny.
Ethertype 0x8906, action deny.
SMAC 0e:fc:00:00:00; SMAC mask ff:ff:ff:00:00:00, action deny.
```

FIP Snooping port information includes the following:

- Fiber Channel Forwarding (FCF) mode
- Number of FCF links connected to the port

• List of FIP Snooping ACLs assigned to the port

The following command displays Fibre Channel Forwarding FIP Snooping information:

show fcoe fips fcf

Total number of FCF	s detect	ed: 10
FCF MAC	Port	Vlan
08:17:f4:fb:c0:02	53	1004
08:17:f4:fb:c0:03	54	1004
08:17:f4:fb:c0:04	55	1002
08:17:f4:fb:c0:05	56	1003
 08:17:f4:fb:c0:0d	64	1002
08:17:14:1D:C0:00	64	1002

Information Dump

The following command dumps switch information:

show information-dump

Command mode: All

Use the dump command to dump all switch information available (10K or more, depending on your configuration). This data is useful for tuning and debugging switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump commands.

Chapter 3. Statistics Commands

You can use the Statistics Commands to view switch performance statistics in both the user and administrator command modes. This chapter discusses how to use the command line interface to display switch statistics.

Table 81. Statistics Commands

Command Syntax and Usage
show layer3 counters
Command mode: All
Displays Layer 3 statistics.
show snmp-server counters
Command mode: All
Displays SNMP statistics. See page 204 for sample output.
show ntp counters
Displays Network Time Protocol (NTP) Statistics. See page 208 for a sample output and a description of NTP Statistics.
Command mode: All
show ptp counters
Displays Precision Time Protocol Statistics. See page 209 for a sample output and a description of PTP Statistics.
Command mode: All
show ip slp counter
Displays Service Location Protocol packet counters. See page 210 for a sample output.
Command mode: All
show counters
Dumps all switch statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command.
For details, see page 210.
Command mode: All

Port Statistics

These commands display traffic statistics on a port-by-port basis. Traffic statistics include SNMP Management Information Base (MIB) objects.

```
Table 82. Port Statistics Commands
```

```
Command Syntax and Usage
show interface port port alias or number> dot1x counters
   Displays IEEE 802.1X statistics for the port. See page 129 for sample output.
   Command mode: All
show interface port port alias or number> bridging-counters
   Displays bridging ("dot1") statistics for the port. See page 132 for sample
   output.
   Command mode: All
show interface port port alias or number> ethernet-counters
   Displays Ethernet ("dot3") statistics for the port. See page 133 for sample
   output.
   Command mode: All
show interface port port alias or number> interface-counters
   Displays interface statistics for the port. See page 136 for sample output.
   Command mode: All
show interface port port alias or number> ip-counters
   Displays IP statistics for the port. See page 138 for sample output.
   Command mode: All
show interface port port alias or number> link-counters
   Displays link statistics for the port. See page 139 for sample output.
   Command mode: All
show interface port port alias or number> rmon-counters
   Displays Remote Monitoring (RMON) statistics for the port. See page 139 for
   sample output.
   Command mode: All
show interface port port alias or number> ptp-counters
   Displays Precision Time Protocol statistics for the port. See page 209 for a
   sample output and a description of PTP Statistics.
   Command mode: All
show interface port port alias or number> oam counters
   Displays Operation, Administrative, and Maintenance (OAM) protocol statistics
   for the port.
   Command mode: All
```

Table 82. Port Statistics Commands

Command Syntax and Usage

clear interface port port alias or number> counters

Clears all statistics for the port.

Command mode: All except User EXEC

clear counters

Clears statistics for all ports.

Command mode: All except User EXEC

802.1X Authenticator Statistics

Use the following command to display the 802.1X authenticator statistics of the selected port:

show interface port port alias or number> dot1x counters

Command mode: All

Authenticator Statistics	:	
eapolFramesRx	=	925
eapolFramesTx	=	3201
eapolStartFramesRx	=	2
eapolLogoffFramesRx	=	0
eapolRespIdFramesRx	=	463
eapolRespFramesRx	=	460
eapolReqIdFramesTx	=	1820
eapolReqFramesTx	=	1381
invalidEapolFramesRx	=	0
eapLengthErrorFramesRx	=	0
lastEapolFrameVersion	=	1
lastEapolFrameSource	=	00:01:02:45:ac:51

Table 83. 802.1X Authenticator Statistics of a Port

Statistics	Description
eapolFramesRx	Total number of EAPOL frames received
eapolFramesTx	Total number of EAPOL frames transmitted
eapolStartFramesRx	Total number of EAPOL Start frames received
eapolLogoffFramesRx	Total number of EAPOL Logoff frames received
eapolRespIdFramesRx	Total number of EAPOL Response Identity frames received
eapolRespFramesRx	Total number of Response frames received
eapolReqIdFramesTx	Total number of Request Identity frames transmitted
eapolReqFramesTx	Total number of Request frames transmitted
invalidEapolFramesRx	Total number of invalid EAPOL frames received

Statistics	Description
eapLengthErrorFramesRx	Total number of EAP length error frames received
lastEapolFrameVersion	The protocol version number carried in the most recently received EAPOL frame.
lastEapolFrameSource	The source MAC address carried in the most recently received EAPOL frame.

802.1X Authenticator Diagnostics

Use the following command to display the 802.1X authenticator diagnostics of the selected port:

show interface port port alias or number> dot1x counters

Command mode: All

Authenticator Diagnostics:	
authEntersConnecting	= 1820
authEapLogoffsWhileConnecting	= 0
authEntersAuthenticating	= 463
authSuccessesWhileAuthenticating	= 5
authTimeoutsWhileAuthenticating	= 0
authFailWhileAuthenticating	= 458
authReauthsWhileAuthenticating	= 0
authEapStartsWhileAuthenticating	= 0
authEapLogoffWhileAuthenticating	= 0
authReauthsWhileAuthenticated	= 3
authEapStartsWhileAuthenticated	= 0
authEapLogoffWhileAuthenticated	= 0
backendResponses	= 923
backendAccessChallenges	= 460
backendOtherRequestsToSupplicant	= 460
backendNonNakResponsesFromSupplicant	= 460
backendAuthSuccesses	= 5
backendAuthFails	= 458

Table 84. 802.1X Authenticator Diagnostics of a Port

Statistics	Description
authEntersConnecting	Total number of times that the state machine transitions to the CONNECTING state from any other state.
authEapLogoffsWhile Connecting	Total number of times that the state machine transitions from CONNECTING to DISCONNECTED as a result of receiving an EAPOL-Logoff message.
authEntersAuthenticating	Total number of times that the state machine transitions from CONNECTING to AUTHENTICATING, as a result of an EAP-Response/Identity message being received from the Supplicant.

Statistics	Description
authSuccessesWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to AUTHENTICATED, as a result of the Backend Authentication state machine indicating successful authentication of the Supplicant.
authTimeoutsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of the Backend Authentication state machine indicating authentication timeout.
authFailWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to HELD, as a result of the Backend Authentication state machine indicating authentication failure.
authReauthsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of a re-authentication request
authEapStartsWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Start message being received from the Supplicant.
authEapLogoffWhile Authenticating	Total number of times that the state machine transitions from AUTHENTICATING to ABORTING, as a result of an EAPOL-Logoff message being received from the Supplicant.
authReauthsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of a re-authentication request.
authEapStartsWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to CONNECTING, as a result of an EAPOL-Start message being received from the Supplicant.
authEapLogoffWhile Authenticated	Total number of times that the state machine transitions from AUTHENTICATED to DISCONNECTED, as a result of an EAPOL-Logoff message being received from the Supplicant.
backendResponses	Total number of times that the state machine sends an initial Access-Request packet to the Authentication server. Indicates that the Authenticator attempted communication with the Authentication Server.
backendAccessChallenges	Total number of times that the state machine receives an initial Access-Challenge packet from the Authentication server. Indicates that the Authentication Server has communication with the Authenticator.

Table 84. 802.1X Authenticator Diagnostics of a Port

Statistics	Description
backendOtherRequests ToSupplicant	Total number of times that the state machine sends an EAP-Request packet (other than an Identity, Notification, Failure, or Success message) to the Supplicant. Indicates that the Authenticator chose an EAP-method.
backendNonNak ResponsesFromSupplicant	Total number of times that the state machine receives a response from the Supplicant to an initial EAP-Request, and the response is something other than EAP-NAK. Indicates that the Supplicant can respond to the Authenticator.s chosen EAP-method.
backendAuthSuccesses	Total number of times that the state machine receives an Accept message from the Authentication Server. Indicates that the Supplicant has successfully authenticated to the Authentication Server.
backendAuthFails	Total number of times that the state machine receives a Reject message from the Authentication Server. Indicates that the Supplicant has not authenticated to the Authentication Server.

Table 84. 802.1X Authenticator Diagnostics of a Port

Bridging Statistics

Use the following command to display the bridging statistics of the selected port:

show interface port port alias or number> bridging-counters

Command mode: All

dot1PortInFrames:63242584dot1PortOutFrames:63277826dot1PortInDiscards:0dot1TpLearnedEntryDiscards:0dot1StpPortForwardTransitions:0	Bridging statistics for port INTA	1:
dot1PortInDiscards:0dot1TpLearnedEntryDiscards:0	dot1PortInFrames:	63242584
dot1TpLearnedEntryDiscards: 0	dot1PortOutFrames:	63277826
1 1	dot1PortInDiscards:	0
dot1StpPortForwardTransitions: 0	dot1TpLearnedEntryDiscards:	0
	dot1StpPortForwardTransitions:	0

Table 85. Bridging Statistics of a Port

Statistics	Description
dot1PortInFrames	The number of frames that have been received by this port from its segment. A frame received on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.
dot1PortOutFrames	The number of frames that have been transmitted by this port to its segment. Note that a frame transmitted on the interface corresponding to this port is only counted by this object if and only if it is for a protocol being processed by the local bridging function, including bridge management frames.

Table 85. Bridging Statistics of a Port

Statistics	Description
dot1PortInDiscards	Count of valid frames received which were discarded (that is, filtered) by the Forwarding Process.
dot1TpLearnedEntry Discards	The total number of Forwarding Database entries, which have been or would have been learnt, but have been discarded due to a lack of space to store them in the Forwarding Database. If this counter is increasing, it indicates that the Forwarding Database is regularly becoming full (a condition which has unpleasant performance effects on the subnetwork). If this counter has a significant value but is not presently increasing, it indicates that the problem has been occurring but is not persistent.
dot1StpPortForward Transitions	The number of times this port has transitioned from the Learning state to the Forwarding state.

Ethernet Statistics

Use the following command to display the ethernet statistics of the selected port:

show interface port port alias or number> ethernet-counters

Command mode: All

0		
0		
0		
0		
0		
0		
NA		
0		
0		
	0 0 0 0 0 NA 0 0	0 0 0 0 0 0 NA 0 0

Table 86. Ethernet Statistics for Port

Statistics	Description
dot3StatsAlignment Errors	A count of frames received on a particular interface that are not an integral number of octets in length and do not pass the Frame Check Sequence (FCS) check.
	The count represented by an instance of this object is incremented when the alignmentError status is returned by the MAC service to the Logical Link Control (LLC) (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsFCSErrors	A count of frames received on a particular interface that are an integral number of octets in length but do not pass the Frame Check Sequence (FCS) check.
	The count represented by an instance of this object is incremented when the frameCheckError status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsSingleCollision Frames	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by exactly one collision.
	A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsMultipleCollisionFrame object.
dot3StatsMultipleCollisionF rames	A count of successfully transmitted frames on a particular interface for which transmission is inhibited by more than one collision.
	A frame that is counted by an instance of this object is also counted by the corresponding instance of either the ifOutUcastPkts, ifOutMulticastPkts, or ifOutBroadcastPkts, and is not counted by the corresponding instance of the dot3StatsSingleCollisionFrames object.

Statistics	Description
dot3StatsLateCollisions	The number of times that a collision is detected on a particular interface later than 512 bit-times into the transmission of a packet.
	Five hundred and twelve bit-times corresponds to 51.2 microseconds on a 10 Mbit/s system. A (late) collision included in a count represented by an instance of this object is also considered as a (generic) collision for purposes of other collision-related statistics.
dot3StatsExcessive Collisions	A count of frames for which transmission on a particular interface fails due to excessive collisions.
dot3StatsInternalMac TransmitErrors	A count of frames for which transmission on a particular interface fails due to an internal MAC sub layer transmit error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsLateCollisions object, the dot3StatsExcessiveCollisions object, or the dot3StatsCarrierSenseErrors object.
	The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of transmission errors on a particular interface that are not otherwise counted.
dot3StatsFrameTooLongs	A count of frames received on a particular interface that exceed the maximum permitted frame size.
	The count represented by an instance of this object is incremented when the frameTooLong status is returned by the MAC service to the LLC (or other MAC user). Received frames for which multiple error conditions obtained are, according to the conventions of IEEE 802.3 Layer Management, counted exclusively according to the error status presented to the LLC.
dot3StatsInternalMac ReceiveErrors	A count of frames for which reception on a particular interface fails due to an internal MAC sub layer receive error. A frame is only counted by an instance of this object if it is not counted by the corresponding instance of either the dot3StatsFrameTooLongs object, the dot3StatsAlignmentErrors object, or the dot3StatsFCSErrors object.
	The precise meaning of the count represented by an instance of this object is implementation-specific. In particular, an instance of this object may represent a count of received errors on a particular interface that are not otherwise counted.

Table 86. Ethernet Statistics for Port (continued)

Interface Statistics

Use the following command to display the interface statistics of the selected port:

show interface port port alias or number> interface-counters

Command mode: All

Interface statistics	for port EXT1:		
	ifHCIn Counters	ifHCOut Counters	
Octets:	51697080313	51721056808	
UcastPkts:	65356399	65385714	
BroadcastPkts:	0	6516	
MulticastPkts:	0	0	
FlowCtrlPkts:	0	0	
Discards:	0	0	
Errors:	0	21187	
Ingress Discard reas	ons:	Egress Discard reasons:	
VLAN Discards:	0	HOL-blocking Discards:	0
Filter Discards:	0	MMU Discards:	0
Policy Discards:	0	Cell Error Discards:	0
Non-Forwarding State	: 0	MMU Aging Discards:	0
IBP/CBP Discards:	0	Other Discards:	0

Table 87. Interface Statistics for Port

Statistics	Description
ifInOctets	The total number of octets received on the interface, including framing characters.
ifInUcastPkts	The number of packets, delivered by this sub-layer to a higher sub- layer, which were not addressed to a multicast or broadcast address at this sub-layer.
ifInBroadcastPkts	The number of packets, delivered by this sub-layer to a higher sub- layer, which were addressed to a broadcast address at this sub-layer.
ifInMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses.
ifInFlowControlPkts	The total number of flow control pause packets received on the interface.
ifInDiscards	The number of inbound packets which were chosen to be discarded even though no errors had been detected to prevent their being delivered to a higher-layer protocol. One possible reason for discarding such a packet could be to free up buffer space.

Table 87.	Interface	Statistics	for Port	(continued)
-----------	-----------	------------	----------	-------------

Statistics	Description
ifInErrors	For packet-oriented interfaces, the number of inbound packets that contained errors preventing them from being delivered to a higher-layer protocol. For character-oriented or fixed-length interfaces, the number of inbound transmission units that contained errors preventing them from being deliverable to a higher-layer protocol.
ifOutOctets	The total number of octets transmitted out of the interface, including framing characters.
ifOutUcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were not addressed to a multicast or broadcast address at this sub-layer, including those that were discarded or not sent.
ifOutBroadcastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a broadcast address at this sub-layer, including those that were discarded or not sent. This object is a 64-bit version of ifOutBroadcastPkts.
ifOutMulticastPkts	The total number of packets that higher-level protocols requested to be transmitted, and which were addressed to a multicast address at this sub-layer, including those that were discarded or not sent. For a MAC layer protocol, this includes both Group and Functional addresses. This object is a 64-bit version of ifOutMulticastPkts.
ifOutFlowControlPkts	The total number of flow control pause packets transmitted out of the interface.
ifOutDiscards	The number of outbound packets which were chosen to be discarded even though no errors had been detected to prevent their being transmitted. One possible reason for discarding such a packet could be to free up buffer space.
ifOutErrors	For packet-oriented interfaces, the number of outbound packets that could not be transmitted because of errors. For character-oriented or fixed-length interfaces, the number of outbound transmission units that could not be transmitted because of errors.
VLAN Discards	Discarded because the packet was tagged with a VLAN to which this port is not a member.
Filter Discards	Dropped by the Content Aware Engine (user-configured filter).
Policy Discards	Dropped due to policy setting. For example, due to a user-configured static entry.

Statistics	Description
Non-Forwarding State	Discarded because the ingress port is not in the forwarding state.
IBP/CBP Discards	Discarded because of Ingress Back Pressure (flow control), or because the Common Buffer Pool is full (for example, insufficient packet buffering).
HOL-blocking Discards	HOL-blocking Discards = Discarded because of Head Of Line (HOL) blocking mechanism. Low priority packets are placed in a separate queue and can be discarded as applications or the TCP protocol keep track of whether a retransmission is necessary or not. HOL blocking is necessary to wait until an overloaded egress port buffer can receive data again.
MMU Discards	Discarded because of Memory Management Unit.
Other Discards	Discarded packets not included in any category.

Table 87. Interface Statistics for Port (continued)

Interface Protocol Statistics

Use the following command to display the interface protocol statistics of the selected port:

show interface port port alias or number> ip-counters

Command mode: All

ipInReceives0ipInHeaderError:0ipInDiscards:	GEA IP statistics for port	INTA1:
-	ipInReceives : 0	
ipInDiscards : 0	ipInHeaderError: 0	
	ipInDiscards : 0	

Table 88. Interface Protocol Statistics

Statistics	Description
ipInReceives	The total number of input datagrams received from interfaces, including those received in error.
ipInHeaderErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch).
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.

Link Statistics

Use the following command to display the link statistics of the selected port:

show interface port port alias or number> link-counters

Command mode: All

Table 89. Link Statistics

Statistics	Description
linkStateChange	The total number of link state changes.

RMON Statistics

Use the following command to display the Remote Monitoring (RMON) statistics of the selected port:

show interface port port alias or number> rmon-counters

Command mode: All.

RMON statistics for port EXT2:		
etherStatsDropEvents:	NA	
etherStatsOctets:	0	
etherStatsPkts:	0	
etherStatsBroadcastPkts:	0	
etherStatsMulticastPkts:	0	
etherStatsCRCAlignErrors:	0	
etherStatsUndersizePkts:	0	
etherStatsOversizePkts:	0	
etherStatsFragments:	NA	
etherStatsJabbers:	0	
etherStatsCollisions:	0	
etherStatsPkts64Octets:	0	
etherStatsPkts65to1270ctets:	0	
etherStatsPkts128to2550ctets:	0	
etherStatsPkts256to5110ctets:	0	
etherStatsPkts512to1023Octets:	0	
etherStatsPkts1024to1518Octets:	0	

Statistics	Description
etherStatsDropEvents	The total number of packets received that were dropped because of system resource constraints.
etherStatsOctets	The total number of octets of data (including those in bad packets) received on the network (excluding framing bits but including FCS octets).
etherStatsPkts	The total number of packets (including bad packets, broadcast packets, and multicast packets) received.

Statistics	Description
etherStatsBroadcastPkts	The total number of good packets received that were directed to the broadcast address.
etherStatsMulticastPkts	The total number of good packets received that were directed to a multicast address.
etherStatsCRCAlignErrors	The total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, but had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
etherStatsUndersizePkts	The total number of packets received that were less than 64 octets long (excluding framing bits but including FCS octets) and were otherwise well formed.
etherStatsOversizePkts	The total number of packets received that were longer than 1518 octets (excluding framing bits but including FCS octets) and were otherwise well formed.
etherStatsFragments	The total number of packets received that were less than 64 octets in length (excluding framing bits but including FCS octets) and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error).
etherStatsJabbers	The total number of packets received that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either a bad Frame Check Sequence (FCS) with an integral number of octets (FCS Error) or a bad FCS with a non-integral number of octets (Alignment Error). Jabber is defined as the condition where any packet exceeds 20 ms. The allowed range to detect jabber is between 20 ms and 150 ms.
etherStatsCollisions	The best estimate of the total number of collisions on this Ethernet segment.
etherStatsPkts64Octets	The total number of packets (including bad packets) received that were less than or equal to 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts65to127 Octets	The total number of packets (including bad packets) received that were greater than 64 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts128to255 Octets	The total number of packets (including bad packets) received that were greater than 127 octets in length (excluding framing bits but including FCS octets).

Table 90. RMON Statistics of a Port (continued)

Table 90.	RMON Statistics of a Port (continued)
-----------	-----------------------------	------------

Statistics	Description
etherStatsPkts256to511 Octets	The total number of packets (including bad packets) received that were greater than 255 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts512to1023 Octets	The total number of packets (including bad packets) received that were greater than 511 octets in length (excluding framing bits but including FCS octets).
etherStatsPkts1024to1518 Octets	The total number of packets (including bad packets) received that were greater than 1023 octets in length (excluding framing bits but including FCS octets).

QoS Queue Counter-Based Statistics

Use the following command to display the counter-based QoS queue statistics of the selected port:

show interface port port alias or number> egress-queue-counters

Command mode: All.

QoS statistics for port INTA14:		
QoS Queue 0:		
Tx Packets:	664872	
Dropped Packets:	0	
Tx Bytes:	46791050	
Dropped Bytes:	0	
QoS Queue 1:		
Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	
QoS Queue 2:		
Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0

Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	
QoS Queue 7:		
Tx Packets:	9112	
Dropped Packets:	0	
Tx Bytes:	1463040	
Dropped Bytes:	0	

Table 91. QoS Queue Counter-Based Statistics of a Port

Statistics	Description
Tx Packets	Total number of successfully transmitted packets for the QoS queue
Dropped Packets	Total number of dropped packets for the QoS queue

Statistics	Description
Tx Bytes	Total number of successfully transmitted bytes for the QoS queue
Dropped Bytes	Total number of dropped bytes for the QoS queue

Table 91. QoS Queue Counter-Based Statistics of a Port (continued)

QoS Queue Rate-Based Statistics

Use the following command to display the rate-based QoS queue statistics of the selected port:

show interface port cport alias or number> egress-queue-rate

Command mode: All.

QoS Rate for port INTA14:		
QoS Queue 0:		
Tx Packets:	5	
Dropped Packets:	0	
Tx Bytes:	363	
Dropped Bytes:	0	
QoS Queue 1:		
Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	
QoS Queue 2:		
Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	
QoS Queue 3:

Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	
QoS Queue 5:		
Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	
QoS Queue 6:		
Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	
QoS Queue 7:		
Tx Packets:	0	
Dropped Packets:	0	
Tx Bytes:	0	
Dropped Bytes:	0	

Table 92. QoS Queue Rate-Based Statistics of a Por
--

Statistics	Description
Tx Packets	Number of successfully transmitted packets per second for the QoS queue
Dropped Packets	Number of dropped packets per second for the QoS queue
Tx Bytes	Number of successfully transmitted bytes per second for the QoS queue
Dropped Bytes	Number of dropped bytes per second for the QoS queue

Trunk Group Statistics

Table 93. Trunk Group Statistics Commands

Command Syntax and Usage

show interface portchannel <*trunk group number*> interface counters Displays interface statistics for the trunk group.

Command mode: All

clear interface portchannel <trunk group number> counter

Clears all the statistics on the selected trunk group.

Command mode: All except User EXEC

Layer 2 Statistics

Table 94. Layer 2 Statistics Commands

abour "	ac-address-table counters
	blays FDB statistics. See page 147 for sample output.
Cor	nmand mode: All
clear	mac-address-table counters
Clea	ars FDB statistics.
Cor	nmand mode: All except User EXEC
show i	nterface port <pre>port alias or number> lacp counters</pre>
	plays Link Aggregation Control Protocol (LACP) statistics. See page 147 for pple output.
Cor	nmand mode: All
clear	interface port <pre>port alias or number> lacp counters</pre>
Clea	ars Link Aggregation Control Protocol (LACP) statistics.
Cor	nmand mode: All except User EXEC
show h	otlinks counters
Dis	plays Hot Links statistics. See page 148 for sample output.
Cor	nmand mode: All except User EXEC
clear	hotlinks
Clea	ars all Hot Links statistics.
Cor	nmand mode: All except User EXEC
show i	nterface port <pre>port alias or number> 11dp counters</pre>
Dis	plays LLDP statistics. See page 149 for sample output.
Cor	nmand mode: All except User EXEC
show c	pam counters
Dis	plays OAM statistics. See page 150 for sample output.

FDB Statistics

Use the following command to display statistics regarding the use of the forwarding database, including the number of new entries, finds, and unsuccessful searches:

show mac-address-table counters

Command mode: All

FDB statistics:			
current:	83	hiwat:	855

FDB statistics are described in the following table:

Table 95. Forwarding Database Statistics

Statistic	Description
current	Current number of entries in the Forwarding Database.
hiwat	Highest number of entries recorded at any given time in the Forwarding Database.

LACP Statistics

Use the following command to display Link Aggregation Control Protocol (LACP) statistics:

show interface port port alias or number> lacp counters

Command mode: All

Port EXT1:	
Valid LACPDUs received:	- 870
Valid Marker PDUs received:	- 0
Valid Marker Rsp PDUs received:	- 0
Unknown version/TLV type:	- 0
Illegal subtype received:	- 0
LACPDUs transmitted:	- 6031
Marker PDUs transmitted:	- 0
Marker Rsp PDUs transmitted:	- 0

Link Aggregation Control Protocol (LACP) statistics are described in the following table:

Table 96. LACP Statistics

Statistic	Description		
Valid LACPDUs received	Total number of valid LACP data units received.		
Valid Marker PDUs received	Total number of valid LACP marker data units received.		
Valid Marker Rsp PDUs received	Total number of valid LACP marker response data units received.		

Table 96. LACP Statistics (continued)

Statistic	Description
Unknown version/TLV type	Total number of LACP data units with an unknown version or type, length, and value (TLV) received.
Illegal subtype received	Total number of LACP data units with an illegal subtype received.
LACPDUs transmitted	Total number of LACP data units transmitted.
Marker PDUs transmitted	Total number of LACP marker data units transmitted.
Marker Rsp PDUs transmitted	Total number of LACP marker response data units transmitted.

Hotlinks Statistics

Use the following command to display Hot Links statistics:

show hotlinks counters

Command mode: All

Hot Links Trigger Stats:					
Trigger 1 statistics: Trigger Name: Tric	aor	1			
Master active:	lder	0			
Backup active: FDB update:	0	0 failed:	0		

The following table describes the Hotlinks statistics:

Table 97. Hotlinks Statistics

Statistic	Description
Master active	Total number of times the Master interface transitioned to the Active state.
Backup active	Total number of times the Backup interface transitioned to the Active state.
FDB update	Total number of FDB update requests sent.
failed	Total number of FDB update requests that failed.

LLDP Port Statistics

Use the following command to display LLDP statistics:

show interface port cport alias or number> lldp counters

Command mode: All

LLDP Port INTA1 Statistics	
Frames Transmitted	: 0
Frames Received	: 0
Frames Received in Errors	: 0
Frames Discarded	: 0
TLVs Unrecognized	: 0
Neighbors Aged Out	: 0

The following table describes the LLDP port statistics:

Table 98. LLDP Port Statistics

Statistic	Description
Frames Transmitted	Total number of LLDP frames transmitted.
Frames Received	Total number of LLDP frames received.
Frames Received in Errors	Total number of LLDP frames that had errors.
Frames Discarded	Total number of LLDP frames discarded.
TLVs Unrecognized	Total number of unrecognized TLV (Type, Length, and Value) fields received.
Neighbors Aged Out	Total number of neighbor devices that have had their LLDP information aged out.

OAM Statistics

Use the following command to display OAM statistics:

```
show oam counters
```

Command mode: All

OAM statistics on port INTA1	
Information OAMPDU Tx :	0
Information OAMPDU Rx :	0
Unsupported OAMPDU Tx :	0
Unsupported OAMPDU Tx :	0
Local faults	
0 Link fault records	
0 Critical events	
0 Dying gasps	
Remote faults	
0 Link fault records	
0 Critical events	
0 Dying gasps	

OAM statistics include the following:

- Total number of OAM Protocol Data Units (OAMPDU) transmitted and received.
- Total number of unsupported OAM Protocol Data Units (OAMPDU) transmitted and received.
- Local faults detected
- Remote faults detected

vLAG Statistics

The following table describes the vLAG statistics commands:

Table 99. vLAG Statistics Options

Command Syntax and Usage
show vlag isl-statistics Displays vLAG ISL statistics for the selected port. See page 151 for sample output.
clear vlag statistics Clears all vLAG statistics.
show vlag statistics Displays all vLAG statistics. See page 151 for sample output.

vLAG ISL Statistics

Use the following command to display vLAG statistics:

```
show vlag isl-statistics
```

Command mode: All

ISL statistics include the total number of octets received/transmitted, and the total number of packets received/transmitted over the Inter-Switch Link (ISL).

vLAG Statistics

Use the following command to display vLAG statistics:

show vlag statistics

Command mode: All

vLAG PDU sent:			
Role Election:	0	System Info:	0
Peer Instance Enable:	0	Peer Instance Disable:	0
FDB Dynamic Add:	0	FDB Dynamic Del:	0
FDB Inactive Add:	0	FDB Inactive Del:	0
Health Check:	0	ISL Hello:	0
Other:	0	Unknown:	0
vLAG PDU received:			
Role Election:	0	System Info:	0
Peer Instance Enable:	0	Peer Instance Disable:	0
FDB Dynamic Add:	0	FDB Dynamic Del:	0
FDB Inactive Add:	0	FDB Inactive Del:	0
Health Check:	0	ISL Hello:	0
Other:	0	Unknown:	0
vLAG IGMP packets for	warded:		
IGMP Reports:	0		
IGMP Leaves:	0		

The following table describes the vLAG statistics:

Table 100. vLAG Statistics

Statistic	Description		
Role Election	Total number of vLAG PDUs sent for role elections.		
System Info	Total number of vLAG PDUs sent for getting system information.		
Peer Instance Enable	Total number of vLAG PDUs sent for enabling peer instance.		
Peer Instance Disable	Total number of vLAG PDUs sent for disabling peer instance.		

Table 100. vLAG Statistics (continued)

Statistic	Description
FDB Dynamic Add	Total number of vLAG PDUs sent for addition of FDB dynamic entry.
FDB Dynamic Del	Total number of vLAG PDUs sent for deletion of FDB dynamic entry.
FDB Inactive Add	Total number of vLAG PDUs sent for addition of FDB inactive entry.
FDB Inactive Del	Total number of vLAG PDUs sent for deletion of FDB inactive entry.
Health Check	Total number of vLAG PDUs sent for health checks.
ISL Hello	Total number of vLAG PDUs sent for ISL hello.
Other	Total number of vLAG PDUs sent for other reasons.
Unknown	Total number of vLAG PDUs sent for unknown operations.
	vLAG IGMP packets forwarded
IGMP Reports	Total number of IGMP Reports forwarded over vLAG.
IGMP Leaves	Total number of IGMP Leave messages forwarded over vLAG.

Layer 3 Statistics

Table 101. Layer 3 Statistics Commands

```
Command Syntax and Usage
show ip counters
   Displays IP statistics. See page 156 for sample output.
   Command mode: All
clear ip counters
   Clears IPv4 statistics. Use this command with caution as it deletes all the IPv4
   statistics.
   Command mode: All except User EXEC
show ip route counters
   Displays route statistics. See page 164 for sample output.
   Command mode: All
show ip arp counters
   Displays Address Resolution Protocol (ARP) statistics. See page 165 for
   sample output.
   Command mode: All
show ip dns counters
   Displays Domain Name System (DNS) statistics. See page 165 for sample
   output.
   Command mode: All
show ip icmp counters
   Displays ICMP statistics. See page 166 for sample output.
   Command mode: All
show ip tcp counters
   Displays TCP statistics. See page 168 for sample output.
   Command mode: All
show ip udp counters
   Displays UDP statistics. See page 169 for sample output.
   Command mode: All
show ip ospf counters
   Displays OSPF statistics. See page 176 for sample output.
   Command mode: All
show ipv6 ospf counters
   Displays OSPFv3 statistics. See page 181 for sample output.
   Command mode: All
```

Table 101.	Layer 3 Statistics Commands (continued)
------------	---

Command Syntax and Usage
show ip igmp counters Displays IGMP statistics. See page 170 for sample output. Command mode: All
show layer3 igmp-groups Displays the total number of IGMP groups that are registered on the switch. Command mode: All
show layer3 ipmc-groups Displays the total number of current IP multicast groups that are registered on the switch. Command mode: All
<pre>show ipv6 mld counters Displays Multicast Listener Discovery (MLD) statistics. See page 172 for more details and sample output. Command mode: All</pre>
show ip vrrp counters When virtual routers are configured, you can display the protocol statistics for VRRP. See page 185 for sample output. Command mode: All
show ip pim counters Displays PIM statistics for all configured PIM interfaces. See page 186 for sample output. Command mode: All
show ip pim mroute count Displays statistics of various multicast entry types. Command mode: All
show ip pim interface <i><interface number=""></interface></i> counters Displays PIM statistics for the selected interface. Command mode: All
<pre>show ip rip counters Displays Routing Information Protocol (RIP) statistics. See page 187 for sample output. Command mode: All</pre>
clear ip arp counters Clears Address Resolution Protocol (ARP) statistics. Command mode: All except User EXEC

Table 101. Layer 3 Statistics Commands (continued)	
Command Syntax and Usage	
clear ip dns counters	
Clears Domain Name System (DNS) statistics.	
Command mode: All except User EXEC	
clear ip icmp counters	
Clears Internet Control Message Protocol (ICMP) statistics.	
Command mode: All except User EXEC	
clear ip tcp counters	
Clears Transmission Control Protocol (TCP) statistics.	
Command mode: All except User EXEC	
clear ip udp counters	
Clears User Datagram Protocol (UDP) statistics.	
Command mode: All except User EXEC	
clear ip igmp [< <i>VLAN number</i> >] counters	
Clears IGMP statistics.	
Command mode: All	
clear ip vrrp counters	
Clears VRRP statistics.	
Command mode: All	
clear ip pim counters	
Clears PIM statistics for all interfaces.	
Command mode: Privileged EXEC	
clear ip pim interface < <i>interface number</i> > counters	
Clears PIM statistics on the selected interface.	
Command mode: Privileged EXEC	
clear ip counters	
Clears IP statistics. Use this command with caution as it will delete all the IP statistics.)
Command mode: All	
clear ip rip counters	
Clears Routing Information Protocol (RIP) statistics.	
Command mode: All except User EXEC	

Table 101. Layer 3 Statistics Commands (continued)

Table 101. Layer 3 Statistics Commands (continued)

Command Syntax and Usage

clear ip ospf counters

Clears Open Shortest Path First (OSPF) statistics.

Command mode: All except User EXEC

show layer3 counters

Dumps all Layer 3 statistics. Use this command to gather data for tuning and debugging switch performance. If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command.

Command mode: All

IPv4 Statistics

The following command displays IPv4 statistics:

show ip counters

Command mode: All

Use the following command to clear IPv4 statistics:

clear ip counters

IP statistics:				
ipInReceives:	3115873	ipInHdrErrors:	1	
ipInAddrErrors:	35447	ipForwDatagrams:	0	
ipInUnknownProtos:	500504	ipInDiscards:	0	
ipInDelivers:	2334166	ipOutRequests:	1010542	
ipOutDiscards:	4	ipOutNoRoutes:	4	
ipReasmReqds:	0	ipReasmOKs:	0	
ipReasmFails:	0	ipFragOKs:	0	
ipFragFails:	0	ipFragCreates:	0	
ipRoutingDiscards:	0	ipDefaultTTL:	255	
ipReasmTimeout:	5			

Table 102. IP Statistics

Statistic	Description The total number of input datagrams received from interfaces, including those received in error.		
ipInReceives			
ipInHdrErrors	The number of input datagrams discarded due to errors in their IP headers, including bad checksums, version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.		

Table 102. IP Statistics (continued)

Statistic	Description	
ipInAddrErrors	The number of input datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses (for example, 0.0.0.0) and addresses of unsupported Classes (for example, Class E). For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.	
ipForwDatagrams	The number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source- Route option processing was successful.	
ipInUnknownProtos	The number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.	
ipInDiscards	The number of input IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.	
ipInDelivers	The total number of input datagrams successfully delivered to IP user-protocols (including ICMP).	
ipOutRequests	The total number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission. Note that this counter does include any datagrams counted in ipForwDatagrams	
ipOutDiscards	The number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space). Note that this counter would include datagrams counted in <i>ipForwDatagrams</i> if any such packets met this (discretionary) discard criterion.	
ipOutNoRoutes	The number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this counter includes any packets counted in ipForwDatagrams, which meet this <i>no-route</i> criterion. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.	
ipReasmReqds	The number of IP fragments received which needed to be reassembled at this entity (the switch).	
ipReasmOKs	The number of IP datagrams successfully re- assembled.	

Table 102. IP Statistics (continued)

Statistic	Description	
ipReasmFails	The number of failures detected by the IP re- assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.	
ipFragOKs	The number of IP datagrams that have been successfully fragmented at this entity (the switch).	
ipFragFails	The number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their Don't Fragment flag was set.	
ipFragCreates	The number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).	
ipRoutingDiscards	The number of routing entries, which were chosen to be discarded even though they are valid. One possible reason for discarding such an entry could be to free-up buffer space for other routing entries.	
ipDefaultTTL	The default value inserted into the Time-To-Live (TTL) field of the IP header of datagrams originated at this entity (the switch), whenever a TTL value is not supplied by the transport layer protocol.	
ipReasmTimeout	The maximum number of seconds, which received fragments are held while they are awaiting reassembly a this entity (the switch).	

IPv6 Statistics

The following command displays IPv6 statistics:

show ipv6 counters

Command mode: All

Use the following command to clear IPv6 statistics:

clear ipv6 counters

Table 103 describes the IPv6 statistics.

Table 103. IPv6 Statistics

Statistic	Description			
Rcvd	Number of datagrams received from interfaces, including those received in error.			
HdrErrors	Number of datagrams discarded due to errors in their IP headers, including bad checksums, version number mismatch, other format errors, time-to-live exceeded, errors discovered in processing their IP options, and so forth.			
TooBigErrors	The number of input datagrams that could not be forwarded because their size exceeded the link MTU of outgoing interface.			
AddrErrors	Number of datagrams discarded because the IP address in their IP header's destination field was not a valid address to be received at this entity (the switch). This count includes invalid addresses. For entities which are not IP Gateways and therefore do not forward datagrams, this counter includes datagrams discarded because the destination address was not a local address.			
FwdDgrams	Number of input datagrams for which this entity (the switch) was not their final IP destination, as a result of which an attempt was made to find a route to forward them to that final destination. In entities which do not act as IP Gateways, this counter will include only those packets, which were Source-Routed via this entity (the switch), and the Source- Route option processing was successful.			
UnknownProtos	Number of locally addressed datagrams received successfully but discarded because of an unknown or unsupported protocol.			
Discards	Number of IP datagrams for which no problems were encountered to prevent their continued processing, but which were discarded (for example, for lack of buffer space). Note that this counter does not include any datagrams discarded while awaiting re-assembly.			
Delivers	Number of datagrams successfully delivered to IP user-protocols (including ICMP).			
OutRequests	Number of IP datagrams which local IP user-protocols (including ICMP) supplied to IP in requests for transmission.			
OutDiscards	Number of output IP datagrams for which no problem was encountered to prevent their transmission to their destination, but which were discarded (for example, for lack of buffer space).			
OutNoRoutes	Number of IP datagrams discarded because no route could be found to transmit them to their destination. Note that this includes any datagrams which a host cannot route because all of its default gateways are down.			

Table 103. IPv6 Statistics (continued)

Statistic	Description		
ReasmReqds	Number of IP fragments received which needed to be reassembled at this entity (the switch).		
ReasmOKs	Number of IP datagrams successfully re- assembled.		
ReasmFails	Number of failures detected by the IP re- assembly algorithm (for whatever reason: timed out, errors, and so forth). Note that this is not necessarily a count of discarded IP fragments since some algorithms (notably the algorithm in RFC 815) can lose track of the number of fragments by combining them as they are received.		
FragOKs	Number of IP datagrams that have been successfully fragmented at this entity (the switch).		
FragFails	Number of IP datagrams that have been discarded because they needed to be fragmented at this entity (the switch) but could not be, for example, because their Don't Fragment flag was set.		
FragCreates	Number of IP datagram fragments that have been generated as a result of fragmentation at this entity (the switch).		
RcvdMCastPkt	The number of multicast packets received by the interface.		
SentMcastPkts	The number of multicast packets transmitted by the interface.		
TruncatedPkts	The number of input datagrams discarded because datagram frame didn't carry enough data.		
RcvdRedirects	The number of Redirect messages received by the interface.		
SentRedirects	The number of Redirect messages sent.		

The following table describes the IPv6 ICMP statistics.

Table 104. ICMP Statistics

Statistic	Description		
Received			
ICMPPkts	Number of ICMP messages which the entity (the switch) received.		
ICMPErrPkt	Number of ICMP messages which the entity (the switch) received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, and so forth).		
DestUnreach	Number of ICMP Destination Unreachable messages received.		
TimeExcds	Number of ICMP Time Exceeded messages received.		
ParmProbs	Number of ICMP Parameter Problem messages received.		
PktTooBigMsg	The number of ICMP Packet Too Big messages received by the interface.		
ICMPEchoReq	Number of ICMP Echo (request) messages received.		
ICMPEchoReps	Number of ICMP Echo Reply messages received.		
RouterSols	Number of Router Solicitation messages received by the switch.		
RouterAdv	Number of Router Advertisements received by the switch.		
NeighSols	Number of Neighbor Solicitations received by the switch.		
NeighAdv	Number of Neighbor Advertisements received by the switch.		
Redirects	Number of ICMP Redirect messages received.		
AdminProhib	The number of ICMP destination unreachable/communication administratively prohibited messages received by the interface.		
ICMPBadCode	The number of ICMP Parameter Problem messages received by the interface.		
Sent			
ICMPMsgs	Number of ICMP messages which this entity (the switch) attempted to send.		
ICMPErrMsgs	Number of ICMP messages which this entity (the switch) did not send due to problems discovered within ICMP such as a lack of buffer. This value should not include errors discovered outside the ICMP layer such as the inability of IP to route the resultant datagram. In some implementations there may be no types of errors that contribute to this counter's value.		
DstUnReach	Number of ICMP Destination Unreachable messages sent.		
TimeExcds	Number of ICMP Time Exceeded messages sent.		

Table 104. ICMP Statistics (continued)

Statistic	Description
ParmProbs	Number of ICMP Parameter Problem messages sent.
PktTooBigs	The number of ICMP Packet Too Big messages sent by the interface.
EchoReq	Number of ICMP Echo (request) messages sent.
EchoReply	Number of ICMP Echo Reply messages sent.
RouterSols	Number of Router Solicitation messages sent by the switch.
RouterAdv	Number of Router Advertisements sent by the switch.
NeighSols	Number of Neighbor Solicitations sent by the switch.
NeighAdv	Number of Neighbor Advertisements sent by the switch.
RedirectMsgs	Number of ICMP Redirect messages sent. For a host, this object will always be zero, since hosts do not send redirects.
AdminProhibMsgs	Number of ICMP destination unreachable/communication administratively prohibited messages sent.

Table 105 describes the UDP statistics.

Table 105. UDP Statistics

Statistic	Description		
Received			
UDPDgrams	Number of UDP datagrams received by the switch.		
UDPNoPorts	Number of received UDP datagrams for which there was no application at the destination port.		
UDPErrPkts	Number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.		
Sent			
UDPDgrams	Number of UDP datagrams sent from this entity (the switch).		

IPv4 Route Statistics

The following command displays IPv4 route statistics:

```
show ip route counters
```

Command mode: All

Route statistics:		
Current total outstanding routes	:	1
Highest number ever recorded	:	1
Current static routes	:	0
Current RIP routes	:	0
Current OSPF routes	:	0
Current BGP routes	:	0
Maximum supported routes	:	2048
ECMP statistics (active in ASIC):		
Maximum number of ECMP routes	:	2048
Maximum number of static ECMP routes	:	128
Number of routes with ECMP paths	:	0

IPv6 Route Statistics

The following command displays IPv6 route statistics:

show ipv6 route counters

Command mode: All

IPV6 Route statistics: ipv6RoutesCur: 4 ipv6RoutesMax: 1156	-	outesHighWater:	6	
ECMP statistics:				
Maximum number of ECMP routes	:	: 600		
Max ECMP paths allowed for one	e route :	: 5		

Table 106. IPv6 Route Statistics

Statistics	Description
ipv6RoutesCur	Total number of outstanding routes in the route table.
ipv6RoutesHighWater	Highest number of routes ever recorded in the route table.
ipv6RoutesMax	Maximum number of routes that are supported.
Maximum number of ECMP routes	Maximum number of ECMP routes supported.
Max ECMP paths allowed for one route	Maximum number of ECMP paths supported for each route.

Use the clear option to delete all IPv6 route statistics.

ARP statistics

The following command displays Address Resolution Protocol statistics.

show ip arp counters

Command mode: All

ARP statistics:				
arpEntriesCur:	3	arpEntriesHighWater:	4	
arpEntriesMax:	4095			

Table 107. ARP Statistics

Statistic	Description
arpEntriesCur	The total number of outstanding ARP entries in the ARP table.
arpEntriesHighWater	The highest number of ARP entries ever recorded in the ARP table.
arpEntriesMax	The maximum number of ARP entries that are supported.

DNS Statistics

The following command displays Domain Name System statistics.

show ip dns counters

Command mode: All

0				
U				
0				
0				
	0	0	0	0

Table 108. DNS Statistics

Statistics	Description			
dnsInRequests	The total number of DNS response packets that have been received.			
dnsOutRequests	The total number of DNS response packets that have been transmitted.			
dnsBadRequests	The total number of DNS request packets received that were dropped.			

ICMP Statistics

The following command displays ICMP statistics:

show ip icmp counters

ICMP statistics:				
icmpInMsgs:	245802	icmpInErrors:	1393	
icmpInDestUnreachs:	41	icmpInTimeExcds:	0	
icmpInParmProbs:	0	icmpInSrcQuenchs:	0	
icmpInRedirects:	0	icmpInEchos:	18	
icmpInEchoReps:	244350	icmpInTimestamps:	0	
icmpInTimestampReps:	0	icmpInAddrMasks:	0	
icmpInAddrMaskReps:	0	icmpOutMsgs:	253810	
icmpOutErrors:	0	icmpOutDestUnreachs:	15	
icmpOutTimeExcds:	0	icmpOutParmProbs:	0	
icmpOutSrcQuenchs:	0	icmpOutRedirects:	0	
icmpOutEchos:	253777	icmpOutEchoReps:	18	
icmpOutTimestamps:	0	icmpOutTimestampReps:	0	
icmpOutAddrMasks:	0	icmpOutAddrMaskReps:	0	

Table 109. ICMP Statistics

Statistic	Description
icmpInMsgs	The total number of ICMP messages which the entity (the switch) received. Note that this counter includes all those counted by icmpInErrors.
icmpInErrors	The number of ICMP messages which the entity (the switch) received but determined as having ICMP-specific errors (bad ICMP checksums, bad length, and so forth).
icmpInDestUnreachs	The number of ICMP Destination Unreachable messages received.
icmpInTimeExcds	The number of ICMP Time Exceeded messages received.
icmpInParmProbs	The number of ICMP Parameter Problem messages received.
icmpInSrcQuenchs	The number of ICMP Source Quench (buffer almost full, stop sending data) messages received.
icmpInRedirects	The number of ICMP Redirect messages received.
icmpInEchos	The number of ICMP Echo (request) messages received.
icmpInEchoReps	The number of ICMP Echo Reply messages received.
icmpInTimestamps	The number of ICMP Timestamp (request) messages received.
icmpInTimestampReps	The number of ICMP Timestamp Reply messages received.

Table 109. ICMP Statistics

Statistic	Description
icmpInAddrMasks	The number of ICMP Address Mask Request messages received.
icmpInAddrMaskReps	The number of ICMP Address Mask Reply messages received.
icmpOutMsgs	The total number of ICMP messages which this entity (the switch) attempted to send. Note that this counter includes all those counted by icmpOutErrors.
icmpOutErrors	The number of ICMP messages which this entity (the switch) did not send due to problems discovered within ICMP such as a lack of buffer. This value should not include errors discovered outside the ICMP layer such as the inability of IP to route the resultant datagram. In some implementations there may be no types of errors that contribute to this counter's value.
icmpOutDestUnreachs	The number of ICMP Destination Unreachable messages sent.
icmpOutTimeExcds	The number of ICMP Time Exceeded messages sent.
icmpOutParmProbs	The number of ICMP Parameter Problem messages sent.
icmpOutSrcQuenchs	The number of ICMP Source Quench (buffer almost full, stop sending data) messages sent.
icmpOutRedirects	The number of ICMP Redirect messages sent. For a host, this object will always be zero, since hosts do not send redirects.
icmpOutEchos	The number of ICMP Echo (request) messages sent.
icmpOutEchoReps	The number of ICMP Echo Reply messages sent.
icmpOutTimestamps	The number of ICMP Timestamp (request) messages sent.
icmpOutTimestampReps	The number of ICMP Timestamp Reply messages sent.
icmpOutAddrMasks	The number of ICMP Address Mask Request messages sent.
icmpOutAddrMaskReps	The number of ICMP Address Mask Reply messages sent.

TCP Statistics

The following command displays TCP statistics:

show ip tcp counters

Command mode: All

TCP statistics:			
tcpRtoAlgorithm:	4	tcpRtoMin:	0
tcpRtoMax:	240000	tcpMaxConn:	512
tcpActiveOpens:	252214	tcpPassiveOpens:	7
tcpAttemptFails:	528	tcpEstabResets:	4
tcpInSegs:	756401	tcpOutSegs:	756655
tcpRetransSegs:	0	tcpInErrs:	0
tcpCurBuff:	0	tcpCurConn:	3
tcpOutRsts:	417		

Table 110. TCP Statistics

Statistic	Description	
tcpRtoAlgorithm	The algorithm used to determine the timeout value used for retransmitting unacknowledged octets.	
tcpRtoMin	The minimum value permitted by a TCP implementation for the retransmission timeout, measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission timeout. In particular, when the timeout algorithm is rsre(3), an object of this type has the semantics of the LBOUND quantity described in RFC 793.	
tcpRtoMax	The maximum value permitted by a TCP implementation for the retransmission timeout, measured in milliseconds. More refined semantics for objects of this type depend upon the algorithm used to determine the retransmission timeout. In particular, when the timeout algorithm is rsre(3), an object of this type has the semantics of the UBOUND quantity described in RFC 793.	
tcpMaxConn	The limit on the total number of TCP connections the entity (the switch) can support. In entities where the maximum number of connections is dynamic, this object should contain the value -1.	
tcpActiveOpens	The number of times TCP connections have made a direct transition to the SYN-SENT state from the CLOSED state.	
tcpPassiveOpens	The number of times TCP connections have made a direct transition to the SYN-RCVD state from the LISTEN state.	
tcpAttemptFails	The number of times TCP connections have made a direct transition to the CLOSED state from either the SYN-SENT state or the SYN-RCVD state, plus the number of times TCP connections have made a direct transition to the LISTEN state from the SYN-RCVD state.	

Table 110. TCP Statistics

Statistic	Description	
tcpEstabResets	The number of times TCP connections have made a direct transition to the CLOSED state from either the ESTABLISHED state or the CLOSE-WAIT state.	
tcpInSegs	The total number of segments received, including those received in error. This count includes segments received on currently established connections.	
tcpOutSegs	OutSegs The total number of segments sent, including those on current connections but excluding those containing only retransmitted octets.	
tcpRetransSegs	The total number of segments retransmitted - that is, the number of TCP segments transmitted containing one or more previously transmitted octets.	
tcpInErrs	The total number of segments received in error (for example, bad TCP checksums).	
tcpCurBuff	The total number of outstanding memory allocations from heap by TCP protocol stack.	
tcpCurConn	The total number of outstanding TCP sessions that are currently opened.	
tcpOutRsts	The number of TCP segments sent containing the RST flag.	

UDP Statistics

The following command displays UDP statistics:

show ip udp counters

Command mode: All

UDP statistics:			
udpInDatagrams:	54	udpOutDatagrams:	43
udpInErrors:	0	udpNoPorts:	1578077

Table 111. UDP Statistics

Statistic	Description
udpInDatagrams	The total number of UDP datagrams delivered to the switch.
udpOutDatagrams	The total number of UDP datagrams sent from this entity (the switch).
udpInErrors	The number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.
udpNoPorts	The total number of received UDP datagrams for which there was no application at the destination port.

IGMP Statistics

The following command displays statistics about the use of the IGMP Multicast Groups:

show ip igmp counters

IGMP Snoop vlan 2 statistics:			
rxIgmpValidPkts:	0	rxIgmpInvalidPkts:	0
rxIgmpGenQueries:	0	rxIgmpGrpSpecificQueries:	0
rxIgmpGroupSrcSpecificQueries:	0	rxIgmpDiscardPkts:	0
rxIgmpLeaves:	0	rxIgmpReports:	0
txIgmpReports:	0	txIgmpGrpSpecificQueries:	0
txIgmpLeaves:	0	rxIgmpV3CurrentStateRecords:	0
rxIgmpV3SourceListChangeRecords	3:0	rxIgmpV3FilterChangeRecords:	0
txIgmpGenQueries:	C)	

Table 112. IGMP Statistics

Statistic	Description
rxIgmpValidPkts	Total number of valid IGMP packets received
rxlgmpInvalidPkts	Total number of invalid packets received
rxIgmpGenQueries	Total number of General Membership Query packets received
rxIgmpGrpSpecificQueries	Total number of Membership Query packets received from specific groups
rxIgmpGroupSrcSpecificQueries	Total number of Group Source-Specific Queries (GSSQ) received
rxIgmpDiscardPkts	Total number of IGMP packets discarded
rxIgmpLeaves	Total number of Leave requests received
rxIgmpReports	Total number of Membership Reports received
txIgmpReports	Total number of Membership reports transmitted
txIgmpGrpSpecificQueries	Total number of Membership Query packets transmitted to specific groups
txIgmpLeaves	Total number of Leave messages transmitted
rxIgmpV3CurrentStateRecords	Total number of Current State records received
rxlgmpV3SourceListChangeRecords	Total number of Source List Change records received.

Table 112. IGMP Statistics

Statistic	Description
	Total number of Filter Change records received.
	Total number of General Membership Query packets transmitted.

MLD Statistics

Table 113 describes the commands used to view MLD statistics.

Table 113. MLD Statistics Command

Command Syntax and Usage	
show ipv6 mld counters	
Displays MLD statistics. See page 173 for sample output.	
Command mode: All	
show ipv6 mld groups counters	
Displays total number of MLD entries.	
Command mode: All	
show ipv6 mld interface	
Displays information for all MLD interfaces.	
Command mode: All	
show ipv6 mld interface <interface number=""></interface>	
Displays MLD interface statistics for the specified interface.	
Command mode: All	
show ipv6 mld interface <interface number=""> counters</interface>	
Displays total number of MLD entries on the interface.	
Command mode: All	
show ipv6 mld interface counters	
Displays total number of MLD entries.	
Command mode: All	
clear ipv6 mld counters	
Clears MLD counters.	
Command mode: All except User Exec	
clear ipv6 mld dynamic	
Clears all dynamic MLD tables.	
Command mode: All except User Exec	
clear ipv6 mld groups	
Clears dynamic MLD registered group tables.	
Command mode: All except User Exec	
clear ipv6 mld mrouter	
Clears dynamic MLD Mrouter group tables.	
Command mode: All except User Exec	

MLD Global Statistics

The following command displays MLD global statistics for all MLD packets received on all interfaces:

show ipv6 mld counters

MID global statistic	N .				
MLD global statistic:					
Total L3 IPv6 (S, G,	V) entries: 2	2			
Total MLD groups:	2				
Bad Length:	()			
Bad Checksum:	()			
Bad Receive If:	()			
Receive non-local:	()			
Invalid Packets:	4	ł			
MLD packet statistics	s for interface	es:			
MLD interface packet		ninterface	1:		
	Received		Sent		
General Query		0	1067		0
MAS Query		0	0		0
MASSQ Query		0	0		0

TO_EXC FMCRs(v2)		0	8		0
ALLOW SLCRs (v2)		0	0		0
BLOCK SLCRs (v2)		1	0		0

The following table describes the fields in the MLD global statistics output.

Table 114. MLD Global Statistics

Statistic	Description
Bad Length	Number of messages received with length errors.
Bad Checksum	Number of messages received with an invalid IP checksum.
Bad Receive If	Number of messages received on an interface not enabled for MLD.
Receive non-local	Number of messages received from non-local senders.
Invalid packets	Number of rejected packets.
General Query (v1/v2)	Number of general query packets.
MAS Query(v1/v2)	Number of multicast address specific query packets.
MASSQ Query (v2)	Number of multicast address and source specific query packets.
Listener Report(v1)	Number of packets sent by a multicast listener in response to MLDv1 query.
Listener Done(v1/v2)	Number of packets sent by a host when it wants to stop receiving multicast traffic.
Listener Report(v2)	Number of packets sent by a multicast listener in response to MLDv2 query.
MLDv2 INC mode CSRs	Number of current state records with include filter mode.
MLDv2 EXC mode CSRs	Number of current state records with exclude filter mode.
MLDv2 TO_INC FMCRs	Number of filter mode change records for which the filter mode has changed to include mode.
MLDv2 TO_EXC FMCRs	Number of filter mode change records for which the filter mode has changed to exclude mode.
MLDv2 ALLOW SLCRs	Number of source list change records for which the specified sources from where the data is to be received has changed.
MLDv2 BLOCK SLCRs	Number of source list change records for which the specified sources from where the data is to be received is to be blocked.

OSPF Statistics

Table 115.	OSPF Statistics	Commands
------------	------------------------	----------

Command Syntax and Usage	
show ip ospf counters	
Displays OSPF statistics.	
Command mode: All	
See page 176 for sample output.	
show ip ospf area counters	
Displays OSPF area statistics.	
Command mode: All except User EXEC	
show ip ospf interface [<interface number="">] counters</interface>	
Displays OSPF interface statistics.	
Command mode: All except User EXEC	

OSPF Global Statistics

The following command displays statistics about OSPF packets received on all OSPF areas and interfaces:

show ip ospf counters

	D		
Rx/Tx Stats:	KX	Tx 	
- Pkts	0	0	
hello	23	518	
database	4	12	
ls requests		1	
ls acks	7	7	
ls updates	9	7	
Nbr change stats:		Intf change Stats:

down	1		
Timers kickoff			
hello	514		
retransmit	1028		
lsa lock	0		
lsa ack	0		
dbage	0		
summary	0		
ase export	0		

Statistic	Description		
Rx/Tx Stats:			
Rx Pkts	The sum total of all OSPF packets received on all OSPF areas and interfaces.		
Tx Pkts	The sum total of all OSPF packets transmitted on all OSPF areas and interfaces.		
Rx Hello	The sum total of all Hello packets received on all OSPF areas and interfaces.		
Tx Hello	The sum total of all Hello packets transmitted on all OSPF areas and interfaces.		

Statistic	Description
Rx Database	The sum total of all Database Description packets received on all OSPF areas and interfaces.
Tx Database	The sum total of all Database Description packets transmitted on all OSPF areas and interfaces.
Rx Is Requests	The sum total of all Link State Request packets received on all OSPF areas and interfaces.
Tx Is Requests	The sum total of all Link State Request packets transmitted on all OSPF areas and interfaces.
Rx Is Acks	The sum total of all Link State Acknowledgement packets received on all OSPF areas and interfaces.
Tx Is Acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPF areas and interfaces.
Rx Is Updates	The sum total of all Link State Update packets received on all OSPF areas and interfaces.
Tx Is Updates	The sum total of all Link State Update packets transmitted on all OSPF areas and interfaces.

Table 116. OSPF General Statistics (continued)

Statistic	Description			
Nbr Change St	ats:			
hello	The sum total of all Hello packets received from neighbors on all OSPF areas and interfaces.			
Start	The sum total number of neighbors in this state (that is, an indication that Hello packets should now be sent to the neighbor at intervals of HelloInterval seconds.) across all OSPF areas and interfaces.			
n2way	The sum total number of bidirectional communication establishment between this router and other neighboring routers.			
adjoint ok	The sum total number of decisions to be made (again) as to whether an adjacency should be established/maintained with the neighbor across all OSPF areas and interfaces.			
negotiation done	The sum total number of neighbors in this state wherein the Master/slave relationship has been negotiated, and sequence numbers have been exchanged, across all OSPF areas and interfaces.			
exchange done	The sum total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets, across all OSPF areas and interfaces.			
bad requests	The sum total number of Link State Requests which have been received for a link state advertisement not contained in the database across all interfaces and OSPF areas.			
bad sequence	The sum total number of Database Description packets which have been received that either:			
	a. Has an unexpected DD sequence number			
	b. Unexpectedly has the init bit set			
	 c. Has an options field differing from the last Options field received in a Database Description packet. 			
	Any of these conditions indicate that some error has occurred during adjacency establishment for all OSPF areas and interfaces.			
loading done	The sum total number of link state updates received for all out-of-date portions of the database across all OSPF areas and interfaces.			
n1way	The sum total number of Hello packets received from neighbors, in which this router is not mentioned across all OSPF interfaces and areas.			
rst_ad	The sum total number of times the Neighbor adjacency has been reset across all OPSF areas and interfaces.			

Statistic	Description					
down	The total number of Neighboring routers down (that is, in the initial					
	state of a neighbor conversation.) across all OSPF areas and interfaces.					
Intf Change S	Intf Change Stats:					
up	The sum total number of interfaces up in all OSPF areas.					
down	The sum total number of interfaces down in all OSPF areas.					
Іоор	The sum total of interfaces no longer connected to the attached network across all OSPF areas and interfaces.					
unloop	The sum total number of interfaces, connected to the attached network in all OSPF areas.					
wait timer	The sum total number of times the Wait Timer has been fired, indicating the end of the waiting period that is required before electing a (Backup) Designated Router across all OSPF areas and interfaces.					
backup	The sum total number of Backup Designated Routers on the attached network for all OSPF areas and interfaces.					
nbr change	The sum total number of changes in the set of bidirectional neighbors associated with any interface across all OSPF areas.					

Table 116. OSPF General Statistics (continued)

Table 116.	OSPF	General	Statistics	(continued)
------------	------	---------	------------	-------------

Statistic	Description
Timers Kickoff:	
hello	The sum total number of times the Hello timer has been fired (which triggers the send of a Hello packet) across all OPSF areas and interfaces.
retransmit	The sum total number of times the Retransmit timer has been fired across all OPSF areas and interfaces.
lsa lock	The sum total number of times the Link State Advertisement (LSA) lock timer has been fired across all OSPF areas and interfaces.
lsa ack	The sum total number of times the LSA Ack timer has been fired across all OSPF areas and interfaces.
dbage	The total number of times the data base age (Dbage) has been fired.
summary	The total number of times the Summary timer has been fired.
ase export	The total number of times the Autonomous System Export (ASE) timer has been fired.

OSPFv3 Statistics

Table 117. OSPFv3 Statistics Commands

show ipv6 ospf counters	
Displays OSPFv3 statistics. See page 176 for sample output.	
Command mode: All	
show ipv6 ospf area counters	
Displays OSPFv3 area statistics.	
Command mode: All	
show ipv6 ospf interface [<interface number="">] counters</interface>	
Displays OSPFv3 interface statistics.	
Command mode: All	

OSPFv3 Global Statistics

The following command displays statistics about OSPFv3 packets received on all OSPFv3 areas and interfaces:

show ipv6 ospf counters

Command mode: All

Rx/Tx/Disd Stats:

The OSPFv3 General Statistics contain the sum total of all OSPF packets received on all OSPFv3 areas and interfaces.

Table 118. OSPFv3 General Statistics

Statistics		Description			
Rx	Rx/Tx Stats:				
	Rx Pkts	The sum total of all OSPFv3 packets received on all OSPFv3 interfaces.			
	Tx Pkts	The sum total of all OSPFv3 packets transmitted on all OSPFv3 interfaces.			
	Discarded Pkts	The sum total of all OSPFv3 packets discarded.			
	Rx hello	The sum total of all Hello packets received on all OSPFv3 interfaces.			

Statistics	Description				
Tx hello	The sum total of all Hello packets transmitted on all OSPFv3 interfaces.				
Discarded hello	The sum total of all Hello packets discarded, including packets for which no associated interface has been found.				
Rx database	The sum total of all Database Description packets received on all OSPFv3 interfaces.				
Tx database	The sum total of all Database Description packets transmitted on all OSPFv3 interfaces.				
Discarded database	The sum total of all Database Description packets discarded.				
Rx Is requests	The sum total of all Link State Request packets received on all OSPFv3 interfaces.				
Tx Is requests	The sum total of all Link State Request packets transmitted on all OSPFv3 interfaces.				
Discarded Is requests	The sum total of all Link State Request packets discarded.				
Rx Is acks	The sum total of all Link State Acknowledgement packets received on all OSPFv3 interfaces.				
Tx Is acks	The sum total of all Link State Acknowledgement packets transmitted on all OSPFv3 interfaces.				
Discarded Is acks	The sum total of all Link State Acknowledgement packets discarded.				
Rx Is updates	The sum total of all Link State Update packets received on all OSPFv3 interfaces.				
Tx Is updates	The sum total of all Link State Update packets transmitted on all OSPFv3 interfaces.				
Discarded Is updates	The sum total of all Link State Update packets discarded.				
Nbr Change Stats	:				
down	The total number of Neighboring routers down (that is, in the initial state of a neighbor conversation.) across all OSPFv3 interfaces.				
attempt	The total number of transitions into attempt state of neighboring routers across allOSPFv3 interfaces.				
init	The total number of transitions into init state of neighboring routers across all OSPFv3 interfaces.				
n2way	The total number of bidirectional communication establishment between this router and other neighboring routers.				

Table 118. OSPFv3 General Statistics (continued)

Statistics		Description			
	exstart	The total number of transitions into exstart state of neighboring routers across all OSPFv3 interfaces			
	exchange done	The total number of neighbors in this state (that is, in an adjacency's final state) having transmitted a full sequence of Database Description packets, across all OSPFv3 interfaces.			
	loading done	The total number of link state updates received for all out-of-date portions of the database across all OSPFv3 interfaces.			
	full	The total number of transitions into full state of neighboring routers across all OSPFv3 interfaces.			
	all events	The total number of state transitions of neighboring routers across all OSPFv3 interfaces.			

Table 118. OSPFv3 General Statistics (co	ontinued)
--	-----------

Statistics	Description			
Intf Change Stats:				
down	The total number of transitions into down state of all OSPFv3 interfaces.			
Іоор	The total number of transitions into loopback state of all OSPFv3 interfaces.			
waiting	The total number of transitions into waiting state of all OSPFv3 interfaces.			
ptop	The total number of transitions into point-to-point state of all OSPFv3 interfaces.			
dr	The total number of transitions into Designated Router other state of all OSPFv3 interfaces.			
backup	The total number of transitions into backup state of all OSPFv3 interfaces.			
all events	The total number of changes associated with any OSPFv3 interface, including changes into internal states.			
Timers Kickoff:				
hello	The total number of times the Hello timer has been fired (which triggers the send of a Hello packet) across all OSPFv3 interfaces.			
wait	The total number of times the wait timer has been fired (which causes an interface to exit waiting state), across all OPSFv3 interfaces.			
poll	The total number of times the timer whose firing causes hellos to be sent to inactive NBMA and Demand Circuit neighbors has been fired, across all OPSFv3 interfaces.			
nbr probe	The total number of times the neighbor probe timer has been fired, across all OPSFv3 interfaces.			
Number of LSAs				
originated	The number of LSAs originated by this router.			
rcvd newer originations	The number of LSAs received that have been determined to be newer originations.			

VRRP Statistics

Virtual Router Redundancy Protocol (VRRP) support on the EN4093/EN4093R provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

When virtual routers are configured, you can display the protocol statistics for VRRP. The following command displays VRRP statistics:

show ip vrrp counters

Command mode: All

0	vrrpBadAdvers:	0	
0			
0	vrrpBadVrid:	0	
0	vrrpBadData:	0	
0	vrrpBadInterval:	0	
	0 0 0 0	0 0 vrrpBadVrid: 0 vrrpBadData:	0 0 vrrpBadVrid: 0 0 vrrpBadData: 0

Table 119. VRRP Statistics

Statistics	Description	
vrrpInAdvers	The total number of valid VRRP advertisements that have been received.	
vrrpBadAdvers	The total number of VRRP advertisements received that were dropped.	
vrrpOutAdvers	The total number of VRRP advertisements that have been sent.	
vrrpBadVersion	The total number of VRRP advertisements received that had a bad version number.	
vrrpBadVrid	The total number of VRRP advertisements received that had a bad virtual router ID.	
vrrpBadAddress	The total number of VRRP advertisements received that had a bad address.	
vrrpBadData	The total number of VRRP advertisements received that had bad data.	
vrrpBadPassword	The total number of VRRP advertisements received that had a bad password.	
vrrpBadInterval	The total number of VRRP advertisements received that had a bad interval.	

PIM Statistics

The following command displays Protocol Independent Multicast (PIM) statistics:

show ip pim counters

Hello Tx/Rx	:	2595/2596
Join/Prune Tx/Rx	:	0/0
Assert Tx/Rx	:	0/0
Register Tx/Rx	:	0/0
Null-Reg Tx/Rx	:	0/0
RegStop Tx/Rx	:	0/0
CandRPAdv Tx/Rx	:	973/0
BSR Tx/Rx	:	0/1298
Graft Tx/Rx	:	0/0
Graft Ack Tx/Rx	:	0/0
Mcast data Tx/Rx	:	0/0
MDP drop Tx/Rx	:	0/0
CTL drop Tx/Rx	:	0/0
Bad pkts	:	0

Table 120. PIM Statistics

Statistics	Description
Hello Tx/Rx	Number of Hello messages transmitted or received
Join/Prune Tx/Rx	Number of Join/Prune messages transmitted or received
Assert Tx/Rx	Number of Assert messages transmitted or received
Register Tx/Rx	Number of Register messages transmitted or received
Null-Reg Tx/Rx	Number of NULL-register messages received
RegStop Tx/Rx	Number of Register Stop messages transmitted or received
CandRPAdv Tx/Rx	Number of Candidate RP Advertisements transmitted or received
BSR Tx/Rx	Number of Bootstrap Router (BSR) messages transmitted or received
Graft Tx/Rx	Number of Graft messages transmitted or received
Graft Ack Tx/Rx	Number of Graft Acknowledgements transmitted or received
Mcast data Tx/Rx	Number of multicast datagrams transmitted or received
MDP drop Tx/Rx	Number of Multicast data packet Tx/Rx dropped
CTL drop Tx/Rx	Number of PIM control packet Tx/Rx dropped
Bad pkts	Number of bad PIM packets received

Routing Information Protocol Statistics

The following command displays RIP statistics:

show ip rip counters

RIP ALL	STATS INFORMATION:		
	RIP packets received = 12		
	RIP packets sent = 75		
	RIP request received $= 0$		
	RIP response recevied = 12		
	RIP request sent = 3		
	RIP reponse sent = 72		
	RIP route timeout = 0		
	RIP bad size packet received =	0	
	RIP bad version received	=	0
	RIP bad zeros received	=	0
	RIP bad src port received	=	0
	RIP bad src IP received	=	0
	RIP packets from self received	=	0

Management Processor Statistics

```
Table 121. Management Processor Statistics Commands
```

ghow	n mp thread
C	Displays STEM thread statistics. This command is used by Technical Support Personnel.
C	Command mode: All
show	n mp packet counters
	Displays packet statistics, to check for leads and load. To view a sample outpur and a description of the statistics, see page 189.
C	Command mode: All
show	n mp tcp-block
	Displays all TCP control blocks that are in use. To view a sample output and a lescription of the statistics, see page 197.
C	Command mode: All
show	nmp udp-block
	Displays all UDP control blocks that are in use. To view a sample output, see age 198.
C	Command mode: All
show	processes cpu
	Displays CPU utilization for periods of up to 1, 4, and 64 seconds. To view a ample output and a description of the statistics, see page 198.
C	Command mode: All
show	processes cpu history
D	Displays history of CPU utilization. To view a sample output, see page 199.

Packet Statistics

Table 122. Packet Statistics Commands

Command Syntax and Usage			
show mp packet counters			
Displays packet statistics, to check for leads and load. To view a sample output and a description of the stats, see page 189.			
Command mode: All			
clear mp packet logs			
Clears all CPU packet statistics and logs.			
Command mode: All			

MP Packet Statistics

The following command displays MP packet statistics:

show mp packet counters

Packet rate:	Incoming	Outgoing
1-second:	5	2
4-seconds:	5	1
64-seconds:	5	1
Packet counters:		Sent
Total packets:	359841	103895

```

Statistics	Description	
Packet rate		
1-second	The rate of incoming and outgoing packets over 1 second.	
4-seconds	The rate of incoming and outgoing packets over 4 seconds.	
64-seconds	The rate of incoming and outgoing packets over 64 seconds.	
Packets counters		
Total packets	Total number of packets received and sent.	
Since bootup	Total number of packets received and sent since the last switch reboot.	

Statistics	Description
BPDUs	Total number of spanning-tree Bridge Protocol Data Units received and sent.
Cisco packets	Total number of UniDirectional Link Detection (UDLD) packets and Cisco Discovery Protocol (CDP) packets received and sent.
ARP packets	Total number of Address Resolution Protocol packets received and sent.
IPv4 packets	Total number of IPv4 packets received and sent. Includes the following packet types: – IGMP – PIM – ICMP requests – ICMP replies
TCP packets	Total number of TCP packets received and sent. Includes the following packet types: – FTP – HTTP – SSH – TACACS+ – Telnet – Other
UDP packets	Total number of UDP packets received and sent. Includes the following packet types: – DHCP – NTP – RADIUS – SNMP – TFTP – Other
RIP packets	Total number of Routing Information Protocol packets received and sent.
OSPF packets	Total number of Open Shortest Path First packets received and sent.
BGP packets	Total number of Border Gateway Protocol packets received and sent.
IPv6 packets	Total number of IPv6 packets received and sent.
LLDP PDUs	Total number of Link Layer Discovery Protocol data units received and sent.
ECP PDUs	Total number of Edge Control Protocol data units received and sent.

Statistics	Description	
MgmtSock Packets	Total number of packets received and transmitted through the management port.	
Other	Total number of other packets received and transmitted.	
Packet Buffer Statistics		
allocs	Total number of packet allocations from the packet buffer pool by the TCP/IP protocol stack.	
frees	Total number of times the packet buffers are freed (released) to the packet buffer pool by the TCP/IP protocol stack.	
failures	Total number of packet allocation failures from the packet buffer pool by the TCP/IP protocol stack.	
dropped	Total number of packets dropped by the packet buffer pool.	
small packet buffers		
current	Total number of packet allocations with size less than 128 bytes from the packet buffer pool by the TCP/IP protocol stack.	
max	Maximum number of small packet allocations supported	
threshold	Threshold value for small packet allocations, beyond which only high-priority small packets are allowed.	
hi-watermark	The highest number of packet allocation with size less than 128 bytes from the packet buffer pool by the TCP/IP protocol stack.	
hi-water time	Time stamp that indicates when the hi-watermark was reached.	
medium packet buffers		
current	Total number of packet allocations with size between 128 to 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.	
max	Maximum number of medium packet allocations supported.	
threshold	Threshold value for medium packet allocations, beyond which only high-priority medium packets are allowed.	
hi-watermark	The highest number of packet allocation with size between 128 to 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.	
hi-water time	Time stamp that indicates when the hi-watermark was reached.	

Statistics	Description		
jumbo packet buffers			
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
max	Maximum number of jumbo packet allocations supported.		
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
pkt_hdr statistics			
current	Total number of packet allocations with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		
max	Maximum number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack that are supported.		
hi-watermark	The highest number of packet allocation with more than 1536 bytes from the packet buffer pool by the TCP/IP protocol stack.		

Packet Statistics Log

These commands allow you to display a log of all packets received by CPU. The following table describes the Packet Statistics Log options.

Table 123. Packet Statistics Log Options

show mp packet log all					
.,	received by and sent from the CPU. To view a sample n of the log entries, see "Packet Log example" on				
show mp packet log r	2				
Displays all packets log	is received by the CPU.				
show mp packet log t	2				
Displays all packet logs	s sent from the CPU.				

Packet Log example

```
358. Type: BPDU, sent 1:01:11 Tue Mar 20, 2012
Port EXT2, VLAN 201, Length 57, Reason 0x0, Flags 0x0
Dst MAC: 01:80:c2:00:00:00, Src MAC: 08:17:f4:a7:57:2c
357. Type: ICMP ECHO Req,sent 1:01:09 Tue Mar 20, 2012
Port MGT1, VLAN 4095, Length 16, Reason 0x0, Flags 0x0 FromMgmtSock
Src IP: 9.43.98.125, Dst IP: 9.43.98.254
```

Each packet log entry includes the following information:

- Entry ID
- Packet type
- Date and time
- Port number
- VLAN number
- · Packet length
- Reason code
- Flags
- Source and destination address

Packet Statistics Last Packet

These commands allow you to display a specified number (N) of the most recent packet logs received by or sent from the CPU. The following table describes the Packet Statistics Last Packet options.

Table 124. Last Packet Options

Command Syntax and Usage				
show mp packet last both <1-1000>				
Displays a specified number of recent packet logs received by and sent from the CPU. To view a sample output and a description, see "Packet Log example" on page 194.				
show mp packet last rx <1-1000>				
Displays a specified number of recent packet logs received by the CPU.				
show mp packet last tx <1-1000>				
Displays a specified number of recent packet logs sent from the CPU.				

Packet Statistics Dump

The following table describes the Packet Statistics Dump options.

Table 125. Packet Statistics Dump Options

Command Syntax and Usage
show mp packet dump all Displays all packet statistics and logs received by and sent from the CPU.
show mp packet dump rx Displays all packet statistics and logs received by the CPU.

Table 125. Packet Statistics Dump Options

Command Syntax and Usage

show mp packet dump tx

Displays all packet statistics and logs sent from the CPU.

Packet Statistics Parse

The following table describes the Packet Statistics Parse options.

Table 126.	Packet	Statistics	Parse	Options
------------	--------	------------	-------	---------

Command Syntax and Usage				
show mp packet parse rx <i><packet type=""></packet></i> Displays specified packet types received by the CPU. Table 127 lists the packet types accepted by this command.				
show mp packet parse tx < <i>packet type</i> > Displays specified packet types sent from the CPU. Table 127 lists the packet types accepted by this command.				

Table 127. Packet types accepted by the packet parse command

Packet Type	Description			
arp	Display only ARP packets logged.			
bgp	Display only BGP packets logged.			
bpdu	Display only BPDUs logged.			
cisco	Display only Cisco packets (BPDU/CDP/UDLD) logged.			
dhcp	Display only DHCP packets logged.			
еср	Display only ECP packets logged.			
fcoe	Display only FCoE FIP PDUs logged.			
ftp	Display only FTP packet logged.			
http	Display only HTTP packets logged.			
icmp	Display only ICMP packets logged.			
igmp	Display only IGMP packet logged.			
ip-addr	Display only logged packets with specified IP address.			
ipv4	Display only IPv4 packets logged.			
ipv6	Display only IPv6 packets logged.			
lacp	Display only LACP packets logged.			
lldp	Display only LLDP PDUs logged.			
mac	Display only logged packets with specified MAC address.			
mgmtsock	Display only packets logged from management ports.			

Packet Type	Description
ntp	Display only NTP packets logged.
ospf	Display only OSPF packet logged.
other	Display logs of all packets not explicitly selectable.
pim	Display only PIM packet logged.
port	Display only logged packets with specified port.
radius	Display only RADIUS packets logged.
rarp	Display only Reverse-ARP packets logged.
raw	Display raw packet buffer in addition to headers.
rip	Display only RIP packet logged.
snmp	Display only SNMP packets logged.
ssh	Display only SSH packets logged.
tacacs	Display only TACACS packets logged.
tcp	Display only TCP packets logged.
tcpother	Display only TCP other-port packets logged.
telnet	Display only TELNET packets logged.
tftp	Display only TFTP packets logged.
udp	Display only UDP packets logged.
udpother	Display only UDP other-port packets logged.
vlan	Display only logged packets with specified VLAN.

TCP Statistics

The following command displays TCP statistics:

show mp tcp-block

Data Ports	5:			
All TCP al	llocat	ed control blocks:		-

CPU Statistics

The following command displays the CPU utilization statistics:

show mp cpu

Command mode: All .

CPU utilization		Highest	Thread	Time
cpuUtil1Second: cpuUtil4Seconds: cpuUtil64Seconds:	13% 7% 13%	93%	110 (FTMR)	11:36:19 Mon Jan 10, 2012

Table 129. CPU Statistics (stats/mp/cpu)

Statistics	Description
cpuUtil1Second	The utilization of MP CPU over 1 second. It shows the percentage, highest rate, thread, and time the highest utilization occurred.
cpuUtil4Seconds	The utilization of MP CPU over 4 seconds. It shows the percentage.
cpuUtil64Seconds	The utilization of MP CPU over 64 seconds. It shows the percentage.
Highest	The highest percent ever recorded of CPU utilization.

Table 129. CPU Statistics (stats/mp/cpu)

Statistics	Description							
Thread	Thread ID and name of the thread which caused highest CPU utilization.							
Time	Time stamp that indicates when the hi-water mark was reached.							

show processes cpu

Command mode: All

Total C	PU Utiliza	For 5 For 1	<pre>second: 0. second: 3. minute: 3. minute: 3.</pre>	02% 73%

Table 130. CPU Statistics

Statistics	Description
Thread ID	The thread ID number.
Thread Name	The name of the thread.
1sec	The percent of CPU use over 1 second.
5sec	The percent of CPU use over 5 seconds.
1Min	The percent of CPU use over 1 minute.
5Min	The percent of CPU use over 5 minutes.
Status	The status of the process.

History of CPU Statistics

The following command displays CPU utilization history:

show mp cpu history

CPU	Utiliza	ation	His	story				
	(1000		16 00 00		·		0.01.0
4	('I'ND')	100%	at	16:00:27	wea	Dec	31,	2012
127	(DONE)	100%	at	1:34:43	Wed	Mar	7,	2012
20	(EPI)	55%	at	1:34:53	Wed	Mar	7,	2012
110	(ETMR)	56%	at	1:34:54	Wed	Mar	7,	2012
110	(ETMR)	64%	at	1:34:56	Wed	Mar	7,	2012
110	(ETMR)	68%	at	1:35:01	Wed	Mar	7,	2012
94	(PROX)	75%	at	2:46:54	Wed	Mar	7,	2012
94	(PROX)	84%	at	2:46:55	Wed	Mar	7,	2012
94	(PROX)	84%	at	2:46:57	Wed	Mar	7,	2012

Access Control List Statistics

The following commands display and change ACL statistics.

Table 131. ACL Statistics Commands

show access-c	ontrol list <acl number=""> counters</acl>
	Access Control List Statistics for a specific ACL.
Command n	
abow access	ontrol list6 <acl number=""> counters</acl>
	IPv6 ACL statistics for a specific ACL.
Command n	-
	ontrol macl < <i>MACL number</i> > counters
	ACL statistics for a specific management ACL (MACL).
Command n	
show access-c	ontrol counters
Displays all A	CL statistics.
Command n	node: All
clear access-	control list {< <i>ACL number</i> > all} counters
Clears ACL s	tatistics.
Command n	ode: Privileged EXEC
clear access-	control list6 { <acl number=""> all}</acl>
	ACL statistics.
Command n	node: Privileged EXEC
clear access-	control macl {< <i>ACL number</i> > all} counters
	gement ACL (MACL) statistics.
	node: Privileged EXEC
	ontrol meter <meter number=""> counters</meter>
	meter statistics.
Command n	node: All
clear access-	control meter <meter number=""> counters</meter>
Clears ACL r	neter statistics.
Command n	ode: Privileged EXEC

ACL Statistics

The following command displays ACL statistics.

show access-control counters

Command mode: All

Hits for ACL 1:	26057515	
Hits for ACL 2:	26057497	

VMAP Statistics

The following command displays VLAN Map statistics.

show access-control vmap {<vmap number>} counters

Command mode: All

Hits for VMAP 1:

57515

Fibre Channel over Ethernet Statistics

The following command displays Fibre Channel over Ethernet (FCoE) statistics:

show fcoe counters

Command mode: All

FCOE statistics:			
FCFAdded:	5	FCFRemoved:	1
FCOEAdded:	81	FCOERemoved:	24

Fibre Channel over Ethernet (FCoE) statistics are described in the following table:

Table 132. FCoE Statistics (/sta	ts/fcoe)
----------------------------------	----------

Statistic	Description	
FCFAdded	Total number of FCoE Forwarders (FCF) added.	
FCFRemoved	Total number of FCoE Forwarders (FCF) removed.	
FCOEAdded	Total number of FCoE connections added.	
FCOERemoved	Total number of FCoE connections removed.	

The total can accumulate over several FCoE sessions, until the statistics are cleared.

The following command clears Fibre Channel over Ethernet (FCoE) statistics:

clear fcoe counters

Command mode: Privileged EXEC

ACL Meter Statistics

This option displays ACL meter statistics.

show access-control meter <meter number> counters

Command mode: All

Out of profile hits for Meter 1, Port EXT1: 0 Out of profile hits for Meter 2, Port EXT1: 0

SNMP Statistics

The following command displays SNMP statistics:

show snmp-server counters

Command mode: All

SNMP statistics:			
snmpInPkts:	150097	<pre>snmpInBadVersions:</pre>	0
<pre>snmpInBadC'tyNames:</pre>	0	<pre>snmpInBadC'tyUses:</pre>	0
<pre>snmpInASNParseErrs:</pre>	0	<pre>snmpEnableAuthTraps:</pre>	0
snmpOutPkts:	150097	<pre>snmpInBadTypes:</pre>	0
snmpInTooBigs:	0	snmpInNoSuchNames:	0
<pre>snmpInBadValues:</pre>	0	<pre>snmpInReadOnlys:</pre>	0
snmpInGenErrs:	0	<pre>snmpInTotalReqVars:</pre>	798464
<pre>snmpInTotalSetVars:</pre>	2731	snmpInGetRequests:	17593
snmpInGetNexts:	131389	snmpInSetRequests:	615
snmpInGetResponses:	0	<pre>snmpInTraps:</pre>	0
snmpOutTooBigs:	0	snmpOutNoSuchNames:	1
<pre>snmpOutBadValues:</pre>	0	<pre>snmpOutReadOnlys:</pre>	0
snmpOutGenErrs:	1	snmpOutGetRequests:	0
snmpOutGetNexts:	0	<pre>snmpOutSetRequests:</pre>	0
<pre>snmpOutGetResponses:</pre>	150093	snmpOutTraps:	4
<pre>snmpSilentDrops:</pre>	0	snmpProxyDrops:	0

Table 133. SNMP Statistics

Statistic	Description	
snmpInPkts	The total number of Messages delivered to the SNMP entity from the transport service.	
snmpInBadVersions	The total number of SNMP Messages, which were delivered to the SNMP protocol entity and were for an unsupported SNMP version.	
snmpInBadC'tyNames	The total number of SNMP Messages delivered to the SNMP entity which used an SNMP community name not known to the said entity (the switch).	
snmpInBadC'tyUses	The total number of SNMP Messages delivered to the SNMP protocol entity which represented an SNMP operation which was not allowed by the SNMP community named in the Message.	

Table 133. SNMP Statistics (continued)

Statistic	Description	
snmpInASNParseErrs	The total number of ASN.1 or BER errors encountered by the SNMP protocol entity when decoding SNMP Messages received.	
	Note: OSI's method of specifying abstract objects is called ASN.1 (Abstract Syntax Notation One, defined in X.208), and one set of rules for representing such objects as strings of ones and zeros is called the BER (Basic Encoding Rules, defined in X.209). ASN.1 is a flexible notation that allows one to define a variety of data types, from simple types such as integers and bit strings to structured types such as sets and sequences. BER describes how to represent or encode values of each ASN.1 type as a string of eight-bit octets.	
snmpEnableAuthTraps	An object to enable or disable the authentication traps generated by this entity (the switch).	
snmpOutPkts	The total number of SNMP Messages which were passed from the SNMP protocol entity to the transport service.	
snmpInBadTypes	The total number of SNMP Messages which failed ASN parsing.	
snmpInTooBigs	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is <i>too big</i> .	
snmpInNoSuchNames	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is noSuchName.	
snmpInBadValues	The total number of SNMP Protocol Data Units (PDUs) which were delivered to the SNMP protocol entity and for which the value of the error-status field is badValue.	
snmpInReadOnlys	The total number of valid SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is `read-Only'. It should be noted that it is a protocol error to generate an SNMP PDU, which contains the value `read-Only' in the error-status field. As such, this object is provided as a means of detecting incorrect implementations of the SNMP.	
snmpInGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were delivered to the SNMP protocol entity and for which the value of the error-status field is genErr.	

Table 133. SNMP Statistics (continued)

Statistic	Description	
snmpInTotalReqVars	The total number of MIB objects which have been retrieved successfully by the SNMP protocol entity as a result of receiving valid SNMP Get-Request and Get-Next Protocol Data Units (PDUs).	
snmpInTotalSetVars	The total number of MIB objects, which have been altered successfully by the SNMP protocol entity as a result of receiving valid SNMP Set-Request Protocol Data Units (PDUs).	
snmpInGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.	
snmpInGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.	
snmpInSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.	
snmpInGetResponses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.	
snmpInTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been accepted and processed by the SNMP protocol entity.	
snmpOutTooBigs	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is <i>too big</i> .	
snmpOutNoSuchNames	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status is noSuchName.	
snmpOutBadValues	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is badValue.	
snmpOutReadOnlys	Not in use.	
snmpOutGenErrs	The total number of SNMP Protocol Data Units (PDUs), which were generated by the SNMP protocol entity and for which the value of the error-status field is genErr.	
snmpOutGetRequests	The total number of SNMP Get-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.	

Table 133.	SNMP	Statistics	(continued)
------------	------	------------	-------------

Statistic	Description
snmpOutGetNexts	The total number of SNMP Get-Next Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutSetRequests	The total number of SNMP Set-Request Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutGetResponses	The total number of SNMP Get-Response Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpOutTraps	The total number of SNMP Trap Protocol Data Units (PDUs), which have been generated by the SNMP protocol entity.
snmpSilentDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMPv2 entity which were silently dropped because the size of a reply containing an alternate Response-PDU with an empty variable bindings field was greater than either a local constraint or the maximum message size associated with the originator of the request.
snmpProxyDrops	The total number of GetRequest-PDUs, GetNextRequest-PDUs, GetBulkRequest-PDUs, SetRequest-PDUs, and InformRequest-PDUs delivered to the SNMP entity which were silently dropped because the transmission of the message to a proxy target failed in a manner such that no Response-PDU could be returned.

NTP Statistics

IBM Networking OS uses NTP (Network Timing Protocol) version 3 to synchronize the switch's internal clock with an atomic time calibrated NTP server. With NTP enabled, the switch can accurately update its internal clock to be consistent with other devices on the network and generates accurate syslogs.

The following command displays NTP statistics:

show ntp counters

Command mode: All

NTP statistics:		
Primary Server:		
Requests Sent:	17	
Responses Received:	17	
Updates:	1	
Secondary Server:		
Requests Sent:	0	
Responses Received:	0	
Updates:	0	
Last update based on response from primary/secondary server. Last update time: 18:04:16 Tue Jan 13, 2012 Current system time: 18:55:49 Tue Jan 13, 2012		
Current system time: 18:55:49 Th	ue Jan 13, 2012	

Table 134. NTP Statistics

Field	Description
Primary Server	Requests Sent: The total number of NTP requests the switch sent to the primary NTP server to synchronize time.
	 Responses Received: The total number of NTP responses received from the primary NTP server.
	• Updates: The total number of times the switch updated its time based on the NTP responses received from the primary NTP server.
Secondary Server	 Requests Sent: The total number of NTP requests the switch sent to the secondary NTP server to synchronize time.
	Responses Received: The total number of NTP responses received from the secondary NTP server.
	• Updates: The total number of times the switch updated its time based on the NTP responses received from the secondary NTP server.
Last update based on response from primary server	Last update of time on the switch based on either primary or secondary NTP response received.

Table 134. NTP Statistics (continued)

Field	Description
Last update time	The time stamp showing the time when the switch was last updated.
Current system time	The switch system time when the following command was issued: show ntp counters

PTP Statistics

Table 135. Precision Time Protocol Statistics Commands

Command Syntax and Usage	
show ptp counters	
Displays Precision Time Protocol statistics.	
Command mode: All	
show interface port <pre>port alias or number> ptp-counters</pre>	
Displays Precision Time Protocol statistics for the port.	
Command mode: All	
clear ptp counters	
Resets PTP packet counters.	
Command mode: Privileged EXEC	

Use the following command to display Precision Time Protocol traffic statistics:

show ptp counters

Command mode: All

Precision time protocol counters:	
+	+
Received Announce messages:	0
Received Sync messages:	0
Received Follow-Up messages:	0
Received Delay-Request messages:	0
Received Delay-Response messages:	0
+	+
Sent Announce messages:	0
Sent Sync messages:	0
Sent Follow-Up messages:	0
Sent Delay-Request messages:	0
Sent Delay-Response messages:	0
+	+

PTP statistics include the following:

- total number of Announce messages transmitted and received.
- total number of Sync transmitted and received.
- total number of Follow_Up messages transmitted and received

- total number of Delay_Req messages transmitted and received
- total number of Delay_Resp messages transmitted and received

SLP Statistics

Table 136. SLP Statistics Commands

Command Syntax and Usage	
show ip slp counter	
Displays SLP packet counters.	
Command mode: All	
clear ip slp counter	
Clears SLP packet counters.	
Command mode: Privileged EXEC	

Use the following command to display SLP packet counters:

show ip slp counter

Command mode: All

Statistics Dump

The following command dumps switch statistics:

show counters

Use the dump command to dump all switch statistics (40K or more, depending on your configuration). This data can be used to tune or debug switch performance.

If you want to capture dump data to a file, set your communication software on your workstation to capture session data prior to issuing the dump command.

Chapter 4. Configuration Commands

This chapter discusses how to use the Command Line Interface (CLI) for making, viewing, and saving switch configuration changes. Many of the commands, although not new, display more or different information than in the previous version. Important differences are called out in the text.

Table 137. General Configuration Commands

ommand Syntax and Usage
how running-config
Dumps current configuration to a script file. For details, see page 435.
Command mode: Privileged EXEC
how running-config diff
Displays running configuration changes that have been applied but not saved to flash memory.
Command mode: Privileged EXEC
opy running-config backup-config
Copy the current (running) configuration from switch memory to the backup-config partition. For details, see page 435.
Command mode: Privileged EXEC
opy running-config startup-config
Copy the current (running) configuration from switch memory to the <pre>startup-config partition.</pre>
Command mode: Privileged EXEC
opy running-config {ftp tftp sftp} lata-port extm-port mgt-port]
Backs up current configuration to a file on the selected FTP/TFTP/SFTP server. Select a management port, or press Enter to use the default (management) port.
Command mode: Privileged EXEC

Table 137. General Configuration Commands

Command Syntax and Usage

copy {ftp|tftp|sftp} running-config

[data-port|extm-port|mgt-port]

Restores current configuration from a FTP/TFTP/SFTP server. Select a management port, or press **Enter** to use the default (management) port. For details, see page 436.

Command mode: Privileged EXEC

copy {tftp|sftp} {ca-cert|host-key|host-cert}

Import interface used by NIST certified test laboratories for USGv6 (NIST SP 500-267) certification purposes. Required for RSA digital signature authentication verification during IKEv2 interoperability testing. Uses TFTP or SFTP to import:

- ca-cert: Certificate Authority root certificate
- host-key: host private key
- host-cert: host public key

Command mode: Privileged EXEC

Viewing and Saving Changes

As you use the configuration commands to set switch parameters, the changes you make take effect immediately. You do not need to apply them. Configuration changes are lost the next time the switch boots, unless you save the changes.

You can view all running configuration changes that have been applied but not saved to flash memory using the show running-config diff command in Privileged EXEC mode.

Note: Some operations can override the settings of the Configuration commands. Therefore, settings you view using the Configuration commands (for example, port status) might differ from run-time information that you view using the Information commands. The Information commands display current run-time information of switch parameters.

Saving the Configuration

You must save configuration settings to flash memory, so the EN4093/EN4093R reloads the settings after a reset.

Note: If you do not save the changes, they will be lost the next time the system is rebooted.

To save the new configuration, enter the following command:

Router# copy running-config startup-config

When you save configuration changes, the changes are saved to the *active* configuration block. For instructions on selecting the configuration to run at the next system reset, see "Selecting a Configuration Block" on page 454.

System Configuration

These commands provide configuration of switch management parameters such as user and administrator privilege mode passwords, Web-based management settings, and management access lists.

Table 138. System Configuration Commands

system date <yyyy> <mm> <dd>

Prompts the user for the system date. The date retains its value when the switch is reset.

Command mode: Global configuration

system time <hh>:<mm>:<ss>

Configures the system time using a 24-hour clock format. The time retains its value when the switch is reset.

Command mode: Global configuration

system timezone

Configures the time zone where the switch resides. You are prompted to select your location (continent, country, region) by the timezone wizard. Once a region is selected, the switch updates the time to reflect local changes to Daylight Saving Time, etc.

Command mode: Global configuration

[no] system daylight

Disables or enables daylight savings time in the system clock. When enabled, the switch will add an extra hour to the system clock so that it is consistent with the local clock. By default, this option is disabled.

Command mode: Global configuration

terminal-length <0-300>

Configures the number of lines per screen displayed in the CLI for the current session. A value of 0 disables paging. By default, it is set to, the corresponding line vty length or line console length value in effect at login.

Command mode: All

Table 138. System Configuration Commands (continued)

Co	mmand Syntax and Usage
lir	ne console length <0-300>
	Configures the number of lines per screen displayed in the CLI by default for console sessions. Setting it to 0 disables paging. The default value is 28.
	Command mode: Global configuration
no	line console
	Sets line console length to the default value of 28.
	Command mode: Global configuration
lir	he vty length <0-300>
	Sets the default number of lines per screen displayed for Telnet and SSH
	sessions. A value of 0 disables paging. The default value is 28.
	Command mode: Global configuration
no	line vty
	Sets line vty length to the default value of 28.
	Command mode: Global configuration
sy	stem idle $<0-60>$
	Sets the idle timeout for CLI sessions, from 1 to 60 minutes. The default is 10
	minutes. A value of 0 disables system idle timeout.
	Command mode: Global configuration
sy	stem linkscan {fast normal slow}
	Configures the link scan interval used to poll the status of ports.
	Command mode: Global configuration
sy	stem notice <maximum 1024="" character="" login="" multi-line="" notice=""> <'.' to end></maximum>
	Displays login notice immediately before the "Enter password:" prompt. This notice can contain up to 1024 characters and new lines.
	Command mode: Global configuration
[nc] banner <1-80 characters>
	Configures a login banner of up to 80 characters. When a user or administrator logs into the switch, the login banner is displayed. It is also displayed as part of the output from the show sys-info command.
	Command mode: Global configuration
[nc] hostname < <i>character string</i> >
	Enables or disables displaying of the host name (system administrator's name) in the Command Line Interface (CLI).
	Command mode: Global configuration
[nc] system reset-control
-	Enables or disables the reset control flag. When enabled, the switch continues to function after a crash of the main processor, using the last known Layer 2/3 information.
	Command mode: Global configuration

Table 138. System Configuration Commands (continued)

Command Syntax and Usage

[no] system packet-logging

Enables or disables logging of packets that come to the CPU. The default setting is enabled.

Command mode: Global configuration

show system

Displays the current system parameters.

Command mode: All

System Error Disable and Recovery Configuration

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 139. Error Disable Configuration Commands

Command Syntax and Usage

errdisable timeout <30-86400>

Configures the error-recovery timeout, in seconds. After the timer expires, the switch attempts to re-enable the port. The default value is 300.

Note: When you change the timeout value, all current error-recovery timers are reset.

Command mode: Global configuration

errdisable recovery

Globally enables automatic error-recovery for error-disabled ports. The default setting is disabled.

Note: Each port must have error-recovery enabled to participate in automatic error recovery.

Command mode: Global configuration

no errdisable recovery

Globally disables error-recovery for error-disabled ports.

Command mode: Global configuration

show errdisable

Displays the current system Error Disable configuration.

Command mode: All

System Host Log Configuration

Table 140. Host Log Configuration Commands	ls
--	----

Command Syntax and Usage
<pre>[no] logging host <1-2> address <ipv4 address=""> [data-port extm-port mgt-port] Sets the IPv4 address of the first or second syslog host. Command mode: Global configuration</ipv4></pre>
<pre>[no] logging host <1-2> address6 <ipv6 address=""> [data-port extm-port mgt-port] Sets the IPv6 address of the first or second syslog host. Command mode: Clabel configuration</ipv6></pre>
Command mode: Global configuration
logging host <1-2> severity <0-7> This option sets the severity level of the first or second syslog host displayed. The default is 7, which means log all severity levels.
Command mode: Global configuration
<pre>logging host <1-2> facility <0-7> This option sets the facility level of the first or second syslog host displayed. The default is 0. Command mode: Global configuration</pre>
logging source-interface <1-5>
Sets the loopback interface number for syslogs.
Command mode: Global configuration
logging console
Enables delivering syslog messages to the console. It is enabled by default. Command mode: Global configuration
no logging console
Disables delivering syslog messages to the console. When necessary, disabling console ensures the switch is not affected by syslog messages. It is enabled by default.
Command mode: Global configuration
[no] logging synchronous [level <0-7> all]
Enables or disables synchronous logging for unsolicited messages. When enabled, if unsolicited messages occur while solicited output display is in progress, the unsolicited messages are buffered and then output separately from the solicited messages. The buffer can store up to 20 unsolicited messages, after which unsolicited messages are discarded. When disabled, unsolicited and solicited messages are logged together.
The level parameter sets a minimum severity level (lower or equal numeric values) for unsolicited messages to be displayed asynchronously; all displays all unsolicited messages asynchronously, regardless of severity level. The default setting is 2.
Command mode: Global configuration

Table 140. Host Log Configuration Commands

labi	
Cor	nmand Syntax and Usage
[no] logging console severity <0-7>
	Sets the severity level of system log messages to display via the console, Telnet, and SSH. The system displays only messages with the selected severity level and above. For example, if you set the console severity to 2, only messages with severity level of 1 and 2 are displayed.
	Command mode: Global configuration
[no	logging buffer severity <0-7>
	Sets the severity level of system log messages that are written to flash buffer. The system saves only messages with the selected severity level and above. For example, if you set the buffer severity to 2, only messages with severity level of 1 and 2 are saved.
	Command mode: Global configuration
[no] logging log [< <i>feature</i> >] Displays a list of features for which syslog messages can be generated. You can choose to enable/disable specific features (such as vlans, stg, or ssh), or enable/disable syslog on all available features.
	Command mode: Global configuration
sho	ow logging [severity < severity level>] [reverse]
	Displays the current syslog settings, followed by the most recent 2000 syslog messages, as displayed by the show logging messages command. For details, see page 27.
	The reverse option displays the output in reverse order, from the newest entry to the oldest.
	Command mode: All

SSH Server Configuration

For the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch, these commands enable Secure Shell access from any SSH client.

ssh s	scp-password
S	et the administration password for SCP access.
C	ommand mode: Global configuration
ssh g	generate-host-key
G	enerate the RSA host key.
C	ommand mode: Global configuration
ssh p	port <tcp number="" port=""></tcp>
S	ets the SSH server port number.
C	ommand mode: Global configuration
ssh s	scp-enable
E	nables the SCP apply and save.
C	ommand mode: Global configuration
no sa	sh scp-enable
Di	isables the SCP apply and save.
C	ommand mode: Global configuration
ssh e	enable
E	nables the SSH server.
C	ommand mode: Global configuration
no sa	sh enable
Di	isables the SSH server.
C	ommand mode: Global configuration
show	ssh
Di	isplays the current SSH server configuration.
C	ommand mode: All

RADIUS Server Configuration

Table 142. RADIUS Server Configuration Commands

Comma	nd Syntax and Usage	
[no] radius-server primary-host < <i>IP address</i> >		
Sets	the primary RADIUS server address.	
Cor	nmand mode: Global configuration	
[no] ra	dius-server secondary-host <i><ip address=""></ip></i>	
Sets	s the secondary RADIUS server address.	
Cor	nmand mode: Global configuration	
radius	-server primary-host <ip address=""> key <1-32 characters></ip>	
	is the primary shared secret between the switch and the RADIUS ver(s).	
Cor	nmand mode: Global configuration	
radius	-server secondary-host <ip address=""> key <1-32 characters></ip>	
	is the secondary shared secret between the switch and the RADIUS ver(s).	
Cor	nmand mode: Global configuration	
[defau]	Lt] radius-server port < UDP port number>	
Ente	er the number of the UDP port to be configured, between 1500 - 3000. The null is 1645.	
Cor	nmand mode: Global configuration	
radius	-server retransmit <1-3>	
	s the number of failed authentication requests before switching to a rent RADIUS server. The default is 3 requests.	
Cor	nmand mode: Global configuration	
radius	-server timeout <1-10>	
	the amount of time, in seconds, before a RADIUS server authentication mpt is considered to have failed. The default is 3 seconds.	
Cor	nmand mode: Global configuration	
ip rad	ius-server source-interface loopback <1-5>	
Sets	the RADIUS source loopback interface.	
Cor	nmand mode: Global configuration	
[no] ra	dius-server backdoor	
	bles or disables the RADIUS backdoor for Telnet/SSH/HTTP/HTTPS. default value is disabled.	
Ser	btain the RADIUS backdoor password for your switch, contact your <i>v</i> ice and port line.	
Cor	nmand mode: Global configuration	

radius-s	radius-server enable	
Enable	es the RADIUS server.	
Comn	nand mode: Global configuration	
no radiu	us-server enable	
Disabl	es the RADIUS server.	
Comn	nand mode: Global configuration	
show radius-server		
Displa	ys the current RADIUS server parameters.	
Comn	nand mode: All	

TACACS+ Server Configuration

TACACS (Terminal Access Controller Access Control system) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system. TACACS is not an encryption protocol, and therefore less secure than TACACS+ and Remote Authentication Dial-In User Service (RADIUS) protocols. Both TACACS and TACACS+ are described in RFC 1492.

TACACS+ protocol is more reliable than RADIUS, as TACACS+ uses the Transmission Control Protocol (TCP) whereas RADIUS uses the User Datagram Protocol (UDP). Also, RADIUS combines authentication and authorization in a user profile, whereas TACACS+ separates the two operations.

TACACS+ offers the following advantages over RADIUS as the authentication device:

- TACACS+ is TCP-based, so it facilitates connection-oriented traffic.
- It supports full-packet encryption, as opposed to password-only in authentication requests.
- It supports de-coupled authentication, authorization, and accounting.

Table 143. TACACS+ Server Configuration Commands

Command Syntax and Usage	
[no] tacacs-server primary-host < <i>IP address</i> >	
Defines the primary TACACS+ server address.	
Command mode: Global configuration	
[no] tacacs-server secondary-host < <i>IP address</i> >	
Defines the secondary TACACS+ server address.	
Command mode: Global configuration	
[no] tacacs-server primary-host < <i>IP address</i> > key < <i>1-32 characters</i> >	
This is the primary shared secret between the switch and the TACACS+ server(s).	
Command mode: Global configuration	
[no] tacacs-server secondary-host < <i>IP address</i> > key < <i>1-32 characters</i> >	
This is the secondary shared secret between the switch and the TACACS+ server(s).	
Command mode: Global configuration	
[default] tacacs-server port <tcp number="" port=""></tcp>	
Enter the number of the TCP port to be configured, between 1 and 65000. The default is 49.	
Command mode: Global configuration	
tacacs-server retransmit <i><1-3></i>	
Sets the number of failed authentication requests before switching to a different TACACS+ server. The default is 3 requests.	
Command mode: Global configuration	

Table 143. TACACS+ Server Configuration Commands

	e 143. TACACS+ Server Configuration Commands
Command Syntax and Usage	
tac	cacs-server attempts <1-10>
	Sets the number of failed login attempts before disconnecting the user. The default is 2 attempts.
	Command mode: Global configuration
tac	cacs-server timeout <4-15>
	Sets the amount of time, in seconds, before a TACACS+ server authentication attempt is considered to have failed. The default is 5 seconds.
	Command mode: Global configuration
ip	tacacs-server source-interface loopback <1-5>
	Sets the TACACS+ source loopback interface.
	Command mode: Global configuration
[nc) tacacs-server user-mapping $\{ < 0-15 > \text{user} \text{oper} \text{admin} \}$
	Maps a TACACS+ authorization level to a switch user level. Enter a TACACS+ authorization level (0-15), followed by the corresponding switch user level.
	Command mode: Global configuration
[no] tacacs-server backdoor
	Enables or disables the TACACS+ back door for Telnet, SSH/SCP, or HTTP/HTTPS.
	Enabling this feature allows you to bypass the TACACS+ servers. It is recommended that you use Secure Backdoor to ensure the switch is secured, because Secure Backdoor disallows access through the back door when the TACACS+ servers are responding.
	The default setting is disabled.
	To obtain the TACACS+ backdoor password for your EN4093/EN4093R, contact your Service and Support line.
	Command mode: Global configuration
[no	tacacs-server secure-backdoor
-	Enables or disables TACACS+ secure back door access through Telnet, SSH/SCP, or HTTP/HTTPS only when the TACACS+ servers are not responding.
	This feature is recommended to permit access to the switch when the TACACS+ servers become unresponsive. If no back door is enabled, the only way to gain access when TACACS+ servers are unresponsive is to use the back door via the console port.
	The default is disabled.
	Command mode: Global configuration
[no] tacacs-server privilege-mapping
	Enables or disables TACACS+ privilege-level mapping.
	The default value is disabled.
	Command mode: Global configuration

Table 14	43. TACACS+ Server Configuration Commands
Comma	and Syntax and Usage
[no] t	acacs-server password-change
Ena	ables or disables TACACS+ password change.
The	e default value is disabled.
Co	mmand mode: Global configuration
prima	ry-password
	nfigures the password for the primary TACACS+ server. The CLI will prompt u for input.
Co	mmand mode: Global configuration
secon	dary-password
	nfigures the password for the secondary TACACS+ server. The CLI will mpt you for input.
Co	mmand mode: Global configuration
[no] t	acacs-server command-authorization
Ena	ables or disables TACACS+ command authorization.
Co	mmand mode: Global configuration
[no] t	acacs-server command-logging
Ena	ables or disables TACACS+ command logging.
Co	mmand mode: Global configuration
Ena TA Wh ser	tacacs-server directed-request [restricted no-truncate] ables or disables TACACS+ directed request, which uses a specified CACS+ server for authentication, authorization, accounting. When enabled hen directed-request is enabled, each user must add a configured TACACS+ ver hostname to the username (for example, username@hostname) ring login.
Thi	s command allows the following options:
- 1	Restricted : Only the username is sent to the specified TACACS+ server.
- 1	No-truncate: The entire login string is sent to the TACACS+ server.
[no] ta	acacs-server accounting-enable
Ena	ables or disables TACACS+ accounting.
Co	mmand mode: Global configuration
[no] t	acacs-server enable
Ena	ables or disables the TACACS+ server. By default, the server is disabled.
Co	mmand mode: Global configuration
Dis	tacacs-server plays current TACACS+ configuration parameters. mmand mode: All

Table 143. TACACS+ Server Configuration Commands

LDAP Server Configuration

LDAP (Lightweight Directory Access Protocol) is an authentication protocol that allows a remote access server to forward a user's logon password to an authentication server to determine whether access can be allowed to a given system.

Table 144. LDAP Server Configuration Commands

Command Syntax and Usage		
[no] ldap-server primary-host <i><ip address=""></ip></i>		
Sets the primary LDAP server address.		
Command mode: Global configuration		
[no] ldap-server secondary-host < <i>IP address</i> >		
Sets the secondary LDAP server address.		
Command mode: Global configuration		
[default] ldap-server port <udp number="" port=""></udp>		
Enter the number of the UDP port to be configured, be default is 389.	etween 1 - 65000. The	
Command mode: Global configuration		
ldap-server retransmit <1-3>		
Sets the number of failed authentication requests before different LDAP server. The default is 3 requests.	pre switching to a	
Command mode: Global configuration		
ldap-server timeout <4-15>		
Sets the amount of time, in seconds, before a LDAP s attempt is considered to have failed. The default is 5 s		
Command mode: Global configuration		
ldap-server domain [<1-128 characters> none]		
Sets the domain name for the LDAP server. Enter the organization. For example:	full path for your	
ou=people,dc=mydomain,dc=com		
Command mode: Global configuration		
[no] ldap-server backdoor		
Enables or disables the LDAP back door for Telnet, S HTTP/HTTPS. The default setting is <code>disabled</code> .	SH/SCP, or	
To obtain the LDAP back door password for your EN4 your Service and Support line.	093/EN4093R, contact	
Command mode: Global configuration		
ldap-server enable		
Enables the LDAP server.		
Command mode: Global configuration		

Table 144. LDAP Server Configuration Commands

Command Syntax and Usage

no ldap-server enable

Disables the LDAP server.

Command mode: Global configuration

show ldap-server

Displays the current LDAP server parameters.

Command mode: All

NTP Client Configuration

These commands allow you to synchronize the switch clock to a Network Time Protocol (NTP) server. By default, this option is disabled.

Table 145. NTP Client Configuration Commands

Command Syntax and Usage			
[no] ntp primary-server < <i>IP address</i> > [-m -mgt -e -extm -d -data]			
Prompts for the IP addresses of the primary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt), external management port (extm), or data port (data).			
Command mode: Global configuration			
[no] ntp secondary-server < <i>IP address</i> > [-m -mgt -e -extm -d -data]			
Prompts for the IP addresses of the secondary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt), external management port (extm), or data port (data).			
Command mode: Global configuration			
<pre>[no] ntp ipv6 primary-server <ipv6 address=""> [-m -mgt -e -extm -d -data]</ipv6></pre>			
Prompts for the IPv6 addresses of the primary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt), external management port (extm), or data port (data).			
Note : To delete the IPv6 primary server, use the following command: no ntp primary-server < <i>IP</i> address>			
Command mode: Global configuration			

Table 145. NTP Client Configuration Commands

Command Syntax and Usage
<pre>[no] ntp ipv6 secondary-server <ipv6 address=""> [-m -mgt -e -extm -d -data]</ipv6></pre>
Prompts for the IPv6 addresses of the secondary NTP server to which you want to synchronize the switch clock. Select the port to use for data transfer: internal management port (mgt), external management port ($extm$), or data port ($data$).
Note : To delete the IPv6 secondary server, use the following command: no ntp secondary-server <i><ip address=""></ip></i>
Command mode: Global configuration
ntp interval <5-44640>
Specifies the interval, that is, how often, in minutes, to re-synchronize the switch clock with the NTP server.
Command mode: Global configuration
ntp source loopback <1-5>
Sets the NTP source loopback interface.
Command mode: Global configuration
[no] ntp authenticate
Enables or disables NTP authentication. The default setting is disabled.
When authentication is enabled, the switch transmits NTP packets with the MAC address appended.
Command mode: Global configuration
ntp primary-key <1-65534>
Adds the NTP primary server key, which specifies which MD5 key is used by the primary server.
Command mode: Global configuration
ntp secondary-key <1-65534>
Adds the NTP secondary server key, which specifies which MD5 key is used by the secondary server.
Command mode: Global configuration
ntp trusted-key <1-65534> 0
Adds an MD5 key code to the list of trusted keys. Enter 0 (zero) to remove the selected key code.
Command mode: Global configuration
ntp enable
Enables the NTP synchronization service.
Command mode: Global configuration

Table 145. NTP Client Configuration Commands

Command Syntax and Usage

no ntp enable

Disables the NTP synchronization service.

Command mode: Global configuration

show ntp

Displays the current NTP service settings.

Command mode: All

NTP MD5 Key Commands

Table 146. NTP MD5 KEy Configuration Options

Command Syntax and Usage

ntp message-digest-key <1-65534> md5-key <1-16 characters>

Configures the selected MD5 key code.

Command mode: Global configuration

no ntp message-digest-key <1-65534>

Deletes the selected MD5 key code.

Command mode: Global configuration

System SNMP Configuration

IBM Networking OS supports SNMP-based network management. In SNMP model of network management, a management station (client/manager) accesses a set of variables known as MIBs (Management Information Base) provided by the managed device (agent). If you are running an SNMP network management station on your network, you can manage the switch using the following standard SNMP MIBs:

- MIB II (RFC 1213)
- Ethernet MIB (RFC 1643)
- Bridge MIB (RFC 1493)

An SNMP agent is a software process on the managed device that listens on UDP port 161 for SNMP messages. Each SNMP message sent to the agent contains a list of management objects to retrieve or to modify.

SNMP parameters that can be modified include:

- System name
- System location
- System contact
- Use of the SNMP system authentication trap function
- Read community string
- Write community string
- Trap community strings

Table 147. System SNMP Commands

Command Syntax and Usage		
snmp-server name <1-64 characters>		
Configures the name for the system. The name can have a maximum of 64 characters.		
Command mode: Global configuration		
snmp-server location <1-64 characters>		
Configures the name of the system location. The location can have a maximum of 64 characters.		
Command mode: Global configuration		
<pre>snmp-server contact <1-64 characters></pre>		
Configures the name of the system contact. The contact can have a maximum of 64 characters.		
Command mode: Global configuration		
snmp-server read-community <1-32 characters>		
Configures the SNMP read community string. The read community string controls SNMP "get" access to the switch. It can have a maximum of 32 characters. The default read community string is <i>public</i> . Command mode: Global configuration		

Table 147. System SNMP Commands

Command Syntax and Usage
 Snmp-server write-community <1-32 characters> Configures the SNMP write community string. The write community string controls SNMP "set" and "get" access to the switch. It can have a maximum of 32 characters. The default write community string is <i>private</i>. Command mode: Global configuration
snmp-server trap-source { <interface number=""> loopback <1-5>} Configures the source interface for SNMP traps. To send traps through the management ports, specify interface 128. Command mode: Global configuration snmp-server host <trap address="" host="" ip=""> <trap community="" host="" string=""> Adds a trap host server. Command mode: Global configuration</trap></trap></interface>
no snmp-server host <trap address="" host="" ip=""> Removes the trap host server. Command mode: Global configuration</trap>
snmp-server timeout <1-30> Sets the timeout value for the SNMP state machine, in minutes. Command mode: Global configuration
no] snmp-server authentication-trap Enables or disables the use of the system authentication trap facility. The default setting is disabled. Command mode: Global configuration
no] snmp-server link-trap Enables or disables the sending of SNMP link up and link down traps. The default setting is enabled. Command mode: Global configuration
show snmp-server Displays the current SNMP configuration. Command mode: All

SNMPv3 Configuration

SNMP version 3 (SNMPv3) is an extensible SNMP Framework that supplements the SNMPv2 Framework by supporting the following:

- a new SNMP message format
- security for messages
- access control
- remote configuration of SNMP parameters

For more details on the SNMPv3 architecture please refer to RFC3411 to RFC3418.

Table 148.	SNMPv3	Configuration	Commands
------------	--------	---------------	----------

Com	mand Syntax and Usage
snmp	p-server user <1-16>
	This command allows you to create a user security model (USM) entry for an authorized user. You can also configure this entry through SNMP.
0	Command mode: Global configuration
	To view command options, see page 234.
snmp	p-server view <1-128>
٦	This command allows you to create different MIB views.
(Command mode: Global configuration
-	To view command options, see page 235.
snmp	p-server access <1-32>
(This command allows you to specify access rights. The View-based Access Control Model defines a set of services that an application can use for checking access rights of the user. You need access control when you have to process retrieval or modification request from an SNMP entity.
(Command mode: Global configuration
	To view command options, see page 236.
snmp	p-server group <1-16>
r	A group maps the user name to the access group names and their access rights needed to access SNMP management objects. A group defines the access rights assigned to all names that belong to a particular group.
(Command mode: Global configuration
	To view command options, see page 238.
snmp	p-server community <1-16>
	The community table contains objects for mapping community strings and version-independent SNMP message parameters.
0	Command mode: Global configuration
	To view command options, see page 238.

Table 148. SNMPv3 Configuration Commands

snmp-server target-address <1-16>

This command allows you to configure destination information, consisting of a transport domain and a transport address. This is also termed as transport endpoint. The SNMP MIB provides a mechanism for performing source address validation on incoming requests, and for selecting community strings based on target addresses for outgoing notifications.

Command mode: Global configuration

To view command options, see page 239.

snmp-server target-parameters <1-16>

This command allows you to configure SNMP parameters, consisting of message processing model, security model, security level, and security name information. There may be multiple transport endpoints associated with a particular set of SNMP parameters, or a particular transport endpoint may be associated with several sets of SNMP parameters.

Command mode: Global configuration

To view command options, see page 240.

snmp-server notify <1-16>

A notification application typically monitors a system for particular events or conditions, and generates Notification-Class messages based on these events or conditions.

Command mode: Global configuration

To view command options, see page 241.

snmp-server version {v1v2v3 | v3only}

This command allows you to enable or disable the access to SNMP versions 1, 2 or 3. The default setting is v3only.

Command mode: Global configuration

show snmp-server v3

Displays the current SNMPv3 configuration.

Command mode: All

User Security Model Configuration

You can make use of a defined set of user identities using this Security Model. An SNMP engine must have the knowledge of applicable attributes of a user.

These commands help you create a user security model entry for an authorized user. You need to provide a security name to create the USM entry.

Table 149. User Security Model Configuration Commands

Command Syntax and Usage
snmp-server user <1-16> name <1-32 characters>
This command allows you to configure a string that represents the name of the user. This is the login name that you need in order to access the switch.
Command mode: Global configuration
<pre>snmp-server user <1-16> authentication-protocol {md5 sha none} authentication-password <pre>password value></pre></pre>
This command allows you to configure the authentication protocol and password.
The authentication protocol can be HMAC-MD5-96 or HMAC-SHA-96, or none. The default algorithm is none.
When you configure an authentication algorithm, you must provide a password, otherwise you will get an error message during validation. This command allows you to create or change your password for authentication.
Command mode: Global configuration
<pre>snmp-server user <1-16> privacy-protocol {des none} privacy-password <pre>cpassword value></pre></pre>
This command allows you to configure the type of privacy protocol and the privacy password.
The privacy protocol protects messages from disclosure. The options are des (CBC-DES Symmetric Encryption Protocol) or none. If you specify des as the privacy protocol, then make sure that you have selected one of the authentication protocols (MD5 or HMAC-SHA-96). If you select none as the authentication protocol, you will get an error message.
You can create or change the privacy password.
Command mode: Global configuration
no snmp-server user <1-16>
Deletes the USM user entries.
Command mode: Global configuration
show snmp-server v3 user <1-16>
Displays the USM user entries.
Command mode: All

SNMPv3 View Configuration

Note that the first five default <code>vacmViewTreeFamily</code> entries cannot be removed, and their names cannot be changed.

Table 150.	SNMPv3 Vie	w Configuration	Commands
------------	------------	-----------------	----------

Command Syntax and Usage
<pre>snmp-server view <1-128> name <1-32 characters></pre>
This command defines the name for a family of view subtrees.
Command mode: Global configuration
snmp-server view <1-128> tree <1-64 characters>
This command defines MIB tree, which when combined with the corresponding mask defines a family of view subtrees.
Command mode: Global configuration
[no] snmp-server view <1-128> mask <1-32 characters>
This command defines the bit mask, which in combination with the corresponding tree defines a family of view subtrees.
Command mode: Global configuration
<pre>snmp-server view <1-128> type {included excluded}</pre>
This command indicates whether the corresponding instances of vacmViewTreeFamilySubtree and vacmViewTreeFamilyMask define a family of view subtrees, which is included in or excluded from the MIB view.
Command mode: Global configuration
no snmp-server view <1-128>
Deletes the vacmViewTreeFamily group entry.
Command mode: Global configuration
show snmp-server v3 view <1-128>
Displays the current vacmViewTreeFamily configuration.
Command mode: All

View-based Access Control Model Configuration

The view-based Access Control Model defines a set of services that an application can use for checking access rights of the user. Access control is needed when the user has to process SNMP retrieval or modification request from an SNMP entity.

Table 151. View-based Access Control Model Commands

Command Syntax and Usage
<pre>snmp-server access <1-32> name <1-32 characters></pre>
Defines the name of the group.
Command mode: Global configuration
<pre>snmp-server access <1-32> prefix <1-32 characters></pre>
Defines the name of the context. An SNMP context is a collection of management information that an SNMP entity can access. An SNMP entity has access to many contexts. For more information on naming the management information, see RFC2571, the SNMP Architecture document. The view-based Access Control Model defines a table that lists the locally available contexts by contextName.
Command mode: Global configuration
<pre>snmp-server access <1-32> security {usm snmpv1 snmpv2}</pre>
Allows you to select the security model to be used.
Command mode: Global configuration
snmp-server access <1-32> level {noAuthNoPriv authNoPriv authPriv}
Defines the minimum level of security required to gain access rights. The level noAuthNoPriv means that the SNMP message will be sent without authentication and without using a privacy protocol. The level authNoPriv means that the SNMP message will be sent with authentication but without using a privacy protocol. The authPriv means that the SNMP message will be sent both with authentication and using a privacy protocol.
Command mode: Global configuration
<pre>snmp-server access <1-32> match {exact prefix}</pre>
If the value is set to $exact$, then all the rows whose contextName exactly matches the prefix are selected. If the value is set to $prefix$ then the all the rows where the starting octets of the contextName exactly match the prefix are selected.
Command mode: Global configuration
<pre>snmp-server access <1-32> read-view <1-32 characters></pre>
Defines a read view name that allows you read access to a particular MIB view. If the value is empty or if there is no active MIB view having this value then no access is granted.
Command mode: Global configuration

Table 151. View-based Access Control Model Commands

Command Syntax and Usage

snmp-server access <1-32> write-view <1-32 characters>

Defines a write view name that allows you write access to the MIB view. If the value is empty or if there is no active MIB view having this value then no access is granted.

Command mode: Global configuration

snmp-server access <1-32> notify-view <1-32 characters>

Defines a notify view name that allows you notify access to the MIB view.

Command mode: Global configuration

no snmp-server access <1-32>

Deletes the View-based Access Control entry.

Command mode: Global configuration

show snmp-server v3 access <1-32>

Displays the View-based Access Control configuration.

Command mode: All

SNMPv3 Group Configuration

Table 152. SNMPv3 Group Configuration Commands

Com	Command Syntax and Usage		
snmj	<pre>snmp-server group <1-16> security {usm snmpv1 snmpv2}</pre>		
I	Defines the security model.		
(Command mode: Global configuration		
snmj	p-server group <1-16> user-name <1-32 characters>		
	Sets the user name as defined in the following command on page 234: snmp-server user <1-16> name <1-32 characters>		
(Command mode: Global configuration		
snmj	p-server group <1-16> group-name <1-32 characters>		
	The name for the access group as defined in the following command: $snmp-server$ access <1-32> name <1-32 characters> on page 234.		
(Command mode: Global configuration		
no	snmp-server group <1-16>		
I	Deletes the vacmSecurityToGroup entry.		
(Command mode: Global configuration		
sho	w snmp-server v3 group <1-16>		
I	Displays the current vacmSecurityToGroup configuration.		
(Command mode: All		

SNMPv3 Community Table Configuration

These commands are used for configuring the community table entry. The configured entry is stored in the community table list in the SNMP engine. This table is used to configure community strings in the Local Configuration Datastore (LCD) of SNMP engine.

Table 153. SNMPv3 Community Table Configuration Commands

Command Syntax and Usage		
<pre>snmp-server community <1-16> index <1-32 characters> Allows you to configure the unique index value of a row in this table. Command string: Global configuration</pre>		
<pre>snmp-server community <1-16> name <1-32 characters> Defines the user name as defined in the following command on page 234: snmp-server user <1-16> name <1-32 characters> Command string: Global configuration</pre>		
<pre>snmp-server community <1-16> user-name <1-32 characters> Defines a readable string that represents the corresponding value of an SNMP community name in a security model. Command mode: Global configuration</pre>		

Table 153. SNMPv3 Community Table Configuration Commands (continued)

Command Syntax and Usage

```
snmp-server community <1-16> tag <1-255 characters>
```

Allows you to configure a tag. This tag specifies a set of transport endpoints to which a command responder application sends an SNMP trap.

Command mode: Global configuration

no snmp-server community <1-16>

Deletes the community table entry.

Command mode: Global configuration

show snmp-server v3 community <1-16>

Displays the community table configuration.

Command mode: All

SNMPv3 Target Address Table Configuration

These commands are used to configure the target transport entry. The configured entry is stored in the target address table list in the SNMP engine. This table of transport addresses is used in the generation of SNMP messages.

Table 154. Target Address Table Configuration Commands

Command Syntax and Usage
<pre>snmp-server target-address <1-16> address <ip address=""> name <1-32 characters></ip></pre>
Allows you to configure the locally arbitrary, but unique identifier, target address name associated with this entry.
Command mode: Global configuration
<pre>snmp-server target-address <1-16> name <1-32 characters> address <transport address="" ip=""></transport></pre>
Configures a transport IPv4 address that can be used in the generation of SNMP traps.
Command mode: Global configuration
<pre>snmp-server target-address <1-16> port <pre>port number></pre></pre>
Allows you to configure a transport address port that can be used in the generation of SNMP traps.
Command mode: Global configuration
<pre>snmp-server target-address <1-16> taglist <1-255 characters></pre>
Allows you to configure a list of tags that are used to select target addresses for a particular operation.
Command mode: Global configuration
snmp-server target-address <1-16> parameters-name <1-32 characters>
Defines the name as defined in the following command on page 240: snmp-server target-parameters $<1-16>$ name $<1-32$ characters>
Command mode: Global configuration

Table 154. Target Address Table Configuration Commands (continued)

Command Syntax and Usage

no snmp-server target-address <1-16>

Deletes the Target Address Table entry.

Command mode: Global configuration

show snmp-server v3 target-address <1-16>

Displays the current Target Address Table configuration.

Command mode: All

SNMPv3 Target Parameters Table Configuration

You can configure the target parameters entry and store it in the target parameters table in the SNMP engine. This table contains parameters that are used to generate a message. The parameters include the message processing model (for example: SNMPv3, SNMPv2c, SNMPv1), the security model (for example: USM), the security name, and the security level (noAuthnoPriv, authNoPriv, or authPriv).

Table 155. Target Parameters Table Configuration Commands

Command Syntax and Usage		
snmp-server target-parameters <1-16> name <1-32 characters> Allows you to configure the locally arbitrary, but unique, identifier that is associated with this entry.		
Command mode: Global configuration		
<pre>snmp-server target-parameters <1-16> message {snmpv1 snmpv2c snmpv3}</pre>		
Allows you to configure the message processing model that is used to generate SNMP messages.		
Command mode: Global configuration		
<pre>snmp-server target-parameters <1-16> security {usm snmpv1 snmpv2}</pre>		
Allows you to select the security model to be used when generating the SNMP messages.		
Command mode: Global configuration		
snmp-server target-parameters <1-16> user-name <1-32 characters>		
Defines the name that identifies the user in the USM table (page 234) on whose behalf the SNMP messages are generated using this entry.		
Command mode: Global configuration		

240 EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch: ISCLI–Industry Standard CLI Reference

Table 155. Target Parameters Table Configuration Commands (continued)

Command Syntax and Usage

```
snmp-server target-parameters <1-16> level
{noAuthNoPriv|authNoPriv|authPriv}
```

Allows you to select the level of security to be used when generating the SNMP messages using this entry. The level noAuthNoPriv means that the SNMP message will be sent without authentication and without using a privacy protocol. The level authNoPriv means that the SNMP message will be sent with authentication but without using a privacy protocol. The authPriv means that the SNMP message will be sent both with authentication and using a privacy protocol.

Command mode: Global configuration

```
no snmp-server target-parameters <1-16>
```

Deletes the targetParamsTable entry.

Command mode: Global configuration

show snmp-server v3 target-parameters <1-16>

Displays the current targetParamsTable configuration.

Command mode: All

SNMPv3 Notify Table Configuration

SNMPv3 uses Notification Originator to send out traps. A notification typically monitors a system for particular events or conditions, and generates Notification-Class messages based on these events or conditions.

Table 156. Notify Table Commands

Command Syntax and Usage			
<pre>snmp-server notify <1-16> name <1-32 characters></pre>			
Defines a locally arbitrary, but unique, identifier associated with this SNMP notify entry.			
Command mode: Global configuration			
snmp-server notify <1-16> tag <1-255 characters>			
Allows you to configure a tag that contains a tag value which is used to select entries in the Target Address Table. Any entry in the snmpTargetAddrTable, that matches the value of this tag, is selected.			
Command mode: Global configuration			
no snmp-server notify <1-16>			
Deletes the notify table entry.			
Command mode: Global configuration			
show snmp-server v3 notify <1-16>			
Displays the current notify table configuration.			
Command mode: All			

System Access Configuration

The following table describes system access configuration commands.

Table 157. System Access Configuration Commands

access user user-password

Sets the user (user) password. The user has no direct responsibility for switch management. The user view switch status information and statistics, but cannot make any configuration changes.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Note: To disable the user account, set the password to null (no password).

Command Mode: Global configuration

access user operator-password

Sets the operator (oper) password. The operator manages all functions of the switch. The operator can view all switch information and statistics and can reset ports.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Note: To disable the operator account, set the password to null (no password). The default setting is disabled (no password).

Command Mode: Global configuration

access user administrator-password

Sets the administrator (admin) password. The administrator has complete access to all menus, information, and configuration commands on the EN4093/EN4093R, including the ability to change both the user and administrator passwords.

This command will prompt for required information: current admin password, new password (up to 128 characters) and confirmation of the new password.

Access includes "oper" functions.

Note: You cannot disable the administrator password.

Command Mode: Global configuration

[no] access http enable

Enables or disables HTTP (Web) access to the Browser-Based Interface. The default setting is $\tt disabled.$

Command mode: Global configuration

[default] access http port [port number>]

Sets the switch port used for serving switch Web content. The default is HTTP port 80.

Command mode: Global configuration

Table 157. System Access Configuration Commands

Command Syntax and Usage		
<pre>[no] access snmp {read-only read-write}</pre>		
Disables or provides read-only/write-read SNMP access.		
Command mode: Global configuration		
[no] access telnet enable		
Enables or disables Telnet access. The default setting is disabled.		
Command mode: Global configuration		
[default] access telnet port [<1-65535>]		
Sets an optional Telnet server port number for cases where the server listens for Telnet sessions on a non-standard port.		
Command mode: Global configuration		
[default] access tftp-port [<1-65535>]		
Sets the TFTP port for the switch. The default is port 69.		
Command mode: Global configuration		
[no] access tsbbi enable		
Enables or disables Telnet/SSH configuration through the Browser-Based Interface (BBI).		
Command mode: Global configuration		
[no] access userbbi enable		
Enables or disables user configuration access through the Browser-Based Interface (BBI).		
Command mode: Global configuration		
show access		
Displays the current system access parameters.		
Command mode: All		

Management Network Configuration

These commands are used to define IP address ranges which are allowed to access the switch for management purposes.

```
Table 158. Management Network Configuration Commands
```

Command Syntax and Usage

access management-network <mgmt network IPv4 or IPv6 address>
<mgmt network mask or prefix length>

Adds a defined network through which switch access is allowed through Telnet, SNMP, RIP, or the IBM Networking OS browser-based interface. A range of IP addresses is produced when used with a network mask address. Specify an IP address and mask address in dotted-decimal notation.

Note: If you configure the management network without including the switch interfaces, the configuration causes the Firewall Load Balancing health checks to fail and creates a "Network Down" state on the network.

Command mode: Global configuration

no access management-network <mgmt network IPv4 or IPv6 address>
 <mgmt network mask or prefix length>

Removes a defined network, which consists of a management network address and a management network mask address.

Command mode: Global configuration

show access management-network

Displays the current management network configuration.

Command mode: All

clear access management-network

Removes all defined management networks.

Command mode: All except User EXEC

User Access Control Configuration

The following table describes user-access control commands.

Passwords can be a maximum of 128 characters.

Table 159. User Access Control Configuration Commands

Command Syntax and Usage	
access user <1-10>	
Configures the User ID.	
Command mode: Global configuration	
access user eject { <user name=""> <session id="">}</session></user>	
Ejects the specified user from the EN4093/EN4093R.	
Command mode: Global configuration	

Table 159. User Access Control Configuration Commands

Command Syntax and Usage

clear line <1-12>

Ejects the user with the corresponding session ID from the EN4093/EN4093R. **Command mode:** Privileged EXEC

access user user-password <1-128 characters>

Sets the user (user) password. The user has no direct responsibility for switch management. He or she can view switch status information and statistics, but cannot make any configuration changes.

Command mode: Global configuration

access user operator-password <1-128 characters>

Sets the operator (oper) password. The operator manages all functions of the switch. The operator can view all switch information and statistics and can reset ports.

Command mode: Global configuration

access user administrator-password <1-128 characters>

Sets the administrator (admin) password. The super user administrator has complete access to all information and configuration commands on the EN4093/EN4093R, including the ability to change both the user and administrator passwords.

Access includes "oper" functions.

Command mode: Global configuration

show access user

Displays the current user status.

Command mode: All

System User ID Configuration

The following table describes user ID configuration commands.

Table 160. User ID Configuration Commands

Command Syntax and Usage		
access user <1-10> level {user operator administrator}		
Sets the Class-of-Service to define the user's authority level. IBM Networking OS defines these levels as: User, Operator, and Administrator, with User being the most restricted level.		
Command mode: Global configuration		
access user <1-10> name <1-8 characters>		
Defines the user name of maximum eight characters.		
Command mode: Global configuration		

Table 160. User ID Configuration Commands

Cor	nmand Syntax and Usage			
aco	cess user <1-10> password			
Sets the user (user) password. This command will prompt for require information: current admin password, new password (up to 128 charac confirmation of the new password.				
	Command mode: Global configuration			
aco	cess user <1-10> enable			
	Enables the user ID.			
	Command mode: Global configuration			
no	access user <1-10> enable			
	Disables the user ID.			
	Command mode: Global configuration			
no	access user <1-10>			
	Deletes the user ID.			
	Command mode: Global configuration			
sho	ow access user			
	Displays the current user ID configuration.			
	Command mode: All			

Strong Password Configuration

The following table describes strong password configuration commands.

Table 161. Strong Password Configuration Commands

Command Syntax and Usage		
access user strong-password enable		
Enables Strong Password requirement.		
Command mode: Global configuration		
no access user strong-password enable		
Disables Strong Password requirement.		
Command mode: Global configuration		
access user strong-password expiry $<1-365>$		
Configures the number of days allowed before the password must be changed. The default value is 60 days.		
Command mode: Global configuration		
access user strong-password warning <1-365>		
Configures the number of days before password expiration, that a warning is issued to users. The default value is 15 days.		
Command mode: Global configuration		

Table 161. Strong Password Configuration Commands

Command Syntax and Usage

```
access user strong-password faillog <1-255>
```

Configures the number of failed login attempts allowed before a security notification is logged. The default value is 3 login attempts.

Command mode: Global configuration

show access user strong-password

Displays the current Strong Password configuration.

Command mode: All

HTTPS Access Configuration

The following table describes HTTPS access configuration commands.

```
Table 162. HTTPS Access Configuration Commands
```

Command Syntax and Usage		
[no] access https enable Enables or disables BBI access (Web access) using HTTPS. The defause setting is enabled. Command mode: Global configuration	ult	
[default] access https port [<i>TCP port number</i>] Defines the HTTPS Web server port number. The default port is 443. Command mode: Global configuration		
 access https generate-certificate Allows you to generate a certificate to connect to the SSL to be used dur key exchange. A default certificate is created when HTTPS is enabled f first time. The user can create a new certificate defining the information they want to be used in the various fields. For example: Country Name (2 letter code): CA State or Province Name (full name): Ontario Locality Name (for example, city): Ottawa Organization Name (for example, company): IBM Organizational Unit Name (for example, section): Operations Common Name (for example, user's name): Mr Smith Email (for example, email address): info@ibm.com You will be asked to confirm if you want to generate the certificate. It wi approximately 30 seconds to generate the certificate. Then the switch v restart SSL agent. 	or the that	

Table 162. HTTPS Access Configuration Commands

Command Syntax and Usage

access https save-certificate

Allows the client, or the Web browser, to accept the certificate and save the certificate to Flash to be used when the switch is rebooted.

Command mode: Global configuration

show access

Displays the current SSL Web Access configuration.

Command mode: All

Custom Daylight Saving Time Configuration

Use these commands to configure custom Daylight Saving Time. The DST is defined by two rules, the start rule and end rule. The rules specify the dates when the DST starts and finishes. These dates are represented as specific calendar dates or as relative offsets in a month (for example, 'the second Sunday of September').

Relative offset example: 2070901 = Second Sunday of September, at 1:00 a.m.

Calendar date example: 0070901 = September 7, at 1:00 a.m.

Table 163. Custom DST Configuration Commands

Command Syntax and Usage
system custom-dst start-rule WDDMMhh>
Configures the start date for custom DST, as follows:
WDMMhh
W = week (0-5, where 0 means use the calender date) D = day of the week (01-07, where 01 is Monday) MM = month (1-12) hh = hour (0-23)
Note: Week 5 is always considered to be the last week of the month.
Command mode: Global configuration
system custom-dst end-rule WDDMMhh>
Configures the end date for custom DST, as follows:
WDMMhh
W = week (0-5, where 0 means use the calender date) D = day of the week (01-07, where 01 is Monday) MM = month (1-12) hh = hour (0-23)
Note: Week 5 is always considered to be the last week of the month.
Command mode: Global configuration

Table 163. Custom DST Configuration Commands

Command Syntax and Usage

system custom-dst enable

Enables the Custom Daylight Saving Time settings.

Command mode: Global configuration

no system custom-dst enable

Disables the Custom Daylight Savings Time settings.

Command mode: Global configuration

show custom-dst

Displays the current Custom DST configuration.

Command mode: All

sFlow Configuration

IBM Networking OS supports sFlow version 5. sFlow is a sampling method used for monitoring high speed switched networks. Use these commands to configure the sFlow agent on the switch.

Table 164. sFlow Configuration Commands

Command Syntax and Usage		
sflow enable		
Enables the sFlow agent.		
Command mode: Global configuration		
no sflow enable		
Disables the sFlow agent.		
Command mode: Global configuration		
sflow server <ip address=""></ip>		
Defines the sFlow server address.		
Command mode: Global configuration		
sflow port <1-65535>		
Configures the UDP port for the sFlow server. The default value is 6343.		
Command mode: Global configuration		
show sflow		
Displays sFlow configuration parameters.		
Command mode: All		

sFlow Port Configuration Note: Use the following commands to configure the sFlow port on the switch.

Table 165. sFlow Port Configuration Commands

Command Syntax and Usage
<pre>[no] sflow polling <5-60> Configures the sFlow polling interval, in seconds. The default setting is disabled. Command mode: Interface port</pre>
[no] sflow sampling <256-65536>
Configures the sFlow sampling rate, in packets per sample. The default setting is disabled.
Command mode: Interface port

Port Configuration

Use the Port Configuration commands to configure settings for switch ports (INT*x*) and (EXT*x*). If you are configuring management ports (MGT1 or EXTM), see "Management Port Configuration" on page 259.

Table 166. Port Configuration Commands

Table 166. Port Configuration Commands	
Command Syntax and Usage	
interface port <pre>port alias or number></pre>	
Enter Interface port mode.	
Command mode: Global configuratio	n
dot1p <0-7>	
Configures the port's 802.1p priority le	vel.
Command mode: Interface port	
pvid <vlan number=""></vlan>	
Sets the default VLAN number which which the not VLAN tagged. The default number	vill be used to forward frames which are is 1 for non-management ports.
Command mode: Interface port	
name <1-64 characters>	
Sets a name for the port. The assigne number on some information and stati	d port name appears next to the port stics screens. The default is set to None.
Command mode: Interface port	
[no] bpdu-guard	
Enables or disables BPDU guard, to a Port Fast Forwarding enabled.	void spanning-tree loops on ports with
[no] dscp-marking	
Enables or disables DSCP re-marking	on a port.
Command mode: Interface port	
[no] rmon	
Enables or disables Remote Monitorin for any RMON configurations to function	g for the port. RMON must be enabled on.
Command mode: Interface port	
[no] tagging	
Disables or enables VLAN tagging for disabled for external ports (EXT <i>x</i>) a (INT <i>x</i>).	
Command mode: Interface port	
[no] tag-pvid	
Disables or enables VLAN tag persister removed from packets whose VLAN ta setting is disabled for internal server and enabled for management (MGT)	ag matches the port PVID. The default r ports (INT <i>x</i>) and external ports (EXT <i>x</i>),
Command mode: Interface port	

Table 166. Port Configuration Commands (continued)

Command Syntax and Usage	
[no] flood-blocking	
Enables or disables port Flood Blocking. When enabled, unicast and packets with unknown destination MAC addresses are blocked from	l multicast the port.
Command mode: Interface port	
port-channel min-links <1-32>	
Set the minimum number of links for this port. If the specified minimum of ports are not available, the trunk is placed in the $down$ state.	m number
Command mode: Interface port	
[no] broadcast-threshold <0-262143>	
Limits the number of broadcast packets per second to the specified disabled, the port forwards all broadcast packets.	value. If
Command mode: Interface port	
[no] multicast-threshold <0-262143>	
Limits the number of multicast packets per second to the specified v disabled, the port forwards all multicast packets.	alue. If
Command mode: Interface port	
[no] dest-lookup-threshold <0-262143>	
Limits the number of unknown unicast packets per second to the spe value. If disabled, the port forwards all unknown unicast packets.	ecified
Command mode: Interface port	
no shutdown	
Enables the port.	
Command mode: Interface port	
shutdown	
Disables the port. (To temporarily disable a port without changing its configuration attributes, refer to "Temporarily Disabling a Port" on pa	
Command mode: Interface port	
show interface port <pre>port alias or number></pre>	
Displays current port parameters.	
Command mode: All	

Port Error Disable and Recovery Configuration

The Error Disable and Recovery feature allows the switch to automatically disable a port if an error condition is detected on the port. The port remains in the error-disabled state until it is re-enabled manually, or re-enabled automatically by the switch after a timeout period has elapsed. The error-disabled state of a port does not persist across a system reboot.

Table 167. Port Error Disable Commands

err	disable recovery
	Enables automatic error-recovery for the port. The default setting is enabled
	Note : Error-recovery must be enabled globally before port-level commands become active.
	Command mode: Interface port
no	errdisable recovery
	Disables automatic error-recovery for the port.
	Command mode: Interface port
shc	ow interface port <port alias="" number="" or=""> errdisable</port>
	Displays current port Error Disable parameters.
	Command mode: All

Port Link Configuration

Use these commands to set flow control for the port link.

Comm	and Syntax and Usage
speed	{10 100 1000 auto}
Sets t	he link speed. Some options are not valid on all ports. The choices include:
_	10 Mbps
_	100 Mbps
_	1000 Mbps
_	10000 Mps
_	any (auto negotiate port speed)
Co	ommand mode: Interface port
duplex	<pre>{full half any}</pre>
Sets t	he operating mode. The choices include:
-	"Any," for auto negotiation (default)
_	Half-duplex
_	Full-duplex
Co	ommand mode: Interface port

Table 168. Port Link Configuration Commands

Command Syntax and Usage
[no] flowcontrol {receive send both}
Sets the flow control. The choices include:
 Receive flow control
 Transmit flow control
 Both receive and transmit flow control (default)
 No flow control
Note : For external ports (EXT x) the default setting is no flow control, and for internal ports (INT x) the default setting is both receive and transmit.
Command mode: Interface port
[no] auto
Turns auto-negotiation on or off.
show interface port <port alias="" number="" or=""></port>
Displays current port parameters.
Command mode: All

Temporarily Disabling a Port

To temporarily disable a port without changing its stored configuration attributes, enter the following command at any prompt:

Router# interface port port alias or number> shutdown

Because this configuration sets a temporary state for the port, you do not need to use a save operation. The port state will revert to its original configuration when the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch is reset. See the "Operations Commands" on page 437 for other operations-level commands.

UniDirectional Link Detection Configuration

UDLD commands are described in the following table.

Command Syntax and Usage
[no] udld
Enables or disables UDLD on the port.
Command mode: Interface port
[no] udld aggressive
Configures the UDLD mode for the selected port, as follows:
 Normal: Detect unidirectional links that have mis-connected interfaces. The port is disabled if UDLD determines that the port is mis-connected. Use the "no" form to select normal operation.
 Aggressive: In addition to the normal mode, the aggressive mode disables the port if the neighbor stops sending UDLD probes for 7 seconds.
Command mode: Interface port
show interface port <pre>port alias or number> udld</pre>
Displays current port UDLD parameters.
Command mode: All

Port OAM Configuration

Operation, Administration, and Maintenance (OAM) protocol allows the switch to detect faults on the physical port links. OAM is described in the IEEE 802.3ah standard.

OAM Discovery commands are described in the following table.

Table 170. Port OAM Configuration Commands

Cor	nmand Syntax and Usage
oan	(active passive}
	Configures the OAM discovery mode, as follows:
	 Active: This port link initiates OAM discovery.
	 Passive: This port allows its peer link to initiate OAM discovery.
	If OAM determines that the port is in an anomalous condition, the port is disabled.
	Command mode: Interface port
no	oam {active passive}
	Disables OAM discovery on the port.
	Command mode: Interface port
sho	ow oam
	Displays current port OAM parameters.
	Command mode: All

Port ACL Configuration

The following table describes port ACL configuration commands

Table 171. Port ACL/QoS Configuration Commands

Command Syntax and Usage
[no] access-control list <acl number=""></acl>
Adds or removes the specified ACL. You can add multiple ACLs to a port.
Command mode: Interface port
[no] access-control list6 <acl number=""></acl>
Adds or removes the specified IPv6 ACL. You can add multiple ACLs to a port.
Command mode: Interface port
[no] access-control group <acl group="" number=""></acl>
Adds or removes the specified ACL group. You can add multiple ACL groups to a port.
Command mode: Interface port
show interface port <pre>port alias or number> access-control</pre>
Displays current ACL QoS parameters.
Command mode: All

Port Spanning Tree Configuration

Table 172. Port STP Commands

Comn	nand Syntax and Usage
[no]	spanning-tree edge
а	nables or disables this port as an edge port. An edge port is not connected to bridge, and can begin forwarding traffic as soon as the link is up. Configure erver ports as edge ports (enabled).
	ote : After you configure the port as an edge port, you must disable the port nd then re-enable the port for the change to take effect.
С	ommand mode: Interface port
[no]	spanning-tree link-type p2p shared
D	efines the type of link connected to the port, as follows:
_	no: Configures the port to detect the link type, and automatically match its settings.
_	p2p: Configures the port for Point-To-Point protocol.
-	shared: Configures the port to connect to a shared medium (usually a hub).
Т	he default link type is auto.
С	ommand mode: Interface port
show	<pre>interface port {<port alias="" number="" or="">}</port></pre>
D	isplays current port configuration parameters.
С	ommand mode: All

Port Spanning Tree Guard Configuration

Table 173. Port STP Guard Options

Command Syntax and Usage

spanning-tree guard loop

Enables STP loop guard. STP loop guard prevents the port from forwarding traffic if no BPDUs are received. The port is placed into a loop-inconsistent blocking state until a BPDU is received.

Command mode: Interface port/Interface portchannel

spanning-tree guard root

Enables STP root guard. STP root guard enforces the position of the root bridge. If the bridge receives a superior BPDU, the port is placed into a root-inconsistent state (listening).

Command mode: Interface port/Interface portchannel

Table 173. Port STP Guard Options

Command Syntax and Usage

spanning-tree guard none

Disables STP loop guard and root guard.

Command mode: Interface port/Interface portchannel

no spanning-tree guard

Sets the Spanning Tree guard parameters to their default values.

Command mode: Interface port/Interface portchannel

Port WRED Configuration

These commands allow you to configure Weighted Random Early Detection (WRED) parameters for a selected port. For global WRED configuration, see "Weighted Random Early Detection Configuration" on page 266.

Table 174. Port WRED Options

Command Syntax and Usage		
[no] random-detect ecn enable		
Enables or disables Explicit Congestion Notification (ECN). When ECN is on, the switch marks the ECN bit of the packet (if applicable) instead of dropping the packet. ECN-aware devices are notified of the congestion and those devices can take corrective actions.		
Note: ECN functions only on TCP traffic.		
Command mode: Interface port		
random-detect enable		
Turns on Random Detection and avoidance.		
Command mode: Interface port		
no random-detect enable		
Turns off Random Detection and avoidance.		
Command mode: Interface port		
show interface port <pre>port alias or number> random-detect</pre>		
Displays current Random Detection and avoidance parameters.		
Command mode: All		

Port WRED Transmit Queue Configuration

Use this menu to define WRED thresholds for the port's transmit queues. Set each threshold between 1% and 100%. When the average queue size grows beyond the minimum threshold, packets begin to be dropped. When the average queue size reaches the maximum threshold, all packets are dropped. The probability of packet-drop between the thresholds is defined by the drop rate.

Table 175. Port WRED Transmit Queue Options

Command Syntax and Usage	
<pre>[no] random-detect transmit-queue <0-7> tcp <min. (1-100)="" threshold=""> <max. (1-100)="" threshold=""> <drop (1-100)="" rate=""></drop></max.></min.></pre>	
Configures the WRED thresholds for TCP traffic. Use the no form to clear the WRED threshold value.	
Command mode: Interface port	
<pre>[no] random-detect transmit-queue <0-7> non-tcp <min. (1-100)="" threshold=""> <max. (1-100)="" threshold=""> <drop (1-100)="" rate=""> Configures the WRED thresholds for non-TCP traffic. Use the no form to clear the WRED threshold value. Command mode: Interface port</drop></max.></min.></pre>	
random-detect transmit-queue <0-7> enable	
Sets the WRED transmit queue configuration to on.	
Command mode: Interface port	
no random-detect transmit-queue <0-7> enable	
Sets the WRED transmit queue configuration to off.	
Command mode: Interface port	

Management Port Configuration

You can use these commands to set port parameters for management ports (MGT1 and EXTM). Use these commands to set port parameters for the port link. For MGT1, the values for speed, duplex, and flow control are fixed, and cannot be configured.

 Table 176.
 Management Port Configuration Commands

Command Syntax and Usage		
peed {10 100 1000 auto}		
Sets the link speed. The choices include:		
- 10 Mbps		
- 100 Mbps		
– 1000 Mbps		
 Auto — for auto negotiation 		
Command mode: Interface port		

Command	d Syntax and Usage			
duplex	duplex {full half any}			
Sets	the operating mode. The choices include:			
– Fu	II-duplex			
– Ha	lf-duplex			
– An	y — for auto negotiation (default)			
Com	mand mode: Interface port			
[no] flo	wcontrol {receive send both}			
Sets	the flow control. The choices include:			
– Re	ceive flow control			
– Tra	ansmit flow control			
– Во	th receive and transmit flow control (default)			
– No	flow control			
Com	mand mode: Interface port			
no shut	down			
Enab	les the port.			
Com	mand mode: Interface port			
shutdow	n			
Disab	oles the port.			
Com	mand mode: Interface port			
show in	terface port <port alias="" number="" or=""></port>			
Displa	ays current port parameters.			
Com	mand mode: All			

Table 176. Management Port Configuration Commands (continued)

Stacking Configuration

A *stack* is a group of switches that work together as a unified system. The network views a stack of switches as a single entity, identified by a single network IP address. The Stacking Configuration commands are used to configure a stack, and to define the Master and Backup interfaces that represent the stack on the network.

The Stacking Configuration commands are available only after Stacking is enabled and the switch is reset. For more information, see "Stacking Boot Options" on page 447.

Table 177.	Stacking	Configuration	Options
------------	----------	---------------	---------

Command Syntax and Usage
[no] stack name <1- characters>
Defines a name for the stack.
Command mode: Global configuration
[no] stack backup < <i>csnum</i> (<i>l-</i>)>
Defines the backup switch in the stack, based on its configured switch number (csnum).
Command mode: Global configuration
show stack switch-number <csnum (1-)=""></csnum>
Displays the current stacking parameters.
Command mode: All

Stacking Switch Configuration

Command Syntax and Usage
<pre>stack switch-number <csnum (1-)=""> bind <asnum (1-16)=""></asnum></csnum></pre>
Binds the selected switch to the stack, based on its attached switch number (asnum).
Command mode: Global configuration
<pre>stack switch-number <csnum (1-)=""> [bay <bay no.="">] universal-unic-id <uuid></uuid></bay></csnum></pre>
Applies a Universally Unique Identifier to the switch.
Command mode: Global configuration

Table 178. Stacking Switch Options

Command Syntax and Usage
no stack switch-number <csnum (1-)=""></csnum>
Deletes the selected switch from the stack.
Command mode: Global configuration
show stack attached-switches
Displays the current stacking switch parameters.
Command mode: Global configuration

Quality of Service Configuration

Quality of Service (QoS) commands configure the 802.1p priority value and DiffServ Code Point value of incoming packets. This allows you to differentiate between various types of traffic, and provide different priority levels.

802.1p Configuration

This feature provides the EN4093/EN4093R the capability to filter IP packets based on the 802.1p bits in the packet's VLAN header. The 802.1p bits specify the priority that you should give to the packets while forwarding them. The packets with a higher (non-zero) priority bits are given forwarding preference over packets with numerically lower priority bits value.

Table 179. 802.1p Configuration Commands

handles the matching traffic.

Command Syntax and Usage		
qos	transmit-queue mapping <priority (0-7)=""> <cosq number=""></cosq></priority>	
	Maps the 802.1p priority of to the Class of Service queue (COSq) priority. Enter	
	the 802.1p priority value (0-7), followed by the Class of Service queue that	

Command mode: Global configuration

qos transmit-queue weight-cos <COSq number> <weight (0-15)>

Configures the weight of the selected Class of Service queue (COSq). Enter the queue number (0-1), followed by the scheduling weight (0-15). **Command mode:** Global configuration

show qos transmit-queue

Displays the current 802.1p parameters.

Command mode: All

DSCP Configuration

These commands map the DiffServ Code Point (DSCP) value of incoming packets to a new value or to an 802.1p priority value.

 Table 180.
 DSCP Configuration Commands

Command Syntax and Usage
qos dscp dscp-mapping <dscp (0-63)=""> <new (0-63)="" dscp=""></new></dscp>
Maps the initial DiffServ Code Point (DSCP) value to a new value. Enter the DSCP value (0-63) of incoming packets, followed by the new value.
Command mode: Global configuration
<pre>qos dscp dot1p-mapping <dscp (0-63)=""> <priority (0-7)=""></priority></dscp></pre>
Maps the DiffServ Code point value to an 802.1p priority value. Enter the DSCP value, followed by the corresponding 802.1p value.
Command mode: Global configuration

Table 180. DSCP Configuration Commands

qos dscp re-marking	
Turns on DSCP re-marking globally.	
Command mode: Global configuration	
no qos dscp re-marking	
Turns off DSCP re-marking globally.	
Command mode: Global configuration	
show qos dscp	
Displays the current DSCP parameters.	
Command mode: All	

Control Plane Protection

These commands allow you to limit the number of selected protocol packets received by the control plane (CP) of the switch. These limits help protect the CP from receiving too many protocol packets in a given time period.

Table 181. Control Plane Protection Options

Com	mand Syntax and Usage
	protocol-packet-control packet-queue-map < <i>packet queue number (0-40)</i> >
C	Configures a packet type to associate with each packet queue number. Enter a queue number, followed by the packet type. You may map multiple packet ypes to a single queue. The following packet types are allowed:
-	- 802.1x (IEEE 802.1x packets)
-	- application-cri-packets (critical packets of various applications, such as Telnet, SSH)
_	 arp-bcast (ARP broadcast packets)
_	 arp-ucast (ARP unicast reply packets)
-	- bgp (BGP packets)
-	 bpdu (Spanning Tree Protocol packets)
_	 cisco-bpdu (Cisco STP packets)
_	 dest-unknown (packets with destination not yet learned)
-	- dhcp (DHCP packets)
-	- icmp (ICMP packets)
-	- igmp (IGMP packets)
-	 ipv4-miscellaneous (IPv4 packets with IP options and TTL exception)
-	 ipv6-nd (IPv6 Neighbor Discovery packets)
-	 lacp (LACP/Link Aggregation protocol packets)
-	- IIdp (LLDP packets)
-	- ospf (OSPF packets)
-	- ospf3 (OSPF3 Packets)
-	- pim (PIM packets)
	- ptp (PTP packets)
	- rip (RIP packets)
	- system (system protocols, such as tftp, ftp, telnet, ssh)
	- udld (UDLD packets)
	- vlag (vLAG packets)
	- vrrp (VRRP packets)
0	Command mode: Global configuration
	protocol-packet-control rate-limit-packet- ueue <i><packet (0-40)="" number="" queue=""> <1-10000></packet></i>
(Configures the number of packets per second allowed for each packet queue.
(Command mode: Global configuration

Table 181. Control Plane Protection Options (continued)

 Command Syntax and Usage

 no qos protocol-packet-control packet-queue-map <packet type>

 Clears the selected packet type from its associated packet queue.

 Command mode: Global configuration

 no qos protocol-packet-control rate-limit-packetqueue <packet queue number (0-40)>

 Clears the packet rate configured for the selected packet queue.

 Command mode: Global configuration

 show qos protocol-packet-control information protocol

 Displays of mapping of protocol packet types to each packet queue number.

 The status indicates whether the protocol is running or not running.

 Command mode: All

 show qos protocol-packet-control information queue

 Displays the packet rate configured for each packet queue.

 Command mode: All

Weighted Random Early Detection Configuration

Weighted Random Early Detection (WRED) provides congestion avoidance by pre-emptively dropping packets before a queue becomes full. EN4093/EN4093R implementation of WRED defines TCP and non-TCP traffic profiles on a per-port, per COS queue basis. For each port, you can define a transmit-queue profile with thresholds that define packet-drop probability.

These commands allow you to configure global WRED parameters. For port WRED commands, see "Port WRED Configuration" on page 258.

Table 182. WRED Configuration Options

Command Syntax and Usage

qos random-detect ecn

Enables or disables Explicit Congestion Notification (ECN). When ECN is on, the switch marks the ECN bit of the packet (if applicable) instead of dropping the packet. ECN-aware devices are notified of the congestion and those devices can take corrective actions.

Note: ECN functions only on TCP traffic.

Command mode: Global configuration

qos random-detect enable

Turns on Random Detection and avoidance.

Command mode: Global configuration

Table 182. WRED Configuration Options

Command Syntax and Usage

no qos random-detect enable

Turns off Random Detection and avoidance.

Command mode: Global configuration

show qos random-detect

Displays current Random Detection and avoidance parameters.

Command mode: All

WRED Transmit Queue Configuration

Table 183. WRED Transmit Queue Options

Command Syntax and Usage [no] gos random-detect transmit-queue <0-7> tcp <min. threshold (1-100)> <max. threshold (1-100)> <drop rate (1-100)> Configures the WRED thresholds for TCP traffic. Use the no form to clear the WRED threshold value. Command mode: Global configuration [no] gos random-detect transmit-queue <0-7> non-tcp <min. threshold (1-100)> <max. threshold (1-100)> <drop rate (1-100)> Configures the WRED thresholds for non-TCP traffic. Use the no form to clear the WRED threshold value. Command mode: Global configuration qos random-detect transmit-queue <0-7> enable Sets the WRED transmit queue configuration to on. Command mode: Global configuration no qos random-detect transmit-queue <0-7> enable Sets the WRED transmit queue configuration to off. Command mode: Global configuration

Access Control Configuration

Use these commands to create Access Control Lists and ACL Groups. ACLs define matching criteria used for IP filtering and Quality of Service functions.

For information about assigning ACLs to ports, see "Port ACL Configuration" on page 256.

Table 184. General ACL Configuration Commands

Command Syntax and Usage
[no] access-control list <1-640>
Configures an Access Control List.
Command mode: Global configuration
To view command options, see page 269.
[no] access-control group <1-640>
Configures an ACL Group.
Command mode: Global configuration
To view command options, see page 280.
show access-control
Displays the current ACL parameters.
Command mode: All

Access Control List Configuration

These commands allow you to define filtering criteria for each Access Control List (ACL).

Table 185. ACL Configuration Commands

Comn	nand Syntax and Usage
[no] numbe	access-control list <1-640> egress-port port <port alias="" er="" or=""></port>
С	onfigures the ACL to function on egress packets.
С	ommand mode: Global configuration
acce: <0-7>	ss-control list <1-640> action {permit deny set-priority }
cł	onfigures a filter action for packets that match the ACL definitions. You can noose to permit (pass) or deny (drop) packets, or set the 802.1p priority leve I-7).
С	ommand mode: Global configuration
[no]	access-control list $<\!l$ -640> statistics
Е	nables or disables the statistics collection for the Access Control List.
С	ommand mode: Global configuration
defa	ult access-control list <1-640>
R	esets the ACL parameters to their default values.
С	ommand mode: Global configuration
show	access-control list <1-640>
D	isplays the current ACL parameters.
С	ommand mode: All
[no]	access-control list6 <1-128>
	onfigures an IPv6 Access Control List. To view command options, see age 273.
С	ommand mode: Global configuration

Ethernet Filtering Configuration

These commands allow you to define Ethernet matching criteria for an ACL.

Table 186.	Ethernet Filtering	Configuration	Commands
------------	--------------------	---------------	----------

Command Syntax and Usage	
<pre>[no] access-control list <1-640> ethernet source-mac-address <mac address=""> <mac mask=""> Defines the source MAC address for this ACL.</mac></mac></pre>	
Command mode: Global configuration	
<pre>[no] access-control list <1-640> ethernet destination-mac-address <mac address=""> <mac mask=""> Defines the destination MAC address for this ACL.</mac></mac></pre>	
Command mode: Global configuration	
<pre>[no] access-control list <1-640> ethernet vlan <vlan id=""> <vlan mask=""></vlan></vlan></pre>	
Defines a VLAN number and mask for this ACL.	
Command mode: Global configuration	
<pre>[no] access-control list <1-640> ethernet ethernet-type {arp ip ipv6 mpls rarp any <other (0x600-0xffff)="">}</other></pre>	
Defines the Ethernet type for this ACL.	
Command mode: Global configuration	
[no] access-control list <1-640> ethernet priority <0-7> Defines the Ethernet priority value for the ACL.	
Command mode: Global configuration	
default access-control list <1-640> ethernet Resets Ethernet parameters for the ACL to their default values. Command mode: Global configuration	
no access-control list <1-640> ethernet	
Removes Ethernet parameters for the ACL.	
Command mode: Global configuration	
show access-control list <1-640> ethernet Displays the current Ethernet parameters for the ACL. Command mode: All	

IPv4 Filtering Configuration

These commands allow you to define IPv4 matching criteria for an ACL.

Table 187. IP version 4 Filtering Configuration Commands

Command Syn	tax and Usage
	control list < <i>l-640</i> > ipv4 source-ip-address <i>s</i> > <i><ip i="" mask<="">></ip></i>
	source IP address for the ACL. If defined, traffic with this source IP ill match this ACL. Specify an IP address in dotted decimal notation.
	d mode: Global configuration
	control list $<1-640>$ ipv4 destination-ip-address ss> $ mask>$
	destination IP address for the ACL. If defined, traffic with this IP address will match this ACL.
Command	d mode: Global configuration
[no] access-	control list <1-640> ipv4 protocol <0-255>
matches th	IP protocol for the ACL. If defined, traffic from the specified protocol his filter. Specify the protocol number. Listed below are some of the n protocols.
Number	Name
1	icmp
2	igmp
6 17	t cp udp
89	ospf
112	vrrp
Command	d mode: Global configuration
[no] access-	control list <1-640> ipv4 type-of-service <0-255>
	Type of Service (ToS) value for the ACL. For more information on to RFC 1340 and 1349.
Command	d mode: Global configuration
default acc	ess-control list <1-640> ipv4
Resets the	Pv4 parameters for the ACL to their default values.
Command	d mode: Global configuration
show access	-control list <1-640> ipv4
Displays th	ne current IPv4 parameters.
Command	d mode: All

TCP/UDP Filtering Configuration

These commands allow you to define TCP/UDP matching criteria for an ACL.

Command Synt	Command Syntax and Usage		
[no] access-o <mask (0xf<="" th=""><th>control list <1-640> tcp-udp source-port <1-65535> FFFF)></th></mask>	control list <1-640> tcp-udp source-port <1-65535> FFFF)>		
UDP source	ource port for the ACL. If defined, traffic with the specified TCP or e port will match this ACL. Specify the port number. Listed below are e well-known ports:		
Number	Name		
20	ftp-data		
21	ftp		
22	ssh		
23	telnet		
25	smtp		
37	time		
42	name		
43	whois		
53	domain		
69	tftp		
70	gopher		
79	finger		
80 C ommond	http		
Command	mode: Global configuration		
	control list <1-640> tcp-udp destination-port <mask(0xffff)></mask(0xffff)>		
	estination port for the ACL. If defined, traffic with the specified TCP stination port will match this ACL. Specify the port number, just as above.		
Command	mode: Global configuration		
[no] access-o <mask (0x<="" td=""><td>control list <1-640> tcp-udp flags <value (0x0-0x3f)=""></value> 0-0x3f)></td></mask>	control list <1-640> tcp-udp flags <value (0x0-0x3f)=""></value> 0-0x3f)>		
Defines a T	CP/UDP flag for the ACL.		
	mode: Global configuration		
default acce	ess-control list <1-640> tcp-udp		
	TCP/UDP parameters for the ACL to their default values.		
	mode: Global configuration		
	•		
	-control list <1-640> tcp-udp		
	e current TCP/UDP Filtering parameters.		
Command	Command mode: All		

Packet Format Filtering Configuration

These commands allow you to define Packet Format matching criteria for an ACL.

Table 189.	Packet Format Filtering Configuration Commands
------------	--

Command Syntax and Usage
<pre>[no] access-control list <1-640> packet-format ethernet {ethertype2 snap llc} Defines the Ethernet format for the ACL.</pre>
Command mode: Global configuration
<pre>[no] access-control list <1-640> packet-format tagging {any none tagged} Defines the tagging format for the ACL. Command mode: Global configuration</pre>
<pre>[no] access-control list <1-640> packet-format ip {ipv4 ipv6} Defines the IP format for the ACL. Command mode: Global configuration</pre>
default access-control list <1-640> packet-format Resets Packet Format parameters for the ACL to their default values. Command mode: Global configuration
show access-control list <1-640> packet-format Displays the current Packet Format parameters for the ACL. Command mode: All

ACL IPv6 Configuration

These commands allow you to define filtering criteria for each IPv6 Access Control List (ACL).

Table 190. IPv6 ACL Options

Command Syntax and Usage
<pre>[no] access-control list6 <1-128> egress-port port <port alias="" number="" or=""> Configures the ACL to function on egress packets. Command mode: Global configuration</port></pre>
<pre>access-control list6 <i-128> action {permit deny set-priority <0-7>} Configures a filter action for packets that match the ACL definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7). Command mode: Global configuration</i-128></pre>
<pre>[no] access-control list6 <1-128> statistics Enables or disables the statistics collection for the Access Control List. Command mode: Global configuration</pre>

Table 190. IPv6 ACL Options

Command Syntax and Usage

default access-control list6 <1-128>

Resets the ACL parameters to their default values.

Command mode: Global configuration

show access-control list <1-128>

Displays the current ACL parameters.

Command mode: All

IPv6 Filtering Configuration

Ē

These commands allow you to define IPv6 matching criteria for an ACL.

Table 191. IP version 6 Filtering Options

Command Syntax and Usage
<pre>[no] access-control list6 <1-128> ipv6 source-address <1Pv6 address> <pre>cprefix length (1-128)></pre></pre>
Defines a source IPv6 address for the ACL. If defined, traffic with this source address will match this ACL.
Command mode: Global configuration
<pre>[no] access-control list6 <1-128> ipv6 destination-address <ipv6 address=""> <prefix (1-128)="" length=""></prefix></ipv6></pre>
Defines a destination IPv6 address for the ACL. If defined, traffic with this destination address will match this ACL.
Command mode: Global configuration
[no] access-control list6 <1-128> ipv6 next-header <0-255> Defines the next header value for the ACL. If defined, traffic with this next header value will match this ACL.
<pre>[no] access-control list6 <1-128> ipv6 flow-label <0-1048575> Defines the flow label for the ACL. If defined, traffic with this flow label will match this ACL.</pre>
[no] access-control list6 <1-128> ipv6 traffic-class <0-255>
Defines the traffic class for the ACL. If defined, traffic with this traffic class will match this ACL.
default access-control list6 <1-128> ipv6
Resets the IPv6 parameters for the ACL to their default values.
Command mode: Global configuration
show access-control list6 <1-128> ipv6
Displays the current IPv6 parameters.
Command mode: All

IPv6 TCP/UDP Filtering Configuration

These commands allows you to define TCP/UDP matching criteria for an ACL.

Table 192.	IPv6 ACL	TCP/UDP	Filtering	Options
------------	----------	---------	-----------	---------

Command Syn	tax and Usage
[no] access-c <mask (0xf<="" th=""><th>ontrol list6 <1-128> tcp-udp source-port <1-65535> FFF)></th></mask>	ontrol list6 <1-128> tcp-udp source-port <1-65535> FFF)>
UDP source	source port for the ACL. If defined, traffic with the specified TCP or ce port will match this ACL. Specify the port number. Listed here are e well-known ports:
Number	Name
20	ftp-data
21	ftp
22	ssh
23	telnet
25	smtp
37	time
42	name
43	whois
53	domain
69	tftp

79	finger
80	http
Command	d mode: Global configuration
	ontrol list6 <1-128> tcp-udp destination-port Standard (0xFFFF)>
	destination port for the ACL. If defined, traffic with the specified TCP stination port will match this ACL. Specify the port number, just as to above.
Command	d mode: Global configuration
	ontrol list6 <1-128> tcp-udp hue(0x0-0x3f)> <mask(0x0-0x3f)></mask(0x0-0x3f)>
Defines a	TCP/UDP flag for the ACL.
	d mode: Global configuration
default acce	ss-control list6 <1-128> tcp-udp
	TCP/UDP parameters for the ACL to their default values.
Command	d mode: Global configuration
show access-	control list6 <1-128> tcp-udp
Displays th	ne current TCP/UDP Filtering parameters.
	d mode: All
Sommand	

IPv6 Re-Mark Configuration

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

IPv6 Re-Marking In-Profile Configuration

Table 193. IPv6 Re-Marking In-Profile Options

Command Syntax and Usage
[no] access-control list6 <1-128> re-mark dot1p <0-7>
Re-marks the 802.1p value. The value is the priority bits information in the packet structure.
Command mode: Global configuration
<pre>[no] access-control list6 <1-128> re-mark in-profile dscp <0-63> Re-marks the DSCP value for in-profile traffic. Command mode: Global configuration</pre>
<pre>[no] access-control list6 <1-128> re-mark use-tos-precedence Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.</pre>
Command mode: Global configuration
default access-control list6 <1-128> re-mark Sets the ACL re-mark parameters to their default values. Command mode: Global configuration
show access-control list6 <1-128> re-mark Displays current re-mark parameters. Command mode: All

Management ACL Filtering Configuration

These commands allow you to define matching criteria for a Management ACL.

Table 194.	Management ACL	Filtering Cont	figuration Command	ls
10010 1011	management	i moning com	igaladon ooniniana	

Command Syntax and Usage		
[no] access-control macl <1-128> ipv4 Enables the Management ACL.		
<pre>[no] access-control macl <1-128> ipv4 <source address="" ip=""/> [<address mask="">] Sets IPv4 filtering to filter on the source IP address. Command mode: Global configuration</address></pre>		

Table 194. Management ACL Filtering Configuration Commands (continued)

n	
Command Sy	ntax and Usage
[no] access [< <i>address</i>	-control macl <1-128> ipv4 <destination address="" ip=""> mask>]</destination>
Sets IPv4	filtering to filter on the destination IP address.
Comman	d mode: Global configuration
	-control macl <1-128>ipv4 protocol <0-255> In IP protocol for the MACL. If defined, traffic from the specified
protocol r	natches this filter. Specify the protocol number. Listed here are some II-known protocols.
Number	Name
1 2 6 17 89 112	icmp igmp tcp udp ospf vrrp
Comman	nd mode: Global configuration
Resets th	cess-control list < <i>ACL number</i> > ipv4 le IPv4 parameters for the ACL to their default values. ld mode: Global configuration
show acces	s-control list < <i>ACL number</i> > packet-format
Displays	the current Packet Format parameters for the ACL.
Comman	id mode: All

TCP/UDP Filtering Configuration

The following commands allow you to define TCP/UDP matching criteria for a Management ACL.

Table 195. Management ACL TCP/UDP Filtering Configuration Commands

Command Syn	tax and Usage
[no] access- [<mask (0<="" b="">></mask>	control macl <1-128> tcp-udp source-port <1-65535> x0-0x3f)>]
specified T	source port for the Management ACL. If defined, traffic with the ICP or UDP source port will match this Management ACL. Specify umber. Listed here are some of the well-known ports:
Number	Name
20	ftp-data
21	ftp
22	ssh
23	telnet
25	smtp
37	time
42	name
43	whois
53	domain
69	tftp
70	gopher
79	finger
80	http
Command	d mode: Global configuration
	control macl <1-128> tcp-udp destination-port [<mask (0xffff)="">]</mask>
specified T	destination port for the Management ACL. If defined, traffic with the ICP or UDP destination port will match this Management ACL. e port number, just as with sport.
Command	d mode: Global configuration
default acc	ess-control list <acl number=""> tcp-udp</acl>
Resets the	e TCP/UDP parameters for the ACL to their default values.
	d mode: Global configuration
	•
	s-control list <acl number=""> tcp-udp</acl>
Displays th	ne current TCP/UDP Filtering parameters.
Command	d mode: All

VMAP Configuration

A VLAN Map is an Access Control List (ACL) that can be assigned to a VLAN or a VM group instead of a port. In a virtualized environment where Virtual Machines move between physical servers, VLAN Maps allow you to create traffic filtering and metering policies associated with a VM's VLAN.

For more information about VLAN Map configuration commands, see "Access Control List Configuration" on page 269.

For more information about assigning VLAN Maps to a VLAN, see "VLAN Configuration" on page 319.

For more information about assigning VLAN Maps to a VM group, see "VM Group Configuration" on page 423.

Table 196 lists the general VMAP configuration commands.

Table 196. VMAP Configuration Commands

Command Syntax and Usage
no] access-control vmap <1-128> egress-port <pre>port alias or number></pre>
Configures the VMAP to function on egress packets.
Command mode: Global configuration
access-control vmap <1-128> action {permit deny set-priority <0-7>}
Configures a filter action for packets that match the VMAP definitions. You can choose to permit (pass) or deny (drop) packets, or set the 802.1p priority level (0-7).
Command mode: Global configuration
[no] access-control vmap <1-128> statistics
Enables or disables the statistics collection for the VMAP.
Command mode: Global configuration
default access-control vmap <1-128>
Resets the VMAP parameters to their default values.
Command mode: Global configuration
show access-control vmap <1-128>
Displays the current VMAP parameters.
Command mode: All

ACL Group Configuration

These commands allow you to compile one or more ACLs into an ACL group. Once you create an ACL group, you can assign the ACL group to one or more ports.

Table 197. ACL Group Configuration Commands

Command Syntax and Usage
access-control group <1-640> list <1-640>
Adds the selected ACL to the ACL group.
Command mode: Global configuration
no access-control group <1-640> list <1-640>
Removes the selected ACL from the ACL group.
Command mode: Global configuration
show access-control group <1-640>
Displays the current ACL group parameters.
Command mode: All

ACL Metering Configuration

These commands define the Access Control profile for the selected ACL or ACL Group.

Table 198. ACL Metering Configuration Commands

Command Syntax and Usage
access-control list <1-640> meter committed-rate <64-10000000> Configures the committed rate, in Kilobits per second. The committed rate must be a multiple of 64. Command mode: Global configuration
access-control list <1-640> meter maximum-burst-size <32-4096> Configures the maximum burst size, in Kilobits. Enter one of the following values for mbsize: 32, 64, 128, 256, 512, 1024, 2048, 4096 Command mode: Global configuration
<pre>[no] access-control list <1-640> meter enable Enables or disables ACL Metering. Command mode: Global configuration</pre>
access-control list <1-640> meter action {drop pass} Configures the ACL Meter to either drop or pass out-of-profile traffic. Command mode: Global configuration
default access-control list <1-640> meter Sets the ACL meter configuration to its default values. Command mode: Global configuration

Table 198. ACL Metering Configuration Commands

Command Syntax and Usage

no access-control list <1-640> meter

Deletes the selected ACL meter.

Command mode: Global configuration

show access-control list $<\!l$ -640> meter

Displays current ACL Metering parameters.

Command mode: All

ACL Re-Mark Configuration

You can choose to re-mark IP header data for the selected ACL or ACL group. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

Table 199. ACL Re-Marking Configuration Commands

Command Syntax and Usage	
access-control list <1-640> re-mark dot1p <0-7>	
Defines 802.1p value. The value is the priority bits information in the pack structure.	ket
Command mode: Global configuration	
no access-control list <1-640> re-mark dot1p	
Disables use of 802.1p value for re-marked packets.	
Command mode: Global configuration	
[no] access-control list <1-640> re-mark use-tos-precedence	3
Enable or disable mapping of TOS (Type of Service) priority to 802.1p pr for In-Profile packets. When enabled, the TOS value is used to set the 80 value.	
Command mode: Global configuration	
default access-control list <1-640> re-mark	
Sets the ACL Re-mark configuration to its default values.	
Command mode: Global configuration	
show access-control list <1-640> re-mark	
Displays current Re-mark parameters.	
Command mode: All	

Re-Marking In-Profile Configuration

Table 200. ACL Re-Mark In-Profile Commands

Command Syntax and Usage
access-control list <1-640> re-mark in-profile dscp <0-63>
Sets the DiffServ Code Point (DSCP) of in-profile packets to the selected value.
Command mode: Global configuration
no access-control list <1-640> re-mark in-profile dscp
Disables use of DSCP value for in-profile traffic.
Command mode: Global configuration
show access-control list <1-640> re-mark
Displays current Re-mark parameters.
Command mode: All

Re-Marking Out-of-Profile Configuration

Table 201. ACL Re-Mark Out-of-Profile Commands

Command Syntax and Usage
access-control list <1-640> re-mark out-profile dscp <0-63>
Sets the DiffServ Code Point (DSCP) of out-of-profile packets to the selected value. The switch sets the DSCP value on Out-of-Profile packets.
Command mode: Global configuration
no access-control list < <i>l-640</i> > re-mark out-profile dscp
Disables use of DSCP value for out-of-profile traffic.
Command mode: Global configuration
show access-control list <1-640> re-mark
Displays current re-mark parameters.
Command mode: All

IPv6 Re-Marking Configuration

You can choose to re-mark IP header data for the selected ACL. You can configure different re-mark values, based on whether packets fall within the ACL metering profile, or out of the ACL metering profile.

Table 202. IPv6 General Re-Mark Options

Command Syntax and Usage
[no] access-control list6 <1-128> re-mark dot1p <0-7>
Re-marks the 802.1p value. The value is the priority bits information in the packet structure.
Command mode: Global configuration
<pre>[no] no access-control list6 <1-128> re-mark use-tos-precedence</pre>
Enables or disables mapping of TOS (Type of Service) priority to 802.1p priority for in-profile packets. When enabled, the TOS value is used to set the 802.1p value.
Command mode: Global configuration
default access-control list6 <1-128> re-mark
Sets the ACL re-mark parameters to their default values.
Command mode: Global configuration
show access-control list6 <1-128> re-mark

show access-control list6 <1-128> re-mark

Displays current re-mark parameters.

Command mode: All

IPv6 Re-Marking In-Profile Configuration

Table 203. IPv6 Re-Mark In-Profile Options

Command Syntax and Usage
<pre>[no] no access-control list6 <1-128> re-mark in-profile dscp <0-63></pre>
Re-marks the DSCP value for in-profile traffic.
Command mode: Global configuration
default access-control list6 <1-128> re-mark
Sets the ACL re-mark parameters to their default values.
Command mode: Global configuration
show access-control list6 <1-128> re-mark
Displays current re-mark parameters.
Command mode: All

Port Mirroring

Port mirroring is disabled by default. For more information about port mirroring on the EN4093/EN4093R, see "Appendix A: Troubleshooting" in the *IBM Networking OS 7.5 Application Guide*.

Note: Traffic on VLAN 4095 is not mirrored to the external ports.

Port Mirroring commands are used to configure, enable, and disable the monitor port. When enabled, network packets being sent and/or received on a target port are duplicated and sent to a monitor port. By attaching a network analyzer to the monitor port, you can collect detailed information about your network performance and usage.

Table 204. Port Mirroring Configuration Commands

Command Syntax and Usage	
[no] port-mirroring enable	
Enables or disables port mirro	ring.
Command mode: Global cont	iguration
show port-mirroring	
Displays current settings of the	e mirrored and monitoring ports.
Command mode: All	

Port-Mirroring Configuration

Table 205.	Port-Based Port-Mirroring	Configuration Commands
------------	---------------------------	------------------------

Command Syntax and Usage	
<pre>port-mirroring monitor-port <pre>port alias or number> mirroring-port <pre>port alias or number> {in out both}</pre></pre></pre>	
Adds the port to be mirrored. This command also allows you to enter the direction of the traffic. It is necessary to specify the direction because:	
If the source port of the frame matches the mirrored port and the mirrored direction is ingress or both (ingress and egress), the frame is sent to the monitoring port.	
If the destination port of the frame matches the mirrored port and the mirrored direction is egress or both, the frame is sent to the monitoring port.	
Command mode: Global configuration	
<pre>no port-mirroring monitor-port <pre> port alias or number> mirroring-port <pre> <pr< td=""></pr<></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre>	
Removes the mirrored port.	
Command mode: Global configuration	
show port-mirroring	
Displays the current settings of the monitoring port.	
Command mode: All	

Layer 2 Configuration

The following table describes basic Layer 2 Configuration commands. The following sections provide more detailed information and commands.

```
Table 206. Layer 2 Configuration Commands
```

ommand Syntax and Usage	
Lan <vlan number=""></vlan>	
Enter VLAN configuration mode. To view command options, see page 319	
Command mode: Global configuration	
panning-tree mode disable	
When enabled, globally turns Spanning Tree off (selects Spanning-Tree mode "disable"). All ports are placed into forwarding state. Any BPDU's received are flooded. BPDU Guard is not affected by this command.	
To enable Spanning-Tree, select another Spanning-Tree mode.	
Command mode: Global configuration	
no] spanning-tree stg-auto	
Enables or disables VLAN Automatic STG Assignment (VASA). When enabled, each time a new VLAN is configured, the switch will automatically assign the new VLAN its own STG. Conversely, when a VLAN is deleted, it STG is not associated with any other VLAN, the STG is returned to the available pool.	
Note: VASA applies only to PVRST mode.	
Command mode: Global configuration	
o] spanning-tree pvst-compatibility	
Enables or disables VLAN tagging of Spanning Tree BPDUs. The default setting is enabled.	
Command mode: Global configuration	
no] spanning-tree loopguard	
Enables or disables Spanning Tree Loop Guard.	
Command mode: Global configuration	
now layer2	
Displays current Layer 2 parameters.	
Command mode: All	

802.1X Configuration

These commands allow you to configure the EN4093/EN4093R as an IEEE 802.1X Authenticator, to provide port-based network access control.

Table 207. 802.1x Configuration Commands

Command Syntax and Usage	
dotlx enable	
Globally enables 802.1X.	
Command mode: Global configuration	
no dot1x enable	
Globally disables 802.1X.	
Command mode: Global configuration	
show dot1x	
Displays current 802.1X parameters.	
Command mode: All	

802.1X Global Configuration

The global 802.1X commands allow you to configure parameters that affect all ports in the EN4093/EN4093R.

Table 208.	802.1X Global	Configuration	Commands
------------	---------------	---------------	----------

Command Syntax and Usage	
dot1x mode [force-unauthorized auto force-authorized]	
Sets the type of access control for all ports:	
 force-unauthorized - the port is unauthorized unconditionally. 	
 auto - the port is unauthorized until it is successfully authorized by the RADIUS server. 	
 force-authorized - the port is authorized unconditionally, allowing all traffic. 	
The default value is force-authorized.	
Command mode: Global configuration	
dotlx quiet-time <0-65535>	
Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/ Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.	
Command mode: Global configuration	
dot1x transmit-interval <1-65535>	
Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds. Command mode: Global configuration	

Table 208. 802.1X Global Configuration Commands

Table	208. 802.1X Global Configuration Commands
Com	mand Syntax and Usage
dot	1x supplicant-timeout <1-65535>
t	Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet from the authentication server. The default value is 30 seconds.
(Command mode: Global configuration
dot	lx server-timeout <1-65535>
I	Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value s 30 seconds.
l	The time interval between transmissions of the RADIUS Access-Request backet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of radius-server timeout < <i>timeout-value</i> > (default is 3 seconds).
(Command mode: Global configuration
dot	1x max-request <1-10>
	Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.
(Command mode: Global configuration
dot	1x re-authentication-interval <1-604800>
\$	Sets the time, in seconds, the authenticator waits before re-authenticating a supplicant (client) when periodic re-authentication is enabled. The default value is 3600 seconds.
(Command mode: Global configuration
dot	1x re-authenticate
;	Sets the re-authentication status to on. The default value is off.
(Command mode: Global configuration
[no]	dot1x re-authenticate
	Sets the re-authentication status to off. The default value is off.
(Command mode: Global configuration
	dot1x vlan-assign
	Sets the dynamic VLAN assignment status to on or off. The default value is off.
(Command mode: Global configuration
defa	ault dot1x
	Resets the global 802.1X parameters to their default values.
	Command mode: Global configuration
	-
	w dot1x Diaplaya auront alabal 202 1X paramatam
	Displays current global 802.1X parameters.
(Command mode: All

802.1X Guest VLAN Configuration

The 802.1X Guest VLAN commands allow you to configure a Guest VLAN for unauthenticated ports. The Guest VLAN provides limited access to switch functions.

Table 209.	802.1X Guest \	/LAN Configuration Commands
------------	----------------	-----------------------------

Со	mmand Syntax and Usage
[no] dot1x guest-vlan vlan <i><vlan number=""></vlan></i>
	Configures the Guest VLAN number.
	Command mode: Global configuration
dot	tlx guest-vlan enable
	Enables the 802.1X Guest VLAN.
	Command mode: Global configuration
no	dot1x guest-vlan enable
	Disables the 802.1X Guest VLAN.
	Command mode: Global configuration
sho	ow dotlx
	Displays current 802.1X parameters.
	Command mode: All

802.1X Port Configuration

The 802.1X port commands allows you to configure parameters that affect the selected port in the EN4093/EN4093R. These settings override the global 802.1X parameters.

	Table 210.	802.1X Port Command	s
--	------------	---------------------	---

Command Syntax and Usage
dot1x mode force-unauthorized auto force-authorized
Sets the type of access control for the port:
 force-unauthorized - the port is unauthorized unconditionally.
 auto - the port is unauthorized until it is successfully authorized by the RADIUS server.
 force-authorized - the port is authorized unconditionally, allowing all traffic.
The default value is force-authorized.
Command mode: Interface port
dot1x quiet-time <0-65535>
Sets the time, in seconds, the authenticator waits before transmitting an EAP-Request/ Identity frame to the supplicant (client) after an authentication failure in the previous round of authentication. The default value is 60 seconds.
Command mode: Interface port

Table 210. 802.1X Port Commands

Command Syntax and Usage
dot1x transmit-interval <1-65535>
Sets the time, in seconds, the authenticator waits for an EAP-Response/Identity frame from the supplicant (client) before retransmitting an EAP-Request/Identity frame. The default value is 30 seconds.
Command mode: Interface port
dot1x supplicant-timeout <1-65535>
Sets the time, in seconds, the authenticator waits for an EAP-Response packet from the supplicant (client) before retransmitting the EAP-Request packet from the authentication server. The default value is 30 seconds.
Command mode: Interface port
dotlx server-timeout <1-65535>
Sets the time, in seconds, the authenticator waits for a response from the RADIUS server before declaring an authentication timeout. The default value is 30 seconds.
The time interval between transmissions of the RADIUS Access-Request packet containing the supplicant's (client's) EAP-Response packet is determined by the current setting of the radius-server timeout command.
Command mode: Interface port
dot1x max-request <1-10>
Sets the maximum number of times the authenticator retransmits an EAP-Request packet to the supplicant (client). The default value is 2.
Command mode: Interface port
dot1x re-authentication-interval <1-604800>
Sets the time, in seconds, the authenticator waits before re-authenticating a supplicant (client) when periodic re-authentication is enabled. The default value is 3600 seconds.
Command mode: Interface port
dot1x re-authenticate
Sets the re-authentication status to on. The default value is off.
Command mode: Interface port
[no] dot1x re-authenticate
Sets the re-authentication status off. The default value is off.
Command mode: Interface port
[no] dot1x vlan-assign
Sets the dynamic VLAN assignment status to on or off. The default value is off.
Command mode: Interface port

Table 210. 802.1X Port Commands

Command Syntax and Usage

default dot1x

Resets the 802.1X port parameters to their default values.

Command mode: Interface port

dot1x apply-global

Applies current global 802.1X configuration parameters to the port.

Command mode: Interface port

show interface port port alias or number> dot1x

Displays current 802.1X port parameters.

Command mode: All

RSTP/MSTP/PVRST Configuration

IBM Networking OS supports the IEEE 802.1w Rapid Spanning Tree Protocol (RSTP), IEEE 802.1s Multiple Spanning Tree Protocol (MSTP), and Per VLAN Rapid Spanning Tree Protocol (PVRST). MSTP allows you to map many VLANs to a small number of Spanning Tree Groups, each with its own topology.

Up to 32 Spanning Tree Groups can be configured in MSTP mode. MRST is turned off by default and the default STP mode is PVRST.

Note: When Multiple Spanning Tree is turned on, VLAN 4095 is moved from Spanning Tree Group 128 to the Common Internal Spanning Tree (CIST). When Multiple Spanning Tree is turned off, VLAN 4095 is moved back to Spanning Tree Group 128.

Table 211. Multiple Spanning Tree Configuration Command

Command Syntax and Usage	
spanning-tree mstp name <1-32 characters> Configures a name for the MSTP region. All devices within an MSTP region must have the same region name.	
Command mode: Global configuration	
spanning-tree mstp version <0-65535>	
Configures a version number for the MSTP region. The version is used as a numerical identifier for the region. All devices within an MSTP region must have the same version number.	
Command mode: Global configuration	
spanning-tree mstp maximum-hop <4-60>	
Configures the maximum number of bridge hops a packet may traverse before it is dropped. The default value is 20.	
Command mode: Global configuration	
spanning-tree mode [disable mst pvrst rstp]	
Selects and enables Multiple Spanning Tree mode (mst), Per VLAN Rapid Spanning Tree mode ($pvrst$), or Rapid Spanning Tree mode ($rstp$).	
The default mode is STP/PVRST+.	
When you select spanning-tree disable, the switch globally turns Spanning Tree off. All ports are placed into forwarding state. Any BPDU's received are flooded. BPDU Guard is not affected by this command.	
Command mode: Global configuration	
show spanning-tree mstp mrst	
Displays the current RSTP/MSTP/PVRST+ configuration.	
Command mode: All	

Common Internal Spanning Tree Configuration

Table 212 describes the commands used to configure Common Internal Spanning Tree (CIST) parameters. The CIST provides compatibility with different MSTP regions and with devices running different Spanning Tree instances. It is equivalent to Spanning Tree Group 0.

Table 212. CIST Configuration Commands

default spanning-tree mstp cist

Resets all CIST parameters to their default values.

Command mode: Global configuration

```
show spanning-tree mstp cist
```

Displays the current CIST configuration.

Command mode: All

CIST Bridge Configuration

CIST bridge parameters are used only when the switch is in MSTP mode. CIST parameters do not affect operation of STP/PVST+, RSTP, or PVRST+.

Command Syntax and Usage
spanning-tree mstp cist-add-vlan <vlan no.=""></vlan>
Add the specified VLANs to CIST.
Command mode: Global configuration
spanning-tree mstp cist-bridge priority <0-65535>
Configures the CIST bridge priority. The bridge priority parameter controls which bridge on the network is the MSTP root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority.
The range is 0 to 65535, in steps of 4096 (0, 4096, 8192), and the default value is 61440.
Command mode: Global configuration
spanning-tree mstp cist-bridge maximum-age $<\!\!6\text{-}40\!\!>$
Configures the CIST bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it reconfigures the MSTP network. The range is 6 to 40 seconds, and the default is 20 seconds.
Command mode: Global configuration

Table 213. CIST Bridge Configuration Commands

Command Syntax and Usage

spanning-tree mstp cist-bridge forward-delay <4-30>

Configures the CIST bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.

Command mode: Global configuration

show spanning-tree mstp cist

Displays the current CIST bridge configuration.

Command mode: All

CIST Port Configuration

CIST port parameters are used to modify MSTP operation on an individual port basis. CIST parameters do not affect operation of STP/PVST+. For each port, RSTP/MSTP is turned on by default.

Table 214. CIST Port Configuration Commands

Command Syntax and Usage

spanning-tree mstp cist interface-priority <0-240>

Configures the CIST port priority. The port priority helps determine which bridge port becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment.

The range is 0 to 240, in steps of 16 (0, 16, 32...), and the default is 128.

Command mode: Interface port

spanning-tree mstp cist path-cost <0-20000000>

Configures the CIST port path cost. The port path cost is used to help determine the designated port for a segment. Port path cost is based on the port speed, and is calculated as follows:

- 100Mbps = 200000
- 1Gbps = 20000
- 10Gbps = 2000

The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.

Command mode: Interface port

spanning-tree mstp cist hello <1-10>

Configures the CIST port Hello time. The Hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge Hello value. The range is 1 to 10 seconds, and the default is 2 seconds.

Command mode: Interface port

Table 214. CIST Port Configuration Commands (continued)

Command Syntax and Usage

[no] spanning-tree mstp cist pvst-protection

Configures PVST Protection on the selected port. If the port receives any PVST+/PVRST+ BPDUs, it error disabled. PVST Protection works only in MSTP mode. The default setting is disabled.

Command mode: Interface port

spanning-tree mstp cist enable

Enables MRST on the port.

Command mode: Interface port

no spanning-tree mstp cist enable

Disables MRST on the port.

Command mode: Interface port

show interface port <port alias or number> spanning-tree mstp cist
Displays the current CIST port configuration.

Command mode: All

Spanning Tree Configuration

IBM Networking OS supports the IEEE 802.1D Spanning Tree Protocol (STP). STP is used to prevent loops in the network topology. Up to 128 Spanning Tree Groups can be configured on the switch (STG reserved for management).

Note: When VRRP is used for active/active redundancy, STG must be enabled.

Table 215. Spanning Tree Configuration Commands

Cor	Command Syntax and Usage	
spa	anning-tree stp <i><stg number=""></stg></i> vlan <i><vlan number=""></vlan></i>	
	Associates a VLAN with a Spanning Tree and requires a VLAN ID as a parameter.	
	Command mode: Global configuration	
no	<pre>spanning-tree stp <stg number=""> vlan <vlan number=""></vlan></stg></pre>	
	Breaks the association between a VLAN and a Spanning Tree and requires a VLAN ID as a parameter.	
	Command mode: Global configuration	
no	spanning-tree stp < <i>STG number</i> > vlan all	
	Removes all VLANs from a Spanning Tree.	
	Command mode: Global configuration	
spa	anning-tree stp <i><stg number=""></stg></i> enable	
	Globally enables Spanning Tree Protocol. STG is turned on by default.	
	Command mode: Global configuration	

Table 215. Spanning Tree Configuration Commands

Command Syntax and Usage

no spanning-tree stp <*STG number*> enable

Globally disables Spanning Tree Protocol.

Command mode: Global configuration

default spanning-tree <STG number>

Restores a Spanning Tree instance to its default configuration.

Command mode: Global configuration

[no] spanning-tree loopguard

Enables or disables spanning tree loop guard.

Command mode: Global configuration

show spanning-tree stp <STG number>

Displays current Spanning Tree Protocol parameters.

Command mode: All

Bridge Spanning Tree Configuration

Spanning Tree bridge parameters affect the global STG operation of the switch. STG bridge parameters include:

- Bridge priority
- Bridge hello time
- Bridge maximum age
- Forwarding delay

Table 216. Bridge Spanning Tree Configuration Commands

Command Syntax and Usage

spanning-tree stp <STG number> bridge priority <0-65535>

Configures the bridge priority. The bridge priority parameter controls which bridge on the network is the STG root bridge. To make this switch the root bridge, configure the bridge priority lower than all other switches and bridges on your network. The lower the value, the higher the bridge priority. The default value is 65534.

RSTP/MSTP: The range is 0 to 61440, in steps of 4096 (0, 4096, 8192...), and the default is 61440.

Command mode: Global configuration

spanning-tree stp <STG number> bridge hello-time <1-10>

Configures the bridge Hello time. The Hello time specifies how often the root bridge transmits a configuration bridge protocol data unit (BPDU). Any bridge that is not the root bridge uses the root bridge Hello value. The range is 1 to 10 seconds, and the default is 2 seconds.

This command does not apply to MSTP.

Command mode: Global configuration

Table 216. Bridge Spanning Tree Configuration Commands

Command Syntax and Usage

spanning-tree stp <stg number=""></stg>	> bridge maximum-age <i><6-40></i>
---	--

Configures the bridge maximum age. The maximum age parameter specifies the maximum time the bridge waits without receiving a configuration bridge protocol data unit before it re configures the STG network. The range is 6 to 40 seconds, and the default is 20 seconds.

This command does not apply to MSTP.

Command mode: Global configuration

spanning-tree stp <STG number> bridge forward-delay <4-30>

Configures the bridge forward delay parameter. The forward delay parameter specifies the amount of time that a bridge port has to wait before it changes from the listening state to the learning state and from the learning state to the forwarding state. The range is 4 to 30 seconds, and the default is 15 seconds.

This command does not apply to MSTP

Command mode: Global configuration

show spanning-tree stp <STG number> bridge

Displays the current bridge STG parameters.

Command mode: All

When configuring STG bridge parameters, the following formulas must be used:

- 2*(fwd-1) <u>></u> mxage
- 2*(*hello*+1) < *mxage*

Spanning Tree Port Configuration

By default for STP/PVST+, Spanning Tree is turned off for internal ports and management ports, and turned on for external ports. By default for RSTP/MSTP, Spanning Tree is turned off for internal ports and management ports, and turned on for external ports, with internal ports configured as Edge ports. STG port parameters include:

- Port priority
- Port path cost

For more information about port Spanning Tree commands, see "Port Spanning Tree Configuration" on page 257.

Table 217. Spanning Tree Port Commands

Command	Syntax	and I	Jsage
---------	--------	-------	-------

Г

spanning-tree stp < <i>STG number</i> > priority < <i>0-255</i> >	
Configures the port priority. The port priority helps determine which bridge p becomes the designated port. In a network topology that has multiple bridge ports connected to a single segment, the port with the lowest port priority becomes the designated port for the segment. The default value is 128.	
RSTP/MSTP : The range is 0 to 240, in steps of 16 (0, 16, 32).	
Command mode: Interface port	
<pre>spanning-tree stp <stg number=""> path-cost <1-65535, 0 for default)></stg></pre>	
Configures the port path cost. The port path cost is used to help determine t designated port for a segment. Port path cost is based on the port speed, a is calculated as follows: – 100Mbps = 19	
– 1Gbps = 4	
- 10Gbps = 2	
The default value of 0 (zero) indicates that the default path cost will be computed for an auto negotiated link speed.	
Command mode: Interface port	
spanning-tree stp link-type {auto p2p shared}	
Defines the type of link connected to the port, as follows:	
 auto: Configures the port to detect the link type, and automatically mate its settings. 	ch
 p2p: Configures the port for Point-To-Point protocol. 	
 shared: Configures the port to connect to a shared medium (usually a hub). 	
Command mode: Interface port	
[no] spanning-tree edge	
Enables or disables this port as an edge port. An edge port is not connected a bridge, and can begin forwarding traffic as soon as the link is up. Configur server ports as edge ports (enabled).	
Command mode: Interface port	
spanning-tree stp <i><stg number=""></stg></i> enable	
Enables STG on the port.	
Command mode: Interface port	

Table 217. Spanning Tree Port Commands (continued)

 Command Syntax and Usage

 no spanning-tree stp <STG number> enable

 Disables STG on the port.

 Command mode: Interface port

 show interface port <port alias or number> spanning-tree stp <STG number>

 Displays the current STG port parameters.

 Command mode: All

Forwarding Database Configuration

Use the following commands to configure the Forwarding Database (FDB).

Table 218. FDB Configuration Commands

Command Syntax and Usage
mac-address-table aging $<\!0.65535\!>$
Configures the aging value for FDB entries, in seconds. The default value is 300.
Command mode: Global configuration
[no] mac-address-table mac-notification
Enables or disables MAC address notification.
Command mode: Global configuration
show mac-address-table
Display current FDB configuration.
Command mode: All

Static FDB Configuration

Use the following commands to configure static entries in the Forwarding Database (FDB).

Table 219. FDB Configuration Commands

Cor	nmand Syntax and Usage
mac	c-address-table static <mac address=""> vlan <vlan number=""> {port <port alias="" number="" or=""> portchannel <trunk number=""> adminkey <1-65535>}</trunk></port></vlan></mac>
	Adds a permanent FDB entry. Enter the MAC address using the following format, xx:xx:xx:xx:xx:xx
	For example, 08:00:20:12:34:56
	You can also enter the MAC address as follows:
	For example, 080020123456
	Command mode: Global configuration
no	<pre>mac-address-table static <mac address=""> <vlan number=""></vlan></mac></pre>
	Deletes a permanent FDB entry.
	Command mode: Global configuration
no	mac-address-table static all
	Clears all static FDB entries.
	Command mode: Global configuration
sho	ow mac-address-table
	Display current FDB configuration.
	Command mode: All

Static Multicast MAC Configuration

The following options are available to control the forwarding of known and unknown multicast packets:

- All multicast packets are flooded to the entire VLAN. This is the default switch behavior.
- Known multicast packets are forwarded only to those ports specified. Unknown
 multicast packets are flooded to the entire VLAN. To configure this option, define
 the Multicast MAC address for the VLAN and specify ports that are to receive
 multicast packets (mac-address-table multicast).
- Known multicast packets are forwarded only to those ports specified. Unknown
 multicast packets are dropped. To configure this option:
 - Define the Multicast MAC address for the VLAN and specify ports that are to receive multicast packets (mac-address-table multicast).
 - Enable Flood Blocking on ports that are not to receive multicast packets (interface port x) (flood-blocking).

Use the following commands to configure static Multicast MAC entries in the Forwarding Database (FDB).

Cor	nmand Syntax and Usage
mac	c-address-table multicast <mac address=""> <vlan number=""> <port alias="" number="" or=""></port></vlan></mac>
	Adds a static multicast entry. You can list ports separated by a space, or enter a range of ports separated by a hyphen (-). For example:
	<pre>mac-address-table multicast 01:00:00:23:3f:01 200 int1-int4</pre>
	Command mode: Global configuration
no	<pre>mac-address-table multicast <mac address=""> <vlan number=""> <pre> <pre> <pre> <pre> </pre> </pre> </pre></pre></vlan></mac></pre>
	Deletes a static multicast entry.
	Command mode: Global configuration
no	<pre>mac-address-table multicast {all mac <mac address=""> vlan <vlan number=""> port <pre>port alias or number>} Clears static multicast entries.</pre></vlan></mac></pre>
	Command mode: Global configuration
sho	ow mac-address-table multicast
	Display the current static multicast entries.
	Command mode: All

Edge Control Protocol Configuration

Use the following commands to configure Edge Control Protocol (ECP).

Table 221. ECP Configuration Options

Command Syntax and Usage
ecp retransmit-interval <100-9000>
Sets the retransmission interval, in milliseconds. The default value is 1000ms.
Command mode: Global configuration
default ecp retransmit-interval
Resets the ECP retransmit interval to the default 1000 milliseconds.
Command mode: Global configuration
show ecp [channels upper-layer-protocols]
Displays settings for all ECP channels or registered ULPs.
Command mode: All

LLDP Configuration

Use the following commands to configure Link Layer Detection Protocol (LLDP).

Table 222. LLDP Configuration Commands

Command Syntax and Usage
lldp refresh-interval <5-32768>
Configures the message transmission interval, in seconds. The default value is 30 seconds.
Command mode: Global configuration
lldp holdtime-multiplier <2-10>
Configures the message hold time multiplier. The hold time is configured as a multiple of the message transmission interval.
The default value is 4.
Command mode: Global configuration
lldp trap-notification-interval <1-3600>
Configures the trap notification interval, in seconds. The default value is 5.
Command mode: Global configuration
lldp transmission-delay <1-8192>
Configures the transmission delay interval. The transmit delay timer represents the minimum time permitted between successive LLDP transmissions on a port.
The default value is 2.
Command mode: Global configuration

Table 222. LLDP Configuration Commands

11ċ	dp reinit-delay <1-10>
	Configures the re-initialization delay interval, in seconds. The re-initialization delay allows the port LLDP information to stabilize before transmitting LLDP messages.
	The default value is 2.
	Command mode: Global configuration
11ċ	lp enable
	Globally turns LLDP on. The default setting is on.
	Command mode: Global configuration
no	lldp enable
	Globally turns LLDP off.
	Command mode: Global configuration
shc	ow lldp
	Display current LLDP configuration.
	Command mode: All

LLDP Port Configuration

Use the following commands to configure LLDP port options.

Table 223. LLDP Port Commands

Command Syntax and Usage
<pre>1ldp admin-status {disabled tx_only rx_only tx_rx} Configures the LLDP transmission type for the port, as follows:</pre>
Command mode: Interface port
[no] lldp trap-notification Enables or disables SNMP trap notification for LLDP messages. Command mode: Interface port
show interface port <i><port alias="" number="" or=""></port></i> 11dp Display current LLDP port configuration. Command mode : All

LLDP Optional TLV configuration

Use the following commands to configure LLDP port TLV (Type, Length, Value) options for the selected port.

Table 224. Optional TLV Commands

no] lldp tlv portdesc	
Enables or disables the Port Description information	type.
Command mode: Interface port	
no] lldp tlv sysname	
Enables or disables the System Name information ty	/pe.
Command mode: Interface port	
no] lldp tlv sysdescr	
Enables or disables the System Description informa	tion type.
Command mode: Interface port	
no] lldp tlv syscap	
Enables or disables the System Capabilities information	tion type.
Command mode: Interface port	
no] lldp tlv mgmtaddr	
Enables or disables the Management Address inform	nation type.
Command mode: Interface port	
no] lldp tlv portvid	
Enables or disables the Port VLAN ID information ty	pe.
Command mode: Interface port	
no] lldp tlv portprot	
Enables or disables the Port and VLAN Protocol ID	information type.
Command mode: Interface port	
no] lldp tlv vlanname	
Enables or disables the VLAN Name information typ	e.
Command mode: Interface port	
no] lldp tlv protid	
Enables or disables the Protocol ID information type	
Command mode: Interface port	
no] lldp tlv macphy	
Enables or disables the MAC/Phy Configuration info	rmation type.
Command mode: Interface port	
no] lldp tlv powermdi	
Enables or disables the Power via MDI information t	ype.
Command mode: Interface port	

Command Syntax and Usage
[no] lldp tlv linkaggr Enables or disables the Link Aggregation information type. Command mode : Interface port
[no] lldp tlv framesz Enables or disables the Maximum Frame Size information type. Command mode : Interface port
[no] 11dp t1v dcbx Enables or disables the Data Center Bridging Capability Exchange (DCBX) information type. Command mode: Interface port
[no] lldp tlv all Enables or disables all optional TLV information types. Command mode : Interface port
show interface port <i><port alias="" number="" or=""></port></i> lldp Display current LLDP port configuration. Command mode : All

Table 224. Optional TLV Commands (continued)

Trunk Configuration

Trunk groups can provide super-bandwidth connections between EN4093/EN4093R 10Gb Virtual Fabric Scalable Switchs or other trunk capable devices. A *trunk* is a group of ports that act together, combining their bandwidth to create a single, larger port. Up to 64 trunk groups can be configured on the EN4093/EN4093R, with the following restrictions:

- Any physical switch port can belong to no more than one trunk group.
- Up to 22 ports can belong to the same trunk group (32 ports when stacking is enabled).
- Configure all ports in a trunk group with the same properties (speed, duplex, flow control, STG, VLAN, and so on).
- Trunking from non-BLADE devices must comply with Cisco[®] EtherChannel[®] technology.

By default, each trunk group is empty and disabled.

Table 225. Trunk Configuration Commands

Cor	nmand Syntax and Usage
portchannel <1-64> port <pre>port alias or number></pre>	
	Adds a physical port or ports to the current trunk group. You can add several ports, with each port separated by a comma (,) or a range of ports, separated by a dash (-).
	Command mode: Global configuration
no	portchannel <1-64> port <pre>port alias or number></pre>
	Removes a physical port or ports from the current trunk group.
	Command mode: Global configuration
[no	portchannel <1-64> enable
	Enables or Disables the current trunk group.
	Command mode: Global configuration
no	portchannel <1-64>
	Removes the current trunk group configuration.
	Command mode: Global configuration
sho	ow portchannel <1-64>
	Displays current trunk group parameters.
	Command mode: All

IP Trunk Hash Configuration

Use the following commands to configure IP trunk hash settings for the EN4093/EN4093R. Trunk hash parameters are set globally for the EN4093/EN4093R. The trunk hash settings affect both static trunks and LACP trunks.

To achieve the most even traffic distribution, select options that exhibit a wide range of values for your particular network. You may use the configuration settings listed in Table 226 combined with the hash parameters listed in Table 227.

Table 226. Trunk Hash Settings

Command Syntax and Usage
[no] portchannel thash ingress
Enables or disables use of the ingress port to compute the trunk hash value. The default setting is disabled.
Command mode: Global configuration
[no] portchannel thash L4port
Enables or disables use of Layer 4 service ports (TCP, UDP, etc.) to compute the hash value. The default setting is <code>disabled</code> .
Command mode: Global configuration
show portchannel hash
Display current trunk hash configuration.
Command mode: All

Layer 2 Trunk Hash

Layer 2 trunk hash parameters are set globally. You can enable one or both parameters, to configure any of the following valid combinations:

- SMAC (source MAC only)
- DMAC (destination MAC only)
- SMAC and DMAC

Use the following commands to configure Layer 2 trunk hash parameters for the switch.

Table 227. Layer 2 Trunk Hash Options

Command Syntax and Usage
[no] portchannel thash 12hash 12-source-mac-address
Enables or disables Layer 2 trunk hashing on the source MAC.
Command mode: Global configuration
[no] portchannel thash 12hash 12-destination-mac-address
Enables or disables Layer 2 trunk hashing on the destination MAC.
Command mode: Global configuration

Table 227. Layer 2 Trunk Hash Options (continued)

Command Syntax and Usage

[no] portchannel thash l2hash l2-source-destination-mac Enables or disables Layer 2 trunk hashing on both the source and destination MAC.

Command mode: Global configuration

show portchannel hash

Displays the current trunk hash settings.

Command mode: All

Layer 3 Trunk Hash

Layer 3 trunk hash parameters are set globally. You can enable one or both parameters, to configure any of the following valid combinations:

- SIP (source IP only)
- DIP (destination IP only)
- SIP and DIP

Use the following commands to configure Layer 3 trunk hash parameters for the switch.

Table 228. Layer 3 Trunk Hash Options

Command Syntax and Usage	
[no] portchannel thash 13thash 13-use-12-hash	
Enables or disables use of Layer 2 hash parameters only. When enabled, Layer 3 hashing parameters are cleared.	
Command mode: Global configuration	
<pre>[no] portchannel thash 13thash 13-source-ip-address Enables or disables Layer 3 trunk hashing on the source IP address. Command mode: Global configuration</pre>	
<pre>[no] portchannel thash 13thash 13-destination-ip-address Enables or disables Layer 3 trunk hashing on the destination IP address. Command mode: Global configuration</pre>	
<pre>[no] portchannel thash 13thash 13-source-destination-ip Enables or disables Layer 3 trunk hashing on both the source and the destination IP address. Command mode: Global configuration</pre>	
show portchannel hash Displays the current trunk hash settings. Command mode: All	

Virtual Link Aggregation Group Protocol Configuration

vLAG groups allow you to enhance redundancy and prevent implicit loops without using STP. The vLAG group acts as a single virtual entity for the purpose of establishing a multi-port trunk.

Table 229. vLAG Configuration Options

Command Syntax and Usage
[no] vlag portchannel < <i>trunk group number</i> > enable
Enables or disables vLAG on the selected trunk group.
Command mode: Global configuration
[no] vlag adminkey <1-65535> enable
Enables or disables vLAG on the selected LACP admin key. LACP trunks
formed with this admin key will be included in the vLAG configuration.
Command mode: Global configuration
[no] vlag enable
Enables or disables vLAG globally.
Command mode: Global configuration
[no] vlag tier-id <1-512>
Sets the vLAG peer ID.
Command mode: Global configuration
vlag priority <0-65535>
Configures the vLAG priority for the switch, used for election of Primary and Secondary vLAG switches. The switch with lower priority is elected to the role of Primary vLAG switch.
Command mode: Global configuration
vlag startup-delay <i><seconds></seconds></i>
Sets the vLAG startup delay interval, in seconds.
Command mode: Global configuration
show vlag information
Displays current vLAG parameters.
Command mode: All

vLAG Health Check Configuration

These commands allow you to configure a health check of synchronization between vLAG peers.

Table 230.	vLAG Health	Check	Configuration	Options
------------	-------------	-------	---------------	---------

Command Syntax and Usage		
vlag hlthchk peer-ip <i><ip address=""></ip></i>		
Configures the IP address of the vLAG peer.		
Command mode: Global configuration		
[no] vlag hlthchk connect-retry-interval <1-300>		
Sets in seconds the vLAG health check connect retry interval, in seconds. The default value is 30.		
Command mode: Global configuration		
[no] vlag hlthchk keepalive-attempts <1-24>		
Sets the number of vLAG keep alive attempts. The default value is 3.		
Command mode: Global configuration		
[no] vlag hlthchk keepalive-interval <2-300>		
Sets the time between vLAG keep alive attempts, in seconds. The default value is 5.		
Command mode: Global configuration		

vLAG ISL Configuration

These commands allow you to configure a dedicated inter-switch link (ISL) for synchronization between vLAG peers.

Table 231. vLAG ISL Configuration Options

Command Syntax and Usage		
[no] vlag isl portchannel <1-64> enable		
Enables or disables vLAG Inter-Switch Link (ISL) on the selected trunk group.		
Command mode: Global configuration		
[no] vlag isl adminkey <1-65535>		
Enables or disables vLAG Inter-Switch Link (ISL) on the selected LACP <i>admin key</i> . LACP trunks formed with this <i>admin key</i> will be included in the ISL.		
Command mode: Global configuration		
[no] vlag isl vlan <1-4094>		
Enables or disables vLAG Inter-Switch Link (ISL) on the VLAN. This VLAN is used to carry VLAG protocol data.		
Command mode: Global configuration		
show vlag information		
Displays current vLAG parameters.		
Command mode: All		

Link Aggregation Control Protocol Configuration

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the EN4093/EN4093R.

_	
Cor	nmand Syntax and Usage
lac	cp system-priority <1-65535>
	Defines the priority value for the EN4093/EN4093R. Lower numbers provide higher priority. The default value is 32768.
	Command mode: Global configuration
lac	p timeout {short long}
	Defines the timeout period before invalidating LACP data from a remote partner. Choose short (3 seconds) or long (90 seconds). The default value is long.
	Note: It is recommended that you use a timeout value of long, to reduce LACPDU processing. If your EN4093/EN4093R's CPU utilization rate remains at 100% for periods of 90 seconds or more, consider using static trunks instead of LACP.
	Command mode: Global configuration
no	lacp <1-65535>
	Deletes a selected LACP trunk, based on its <i>admin key</i> . This command is equivalent to disabling LACP on each of the ports configured with the same <i>admin key</i> .
	Command mode: Global configuration
sho	ow lacp
	Display current LACP configuration.
	Command mode: All

LACP Port Configuration

Use the following commands to configure Link Aggregation Control Protocol (LACP) for the selected port.

Table 233.	Link Aggregation	Control Protocol	Commands
------------	------------------	------------------	----------

Command	Syntax and Usage
lacp mod	e {off active passive}
Set the	LACP mode for this port, as follows:
– off	
	LACP off for this port. You can use this port to manually configure a c trunk. The default value is $\tt off.$
– acti	ve
Turr	LACP on and set this port to active. Active ports initiate LACPDUs.
– pas	Sive
	LACP on and set this port to passive. Passive ports do not initiate PDUs, but respond to LACPDUs from active ports.
Comm	and mode: Interface port
lacp pri	ority <1-65535>
	e priority value for the selected port. Lower numbers provide higher The default value is 32768.
Comm	and mode: Interface port
lacp key	<1-65535>
	e admin key for this port. Only ports with the same <i>admin key</i> and <i>oper</i> berational state generated internally) can form a LACP trunk group.
Comm	and mode: Interface port
port-cha	nnel min-links <1-32>
	minimum number of links for this port. If the specified minimum numbers are not available, the trunk is placed in the down state.
Comm	and mode: Interface port
show int	erface port <port alias="" number="" or=""> lacp</port>
Display	is the current LACP configuration for this port.
	and mode: All

Layer 2 Failover Configuration

Use these commands to configure Layer 2 Failover. For more information about Layer 2 Failover, see "High Availability" in the *IBM Networking OS Application Guide*.

Cor	nmand Syntax and Usage
fai	llover vlan
	Globally turns VLAN monitor on . When the VLAN Monitor is on , the switch automatically disables only internal ports that belong to the same VLAN as ports in the failover trigger. The default value is off.
	Command mode: Global configuration
no	failover vlan
	Globally turns VLAN monitor off . When the VLAN Monitor is on, the switch automatically disables only internal ports that belong to the same VLAN as ports in the failover trigger. The default value is off.
	Command mode: Global configuration
fai	llover enable
	Globally turns Layer 2 Failover on.
	Command mode: Global configuration
no	failover enable
	Globally turns Layer 2 Failover off.
	Command mode: Global configuration
sho	ow failover trigger
	Displays current Layer 2 Failover parameters.
	Command mode: All

Failover Trigger Configuration

Table 235. Failover Trigger Configuration Commands

Command Syntax and Usage		
[no] failover trigger <1-8> enable		
Enables or disables the Failover trigger.		
Command mode: Global configuration		
no failover trigger <1-8>		
Deletes the Failover trigger.		
Command mode: Global configuration		
failover trigger <1-8> limit <0-1024>		
Configures the minimum number of operational links allowed within each trigger before the trigger initiates a failover event. If you enter a value of zero (0), the switch triggers a failover event only when no links in the trigger are operational.		
Command mode: Global configuration		
show failover trigger <1-8>		
Displays the current failover trigger settings.		
Command mode: All		

Auto Monitor Configuration

Table 236. Auto Monitor Configuration Commands

-			
Со	Command Syntax and Usage		
fa	ilover trigger <1-8> amon portchannel <trunk group="" number=""> Adds a trunk group to the Auto Monitor. Command mode: Global configuration</trunk>		
no	<pre>failover trigger <1-8> amon portchannel <trunk group="" number=""> Removes a trunk group from the Auto Monitor. Command mode: Global configuration</trunk></pre>		
	failover trigger <1-8> amon adminkey <1-65535> Adds a LACP admin key to the Auto Monitor. LACP trunks formed with this admin key will be included in the Auto Monitor. Command mode: Global configuration		
no	failover trigger <1-8> amon adminkey <1-65535> Removes a LACP <i>admin key</i> from the Auto Monitor. Command mode: Global configuration		

Failover Manual Monitor Port Configuration

Use these commands to define the port link(s) to monitor. The Manual Monitor Port configuration accepts only external uplink ports.

Note: AMON and MMON configurations are mutually exclusive.

Table 237. Failover Manual Monitor Port Commands

<u> </u>	
Cor	nmand Syntax and Usage
fai	lover trigger <1-8> mmon monitor member <port alias="" number="" or=""></port>
	Adds the selected port to the Manual Monitor Port configuration.
	Command mode: Global configuration
no	failover trigger <1-8> mmon monitor member <port alias="" number="" or=""></port>
	Removes the selected port from the Manual Monitor Port configuration.
	Command mode: Global configuration
fai	.lover trigger <1-8> mmon monitor portchannel <trunk number=""></trunk>
	Adds the selected trunk group to the Manual Monitor Port configuration.
	Command mode: Global configuration
no	failover trigger <1-8> mmon monitor portchannel <trunk number=""></trunk>
	Removes the selected trunk group to the Manual Monitor Port configuration.
	Command mode: Global configuration
fai	lover trigger <1-8> mmon monitor adminkey <1-65535>
	Adds an LACP <i>admin key</i> to the Manual Monitor Port configuration. LACP trunks formed with this <i>admin key</i> will be included in the Manual Monitor Port configuration.
	Command mode: Global configuration
no	failover trigger <1-8> mmon monitor adminkey <1-65535>
	Removes an LACP admin key from the Manual Monitor Port configuration.
	Command mode: Global configuration
sho	ow failover trigger < <i>l-8</i> >
	Displays the current Failover settings.
	Command mode: All

Failover Manual Monitor Control Configuration

Use these commands to define the port link(s) to control. The Manual Monitor Control configuration accepts internal and external ports, but not management ports.

Table 238. Failover Manual Monitor Control Commands

Со	Command Syntax and Usage	
fa	ilover trigger <1-8> mmon control member <port alias="" number="" or=""> Adds the selected port to the Manual Monitor Control configuration. Command mode: Global configuration</port>	
no	failover trigger <1-8> mmon control member <port alias="" number="" or=""> Removes the selected port from the Manual Monitor Control configuration. Command mode: Global configuration</port>	
fa	ilover trigger < <i>l-8</i> > mmon control portchannel < <i>trunk number</i> > Adds the selected trunk group to the Manual Monitor Control configuration. Command mode: Global configuration	
no	<pre>failover trigger <1-8> mmon control portchannel <trunk number=""> Removes the selected trunk group to the Manual Monitor Control configuration. Command mode: Global configuration</trunk></pre>	
fa	ilover trigger < <i>1-8</i> > mmon control adminkey < <i>1-65535</i> > Adds an LACP <i>admin key</i> to the Manual Monitor Control configuration. LACP trunks formed with this <i>admin key</i> will be included in the Manual Monitor Control configuration. Command mode: Global configuration	
no	failover trigger <1-8> mmon control adminkey <1-65535> Removes an LACP admin key from the Manual Monitor Control configuration. Command mode: Global configuration	
sh	ow failover trigger <i><1-8></i> Displays the current Failover settings. Command mode: All	

Hot Links Configuration

Use these commands to configure Hot Links. For more information about Hot Links, see "Hot Links" in the *IBM Networking OS 7.5 Application Guide*.

Table 239. Hot Links Configuration Commands

Com	Command Syntax and Usage	
[no] hotlinks bpdu		
i	Enables or disables flooding of Spanning-Tree BPDUs on the active Hot Links interface when the interface belongs to a Spanning Tree group that is globally turned off. This feature can prevent unintentional loop scenarios (for example, if two uplinks come up at the same time).	
-	The default setting is disabled.	
	Command mode: Global configuration	
[no]	hotlinks fdb-update	
	Enables or disables FDB Update, which allows the switch to send FDB and MAC update packets over the active interface.	
-	The default value is disabled.	
	Command mode: Global configuration	
hot	links fdb-update-rate <10-1000>	
	Configures the FDB Update rate, in packets per second.	
	Command mode: Global configuration	
hot	links enable	
	Globally enables Hot Links.	
	Command mode: Global configuration	
no	hotlinks enable	
	Globally disables Hot Links.	
	Command mode: Global configuration	
sho	w hotlinks	
	Displays current Hot Links parameters.	
	Command mode: All	

Hot Links Trigger Configuration

Table 240. Hot Links Trigger Configuration Commands

Command Syntax and Usage
hotlinks trigger <1-25> forward-delay <0-3600>
Configures the Forward Delay interval, in seconds. The default value is 1.
Command mode: Global configuration
[no] hotlinks trigger <1-25> name <1-32 characters>
Defines a name for the Hot Links trigger.
Command mode: Global configuration
[no] hotlinks trigger <1-25> preemption
Enables or disables pre-emption, which allows the Master interface to transition to the Active state whenever it becomes available.
The default setting is enabled.
Command mode: Global configuration
[no] hotlinks trigger <1-25> enable
Enables or disables the Hot Links trigger.
Command mode: Global configuration
no hotlinks trigger <1-25>
Deletes the Hot Links trigger.
Command mode: Global configuration
show hotlinks trigger <1-25>
Displays the current Hot Links trigger settings.
Command mode: All

Hot Links Master Configuration

Use the following commands to configure the Hot Links Master interface.

```
Table 241. Hot Links Master Configuration Commands
```

Command Syntax and Usage	
ho] hotlinks trigger <1-25> master port <port alias="" number="" or=""> Adds or removes the selected port to the Hot Links Master interface. Command mode: Global configuration</port>	
ho] hotlinks trigger <1-25> master portchannel <trunk group="" number<br="">Adds or removes the selected trunk group to the Master interface. Command mode: Global configuration</trunk>	:r>
ho] hotlinks trigger <1-25> master adminkey <1-65535> Adds or removes an LACP admin key to the Master interface. LACP trunks formed with this admin key will be included in the Master interface. Command mode: Global configuration	
how hotlinks trigger < <i>I-25</i> > Displays the current Hot Links trigger settings. Command mode: All	

Hot Links Backup Configuration

Use the following commands to configure the Hot Links Backup interface.

Table 242. Hot Links Backup C	Configuration Commands
-------------------------------	------------------------

Command Syntax and Usage	
[no] hotlinks trigger <1-25> backup port <pre>port alias or number> Adds or removes the selected port to the Hot Links Backup interface.</pre>	
Command mode: Global configuration	
[no] hotlinks trigger <1-25> backup portchannel <trunk group="" number=""></trunk>	
Adds or removes the selected trunk group to the Backup interface. Command mode: Global configuration	
[no] hotlinks trigger <1-25> backup adminkey <1-65535>	
Adds or removes an LACP <i>admin key</i> to the Backup interface. LACP trunks formed with this <i>admin key</i> will be included in the Backup interface.	
Command mode: Global configuration	
show hotlinks trigger <1-25>	
Displays the current Hot Links trigger settings.	
Command mode: All	

VLAN Configuration

These commands configure VLAN attributes, change the status of each VLAN, change the port membership of each VLAN, and delete VLANs.

By default, VLAN 1 is the only VLAN configured on the switch. Internal server ports and external uplink ports are members of VLAN 1 by default. Up to 4094 VLANs can be configured on the EN4093/EN4093R.

VLANs can be assigned any number between 1 and 4094. VLAN 4095 is reserved for switch management.

Command Syntax and Usage	
vlan <vlan number=""></vlan>	
Enter VLAN configuration mode.	
Command mode: Global configuration	
protocol-vlan <1-8>	
Configures the Protocol-based VLAN (PVLAN).	
Command mode: VLAN	
name <1-32 characters>	
Assigns a name to the VLAN or changes the existing name. The default VL name is the first one.	AN.
Command mode: VLAN	
stg <stg number=""></stg>	
Assigns a VLAN to a Spanning Tree Group.	
Command mode: VLAN	
[no] vmap <1-128> [extports intports]	
Adds or removes a VLAN Map to the VLAN membership. You can choose limit operation of the VLAN Map to internal ports only or external ports only you do not select a port type, the VMAP is applied to the entire VLAN.	
Command mode: VLAN	
nember <port alias="" number="" or=""></port>	
Adds port(s) to the VLAN membership.	
Command mode: VLAN	
no member <port alias="" number="" or=""></port>	
Removes port(s) from this VLAN.	
Command mode: VLAN	
[no] management	
Configures this VLAN as a management VLAN. You must add the management ports (for example, MGT1) to each new management VLAN. External ports cannot be added to management VLANs.	
Command mode: VLAN	

Tab	le 243. VLAN Configuration Commands (continued)
Cor	nmand Syntax and Usage
[no	Configures the switch to flood unregistered IP multicast traffic to all ports. The default setting is enabled.
	Note: If none of the IGMP hosts reside on the VLAN of the streaming server for a IPMC group, you must disable IGMP flooding to ensure that multicast data is forwarded across the VLANs for that IPMC group.
	Command mode: VLAN
[no	o] cpu
	Configures the switch to forward unregistered IP multicast traffic to the MP, which adds an entry in the IPMC table, as follows:
	- If no Mrouter is present, drop subsequent packets with same IPMC.
	 If an Mrouter is present, forward subsequent packets to the Mrouter(s) on the ingress VLAN.
	The default setting is enabled.
	Note : If both flood and cpu are disabled, then the switch drops all unregistered IPMC traffic.
	Command mode: VLAN
[no	o] optflood
	Enables or disables optimized flooding. When enabled, optimized flooding avoids packet loss during the learning period. The default setting is disabled.
	Command mode: VLAN
ena	able
	Enables this VLAN.
	Command mode: VLAN
no	enable
	Disables this VLAN without removing it from the configuration.
	Command mode: VLAN
no	vlan <vlan number=""></vlan>
	Deletes this VLAN.
	Command mode: VLAN
sho	ow vlan information
	Displays the current VLAN configuration.
	Command mode: All

Note: All ports must belong to at least one VLAN. Any port which is removed from a VLAN and which is not a member of any other VLAN is automatically added to default VLAN 1. You cannot remove a port from VLAN 1 if the port has no membership in any other VLAN. Also, you cannot add a port to more than one VLAN unless the port has VLAN tagging turned on.

Protocol-Based VLAN Configuration

Use the following commands to configure Protocol-based VLAN for the selected VLAN.

Table 244. Protocol VLAN Configuration Commands

nr	<pre>ptocol-vlan <1-8> frame-type {ether2 llc snap} <ethernet type=""></ethernet></pre>
Ρ _Γ ,	Configures the frame type and the Ethernet type for the selected protocol.
	Ethernet type consists of a 4-digit (16 bit) hex code, such as 0080 (IPv4).
	Command mode: VLAN
pro	<pre>ptocol-vlan <1-8> protocol <pre>protocol type></pre></pre>
	Selects a pre-defined protocol, as follows:
	- decEther2:DEC Local Area Transport
	- ipv4Ether2:Internet IP (IPv4)
	- ipv6Ether2:IPv6
	- ipx802.2:Novell IPX 802.2
	- ipx802.3:Novell IPX 802.3
	- ipxEther2:Novell IPX
	- ipxSnap:Novell IPX SNAP
	- netbios:NetBIOS 802.2
	- rarpEther2:Reverse ARP
	- sna802.2:SNA 802.2
	 snaEther2:IBM SNA Service on Ethernet
	- vinesEther2:Banyan VINES
	 xnsEther2:XNS Compatibility
	Command mode: VLAN
pro	ptocol-vlan <1-8> priority <0-7>
	Configures the priority value for this PVLAN.
	Command mode: VLAN
pr	ptocol-vlan <1-8> member <port alias="" number="" or=""></port>
-	Adds a port to the selected PVLAN.
	Command mode: VLAN
no	protocol-vlan <1-8> member <port alias="" number="" or=""></port>
	Removes a port from the selected PVLAN.
	Command mode: VLAN
Inc	protocol-vlan <1-8> tag-pylan <nort alias="" number="" or=""></nort>
[nc] protocol-vlan <1-8> tag-pvlan <port alias="" number="" or=""> Defines a port that will be tagged by the selected protocol on this VLAN.</port>

Table 244. Protocol VLAN Configuration Commands (continued)

Co	Command Syntax and Usage	
pro	Dtocol-vlan < <i>I-8</i> > enable Enables the selected protocol on the VLAN. Command mode: VLAN	
no	protocol-vlan <1-8> enable Disables the selected protocol on the VLAN. Command mode: VLAN	
no	protocol-vlan <1-8> Deletes the selected protocol configuration from the VLAN. Command mode: VLAN	
sh	bw protocol-vlan < <i>l-8</i> > Displays current parameters for the selected PVLAN. Command mode: All	

Private VLAN Configuration

Use the following commands to configure Private VLAN.

```
Table 245. Private VLAN Configuration Commands
```

Con	Command Syntax and Usage	
pri	vate-vlan type primary	
	Configures the VLAN type as a Primary VLAN.	
	A Private VLAN must have only one primary VLAN. The primary VLAN carries unidirectional traffic to ports on the isolated VLAN or to community VLAN.	
	Command mode: VLAN	
pri	vate-vlan type community	
	Configures the VLAN type as a community VLAN.	
	Community VLANs carry upstream traffic from host ports. A Private VLAN may have multiple community VLANs.	
	Command mode: VLAN	
pri	vate-vlan type isolated	
	Configures the VLAN type as an isolated VLAN.	
	The isolated VLAN carries unidirectional traffic from host ports. A Private VLAN may have only one isolated VLAN.	
	Command mode: VLAN	
10	private-vlan type	
	Clears the private-VLAN type.	
	Command mode: VLAN	

Table 245. Private VLAN Configuration Commands (continued)

mmand Syntax and Usage			
o] private-vlan map [<2-4094>]			
Configures Private VLAN mapping between a secondary VLAN and a primary VLAN. Enter the primary VLAN ID. Secondary VLANs have the type defined as isolated or community. Use the no form to remove the mapping between the secondary VLAN and the primary VLAN.			
Command mode: VLAN			
private-vlan enable			
Enables the private VLAN.			
Command mode: VLAN			
private-vlan enable			
Disables the Private VLAN.			
Command mode: VLAN			
ow private-vlan [<2-4094>]			
Displays current parameters for the selected Private VLAN(s).			

Command mode: VLAN

Layer 3 Configuration

The following table describes basic Layer 3 Configuration commands. The following sections provide more detailed information and commands.

```
Table 246. Layer 3 Configuration Commands
```

Command Syntax and Usage	
interface ip < <i>interface number</i> >	
Configures the IP Interface. The EN4093/EN4093R interfaces. To view command options, see page 325	
Command mode: Global configuration	
route-map {<1-32>}	
Enter IP Route Map mode. To view command option	ns, see page 335.
Command mode: Global configuration	
router rip	
Configures the Routing Interface Protocol. To view on page 338.	command options, see
Command mode: Global configuration	
router ospf	
Configures OSPF. To view command options, see p	age 342.
Command mode: Global configuration	
ipv6 router ospf	
Enters OSPFv3 configuration mode. To view comma	and options, see page 395.
Command mode: Global configuration	
router bgp	
Configures Border Gateway Protocol. To view comm page 351.	nand options, see
Command mode: Global configuration	
router vrrp	
Configures Virtual Router Redundancy. To view con page 378.	nmand options, see
Command mode: Global configuration	
ip pim component <1-2>	
Enters Protocol Independent Multicast (PIM) compo To view command options, see page 390.	onent configuration mode.

Table 246. Layer 3 Configuration Commands

Command Syntax and Usage

ip router-id <*IP address*>

Sets the router ID.

Command mode: Global configuration

show layer3

Displays the current IP configuration.

Command mode: All

IP Interface Configuration

The EN4093/EN4093R supports up to 128 IP interfaces. Each IP interface represents the EN4093/EN4093R on an IP subnet on your network. The Interface option is disabled by default.

IP Interface 127 and 128 are reserved for switch management. If the IPv6 feature is enabled on the switch, IP Interface 125 and 126 are also reserved.

Note: To maintain connectivity between the management module and the EN4093/EN4093R, use the management module interface to change the IP address of the switch.

Cor	Command Syntax and Usage		
int	<pre>interface ip <interface number=""></interface></pre>		
	Enter IP interface mode.		
	Command mode: Global configuration		
ip	address <ip address=""> [<ip netmask="">]</ip></ip>		
	Configures the IP address of the switch interface, using dotted decimal notation.		
	Command mode: Interface IP		
ip	netmask <ip netmask=""></ip>		
	Configures the IP subnet address mask for the interface, using dotted decimal notation.		
	Command mode: Interface IP		
<pre>ipv6 address <ip (such="" 3001:0:0:0:0:0:0:abcd:12)="" address="" as=""> [<ip6 (1-128)="" length="" prefix="">] [enable anycast]</ip6></ip></pre>			
	Configures the IPv6 address of the switch interface, using hexadecimal format with colons.		
	Command mode: Interface IP		
ipv	<pre>ipv6 secaddr6 address <ip (such="" 3001:0:0:0:0:0:0:abcd:12)="" address="" as=""> <prefix length=""> [anycast]</prefix></ip></pre>		
	Configures the secondary IPv6 address of the switch interface, using hexadecimal format with colons.		
	Command mode: Interface IP		

00	nmand Syntax and Usage
ipv	76 prefixlen <ipv6 (1-128)="" length="" prefix=""></ipv6>
	Configures the subnet IPv6 prefix length. The default value is 0 (zero).
	Command mode: Interface IP
vla	an <vlan number=""></vlan>
	Configures the VLAN number for this interface. Each interface can belong to one VLAN.
	Command mode: Interface IP
[no] relay
	Enables or disables the BOOTP relay on this interface. The default setting is enabled.
	Command mode: Interface IP
[no	o] ip6host
	Enables or disables the IPv6 Host Mode on this interface. The default setting is
	disabled for data interfaces, and enabled for the management interface.
	Command mode: Interface IP
[no	o] ipv6 unreachables
	Enables or disables sending of ICMP Unreachable messages. The default setting is enabled.
	Command mode: Interface IP
ena	able
	Enables this IP interface.
	Command mode: Interface IP
no	enable
	Disables this IP interface.
	Command mode: Interface IP
no	<pre>interface ip <interface number=""></interface></pre>
	Removes this IP interface.
	Command mode: Interface IP
sho	ow interface ip <i><interface number=""></interface></i>
sho	ow interface ip <i><interface number=""></interface></i> Displays the current interface settings.

Table 247. IP Interface Configuration Commands (continued)

IPv6 Neighbor Discovery Configuration

The following table describes the ${\sf IPv6}$ Neighbor Discovery Configuration commands.

Table 248.	IPv6 Neighbor L	Discovery	Configuration	Options

Command Syntax and Usage
[no] ipv6 nd suppress-ra Enables or disables IPv6 Router Advertisements on the interface. The default setting is disabled (suppress Router Advertisements). Command mode: Interface IP
 [no] ipv6 nd managed-config Enables or disables the managed address configuration flag of the interface. When enabled, the host IP address can be set automatically through DHCP. The default setting is disabled.
Command mode: Interface IP
 [no] ipv6 nd other-config Enables or disables the other stateful configuration flag, which allows the interface to use DHCP for other stateful configuration. The default setting is disabled. Command mode: Interface IP
ipv6 nd ra-lifetime <0-9000>
Configures the IPv6 Router Advertisement lifetime interval. The RA lifetime interval must be greater than or equal to the RA maximum interval (advint). The default value is 1800 seconds.
Command mode: Interface IP
<pre>[no] ipv6 nd dad-attempts <1-10> Configures the maximum number of duplicate address detection attempts. The default value is 1. Command mode: Interface IP</pre>
<pre>[no] ipv6 nd reachable-time <1-3600> [no] ipv6 nd reachable-time <1-3600000> ms Configures the advertised reachability time, in seconds or milliseconds (ms). The default value is 30 seconds.</pre>
Command mode: Interface IP
 [no] ipv6 nd ra-interval <4-1800> Configures the Router Advertisement maximum interval. The default value is 600 seconds. Note: Set the maximum RA interval to a value greater than or equal to 4/3 of the minimum RA interval. Command mode: Interface IP

Table 248. IPv6 Neighbor Discovery Configuration Options (continued)

Com	mand Syntax and Usage
[no]	ipv6 nd ra-intervalmin <3-1350>
	Configures the Router Advertisement minimum interval. The default value is 98 seconds.
	lote : Set the minimum RA interval to a value less than or equal to 0.75 of the naximum RA interval.
C	Command mode: Interface IP
	ipv6 nd retransmit-time <i><0-4294967></i> ipv6 nd retransmit-time <i><0-4294967295></i> ms
n	Configures the Router Advertisement re-transmit timer, in seconds or nilliseconds (ms). The default value is 1 second.
	Command mode: Interface IP
[no]	ipv6 nd hops-limit <0-255>
C	Configures the Router Advertisement hop limit.
Т	The default value is 64.
C	Command mode: Interface IP
[no]	ipv6 nd advmtu
	Enables or disables the MTU option in Router Advertisements. The default setting is enabled.
C	Command mode: Interface IP

Default Gateway Configuration

The switch can be configured with up to 4 IPv4 gateways. Gateways 1–4 are reserved for default gateways. Gateway 4 is reserved for switch management.

This option is disabled by default.

Table 249. Default Gateway Configuration Commands

Cor	Command Syntax and Usage	
ip	gateway <1-4> address <ip address=""></ip>	
	Configures the IP address of the default IP gateway using dotted decimal notation.	
	Command mode: Global configuration	
ip	gateway <1-4> interval <0-60>	
	The switch pings the default gateway to verify that it's up. This command sets the time between health checks. The range is from 0 to 60 seconds. The default is 2 seconds.	
	Command mode: Global configuration	

Table 249. Default Gateway Configuration Commands (continued)

Cor	nmand Syntax and Usage
ip	gateway <1-4> retry <1-120>
	Sets the number of failed health check attempts required before declaring this default gateway inoperative. The range is from 1 to 120 attempts. The default is 8 attempts.
	Command mode: Global configuration
[no] ip gateway <1-4> arp-health-check
	Enables or disables Address Resolution Protocol (ARP) health checks. The default setting is disabled. The arp option does not apply to management gateways.
	Command mode: Global configuration
ip	gateway <1-4> enable
	Enables the gateway for use.
	Command mode: Global configuration
no	ip gateway <1-4> enable
	Disables the gateway.
	Command mode: Global configuration
no	ip gateway <1-4>
	Deletes the gateway from the configuration.
	Command mode: Global configuration
sho	ow ip gateway <1-4>
	Displays the current gateway settings.
	Command mode: All

IPv4 Static Route Configuration

Up to 128 IPv4 static routes can be configured.

```
Table 250. IPv4 Static Route Configuration Commands
```

Cor	Command Syntax and Usage		
ip	route <ip netmask=""><ip nexthop="">[<interface number="">]Adds a static route. You will be prompted to enter a destination IP address, destination subnet mask, and gateway address. Enter all addresses using dotted decimal notation.Command mode:Global configuration</interface></ip></ip>		
no	<pre>ip route <ip subnet=""> <ip netmask=""> [<interface number="">] Removes a static route. The destination address of the route to remove must be specified using dotted decimal notation.</interface></ip></ip></pre>		
	Command mode: Global configuration		

Cor	mmand Syntax and Usage
	<pre>ip route destination-address <ip address=""> Clears all IP static routes with this destination. Command mode: Global configuration</ip></pre>
no	<pre>ip route gateway <ip address=""> Clears all IP static routes that use this gateway. Command mode: Global configuration</ip></pre>
ip	route interval <1-60> Configures the ping interval for ECMP health checks, in seconds. The default value is one second. Command mode: Global configuration
ip	route retries <1-60> Configures the number of health check retries allowed before the switch declares that the gateway is down. The default value is 3. Command mode: Global configuration
sho	ow ip route static Displays the current IP static routes. Command mode: All

Table 250. IPv4 Static Route Configuration Commands (continued)

IP Multicast Route Configuration

The following table describes the IP Multicast (IPMC) route commands.

Note: Before you can add an IPMC route, IGMP must be turned on and IGMP Snooping/ Relay must be enabled.

Table 251. IP Multicast Route Configuration Commands

Cor	nmand Syntax and Usage
ip	<pre>mroute <ipmc destination=""> <vlan number=""> <port alias="" number="" or=""> {primary backup host} [<virtual id="" router=""> none]</virtual></port></vlan></ipmc></pre>
	Adds a static multicast route. The destination address, VLAN, and member port of the route must be specified. Indicate whether the route is used for a primary, backup, or host multicast router.
	Command mode: Global configuration
no	<pre>ip mroute <ipmc destination=""> <vlan number=""> <port alias="" number="" or=""> {primary backup host} [<virtual id="" router=""> none]</virtual></port></vlan></ipmc></pre>
	Removes a static multicast route. The destination address, VLAN, and member port of the route to remove must be specified.
	Command mode: Global configuration

Table 251. IP Multicast Route Configuration Commands (continued)

 Command Syntax and Usage

 ip mroute <IP address> <VLAN number> portchannel <trunk group number>

 {primary|backup|host} [<virtual router ID>|none]

 Adds a static multicast route. The destination address, VLAN, and member

 trunk group of the route must be specified. Indicate whether the route is used

 for a primary, backup, or host multicast router.

 Command mode: Global configuration

 no ip mroute <IP address> <VLAN number> portchannel

 <trunk group number> {primary|backup|host} [<virtual router ID>|none]

Removes a static multicast route. The destination address, VLAN, and member trunk group of the route to remove must be specified.

Command mode: Global configuration

ip mroute <IP address> <VLAN number> adminkey <1-65535>
{primary|backup|host} [<virtual router ID>|none]

Adds a static multicast route. The destination address, VLAN, and LACP *admin key* of the route must be specified. Indicate whether the route is used for a primary, backup, or host multicast router.

Command mode: Global configuration

no ip mroute <*IP address*> <*VLAN number*> adminkey <*1-65535*> |none] Removes a static multicast route. The destination address, VLAN, and LACP *admin key* of the route to remove must be specified.

Command mode: Global configuration

no ip mroute all

Removes all static multicast routes.

Command mode: Global configuration

show ip mroute

Displays the current IP multicast routes.

Command mode: All

ARP Configuration

Address Resolution Protocol (ARP) is the TCP/IP protocol that resides within the Internet layer. ARP resolves a physical address from an IP address. ARP queries machines on the local network for their physical addresses. ARP also maintains IP to physical address pairs in its cache memory. In any IP communication, the ARP cache is consulted to see if the IP address of the computer or the router is present in the ARP cache. Then the corresponding physical address is used to send a packet.

Table 252. ARP Configuration Commands

ip	arp rearp <2-120>
	Defines re-ARP period, in minutes, for entries in the switch arp table. When ARP entries reach this value the switch will re-ARP for the address to attempt to refresh the ARP cache. The default value is 5 minutes.
	Command mode: Global configuration
sho	ow ip arp
	Displays the current ARP configurations.
	Command mode: All

ARP Static Configuration

Static ARP entries are permanent in the ARP cache and do not age out like the ARP entries that are learned dynamically. Static ARP entries enable the switch to reach the hosts without sending an ARP broadcast request to the network. Static ARPs are also useful to communicate with devices that do not respond to ARP requests. Static ARPs can also be configured on some gateways as a protection against malicious ARP Cache corruption and possible DOS attacks.

Table 253. ARP Static Configuration Commands

Coi	nmand Syntax and Usage
ip	<pre>arp <ip address=""> <mac address=""> vlan <vlan number=""> port <pre></pre></vlan></mac></ip></pre>
	Adds a permanent ARP entry.
	Command mode: Global configuration
ip	arp <destination address="" ip="" unicast=""> <destination address="" mac="" multicast=""> vlan <cluster number="" vlan=""></cluster></destination></destination>
	Adds a static multicast ARP entry for Network Load Balancing (NLB).
	Command mode: Global configuration
no	ip arp < <i>IP address</i> >
	Deletes a permanent ARP entry.
	Command mode: Global configuration

Table 253. ARP Static Configuration Commands (continued)

Command Syntax and Usage

no ip arp all

Deletes all static ARP entries.

Command mode: Global configuration

show ip arp static

Displays current static ARP configuration.

Command mode: All

IP Forwarding Configuration

Table 254. IP Forwarding Configuration Commands

Cor	nmand Syntax and Usage
[no] ip routing directed-broadcasts
	Enables or disables forwarding directed broadcasts. The default setting is disabled.
	Command mode: Global configuration
[no] ip routing no-icmp-redirect
	Enables or disables ICMP re-directs. The default setting is disabled.
	Command mode: Global configuration
[no] ip routing icmp6-redirect
	Enables or disables IPv6 ICMP re-directs. The default setting is disabled.
	Command mode: Global configuration
ip	routing
	Enables IP forwarding (routing) on the EN4093/EN4093R. Forwarding is turned on by default.
	Command mode: Global configuration
no	ip routing
	Disables IP forwarding (routing) on the EN4093/EN4093R.
	Command mode: Global configuration
sho	ow ip routing
	Displays the current IP forwarding settings.
	Command mode: All

Network Filter Configuration

Table 255. IP Network Filter Configuration Commands

mmand Syntax and Usage
match-address <1-256> <ip address=""> <ip netmask=""></ip></ip>
Sets the starting IP address and IP Netmask for this filter to define the range of IP addresses that will be accepted by the peer when the filter is enabled. The default address is $0.0.0.0.0.0.0.0.0$
For Border Gateway Protocol (BGP), assign the network filter to an access-list in a route map, then assign the route map to the peer.
Command mode: Global configuration.
match-address <1-256> enable
Enables the Network Filter configuration.
Command mode: Global configuration

Table 255. IP Network Filter Configuration Commands

Coi	nmand Syntax and Usage
no	ip match-address <1-256> enable Disables the Network Filter configuration.
	Command mode: Global configuration
no	<pre>ip match-address <1-256> Deletes the Network Filter configuration. Command mode: Global configuration</pre>
sho	bw ip match-address [<1-256>] Displays the current the Network Filter configuration. Command mode: All

Routing Map Configuration

Note: The *map number* (1-32) represents the routing map you wish to configure.

Routing maps control and modify routing information.

Table 256.	Routing Map	Configuration	Commands
------------	-------------	---------------	----------

Command Syntax and Usage
route-map <1-32>
Enter route map configuration mode.
Command mode: Route map
[no] access-list <1-8>
Configures the Access List. For more information, see page 337.
Command mode: Route map
[no] as-path-list <1-8>
Configures the Autonomous System (AS) Filter. For more information, see page 338.
Command mode: Route map
[no] as-path-preference <1-65535>
Sets the AS path preference of the matched route. You can configure up to three path preferences.
Command mode: Route map
[no] local-preference <0-4294967294>
Sets the local preference of the matched route, which affects both inbound and outbound directions. The path with the higher preference is preferred.
Command mode: Route map
[no] metric <1-4294967294>
Sets the metric of the matched route.
Command mode: Route map

Table 256. Routing Map Configuration Commands

Ino] metric-type {1 2}
L	Assigns the type of OSPF metric. The default is type 1.
	 Type 1—External routes are calculated using both internal and external metrics.
	 Type 2—External routes are calculated using only the external metrics. Type 1 routes have more cost than Type 2.
	 none—Removes the OSPF metric.
	Command mode: Route map
pre	ecedence <1-255>
	Sets the precedence of the route map. The smaller the value, the higher the precedence. Default value is 10.
	Command mode: Route map
[no] weight <0-65534>
	Sets the weight of the route map.
	Command mode: Route map
ena	able
	Enables the route map.
	Command mode: Route map
no	enable
	Disables the route map.
	Command mode: Route map
no	route-map <1-32>
	Deletes the route map.
	Command mode: Route map
sho	ow route-map [<1-32>]
	Displays the current route configuration.
	Command mode: All

IP Access List Configuration

Note: The *route map number* (1-32) and the *access list number* (1-8) represent the IP access list you wish to configure.

Table 257. IP Access List Configuration Commands

Cor	nmand Syntax and Usage
[no]	access-list <1-8> match-address <1-256>
	Sets the network filter number. See "Network Filter Configuration" on page 334 for details.
	Command mode: Route map
[no	access-list <1-8> metric <1-4294967294>
	Sets the metric value in the AS-External (ASE) LSA.
	Command mode: Route map
acc	ess-list <1-8> action {permit deny}
	Permits or denies action for the access list.
	Command mode: Route map
acc	ess-list <1-8> enable
	Enables the access list.
	Command mode: Route map
no	access-list <1-8> enable
	Disables the access list.
	Command mode: Route map
no	access-list <1-8>
	Deletes the access list.
	Command mode: Route map
shc	ow route-map <1-32> access-list <1-8>
	Displays the current Access List configuration.
	Command mode: All

Autonomous System Filter Path Configuration

Note: The *rmap number* and the *path number* represent the AS path you wish to configure.

Table 258. AS Filter Configuration Commands

	nmand Syntax and Usage
as-	-path-list <1-8> as-path <1-65535>
	Sets the Autonomous System filter's path number.
	Command mode: Route map
as-	-path-list <1-8> action {permit deny}
	Permits or denies Autonomous System filter action.
	Command mode: Route map
as-	-path-list <1-8> enable
	Enables the Autonomous System filter.
	Command mode: Route map
no	as-path-list <1-8> enable
	Disables the Autonomous System filter.
	Command mode: Route map
no	as-path-list <1-8>
	Deletes the Autonomous System filter.
	Command mode: Route map
sho	ow route-map <1-32> as-path-list <1-8>
	Displays the current Autonomous System filter configuration.
	Command mode: All

Routing Information Protocol Configuration

RIP commands are used for configuring Routing Information Protocol parameters. This option is turned off by default.

Table 259. Routing Information Protocol Commands

Command Syntax and Usage	
router rip Enter Router RIP configuration mode.	
Command mode: Global configuration	
timers update <1-120>	
Configures the time interval for sending for RIP table updates, in seconds. The default value is 30 seconds.	
Command mode: Router RIP	

Table 259. Routing Information Protocol Commands (continued)

ena	able
	Globally turns RIP on.
	Command mode: Router RIP
no	enable
	Globally turns RIP off.
	Command mode: Router RIP

Routing Information Protocol Interface Configuration

The RIP Interface commands are used for configuring Routing Information Protocol parameters for the selected interface.

Note: Do not configure RIP version 1 parameters if your routing equipment uses RIP version 2.

Table 260. RIP Interface Commands

Con	Command Syntax and Usage	
ip	rip version {1 2 both}	
	Configures the RIP version used by this interface. The default value is version 2.	
	Command mode: Interface IP	
[no] ip rip supply	
	When enabled, the switch supplies routes to other routers. The default setting is enabled.	
	Command mode: Interface IP	
[no] ip rip listen	
	When enabled, the switch learns routes from other routers. The default value is enabled.	
	Command mode: Interface IP	
[no] ip rip poison	
	When enabled, the switch uses split horizon with poisoned reverse. When disabled, the switch uses only split horizon. The default value is <code>disabled</code> .	
	Command mode: Interface IP	
[no] ip rip split-horizon	
	Enables or disables split horizon. The default value is enabled.	
	Command mode: Interface IP	

Table 260. RIP Interface Commands (continued)

command Syntax and Usage	
 ip rip triggered Enables or disables Triggered Updates. Triggered Updates are used to specific convergence. When enabled, Triggered Updates force a router to send up messages immediately, even if it is not yet time for the update message. default value is enabled. Command mode: Interface IP 	date
no] ip rip multicast-updates	
Enables or disables multicast updates of the routing table (using address 224.0.0.9). The default value is enabled.	5
Command mode: Interface IP	
 ip rip default-action {listen supply both} When enabled, the switch accepts RIP default routes from other routers, gives them lower priority than configured default gateways. When disabled switch rejects RIP default routes. The default value is none. Command mode: Interface IP 	
no] ip rip metric [<1-15>]	
Configures the route metric, which indicates the relative distance to the destination. The default value is 1.	
Command mode: Interface IP	
no] ip rip authentication type password Enables or disables password authentication. The default is disabled. Command mode: Interface IP	
no] ip rip authentication key <i><password></password></i>	
Configures the authentication key password.	
Command mode: Interface IP	
p rip enable Enables this RIP interface.	
Command mode: Interface IP	
o ip rip enable	
Disables this RIP interface.	
Command mode: Interface IP	
how interface ip <i><interface number=""></interface></i> rip	
Displays the current RIP configuration.	

RIP Route Redistribution Configuration

The following table describes the RIP Route Redistribution commands.

Table 261. F	RIP Redistribution Commands
--------------	-----------------------------

Со	nmand Syntax and Usage
rec	listribute {fixed static ospf eospf ebgp ibgp} <1-32>
	Adds selected routing maps to the RIP route redistribution list. To add specific route maps, enter routing map numbers, separated by a comma (,). To add all 32 route maps, type all.
	The routes of the redistribution protocol matched by the route maps in the route redistribution list will be redistributed.
	Command mode: Router RIP
no	redistribute {fixed static ospf eospf ebgp ibgp} <1-32> Removes the route map from the RIP route redistribution list.
	To remove specific route maps, enter routing map numbers, separated by a comma (,). To remove all 32 route maps, type all.
	Command mode: Router RIP
rec	distribute {fixed static ospf eospf ebgp ibgp} export <1-15>
	Exports the routes of this protocol in which the metric and metric type are specified. To remove a previous configuration and stop exporting the routes of the protocol, enter none.
	Command mode: Router RIP
sho	ow ip rip redistribute
	Displays the current RIP route redistribute configuration.
	Command mode: All

Open Shortest Path First Configuration

Table 262. OSPF Configuration Commands

rou	iter ospf
	Enter Router OSPF configuration mode.
	Command mode: Global configuration
are	ea-range <1-16>
	Configures summary routes for up to 16 IP addresses. See page 345 to view command options.
	Command mode: Router OSPF
ip	ospf <interface number=""></interface>
	Configures the OSPF interface. See page 345 to view command options.
	Command mode: Interface IP
are	ea-virtual-link <1-3>
	Configures the Virtual Links used to configure OSPF for a Virtual Link. See page 347 to view command options.
	Command mode: Router OSPF
mes	ssage-digest-key <1-255> md5-key <text string=""></text>
	Assigns a string to MD5 authentication key.
	Command mode: Router OSPF
hos	st <1-128>
	Configures OSPF for the host routes. Up to 128 host routes can be configured Host routes are used for advertising network device IP addresses to external networks to perform server load balancing within OSPF. It also makes Area Border Router (ABR) load sharing and ABR failover possible.
	See page 348 to view command options.
	Command mode: Router OSPF
lsć	Ab-limit <lsdb (0-2048,="" 0="" for="" limit="" limit)="" no=""></lsdb>
	Sets the link state database limit.
	Command mode: Router OSPF
[nc	b] default-information <1-16777214> <as (1\2)="" metric="" type=""></as>
	Sets one default route among multiple choices in an area. Negate the command to disable this configuration.
	Command mode: Router OSPF
ena	able
	Enables OSPF on the EN4093/EN4093R.

Table 262. OSPF Configuration Commands (continued)

Command Syntax and Usage

no enable

Disables OSPF on the EN4093/EN4093R.

Command mode: Router OSPF

show ip ospf

Displays the current OSPF configuration settings.

Command mode: All

Area Index Configuration

Table 263. Area Index Configuration Commands

Command Syntax and Usage	
area <0-2> area-id <ip address=""></ip>	
Defines the IP address of the OSPF area number.	
Command mode: Router OSPF	
area <0-2> type {transit stub nssa}	
Defines the type of area. For example, when a virtual link has to be established with the backbone, the area type must be defined as transit.	
Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.	
Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.	
NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas. External routes from outside the Autonomous System (AS) can be advertised within the NSSA but are not distributed into other areas.	
Command mode: Router OSPF	
area <0-2> stub-metric <1-65535>	
Configures a stub area to send a numeric metric value. All routes received via that stub area carry the configured metric to potentially influencing routing decisions.	
Metric value assigns the priority for choosing the switch for default route. Metric type determines the method for influencing routing decisions for external routes.	
Command mode: Router OSPF	

Table 263. Area Index Configuration Commands (continued)

Command Syntax and Usage		
[no] area <0-2> authentication-type {password md5}		
None: No authentication required.		
Password: Authenticates simple passwords so that only trusted routing devices can participate.		
MD5: This parameter is used when MD5 cryptographic authentication is required.		
Command mode: Router OSPF		
area <0-2> spf-interval <1-255>		
Configures the minimum time interval, in seconds, between two successing SPF (shortest path first) calculations of the shortest path tree using the Dijkstra's algorithm. The default value is 10 seconds.	ve	
Command mode: Router OSPF		
area <0-2> enable		
Enables the OSPF area.		
Command mode: Router OSPF		
no area <0-2> enable		
Disables the OSPF area.		
Command mode: Router OSPF		
no area <i><0-2></i>		
Deletes the OSPF area.		
Command mode: Router OSPF		
show ip ospf area <0-2>		
Displays the current OSPF configuration.		
Command mode: All		

OSPF Summary Range Configuration

Table 264. OSPF Summary Range Configuration Commands

are	ea-range <1-16> address <1P address> <1P netmask>
	Displays the base IP address or the IP address mask for the range.
	Command mode: Router OSPF
are	ea-range <1-16> area <0-2>
	Displays the area index used by the EN4093/EN4093R.
	Command mode: Router OSPF
[no] area-range <i><1-16></i> hide
	Hides the OSPF summary range.
	Command mode: Router OSPF
are	ea-range < <i>l-16</i> > enable
	Enables the OSPF summary range.
	Command mode: Router OSPF
no	area-range <1-16> enable
	Disables the OSPF summary range.
	Command mode: Router OSPF
no	area-range <1-16>
	Deletes the OSPF summary range.
	Command mode: Router OSPF
sho	ow ip ospf area-range <i><1-16></i>
	Displays the current OSPF summary range.

OSPF Interface Configuration

Table 265. OSPF Interface Configuration Commands

Coi	Command Syntax and Usage	
ip	ospf area <0-2>	
	Configures the OSPF area index.	
	Command mode: Interface IP	
ip	ospf priority <0-255>	
	Configures the priority value for the EN4093/EN4093R's OSPF interfaces.	
	A priority value of 255 is the highest and 1 is the lowest. A priority value of 0 specifies that the interface cannot be used as Designated Router (DR) or Backup Designated Router (BDR).	
	Command mode: Interface IP	

Table 265. OSPF Interface Configuration Commands (continued)

Cor	nmand Syntax and Usage
ip	ospf cost <1-65535> Configures cost set for the selected path—preferred or backup. Usually the cost is inversely proportional to the bandwidth of the interface. Low cost indicates high bandwidth. Command mode: Interface IP
in	ospf hello-interval <1-65535>
	ospf hello-interval <50-65535ms>
	Configures the interval, in seconds or milliseconds, between the hello packets for the interfaces.
	Command mode: Interface IP
	ospf dead-interval <1-65535> ospf dead-interval <1000-65535ms>
	Configures the health parameters of a hello packet, in seconds or milliseconds, before declaring a silent router to be down.
	Command mode: Interface IP
ip	ospf transit-delay <1-3600>
	Configures the transit delay in seconds.
	Command mode: Interface IP
ip	ospf retransmit-interval <1-3600>
	Configures the retransmit interval in seconds.
	Command mode: Interface IP
[no	ip ospf key <key string=""></key>
	Sets the authentication key to clear the password.
	Command mode: Interface IP
[no] ip ospf message-digest-key <1-255>
	Assigns an MD5 key to the interface.
	Command mode: Interface IP
[nc] ip ospf passive-interface
	Sets the interface as passive. On a passive interface, you can disable OSPF
	protocol exchanges, but the router advertises the interface in its LSAs so that
	IP connectivity to the attached network segment will be established. Command mode: Interface IP
[nc	o] ip ospf point-to-point
	Sets the interface as point-to-point.
	Command mode: Interface IP
ip	ospf enable
	Enables OSPF interface.
	Command mode: Interface IP

Table 265. OSPF Interface Configuration Commands (continued)

Command Syntax and Usage

no ip ospf enable

Disables OSPF interface.

Command mode: Interface IP

no ip ospf

Deletes the OSPF interface.

Command mode: Interface IP

Show interface ip <interface number> ospf
Displays the current settings for OSPF interface.
Command mode: All

OSPF Virtual Link Configuration

Table 266. OSPF Virtual Link Configuration Commands

command Syntax and Usage
rea-virtual-link <1-3> area <0-2>
Configures the OSPF area index for the virtual link.
Command mode: Router OSPF
rea-virtual-link <1-3> hello-interval <1-65535> rea-virtual-link <1-3> hello-interval <50-65535ms>
Configures the authentication parameters of a hello packet, in seconds or milliseconds. The default value is 10 seconds.
Command mode: Router OSPF
rea-virtual-link <1-3> dead-interval <1-65535> rea-virtual-link <1-3> dead-interval <1000-65535ms>
Configures the health parameters of a hello packet, in seconds or milliseconds. The default value is 60 seconds.
Command mode: Router OSPF
rea-virtual-link <1-3> transit-delay <1-3600>
Configures the delay in transit, in seconds. The default value is one second.
Command mode: Router OSPF
rea-virtual-link <1-3> retransmit-interval <1-3600>
Configures the retransmit interval, in seconds. The default value is five seconds.
Command mode: Router OSPF
rea-virtual-link <1-3> neighbor-router <ip address=""></ip>
Configures the router ID of the virtual neighbor. The default value is 0.0.0.0.
Command mode: Router OSPF

Table 266. OSPF Virtual Link Configuration Commands (continued)

Cor	Command Syntax and Usage	
[no	area-virtual-link <1-3> key <password></password>	
	Configures the password (up to eight characters) for each virtual link. The default setting is none.	
	Command mode: Router OSPF	
are	ea-virtual-link <1-3> message-digest-key <1-255>	
	Sets MD5 key ID for each virtual link. The default setting is none.	
	Command mode: Router OSPF	
are	ea-virtual-link <1-3> enable	
	Enables OSPF virtual link.	
	Command mode: Router OSPF	
no	area-virtual-link <1-3> enable	
	Disables OSPF virtual link.	
	Command mode: Router OSPF	
no	area-virtual-link <1-3>	
	Deletes OSPF virtual link.	
	Command mode: Router OSPF	
shc	ow ip ospf area-virtual-link <1-3>	
	Displays the current OSPF virtual link settings.	
	Command mode: All	

OSPF Host Entry Configuration

Table 267. OSPF Host Entry Configuration Commands

host <1-128> address <ip address=""></ip>	
Configures the base IP address for the host entry.	
Command mode: Router OSPF	
host <1-128> area <0-2>	
Configures the area index of the host.	
Command mode: Router OSPF	
host <1-128> cost <1-65535>	
Configures the cost value of the host.	
Command mode: Router OSPF	
host <1-128> enable	
Enables OSPF host entry.	
Command mode: Router OSPF	

Table 267. OSPF Host Entry Configuration Commands (continued)

Coi	mmand Syntax and Usage	
no	host <1-128> enable	
	Disables OSPF host entry.	
	Command mode: Router OSPF	
no	host <1-128>	
	Deletes OSPF host entry.	
	Command mode: Router OSPF	
sho	ow ip ospf host <1-128>	
	Displays the current OSPF host entries.	
	Command mode: All	

OSPF Route Redistribution Configuration

Command Syntax and Usage	
redistribute {fixed static rip ebgp ibgp} <rmap (1-32)="" id=""></rmap>	
Adds selected routing map to the rmap list.	
This option adds a route map to the route redistribution list. The routes of the redistribution protocol matched by the route maps in the route redistribution list will be redistributed.	
Command mode: Router OSPF	
no redistribute {fixed static rip ebgp ibgp} <rmap (1-32)="" id=""> Removes the route map from the route redistribution list. Removes routing maps from the rmap list. Command mode: Router OSPF</rmap>	
<pre>[no] redistribute {fixed static rip ebgp ibgp} export metric</pre>	
Exports the routes of this protocol as external OSPF AS-external LSAs in which the metric and metric type are specified. To remove a previous configuration and stop exporting the routes of the protocol, negate the command.	
Command mode: Router OSPF	
show ip ospf redistribute	
Displays the current route map settings.	
Command mode: All	

OSPF MD5 Key Configuration

Table 269. OSPF MD5 Key Commands

Command Syntax and Usage	
essage-digest-key <1-255> md5-key <1-16 characters> Sets the authentication key for this OSPF packet. Command mode: Router OSPF	
no message-digest-key <1-255> Deletes the authentication key for this OSPF packet. Command mode: Router OSPF	
<pre>show ip ospf message-digest-key <1-255> Displays the current MD5 key configuration. Command mode: All</pre>	

Border Gateway Protocol Configuration

Border Gateway Protocol (BGP) is an Internet protocol that enables routers on a network to share routing information with each other and advertise information about the segments of the IP address space they can access within their network with routers on external networks. BGP allows you to decide what is the "best" route for a packet to take from your network to a destination on another network, rather than simply setting a default route from your border router(s) to your upstream provider(s). You can configure BGP either within an autonomous system or between different autonomous systems. When run within an autonomous systems, it's called internal BGP (iBGP). When run between different autonomous systems, it's called external BGP (eBGP). BGP is defined in RFC 1771.

BGP commands enable you to configure the switch to receive routes and to advertise static routes, fixed routes and virtual server IP addresses with other internal and external routers. In the current IBM Networking OS implementation, the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch does not advertise BGP routes that are learned from one iBGP *speaker* to another iBGP *speaker*.

BGP is turned off by default.

Note: Fixed routes are subnet routes. There is one fixed route per IP interface.

Cor	nmand Syntax and Usage
roı	iter bgp
	Enter Router BGP configuration mode.
	Command mode: Global configuration
nei	ighbor <1-12>
	Configures each BGP <i>peer</i> . Each border router, within an autonomous system, exchanges routing information with routers on other external networks.
	To view command options, see page 352.
	Command mode: Router BGP
as	<0-65535>
	Set Autonomous System number.
	Command mode: Router BGP
100	cal-preference <0-4294967294>
	Sets the local preference. The path with the higher value is preferred.
	When multiple peers advertise the same route, use the route with the shortest AS path as the preferred route if you are using eBGP, or use the local preference if you are using iBGP.
	Command mode: Router BGP
ena	able
	Globally turns BGP on.
	Command mode: Router BGP

Table 270. Border Gateway Protocol Commands (continued)

Command Syntax and Usage

no enable

Globally turns BGP off.

Command mode: Router BGP

show ip bgp

Displays the current BGP configuration.

Command mode: All

BGP Peer Configuration

These commands are used to configure BGP peers, which are border routers that exchange routing information with routers on internal and external networks. The peer option is disabled by default.

Table 271. BGP Peer Configuration Commands

Command Syntax and Usage
neighbor <1-12> remote-address <1P address>
Defines the IP address for the specified peer (border router), using dotted decimal notation. The default address is 0.0.0.0.
Command mode: Router BGP
neighbor <1-12> remote-as <1-65535>
Sets the remote autonomous system number for the specified peer.
Command mode: Router BGP
neighbor <1-12> update-source { <interface number=""> loopback <1-5>}</interface>
Sets the source interface number for this peer.
Command mode: Router BGP
neighbor <1-12> timers hold-time <0,3-65535>
Sets the period of time, in seconds, that will elapse before the peer session is torn down because the switch hasn't received a "keep alive" message from the peer. The default value is 180 seconds.
Command mode: Router BGP
neighbor <1-12> timers keep-alive <0, 1-21845>
Sets the keep-alive time for the specified peer, in seconds. The default value is 60 seconds.
Command mode: Router BGP
neighbor <1-12> advertisement-interval <1-65535>
Sets time, in seconds, between advertisements. The default value is 60 seconds.
Command mode: Router BGP

Table 271. BGP Peer Configuration Commands (continued)

Command Syntax and Usage	
ne	Ighbor <1-12> retry-interval <1-65535> Sets connection retry interval, in seconds. The default value is 120 seconds. Command mode: Router BGP
ne	Ighbor <1-12> route-origination-interval <1-65535> Sets the minimum time between route originations, in seconds. The default value is 15 seconds. Command mode: Router BGP
ne:	Ighbor <1-12> time-to-live <1-255> Time-to-live (TTL) is a value in an IP packet that tells a network router whether or not the packet has been in the network too long and should be discarded. TTL specifies a certain time span in seconds that, when exhausted, would cause the packet to be discarded. The TTL is determined by the number of router hops the packet is allowed before it must be discarded.
	This command specifies the number of router hops that the IP packet can make. This value is used to restrict the number of "hops" the advertisement makes. It is also used to support multi-hops, which allow BGP peers to talk across a routed network. The default number is set at 1.
	Note: The TTL value is significant only to eBGP peers, for iBGP peers the TTL value in the IP packets is always 255 (regardless of the configured value).
	Command mode: Router BGP
ne:	Ighbor <1-12> route-map in <1-32> Adds route map into in-route map list. Command mode: Router BGP
ne:	Ighbor <1-12> route-map out <1-32> Adds route map into out-route map list. Command mode: Router BGP
no	neighbor <1-12> route-map in <1-32> Removes route map from in-route map list. Command mode: Router BGP
no	neighbor <1-12> route-map out <1-32> Removes route map from out-route map list. Command mode: Router BGP
no	neighbor <1-12> shutdown Enables this peer configuration. Command mode: Router BGP
ne	Ighbor <1-12> shutdown Disables this peer configuration. Command mode: Router BGP

Table 271. BGP Peer Configuration Commands (continued)

Command Syntax and Usage
no neighbor <1-12>
Deletes this peer configuration.
Command mode: Router BGP
[no] neighbor <1-12> password <1-16 characters>
Configures the BGP peer password.
Command mode: Router BGP
[no] neighbor <1-12> passive
Enables or disables BGP passive mode, which prevents the switch from initiating BGP connections with peers.
Instead, the switch waits for the peer to send an open message first.
Command mode: Router BGP
show ip bgp neighbor [<1-12>]
Displays the current BGP peer configuration.
Command mode: All

BGP Redistribution Configuration

Table 272. BGP Redistribution Configuration Commands

Command Syntax and Usage	
<pre>[no] neighbor <1-12> redistribute default-metric <1-4294967294> Sets default metric of advertised routes. Command mode: Router BGP</pre>	
<pre>[no] neighbor <1-12> redistribute default-action {import originate redistribute} Sets default route action.</pre>	
Defaults routes can be configured as import, originate, redistribute, or none. None: No routes are configured	
Import: Import these routes.	
Originate: The switch sends a default route to peers if it does not have any default routes in its routing table.	
Redistribute: Default routes are either configured through default gateway or learned through other protocols and redistributed to peer. If the routes are learned from default gateway configuration, you have to enable static routes since the routes from default gateway are static routes. Similarly, if the routes are learned from a certain routing protocol, you have to enable that protocol.	
Command mode: Router BGP	
[no] neighbor <1-12> redistribute rip	
Enables or disables advertising RIP routes.	
Command mode: Router BGP	

Command Syntax and Usage	
[no] neighbor <1-12> redistribute ospf Enables or disables advertising OSPF routes.	
Command mode: Router BGP	
[no] neighbor < <i>l</i> - <i>l</i> 2> redistribute fixed Enables or disables advertising fixed routes.	
Command mode: Router BGP	
<pre>[no] neighbor <1-12> redistribute static Enables or disables advertising static routes. Command mode: Router BGP</pre>	
show ip bgp neighbor <1-12> redistribute Displays current redistribution configuration. Command mode: All	

Table 272. BGP Redistribution Configuration Commands (continued)

BGP Aggregation Configuration

These commands enable you to configure BGP aggregation to specify the routes/range of IP destinations a peer router accepts from other peers. All matched routes are aggregated to one route, to reduce the size of the routing table. By default, the first aggregation number is enabled and the rest are disabled.

Table 273. BGP Aggregation Configuration Commands

Command Syntax and Usage	
ago	gregate-address <1-16> <ip address=""> <ip netmask=""></ip></ip>
	Defines the starting subnet IP address for this aggregation, using dotted decimal notation. The default address is 0.0.0.0.
	Command mode: Router BGP
ago	gregate-address <1-16> enable
	Enables this BGP aggregation.
	Command mode: Router BGP
no	aggregate-address <1-16> enable
	Disables this BGP aggregation.
	Command mode: Router BGP
no	aggregate-address <1-16>
	Deletes this BGP aggregation.
	Command mode: Router BGP
sho	ow ip bgp aggregate-address [<1-16>]
	Displays the current BGP aggregation configuration.
	Command mode: All

MLD Global Configuration

Table 274 describes the commands used to configure global Multicast Listener Discovery (MLD) parameters.

Table 274. MLD Global Configuration Commands

ipv6 mld	
Enter MLD global configuration mode.	
Command mode: Global configuration	
default	
Resets MLD parameters to their default values.	
Command mode: MLD Configuration	
enable	
Globally turns MLD on.	
Command mode: MLD Configuration	

Table 274. MLD Global Configuration Commands

no	enable
	Globally turns MLD off.
	Command mode: MLD Configuration
exi	lt
	Exit from MLD configuration mode.
	Command mode: MLD Configuration
sho	w ipv6 mld
	Displays the current MLD configuration parameters.
	Command mode: All

MLD Interface Configuration

Table 275 describes the commands used to configure MLD parameters for an interface.

Table 275. MLD Interface Configuration Commands

Command Syntax and Usage	
ipv6 mld default	
Resets MLD parameters for the selected interface to their default values.	
Command mode: Interface IP	
ipv6 mld dmrtr enable disable	
Enables or disables dynamic Mrouter learning on the interface. The default setting is disabled.	
Command mode: Interface IP	
ipv6 mld enable	
Enables this MLD interface.	
Command mode: Interface IP	
no ipv6 mld enable	
Disables this MLD interface.	
Command mode: Interface IP	
ipv6 mld llistnr <1-32>	
Configures the Last Listener query interval. The default value is 1 second.	
Command mode: Interface IP	
ipv6 mld qintrval <2-65535>	
Configures the interval for MLD Query Reports. The default value is 125 seconds.	
Command mode: Interface IP	

Table 275. MLD Interface Configuration Commands (continued)

Command Syntax and Usage
ipv6 mld qri <1000-65535>
Configures the interval for MLD Query Response Reports. The default value is 10,000 milliseconds.
Command mode: Interface IP
ipv6 mld robust <2-10>
Configures the MLD Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If the subnet is expected to be lossy (high rate of packet loss), increase the value. The default value is 2.
Command mode: Interface IP
ipv6 mld version <1-2>
Defines the MLD protocol version number.
Command mode: Interface IP
show ipv6 mld interface <interface number=""></interface>
Displays the current MLD interface configuration.
Command mode: All

IGMP Configuration

Table 276 describes the commands used to configure basic IGMP parameters.

Table 276. IGMP Configuration Commands

[no] ip igmp aggregate Enables or disables IGMP Membership Report aggregation. Command mode : Global configuration
ip	igmp enable
	Globally turns IGMP on.
	Command mode: Global configuration
no	ip igmp enable
	Globally turns IGMP off.
	Command mode: Global configuration
shc	ow ip igmp
	Displays the current IGMP configuration parameters.
	Command mode: All

The following sections describe the IGMP configuration options.

- "IGMP Snooping Configuration" on page 360
- "IGMPv3 Configuration" on page 361
- "IGMP Relay Configuration" on page 362
- "IGMP Static Multicast Router Configuration" on page 363
- "IGMP Filtering Configuration" on page 364
- "IGMP Advanced Configuration" on page 366
- "IGMP Querier Configuration" on page 367

IGMP Snooping Configuration

IGMP Snooping allows the switch to forward multicast traffic only to those ports that request it. IGMP Snooping prevents multicast traffic from being flooded to all ports. The switch learns which server hosts are interested in receiving multicast traffic, and forwards it only to ports connected to those servers.

Table 277 describes the commands used to configure IGMP Snooping.

Table 277. IGMP Snooping Configuration Commands

Co	Command Syntax and Usage		
ip	igmp snoop mrouter-timeout <1-600> Configures the timeout value for IGMP Membership Queries (mrouter). Once the timeout value is reached, the switch removes the multicast router from its IGMP table, if the proper conditions are met. The range is from 1 to 600 seconds. The default is 255 seconds. Command mode: Global configuration		
ip	igmp snoop source-ip <i><ip address=""></ip></i> Configures the source IP address used as a proxy for IGMP Group Specific Queries. Command mode: Global configuration		
ip	igmp snoop vlan < <i>VLAN number></i> Adds the selected VLAN(s) to IGMP Snooping. Command mode: Global configuration		
no	ip igmp snoop vlan <i><vlan number=""></vlan></i> Removes the selected VLAN(s) from IGMP Snooping. Command mode: Global configuration		
no	ip igmp snoop vlan all Removes all VLANs from IGMP Snooping. Command mode: Global configuration		
ip	igmp snoop enable Enables IGMP Snooping. Command mode: Global configuration		
no	ip igmp snoop enable Disables IGMP Snooping. Command mode: Global configuration		
sho	ow ip igmp snoop Displays the current IGMP Snooping parameters. Command mode: All		

IGMPv3 Configuration

Table 278 describes the commands used to configure IGMP version 3.

Table 278.	IGMP	version 3	Configuration	Commands
------------	------	-----------	---------------	----------

Command Syntax and Usage				
ip iqmp snoop iqmpv3 sources <1-64>				
Configures the maximum number of IGMP multicast sources to snoop from within the group record. Use this command to limit the number of IGMP sources to provide more refined control. The default value is 8.				
Command mode: Global configuration				
no] ip igmp snoop igmpv3 v1v2				
Enables or disables snooping on IGMP version 1 and version 2 reports. When disabled, the switch drops IGMPv1 and IGMPv2 reports. The default value is enabled.				
Command mode: Global configuration				
no] ip igmp snoop igmpv3 exclude Enables or disables snooping on IGMPv3 Exclude Reports. When disabled, the switch ignores Exclude Reports. The default value is enabled. Command mode: Global configuration				
p igmp snoop igmpv3 enable				
Enables IGMP version 3. The default value is disabled.				
Command mode: Global configuration				
o ip igmp snoop igmpv3 enable Disables IGMP version 3. Command mode: Global configuration				
how ip igmp snoop igmpv3				
Displays the current IGMP v3 Snooping configuration.				
Command mode: All				

IGMP Relay Configuration

When you configure IGMP Relay, also configure the IGMP Relay multicast routers.

Table 279 describes the commands used to configure IGMP Relay.

Table 279. IGMP Relay Configuration Commands

Coi	nmand Syntax and Usage
ip	igmp relay vlan <i><vlan number=""></vlan></i> Adds the VLAN to the list of IGMP Relay VLANs. Command mode: Global configuration
no	ip igmp relay vlan <i><vlan number=""></vlan></i> Removes the VLAN from the list of IGMP Relay VLANs. Command mode: Global configuration
ip	<pre>igmp relay report <0-150> Configures the interval between unsolicited Join reports sent by the switch, in seconds. The default value is 10. Command mode: Global configuration</pre>
ip	igmp relay enable Enables IGMP Relay. Command mode: Global configuration
no	ip igmp relay enable Disables IGMP Relay. Command mode: Global configuration
sho	ow ip igmp relay Displays the current IGMP Relay configuration. Command mode: All

IGMP Relay Multicast Router Configuration

 Table 280 describes the commands used to configure multicast routers for IGMP

 Relay.

Table 280. IGMP Relay Mrouter Configuration Commands

Со	mmand Syntax and Usage
ip	igmp relay mrouter <1-2> address <ip address=""> Configures the IP address of the IGMP multicast router used for IGMP Relay. Command mode: Global configuration</ip>
ip	igmp relay mrouter <1-2> interval <1-60>
	Configures the time interval between ping attempts to the upstream Mrouters, in seconds. The default value is 2.
	Command mode: Global configuration

Table 280. IGMP Relay Mrouter Configuration Commands

Со	nmand Syntax and Usage
ip	igmp relay mrouter <1-2> retry <1-120>
	Configures the number of failed ping attempts required before the switch declares this Mrouter is down. The default value is 4.
	Command mode: Global configuration
ip	igmp relay mrouter <1-2> attempt <1-128>
	Configures the number of successful ping attempts required before the switch declares this Mrouter is up. The default value is 5.
	Command mode: Global configuration
ip	igmp relay mrouter <1-2> version <1-2>
	Configures the IGMP version (1 or 2) of the multicast router.
	Command mode: Global configuration
ip	igmp relay mrouter <1-2> enable
	Enables the multicast router.
	Command mode: Global configuration
no	ip igmp relay mrouter <1-2> enable
	Disables the multicast router.
	Command mode: Global configuration
no	ip igmp relay mrouter <1-2>
	Deletes the multicast router from IGMP Relay.
	Command mode: Global configuration

IGMP Static Multicast Router Configuration

Table 281 describes the commands used to configure a static multicast router.

Note: When static Mrouters are used, the switch continues learning dynamic Mrouters via IGMP snooping. However, dynamic Mrouters may not replace static Mrouters. If a dynamic Mrouter has the same port and VLAN combination as a static Mrouter, the dynamic Mrouter is not learned.

Table 281. IGMP Static Multicast Router Configuration Commands

Со	mmand Syntax and Usage
ip	igmp mrouter <port alias="" number="" or=""> <vlan number=""> <version (1-3)=""></version></vlan></port>
	Selects a port/VLAN combination on which the static multicast router is connected, and configures the IGMP version (1 or 2) of the multicast router.
	Command mode: Global configuration
no	ip igmp mrouter <pre>cyport alias or number> <vlan number=""> <version (1-3)=""></version></vlan></pre>
	Removes a static multicast router from the selected port/VLAN combination.
	Command mode: Global configuration

Table 281. IGMP Static Multicast Router Configuration Commands

Command Syntax and Usage	
no ip igmp mrouter all	
Removes all static multicast routers.	
Command mode: Global configuration	
clear ip igmp mrouter	
Clears the multicast router port table.	
Command mode: Global configuration	
show ip igmp mrouter	
Displays the current IGMP Static Multicast Router parameters.	
Command mode: All	

IGMP Filtering Configuration

Table 282 describes the commands used to configure an IGMP filter.

Table 282.	IGMP	Filtering	Configuration	Commands
------------	------	-----------	---------------	----------

Coi	mmand Syntax and Usage
ip	igmp profile <1-16> Configures the IGMP filter. To view command options, see page 365. Command mode: Global configuration
ip	igmp filtering Enables IGMP filtering globally. Command mode: Global configuration
no	ip igmp filtering Disables IGMP filtering globally. Command mode: Global configuration
sho	ow ip igmp filtering Displays the current IGMP Filtering parameters. Command mode: All

IGMP Filter Definition

Table 283 describes the commands used to define an IGMP filter.

```
Table 283. IGMP Filter Definition Commands
```

Cor	nmand Syntax and Usage
ip	igmp profile <1-16> range <ip 1="" address=""> <ip 2="" address=""> Configures the range of IP multicast addresses for this filter.</ip></ip>
	Command mode: Global configuration
ip	igmp profile <1-16> action {allow deny}
	Allows or denies multicast traffic for the IP multicast addresses specified. The default action is ${\tt deny}.$
	Command mode: Global configuration
ip	igmp profile <1-16> enable
	Enables this IGMP filter.
	Command mode: Global configuration
no	ip igmp profile <1-16> enable
	Disables this IGMP filter.
	Command mode: Global configuration
no	ip igmp profile <1-16>
	Deletes this filter's parameter definitions.
	Command mode: Global configuration
sho	ow ip igmp profile <1-16>
	Displays the current IGMP filter.
	Command mode: All

IGMP Filtering Port Configuration

Table 284 describes the commands used to configure a port for IGMP filtering.

Table 284. IGMP Filter Port Configuration Commands

Command Syntax and Usage			
[no] ip igmp filtering			
Enables or disables IGMP filtering on this port.			
Command mode: Interface port			
.p igmp profile <1-16>			
Adds an IGMP filter to this port.			
Command mode: Interface port			

Table 284. IGMP Filter Port Configuration Commands

Command Syntax and Usage

```
no ip igmp profile <1-16>
```

Removes an IGMP filter from this port.

Command mode: Interface port

show interface port port alias or number> igmp-filtering

Displays the current IGMP filter parameters for this port.

Command mode: All

IGMP Advanced Configuration

Table 285 describes the commands used to configure advanced IGMP parameters.

```
Table 285. IGMP Advanced Configuration Commands
```

Со	mmand Syntax and Usage
ip	igmp query-interval <1-600> Sets the IGMP router query interval, in seconds. The default value is 125. Command mode: Global configuration
ip	igmp robust <2-10> Configures the IGMP Robustness variable, which allows you to tune the switch for expected packet loss on the subnet. If the subnet is expected to be lossy (high rate of packet loss), increase the value. The default value is 2. Command mode: Global configuration
ip	<pre>igmp timeout <1-255> Configures the timeout value for IGMP Membership Reports (host). Once the timeout value is reached, the switch removes the host from its IGMP table, if the conditions are met. The range is from 1 to 255 seconds. The default is 10 seconds. Command mode: Global configuration</pre>
[nc	 j ip igmp fastleave <vlan number=""></vlan> Enables or disables Fastleave processing. Fastleave allows the switch to immediately remove a port from the IGMP port list, if the host sends a Leave message, and the proper conditions are met. This command is disabled by default. Command mode: Global configuration
[nc	b] ip igmp rtralert Enables or disables the Router Alert option in IGMP messages. Command mode: Global configuration

IGMP Querier Configuration

Table 282. describes the commands used to configure IGMP Querier.

 Table 286. IGMP Querier Configuration Options

Coi	mmand Syntax and Usage
ip	igmp querier vlan source-ip
	Configures the IGMP source IP address for the selected VLAN.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> max-response <i><1-256></i>
	Configures the maximum time, in tenths of a second, allowed before responding to a Membership Query message. The default value is 100.
	By varying the Query Response Interval, an administrator may tune the burstiness of IGMP messages on the subnet; larger values make the traffic less bursty, as host responses are spread out over a larger interval.
	Command mode: Global configuration
ip	igmp querier vlan query-interval <1-608>
	Configures the interval between IGMP Query broadcasts. The default value is 125 seconds.
	Command mode: Global configuration
ip	igmp querier vlan < <i>VLAN number</i> > robustness <2-10>
	Configures the IGMP Robustness variable, which is the number of times that the switch sends each IGMP message. The default value is 2.
	Command mode: Global configuration
ip	igmp querier vlan election-type [ipv4 mac]
	Sets the IGMP Querier election criteria as IP address or Mac address. The default setting is IPv4.
	Command mode: Global configuration
ip	igmp querier vlan startup-interval <1-608>
	Configures the Startup Query Interval, which is the interval between General Queries sent out at startup.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> startup-count <i><1-10></i>
	Configures the Startup Query Count, which is the number of IGMP Queries sent out at startup. Each Query is separated by the Startup Query Interval. The default value is 2.
	Command mode: Global configuration
ip	igmp querier vlan <i><vlan number=""></vlan></i> version [v1 v2 v3]
	Configures the IGMP version. The default version is v3.
	Command mode: Global configuration

Table 286. IGMP Querier Configuration Options (continued)

Cor	Command Syntax and Usage		
ip	igmp querier enable		
	Enables IGMP Querier.		
	Command mode: Global configuration		
no	ip igmp querier enable		
	Disables IGMP Querier.		
	Command mode: Global configuration		
sho	w ip igmp querier vlan <i><vlan number=""></vlan></i>		
	Displays IGMP Querier information for the selected VLAN.		
	Command mode: Global configuration		
sho	w ip igmp querier		
	Displays the current IGMP Querier parameters.		
	Command mode: All		

IKEv2 Configuration

Table 287 describes the commands used to configure IKEv2.

Table 287. IKEv2 Options

Command Syntax and Usage
ikev2 retransmit-interval <1-20>
Sets the timeout value, in seconds, in case a packet is not received by the peer and needs to be retransmitted. The default value is 20 seconds.
Command mode: Global configuration
[no] ikev2 cookie
Enables or disables cookie notification.
Command mode: Global configuration
show ikev2
Displays the current IKEv2 settings.
Command mode: All

IKEv2 Proposal Configuration

Table 288 describes the commands used to configure an IKEv2 proposal.

```
Table 288. IKEv2 Proposal Options
```

ike	ev2 proposal
	Enter IKEv2 proposal mode.
	Command mode: Global configuration
en	cryption {3des aes-cbc des}
	Configures IKEv2 encryption mode. The default value is 3des.
	Command mode: IKEv2 proposal
in	tegrity {md5 sha1}
	Configures the IKEv2 authentication algorithm type. The default value is shall
	Command mode: IKEv2 proposal
gro	oup {1 2 5 14 24}
	Configures the the DH group. The default group is 2.
	Command mode: IKEv2 proposal

IKEv2 Preshare Key Configuration

Table 289 describes the commands used to configure IKEv2 preshare keys.

Table 289. IKEv2 Preshare Key Options

Command Syntax and Usage
ikev2 preshare-key local <1-32 characters>
Configures the local preshare key. The default value is <pre>ibm123.</pre>
Command mode: Global configuration
<pre>ikev2 preshare-key remote <1-32 characters> <ipv6 address=""></ipv6></pre>
Configures the remote preshare key for the IPv6 address.
Command mode: Global configuration
show ikev2 preshare-key
Displays the current IKEv2 Preshare key settings.
Command mode: Global configuration

IKEv2 Identification Configuration

Table 290 describes the commands used to configure IKEv2 identification.

Table 290. IKEv2 Identification Options

Comma	and Syntax and Usage
ikev2	identity local address
Co	nfigures the switch to use the supplied IPv6 address as identification.
Co	mmand mode: Global configuration
ikev2	identity local fqdn <1-32 characters>
	nfigures the switch to use the fully-qualified domain name (such as ample.com") as identification.
Co	mmand mode: Global configuration
ikev2	identity local email <1-32 characters>
	nfigures the switch to use the supplied email address (such as z@example.com") as identification.
Co	mmand mode: Global configuration
show :	ikev2 identity
Dis	plays the current IKEv2 identification settings.
Co	mmand mode: All

IPsec Configuration

Table 291 describes the commands used to configure IPsec.

Table 291. IPsec Options

ips	ec enable
	Enables IPsec.
	Command mode: Global configuration
no	ipsec enable
	Disables IPsec.
	Command mode: Global configuration
sho	w ipsec
	Displays the current IPsec settings.
	Command mode: All

IPsec Transform Set Configuration

Table 292 describes the commands used to configure IPsec transforms.

Table 292.	IPsec	Transform	Set	Options
------------	-------	-----------	-----	---------

	nmand Syntax and Usage
ips	sec transform-set <1-10> {ah-md5 ah-sha1 esp-3des esp-aes-cbc esp-des esp-md5 esp-nul1 esp sha1}
	Sets the AH or ESP authentication, encryption, or integrity algorithm. The available algorithms are as follows:
	- ah-md5
	- ah-shal
	- esp-3des
	- esp-aes-cbc
	- esp-des
	- esp-md5
	- esp-null
	- esp
	- shal
	Command mode: Global configuration
	<pre>esp-aes-cbc esp-des esp-md5 esp-null esp sha1} Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm.</pre>
	Sets transport mode and the AH or ESP authentication, encryption, or integrity
ips	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm.
ips	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration sec transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des
ips	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration sec transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des esp-aes-cbc esp-des esp-md5 esp-nul1 esp sha1} Sets tunnel mode and the AH or ESP authentication, encryption, or integrity
-	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration sec transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des esp-aes-cbc esp-des esp-md5 esp-null esp sha1} Sets tunnel mode and the AH or ESP authentication, encryption, or integrity algorithm.
-	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration sec transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des esp-aes-cbc esp-des esp-md5 esp-null esp sha1} Sets tunnel mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration
-	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration sec transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des esp-aes-cbc esp-des esp-md5 esp-nul1 esp sha1} Sets tunnel mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration ipsec transform <1-10>
no	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration sec transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des esp-aes-cbc esp-des esp-md5 esp-null esp sha1} Sets tunnel mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration ipsec transform <1-10> Deletes the transform set.
no	Sets transport mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration sec transform-set <1-10> tunnel {ah-md5 ah-sha1 esp-3des esp-aes-cbc esp-des esp-md5 esp-null esp sha1} Sets tunnel mode and the AH or ESP authentication, encryption, or integrity algorithm. Command mode: Global configuration ipsec transform <1-10> Deletes the transform set. Command mode: Global configuration

IPsec Traffic Selector Configuration

Table 293 describes the commands used to configure an IPsec traffic selector.

Table 293. IPsec Traffic Selector Options

Command Syntax and Usage	
<pre>ipsec traffic-selector <1-10> action {permit deny} {any icmp tcp} {<ipv6 address=""> any}</ipv6></pre>	
Sets the traffic-selector to permit or deny the specified type of traffic.	
Command mode: Global configuration	
src < <i>IPv6 address</i> > any	
Sets the source IPv6 address.	
Command mode: Global configuration	
prefix <1-128>	
Sets the destination IPv6 prefix length.	
Command mode: Global configuration	
dst <ipv6 address=""> any</ipv6>	
Sets the destination IP address.	
Command mode: Global configuration	
del	
Deletes the traffic selector.	
Command mode: Global configuration	
cur	
Displays the current IPsec Traffic Selector settings.	
Command mode: All	

IPsec Dynamic Policy Configuration

Table 294 describes the commands used to configure an IPsec dynamic policy.

Table 294. IPsec Dynamic Policy Options

Command Syntax and Usage
ipsec dynamic-policy <1-10>
Enter IPsec dynamic policy mode.
Command mode: Global configuration
peer <ipv6 address=""></ipv6>
Sets the remote peer IP address.
Command mode: IPsec dynamic policy
traffic-selector <1-10>
Sets the traffic selector for the IPsec policy.
Command mode: IPsec dynamic policy

Table 294. IPsec Dynamic Policy Options (continued)

Command Syntax and Usage

transform-set <1-10>

Sets the transform set for the IPsec policy.

Command mode: IPsec dynamic policy

sa-lifetime <120-86400>

Sets the IPsec SA lifetime in seconds. The default value is 86400 seconds. **Command mode:** IPsec dynamic policy

pfs enable|disable

Enables/disables perfect forward security.

Command mode: IPsec dynamic policy

show ipsec dynamic-policy <1-10>

Displays the current IPsec dynamic policy settings.

Command mode: All

IPsec Manual Policy Configuration

Table 295 describes the commands used to configure an IPsec manual policy.

Table 295. IPsec Manual Policy Options

Command Syntax and Usage
ipsec manual-policy <1-10>
Enter IPsec manual policy mode.
Command mode: Global configuration
in-ah auth-key <key (hexadecimal)="" code=""></key>
Sets inbound Authentication Header (AH) authenticator key.
Command mode: IPsec manual policy
peer <ipv6 address=""></ipv6>
Sets the remote peer IP address.
Command mode: IPsec manual policy
traffic-selector <1-10>
Sets the traffic selector for the IPsec policy.
Command mode: IPsec manual policy
transform-set <1-10>
Sets the transform set for the IPsec policy.
Command mode: IPsec manual policy
in-ah spi <256-4294967295>
Sets the inbound Authentication Header (AH) Security Parameter Index (SPI).
Command mode: IPsec manual policy

Table 295.	IPsec Manual	Policy Options	(continued)
------------	--------------	----------------	-------------

Command Syntax and Usage
in-esp cipher-key <key (hexadecimal)="" code=""> Sets the inbound Encapsulating Security Payload (ESP) cipher key. Command mode: IPsec manual policy</key>
<pre>in-esp auth-key <key (hexadecimal)="" code=""> Sets the inbound Encapsulating Security Payload (ESP) authenticator key. Command mode: IPsec manual policy</key></pre>
<pre>in-esp auth-key spi <256-4294967295> Sets the inbound Encapsulating Security Payload (ESP) Security Parameter Index (SPI). Command mode: IPsec manual policy</pre>
out-ah auth-key <key (hexadecimal)="" code=""> Sets the outbound Authentication Header (AH) authenticator key. Command mode: IPsec manual policy</key>
out-ah spi <256-4294967295> Sets the outbound Authentication Header (AH) Security Parameter Index (SPI). Command mode: IPsec manual policy
out-esp auth-key <key (hexadecimal)="" code=""> Sets the outbound Encapsulating Security Payload (ESP) authenticator key. Command mode: IPsec manual policy</key>
out-esp cipher-key <key (hexadecimal)="" code=""> Sets the outbound Encapsulating Security Payload (ESP) cipher key. Command mode: IPsec manual policy</key>
out-esp auth-key spi <256-4294967295> Sets the outbound Encapsulating Security Payload (ESP) Security Parameter Index (SPI). Command mode: IPsec manual policy
show ipsec manual-policy <1-10> Displays the current IPsec manual policy settings. Command mode: All

Domain Name System Configuration

The Domain Name System (DNS) commands are used for defining the primary and secondary DNS servers on your local network, and for setting the default domain name served by the switch services. DNS parameters must be configured prior to using hostname parameters with the ping, traceroute, and tftp commands.

Table 296. Domain Name Service Commands

<pre>You are prompted to set the IPv4 address for your primary DNS server, using dotted decimal notation. Command mode: Global configuration [no] ip dns secondary-server <ip address=""> You are prompted to set the IPv4 address for your secondary DNS server, using dotted decimal notation. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration [no] ip dns ipv6 primary-server <ip address=""> You are prompted to set the IPv6 address for your primary DNS server, using hexadecimal format with colons. Command mode: Global configuration [no] ip dns ipv6 secondary-server <ip address=""> You are prompted to set the IPv6 address for your primary DNS server, using hexadecimal format with colons. Command mode: Global configuration [no] ip dns ipv6 secondary-server <ip address=""> You are prompted to set the IPv6 address for your secondary DNS server, using hexadecimal format with colons. If the primary DNS server, using hexadecimal format with colons. If the primary DNS server, using hexadecimal format with colons. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration ip dns ipv6 request-version {ipv4 ipv6} Sets the protocol used for the first request to the DNS server, as follows: – IPv4 – IPv6 Command mode: Global configuration [no] ip dns domain-name <string> Sets the default domain name used by the switch. For example: mycompany.com Command mode: Global configuration show ip dns Displays the current Domain Name System settings.</string></ip></ip></ip></ip></pre>	L-101	ip dns primary-server <i><ip address=""></ip></i>
dotted decimal notation. Command mode: Global configuration [no] ip dns secondary-server < <i>IP address></i> You are prompted to set the IPv4 address for your secondary DNS server, using dotted decimal notation. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration [no] ip dns ipv6 primary-server < <i>IP address></i> You are prompted to set the IPv6 address for your primary DNS server, using hexadecimal format with colons. Command mode: Global configuration [no] ip dns ipv6 secondary-server < <i>IP address></i> You are prompted to set the IPv6 address for your secondary DNS server, using hexadecimal format with colons. If the primary DNS server, using hexadecimal format with colons. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration ip dns ipv6 request-version {ipv4 ipv6} Sets the protocol used for the first request to the DNS server, as follows: – IPv4 – IPv6 Command mode: Global configuration [no] ip dns domain-name < <i>string></i> Sets the default domain name used by the switch. For example: mycompany.com Command mode: Global configuration show ip dns		
[no] ip dns secondary-server < <i>IP address</i> > You are prompted to set the IPv4 address for your secondary DNS server, using dotted decimal notation. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration [no] ip dns ipv6 primary-server < <i>IP address</i> > You are prompted to set the IPv6 address for your primary DNS server, using hexadecimal format with colons. Command mode: Global configuration [no] ip dns ipv6 secondary-server < <i>IP address</i> > You are prompted to set the IPv6 address for your secondary DNS server, using hexadecimal format with colons. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration ip dns ipv6 request-version {ipv4 ipv6} Sets the protocol used for the first request to the DNS server, as follows: - IPv4 - IPv6 Command mode: Global configuration [no] ip dns domain-name < <i>string</i> > Sets the default domain name used by the switch. For example: mycompany.com Command mode: Global configuration show ip dns		
You are prompted to set the IPv4 address for your secondary DNS server, using dotted decimal notation. If the primary DNS server fails, the configured secondary will be used instead. Command mode: Global configuration [no] ip dns ipv6 primary-server <i><ip address=""></ip></i> You are prompted to set the IPv6 address for your primary DNS server, using hexadecimal format with colons. Command mode: Global configuration [no] ip dns ipv6 secondary-server <i><ip address=""></ip></i> You are prompted to set the IPv6 address for your secondary DNS server, using hexadecimal format with colons. If the primary DNS server fails, the configured secondary will be used instead. -		Command mode: Global configuration dns ipv6 request-version {ipv4 ipv6} Sets the protocol used for the first request to the DNS server, as follows: - IPv4 - IPv6 Command mode: Global configuration ip dns domain-name < <i>string</i> > Sets the default domain name used by the switch. For example: mycompany.com
	[no]	Command mode: Global configuration dns ipv6 request-version {ipv4 ipv6} Sets the protocol used for the first request to the DNS server, as follows: - IPv4 - IPv6 Command mode: Global configuration ip dns domain-name < <i>string</i> > Sets the default domain name used by the switch. For example: mycompany.com Command mode: Global configuration

Bootstrap Protocol Relay Configuration

The Bootstrap Protocol (BOOTP) Relay commands are used to allow hosts to obtain their configurations from a Dynamic Host Configuration Protocol (DHCP) server. The BOOTP configuration enables the switch to forward a client request for an IP address to two DHCP/BOOTP servers with IP addresses that have been configured on the EN4093/EN4093R.

BOOTP relay is turned off by default.

Table 297.	Global BOOTP R	elay Configuration	Options
------------	----------------	--------------------	---------

Command Syntax and Usage	
--------------------------	--

[no] ip bootp-relay server <1-4> address <IP address>

Sets the IP address of the selected global BOOTP server.

Command mode: Global configuration

ip bootp-relay enable

Globally turns on BOOTP relay.

Command mode: Global configuration

no ip bootp-relay enable

Globally turns off BOOTP relay.

Command mode: Global configuration

BOOTP Relay Broadcast Domain Configuration

This menu allows you to configure a BOOTP server for a specific broadcast domain, based on its associated VLAN.

Со	Command Syntax and Usage		
ip	bootp-relay bcast-domain <1-10> vlan <vlan number=""> Configures the VLAN of the broadcast domain. Each broadcast domain must have a unique VLAN. Command mode: Global configuration</vlan>		
ip	bootp-relay bcast-domain <1-10> server <1-4> address <1Pv4 address> Sets the IP address of the BOOTP server. Command mode: Global configuration		
ip	bootp-relay bcast-domain <1-10> enable Enables BOOTP Relay for the broadcast domain. Command mode: Global configuration		
no	<pre>ip bootp-relay bcast-domain <1-10> enable Disables BOOTP Relay for the broadcast domain. When disabled, BOOTP Relay is performed by one of the global BOOTP servers. Command mode: Global configuration</pre>		

Table 298. BOOTP Relay Broadcast Domain Configuration Options

Command Syntax and Usage

no ip bootp-relay bcast-domain <1-10>

Deletes the selected broadcast domain configuration.

Command mode: Global configuration

show ip bootp-relay

Displays the current parameters for the BOOTP Relay broadcast domain.

Command mode: All

VRRP Configuration

Virtual Router Redundancy Protocol (VRRP) support on the EN4093/EN4093R provides redundancy between routers in a LAN. This is accomplished by configuring the same virtual router IP address and ID number on each participating VRRP-capable routing device. One of the virtual routers is then elected as the master, based on a number of priority criteria, and assumes control of the shared virtual router IP address. If the master fails, one of the backup virtual routers will assume routing authority and take control of the virtual router IP address.

By default, VRRP is disabled. IBM Networking OS has extended VRRP to include virtual servers as well, allowing for full active/active redundancy between switches. For more information on VRRP, see the "High Availability" chapter in the *IBM Networking OS 7.5 Application Guide.*

Table 299. Virtual Router Redundancy Protocol Commands

roi	iter vrrp
	Enter Router VRRP configuration mode.
	Command mode: Global configuration
[nc] hot-standby
	Enables or disables hot standby processing, in which two or more switches provide redundancy for each other. By default, this option is disabled.
	Command mode: Router VRRP
ena	able
	Globally enables VRRP on this switch.
	Command mode: Router VRRP
no	enable
	Globally disables VRRP on this switch.
	Command mode: Router VRRP
sho	ow ip vrrp
	Displays the current VRRP parameters.
	Command mode: All

Virtual Router Configuration

These commands are used for configuring virtual routers for this switch. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Virtual routers are disabled by default.

Table 300. VRRP Virtual Router Configuration Commands

Command Syntax and Usage
virtual-router <1-128> virtual-router-id <1-255>
Defines the virtual router ID (VRID). This is used in conjunction with the [no] virtual-router address command below to define a virtual router on this switch. To create a pool of VRRP-enabled routing devices which can provide redundancy to each other, each participating VRRP device must be configured with the same virtual router.
The VRID for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. The default value is 1.
All VRID values must be unique within the VLAN to which the virtual router's IP interface belongs.
Command mode: Router VRRP
[no] virtual-router <1-128> address <1P address>
Defines the IP address for this virtual router using dotted decimal notation. This is used in conjunction with the VRID (above) to configure the same virtual router on each participating VRRP device. The default address is 0.0.0.0.
Command mode: Router VRRP
virtual-router <1-128> interface <interface number=""></interface>
Selects a switch IP interface. If the IP interface has the same IP address as the addr option above, this switch is considered the "owner" of the defined virtual router. An owner has a special priority of 255 (highest) and will always assume the role of master router, even if it must pre-empt another virtual router which has assumed master routing authority. This pre-emption occurs even if the preem option below is disabled. The default value is 1.
Command mode: Router VRRP
virtual-router <1-128> priority <1-254>
Defines the election priority bias for this virtual server. The priority value can be any integer between 1 and 254. The default value is 100.
During the master router election process, the routing device with the highest virtual router priority number wins. If there is a tie, the device with the highest IP interface address wins. If this virtual router's IP address is the same as the one used by the IP interface, the priority for this virtual router will automatically be set to 255 (highest).
When priority tracking is used, this base priority value can be modified according to a number of performance and operational criteria.
Command mode: Router VRRP

Cor	Command Syntax and Usage		
vii	rtual-router <1-128> timers advertise <1-255> Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default value is 1. Command mode: Router VRRP		
[no] virtual-router <1-128> preemption Enables or disables master preemption. When enabled, if this virtual router is in backup mode but has a higher priority than the current master, this virtual router will preempt the lower priority master and assume control. Note that even when preemption is disabled, this virtual router will always pre-empt any other master if this switch is the owner (the IP interface address and virtual router addr are the same). By default, this option is enabled. Command mode: Router VRRP		
viı	rtual-router <i><1-128></i> enable Enables this virtual router. Command mode: Router VRRP		
no	virtual-router <1-128> enable Disables this virtual router. Command mode: Router VRRP		
no	virtual-router <1-128> Deletes this virtual router from the switch configuration. Command mode: Router VRRP		
sho	bw ip vrrp virtual-router < <i>I-128</i> > Displays the current configuration information for this virtual router. Command mode: All		

Virtual Router Priority Tracking Configuration

These commands are used for modifying the priority system used when electing the master router from a pool of virtual routers. Various tracking criteria can be used to bias the election results. Each time one of the tracking criteria is met, the priority level for the virtual router is increased by an amount defined through the VRRP Tracking commands.

Criteria are tracked dynamically, continuously updating virtual router priority levels when enabled. If the virtual router preemption option is enabled, this virtual router can assume master routing authority when its priority level rises above that of the current master. Some tracking criteria apply to standard virtual routers, otherwise called "virtual interface routers." A virtual *server* router is defined as any virtual router whose IP address is the same as any configured virtual server IP address.

```
Table 301. VRRP Priority Tracking Configuration Commands
```

Command Syntax and Usage

[no] virtual-router <1-128> track virtual-routers

When enabled, the priority for this virtual router will be increased for each virtual router in master mode on this switch. This is useful for making sure that traffic for any particular client/server pairing are handled by the same switch, increasing routing and load balancing efficiency. This command is disabled by default.

Command mode: Router VRRP

[no] virtual-router <1-128> track interfaces

When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.

Command mode: Router VRRP

[no] virtual-router <1-128> track ports

When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered "active" if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.

Command mode: Router VRRP

show ip vrrp virtual-router <1-128> track

Displays the current configuration for priority tracking for this virtual router.

Command mode: All

Virtual Router Group Configuration

Virtual Router Group commands are used for associating all virtual routers into a single logical virtual router, which forces all virtual routers on the EN4093/EN4093R to either be master or backup as a group. A virtual router is defined by its virtual router ID and an IP address. On each VRRP-capable routing device participating in redundancy for this virtual router, a virtual router will be configured to share the same virtual router ID and IP address.

Note: This option is required to be configured only when using at least two EN4093/EN4093Rs in a hot-standby failover configuration, where only one switch is active at any time.

Table 302.	VRRP Virtual	Router Group	Configuration	Commands
------------	--------------	--------------	---------------	----------

Table 302. VRRP Virtual Router Group Configuration Commands			
Command Syntax and Usage			
group virtual-router-id <1-255>			
Defines the virtual router ID (VRID).			
The VRID for standard virtual routers (where the virtual router IP address is not the same as any virtual server) can be any integer between 1 and 255. All VRID values must be unique within the VLAN to which the virtual router's IP interface (see interface below) belongs. The default virtual router ID is 1. Command mode: Router VRRP			
group interface <interface number=""></interface>			
Selects a switch IP interface. The default switch IP interface number is 1.			
Command mode: Router VRRP			
group priority <1-254>			
Defines the election priority bias for this virtual router group. This can be any integer between 1 and 254. The default value is 100.			
During the master router election process, the routing device with the highest virtual router priority number wins.			
Each virtual router group is treated as one entity regardless of how many virtual routers are in the group. When the switch tracks the virtual router group, it measures the resources contained in the group (such as interfaces, VLAN ports, real servers). The priority is updated as a group. Every virtual router in the group has the same priority.			
The <i>owner</i> parameter does not apply to the virtual router group. The group itself cannot be an owner and therefore the priority is 1-254.			
Command mode: Router VRRP			
group advertisement <1-255>			
Defines the time interval between VRRP master advertisements. This can be any integer between 1 and 255 seconds. The default is 1.			
Command mode: Router VRRP			

Table 302. VRRP Virtual Router Group Configuration Commands (continued)

[no] group preemption
	Enables or disables master pre-emption. When enabled, if the virtual router group is in backup mode but has a higher priority than the current master, this virtual router will pre-empt the lower priority master and assume control. Note that even when preemption is disabled, this virtual router will always pre-empt any other master if this switch is the owner (the IP interface address and virtual router address are the same). By default, this option is enabled. Command mode: Router VRRP
gro	oup enable
	Enables the virtual router group.
	Command mode: Router VRRP
no	group enable
	Disables the virtual router group.
	Command mode: Router VRRP
no	group
	Deletes the virtual router group from the switch configuration.
	Command mode: Router VRRP
sho	ow ip vrrp group
	Displays the current configuration information for the virtual router group.
	Command mode: All

Virtual Router Group Priority Tracking Configuration

Note: If *Virtual Router Group Tracking* is enabled, the tracking option will be available only under *group* option. The tracking setting for the other individual virtual routers will be ignored.

Table 303. Virtual Router Group Priority Tracking Configuration Commands

Command Syntax and Usage

[no] group track interfaces

When enabled, the priority for this virtual router will be increased for each other IP interface active on this switch. An IP interface is considered active when there is at least one active port on the same VLAN. This helps elect the virtual routers with the most available routes as the master. This command is disabled by default.

Command mode: Router VRRP

Table 303. Virtual Router Group Priority Tracking Configuration Commands

Command Syntax and Usage

[no] group track ports

When enabled, the priority for this virtual router will be increased for each active port on the same VLAN. A port is considered "active" if it has a link and is forwarding traffic. This helps elect the virtual routers with the most available ports as the master. This command is disabled by default.

Command mode: Router VRRP

show ip vrrp group track

Displays the current configuration for priority tracking for this virtual router.

Command mode: All

VRRP Interface Configuration

Note: The *interface* represents the IP interface on which authentication parameters must be configured.

These commands are used for configuring VRRP authentication parameters for the IP interfaces used with the virtual routers.

Table 304. VRRP Interface Commands

Cor	nmand Syntax and Usage		
int	cerface <interface number=""> authentication {password none}</interface>		
	Defines the type of authentication that will be used: none (no authentication) o password (password authentication).		
	Command mode: Router VRRP		
[no	interface <interface number=""> password <password></password></interface>		
	Defines a plain text password up to eight characters long. This password will be added to each VRRP packet transmitted by this interface when password authentication is chosen (see interface authentication above).		
	Command mode: Router VRRP		
no	interface <interface number=""></interface>		
	Clears the authentication configuration parameters for this IP interface. The IP interface itself is not deleted.		
	Command mode: Router VRRP		
shc	ow ip vrrp interface <i><interface number=""></interface></i>		
	Displays the current configuration for this IP interface's authentication parameters.		
	Command mode: All		

VRRP Tracking Configuration

These commands are used for setting weights for the various criteria used to modify priority levels during the master router election process. Each time one of the tracking criteria is met (see "VRRP Virtual Router Priority Tracking Commands" on

page 380), the priority level for the virtual router is increased by a defined amount.

Table 305. VRRP Tracking Configuration Commands

tracking-priority-increment virtual-routers <0-254>

Defines the priority increment value (0 through 254) for virtual routers in master mode detected on this switch. The default value is 2.

Command mode: Router VRRP

tracking-priority-increment interfaces <0-254>

Defines the priority increment value for active IP interfaces detected on this switch. The default value is 2.

Command mode: Router VRRP

tracking-priority-increment ports <0-254>

Defines the priority increment value for active ports on the virtual router's VLAN. The default value is 2.

Command mode: Router VRRP

show ip vrrp tracking-priority-increment

Displays the current configuration of priority tracking increment values.

Command mode: All

Note: These priority tracking options only define increment values. These options do not affect the VRRP master router election process until options under the VRRP Virtual Router Priority Tracking Commands (see page 380) are enabled.

Protocol Independent Multicast Configuration

Table 306. PIM Configuration Options

in	pim component <1-2>
тр	Enter PIM component mode. See page 386 to view options.
	Command mode: Global configuration
ip	pim regstop-ratelimit-period <0-2147483647>
	Configures the register stop rate limit, in seconds. The default value is 5.
	Command mode: Global configuration
[no] ip pim static-rp enable
	Enables or disables static RP configuration. The default setting is disabled.
	Command mode: Global configuration
[no] ip pim pmbr enable
	Enables or disables PIM border router. The default setting is disabled.
	Command mode: Global configuration
ip	pim enable
	Globally turns PIM on.
	Command mode: Global configuration
no	ip pim enable
	Globally turns PIM off.
	Command mode: Global configuration
cle	ar ip pim mroute
	Clears PIM multicast router entries.
	Command mode: Global configuration

PIM Component Configuration

Table 307. PIM Component Configuration Options

Command Syntax and Usage		
ip pim component <1-2>		
Enter PIM component mode.		
Command mode: Global configuration		
mode {dense sparse}		
Configures the operational mode of the PIM router (dense or sparse).		
Command mode: PIM Component		
show ip pim component [<1-2>]		
Displays the current PIM component configuration settings.		
Command mode: All		

RP Candidate Configuration

Use these commands to configure a PIM router Rendezvous Point (RP) candidate.

Table 308.	RP Candidate	Configuration	Options
------------	--------------	---------------	---------

Command Syntax and Usage		
rp-candidate rp-address <group address="" multicast=""> <group mask="" subnet=""> <ip address=""></ip></group></group>		
Adds an RP candidate.		
Command mode: PIM Component		
o rp-candidate rp-address <group address="" multicast=""> <group mask="" subnet=""> <ip address=""></ip></group></group>		
Removes the specified RP candidate.		
Command mode: PIM Component		
p-candidate holdtime <0-255>		
Configures the hold time of the RP candidate, in seconds.		

Command mode: PIM Component

RP Static Configuration

Use these commands to configure a static PIM router Rendezvous Point (RP).

Table 309. RP Static Configuration Options

Command Syntax and Usage			
<pre>rp-static rp-address <group address="" multicast=""> <group mask="" subnet=""></group></group></pre>			
Adds a static RP.			
Command mode: PIM Component			
<pre>no rp-static rp-address <group address="" multicast=""> <group mask="" subnet=""></group></group></pre>			
Removes the specified static RP.			
Command mode: PIM Component			

PIM Interface Configuration

Table 310. PIM Interface Configuration Options

Command Syntax and Usage		
int	cerface ip <i><interface number=""></interface></i>	
	Enter Interface IP mode.	
	Command mode: Global Configuration	
ip	pim hello-interval <0-65535>	
	Configures the time interval, in seconds, between PIM Hello packets. The default value is 30.	
	Command mode: Interface IP	

Table 310. PIM Interface Configuration Options (continued)

Co	mmand Syntax and Usage
ip	pim join-prune-interval <0-65535> Configures the interval between Join Prune messages, in seconds. The default value is 60. Command mode : Interface IP
[no	o] ip pim cbsr-preference <0-255> Configures the candidate bootstrap router preference. Command mode : Interface IP
ip	pim component-id <1-2> Defines the component ID for the interface. Command mode : Interface IP
ip	pim hello-holdtime <1-65535> Configures the time period for which a neighbor is to consider this switch to be operative (up). The default value is 105. Command mode : Interface IP
ip	pim dr-priority <0-4294967294> Configures the designated router priority. The default value is 1. Command mode : Interface IP
ip	pim override-interval <0-65535> Configures the override interval for the router interface, in seconds. Command mode : Interface IP
ip	pim lan-delay <0-32767> Configures the LAN delay value for the router interface, in seconds. Command mode: Interface IP
[no	b] ip pim border-bit Enables or disables the interface as a border router. The default setting is disabled. Command mode: Interface IP
[no	D] ip pim lan-prune-delay Enables or disables LAN delay advertisements on the interface. The default setting is disabled. Command mode: Interface IP
ip	pim neighbor-addr <i><ip address=""></ip></i> allow deny Allows or denies PIM access to the specified neighbor. You can configure a list of up to 72 neighbors that bypass the neighbor filter. Once you configure the interface to allow a neighbor, you can configure the interface to deny the neighbor. Command mode : Interface IP

Table 310. PIM Interface Configuration Options (continued)

Command Syntax and Usage
[no] ip pim neighbor-filter
Enables or disables the PIM neighbor filter on the interface. When enabled, this interface does not accept any PIM neighbors, unless specifically permitted using the following command: ip pim neighbor-addr <i><ip address=""></ip></i>
Command mode: Interface IP
ip pim enable
Enables PIM on the interface.
Command mode: Interface IP
no ip pim enable
Disables PIM on the interface.
Command mode: Interface IP
show ip pim neighbor-filters
Displays the configured PIM neighbor filters.
Command mode: All
show ip pim interface [< <i>interface number</i> > detail]
Displays the current PIM interface parameters.
Command mode: All

IPv6 Default Gateway Configuration

The switch supports IPv6 default gateways.

- Gateway 1 is used for data traffic.
- Gateways 3 and 4 are reserved for management.

Table 311 describes the IPv6 Default Gateway Configuration commands.

Table 311. IPv6 Default Gateway Configuration Commands

Command Syntax and Usage	
<pre>ip gateway6 {<gateway number="">} address <ipv6 address=""> Configures the IPv6 address of the default gateway, in hexadecimal format with colons (such as 3001:0:0:0:0:abcd:12). Command mode: Global configuration</ipv6></gateway></pre>	
<pre>[no] ip gateway6 {<gateway number="">} enable Enables or disables the default gateway. Command mode: Global configuration</gateway></pre>	
no ip gateway6 { <gateway number="">} Deletes the default gateway. Command mode: Global configuration</gateway>	
show ipv6 gateway6 {< <i>gateway number</i> >} Displays the current IPv6 default gateway configuration. Command mode : All	

IPv6 Static Route Configuration

Table 312 describes the IPv6 static route configuration commands.

Table 312. IPv6 Static Route Configuration Commands

Со	mmand Syntax and Usage
ip	route6 <ipv6 address=""> <prefix length=""> <ipv6 address="" gateway=""> [<interface number="">] Adds an IPv6 static route. Command mode: Global configuration</interface></ipv6></prefix></ipv6>
no	<pre>ip route6 <ipv6 address=""> <prefix length=""> Removes the selected route. Command mode: Global configuration</prefix></ipv6></pre>

Table 312. IPv6 Static Route Configuration Commands (continued)

Con	mand Syntax and Usage
	ip route6 [destination-address <i><ipv6 address=""></ipv6></i> gateway <i><default address="" gateway=""></default></i> interface <i><1-128></i> all]
	Clears IPv6 static routes. You are prompted to select the routes to clear, based on the following criteria:
	 dest: Destination IPv6 address of the route
	 gw: Default gateway address used by the route
	 if: Interface used by the route
	 all: All IPv6 static routes
	Command mode: Global configuration
sho	w ipv6 route static
	Displays the current static route configuration.
	Command mode: All

IPv6 Neighbor Discovery Cache Configuration

Table 313 describes the IPv6 Neighbor Discovery cache configuration commands.

Coi	nmand Syntax and Usage
ip	<pre>neighbors <ipv6 address=""> <mac address=""> vlan <vlan number=""> port <pre>/port number or alias></pre></vlan></mac></ipv6></pre>
	Adds a static entry to the Neighbor Discovery cache table.
	Command mode: Global configuration
no	<pre>ip neighbors {<ipv6 address=""> all}</ipv6></pre>
	Deletes the selected entry from the static Neighbor Discovery cache table.
	Command mode: Global configuration
no	ip neighbors [all if <1-128> all interface port <pre>/ all vlan <vlan number=""> all]</vlan></pre>
	Clears the selected static entries in the Neighbor Discovery cache table.
	Command mode: Global configuration

IPv6 Path MTU Configuration

The following table describes the configuration options for Path MTU (Maximum Transmission Unit). The Path MTU cache can consume system memory and affect performance. These commands allow you to manage the Path MTU cache.

Table 314. IPv6 Path MTU Commands

Command Syntax and Usage
ip pmtu6 timeout 0 <10-100>
Sets the timeout value for Path MTU cache entries, in minutes. Enter 0 (zero) to set the timeout to infinity (no timeout).
The default value is 10 minutes.
Command mode: Global configuration
clear ipv6 pmtu
Clears all entries in the Path MTU cache.
Command mode: All Except User EXEC
show ipv6 pmtu
Displays the current Path MTU configuration.
Command mode: All

IPv6 Neighbor Discovery Prefix Configuration

The following table describes the Neighbor Discovery prefix configuration options. These commands allow you to define a list of prefixes to be placed in Prefix Information options in Router Advertisement messages sent from an interface.

Table 315. IPv6 Neighbor Discovery Prefix Commands

Command Syntax and Usage
interface ip <1-127>
Enters Interface IP mode.
Command mode: Global configuration
ipv6 nd prefix { <i><ipv6 prefix=""> <prefix length=""></prefix></ipv6></i> } [no-advertise]
Adds a Neighbor Discovery prefix to the interface. The default setting is enabled.
To disable the prefix and not advertise it in the Prefix Information options in Router Advertisement messages sent from the interface use the no-advertise option.
Additional prefix options are listed below.
Command mode: Interface IP
no ipv6 nd prefix [< <i>IPv6 prefix</i> > < <i>prefix length</i> >] interface all
Removes the selected Neighbor Discovery prefix(es). If you specify an interface number, all prefixes for the interface are removed.
Command mode: Interface IP

Table 315. IPv6 Neighbor Discovery Prefix Commands (continued)

Table 315. IPV6 Neighbor Discovery Prefix Commands (continued)
Command Syntax and Usage
<pre>ipv6 nd prefix {<ipv6 prefix=""> <prefix length="">} valid-lifetime <0-4294967295> [infinite variable} prefered-lifetime <0-4294967295> [infinite variable}</prefix></ipv6></pre>
Configures the Valid Lifetime and (optionally) the Preferred Lifetime of the prefix, in seconds.
The Valid Lifetime is the length of time (relative to the time the packet is sent) that the prefix is valid for the purpose of on-link determination. The default value is 2592000.
The Preferred Lifetime is the length of time (relative to the time the packet is sent) that addresses generated from the prefix via stateless address autoconfiguration remain preferred. The default value is 604800.
Note: The Preferred Lifetime value must not exceed the Valid Lifetime value.
Command mode: Interface IP
<pre>ipv6 nd prefix {<ipv6 prefix=""> <prefix length="">} off-link [no-autoconfig]</prefix></ipv6></pre>
Disables the on-link flag. When enabled, the on-link flag indicates that this prefix can be used for on-link determination. When disabled, the advertisement makes no statement about on-link or off-link properties of the prefix. The default setting is enabled.
To clear the off-link flag, omit the off-link parameter when you issue this command.
Command mode: Interface IP
<pre>ipv6 nd prefix {<ipv6 prefix=""> <prefix length="">} no-autoconfig</prefix></ipv6></pre>
Disables the autonomous flag. When enabled, the autonomous flag indicates that the prefix can be used for stateless address configuration. The default setting is enabled.
Command mode: Interface IP
<pre>show ipv6 prefix {<interface number="">}</interface></pre>
Displays current Neighbor Discovery prefix parameters.
Command mode: All

IPv6 Prefix Policy Table Configuration

The following table describes the configuration options for the IPv6 Prefix Policy Table. The Prefix Policy Table allows you to override the default address selection criteria.

Table 316. IPv6 Prefix Policy Table Options

Command Syntax and Usage		
<pre>ip prefix-policy <ipv6 prefix=""> <prefix length=""> <precedence (0-100)=""> <label (0-100)=""></label></precedence></prefix></ipv6></pre>		
Adds a Prefix Policy Table entry. Enter the following parameters:		
 IPv6 address prefix 		
 Prefix length 		
 Precedence: The precedence is used to sort destination addresses. Prefixes with a higher precedence are sorted before those with a lower precedence. 		
 Label: The label allows you to select prefixes based on matching labels. Source prefixes are coupled with destination prefixes if their labels match. 		
Command mode: Global configuration		
<pre>no ip prefix-policy <ipv6 prefix=""> <prefix length=""> <precedence (0-100)=""> <label (0-100)=""></label></precedence></prefix></ipv6></pre>		
Removes a prefix policy table entry.		
Command mode: Global configuration		
show ip prefix-policy		
Displays the current Prefix Policy Table configuration.		
Command mode: All		

Open Shortest Path First Version 3 Configuration

Table 317. OSPFv3 Configuration Commands
--

[no]	ipv6 router ospf
	nter OSPFv3 configuration mode. Enables or disables OSPFv3 routing otocol.
С	ommand mode: Global configuration
abr-	type [standard cisco ibm]
С	onfigures the Area Border Router (ABR) type, as follows:
_	Standard
_	Cisco
-	IBM
TI	ne default setting is standard.
С	ommand mode: Router OSPF3
as-e	xternal lsdb-limit <lsdb (0-2147483647,="" -1="" for="" limit="" limit)="" no=""></lsdb>
S	ets the link state database limit.
С	ommand mode: Router OSPF3
exit	-overflow-interval <0-4294967295>
	onfigures the number of seconds that a router takes to exit Overflow State. ne default value is 0 (zero).
С	ommand mode: Router OSPF3
refe	rence-bandwidth <0-4294967295>
	onfigures the reference bandwidth, in kilobits per second, used to calculate e default interface metric. The default value is 100,000.
С	ommand mode: Router OSPF3
time:	rs spf {< <i>SPF delay (0-65535)</i> >} {< <i>SPF hold time (0-65535)</i> >}
	onfigures the number of seconds that SPF calculation is delayed after a pology change message is received. The default value is 5.
	onfigures the number of seconds between SPF calculations. The default alue is 10.
С	ommand mode: Router OSPF3
rout	er-id <ipv4 address=""></ipv4>
D	efines the router ID.
С	ommand mode: Router OSPF3
[no]	nssaAsbrDfRtTrans
	nables or disables setting of the P-bit in the default Type 7 LSA generated by

Table 317. OSPFv3 Configuration Commands (continued)

Command Syntax and Usage	
--------------------------	--

enable

Enables OSPFv3 on the switch.

Command mode: Router OSPF3

no enable

Disables OSPFv3 on the switch.

Command mode: Router OSPF3

```
show ipv6 ospf
```

Displays the current OSPF configuration settings.

Command mode: All

OSPFv3 Area Index Configuration

Table 318. OSPFv3 Area Index Configuration Options

Command Syntax and Usage		
area <area index=""/> area-id <ip address=""></ip>		
Defines the IP address of the OSPFv3 area number.		
Command mode: Router OSPF3		
area <area index=""/> type {transit stub nssa} {no-summary}		
Defines the type of area. For example, when a virtual link has to be established with the backbone, the area type must be defined as transit.		
Transit area: allows area summary information to be exchanged between routing devices. Any area that is not a stub area or NSSA is considered to be transit area.		
Stub area: is an area where external routing information is not distributed. Typically, a stub area is connected to only one other area.		
NSSA: Not-So-Stubby Area (NSSA) is similar to stub area with additional capabilities. For example, routes originating from within the NSSA can be propagated to adjacent transit and backbone areas. External routes from outside the Autonomous System (AS) can be advertised within the NSSA but are not distributed into other areas.		
Enables or disables the no-summary option. When enabled, the area-border router neither originates nor propagates Inter-Area-Prefix LSAs into stub/NSSA areas. Instead it generates a default Inter-Area-Prefix LSA.		
The default setting is disabled.		
Command mode: Router OSPF3		
area <area index=""/> default-metric <metric (1-16777215)="" value=""></metric>		
Configures the cost for the default summary route in a stub area or NSSA.		
Command mode: Router OSPF3		

Command Syntax and Usage
area < <i>area index</i> > default-metric type < <i>1-3</i> >
Configures the default metric type applied to the route.
This command applies only to area type of Stub/NSSA.
Command mode: Router OSPF3
area <area index=""/> stability-interval <1-255>
Configures the stability interval for an NSSA, in seconds. When the interval expires, an elected translator determines that its services are no longer required. The default value is 40.
Command mode: Router OSPF3
area <area index=""/> translation-role always candidate
Configures the translation role for an NSSA area, as follows:
 Always: Type 7 LSAs are always translated into Type 5 LSAs.
 Candidate: An NSSA border router participates in the translator election process.
The default setting is candidate.
Command mode: Router OSPF3
area <area index=""/> enable
Enables the OSPF area.
Command mode: Router OSPF3
area <i><area index=""/></i> no enable
Disables the OSPF area.
Command mode: Router OSPF3
no area <i><area index=""/></i>
Deletes the OSPF area.
Command mode: Router OSPF3
show ipv6 ospf areas
Displays the current OSPFv3 area configuration.
Command mode: All

OSPFv3 Summary Range Configuration

```
Table 319. OSPFv3 Summary Range Configuration Options
```

area	a-range <1-16> address <1Pv6 address> <prefix (1-128)="" length=""></prefix>
	Configures the base IPv6 address and subnet prefix length for the range
	Command mode: Router OSPF3
area	a-range <1-16> area <area (0-2)="" index=""/>
(Configures the area index used by the switch.
C	Command mode: Router OSPF3
area	a-range <1-16> lsa-type summary Type7
(Configures the LSA type, as follows:
-	- Summary LSA
-	- Type7 LSA
C	Command mode: Router OSPF3
area	a-range <1-16> tag <0-4294967295>
(Configures the route tag.
C	Command mode: Router OSPF3
[no]	area-range <1-16> hide
ŀ	Hides the OSPFv3 summary range.
C	Command mode: Router OSPF3
area	a-range <1-16> enable
E	Enables the OSPFv3 summary range.
C	Command mode: Router OSPF3
area	a-range <1-16> no enable
[Disables the OSPFv3 summary range.
C	Command mode: Router OSPF3
no a	area-range <1-16>
[Deletes the OSPFv3 summary range.
C	Command mode: Router OSPF3
shov	v ipv6 ospf area-range
Γ	Displays the current OSPFv3 summary range.

OSPFv3 AS-External Range Configuration

Table 320. OSPFv3 AS External Range Configuration Options

sum	mary-prefix <1-16> address <1Pv6 address> <1Pv6 prefix length (1-128)>
	Configures the base IPv6 address and the subnet prefix length for the range.
	Command mode: Router OSPF3
sum	mary-prefix <1-16> area <area (0-2)="" index=""/>
	Configures the area index used by the switch.
	Command mode: Router OSPF3
	<pre>mary-prefix <1-16> aggregation-effect {allowAll denyAll advertise not-advertise}</pre>
	Configures the aggregation effect, as follows:
	 allowAll: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are generated. Aggregated Type-7 LSAs are generated in all the attached NSSAs for the range.
	 denyAll: Type-5 and Type-7 LSAs are not generated.
	 advertise: If the area ID is 0.0.0.0, aggregated Type-5 LSAs are generated. For other area IDs, aggregated Type-7 LSAs are generated in the NSSA area.
	 not-advertise: If the area ID is 0.0.0.0, Type-5 LSAs are not generated, while all NSSA LSAs within the range are cleared and aggregated Type-7 LSAs are generated for all NSSAs. For other area IDs, aggregated Type-7 LSAs are not generated in the NSSA area.
	Command mode: Router OSPF3
[nc] summary-prefix <1-16> translation
	When enabled, the P-bit is set in the generated Type-7 LSA. When disabled, the P-bit is cleared. The default setting is disabled.
	Command mode: Router OSPF3
sur	mary-prefix <1-16> enable
	Enables the OSPFv3 AS-external range.
	Command mode: Router OSPF3
sum	mary-prefix <1-16> no enable
	Disables the OSPFv3 AS-external range.
	Command mode: Router OSPF3
no	summary-prefix <1-16>
	Deletes the OSPFv3 AS-external range.
	Command mode: Router OSPF3
	w ipv6 ospf summary-prefix <1-16>
	Displays the current OSPFv3 AS-external range.

OSPFv3 Interface Configuration

Command Syr	ntax and Usage
Enter Inte	ip <i><interface number=""></interface></i> rface IP mode, from Global Configuration mode. d mode : Global configuration
Configure	area <i><area (0-2)="" index=""/></i> is the OSPFv3 area index. d mode : Interface IP
Configure	area <i><area (0-2)="" index=""/></i> instance <i><0-255></i> is the instance ID for the interface. d mode : Interface IP
Configure A priority specifies	ospf priority <priority (0-255)="" value=""> is the priority value for the switch's OSPFv3 interface. value of 255 is the highest and 1 is the lowest. A priority value of 0 that the interface cannot be used as Designated Router (DR). d mode: Interface IP</priority>
Configure	ospf_cost_<1-65535> s the metric value for sending a packet on the interface. d mode : Interface IP
Configure the router	<pre>ospf hello-interval <1-65535> s the indicated interval, in seconds, between the hello packets, that sends on the interface. d mode: Interface IP</pre>
Configure declaring	ospf dead-interval <1-65535> s the health parameters of a hello packet, in seconds, before a silent router to be down. d mode: Interface IP
Configure over this i	ospf transmit-delay <1-1800> s the estimated time, in seconds, taken to transmit LS update packet nterface. d mode : Interface IP
Configure adjacenci	ospf retransmit-interval <1-1800> is the interval in seconds, between LSA retransmissions for es belonging to interface. d mode: Interface IP

Table 321. OSPFv3 Interface Configuration Options (continued)

Comr	nand Syntax and Usage
[no]	ipv6 ospf passive-interface
	nables or disables the passive setting on the interface. On a passive nterface, OSPFv3 protocol packets are suppressed.
С	command mode: Interface IP
ipv6	ospf enable
E	nables OSPFv3 on the interface.
С	command mode: Interface IP
ipv6	ospf no enable
D	visables OSPFv3 on the interface.
С	command mode: Interface IP
no i	pv6 ospf
D	eletes OSPFv3 from interface.
С	command mode: Interface IP
show	pipv6 ospf interface
D	isplays the current settings for OSPFv3 interface.
С	command mode: Interface IP

OSPFv3 over IPSec Configuration

The following table describes the OSPFv3 over IPsec Configuration commands.

Table 322. Layer 3 IPsec Configuration Options

Command Syntax and Usage		
<pre>ipv6 ospf authentication ipsec spi <256-4294967295> {md5 sha1} <authentication (hexadecimal)="" key=""></authentication></pre>		
Configures the Security Parameters Index (SPI), algorithm, and authentication key for the Authentication Header (AH). The algorithms supported are:		
 MD5 (hexadecimal key length is 32) 		
 SHA1 (hexadecimal key length is 40) 		
Command mode: Interface IP		
[no] ipv6 ospf authentication ipsec enable		
Enables or disables IPsec.		
Command mode: Interface IP		
no ipv6 ospf authentication ipsec spi <256-4294967295>		
Disables the specified Authentication Header (AH) SPI.		
Command mode: Interface IP		
ipv6 ospf authentication ipsec default		
Resets the Authentication Header (AH) configuration to default values.		
Command mode: Interface IP		

Table 322. Layer 3 IPsec Configuration Options (continued)

Table 322. Layer 3 IPsec Configuration Options (continued)	
Command Syntax and Usage	
<pre>ipv6 ospf encryption ipsec spi <256-4294967295> esp {3des aes-cbc des null} <encryption (hexadecimal)="" key=""> null} {md5 sha1 none} <authentication (hexadecimal)="" key=""></authentication></encryption></pre>	
Configures the Security Parameters Index (SPI), encryption algorithm, authentication algorithm, and authentication key for the Encapsulating Security Payload (ESP). The ESP algorithms supported are:	1
 3DES (hexadecimal key length is 48) 	
 AES-CBC (hexadecimal key length is 32) 	
 DES (hexadecimal key length is 16) 	
The authentication algorithms supported are:	
 MD5 (hexadecimal key length is 32) 	
 SHA1 (hexadecimal key length is 40) 	
– none	
Note: If the encryption algorithm is null, the authentication algorithm must be either MD5 or SHA1. (hexadecimal key length is 40). If an encryption algorithm is specified (3DES, AES-CBC, or DES), the authentication algorithm can be none.	۱
Command mode: Interface IP	
ipv6 ospf encryption ipsec enable	
Enables OSPFv3 encryption for this interface.	
Command mode: Interface IP	
no ipv6 ospf encryption ipsec spi <256-4294967295>	
Disables the specified Encapsulating Security Payload (ESP) SPI.	
Command mode: Interface IP	
ipv6 ospf encryption ipsec default	
Resets the Encapsulating Security Payload (ESP) configuration to default values.	
Command mode: Interface IP	

OSPFv3 Virtual Link Configuration

Table 323. OSPFv3 Virtual Link Configuration Options

Command Syntax and Usage
area-virtual-link <1-3> area <area (0-2)="" index=""/> Configures the OSPF area index.
Command mode: Router OSPF3
area-virtual-link <1-3> hello-interval <1-65535)>
Configures the indicated interval, in seconds, between the hello packets, that the router sends on the interface.
Command mode: Router OSPF3

Table 323. OSPFv3 Virtual Link Configuration Options (continued)

Command Syntax and Usage area-virtual-link <1-3> dead-interval <1-65535> Configures the time period, in seconds, for which the router waits for hello packet from the neighbor before declaring this neighbor down. Command mode: Router OSPF3 area-virtual-link <1-3> transmit-delay <1-1800> Configures the estimated time, in seconds, taken to transmit LS update packet over this interface. Command mode: Router OSPF3 area-virtual-link <1-3> retransmit-interval <1-1800> Configures the interval, in seconds, between link-state advertisement (LSA) retransmissions for adjacencies belonging to the OSPFv3 virtual link interface. The default value is five seconds. Command mode: Router OSPF3 area-virtual-link <1-3> neighbor-router <NBR router ID (IP address)> Configures the router ID of the virtual neighbor. The default setting is 0.0.0.0 Command mode: Router OSPF3 area-virtual-link <1-3> enable Enables OSPF virtual link. Command mode: Router OSPF3 area-virtual-link <1-3> no enable Disables OSPF virtual link. Command mode: Router OSPF3 no area-virtual-link <*l-3*> Deletes OSPF virtual link. Command mode: Router OSPF3 show ipv6 ospf area-virtual-link Displays the current OSPFv3 virtual link settings. Command mode: All

OSPFv3 Host Entry Configuration

```
Table 324. OSPFv3 Host Entry Configuration Options
```

hos	st <1-128> address <ipv6 address=""> <prefix (1-128)="" length=""></prefix></ipv6>
	Configures the base IPv6 address and the subnet prefix length for the host entry.
	Command mode: Router OSPF3
hos	st <1-128> area <area (0-2)="" index=""/>
	Configures the area index of the host.
	Command mode: Router OSPF3
hos	st <1-128> cost <1-65535>
	Configures the cost value of the host.
	Command mode: Router OSPF3
hos	st <1-128> enable
	Enables the host entry.
	Command mode: Router OSPF3
no	host <1-128> enable
	Disables the host entry.
	Command mode: Router OSPF3
no	host <1-128>
	Deletes the host entry.
	Command mode: Router OSPF3
shc	w ipv6 ospf host [<1-128>]
	Displays the current OSPFv3 host entries.
	Command mode: All

OSPFv3 Redist Entry Configuration

Table 325. OSPFv3 Redist Entry Configuration Options

Command Syntax and Usage
redist-config <1-128> address <ipv6 address=""> <ipv6 (1-128)="" length="" prefix=""></ipv6></ipv6>
Configures the base IPv6 address and the subnet prefix length for the redistribution entry.
Command mode: Router OSPF3
redist-config <1-128> metric-value <1-16777215>
Configures the route metric value applied to the route before it is advertised into the OSPFv3 domain.
Command mode: Router OSPF3

Table 325. OSPFv3 Redist Entry Configuration Options

Со	mmand Syntax and Usage
red	list-config <1-128> metric-type asExttype1 asExttype2
	Configures the metric type applied to the route before it is advertised into the OSPFv3 domain.
	Command mode: Router OSPF3
[no	o] redist-config <1-128> tag <0-4294967295>
	Configures the route tag.
	Command mode: Router OSPF3
red	list-config <1-128> enable
	Enables the OSPFv3 redistribution entry.
	Command mode: Router OSPF3
no	redist-config <1-128> enable
	Disables the OSPFv3 redistribution entry.
	Command mode: Router OSPF3
no	redist-config <1-128>
	Deletes the OSPFv3 redistribution entry.
	Command mode: Router OSPF3
sho	ow ipv6 ospf redist-config
	Displays the current OSPFv3 redistribution configuration entries.
	Command mode: Router OSPF3

OSPFv3 Redistribute Configuration

Table 326. OSPFv3 Redistribute Configuration Options

Command Syntax and Usage

```
[no] redistribute {connected|static}
export <metric value (1-16777215)>
<metric type (1-2)> <tag (0-4294967295)>
```

Exports the routes of this protocol as external OSPFv3 AS-external LSAs in which the metric, metric type, and route tag are specified. To remove a previous configuration and stop exporting the routes of the protocol, use the no form of the command.

Command mode: Router OSPF3

show ipv6 ospf

Displays the current OSPFv3 route redistribution settings.

Command mode: All

IP Loopback Interface Configuration

An IP loopback interface is not connected to any physical port. A loopback interface is always accessible over the network.

Table 327.	IP Loopback Interface	Commands
------------	-----------------------	----------

Со	nmand Syntax and Usage
int	cerface loopback <1-5>
	Enter Interface Loopback mode.
	Command mode: Global configuration
no	interface loopback <1-5>
	Deletes the selected loopback interface.
	Command mode: Global configuration
ip	address <ip address=""></ip>
	Defines the loopback interface IP address.
	Command mode: Interface loopback
ip	netmask <subnet mask=""></subnet>
	Defines the loopback interface subnet mask.
	Command mode: Interface loopback
ip	ospf area <area number=""/>
	Configures the OSPF area index used by the loopback interface.
	Command mode: Interface loopback
[no	o] ip ospf enable
	Enables or disables OSPF for the loopback interface.
	Command mode: Interface loopback

Table 327. IP Loopback Interface Commands (continued)

Command Syntax and Usage

enable

Enables the loopback interface.

Command mode: Interface loopback

no enable

Disables the loopback interface.

Command mode: Interface loopback

show interface loopback <1-5>

Displays the current IP loopback interface parameters.

Command mode: All

Converged Enhanced Ethernet Configuration

 Table 328 describes the Converged Enhanced Ethernet (CEE) configuration commands.

Table 328. CEE Commands

Command Syntax ar	d Usage	
cee enable		
Globally turns C	EE on.	
Command mod	e: Global configuration	
no cee enable		
Globally turns C	EE off.	
Command mod	e: Global configuration	
cee iscsi enabl	3	
Enables or disal	oles ISCSI TLV advertisement	ts.
Command mod	e: Global configuration	
show cee iscsi		
Displays the cur	rent ISCSI TLV parameters.	
Command mod	e: All	
show cee		
Displays the cur	rent CEE parameters.	
Command mod	e: All	

ETS Global Configuration

Enhanced Transmission Selection (ETS) allows you to allocate bandwidth to different traffic types, based on 802.1p priority.

Note: ETS configuration supersedes the QoS 802.1p menu. When ETS is enabled, you cannot configure the 802.1p menu options.

ETS Global Priority Group Configuration

Table 329 describes the global ETS Priority Group configuration options.

Table 329.	Global ETS Priority Group Commands
------------	------------------------------------

Command Syntax and Usage

```
[no] cee global ets priority-group pgid <0-7,15>
   bandwidth <br/>
<br/>
bandwidth percentage (0, 10-100)>
   priority <802.1p priority (0-7)>
   Allows you to configure Priority Group parameters. You can enter the link
   bandwidth percentage allocated to the Priority Group, and also assign one or
   more 802.1p values to the Priority Group.
   Command mode: Global configuration
[no] cee global ets priority-group pgid <0-7,15>
   description <1-31 characters>
   Enter text that describes this Priority Group.
   Command mode: Global configuration
cee global ets priority-group pgid <0-7, 15> priority <0-7>
   Adds one or more 802.1p priority values to the Priority Group. Enter one value
   per line, null to end.
   Command mode: Global configuration
show cee global ets priority-group <0-7, 15>
   Displays the current global ETS Priority Group parameters.
   Command mode: All
show cee global ets
   Displays the current global ETS Priority Group parameters.
   Command mode: All
```

Priority Flow Control Configuration

Priority-based Flow Control (PFC) enhances flow control by allowing the switch to pause traffic based on its 802.1p priority value, while allowing traffic at other priority levels to continue.

Port-level 802.1p PFC Configuration

Table 330 describes the 802.1p Priority Flow Control (PFC) configuration options for the selected port.

Table 330. Port 802.1p PFC Options

Command Syntax and Usage
cee port <port alias="" number="" or=""> pfc enable</port>
Enables Priority Flow Control on the selected port.
Command mode: Global configuration
no cee port <port alias="" number="" or=""> pfc enable</port>
Disables Priority Flow Control on the selected port.
Command mode: Global configuration
cee port <port alias="" number="" or=""> pfc priority <0-7> enable</port>
Enables Priority Flow Control on the selected 802.1p priority.
Note: PFC can be enabled on 802.1p priority 3 and one other priority only.
Command mode: Global configuration
no cee port <port alias="" number="" or=""> pfc priority <0-7> enable</port>
Disables Priority Flow Control on the selected 802.1p priority.
Command mode: Global configuration
<pre>[no] cee port <port alias="" number="" or=""> pfc priority <0-7> description <1-31 characters></port></pre>
Enter text to describe the priority value.
Command mode: Global configuration
show cee port <port alias="" number="" or=""> pfc priority <0-7></port>
Displays the current 802.1p PFC parameters for the selected port.
Command mode: All
show cee port <port alias="" number="" or=""> pfc</port>
Displays the current PFC parameters for the selected port.
Command mode: All

DCBX Port Configuration

 Table 331 describes the port DCB Capability Exchange Protocol (DCBX) configuration options.

Table 331. Port DCBX Commands

Com	mand Syntax and Usage
cee	<pre>port <port alias="" number="" or=""> dcbx app_proto advertise</port></pre>
(Enables or disables DCBX Application Protocol advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).
(Command mode: Global configuration
cee	<pre>port <port alias="" number="" or=""> dcbx app_proto willing</port></pre>
C	Enables or disables Application Protocol willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).
(Command mode: Global configuration
cee	port <port alias="" number="" or=""> dcbx ets advertise</port>
e	Enables or disables DCBX ETS advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).
(Command mode: Global configuration
cee	<pre>port <port alias="" number="" or=""> dcbx ets willing</port></pre>
C	Enables or disables ETS willingness to accept configuration data from the peer device. When enabled, the Willing flag is set to 1 (willing to accept data).
	Command mode: Global configuration
E	port <port alias="" number="" or=""> dcbx pfc advertise Enables or disables DCBX PFC advertisements of configuration data. When enabled, the Advertisement flag is set to 1 (advertise data to the peer device).</port>
(Command mode: Global configuration
cee	port <port alias="" number="" or=""> dcbx pfc willing</port>
	Enables or disables PFC willingness to accept configuration data from the peed device. When enabled, the Willing flag is set to 1 (willing to accept data).
(Command mode: Global configuration
no o	cee port <port alias="" number="" or=""> dcbx enable</port>
[Disables DCBX on the port.
(Command mode: Global configuration
cee	<pre>port <port alias="" number="" or=""> dcbx enable</port></pre>
E	Enables DCBX on the port.
(Command mode: Global configuration
ahor	w cee port <port alias="" number="" or=""> dcbx</port>
SHO	
	Displays the current port DCBX parameters.

Fibre Channel over Ethernet Configuration

Fibre Channel over Ethernet (FCoE) transports Fibre Channel frames over an Ethernet fabric. The CEE features and FCoE features allow you to create a lossless Ethernet transport mechanism.

Note: On EN4093 models, FCoE is not supported in stacking mode.

Table 332 describes the FCoE configuration options.

Table 332. FCoE Configuration Commands

fcc	be fips enable
	Globally turns FIP Snooping on.
	Command mode: Global configuration
no	fcoe fips enable
	Globally turns FIP Snooping off.
	Command mode: Global configuration
fcc	be fips timeout-acl
	Enables or disables ACL time-out removal. When enabled, ACLs associated with expired FCFs and FCoE connections are removed from the system.
	Command mode: Global configuration
[no] fcoe fips automatic-vlan
	Enables or disables automatic VLAN creation, based on response received from the connected device.
	Command mode: Global configuration
chc	ow fcoe
DIIC	
5110	Displays the current FCoE parameters.

FIPS Port Configuration

FIP Snooping allows the switch to monitor FCoE Initialization Protocol (FIP) frames to gather discovery, initialization, and maintenance data. This data is used to automatically configure ACLs that provide FCoE connections and data security.

Table 333 describes the port Fibre Channel over Ethernet Initialization Protocol(FIP) Snooping configuration options.

Table 333. Port FIP Snooping Commands

Table 555. For FIF Shooping Commanus
Command Syntax and Usage
 fcoe fips port <port alias="" number="" or=""> fcf-mode [auto on off]</port> Configures FCoE Forwarding (FCF) on the port, as follows: on: Configures the port as a Fibre Channel Forwarding (FCF) port. off: Configures the port as an FCoE node (ENode). auto: Automatically detect the configuration of the connected device, and configure this port to match.
Command mode: Global configuration
fcoe fips port <port alias="" number="" or=""> enable Enables FIP Snooping on the port. The default setting is enabled. Note: If IPv6 ACLs are assigned to the port, you cannot enable FCoE. Command mode: Global configuration</port>
no fcoe fips port <port alias="" number="" or=""> enable</port>
Disables FIP Snooping on the port.
Command mode: Global configuration

Remote Monitoring Configuration

Remote Monitoring (RMON) allows you to monitor traffic flowing through the switch. The RMON MIB is described in RFC 1757.

The following sections describe the Remote Monitoring (RMON) configuration options.

- "RMON History Configuration" on page 414
- "RMON Event Configuration" on page 415
- "RMON Alarm Configuration" on page 415

RMON History Configuration

Table 334 describes the RMON History commands.

Table 334. RMON History Commands

Cor	nmand Syntax and Usage
rmc	on history <1-65535> interface-oid <1-127 characters>
	Configures the interface MIB Object Identifier. The IFOID must correspond to the standard interface OID, as follows:
	1.3.6.1.2.1.2.2.1.1.x
	where x is the ifIndex
	Command mode: Global configuration
rmc	on history <1-65535> requested-buckets <1-65535>
	Configures the requested number of buckets, which is the number of discrete time intervals over which data is to be saved. The default value is 30.
	The maximum number of buckets that can be granted is 50.
	Command mode: Global configuration
rmc	on history <1-65535> polling-interval <1-3600>
	Configures the time interval over which the data is sampled for each bucket.
	The default value is 1800.
	Command mode: Global configuration
rmc	on history <1-65535> owner <1-127 characters>
	Enter a text string that identifies the person or entity that uses this History index.
	Command mode: Global configuration
no	rmon history <1-65535>
	Deletes the selected History index.
	Command mode: Global configuration
sho	ow rmon history
	Displays the current RMON History parameters.

RMON Event Configuration

Table 335 describes the RMON Event commands.

Table 335. RIVION Event Commands	Table 335.	RMON Event Commands
----------------------------------	------------	---------------------

Cor	nmand Syntax and Usage
rmo	on event <1-65535> description <1-127 characters>
	Enter a text string to describe the event.
	Command mode: Global configuration
[nc	o] rmon event <1-65535> type log trap both
	Selects the type of notification provided for this event. For log events, an entry is made in the log table and sent to the configured syslog host. For trap events an SNMP trap is sent to the management station.
	Command mode: Global configuration
rmo	on event <1-65535> owner <1-127 characters>
	Enter a text string that identifies the person or entity that uses this event index
	Command mode: Global configuration
no	rmon event <1-65535>
	Deletes the selected RMON Event index.
	Command mode: Global configuration
sho	ow rmon event
	Displays the current RMON Event parameters.
	· ·

RMON Alarm Configuration

The Alarm RMON group can track rising or falling values for a MIB object. The MIB object must be a counter, gauge, integer, or time interval. Each alarm index must correspond to an event index that triggers once the alarm threshold is crossed.

Table 336 describes the RMON Alarm commands.

Command Syntax and Usage		
rmon alarm <1-65535> oid <1-127 characters>		
Configures an alarm MIB Object Identifier.		
Command mode: Global configuration		
rmon alarm <1-65535> interval <1-65535>		
Configures the time interval over which data is sampled and compared with the rising and falling thresholds. The default value is 1800.		
Command mode: Global configuration		

Table 336. RMON Alarm Commands (continued)

	DN Alarm Commands (continued)
Command Syn	tax and Usage
rmon alarm	<1-65535> sample abs delta
	the method of sampling the selected variable and calculating the compared against the thresholds, as follows:
	solute value, the value of the selected variable is compared directly thresholds at the end of the sampling interval.
	delta value, the value of the selected variable at the last sample is red from the current value, and the difference compared with the ds.
Command	I mode: Global configuration
rmon alarm	<1-65535> alarm-type rising falling either
Configures	the alarm type as rising, falling, or either (rising or falling).
Command	I mode: Global configuration
rmon alarm	<1-65535> rising-limit <-2147483647-2147483647>
sampled va	the rising threshold for the sampled statistic. When the current alue is greater than or equal to this threshold, and the value at the ng interval was less than this threshold, a single event is generated
Command	I mode: Global configuration
rmon alarm	<1-65535> falling-limit <-2147483647-214748364)
sampled va	the falling threshold for the sampled statistic. When the current alue is less than or equal to this threshold, and the value at the last nterval was greater than this threshold, a single event is generated.
Command	I mode: Global configuration
rmon alarm	<1-65535> rising-crossing-index <1-65535>
Configures threshold i	the rising alarm event index that is triggered when a rising s crossed.
Command	I mode: Global configuration
rmon alarm	<1-65535> falling-crossing-index <1-65535>
Configures threshold i	the falling alarm event index that is triggered when a falling s crossed.
Command	I mode: Global configuration
rmon alarm	<1-65535> owner <1-127 characters>
Enter a tex	t string that identifies the person or entity that uses this alarm index
Command	I mode: Global configuration
no rmon ala	rm <1-65535>
Deletes the	e selected RMON Alarm index.
Command	I mode: Global configuration
show rmon a	larm
Displays th	ne current RMON Alarm parameters.
Command	I mode: All

Virtualization Configuration

Table 337 describes the virtualization configuration options.

Table 337. Virtualization Configurations Options

Command Syntax and Usage	
vir	t enable
E	Enables VMready. The default setting is disabled.
(Command mode: Global configuration
no v	virt enable
Ι	Disables VMready.
I	Note: This command deletes all configured VM groups.
(Command mode: Global configuration
show	w virt
[Displays the current virtualization parameters.
(Command mode: All

VM Policy Bandwidth Management

Table 338 describes the bandwidth management options for the selected VM. Use these commands to limit the bandwidth used by each VM.

Table 338. VM Bandwidth Management Options

Command Syntax and Usage
<pre>virt vmpolicy vmbwidth [<mac address=""> <uuid> <name> <ip address=""> <index number="">] txrate <64-10000000> <max. burst=""> <acl number=""></acl></max.></index></ip></name></uuid></mac></pre>
The first txrate value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the VM to the switch, in kilobits per second. Enter the value in multiples of 64.
The second txrate value configures the maximum burst size, in kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.
The third $txrate$ value represents the ACL assigned to the transmission rate. The ACL is automatically, in sequential order, if not specified by the user. If there are no available ACLs, the TXrate cannot be configured. Each TXrate configuration reduces the number of available ACLs by one.
Command mode: Global configuration
<pre>virt vmpolicy vmbwidth [<mac address=""> <uuid> <name> </name></uuid></mac></pre>
The first rxrate value configures Committed Rate—the amount of bandwidth available to traffic transmitted from the switch to the VM, in kilobits per second. Enter the value in multiples of 64.
The second rxrate value configures the maximum burst size, in Kilobits. Enter one of the following values: 32, 64, 128, 256, 512, 1024, 2048, 4096.
Command mode: Global configuration

Table 338. VM Bandwidth Management Options (continued)

Command Syntax and Usage	
<pre>[no] virt vmpolicy vmbwidth [<mac address=""> <uuid> <name> <ip address=""> <index number="">] bwctrl</index></ip></name></uuid></mac></pre>	
Enables or disables bandwidth control on the VM policy.	
Command mode: Global configuration	
<pre>[no] virt vmpolicy vmbwidth [<mac address=""> <uuid> <name> <ip address=""> <index number="">]</index></ip></name></uuid></mac></pre>	
Deletes the bandwidth management settings from this VM policy.	
Command mode: Global configuration	
<pre>show virt vmpolicy vmbandwidth [<mac address=""> <uuid> <name> <ip address=""> <index number="">]</index></ip></name></uuid></mac></pre>	
Displays the current VM bandwidth management parameters.	
Command mode: All	

Virtual NIC Configuration

Table 339 describes the Virtual NIC (vNIC) configuration options.

Table 339. Virtual NIC options

vni	.c enable
	Globally turns vNIC on.
	Command mode: Global configuration
no	vnic enable
	Globally turns vNIC off.
	Command mode: Global configuration

vNIC Port Configuration

Table 340 describes the Virtual NIC (vNIC) port configuration options.

Table 340. vNIC Port Commands

vni	ic port <port alias="" number="" or=""> index <1-4></port>
	Enters vNIC Configuration mode.
	Note : This command is valid for internal server ports only.
	Command mode: Global configuration
bar	ndwidth <1-100>
	Configures the maximum bandwidth allocated to this vNIC, in increments of 100 Mbps. For example:
	– 1 = 100 Mbps
	- 10 = 1000 Mbps
	Command mode: vNIC configuration
ena	able
	Enables the vNIC.
	Command mode: vNIC configuration
no	enable
	Disables the vNIC.
	Command mode: vNIC configuration

Virtual NIC Group Configuration

Table 341 describes the Virtual NIC (vNIC) Group configuration options.

Table 341. vNIC Group Commands

Command Syntax and Usage
vnic vnicgroup <1-32>
Enters vNIC Group Configuration mode.
Command mode: Global Configuration
vlan <i><vlan number=""></vlan></i>
Assigns a VLAN to the vNIC Group.
Command mode: vNIC Group configuration
[no] failover
Enables or disables uplink failover for the vNIC Group. Uplink Failover for the vNIC Group will disable only the affected vNIC links on the port. Other port functions continue to operate normally.
The default setting is disabled.
Command mode: vNIC Group configuration

Table 341.	vNIC Group	Commands	(continued)
------------	------------	----------	-------------

-	nber <vnic number=""></vnic>
mer	
	Adds a vNIC to the vNIC Group. The vNIC ID is comprised of the port number and the vNIC number. For example: $intA1.1$
	Command mode: vNIC Group configuration
no	member <vnic number=""></vnic>
	Removes the selected vNIC from the vNIC Group.
	Command mode: vNIC Group configuration
poi	rt <port alias="" number="" or=""></port>
	Adds the selected switch port to the vNIC Group.
	Command mode: vNIC Group configuration
no	port <port alias="" number="" or=""></port>
	Removes the selected switch port from the vNIC Group.
	Command mode: vNIC Group configuration
trı	unk <trunk number=""></trunk>
	Adds the selected trunk group to the vNIC Group.
	Command mode: vNIC Group configuration
no	trunk <trunk number=""></trunk>
	Removes the selected trunk group from the vNIC Group.
	Command mode: vNIC Group configuration
ena	able
	Enables the vNIC Group.
	Command mode: vNIC Group configuration
no	enable
	Disables the vNIC Group.
	Command mode: vNIC Group configuration
no	vnic vnicgroup <1-32>
	Deletes the selected vNIC Group.
	Command mode: Global configuration
sho	ow vnicgroup
	Displays the current vNIC Group parameters.
	Displays the current whic Group parameters.

UFP Configuration

Table 342 describes the Unified Fabric Port (UFP) configuration options. UFP allows defining up to 4 virtual ports per physical port. Each virtual port can be set up to operate in a specific mode (access, trunk, tunnel, FCoE) and within predefined bandwidth limits.

Note: vNIC and UFP are mutually exclusive. Only one of them can be globally enabled at any point in time.

Table 342. UFP Commands

Command Syntax and Usage	
[no] ufp enable	
Globally enables or disables UFP.	
Command mode: Global configuration	
[no] ufp port <pre>port_no.> enable</pre>	
Enables or disables UFP on the specified physical ports.	
Command mode: Global configuration	
ufp port <port_no.> vport <1-4></port_no.>	
Enters UFP Virtual Port Configuration mode.	
Command mode: Global configuration	
no ufp port <port_no.> [vport <1-4>]</port_no.>	
Disables UFP settings on the specified physical or virtual port.	
Command mode: Global configuration	
[no] enable	
Enables or disables the virtual port.	
Command mode: UFP Virtual Port Configuration	

Table 342. UFP Commands (continued)

Command Syntax and Usage
network {mode [access trunk tunne fcoel] default-vlan <2-4094> default-tag}
Configures the virtual port network configuration settings:
 mode configures the virtual port's operating mode:
 access allows the virtual port to associate only with the default customer VLAN, as defined by the default-vlan option.
 trunk allows the virtual port to associate with up to 32 customer VLANs. This is the default setting.
 tunnel makes the virtual port VLAN agnostic.
 fcoe configures the virtual port to carry Fibre Channel over Ethernet traffic when linked to a Fibre Channel virtual Host Bus Adapter. Setting a virtual port in fcoe mode enables Priority Flow Control on the physical port.
 default-vlan configures the default VLAN ID for the virtual port. The default value is automatically assigned (408x, where x is the SPAR ID). This option provides an override if conflicts arise with a customer VLAN ID on the upstream network.
 default-tag enables tagging egress frames with the default VLAN ID when the virtual port is in access or trunk mode and default-vlan is defined. Default setting is disabled.
Note: VLANs 4002-4005 cannot be used as customer VLANs
Note: A customer VLAN cannot be configured on multiple virtual ports of the same physical port.
Command mode: UFP Virtual Port Configuration
no network default-tag
Disables default VLAN ID tagging on the virtual port.
Command mode: UFP Virtual Port Configuration
qos bandwidth {max <10-100> min <10-100>}
Configures bandwidth allocation for the virtual port:
 Configures the minimum bandwidth guaranteed for the virtual port as a percentage of the physical port's bandwidth. The default value is 25.
 Configures the maximum bandwidth allowed for this virtual port as a percentage of the physical port's bandwidth. The default value is 100.
Note : The aggregated minimum bandwidth guaranteed for all the virtual ports within a physical port cannot exceed 100.
Command mode: UFP Virtual Port Configuration

VM Group Configuration

Table 343 describes the VM group configuration options. A VM group is a collection of members, such as VMs, ports, or trunk groups. Members of a VM group share certain properties, including VLAN membership, ACLs (VMAP), and VM profiles.

Table 343. VM Group Commands

Command Syntax and Usage				
virt vmgroup <1-1024> cpu				
Enables or disables sending unregistered IPMC to CPU.				
Command mode: Global configuration				
virt vmgroup <1-1024> flood				
Enables or disables flooding unregistered IPMC.				
Command mode: Global configuration				
virt vmgroup <1-1024> optflood				
Enables or disables optimized flooding.				
Command mode: Global configuration				
virt vmgroup <1-1024> vlan <vlan number=""></vlan>				
Assigns a VLAN to this VM group. If you do not assign a VLAN to the VM group, the switch automatically assigns an unused VLAN when adding a port or a VM to the VM Group.				
Note : If you add a VM profile to this group, the group will use the VLAN assigned to the profile.				
Command mode: Global configuration				
<pre>[no] virt vmgroup <1-1024> vmap <vmap number=""> intports extports Assigns the selected VLAN Map to this group. You can choose to limit operation of the VLAN Map to internal ports only or external ports only. If you do not select a port type, the VMAP is applied to the entire VM Group. For more information about configuring VLAN Maps, see "VMAP</vmap></pre>				
Configuration" on page 279.				
Command mode: Global configuration				
[no] virt vmgroup <1-1024> tag				
Enables or disables VLAN tagging on ports in this VM group.				
Command mode: Global configuration				
virt vmgroup <1-1024> vm [<mac address=""> <uuid> <name> <ip address=""> <index number="">]</index></ip></name></uuid></mac>				
Adds a VM to the VM group. Enter a unique identifier to select a VM. The UUID and name parameters apply only if Virtual Center information is configured (virt vmware vcspec). The VM index number is found in the VM information dump (show virt vm).				
Note : If the VM is connected to a port that is contained within the VM group, do not add the VM to the VM group.				
Command mode: Global configuration				

Table 343. VM Group Commands (continued)

Cor	nmand Syntax and Usage
	virt vmgroup <1-1024> vm [<mac address=""> <uuid> <name> </name></uuid></mac>
110	<pre></pre>
	Removes a VM from the VM group. Enter a unique identifier to select a VM.
	The UUID and name parameters apply only if Virtual Center information is
	configured (virt vmware vcspec).
	The VM index number is found in the VM information dump (show virt vm).
	Command mode: Global configuration
viı	ct vmgroup <1-1024> profile <profile (1-39="" characters)="" name=""></profile>
	Adds the selected VM profile to the VM group.
	Command mode: Global configuration
no	virt vmgroup <1-1024> profile
	Removes the VM profile assigned to the VM group.
	Command mode: Global configuration
viı	rt vmgroup <1-1024> port <port alias="" number="" or=""></port>
	Adds the selected port to the VM group.
	Note: A port can be added to a VM group only if no VMs on that port are
	members of the VM group.
	Command mode: Global configuration
	-
no	virt vmgroup <1-1024> port <pre>port alias></pre>
	Removes the selected port from the VM group.
	Command mode: Global configuration
viı	rt vmgroup <1-1024> portchannel <trunk number=""></trunk>
	Adds the selected trunk group to the VM group.
	Command mode: Global configuration
no	virt vmgroup <1-1024> portchannel <trunk number=""></trunk>
	Removes the selected trunk group from the VM group.
	Command mode: Global configuration
viı	rt vmgroup <1-1024> key <1-65535>
	Adds an LACP <i>admin key</i> to the VM group. LACP trunks formed with this <i>admin key</i> will be included in the VM group.
	Command mode: Global configuration
no	virt vmgroup <1-1024> key <1-65535>
	Removes an LACP admin key from the VM group.
	Command mode: Global configuration

Table 343. VM Group Commands (continued)

VM Check Configuration

Table 344 describes the VM Check validation options used for MAC address spoof prevention.

Table 344. VM Check Configuration Options

Command Syntax and Usage						
virt vmcheck acls max <1-640>						
Configures the maximum number of ACLs that can be set up for MAC address spoofing prevention in advanced validation mode. Default value is 50.						
Command mode: Global configuration						
no virt vmcheck acls						
Disables ACL-based MAC address spoofing prevention in advanced validation mode.						
Command mode: Global configuration						
virt vmcheck action basic {link log} Sets up action taken when detecting MAC address spoofing in basic validation mode:						
 link registers a syslog entry and disables the corresponding switch port 						
 log registers a syslog entry 						
Default setting is link.						
Command mode: Global configuration						
virt vmcheck action advanced {acl link log}						
Sets up action taken when detecting MAC address spoofing in advanced validation mode:						
 acl registers a syslog entry and installs an ACL to drop traffic incoming or the corresponding switch port originating from the spoofed MAC address 						
 link registers a syslog entry and disables the corresponding switch port 						
 log registers a syslog entry 						
Default setting is acl.						
Command mode: Global configuration						
[no] virt vmcheck trust <ports></ports>						
Enables or disables trusted ports for VM communication. By default, all ports are disabled.						
Command mode: Global configuration						
show virt vmcheck						
Displays the current VM Check settings. See page 107 for sample output.						
Command mode: Global configuration						

VM Profile Configuration

Table 345 describes the VM Profiles configuration options.

Defines a name for the VM profile. The switch supports up to 32 VM profiles. Command mode: Global configuration no virt vmprofile <profile (1-39="" characters)="" name=""> Deletes the selected VM profile. Command mode: Global configuration virt vmprofile edit <profile (1-39="" characters)="" name=""> vlan <vlan number=""> Assigns a VLAN to the VM profile. Command mode: Global configuration [no] virt vmprofile edit <profile (1-39="" characters)="" name=""> shaping [<average (1-100000000)=""> <burst (1-100000000)=""> <pre>sek (1-1000000000)>] Configures traffic shaping parameters implemented in the hypervisor, as follows: - Average traffic, in Kilobits per second - Maximum burst size, in Kilobytes - Peak traffic, in Kilobits per second - Delete traffic shaping parameters. Command mode: Global configuration [no] virt vmprofile edit <profile (1-39="" characters)="" name=""> eshaping [<average (1-100000000)=""> <burst (1-100000000)=""> <pre>sek (1-1000000000)>] Configures traffic shaping parameters implemented in the hypervisor, as follows: - Average traffic, in Kilobits per second - Delete traffic shaping parameters implemented in the hypervisor, as follows: - Average traffic, in Kilobits per second - Maximum burst size, in Kilobytes - Peak traffic, in Kilobits per second - Maximum burst size, in Kilobytes - Peak traffic, in Kilobits per second - Maximum burst size, in Kilobytes - Peak traffic, in Kilobits per second - Maximum burst size, in Kilobytes - Peak traffic, in Kilobits per second - Delete traffic shaping parameters. show virt vmprofile [<profile name="">]</profile>		 Delete traffic shaping parameters.
		Command mode: Global configuration
Displays the current VM Profile parameters.	sho	w virt vmprofile [<profile name="">]</profile>
		Displays the current VM Profile parameters.

VMWare Configuration

Table 346 describes the VMware configuration options. When the user configures the VMware Virtual Center, the VM Agent module in the switch can perform advanced functionality by communicating with the VMware management console. The Virtual Center provides VM and Host names, IP addresses, Virtual Switch and port group information. The VM Agent on the switch communicates with the Virtual Center to synchronize VM profiles between the switch and the VMware virtual switch.

Table 346. VM Ware Commands

1.121 mussion has an 1.65525						
virt vmware hbport <1-65535>						
Configures the UDP port number used for heartbeat communication from the VM host to the Virtual Center. The default value is port 902.						
Command mode: Global configuration						
[no] virt vmware vcspec [<ip address=""> [<username> noauth</username></ip>	1]					
Defines the Virtual Center credentials on the switch. Once you co Virtual Center, VM Agent functionality is enabled across the syste						
You are prompted for the following information:						
 IP address of the Virtual Center 						
 User name and password for the Virtual Center 						
 Whether to authenticate the SSL security certificate (yes or no))					
Command mode: Global configuration						
virt vmware hello [enable haddr < <i>IP_address</i> > hport < <i>port_no</i> > h	ntimer					
Configures CDP (Ciscoz Discovery Protocol) advertisements sent to VMware ESX hypervisors. Exchanging CDP message with ESX facilitates MAC address spoof prevention. Default setting is disab	hypervisors					
 enable enables CDP advertisements transmission. 						
- haddr advertises a specific IP address instead of the default	0.0.0.0 IP.					
- hport enables ports on which CDP advertisements are sent.						
 htimer sets the number of seconds between successive CD advertisements. Default value is 30. 	Р					
Command mode: Global configuration						
no virt vmware hello [enable hport <i><port no=""></port></i>]						
Disables CDP advertisement transmissions completely or only on ports.	specific					
Command mode: Global configuration						
show virt vmware						
Displays the current VMware parameters.						

Edge Virtual Bridge VSI Type Database Configuration

You can configure your switch to use Edge Virtual Bridging (EVB). Table 346 describes the EVB VSI Type Database configuration options.

Note: EVB is supported in stacked mode starting with release 2.5.

Table 347. Edge Virtual Bridge Configuration Options

Command Syntax and Usage
virt evb vsidb < <i>VSIDB_number</i> > Enter Virtual Station Interface Database configuration mode. Command mode: Global configuration
virt evb update vsidb < <i>VSIDB_number></i> Update VSI types from the VSI database. Command mode : All
clear virt evb vsidb < <i>VSIDB_number></i> Clears local VSI types cache. Command mode : Privileged EXEC
clear virt evb vsi Clears VSI database associations. Command mode : Privileged EXEC
host <i><ip address=""></ip></i> Sets the Virtual Station Interface Type database manager IP address. Command mode: VSI Database
port <1-65534> Sets the Virtual Station Interface Type database manager port. Command mode: VSI Database
filename <uri path=""> Sets the Virtual Station Interface Type database document name. Command mode: VSI Database</uri>
filepath <i><uri path=""></uri></i> Sets the Virtual Station Interface Type database document path. Command mode: VSI Database
update-interval <5-300> Sets the Virtual Station Interface Type database update interval in seconds. A value of "0" disables periodic updates. Command mode: VSI Database
<pre>show virt evb vsitypes [mgrid <0-255> typeid <1-16777215> version <0-255> Displays the current Virtual Station Interface Type database parameters. Command mode: All</pre>

Table 347. Edge Virtual Bridge Configuration Options (continued)

 Command Syntax and Usage

 show virt evb vsidb <VSIDB_number>

 Displays the current Virtual Station Interface database information.

 Command mode: All

 no virt evb vsidb <VSIDB_number>

 Resets the Virtual Station Interface Type database information to the default values.

 Command mode: Global configuration

Edge Virtual Bridge VSI Type Profile Configuration

Table 348 describes the Virtual Station Interface Type profile configuration options.

Table 348. Edge Virtual Bridge VSI Type Profile Configuration Options

Command Syntax and Usage
<pre>virt evb profile <profile_number> Enter Virtual Station Interface type profile configuration mode. Command mode: Global configuration</profile_number></pre>
[no] reflective-relay Enables or disables VEPA mode (Reflective Relay capability). Command mode: EVB Profile
[no] vsi-discovery Enables or disables VSI Discovery (ECP and VDP). Command mode: EVB Profile
no virt evb profile <profile_number> Deletes the specified EVB profile. Command mode: Global configuration</profile_number>
show virt evb profile [<1-16>] Displays the current EVB profile parameters. Command mode: All
evb profile <1-16> Applies the specified EVB profile for the port. Automatically enables LLDP, EVB, and TLV on the corresponding port. Command mode: Interface port
no evb profile Resets EVB profile for the port. Automatically disables LLDP, EVB, and TLV on the corresponding port. Command mode: Interface port

Switch Partition (SPAR) Configuration

Switch partitions (SPARs) divide the data plane inside a physical switch into independent switching domains. Switch partitions do not communicate with each other, forcing hosts on different SPARs to bridge traffic over an upstream link, even if they belong to the same VLAN.

Up to 8 SPARs can be defined on a switch. Each SPAR supports up to 32 local VLANs, for further partitioning flexibility

Table 349. SPAR Configuration Options

Command Syntax and Usage				
spar <1-8>				
Enters SPAR Configuration mode				
Command mode: Global configuration				
no spar <1-8>				
Deletes the specified SPAR.				
Command mode: Global configuration				
[no] enable				
Enables or disables the SPAR.				
Command mode: SPAR Configuration				
name				
Configures the SPAR name.				
Command mode: SPAR Configuration				
<pre>[no] uplink {port <pre>/port no.> portchannel <1-64> adminkey <1-65535>} Enables or disables uplink connectivity for the SPAR. A single external port, portchannel, or LACP channel can be used for uplink. All uplinks within a SPAR are automatically assigned to the SPAR domain's default VLAN and to any SPAR local VLANs.</pre></pre>				
Command mode: SPAR Configuration				
 domain default {vlan <2-4094> member <port no.="">}</port> Configures the SPAR's default domain settings: vlan configures the default SPAR VLAN ID. A unique factory default VLAN ID is assigned to each SPAR as "408x", where x is the SPAR ID <1-8>. This option provides an override if conflicts arise with a customer VLAN ID on the upstream network. member adds server ports to the SPAR. Command mode: SPAR Configuration 				
no domain default member <pre>port no.></pre>				
Removes server ports from the SPAR.				
Command mode: SPAR Configuration				

Table 349. SPAR Configuration Options (continued)

Table 349. SPAR Configuration Options (continued)				
Command Syntax and Usage				
domain local <1-32> {enable member <port no.=""> name <text> vlan <2-4094>}</text></port>				
Configures the SPAR's local domains:				
 enable enables the SPAR local domains 				
 member adds server ports to the SPAR local domains 				
 name configures the SPAR local domains names 				
 vlan applies a VLAN ID to the SPAR local domains. The default value is 0. 				
Command mode: SPAR Configuration				
no domain local <1-32> [enable member <port no.="">vlan <2-4094>]</port>				
Deletes the SPAR local VLAN domains:				
 enable disables the SPAR local domains 				
 member deletes SPAR local domains server ports 				
 vlan deletes the SPAR local domain VLAN ID 				
Command mode: SPAR Configuration				
domain mode {passthrough local}				
Configures the SPAR domain mode:				
 passthrough references member ports only by the SPAR default VLAN. This provides VLAN-unaware uplink connectivity via pass-through tunnel domain switching for SPAR member ports. The default value is passthrough. 				
 local references member ports by both SPAR default VLAN and SPAR local domain VLANs. This provides VLAN-aware uplink connectivity via local domain switching for SPAR member ports 				
Command mode: SPAR Configuration				
 show spar <1-8> [domain [default local <1-32>] uplink] Displays the SPAR settings: domain filters only the SPAR domain related settings default filters only SPAR default domain settings 				
 local <1-32> filters only SPAR local domains settings 				
 uplink filters only SPAR uplink settings 				
Command mode: All				

Precision Time Protocol Configuration

Precision Time Protocol (PTP) allows high accuracy clock synchronization between a networked master clock and compliant network hosts. The IBM Flex System EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch supports two PTP modes:

- Ordinary slave clock Synchronizes the Real Time Clock (RTC) with PTP master clocks detected on the network.
- End-to-End transparent clock Allows PTP traffic to pass through without affecting the RTC, while updating the correction fields for event packets.

Table 350. Precision Time Protocol Configuration Option

Command Syntax and Usage
[no] ptp ordinary enable
Enables or disables PTP ordinary slave clock mode. In this mode, if a PTP master clock is detected on the network, the RTC is synchronized with it. If no master clock is detected, the RTC is not affected. Default setting is disabled.
Note: Enabling PTP ordinary slave clock mode disables NTP settings and system time clock manual settings.
Command mode: Global configuration
[no] ptp transparent enable
Enables or disables PTP End-to-End transparent clock mode. In this mode, incoming PTP packets are forwarded based on routing rules currently in place for the PTP domain's multicast address (within the 224.0.1.129 - 224.0.1.132 range). On egress, PTP packet timestamps are updated based on the time spent between ingress and egress. Default setting is disabled.
Command mode: Global configuration
no ptp
Disables both PTP ordinary slave clock mode and PTP End-to-End transparent clock mode.
Command mode: Global configuration
ip ptp source-interface loopback <1-5>
Loopback interface used as source IP address for delay-request packets sent during synchronization with the master clock in ordinary slave mode. By default, the interface with the lowest index from the master clock's VLAN is used.
Command mode: Global configuration
no ip ptp source-interface loopback
Sets the source IP address for delay-request packets sent during synchronization with the master clock in ordinary slave mode to the interface
with the lowest index from the master clock's VLAN.

Table 350.	Precision	Time Protocol	Configuration	Options	(continued)

Command Syntax and Usage		
[no] ptp		
Enables or disables PTP on the current port. Disabled ports will not support PTP even if PTP is globally enabled. Default setting is enabled.		
Note: PTP is not supported on management ports.		
Command mode: Interface port		
show ptp [counters]		
Displays current PTP settings.		
The counters option displays PTP packet counters. See page 209 for details.		
Command mode: All		
show interface port <pre>port alias or number> ptp-counters</pre>		
Displays Precision Time Protocol statistics for the port. See page 209 for details.		
Command mode: All		
clear ptp counters		
Resets PTP packet counters.		
Command mode: Privileged EXEC		

Service Location Protocol Configuration

Service Location Protocol (SLP) enables networked devices to request/announce services over a local area network without prior configuration. In an SLP environment, devices may have the following roles:

- User Agents (UA) are devices requesting services.
- Service Agents (SA) are devices providing services.
- Directory Agents (DA) are devices caching services provided by SAs. When present in an SLA setup, DAs mediate all communication between UAs and SAs.

When SLP is enabled, the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch behaves as a Service Agent providing systems management services.

Table 351. Service Location Protocol

Command Syntax and Usage
[no] ip slp enable
Enables or disables SLP. Default value is disabled.
Command mode: Global configuration
[no] ip slp active-da-discovery enable
Enables or disables active directory agent discovery. Default value is disabled.
Command mode: Global configuration

Table 351. Service Location Protocol (continued)

Command Syntax and Usage

ip slp active-da-discovery-start-wait-time <1-10>

Number of seconds to wait after enabling SLP before attempting active DA discovery, if active DA discovery is enabled. Default value is 3.

Command mode: Global configuration

clear ip slp directory-agents

Clears directory agents discovered.

Command mode: Privileged EXEC

Configuration Dump

The dump program writes the current switch configuration to the terminal screen. To start the dump program, at the prompt, enter:

Router(config) # show running-config

The configuration is displayed with parameters that have been changed from the default values. The screen display can be captured, edited, and placed in a script file, which can be used to configure other switches through a Telnet connection. When using Telnet to configure a new switch, paste the configuration commands from the script file at the command line prompt of the switch. The active configuration can also be saved or loaded via FTP/TFTP/SFTP, as described on page 436.

Saving the Active Switch Configuration

When the copy running-config {ftp|tftp|sftp} command is used, the switch's active configuration commands (as displayed using show running-config) will be uploaded to the specified script configuration file on the FTP/TFTP/SFTP server. To start the switch configuration upload, at the prompt, enter:

```
Router(config)# copy running-config ftp [data-port|extm-port|mgt-port]
Or
Router(config)# copy running-config ftp [data-port|extm-port|mgt-port]
Or
Router(config)# copy running-config ftp [data-port|extm-port|mgt-port]
```

Select a port, or press **Enter** to use the default (management port). The switch prompts you for the server address and filename.

Notes:

The output file is formatted with line-breaks but no carriage returns—the file cannot be viewed with editors that require carriage returns (such as Microsoft Notepad). If the FTP/TFTP server is running SunOS or the Solaris operating system, the specified configuration file must exist prior to executing the copy running-config command and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current configuration data.

Restoring the Active Switch Configuration

When the copy {ftp|tftp|sftp} running-config command is used, the active configuration will be replaced with the commands found in the specified configuration file. The file can contain a full switch configuration or a partial switch configuration.

To start the switch configuration download, at the prompt, enter:

```
Router(config)# copy ftp running-config [extm-port|mgt-port|data-port]
Or
Router(config)# copy tftp running-config [extm-port|mgt-port|data-port]
Or
Router(config)# copy sftp running-config [extm-port|mgt-port|data-port]
```

Select a port, or press **Enter** to use the default (management port). The switch prompts you for the server address and filename.

Chapter 5. Operations Commands

Operations commands generally affect switch performance immediately, but do not alter permanent switch configurations. For example, you can use Operations commands to immediately disable a port (without the need to apply or save the change), with the understanding that when the switch is reset, the port returns to its normally configured operation.

These commands enable you to alter switch operational characteristics without affecting switch configuration.

Table 352. General Operations Commands

Command Syntax and Usage

password <1-128 characters>

Allows the user to change the password. You must enter the current password in use for validation. The switch prompts for a new password between 1-128 characters.

Command Mode: Privileged EXEC

clear logging

Clears all Syslog messages.

Command Mode: Privileged EXEC

ntp send

Allows the user to send requests to the NTP server.

Command Mode: Privileged EXEC

Operations-Level Port Commands

Operations-level port options are used for temporarily disabling or enabling a port, and for re-setting the port.

Table 353. Port Operations Commands

Cor	Command Syntax and Usage	
no	interface port <pre>port number or alias> shutdown</pre>	
	Temporarily enables the port. The port will be returned to its configured operation mode when the switch is reset.	
	Command Mode: Privileged EXEC	
int	interface port <pre>port number or alias> shutdown</pre>	
	Temporarily disables the port. The port will be returned to its configured operation mode when the switch is reset.	
	Command Mode: Privileged EXEC	
sho	show interface port <pre>port number or alias> operation</pre>	
	Displays the port interface operational state.	
	Command Mode: Privileged EXEC	

Operations-Level Port 802.1X Commands

Operations-level port 802.1X options are used to temporarily set 802.1X parameters for a port.

Table 354. 802.1X Operations Commands

Command Syntax and Usage		
<pre>interface port <port alias="" number="" or=""> dot1x init</port></pre>		
Re-initializes the 802.1X access-control parameters for the port. The following actions take place, depending on the 802.1X port configuration:		
 force unauth: the port is placed in unauthorized state, and traffic is blocked. 		
 auto: the port is placed in unauthorized state, then authentication is initiated. 		
 force auth: the port is placed in authorized state, and authentication is not required. 		
Command Mode: Privileged EXEC		
interface port <port alias="" number="" or=""> dot1x re-authenticate</port>		
Re-authenticates the supplicant (client) attached to the port. This command only applies if the port's 802.1X mode is configured as auto.		
Command Mode: Privileged EXEC		

Operations-Level FCoE Commands

Fibre Channel over Ethernet (FCoE) operations commands are listed in the following table.

Table 355. FCoE Operations Commands

```
Command Syntax and Usage
```

```
no fcoe fips fcf <MAC address>
```

Deletes the selected FCoE Forwarder (FCF), and any associated ACLs.

Command Mode: Privileged EXEC

Operations-Level VRRP Commands

Table 356. Virtual Router Redundancy Operations Commands

Command Syntax and Usage

router vrrp backup <*virtual router number (1-255)*>

Forces the specified master virtual router on this switch into backup mode. This is generally used for passing master control back to a preferred switch once the preferred switch has been returned to service after a failure. When this command is executed, the current master gives up control and initiates a new election by temporarily advertising its own priority level as 0 (lowest). After the new election, the virtual router forced into backup mode by this command will resume master control in the following cases:

- This switch owns the virtual router (the IP addresses of the virtual router and its IP interface are the same)
- This switch's virtual router has a higher priority and preemption is enabled.
- There are no other virtual routers available to take master control.

Command Mode: Privileged EXEC

Operations-Level BGP Commands

Table 357. IP BGP Operations Commands

router bgp start <peer number>

Starts the peer session.

Command Mode: Privileged EXEC

router bgp stop <peer number>

Stops the peer session.

Command Mode: Privileged EXEC

```
show ip bgp state
```

Displays the current BGP operational state.

Command Mode: Privileged EXEC

Protected Mode Options

Protected Mode is used to secure certain switch management options, so they cannot be changed by the management module.

Table 358. Protected Mode Options

Command Syntax and Usage		
[no] protected-mode external-management		
Enables exclusive local control of switch management. When Protected Mode is set to on, the management module cannot be used to disable external management on the switch. The default value is enabled.		
Note : Due to current management module implementation, this setting cannot be disabled.		
Command Mode: Global Configuration		
[no] protected-mode external-ports		
Enables exclusive local control of external ports. When Protected Mode is set to on, the management module cannot be used to disable external ports on the switch. The default value is enabled.		
Note : Due to current management module implementation, this setting cannot be disabled.		
Command Mode: Global Configuration		
[no] protected-mode factory-default		
Enables exclusive local control of factory default resets. When Protected Mode is set to on, the management module cannot be used to reset the switch software to factory default values. The default value is enabled.		
Note : Due to current management module implementation, this setting cannot be disabled.		
Command Mode: Global Configuration		

Table 358. Protected Mode Options (continued)

Command Syntax and Usage		
[no] protected-mode management-vlan-interface		
Enables exclusive local control of the management interface. When Protected Mode is set to on, the management module cannot be used to configure parameters for the management interface. The default value is enabled.		
Note : Due to current management module implementation, this setting cannot be disabled.		
Command Mode: Global Configuration		
protected-mode enable		
Turns Protected Mode on. When Protected Mode is turned on, the switch takes exclusive local control of all enabled options.		
Command Mode: Global Configuration		
no protected-mode enable		
Turns Protected Mode off . When Protected Mode is turned off, the switch relinquishes exclusive local control of all enabled options.		
Command Mode: Global Configuration		
show protected-mode		
Displays the current Protected Mode configuration.		
Command Mode: Global Configuration		

VMware Operations

Use these commands to perform minor adjustments to the VMware operation. Use these commands to perform Virtual Switch operations directly from the switch. Note that these commands require the configuration of Virtual Center access information (virt vmware vcspec).

Table 359. VMware Operations Commands

Command Syntax and Usage

virt vmware pg [<Port Group name> <host ID> <VSwitch name>

<*VLAN number>* <*shaping-enabled>* <*average-Kbps>* <*burst-KB>* <*peak-Kbps>*] Adds a Port Group to a VMware host. You are prompted for the following information:

- Port Group name
- VMware host ID (Use host UUID, host IP address, or host name.)
- Virtual Switch name
- VLAN ID of the Port Group
- Whether to enable the traffic-shaping profile (1 or 0). If you choose 1 (yes), you are prompted to enter the traffic shaping parameters.

Command Mode: Privileged EXEC

Table 359. VMware Operations Commands

	nmand Syntax and Usage
viı	rt vmware vsw <host id=""> <virtual name="" switch=""></virtual></host>
	Adds a Virtual Switch to a VMware host. Use one of the following identifiers to specify the host:
	– UUID
	– IP address
	- Host name
	Command Mode: Privileged EXEC
no	virt vmware pg <port group="" name=""> <host id=""></host></port>
	Removes a Port Group from a VMware host. Use one of the following identifiers to specify the host:
	– UUID
	– IP address
	 Host name
	Command Mode: Privileged EXEC
no	virt vmware vsw <host id=""> <virtual name="" switch=""></virtual></host>
	Removes a Virtual Switch from a VMware host. Use one of the following identifiers to specify the host:
	– UUID
	 IP address
	 Host name
	Command Mode: Privileged EXEC
vii	rt vmware export <vm name="" profile=""> <vmware host="" id=""> <virtual name="" switch=""></virtual></vmware></vm>
	Exports a VM Profile to a VMware host.
	Use one of the following identifiers to specify each host: – UUID
	– IP address
	- Host name
	You may enter a Virtual Switch name, or enter a new name to create a new Virtual Switch.
	Command Mode: Privileged EXEC
viı	rt vmware scan
	Performs a scan of the VM Agent, and updates VM information.
	Command Mode: Privileged EXEC
vii	rt vmware vmacpg <mac address=""> <port group="" name=""></port></mac>
	Changes a VM NIC's configured Port Group.
	Command Mode: Privileged EXEC

Table 359. VMware Operations Commands

Command Syntax and Usage

virt vmware updpg < <i>Port Group name</i> > < <i>host ID</i> > < <i>VLAN number</i> >
[<shaping enabled=""> <average kbps=""> <burst kb=""> <peak kbps="">]</peak></burst></average></shaping>
Updates a VMware host's Port Group parameters.

Command Mode: Privileged EXEC

Distributed vSwitch Operations

Table 360 describes distributed vSwitch operations.

Table 360. Distributed vSwitch Options

Command Syntax and Usage	
<pre>virt vmware dvswitch add <datacenter name=""> <dvswitch name=""></dvswitch></datacenter></pre>	
Adds a distributed vSwitch to a datacenter.	
Command Mode: Privileged EXEC	
virt vmware dvswitch del < <i>datacenter name</i> > < <i>dvSwitch name</i> >	
Deletes a distributed vSwitch from a datacenter.	
Command Mode: Privileged EXEC	
virt vmware dvswitch addhost < <i>dvSwitch name</i> > < <i>host UUID, IP address</i> or name>	ς,
Adds a host to a distributed vSwitch.	
Command Mode: Privileged EXEC	
<pre>virt vmware dvswitch remhost <dvswitch name=""> <host address="" ip="" name="" or="" uuid,=""></host></dvswitch></pre>	ς,
Removes a host from a distributed vSwitch.	
Command Mode: Privileged EXEC	
virt vmware dvswitch adduplnk < <i>dvSwitch name</i> > < <i>host UUID, IP address, or name</i> > < <i>uplink name</i> >	
Adds a NIC to the distributed vSwitch, to use as an uplink.	
Command Mode: Privileged EXEC	
virt vmware dvswitch remuplnk < <i>dvSwitch name</i> > < <i>host UUID, IP address, or name</i> > < <i>uplink name</i> >	
Removes an uplink NIC from the distributed vSwitch.	
Command Mode: Privileged EXEC	

Distributed Port Group Operations

Table 361 describes distributed port group operations.

Table 361. Distributed Port Group Options

	Syntax and Usage
[isha	<pre>ware dpg add <port group="" name=""> <dvswitch name=""> <vlan number=""> ping eshaping <average kbps=""> <burst kb=""> <peak kbps="">] ping eshaping <average kbps=""> <burst kb=""> <peak kbps="">]</peak></burst></average></peak></burst></average></vlan></dvswitch></port></pre>
Adds	a port group to a distributed vSwitch. For example:
Note:	mware dpg add alpha dvSwitch 10 ishaping 10 10 10 eshaping 20 20 2 Ingress shaping and egress shaping parameters are optional. nand Mode: Privileged EXEC
	<pre>vare dpg vmac <vnic mac=""> <port group="" name=""> a vNUC to a distributed part group</port></vnic></pre>
	a vNIC to a distributed port group.
Comn	nand Mode: Privileged EXEC
[isha	<pre>ware dpg update <port group="" name=""> <dvswitch name=""> <vlan number=""> ping eshaping <average kbps=""> <burst kb=""> <peak kbps="">] ping eshaping <average kbps=""> <burst kb=""> <peak kbps="">]</peak></burst></average></peak></burst></average></vlan></dvswitch></port></pre>
Updat	es the parameters of a distributed port group.
Note:	Ingress shaping and egress shaping parameters are optional.
Comn	nand Mode: Privileged EXEC
wirt um	vare dpg del <port group="" name=""> <dvswitch name=""></dvswitch></port>
	es a port group from a distributed vSwitch.

Feature on Demand Key Options

Use the license key to upgrade the port mode. Base port mode is the default. To upgrade the port mode, you must obtain a software license key.

After selecting a port mode, you must reset the switch for the change to take affect. Use the following command to verify the port configuration: show interface information

Table 362. Feature on Demand Key Options

Command Syntax and Usage		
fod-key		
Enter Feature on Demand Key mode.		
Command mode: Privileged EXEC		
enakey address <i><hostname address="" ip="" or=""></hostname></i> keyfile <i><file name=""></file></i> protocol tftp sftp		
Allows you to unlock the software port expansion feature. You are prompted to enter the host name or IP address of the server where the license key is stored, and the license key file name, as follows:		
- 46Port		
- 64Port		
Note : You must upgrade to 46Port port mode before you can upgrade to 64Port port mode.		
Command mode: Feature on Demand Key mode		
rmkey key <i><feature name=""></feature></i>		
Removes the specified software feature.		
Command mode: Feature on Demand Key mode		
<pre>ptkey address <hostname address="" ip="" or=""> key <feature name=""> protocol tftp sftp file <file name=""></file></feature></hostname></pre>		
Loads the specified key file to a server.		
Command mode: Feature on Demand Key mode		
<pre>invkeys address <hostname address="" ip="" or=""> invfile <file name=""> protocol tftp sftp</file></hostname></pre>		
Loads key code inventory information to a server.		
Command mode: Feature on Demand Key mode		

Chapter 6. Boot Options

To use the Boot Options commands, you must be logged in to the switch as the administrator. The Boot Options commands provide options for:

- Selecting a switch software image to be used when the switch is next reset
- Selecting a configuration block to be used when the switch is next reset
- Downloading or uploading a new software image to the switch via FTP/TFTP

In addition to the Boot commands, you can use a Web browser or SNMP to work with switch image and configuration files. To use SNMP, refer to "Working with Switch Images and Configuration Files" in the *Command Reference*.

The boot options are discussed in the following sections.

Stacking Boot Options

The Stacking Boot options are used to define the role of the switch in a stack: either as the Master that controls the stack, or as a participating Member switch. Options are available for loading stack software to individual Member switches, and to configure the VLAN that is reserved for inter-switch stacking communications.

You must enable Stacking and reset the switch to enter Stacking mode. When the switch enters Stacking mode, the Stacking configuration menu appears. For more information, see "Stacking Configuration" on page 261.

Table 363 lists the Boot Stacking command options.

Table 363.	Boot Stacking	Options
------------	---------------	---------

Command Syntax and Usage		
boot stack mode [master member]		
Configures the Stacking mode for the selected switch.		
Command mode: Global configuration		
boot stack higig-trunk < <i>list of ports</i> >		
Configures the ports used to connect the switch to the stack. Enter only 10Gb external ports.		
Command mode: Global configuration		
boot stack vlan <i><vlan number=""></vlan></i> [<i><1-16></i> all backup master]		
Configures the VLAN used for Stacking control communication. This can be applied for:		
– a specific unit <1-16>		
- all units		
– backup unit		
- master unit		
Command mode: Global configuration		

Table 363. Boot Stacking Options (continued)

default boot stac	k [< <i>l-16</i> > all backup master]
Resets the Stackin applied for:	g boot parameters to their default values This can be
 – a specific unit < 	1-16>
– all units	
– backup unit	
 master unit 	
Command mode:	Global configuration
Pushes the selected	mage {image1 image2 boot-image} < <i>I-16</i> > ed software file from the master to the selected switch. Global configuration
[no] boot stack e	nable
Enables or disable	s the switch stack.
Command mode:	Global configuration
show boot stack [master backup <1-> all]
Displays current St	acking boot parameters.
Command mode:	

When in stacking mode, the following stand-alone features are not supported:

- Active Multi-Path Protocol (AMP)
- SFD
- sFlow port monitoring
- Uni-Directional Link Detection (UDLD)
- Port flood blocking
- BCM rate control
- Link Layer Detection Protocol (LLDP)
- Private VLANs
- RIP
- OSPF and OSPFv3
- IPv6
- Virtual Router Redundancy Protocol (VRRP)
- Loopback Interfaces
- Router IDs
- Route maps
- Border Gateway Protocol (BGP)
- MAC address notification
- Static MAC address adding
- Static multicast
- Static routes
- MSTP and RSTP settings for CIST, Name, Rev, and Maxhop
- IGMP Relay and IGMPv3
- Virtual NICs

Switch menus and commands for unsupported features may be unavailable, or may have no effect on switch operation.

Scheduled Reboot

This feature allows you to schedule a reboot to occur at a particular time in the future. This feature is particularly helpful if the user needs to perform switch upgrades during off-peak hours. You can set the reboot time, cancel a previously scheduled reboot, and check the time of the currently set reboot schedule.

Table 364. Boot Scheduling Options

bod	boot schedule <day of="" week=""> <time day="" of=""></time></day>		
	Defines the reboot schedule. Enter the day of the week, followed by the time of day (in hh:mm format). For example:		
	boot schedule monday 11:30		
	Command mode: Global configuration		
	boot schedule		
	Cancels the next pending scheduled reboot.		
	Command mode: Global configuration		
sho	ow boot		
	Displays the current reboot scheduling parameters.		
	Command mode: All		

Netboot Configuration

Netboot allows the switch to automatically download its configuration file over the network during switch reboot, and apply the new configuration. Upon reboot, the switch includes the following options in its DHCP requests:

- Option 66 (TFTP server address)
- Option 67 (file path)

If the DHCP server returns the information, the switch initiates a TFTP file transfer, and loads the configuration file into the active configuration block. As the switch boots up, it applies the new configuration file. Note that the option 66 TFTP server address must be specified in IP-address format (host name is not supported).

If DHCP is not enabled, or the DHCP server does not return the required information, the switch uses the manually-configured TFTP server address and file path.

Table 365. Netboot Options (/boot/netboot)

Command Syntax and Usage		
boo	ot netboot enable	
	Enables Netboot. When enabled, the switch boots into factory-default configuration, and attempts to download a new configuration file.	
	Command mode: Global configuration	
no	boot netboot enable	
	Disables Netboot.	
	Command mode: Global configuration	
[no	b] boot netboot tftp < <i>IP address</i> >	
	Configures the IP address of the TFTP server used for manual configuration. This server is used if DHCP is not enabled, or if the DHCP server does not return the required information.	
	Command mode: Global configuration	
[no	b] boot netboot cfgfile <1-31 characters>	
	Defines the file path for the configuration file on the TFTP server. For example:	
	/directory/sub/config.cfg	
	Command mode: Global configuration	
sho	w boot	
	Displays the current Netboot parameters.	
	Command mode: All	

QSFP+ Port Configuration

Quad Small Form-factor Pluggable Plus (QSFP+) ports are designed to handle high-intensity traffic. Use the following commands to configure QSFP+ ports.

Table 366. QSFP+ Port Options (/boot/qsfp-40Gports)

Command Syntax and Usage		
[no] boot qsfp-40Gports < EXT15, EXT19>		
Enables or disables 40GbE mode on the selected QSFP+ ports. When enabled, each QSFP+ port is set as a single 40GbE port. When disabled, each QSFP+ port is configured to breakout into four 10GbE ports.		
You must reboot the switch for this change to take effect.		
Command mode: Global configuration		
show boot qsfp-port-modes		
Displays the current QSFP+ port settings.		

Command mode: All

Updating the Switch Software Image

The switch software image is the executable code running on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch. A version of the image ships with the switch, and comes pre-installed on the device. As new versions of the image are released, you can upgrade the software running on your switch. To get the latest version of software available for your EN4093/EN4093R, go to:

http://www.ibm.com/support

Click on software updates. Use the following command to determine the current software version: show boot

Upgrading the software image on your switch requires the following:

- Loading the new image onto a FTP or TFTP server on your network
- Transferring the new image from the FTP or TFTP server to your switch
- Selecting the new software image to be loaded into switch memory the next time the switch is reset

Loading New Software to Your Switch

The switch can store up to two different software images, called image1 and image2, as well as boot software, called boot. When you load new software, you must specify where it should be placed: either into image1, image2, or boot.

For example, if your active image is currently loaded into image1, you would probably load the new image software into image2. This lets you test the new software and reload the original active image (stored in image1), if needed.

Note: EN4093R models do not support image releases prior to 7.5.

To load a new software image to your switch, you need the following:

- The image or boot software loaded on a FTP/TFTP server on your network
- The hostname or IP address of the FTP/TFTP server
- The name of the new software image or boot file

Note: The DNS parameters must be configured if specifying hostnames.

When the above requirements are met, use the following procedure to download the new software to your switch.

1. In Privileged EXEC mode, enter the following command:

```
Router# copy {ftp|tftp} {image1|image2|boot-image} [extm-port|
mgt-port|data-port]
```

2. Enter the hostname or IP address of the FTP or TFTP server.

Address or name of remote host: < IP address or hostname >

3. Enter the name of the new software file on the server.

Source file name: <filename>

The exact form of the name will vary by server. However, the file location is normally relative to the FTP or TFTP directory (usually tftpboot).

4. Enter your username and password for the server, if applicable.

User name: {<username> | <Enter>}

5. The system prompts you to confirm your request.

Next. select a software image to run, as described in the following section.

Selecting a Software Image to Run

You can select which software image (image1 or image2) you want to run in switch memory for the next reboot.

1. In Global Configuration mode, enter:

Router(config) # boot image {image1 | image2}

2. Enter the name of the image you want the switch to use upon the next boot. The system informs you of which image set to be loaded at the next reset:

Next boot will use switch software image1 instead of image2.

Uploading a Software Image from Your Switch

You can upload a software image from the switch to a FTP or TFTP server.

1. In Privileged EXEC mode, enter:

```
Router# copy {image1 | image2 | boot-image} {ftp | tftp} [extm-port | mgt-port | data-port]
```

Select a port, or press <Enter> to use the default (management port).

2. Enter the name or the IP address of the FTP or TFTP server:

Address or name of remote host: <*IP address or hostname*>

3. Enter the name of the file into which the image will be uploaded on the FTP or TFTP server:

Destination file name: <*filename*>

4. Enter your username and password for the server, if applicable.

User name: {<username> | <Enter>}

5. The system then requests confirmation of what you have entered. To have the file uploaded, enter Y.

image2 currently contains Software Version 7.5.0
that was downloaded at 0:23:39 Thu Jan 4, 2012.
Upload will transfer image2 (2788535 bytes) to file "image1"
on FTP/TFTP server 192.1.1.1. over the MGT port.
Confirm upload operation (y/n) ? y

Selecting a Configuration Block

When you make configuration changes to the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch, you must save the changes so that they are retained beyond the next time the switch is reset. When you perform a save operation (copy running-config startup-config), your new configuration changes are placed in the *active* configuration block. The previous configuration is copied into the *backup* configuration block.

There is also a *factory* configuration block. This holds the default configuration set by the factory when your EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch was manufactured. Under certain circumstances, it may be desirable to reset the switch configuration to the default. This can be useful when a custom-configured EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch is moved to a network environment where it will be re-configured for a different purpose.

In Global Configuration mode, use the following command to set which configuration block you want the switch to load the next time it is reset:

Router (config) # boot configuration-block {active | backup | factory}

Resetting the Switch

You can reset the switch to make your software image file and configuration block changes occur.

Note: Resetting the switch causes the Spanning Tree Group to restart. This process can be lengthy, depending on the topology of your network.

Enter the following command to reset (reload) the switch:

>> Router# reload

You are prompted to confirm your request.

```
Reset will use software "image2" and the active config block.
>> Note that this will RESTART the Spanning Tree,
>> which will likely cause an interruption in network service.
Confirm reload (y/n) ?
```

Accessing the Menu-based CLI

To access the menu-based CLI, enter the following command from the ISCLI:

Router(config) # boot cli-mode ibmnos-cli

The default command-line interface for the EN4093/EN4093R is the menu-based CLI. To access the ISCLI, enter the following command and reset the EN4093/EN4093R:

Main# boot/mode iscli

Users can select the CLI mode upon login, if the following ISCLI command is enabled:

Router(config) # boot cli-mode prompt

Only an administrator connected through the CLI can view and enable the prompt command. When prompt is enabled, the first user to log in can select the CLI mode. Subsequent users must use the selected CLI mode, until all users have logged out.

Using the Boot Management Menu

The Boot Management menu allows you to switch the software image, reset the switch to factory defaults, or to recover from a failed software download.

You can interrupt the boot process and enter the Boot Management menu from the serial console port. When the system displays Memory Test, press **<Shift B>**. The Boot Management menu appears.

The Boot Management menu allows you to perform the following actions:

- To change the booting image, press 1 and follow the screen prompts.
- To change the configuration block, press 2, and follow the screen prompts.
- To perform a software image recovery, press 3 and follow the screen prompts.
- To perform an Xmodem download (boot image only), press 4 and follow the screen prompts.
- To exit the Boot Management menu, press 6. The booting process continues.

Recovering from a Failed Software Upgrade

Use the following procedure to recover from a failed software upgrade.

- Connect a PC to the serial port of the switch.
- Open a terminal emulator program that supports Xmodem download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:
 - Speed: 9600 bps
 - Data Bits: 8
 - Stop Bits: 1
 - Parity: None
 - Flow Control: None
- Boot the switch and access the Boot Management menu by pressing <Shift B> while the Memory Test is in progress and the dots are being displayed.

4. Select **3** for **Boot in recovery mode**. You will see the following display:

```
Entering Rescue Mode.

Please select one of the following options:

T) Configure networking and tftp download an image

X) Use xmodem 1K to serial download an image

R) Reboot

E) Exit
```

- If you choose option **x** (Xmodem serial download), go to step 5.
- If you choose option t (TFTP download), go to step 6.
- 5. **Xmodem download**: When you see the following message, change the Serial Port characteristics to 115200 bps:

Change the baud rate to 115200 bps and hit the $<\!\!\text{ENTER}\!\!>$ key before initiating the download.

- a. Press <**Enter**> to set the system into download accept mode. When the readiness meter displays (a series of "C" characters), start XModem on your terminal emulator.
- When you see the following message, change the Serial Port characteristics to 9600 bps:

Change the baud rate back to 9600 bps, hit the <ESC> key.

c. When you see the following prompt, enter the image number where you want to install the new software and press <**Enter**>.

Install image as image 1 or 2 (hit return to just boot image): 1

d. The following message is displayed when the image download is complete. Continue to step 7.

```
Installing image as image1...
Image1 updated successfully
Please select one of the following options:
T) Configure networking and tftp download an image
X) Use xmodem 1K to serial download an image
R) Reboot
E) Exit
```

6. **TFTP download**: The switch prompts you to enter the following information:

```
Performing TFTP rescue. Please answer the following questions (enter
'q' to quit):
IP addr :
Server addr:
Netmask :
Gateway :
Image Filename:
```

- a. Enter the required information and press < Enter>.
- b. You will see a display similar to the following:

```
Host IP : 10.10.98.110
Server IP : 10.10.98.100
Netmask : 255.255.255.0
Broadcast : 10.10.98.255
Gateway : 10.10.98.254
Installing image 6.8.3_OS.img from TFTP server 10.10.98.100
```

c. When you see the following prompt, enter the image number where you want to install the new software and press **<Enter**>.

```
Install image as image 1 or 2 (hit return to just boot image): 1
```

d. The following message is displayed when the image download is complete. Continue to step 7.

```
Installing image as image1...
Image1 updated successfully
Please select one of the following options:
    T) Configure networking and tftp download an image
    X) Use xmodem 1K to serial download an image
    R) Reboot
    E) Exit
```

- 7. Image recovery is complete. Perform one of the following steps:
 - Press **r** to reboot the switch.
 - Press e to exit the Boot Management menu
 - Press the Escape key (< Esc>) to re-display the Boot Management menu.

Recovering a Failed Boot Image

Use the following procedure to recover from a failed boot image upgrade.

- 1. Connect a PC to the serial port of the switch.
- Open a terminal emulator program that supports Xmodem download (for example, HyperTerminal, CRT, PuTTY) and select the following serial port characteristics:
 - Speed: 9600 bps

1

- Data Bits: 8
- Stop Bits:
- Parity: None
- Flow Control: None
- Boot the switch and access the Boot Management menu by pressing <Shift B> while the Memory Test is in progress and the dots are being displayed.
- 4. Select 4 for Xmodem download. You will see the following display:

```
Perform xmodem download
To download an image use 1K Xmodem at 115200 bps.
```

5. When you see the following message, change the Serial Port characteristics to 115200 bps:

Change the baud rate to 115200 bps and hit the <ENTER> key before initiating the download.

a. Press <**Enter**> to set the system into download accept mode. When the readiness meter displays (a series of "C" characters), start Xmodem on your terminal emulator.You will see a display similar to the following:

b. When you see the following message, change the Serial Port characteristics to 9600 bps:

Change the baud rate back to 9600 bps, hit the <ESC> key.

Boot image recovery is complete.

Chapter 7. Maintenance Commands

The maintenance commands are used to manage dump information and forward database information. They also include debugging commands to help with troubleshooting.

Dump information contains internal switch state data that is written to flash memory on the EN4093/EN4093R 10Gb Virtual Fabric Scalable Switch after any one of the following occurs:

- The watchdog timer forces a switch reset. The purpose of the watchdog timer is to reboot the switch if the switch software freezes.
- The switch detects a hardware or software problem that requires a reboot.

To use the maintenance commands, you must be logged in to the switch as the administrator.

Table 367. General Maintenance Commands

Command Syntax and Usage		
show flash-dump-uuencode Displays dump information in uuencoded format. For details, see page 471. Command mode: All		
copy flash-dump tftp Saves the system dump information via TFTP. For details, see page 472. Command mode: All except User EXEC		
copy flash-dump ftp Saves the system dump information via FTP. Command mode: All except User EXEC		
clear flash-dump Clears dump information from flash memory. Command mode: All except User EXEC		
<pre>show tech-support [12 13 link port] Dumps all EN4093/EN4093R information, statistics, and configuration. You can log the output (tsdmp) into a file. - 12 displays only Layer 2-related information - 13 displays only Layer 3-related information - link displays only link status-related information - port displays only port-related information Command mode: All except User EXEC</pre>		

Table 367. General Maintenance Commands

Command Syntax and Usage

copy tech-support tftp

Redirects the technical support dump (tsdmp) to an external TFTP server.

Command mode: All except User EXEC

copy tech-support ftp

Redirects the technical support dump (tsdmp) to an external FTP server.

Command mode: All except User EXEC

Forwarding Database Maintenance

The Forwarding Database commands can be used to view information and to delete a MAC address from the forwarding database or to clear the entire forwarding database. This is helpful in identifying problems associated with MAC address learning and packet forwarding decisions.

Table 368. FDB Manipulation Commands

Command Syntax and Usage

show mac-address-table address <MAC address> Displays a single database entry by its MAC address. If not specified, you are prompted for the MAC address of the device. Enter the MAC address using one of the following formats: - xx:xx:xx:xx:xx (such as 08:00:20:12:34:56) - xxxxxxxxxx (such as 080020123456) Command mode: All except User EXEC show mac-address-table interface port cport number or alias Displays all FDB entries for a particular port. Command mode: All except User EXEC show mac-address-table portchannel <trunk group number> Displays all FDB entries for a particular trunk group. Command mode: All show mac-address-table vlan <VLAN number> Displays all FDB entries on a single VLAN. Command mode: All except User EXEC show mac-address-table state {forward|trunk|unknown} Displays all FDB entries of a particular state. Command mode: All except User EXEC show mac-address-table static Displays static entries in the FBD. Command mode: All except User EXEC

Table 368. FDB Manipulation Commands

Co	mmand Syntax and Usage		
no	<pre>mac-address-table static {<mac address=""> all} Removes static FDB entries. Command mode: All except User EXEC</mac></pre>		
no	<pre>mac-address-table multicast {<mac address=""> all} Removes static multicast FDB entries. Command mode: All except User EXEC</mac></pre>		
no	mac-address-table static Clears all static entries from the Forwarding Database. Command mode: All except User EXEC		
cle	ear mac-address-table Clears the entire Forwarding Database from switch memory. Command mode: All except User EXEC		

Debugging Commands

The Miscellaneous Debug Commands display trace buffer information about events that can be helpful in understanding switch operation. You can view the following information using the debug commands:

- Events traced by the Management Processor (MP)
- · Events traced to a buffer area when a reset occurs
- **Note:** IBM Networking OS debug commands are intended for advanced users. Use debug commands with caution as they can disrupt the operation of the switch under high load conditions. When debug is running under high load conditions, the CLI prompt may appear unresponsive. Before debugging, check the MP utilization to verify there is sufficient processing capacity available to perform the debug operation.

If the switch resets for any reason, the MP trace buffer is saved into the snap trace buffer area. The output from these commands can be interpreted by Technical Support personnel.

Table 369. Miscellaneous Debug Commands

Command Syntax and Usage
debug debug-flags
This command sets the flags that are used for debugging purposes.
Command mode: Privileged EXEC

Table 369. Miscellaneous Debug Commands

debuq	mp-trace

Displays the Management Processor trace buffer. Header information similar to the following is shown:

MP trace buffer at 13:28:15 Fri May 25, 2012; mask: 0x2ffdf748

The buffer information is displayed after the header.

Command mode: Privileged EXEC

debug dumpbt

Displays the backtrace log.

Command mode: Privileged EXEC

debug mp-snap

Displays the Management Processor snap (or post-mortem) trace buffer. This buffer contains information traced at the time that a reset occurred.

Command mode: Privileged EXEC

clear flash-config

Deletes all flash configuration blocks.

Command mode: Privileged EXEC

[no] debug lacp packet [receive|transmit|both] [port cport numbers>]

Enables/disables debugging for Link Aggregation Control Protocol (LACP) packets on all ports running LACP.

The following parameters are available:

- receive filters only LACP packets received
- transmit filters only LACP packets sent
- both filters LACP packets either sent or received
- port filters LACP packets sent/received on specific ports

By default, LACP debugging is disabled.

Command mode: Privileged EXEC

[no] debug spanning-tree bpdu [receive|transmit]

Enables/disables debugging for Spanning Tree Protocol (STP) Bridge Protocol Data Unit (BPDU) frames sent or received.

The following parameters are available:

- receive filters only BPDU frames received
- transmit filters only BPDU frames sent

By default, STP BPDU debugging is disabled.

Command mode: Privileged EXEC

DCBX Maintenance

Table 370. DCBX Maintenance Options

Command Syntax and Usage

show dcbx transmit cport alias or number>

Displays the Type-Length-Value (TLV) list transmitted in the DCBX TLV.

show dcbx receive <port alias or number>

Displays the Type-Length-Value (TLV) list received in the DCBX TLV.

ARP Cache Maintenance

Table 371. Address Resolution Protocol Maintenance Commands

Command Syntax and Usage	
<pre>show ip arp find <ip address=""></ip></pre>	
Shows a single ARP entry by IP ad	ldress.
Command mode: All except User	EXEC
show ip arp interface port ${<}p$	ort number or alias>
Shows ARP entries on selected po	orts.
Command mode: All except User	EXEC
show ip arp vlan < <i>VLAN number</i> >	-
Shows ARP entries on a single VL	AN.
Command mode: All except User	EXEC
show ip arp reply	
Shows the list of IP addresses whi requests.	ch the switch will respond to for ARP
Command mode: All except User	EXEC
show ip arp	
Shows all ARP entries.	
Command mode: All except User	EXEC
clear arp	
Clears the entire ARP list from swi	tch memory.
Command mode: All except User	EXEC

Note: To display all or a portion of ARP entries currently held in the switch, you can also refer to "ARP Information" on page 59.

IP Route Manipulation

Table 372. IP Route Manipulation Commands

Command Syntax and Usage	
show ip route address < <i>IP address</i> >	
Shows a single route by destination IP address.	
Command mode: All except User EXEC	
show ip route gateway < <i>IP address</i> >	
Shows routes to a default gateway.	
Command mode: All except User EXEC	
<pre>show ip route type {indirect direct local broadcast martian multicast}</pre>	
Shows routes of a single type.	
Command mode: All except User EXEC	
For a description of IP routing types, see Table 38 on page 58	
<pre>show ip route tag {fixed static address rip ospf bgp broadca martian multicast}</pre>	ast
Shows routes of a single tag.	
Command mode: All except User EXEC	
For a description of IP routing tags, see Table 39 on page 59	
show ip route interface < <i>IP interface</i> >	
Shows routes on a single interface.	
Command mode: All except User EXEC	
show ip route	
Shows all routes.	
Command mode: All except User EXEC	
clear ip route	
Clears the route table from switch memory.	
Command mode: All except User EXEC	

Note: To display all routes, you can also refer to "IP Routing Information" on page 57.

LLDP Cache Manipulation

Table 373 describes the LLDP cache manipulation commands.

Table 373. LLDP Cache Manipulation commands

show	<pre>lldp port <port alias="" number="" or=""></port></pre>
D	isplays Link Layer Discovery Protocol (LLDP) port information.
С	ommand mode: All
show	lldp receive
D	isplays information about the LLDP receive state machine.
С	ommand mode: All
show	lldp transmit
D	isplays information about the LLDP transmit state machine.
С	ommand mode: All
show	lldp remote-device
D	isplays information received from LLDP -capable devices.
С	ommand mode: All
show	lldp
D	isplays all LLDP information.
С	ommand mode: All
clea	r lldp
С	lears the LLDP cache.
С	ommand mode: All

IGMP Groups Maintenance

Table 374 describes the IGMP group maintenance commands.

```
Table 374. IGMP Multicast Group Maintenance Commands
```

Command Syntax and Usage	
show ip igmp groups address < IP address >	
Displays a single IGMP multicast group by its IP address.	
Command mode: All	
show ip igmp groups vlan <vlan number=""></vlan>	
Displays all IGMP multicast groups on a single VLAN.	
Command mode: All	
show ip igmp groups interface port <port alias="" number="" or=""></port>	
Displays all IGMP multicast groups on selected ports.	
Command mode: All	

Table 374. IGMP Multicast Group Maintenance Commands (continued)

Command Syntax and Usage
show ip igmp groups portchannel <i><trunk number=""></trunk></i> Displays all IGMP multicast groups on a single trunk group. Command mode: All
show ip igmp groups detail < <i>IP address</i> > Displays detailed information about a single IGMP multicast group. Command mode: All
show ip igmp groups Displays information for all multicast groups. Command mode: All
clear ip igmp groups Clears the IGMP group table. Command mode: All except User EXEC

IGMP Multicast Routers Maintenance

The following table describes the maintenance commands for IGMP multicast routers (Mrouters).

Table 375. IGMP Multicast Router Maintenance Commands

Command Syntax and Usage
show ip igmp mrouter vlan < <i>VLAN number</i> >
Displays IGMP Mrouter information for a single VLAN.
Command mode: All
show ip igmp mrouter
Displays information for all Mrouters.
Command mode: All
clear ip igmp mrouter
Clears the IGMP Mrouter port table.
Command mode: All except User EXEC

MLD Multicast Group Manipulation

Table 376 describes the Multicast Listener Discovery (MLD) manipulation options.

Table 376. MLD Maintenance

Command Syntax and Usage	
show ipv6 mld groups	
Shows all MLD groups.	
Command mode: All	
show ipv6 mld interface <i><interface number=""></interface></i>	
Shows MLD groups on the specified interface.	
Command mode: All	
clear ipv6 mld mrouter	
Clears all dynamic MLD multicast router group tables.	
Command mode: All except User EXEC	
clear ipv6 mld groups	
Clears all dynamic MLD registered group tables.	
Command mode: All except User EXEC	
clear ipv6 mld dynamic	
Clears all dynamic MLD group tables.	
Command mode: All except User EXEC	

IPv6 Neighbor Discovery Cache Manipulation

Table 377 describes the IPv6 Neighbor Discovery cache manipulation commands.

Table 377. IPv6 Neighbor Discovery cache manipulation commands

Command Syntax and Usage
show ipv6 neighbors find < <i>IPv6 address</i> >
Shows a single IPv6 Neighbor Discovery cache entry by IP address.
Command mode: All
show ipv6 neighbors interface port <pre>port number or alias></pre>
Shows IPv6 Neighbor Discovery cache entries on a single port.
Command mode: All
show ipv6 neighbors vlan <i><vlan number=""></vlan></i>
Shows IPv6 Neighbor Discovery cache entries on a single VLAN.
Command mode: All
show ipv6 neighbors static
Shows static IPv6 Neighbor Discovery cache entries.
Command mode: All
show ipv6 neighbors
Shows all IPv6 Neighbor Discovery cache entries.
Command mode: All
clear ipv6 neighbors
Clears all IPv6 Neighbor Discovery cache entries from switch memory.
Command mode: All except User EXEC

IPv6 Route Maintenance

Table 378 describes the IPv6 route maintenance commands.

Table 378. IPv6 Route Maintenance Options

Command Syntax and Usage		
show ipv6 route address < <i>IPv6 address</i> >		
Show a single route by destination IP address.		
Command mode: All		
show ipv6 route gateway < <i>IPv6 gateway number</i> >		
Show routes to a single gateway.		
Command mode: All		
<pre>show ipv6 route interface <interface number=""></interface></pre>		
Show routes on a single IP interface.		
Command mode: All		

Command Syntax and Usage	
show ipv6 route type {connected static ospf}	
Show routes of a single type.	
Command mode: All	
show ipv6 route static	
Show static IPv6 routes.	
Command mode: All	
show ipv6 route summary	
Shows a summary of IPv6 route information.	
Command mode: All	
show ipv6 route	
Shows all IPv6 routes.	
Command mode: All	
clear ipv6 route	
Clears all IPv6 routes.	
Command mode: Privileged EXEC	

Table 378. IPv6 Route Maintenance Options (continued)

Uuencode Flash Dump

Using this command, dump information is presented in uuencoded format. This format makes it easy to capture the dump information as a file or a string of characters.

If you want to capture dump information to a file, set your communication software on your workstation to capture session data prior to issuing the show flash-dump-uuencode command. This will ensure that you do not lose any information. Once entered, the show flash-dump-uuencode command will cause approximately 23,300 lines of data to be displayed on your screen and copied into the file.

Using the show flash-dump-uuencode command, dump information can be read multiple times. The command does not cause the information to be updated or cleared from flash memory.

Note: Dump information is not cleared automatically. In order for any subsequent dump information to be written to flash memory, you must manually clear the dump region. For more information on clearing the dump region, see page 472.

To access dump information, enter:

Router# show flash-dump-uuencode

The dump information is displayed on your screen and, if you have configured your communication software to do so, captured to a file. If the dump region is empty, the following appears:

```
No FLASH dump available.
```

TFTP or FTP System Dump Put

Use these commands to put (save) the system dump to a TFTP or FTP server.

Note: If the TFTP/FTP server is running SunOS or the Solaris operating system, the specified copy flash-dump tftp (or ftp) file must exist *prior* to executing the copy flash-dump tftp command (or copy flash-dump tftp), and must be writable (set with proper permission, and not locked by any application). The contents of the specified file will be replaced with the current dump data.

To save dump information via TFTP, enter:

Router# copy flash-dump tftp [data-port|extm-port|mgt-port] <server filename>

You are prompted for the TFTP server IP address or hostname, and the *filename* of the target dump file.

To save dump information via FTP, enter:

Router# copy flash-dump ftp [data-port|extm-port|mgt-port] <server filename>

You are prompted for the FTP server IP address or hostname, your *username* and *password*, and the *filename* of the target dump file.

Clearing Dump Information

To clear dump information from flash memory, enter:

Router# clear flash-dump

The switch clears the dump region of flash memory and displays the following message:

FLASH dump region cleared.

If the flash dump region is already clear, the switch displays the following message:

FLASH dump region is already clear.

Unscheduled System Dumps

If there is an unscheduled system dump to flash memory, the following message is displayed when you log on to the switch:

Note: A system dump exists in FLASH. The dump was saved at 13:43:22 Wednesday January 30, 2012. Use show flash-dump uuencode to extract the dump for analysis and clear flash-dump to clear the FLASH region. The region must be cleared before another dump can be saved.

Appendix A. Getting help and technical assistance

If you need help, service, or technical assistance or just want more information about IBM products, you will find a wide variety of sources available from IBM to assist you. This section contains information about where to go for additional information about IBM and IBM products, what to do if you experience a problem with your system, and whom to call for service, if it is necessary.

Before you call

Before you call, make sure that you have taken these steps to try to solve the problem yourself:

- · Check all cables to make sure that they are connected.
- Check the power switches to make sure that the system and any optional devices are turned on.
- Use the troubleshooting information in your system documentation, and use the diagnostic tools that come with your system. Information about diagnostic tools is in the *Problem Determination and Service Guide* on the IBM *Documentation* CD that comes with your system.
- Go to the IBM support website at http://www.ibm.com/systems/support/ to check for technical information, hints, tips, and new device drivers or to submit a request for information.

You can solve many problems without outside assistance by following the troubleshooting procedures that IBM provides in the online help or in the documentation that is provided with your IBM product. The documentation that comes with IBM systems also describes the diagnostic tests that you can perform. Most systems, operating systems, and programs come with documentation that contains troubleshooting procedures and explanations of error messages and error codes. If you suspect a software problem, see the documentation for the operating system or program.

Using the documentation

Information about your IBM system and pre-installed software, if any, or optional device is available in the documentation that comes with the product. That documentation can include printed documents, online documents, ReadMe files, and Help files. See the troubleshooting information in your system documentation for instructions for using the diagnostic programs. The troubleshooting information or the diagnostic programs might tell you that you need additional or updated device drivers or other software. IBM maintains pages on the World Wide Web where you can get the latest technical information and download device drivers and updates. To access these pages, go to http://www.ibm.com/systems/support/ and follow the instructions. Also, some documents are available through the IBM Publications Center at http://www.ibm.com/shop/publications/order/.

Getting help and information on the World Wide Web

On the World Wide Web, the IBM website has up-to-date information about IBM systems, optional devices, services, and support. The address for IBM System x[®] and xSeries[®] information is http://www.ibm.com/systems/x/. The address for IBM Flex System information is http://www.ibm.com/systems/bladecenter/. The address for IBM IntelliStation[®] information is http://www.ibm.com/intellistation/.

You can find service information for IBM systems and optional devices at http://www.ibm.com/systems/support/.

Software service and support

Through IBM Support Line, you can get telephone assistance, for a fee, with usage, configuration, and software problems with System x and x Series servers, Flex System products, IntelliStation workstations, and appliances. For information about which products are supported by Support Line in your country or region, see http://www.ibm.com/services/sl/products/.

For more information about Support Line and other IBM services, see http://www.ibm.com/services/, or see http://www.ibm.com/planetwide/ for support telephone numbers. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

Hardware service and support

You can receive hardware service through your IBM reseller or IBM Services. To locate a reseller authorized by IBM to provide warranty service, go to http://www.ibm.com/partnerworld/ and click **Find Business Partners** on the right side of the page. For IBM support telephone numbers, see http://www.ibm.com/planetwide/. In the U.S. and Canada, call 1-800-IBM-SERV (1-800-426-7378).

In the U.S. and Canada, hardware service and support is available 24 hours a day, 7 days a week. In the U.K., these services are available Monday through Friday, from 9 a.m. to 6 p.m.

IBM Taiwan product service

IBM Taiwan product service contact information:

IBM Taiwan Corporation 3F, No 7, Song Ren Rd. Taipei, Taiwan Telephone: 0800-016-888

Appendix B. Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing IBM Corporation North Castle Drive Armonk, NY 10504-1785 U.S.A.

INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product, and use of those websites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corporation in the United States, other countries, or both. If these and other IBM trademarked terms are marked on their first occurrence in this information with a trademark symbol ([®] or [™]), these symbols indicate U.S. registered or common law trademarks owned by IBM at the time this information was published. Such trademarks may also be registered or common law trademarks in other countries. A current list of IBM trademarks is available on the web at "Copyright and trademark information" at http://www.ibm.com/legal/copytrade.shtml. Adobe and PostScript are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.

Cell Broadband Engine is a trademark of Sony Computer Entertainment, Inc., in the United States, other countries, or both and is used under license therefrom.

Intel, Intel Xeon, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.

Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc., in the United States, other countries, or both.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft, Windows, and Windows NT are trademarks of Microsoft Corporation in the United States, other countries, or both.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Other company, product, or service names may be trademarks or service marks of others.

Important Notes

Processor speed indicates the internal clock speed of the microprocessor; other factors also affect application performance.

CD or DVD drive speed is the variable read rate. Actual speeds vary and are often less than the possible maximum.

When referring to processor storage, real and virtual storage, or channel volume, KB stands for 1024 bytes, MB stands for 1 048 576 bytes, and GB stands for 1 073 741 824 bytes.

When referring to hard disk drive capacity or communications volume, MB stands for 1 000 000 bytes, and GB stands for 1 000 000 000 bytes. Total user-accessible capacity can vary depending on operating environments.

Maximum internal hard disk drive capacities assume the replacement of any standard hard disk drives and population of all hard disk drive bays with the largest currently supported drives that are available from IBM.

Maximum memory might require replacement of the standard memory with an optional memory module.

IBM makes no representation or warranties regarding non-IBM products and services that are ServerProven, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. These products are offered and warranted solely by third parties.

IBM makes no representations or warranties with respect to non-IBM products. Support (if any) for the non-IBM products is provided by the third party, not IBM.

Some software might differ from its retail version (if available) and might not include user manuals or all program functionality.

Particulate contamination

Attention: Airborne particulates (including metal flakes or particles) and reactive gases acting alone or in combination with other environmental factors such as humidity or temperature might pose a risk to the device that is described in this document. Risks that are posed by the presence of excessive particulate levels or concentrations of harmful gases include damage that might cause the device to malfunction or cease functioning altogether. This specification sets forth limits for particulates and gases that are intended to avoid such damage. The limits must not be viewed or used as definitive limits, because numerous other factors, such as temperature or moisture content of the air, can influence the impact of particulates or environmental corrosives and gaseous contaminant transfer. In the absence of specific limits that are set forth in this document, you must implement practices that maintain particulate and gas levels that are consistent with the protection of human health and safety. If IBM determines that the levels of particulates or gases in your environment have caused damage to the device. IBM may condition provision of repair or replacement of devices or parts on implementation of appropriate remedial measures to mitigate such environmental contamination. Implementation of such remedial measures is a customer responsibility.

Contaminant	Limits
Particulate	 The room air must be continuously filtered with 40% atmospheric dust spot efficiency (MERV 9) according to ASHRAE Standard 52.2¹. Air that enters a data center must be filtered to 99.97% efficiency or greater, using high-efficiency particulate air (HEPA) filters that meet MIL-STD-282. The deliquescent relative humidity of the particulate contamination must be more than 60%². The room must be free of conductive contamination such as zinc whiskers.
Gaseous	 Copper: Class G1 as per ANSI/ISA 71.04-1985³ Silver: Corrosion rate of less than 300 Å in 30 days

¹ ASHRAE 52.2-2008 - *Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size*. Atlanta: American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.

² The deliquescent relative humidity of particulate contamination is the relative humidity at which the dust absorbs enough water to become wet and promote ionic conduction.

³ ANSI/ISA-71.04-1985. Environmental conditions for process measurement and control systems: Airborne contaminants. Instrument Society of America, Research Triangle Park, North Carolina, U.S.A.

Documentation format

The publications for this product are in Adobe Portable Document Format (PDF) and should be compliant with accessibility standards. If you experience difficulties when you use the PDF files and want to request a web-based format or accessible PDF document for a publication, direct your mail to the following address:

Information Development IBM Corporation 205/A0153039 E. Cornwallis Road P.O. Box 12195 Research Triangle Park, North Carolina 27709-2195 U.S.A. In the request, be sure to include the publication part number and title.

When you send information to IBM, you grant IBM a non-exclusive right to use or distribute the information in any way it believes appropriate without incurring any obligation to you.

Electronic emission notices

Federal Communications Commission (FCC) statement

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. IBM is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Industry Canada Class A emission compliance statement

This Class A digital apparatus complies with Canadian ICES-003.

Avis de conformité à la réglementation d'Industrie Canada

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Australia and New Zealand Class A statement

Attention: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

European Union EMC Directive conformance statement

This product is in conformity with the protection requirements of EU Council Directive 2004/108/EC on the approximation of the laws of the Member States relating to electromagnetic compatibility. IBM cannot accept responsibility for any failure to satisfy the protection requirements resulting from a nonrecommended modification of the product, including the fitting of non-IBM option cards.

Attention: This is an EN 55022 Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Responsible manufacturer:

International Business Machines Corp. New Orchard Road Armonk, New York 10504 914-499-1900

Germany Class A statement

Deutschsprachiger EU Hinweis:

Hinweis für Geräte der Klasse A EU-Richtlinie zur Elektromagnetischen Verträglichkeit

Dieses Produkt entspricht den Schutzanforderungen der EU-Richtlinie 2004/108/EG zur Angleichung der Rechtsvorschriften über die elektromagnetische Verträglichkeit in den EU-Mitgliedsstaaten und hält die Grenzwerte der EN 55022 Klasse A ein.

Um dieses sicherzustellen, sind die Geräte wie in den Handbüchern beschrieben zu installieren und zu betreiben. Des Weiteren dürfen auch nur von der IBM empfohlene Kabel angeschlossen werden. IBM übernimmt keine Verantwortung für die Einhaltung der Schutzanforderungen, wenn das Produkt ohne Zustimmung der IBM verändert bzw. wenn Erweiterungskomponenten von Fremdherstellern ohne Empfehlung der IBM gesteckt/eingebaut werden.

EN 55022 Klasse A Geräte müssen mit folgendem Warnhinweis versehen werden: "Warnung: Dieses ist eine Einrichtung der Klasse A. Diese Einrichtung kann im Wohnbereich Funk-Störungen verursachen; in diesem Fall kann vom Betreiber verlangt werden, angemessene Maßnahmen zu ergreifen und dafür aufzukommen."

Deutschland: Einhaltung des Gesetzes über die elektromagnetische Verträglichkeit von Geräten

Dieses Produkt entspricht dem "Gesetz über die elektromagnetische Verträglichkeit von Geräten (EMVG)". Dies ist die Umsetzung der EU-Richtlinie 2004/108/EG in der Bundesrepublik Deutschland.

Zulassungsbescheinigung laut dem Deutschen Gesetz über die elektromagnetische Verträglichkeit von Geräten (EMVG) (bzw. der EMC EG Richtlinie 2004/108/EG) für Geräte der Klasse A

Dieses Gerät ist berechtigt, in Übereinstimmung mit dem Deutschen EMVG das EG-Konformitätszeichen - CE - zu führen.

Verantwortlich für die Einhaltung der EMV Vorschriften ist der Hersteller:

International Business Machines Corp. New Orchard Road Armonk, New York 10504 914-499-1900 Der verantwortliche Ansprechpartner des Herstellers in der EU ist:

IBM Deutschland Technical Regulations, Department M456 IBM-Allee 1, 71137 Ehningen, Germany Telephone: +49 7032 15-2937 E-mail: tjahn@de.ibm.com

Generelle Informationen:

Das Gerät erfüllt die Schutzanforderungen nach EN 55024 und EN 55022 Klasse A.

Japan VCCI Class A statement

この装置は、クラス A 情報技術装置です。この装置を家庭環境で使用する と電波妨害を引き起こすことがあります。この場合には使用者が適切な対策 を講ずるよう要求されることがあります。 VCCI-A

This is a Class A product based on the standard of the Voluntary Control Council for Interference (VCCI). If this equipment is used in a domestic environment, radio interference may occur, in which case the user may be required to take corrective actions.

Korea Communications Commission (KCC) statement

이기기는 업무용으로 전자파 적합등록을 받은 기기 이오니, 판매자 또는 사용자는 이점을 주의하시기 바라며, 만약 잘못 구입하셨을 때에는 구입한 곳에 서 비업무용으로 교환하시기 바랍니다.

Please note that this equipment has obtained EMC registration for commercial use. In the event that it has been mistakenly sold or purchased, please exchange it for equipment certified for home use.

Russia Electromagnetic Interference (EMI) Class A statement

ВНИМАНИЕ! Настоящее изделие относится к классу А. В жилых помещениях оно может создавать радиопомехи, для снижения которых необходимы дополнительные меры

People's Republic of China Class A electronic emission statement

中华人民共和国"A类"警告声明

声 明 此为A级产品,在生活环境中,该产品可能会造成无线电干扰。在这种情况下, 可能需要用户对其干扰采取切实可行的措施。

Taiwan Class A compliance statement

警告使用者:
這是甲類的資訊產品,在 居住的環境中使用時,可
能會造成射頻干擾,在這
程情況下,使用者會被要
求採取某些適當的對策。
